of this daughter's portion, her father ſold ſome lands in Derbyſhire, and others in Burgh in the Marſh, Adelthorp, and Winthorp in Lincolnſhire. Denſil the eldeſt ſon of this Sir William Holles, was born at London about 1538 (27). His mother's ſirname gave him his chriſtian name of Denſil, and he married Eleanor, daughter to Edmund Lord Sheffield, the firſt Baron of that race, about the cloſe of Queen Mary's reign; and the manor of Irby, with other lands in Lincolnſhire, being ſettled upon him at his marriage, he fixed his reſidence at Irby (four miles from Great Grimſby) lying at the entrance upon the Wolds. A place, ſays our author, happy in the ſweetneſs of the air, and very delightful by the pleaſant hills and dales, where there are dry and inviting walks both ſummer and winter, with a welcome proſpect toward the ſea; affording as good hawking and hunting, and as good conveniency for training and airing young horſes, as can be found any where. This Lordſhip not being intirely his own, he purchaſed that part which belonged to our author's grandfather Kingſton (28), and had it conveyed to him 18 Eliz. viz. one meſſage, one cottage, a garden, an orchard, 104 acres of land, 30 acres of meadow, and 40 acres of paſture, with the appurtenances. After this purchaſe he improved the Lordſhip by incloſing it, and dividing it into farms laying the lands of each farm by themſelves, which he fenced with quickſet hedges, the beſt and moſt thriving in all the country; this added much both to the beauty of the place and conveniency of the inhabitants. He had alſo that juſt care as to leave the commons very large (beyond the proportion of any of their neighbours); and all theſe together, ſays my author, has been the cauſe, that I never knew in that town any tenant that was not thriving. He had a deſign likewiſe of building a fair manſion houſe near to the place where the ſprings of Welbeck have their riſe, &c. but theſe deſigns were cut ſhort by his death, which happened at Irby, April 22, 1590, near nine months before his father, being then about 52 years of age, and was buried in the chancel of that church under a grave ſtone without any inſcription. His wife died before him, having brought him beſides John the eldeſt, afterwards Earl of Clare, the ſubject of the preſent article, three more ſons, *William*, who died a youth, Sir *George Holles*, and *Thomas*, and five daughters, *Douglas*, *Frances*, *Anne*, *Jane*, and *Gertrude*, of all whom mention will be made in the ſequel (29).

(27) In his picture in the cuſtody of the Counteſs-dowager of Oxford, his age is mentioned to be 48, anno 1586.

(28) Our author's father, Freſcheville Holles, married Elizabeth, daughter and coheir of John Kingſton, Eſq;

(29) They were all born at Irby except the eldeſt ſon. His daughter Douglas, who died before him, was probably named from her aunt, wife to John Lord Sheffield, and daughter of Will. Lord Howard of Effingham, of whom ſee remark [*I*].

[*B*] *An opulent inheritance, and the care of divers brothers and ſiſters.*] As to his inheritance on the inquiſition taken at Nottingham October 4, 33 Eliz. after the death of Sir William Holles his grandfather, the jury found that the ſaid Sir William died on the 26th of January laſt, and that John Holles was his grandſon and heir, and at that time 25 years of age. His grandfather died ſeized of the mannors of Haughton, Eaſthall, Cromwell, and Carleton, with the advowſon of the church of Cromwell, Foxhall-grange in Bothomſale and Haughton, the mannor of Baſford, with the advowſion of the rectory of Kirton, and advowſion of the church of Bothomſale, and divers meſſuages and lands in Haughton, Great Markham, Bothomſale, and Waleſby, all in Com. Nott. the mannor of Yoxall in Staffordſhire, the mannor of Blackwell in Derbyſhire, the mannor of Denſell alias Deinſell in Cornwall, and of forty meſſuages, twenty cottages, 20 toſts, one mill, one dove-houſe, ſixty gardens, ſixty acres of meadow, one hundred acres of paſture, and ten acres of wood, in the pariſhes of St Clement Danes without Temple-bar, St Giles, and St Pancraſe in the Fields, and Kentiſh town, in the county of Middleſex, to all which the ſaid John Holles was his heir. Moreover by his father's will he ſucceeded to the mannor of Irby, as likewiſe to lands purchaſed by him in Barnalbie (30). With regard to his brothers and ſiſters, of theſe latter which were now four, two only lived to be married, Frances, in the life-time of her father, to Sir Francis Cooke of Truſsley in the county of Derby, Knt (31), eldeſt brother to Sir John Cooke, Principal Secretary of State in the reign of King Charles I. And Jane, after her father's deceaſe, became the wife of Thomas Saunderſon, Eſq; younger brother of Sir Nicholas Saunderſon, Viſcount Caſtleton. By her father's will, her fortune on the deceaſe of her two ſiſters Anne and Gertrude before marriage being trebled, was advanced to 3000 marks. Concerning his two brothers; Sir George Holles was born February 19, 1575, and Thomas, in 1579. He ſent them both to Cambridge, from whence the elder, Sir George, made a ſally into the Netherlands, and diſtinguiſhed himſelf in the wars againſt the Spaniards. In the famous battle of Newport, where Sir Francis Vere (by the ſingular courage of the Engliſh, and the good conduct of his brother Sir Horace Vere after he himſelf was ſhot) overcame the Spaniards and obtained a great victory, Sir George received a wound in his right arm with a pike, and a ſhot in his body. After that, for the ſpace of nine months he ſerved within Oſtend, where Sir Francis Vere was Governor, and at the time when the Marquis Spinola beſieged it. There he ſucceeded to the company of Captain Wilford then ſlain (32), and afterwards received a ſhot in at his left eye, and out of his neck behind, with which he immediately fell down ſenſeleſs from the parapet of the town, and was carried off by his friends, who got him into bed. A while after he recovered his ſenſes, but was blind, the anguiſh of one eye having for the preſent taken away the ſight of the other. So ſoon as he came to himſelf he groped for his breeches, in the pockets of which, he remembred, there

(30) See the Will in Regiſt. vocat. Drury in Cur. Prærog. Cantuar. Qu. 31.

(31) He was appointed by his father-in-law executor of his Will, jointly with his eldeſt ſon John Holles.

(32) By this promotion he loſt an annuity of 13 l. 6 s. 8 d. bequeathed by the father's Will to each of his ſons for life, or 'till either came to preferment worth 50 l. per annum, in which caſe to remain to the other brother.

then 26 years of age, he entered into a marriage with Anne, the only daughter of Sir Thomas Stanhope of Shelford in the county of Nottingham, Knight (c). This marriage, though it brought him all the happineſs that could be hoped for in a wife, yet it conveyed to him a deep and laſting animoſity from a great and potent neighbour, the ſon of his grandfather's eſpecial friend, Gilbert Earl of Shrewſbury [C]. But his courage and good fortune

(c) Anceſtor to the preſent Earl of Cheſterfield, Earl Stanhope, Earl of Harrington, and others.

there was ſome gold, and miſſing it, he ſwore an oath that the French had made a booty of him (it being near their quarters that he fell), but being told that his friends had taken it out for ſafety, he was well ſatisfied. Of this hurt he recovered, but loſt his eye, over which he wore a black patch ever after. At length for his ſignal ſervices he was made Serjeant-Major-General of the Engliſh forces in the Low-countries, and died in London unmarried in 1626 (33), and by his laſt will made his nephew Denſil Holles (afterwards Lord Holles of Iſfield) and Mr Nicholas Drake his executors. He lies buried on the eaſt ſide of the chapel of St John the Evangeliſt in Weſtminſter-abbey, next to his kinſman, and firſt commander Sir Francis Vere. His funeral was ſolemnized May 23, 1626; and Mr Gervaſe Holles relates, that it was the greateſt and moſt ſolemn of any in thoſe days. To which, continues he, both the advantage of time and place added much; it happening ſoon after the term, in Parliament time, and a little before the expedition to the iſle of Rhee, when London was full of nobility, gentry, and commanders. All the city trained-bands were preſent. The hearſe was borne by twenty-four colonels and field-officers, eight at a time, the reſt encompaſſing it. His brother the Earl of Clare, and the Lord Vere of Tilbury, were the chief mourners; a great train of the nobility and gentry followed it, and an infinite concourſe of people of all ſorts were ſpectators. The Earls of Oxford and Eſſex offered their aſſiſtance to bear the corps, but the Earl of Clare would not permit them. Over his grave his brother the Earl of Clare ſhortly after erected a handſome monument. His effigies, curiouſly performed, is in the habit of a Roman General ſtanding on a pedeſtal in a commanding poſture, with a battoon in his hand, and is enriched with other figures, cartouches, &c.

(33) See the Latin inſcription on his monument, in the chapel of St John the Evangeliſt in Weſtminſter-abbey.

We ſhall now proceed to Thomas Holles his younger brother, who alſo made a ſally from the Inns of Court into the Netherlands not long after his brother, and became like him a brave and eminent commander. He was (ſays Gervaſe Holles) Lieutenant-Colonel to Sir Horace Vere's regiment conſiſting of thirty-two companies, and was at the ſieges of Sluys, Gulicke, the Grave, Grell, Rhinebergh, and the famous ſieges of the Boſch and Maeſtricht, where he was appointed to aſſault the breach, as my Lord Craven can witneſs, who, as a volunteer, aſſiſted him in that aſſault. He died in Holland, October 13, 1642, aged ſixty-three. He had to wife, Katharine, daughter of Joachimi Van Ecke of Guelderland, by whom he had iſſue two ſons and two daughters; Denſil, who died an infant, George, an officer in the ſervice of the States, who died at Maeſtricht, unmarried, the 10th of March 1654, and was buried in St John's church there; Eleanor, who died unmarried, and Elizabeth, who wedded Theodore Becquer, but died without iſſue.

[C] *This match drew him into a quarrel with the Earl of Shrewſbury.*] It ſeems there had been a treaty between the old Earl of Shrewſbury and Sir William Holles, concerning a marriage betwixt this his grandſon and a neice or kinſwoman of the Earl's. To which motion, whether he meant it in earneſt, or pretending it only for fear of diſpleaſing his grandfather, he ſeemed not unwilling, ſo that every one thought it would have proceeded. But after the deceaſe of them both (for George Earl of Shrewſbury and Sir William Holles died in the ſame year) liking Mrs Stanhope better, he married her, and relinquiſhed the Earl's kinſwoman. This the Earl took as the greateſt affront, the rather becauſe Sir Thomas Stanhope and the Earl were great enemies. The proceſs of this difference cauſed a great deal of trouble and ſome loſs of blood. For firſt, Roger Orme, who was then Sir John Holles's ſervant, though afterwards a captain in Ireland and the Low-Countries, fought a duel with one Pudſey gentleman of the horſe to the Earl of Shrewſbury, in which Pudſey was ſlain. And this quarrel aroſe upon the grounds of the difference between their maſters. The Earl eagerly proſecuted Orme's life, but Sir John Holles got him conveyed into Ireland, and maugre the Earl's power, procured his pardon of Queen Elizabeth. Upon Orme's buſineſs followed that of his own with my couſin Gervaſe Markham, ſo much talked of yet in theſe parts. Gervaſe Markham was a great confident, or as the phraſe is now, the gallant of the Counteſs of Shrewſbury, and was uſually in thoſe days termed her champion. A proper handſome gentleman he was, and of a great courage. He, after Pudſey was ſlain, let fall ſome paſſionate words, accuſing Sir John Holles as the cauſe of that quarrel, and as being guilty of his death. This coming to the ears of Sir John, he ſends him a chartell to this effect.

For GERVASE MARKHAM,

Whereas you have ſaid that I was guilty to that villany of Orme in the death of Pudſey, I affirm that you ly; and ly like a villaine, which I ſhall be ready to make good upon your ſelf, or upon any gentleman my equal living.

JOHN HOLLES.

Markham returned for anſwer, That he accepted the challenge, and would accordingly give a meeting ſuch an hour alone, or with either of them a boy of fourteen or under; the place Workſop Park, and the weapons rapier and dagger. Sir John Holles allowing of the other circumſtances, excepted againſt the place, being the park where his mortal enemy the Earl of Shrewſbury then lived, which he thought neither reaſonable for himſelf to admit, nor honourable for his enemy to propound, and therefore urged, that a more equal place might be aſſigned. Markham taking advantage of this, as if he had declined the encounter, publiſhes it accordingly to his diſgrace. Sir John Holles finding this unworthy dealing, and that he could not have an equal place aſſigned him, reſolved to take that opportunity, which fortune ſhould next offer him, and ſuch a one ſhortly after offered itſelf on the following occaſion. To the chriſtening of his ſecond ſon Denzil Holles, the Lady Stanhope his mother-in-law was invited a godmother, after which performed, ſhe returned from Haughton to Shelford; and Sir John Holles accompanying her part of the way over the foreſt of Shirwood, it fortuned, that Gervaſe Markham with others in his company met them, and paſſed by. So ſoon as he ſaw that Markham was paſſed, he took leave of the Lady Stanhope, galloped after, and overtook him. When obſerving how unworthily he had dealt with him, they both alighted, and drew their rapiers. I have heard him ſay, that upon the firſt encounter he uſed theſe words, *Markham, Guard your ſelf better, or I ſhall ſpoil you preſently*; (for he ſaid, he lay as open to him as a child) and the next paſs he run him between the privities and the bottom of the guts up to the hilt, and out behind toward the ſmall of the back. With this wound Markham fell, and was carried off the field by thoſe in his company, whilſt Sir John Holles with his ſervant Aſhton and a groom, who only were with him, returned to Haughton. The news coming to the Earl of Shrewſbury, he immediately raiſed of his ſervants and tenants to the number of one hundred and twenty, with a reſolution to apprehend Sir John Holles, ſo ſoon as he ſhould know, that Markham's wound was mortal; which Edmund Lord Sheffield, afterwards Earl of Mulgrave, underſtanding, he ſpeedily repaired to Haughton, with threeſcore in his retinue out of Lincolnſhire, to aſſiſt his couſin-german, in caſe the Earl ſhould attempt any thing. An old ſervant of Sir John Holles told me, he was preſent, when the Lord Sheffield came, and that his maſter going forth to meet him, he aſked him, how it was with Markham? he replied, That *he thought the greateſt danger was, that he had ſpoiled his whoring. I bear couſin*, ſays the Lord Sheffield, *that my Lord of Shrewſbury is prepared to trouble you, take my word, before he carry you, it ſhall coſt many a broken pate.* And he went in and remained at Haughton until they had certain account, that Markham was paſſed danger, who indeed recovered, and lived after to be an old man, but never after eat ſupper, nor received the ſacrament; which two things he raſhly vowed not to do, until he were revenged.

[D] *He*

fortune carried him through all the oppoſition he met with on this occaſion with honour and advantage. Indeed his courage was ſo great, that it rendered him in a manner unconcerned at any danger with which his enemies could threaten him; ſo that he aſſumed for his motto in theſe times, *Qui inimicum timet, amicum non amat.* However, finding there was much animoſity and a ſtrong combination againſt him, he reſolved to take a proper method to divert it; and thence, indulging alſo his own inclination ſtrongly bent to knowledge and actions of honour, he made ſeveral ſallies out of the kingdom, and ſpent many years either in travail or military employments, and *that* after a marriage to a lady, who both deſerved and had for him a very great and tender affection. Some of his time he ſpent in Ireland under the then Deputy Sir William Fitz-Williams; where, accompanying Sir Henry Norris in an expedition he made againſt the Iriſh rebels, and behaving in that ſervice with great bravery, he received from the Deputy at his return the honour of knighthood (*d*), as a reward of his merit. He ſerved likewiſe two years in Hungary againſt the Turks; and in his paſſage to and from thence, viewed and obſerved the beſt parts of France and Italy; both which languages he was maſter of, and reaſonably well of the Spaniſh. And whilſt he ſerved in Hungary, he grew ſo perfect in that tongue, that he might have paſſed for a native *. His laſt military employment was with the Earl of Eſſex to the Terceras, an iſland of the Azores, in the year 1597, in the company of his kinſman Sir Francis Vere, who was Lord-Marſhal in that expedition (*e*), with whom he ſailed in the ſhip called the Mary Roſe (*f*). Theſe, and thoſe beforementioned, were the ſcenes of his warfare, which gave him great advantage in knowledge, and added greatly to his reputation. But before this laſt voyage he daſhed upon a rock, which probably might have ſunk him, and indeed threatened more danger than all thoſe enmities he had encountered before. This was a ſharp difference with the Lord Burleigh [*D*], Lord High-Treaſurer of England, who was then and long before of great power with the Queen. But this danger vaniſhed upon the death of the Treaſurer, which happened ſoon afterwards. Neither did this quarrel caſt him at all (as his enemies hoped it would) in the Queen's regard, who never ſteered her opinion of any man by the paſſions or affections of others, but by her own judgment: ſo ſhe continued to him that ſame gracious favour ſhe had always done, even to her deceaſe, which happened about five years after. Upon the acceſſion of King James I. to the throne, Sir John Holles, much out of humour with the new face of things at Court [*E*], retired into the country and attended his eſtate, which 'till then he had very little leiſure to look into, and which he had impaired, by ſelling lands of good value both in Lincolnſhire and Derbyſhire after his grandfather's deceaſe [*F*].

He

(*d*) Mr James Howel obſerves, that this power of conferring honours and knighthood, is a point of grandeur in which the Lord-Deputy of Ireland exceeded the Viceroy of Naples or any other that he knew. Howel's Letters, Vol. I. Sect. 6. Lett. xxxvi. p. 226. edit. 1650.

* The laſt cited author having written an Eſſay concerning the original, growth, changes, and preſent conſiſtence, of the French language, ſubmitted it to his Lordſhip's correction, as to a perſon who had an exact knowledge of many languages, not in a ſuperficial vapouring way, but in a moſt exact manner, both in point of practice and theory. *Ibid.* p. 469. *edit.* 1754.

(*e*) See an account of this expedition, in a piece entitled, The Commentaries of Sir Francis Vere, being diverſ pieces wherein he had Command; written by himſelf in a way of Commentary. Publiſhed by William Dillingham, D. D. 1657.

(*f*) See a liſt of gentry at the end of a diſcourſe concerning that voyage.

[*D*] *He had a ſharp difference with Lord Burleigh.*] What was the grounds of this quarrel is not certainly known, though ſome have imagined it to be the very great familiarity, that Sir John Holles had with the Lady Hatton, the Treaſurer's grand-child *; but certain it is that the Treaſurer, during the preparation for this expedition, inveighed bitterly againſt him (with little arguments of that gravity and wiſdom he had formerly expreſſed) in the Exchequer Chamber. This imprudent and injurious behaviour of the Treaſurer did exceedingly inflame Sir John Holles, and he reſolved not to ſit down with it, but to return him his own. In this ſpirit he writes him a letter, wherein he lets him know the malice and falſhood of his invectives, and then retorts ſeverely upon himſelf, and that in ſo home and nicking a way, as the Treaſurer had never met with the like in his life. The delivery of this letter, continues our author, he entruſted with my father (34), giving him direction, that as ſoon as he received notice that he was got on ſhip-board, he ſhould go with it to the Treaſurer's houſe at dinner-time, and after he had delivered it to one of the ſervants, he ſhould ſlip away and make ſpeed to the fleet after him. This was performed accordingly; and the Treaſurer having read the letter, and being in a great paſſion, ſent out preſently to apprehend the bearer, but he was gone, and being a young gentleman unknown at Court, no man could tell him what he was. Moreover, as Sir John Holles thought he had received a public injury, he reſolved to make his vindication as public; and to that end, diſperſed among his friends divers copies of this letter, which yet remain in ſeveral hands, and one I had, but have loſt it. I have heard many wiſe men ſay, they eſteemed this one of the boldeſt acts that ever he did: for the Treaſurer having power enough, would not have wanted means one way or other to have ruined him. Nor was he unapt (as ſome that knew him have affirmed) to ſecret revenges, which his own creature Camden (35), doth more than darkly inſinuate in the death of Sir Nicholas Throgmorton.

* As the Earl of Clare had the higheſt veneration for the family of Vere, it may not be amiſs to obſerve here, that Edward Vere Earl of Oxford, who married Burleigh's daughter, had at this time quarelled with him, for refuſing his ſuit to intercede for the life of the Duke of Norfolk, condemned for aſſiſting Mary Queen of Scots. Dugd. Baronage, Vol. I. p. 199.

(34) Freſcheville Holles, ſon of Gervaſe, mentioned in note (26). He was alſo, as well as his couſin the Earl of Clare, in the famous engagement againſt the Spaniards in 1588. Our author had an only ſon of the ſame name, who became a brave ſea-officer, as appears from his monument in St Edward's chapel in Weſtminſter-abbey.

(35) Annal. Eliz. anno 1570.

[*E*] *Out of humour with the new face of things at Court.*] My author having obſerved that the Queen's death conveyed a great and general lamentation to all her ſubjects, and to him [Sir John Hollis] who ever had faithfully and religiouſly ſerved and honoured her, and moſt ſincerely loved his country, of which ſhe was the glory, felicity, and firmament, &c. proceeds thus: This bright ſtar ſet, the ſcene at Court was ſtrangely altered, for though King James entered with the greateſt expectation and acclamations that any Prince could do, (ſuch as his wiſdom and virtues well merited) yet he brought with him a crew of neceſſitous and hungry Scots, and filled every corner of the Court with theſe hungry blue-caps. This was that which firſt darkened the glory of the Engliſh Court, which Queen Elizabeth had ever maintained in great luſtre. *I have heard the Earl of Clare ſay, that when he was penſioner to the Queen, he did not know a worſe man of the whole band than himſelf; and that all the world knew he had then an inheritance of* 4000 *l. a year.* It was the conſtant cuſtom of that Queen to call out of all counties in the kingdom, the gentlemen of the greateſt hopes, and the beſt fortune and families, and with thoſe to fill the more honourable rooms of her houſhold ſervants; by which ſhe honoured them, obliged their kindred and alliance, and fortified herſelf. But when moſt of thoſe rooms were poſſeſſed by ſuch trotting companions, the better ſort of the gentry declined the Court, as ſcorning their fellowſhip. Hence it followed, that in a little time, the Court was in a manner wholly compoſed of theſe Scots, and ſuch inconſiderable perſons, as favourites preferred, or money introduced. This cauſed Sir John Holles at that time to retire into the country.

[*F*] *He had ſold ſome lands after his grandfather's death.*] However he repaired that loſs by a far greater improvement afterwards. For he purchaſed the lordſhip of Gamelſton, Maplebecke, and Bevercotes, with a mannor in Baſeford; the rectories of Bothomſale, Eaſt-Markham, and Weſt-Markham, with divers lands in Elkeſly, Waleſby, and little Drayton, all in the county of Nottingham. He likewiſe purchaſed one half of Prince's-ſtreet in Drury-lane, and cauſed to be erected thoſe edifices called Loche's buildings, with the moſt part of Clement's-inn lane, Blackmore-ſtreet by Drury-lane, and a part of Clement's-inn-fields. So that by theſe purchaſes and improvements, he advanced his eſtate before his death to near 8000 *l.* per ann. He likewiſe enlarged Thurland-houſe (now called Clare-

He was engaged during this reign in three conſiderable law-ſuits, the firſt of which being carried for the Crown [*G*], made him much averſe to King James, for whom he had little kindneſs. However, when Prince Henry was created Prince of Wales, May 30, 1610, Sir John Holles was by the King appointed Comptroller of his Houſhold †. In this office he continued during the Prince's life, which was about two years and a half after [*H*]. But with the loſs of that brave Prince all his favour at Court vaniſhed, and he lay open and expoſed to the reſentments of his adverſaries: ſo that, about three years after a bill was filed againſt him in the Star-Chamber, containing ſeveral allegations of high miſdemeanours, which were particularly preſſed and amplified by Sir Edward Coke, Chief Juſtice [*I*]. And though Sir John made a defence, the eloquence of which gave great

† Henry Earl of Oxford was the firſt choſen to be of the order of the Bath at this creation. Anſtis's Obſervations on the Knights of the Bath, p. 61, & ſeq. This is mentioned as an inſtance of the connection between the two families of Vere and Holles, which was moſt aſſiduouſly cultivated by this firſt Earl of Clare.

Clare-houſe) in Nottingham, and new built the Inn called the Blackmoor's-head there. He had alſo an intention of building a new houſe at Haughton, and had ſeveral platforms drawn of it, reſolving to have ſeated it on higher grounds above the barns; but the charge thereof was like to be ſo great, that he thought it better to conſider of, than to undertake it.

[*G*] *He had three law ſuits, of which the firſt was carried for the Crown.*] This firſt law-ſuit was about the wardſhip of Robert Sutton, afterwards Lord Lexington, whoſe mannor of Averſham, was held of his mannor of Haughton by fealty and knight ſervice, which had ever been performed by the anceſtors of Mr Sutton, to the anceſtors and predeceſſors of Sir John Holles; and their wardſhips accordingly accrued, when any of thoſe Suttons died, and the heir within age. But when this laſt fell, a trick was found to intitle the King thereto, for whom judgment was given in the Court of Wards againſt Sir John. His ſecond law-ſuit was with the Society of the Inn of Chancery, called Clement's Inn; and the caſe was thus: Sir William Hawte, and Margaret his wife, had long before ſold by their deed bearing date 17th of December, 23 H. VIII. to Sir William Holles [the Lord-Mayor] their mannor or capital meſſuage called Clement's-Inn, with divers other meſſuages, lands, and tenements, in the pariſhes of St Giles and St Panchraſe in the county of Middleſex. Shortly after, Sir William Holles demiſes the capital meſſuage called Clement's-Inn to that corporation of ſtudents for the term of ninety-nine years, reſerving a rent. That term near expired, the Earl of Clare his great-grand-child and heir reſolving to enter upon it, and theſe clerks and attornies to keep the poſſeſſion they had got, he put it in ſuit; and they brought the Earl into Chancery; there the Lord-Keeper —— to favour thoſe ſetting-dogs * of his own profeſſion, decreed, that they ſhould hold their poſſeſſion for ever, acknowledging him lord of the fee, and paying him a ſmall yearly rent, with an allowance to him and his heirs of two chambers in that houſe for a ſollicitor. Both theſe cauſes were carried againſt him with all the injuſtice that might be; the firſt by the power of the King, and the next by the partiality of the lawyers. In the third, though he had a worſe cauſe, yet he found better ſucceſs. It was concerning the rectories [impropriations] of Elkeſley and Bothomſale, which he had purchaſed for a valuable conſideration; but there proving a flaw in the title, he was impleaded by one Brigham, who pretended to a better right, and he was forced to fly to equity. I well remember, that I attended him to Sir Humphry Davenport, Sir Thomas Crew, Sir Francis Aſhley (all then ſerjeants), and to Mr Noy, all whom he would have retained as counſel in this cauſe. Sir Humphrey Devenport (though a great lover and honourer of him) abſolutely refuſed him. The other would appear for him; but all adviſed him to compound it as well as he could, telling him he would be caſt. He found he had been abuſed, and was very unwilling to loſe what he had well paid for; ſo he procured meetings with the then Lord-keeper, Sir Thomas Coventry. They met in Hatton-houſe garden. When the day of hearing came, I attended my Lord of Clare to Weſtminſter-hall. I remember we met there with Mr Serjeant Glanvil, who was one of Brigham's counſel, who ſaluting him ſaid, *My Lord, I am againſt you to day, and believe you muſt loſe the cauſe.* And the ſame Serjeant when he argued, told the Keeper, *That this cauſe would not require many words, for it was the ſame* (terminis terminantibus) *that he had decreed that very term between ſuch and ſuch parties.* Yet in concluſion, the Keeper gave judgment for the Earl. I have heard the Keeper much condemned for that judgment, who was a man of great abilities and learning in his profeſſion, and for a good while had the reputation of a juſt Judge: but at laſt he appeared with a bare face, and died very ſeaſonably before the Parliament met, elſe no man had heard louder of his corruptions. The loſs of Mr Sutton's wardſhip made Sir John Holles, as ſome have thought, much averſe to King James, for whom he had little kindneſs; nor indeed was a friend to his memory. I have heard him ſay, *That he came to govern a people, that he knew he was not worthy of, and then he was ruled himſelf by two beggars, and a baſe fellow,* Suffolk, Northampton, and Saliſbury. And at any time when he mentioned any thing, which he thought an error in that King, he would ever give his diſcourſe this ſevere cloſe, *which now he feels.*

* Theſe are our author's words.

[*H*] *He was Comptroller of the houſhold to Prince Henry.*] The Prince ever expreſſed a very great love to him and value of him, inſomuch that once he took a progreſs to his houſe at Haughton, where he continued with him many days, and found an entertainment anſwerable to his greatneſs. And I may well queſtion, had the Prince lived to be King, whether any ſubject had found greater proofs of his love. But in 1612 that Prince died. A Prince of ſo great expectation, that not only the eyes of all England, but of all Chriſtendom, were upon him. Moſt people think he was poiſoned, and the Earl of Somerſet not a little ſuſpected for it. I remember Sir George Radcliff told me, he aſked the Earl of Clare, whether he thought the Prince was poiſoned or no, and that he replied, *he thought he was not; but if he was, he believed he had it half a year before he died.* What he meant by that, Sir George underſtood not; nor did he further queſtion him. But I think that had he believed it, and ſuſpected Somerſet of it, he would eternally have hated and abhorred him, whereas, on the contrary, he continued to his death his friendſhip to him.

[*I*] *Allegations preſſed by Sir Edward Coke, and invalidated by Sir John Holles.*] 'Tis ſaid Sir Edward Coke bore a ſpleen againſt him for the familiarity which Sir John Holles had with his then wife, the Lady Elizabeth Hatton. The allegations were, that he had private conference with two jeſuits, Jervas and Garnet, at their execution; and that in all his leaſes to his tenants, he inſerted a condition that they ſhould not go to law one with another, but ſhould make him the umpire of all their differences; with other charges as inconſiderable. But the Chief Juſtice called *thoſe covenants regal covenants,* and ſaid, *it was no leſs than to uſurp over his tenants a regal authority.* He ſaid, that his private conference with thoſe traitors the jeſuits, was a boldneſs of a dangerous inſinuation, and ought to be both cenſured and puniſhed; and with his law rhetoric endeavoured to give as ugly a face, as he could, both to thoſe, and the reſt of his charges. Sir John Holles made his own defence, being ſecond both in reaſon and oratory to no perſon that I knew in his time. He told the Lords, that he wondered much how he could have ſuffered ſo great a charge and inconvenience upon ſuch ſlight accuſations; did he not know withal, that ſince the death of his royal maſter, he had been left *tanquam piſcis in aridum littus.* But it was his happineſs, he ſaid, that he was to make his defence before ſuch honourable perſons, who would rightly judge both of his innocency, and the malice of his adverſaries. He then profeſſed, that if he had erred at all, they were only errors of ignorance. For he could not underſtand at all, that it might be miſconſtrued a crime in him, to endeavour that his poor tenants ſhould not undo one another by unneceſſary ſuits and quarrels, whilſt he might be a medium to reconcile their differences. And having had the honour to ſerve the Crown in near relations, and having been ever bred up in a ſchool of duty and obedience, he was far from that preſumption to trench in the leaſt manner upon

great ſatisfaction to his hearers, yet he was committed to the Fleet, where he continued a priſoner ſome weeks; until at laſt he came out a Baron of England, being created ſuch on the 9th of July 1616, in the 14th year of King James (g). For this dignity he paid the then favourite, the Duke of Buckingham, ten thouſand pounds ſterling [K]. 'Tis certain that, much about this time, he in a manner wholly withdrew from Court [L]. However,

(g) The preamble of his patent mentions only his ſervice to Prince Henry, his integrity and fidelity to the Crown, and his abilities to ſerve it.

upon regal authority. That he could as little apprehend, how his diſcourſe with thoſe condemned perſons could inſinute any dangerous conſequence, ſince dying men are far from a capacity to threaten any ſuch thing. Adding, that he had travelled the beſt parts of Chriſtendom, and obſerved the cuſtoms of thoſe people amongſt whom he came, but could never obſerve, that any man was prohibited to ſpeak to a dying perſon. Sir Edward Coke (who had as much law and levity in him, as any of his profeſſion ever had) interrupted him, ſcoffingly turning upon him that verſe of Virgil, a little varied,

Et quæ tanta fuit Tiburne tibi cauſa videndi?

We have ſeen that this was not the only vengeance which Sir John's ſuſpected intrigue with Lady Hatton brought upon him, and the ſilence of his advocate Mr Gervaſe Holles upon that head, leaves room to conclude that the ſuſpicion was not entirely without good grounds. If ſo, it may be obſerved, that he inherited this weakneſs from his father Denſil Holles, who was inſerted in a paſquil made in thoſe days upon the Lincolnſhire gentlemen, as follows:

Hollys hits in every hole,
And Denſil drives thro' all their dintes,
He gets his neighbours wives with fole,
And yet they ſay the man but mintes.

I remember, ſays Mr Gervaſe Holles, that walking in Irby grounds with the firſt Earl of Clare, he ſhewed me a handſome farm houſe, telling me his father built it to pleaſe a fooliſh woman. The truth is, he was ſeldom without one or other in it for his private uſe and pleaſure. But this could not be ſo private, as to be unknown to his wife, who notwithſtanding ſhe had, as it ſhould ſeem, recourſe to patience, as the only remedy in the caſe of a huſband's falſeneſs to the marriage-bed; yet ſhe proved inexorable in the caſe of her ſiſter-in-law Douglas, daughter of William Lord Howard of Effingham, and wife to John Lord Sheffield, of whoſe incontinency with the Earl of Leiceſter, detected by this Denſil's wife, we have the following account by Mr Gervaſe Holles. The Lord Sheffield, ſays he, and the ſaid lady lived together for ſome years with much happineſs and contentment. Until at laſt it happened, that Queen Elizabeth took a progreſs northward, upon whom the Earl of Leiſter (the then powerful favourite) attended, and ſome days ſhe abode at the Earl of Rutland's at Belvoir-Caſtle. Thither the principal perſons of Lincolnſhire repaired to ſee their Queen, and do their duty, and among others the Lord Sheffield and this fair young lady of his, who ſhone as a ſtar in the Court, both in regard of her beauty, and the richneſs of her apparel. Leiceſter (who was *cauda falax*) ſeeing her, and being much taken with her perfections, he made his addreſſes of courtſhip to her, and uſed all the art that might be (in which he was maſter enough) to debauch her. There is ſmall hopes, that ſhe, who hath once permitted a ſiege, can hold out. For that woman who keeps a looſe guard upon her honour, hath one port already open, and there wants nothing but a bold man to enter. To be ſhort, he found her frail, and had the unlawful fruition of her body. Their crime being arrived at this height, their next deſign was how to ſecure it, as alſo the continuance of this their wickedneſs; which they thought could not well be, ſo long as the Lord Sheffield lived. He was a gentleman of great ſpirit; him therefore they contrived how to make away, and before they parted, Leiceſter (who was perfect in thoſe villainies) undertook the charge of it. Not long after, being at at Normanby, and her ſiſter Holles with her, Leiceſter who had wrote letters to her, in one (after many amorous expreſſions) told her, *That he had not been unmindful in removing that obſtacle, which hindred the full fruition of their contentments; that he had endeavoured one expedient already, which had failed; but he would try another, which he doubted not would hit more ſure.* This letter (as ſhe was going down ſtairs to walk abroad) ſhe dropped in pulling her handkerchief out of her pocket, and her ſiſter Holles, following her, took it up, and either overcome with a woman's curioſity, or guided by a higher providence, ſhe put it in her pocket and read it, when ſhe found her opportunity; and finding therein a plot againſt her brother's life, reſolved (as it befitted her) to acquaint him with it. The lady ſoon after miſſed the letter, and being ſufficiently affrighted, conſcious enough of what was in it, ſhe ſtrictly examined all her women (the gentlewoman from whom I had this relation, was one of them) at firſt with intreaties, at length with ſeverity and cruelty. But out of them, who indeed knew nothing, ſhe got nothing. Then ſhe came to her ſiſter Holles, and falling down on her knees beſought her, if ſhe had found any ſuch letter, to deliver it unto her, aſſuring her, that nothing of harm ſhould come from what the contents of it might ſeem to threaten. But ſhe was inexorable, and would not own the knowledge of any ſuch accident. Shortly after the Lord Sheffield returns home, and his ſiſter Holles (watching her opportunity) gives him the letter. He reads it with anger and amazement; that night he parts beds, the next day houſes, and retired from her. He meditates with himſelf in what manner he might beſt take an honourable and juſt revenge upon the adulterers. Having reſolved, he poſts up to London to effect it; but the diſcovery was arrived at the knowledge of Leiceſter before him; who finding a neceſſity to be quick, bribes an Italian phyſician (whoſe name I have forgot) in whom the Lord Sheffield had great confidence, to poiſon him, which was immediately effected after his arrival at London. He being removed by this villainy, ſhe expected the reward of it, that Leiceſter, as he promiſed, ſhould have married her; but he (according to the nature of all men, who think baſely of their proſtitutes) after he had cohabited with her ſome time, and begot on her a baſe ſon (Sir Robert Dudley, who called himſelf Duke of Northumberland (36)) rejects her and marries the Lady Lettice, widow to Walter Devereux Earl of Eſſex, who, 'tis thought, ſerved him in his own kind every way. I have been, concludes this author, the longer and more punctual in this relation, becauſe it is known to few, yet a certain truth (37).

(36) See ſome account of this perſon in the article GREAVES [JOHN].

(37) The tragical part is touched upon in Leiceſter's Commonwealth, a Satyre upon Leiceſter, diſperſed in the days of Queen Elizabeth; but Mr Holles ſays, he received the relation from a perſon of credit then living in the family, who gave him an account of the ſhare his aunt Holles had in it.

[K] *He purchaſed his Barony.*] Mr Gervaſe Holles obſerves, that after the entrance of King James, the ſale of honours was become a trade at Court, and whilſt the Duke [of B.] lived, ſcarce any man acquired any honours, but ſuch as were either his kindred, or had the fortune (or misfortune) to marry with his kindred, or miſtreſſes; or paid a round ſum of money for it. Nor indeed (continues this author) did that way of merchandiſe ceaſe all the reign of our laſt martyred King (38), which was one cauſe, and not the leaſt of his misfortunes. I have heard the Earl of Clare (I now treat of) often inveigh bitterly againſt it, and he would uſually call it *temporal ſimony*. I remember once I took the liberty (hearing him ſo earneſt on that ſubject) to aſk him, why he would purchaſe himſelf, ſeeing he condemned the King for ſelling. He anſwered, *That he obſerved merit to be no medium to an honorary reward; that he ſaw divers perſons, who, he thought, deſerved as little as he either in their perſons or eſtates, by that means leap over his head; and and therefore ſeeing the market open, and finding his purſe not unfurniſhed for it, he was perſuaded to wear his money, as other men had done.*

(38) This was written, as has been already obſerved, in 1658.

[L] *He withdrew from Court.*] For what reaſon principally is not known, but there was found written by his own hand in one of his books, theſe ſix lines.

Actæon once Diana naked ſpied
At unawares, yet by his dogs he died.
So ill, not done but taken in all things,
Doth cloud the uncleared eyes of minor Kings.
Then haſte from Courts of ſuch unſound complexion,
If that thy ſafety be in thy election.

[M] He

However, the ſame favourite, eight years afterwards, for 5000 pounds, procured him the Earldom of Clare [*M*], by letters patent, bearing date 2 November 1624 (*b*). He had now acquired the higheſt dignity of honour that in reaſon he could aſpire to, which may be reckoned among the felicities of his life. Yet this was accompanied with ſeveral near and preſſing afflictions, the death of many of his children, and downfal of ſome of his neareſt friends. For between and about the time of his two creations, he buried four of his youngeſt ſons and two daughters, and ſaw the ruin of the Earl of Somerſet, and the beheading of Sir Walter Ralegh [*N*], both much eſteemed and beloved by him. King James, a little before his cloſe, diſcovered an intention of making the Earl of Clare Lord-Treaſurer; which was ſo generally believed, that ſeveral applications were made for places under him. And this was the more likely, (notwithſtanding his Majeſty's former dryneſs towards him) becauſe, about the ſame time, he bewrayed ſome jealouſies and wearineſs of the Duke of Buckingham, and an inclination to introduce again into favour the Earl of Somerſet. But his death, which followed immediately upon it, made fruſtrate both theſe intentions. King Charles, in the firſt year of his reign, diſplaced Williams Biſhop of Lincoln from the cuſtody of the Great-Seal. This the Earl of Clare was concerned at; the Biſhop being one of his intimate friends; and when the King deſigned both his ſons to be Knights of the Bath at his Coronation, and gave them notice thereof by his letters, they both refuſed it. As did alſo his younger ſon Denſil Holles to be of that maſque which was then preparing, and in which the King invited him to take a part. Neither did the Earl himſelf move towards London 'till the meeting of the Parliament; and then likewiſe wholly abſented himſelf from Court; which cauſed the King to obſerve him as a perſon diſcontented. That Parliament was remarkable for the charge againſt the Duke of Buckingham, which being delivered from the Houſe of Commons by eight reporters, was again reported by eight Lords in the Houſe of Peers, of which the Earl of Clare was one, who ſpoke to the ſame part that Mr Pym had done before. But the King quickly ſtopt their further proceedings by diſſolving the Parliament. About this time the Duke had uſed all poſſible endeavours to gain the Earl of Clare to his party; to which end he had procured two or three meetings with him in the Strand, at the Counteſs of Banbury's, but could never obtain him [*O*]. And the next Parliament (which was that of

(*b*) The preamble of this patent takes notice of his ſervices againſt the Spaniards and the Iriſh rebels, and contains the grant of an annual fee of 20 l. payable out of the cuſtoms within the port of London.

[*M*] *He procured the Earldom of Clare.*] It was not a little wondered at, that he could obtain this title of Earl of Clare. For the Lord Rich, when he was created an Earl, did very much deſire that title, and the King's counſel after ſeveral debates about it concluded, that ſince the time of the firſt Earls of Clare determined, that honour of Clare had ever been conferred on a Prince of the blood royal; Clare and Clarence being one and the ſame title, and therefore not to be allowed to a meaner ſubject. Whereupon the Lord Rich was created Earl of Warwick. But the power that procured the dignity, prevailed for the title, which was the Duke of Buckingham, to whom King James could not well deny any thing. That he procured it, is plain from a letter (the copy whereof I have ſeen) from this Earl of Clare to the then Biſhop of Lincoln, which began thus.

MY LORD,

My patent is now paſt for the Earldome of Clare (the title wherein my Lord of Warwick was ſo emboged) but what is it, that a powerful favourite cannot do, &c.

[*N*] *He had a particular friendſhip for Sir Walter Ralegh.*] There was found written by the Earl of Clare with his own hand this epitaph on him. Which though his poetry was the worſt part, ſays our author, yet I ſhall here remember.

Here lies Ralegh's corpſ, his ſoul is gone,
To inhabit many, too much for one.
By his we learn the harmes of rarity,
That ſafety only dwells in doe-nought parity.
Artes, Nature, henceforth no more ſuch pieces,
Whilſt fortune's dragon guards the golden fleeces.

Our author here takes occaſion to relate the following paſſage, not contained in the hiſtories of that time. It was much laboured by Sir Walter Ralegh's friends to ſave his life, and particularly by the Earl of Clare, who had ſome power with his proſecutor (Gondemar the Spaniſh Ambaſſador) with whom he had frequent converſations. He diſcovered, as he thought, an inclination in Gondemar to make ſuit to King James for Sir Walter Ralegh's life, in caſe he [Sir Walter] would intreat him to do it. This the Earl of Clare intimated to Sir Walter by Mr Charles Thynne, one of his faſteſt friends, bidding him withal let him know, that there was no other way for his preſervation. When Sir Walter Ralegh heard it he pauſed a little, and then gave this anſwer, *I am yet neither ſo old, nor ſo infirm, but I could be content to live, and therefore this would I do, if I was ſure it would do my buſineſs: but if it fail, then I loſe both my life and my honour; and both theſe I will not part with.* A reſolution, ſays Mr Gervaſe Holles, really not unworthy ſo famous a perſon.

[*O*] *At this time the Duke of Buckingham tried in vain to obtain him.*] His diſpoſition with regard to the Court at this time, as well as the temper obſerved by him in oppoſing the meaſures thereof, may be inferred from a letter to his ſon-in-law Sir Tho. Wentworth, afterward Earl of Strafford, on the following occaſion. Sir Thomas, in the Houſe of Commons, had ſtrenuouſly aſſerted the rights and liberties of the ſubject, and had ſo far diſpleaſed the Duke of Buckingham, that, by his inducement, the King, in 1625, declared ſix that had been members in the laſt Parliament Sheriffs of ſeveral counties, to prevent their being returned to the new Parliament. Among theſe, Sir Tho. Wentworth was for Yorkſhire, Sir Edward Coke, who had been Lord Chief Juſtice, for Buckinghamſhire, Sir Francis Seymour for Wiltſhire, &c (39). Sir Francis, having taken advice thereon, was informed that he might be returned and ſerve for any town or city out of his own county; and thereupon he made an offer to Sir Thomas Wentworth, that he would procure him to be choſen in the Weſt, if he would favour him to get him elected for ſome place in the North. Of which he wrote to the Earl of Clare, requeſting his ſentiments how he ſhould proceed; and his Lordſhip ſent him the following anſwer.

(39) Earl of Strafford's Letters, &c. Vol. I. P. 30.

SON,

You reſolve, in my opinion, of this particular rightly; for we live under a prerogative government, where book-law ſubmits unto lex-loquens; then be theſe extraordinaries, that rely rather upon inference o interpretation than the letter, too weak ſtaves for ſuch ſubjects to lean upon. This is a novelty and a ſtranger, that a Sheriff, who, according to the received rule of our forefathers, is tied to his county as a ſnail to his ſhell, may cauſe himſelf to be choſen a burgeſs or ſervant for a borough; and ſo in a ſort quit the greater and the King's ſervice for a ſubject's a leſs; therefore as a novelty it is rather to be followed than to begin it, and as a ſtranger to be admitted as a probationer, and to be embraced upon further acquaintance. For my part, I ſhall be glad if Sir Edw.

of 3 Car. I.) made the breach ſtill wider between them. For the great cauſe being heard in the Houſe of Peers between Robert Vere Earl of Oxford and Robert Bertie Lord Willoughby of Ereſby, concerning the office of Great-Chamberlain of England *, the Earl of Clare aſſerted the right of the former againſt the Duke of Buckingham's party, and made a reſolute ſpeech on the occaſion [P]. He continued to oppoſe the Court meaſures 'till the death of the Duke, and ſhortly afterwards particularly offended the King, by countenancing the report of his Majeſty's having a deſign to entertain a body of German horſe, in order to awe the kingdom. For this offence he was impriſoned for ſome time, and then reproved at the Council-board [Q]. He was alſo turned out of the commiſſion of the peace, which he took ill, and the country worſe where he lived; miſſing on the bench a perſon of ſuch courage, integrity, and ſo great abilities.

Whilſt

* Lord Willoughby at the ſame time laid claim alſo to the title of Earl of Oxford, as likewiſe to the titles of Lord Bolebeck, Sanford, and Badleſmere. See their ſeveral caſes, as delivered to the Houſe of Peers, in the Hiſtorical Collections of the noble families, Cavendiſhe, Holles, Vere, Harley, and Ogle; by Arthur Collins, Eſq; Lond. 1752. fol. p. 269, & ſeq.

Edw. Coke and Sir Rob. Philips can make their undertaking good. And I could wiſh Sir Francis Seymour were a burgeſs, ſo you were not ſeen in it: and if any of them, without your knowledge or conſent, ſhall confer any ſuch place on you, you are no way in fault thereby; and yet Cæſar's wife muſt be free from ſuſpicion. So as I may conclude, it is not good to ſtand within the diſtance of abſolute power. But I ſee the iſſue. The queſtion will fall between the King and the Parliament; the Houſe will demand her member; and the King denies his officer, and the King's election was prior, ſo as in concluſion ſome drops of diſpleaſure may fall upon the borough, whoſe charter is always in the King's reach: but this is my chimæra, and the lion may be leſs terrible than the picture. Howſoever, this well-proceeding, would put the Courtier out of his trick, ſecure the Parliament better, and the Subject in general, and make great ones more cautious in wreſtling with that high court. Yet, as you write, Son, this buſineſs is of ſuch a nature, as it is much better to be a ſpectator than an actor; and in this I give you no opinion, I only confirm your's. I am glad to hear of my daughter's good health. The Lord of Heaven continue it, and bleſs you both with his beſt bleſſings. Amen.

Your aſſured loving father-in-law,

Haughton, Nov. 27, 1625.

* CLARE (40).

(40) Ibid. p. 31.

[P] *He made a reſolute ſpeech on the occaſion.*] The Earl of Oxford claimed the Chamberlain's place (41) as heir-male, and the Lord Willoughby as heir-general, to Henry Vere Earl of Oxford, deceaſed. They were both near allied in blood to the Earl of Clare, but he had a principal love to the Veres, from which family his grandmother came; and he believed alſo that juſtice lay on his ſide. The Duke of Buckingham, on the contrary part, having ever endeavoured to ſuppreſs the old nobility, ſays our author, laboured earneſtly, both with the Judges who were to deliver their opinions, and with the Peers who were to be judges of the right, in the behalf of the Lord Willoughby; and finding he had gained the moſt of them, he haſtened the tryal a little before the Term began, and when but few of the Judges were yet come to town. They were but five, whereof two (and they of the greateſt learning and reputation) declared their opinions for the Earl of Oxford, the other two for the Lord Willoughby; the fifth (which was Juſtice Dodderidge, an able Antiquary) made a long and learned diſcourſe, but determined nothing. So ſoon as the Judges had ſpoke their ſenſe, the Earl of Dorſet ſtood up, and with an excellent memory delivered the ſum of what the Judges had ſaid, then made an eloquent oration in the behalf of the Lord Willoughby, and moved the Lords to proceed to the vote. The Earl of Clare riſes up after him, and ſpoke to this effect. *That he had not intended to have ſpoken that day, for he had ever obſerved it the manner of the Houſe of Peers, that when any great cauſe was agitated before them, after the Judges had given their opinion, the Lords took time to conſider of the arguments, and to weigh well every circumſtance, before they would proceed to judgment; but ſince that Lord which ſpoke laſt, had, with a very happy memory, delivered the effect of what the Judges had diſcourſed, and with no little force of elocution had endeavoured to incline their Lordſhips in favour of the Lord Willoughby, he would take the liberty to ſay ſomething in the behalf of the Earl of Oxford: and firſt he thought it requiſite and juſt not to proceed to the vote until they had heard all the Judges deliver their opinions; he ſaid that might be ſhortly done, for the term was at hand, when they muſt repair to town. He told them, that in caſe of right between private perſons, when the cauſe appeared any thing knotty or doubtful, the ſeveral courts never uſed to proceed unto judgment, until the matter had been deliberately argued and debated by all the Judges in the Exchequer-chamber; and if yet there appeared any diſſatisfaction, they deferred the determination of it until the next Parliament: wherefore if in leſſer cauſes and between meaner perſons, both preſent and former ages had been ſo tender in matter of right, How much more ought the Lords to be in this particular, being between perſons of ſo great nobility, and a right of the moſt antient and the moſt honourable tenure of grand Sergeantry then in being? Yet, notwithſtanding all this, if they would proceed to a vote with ſuch precipitation, he deſired them to conſider, firſt, as to the Judges opinions, the ballance yet hung even, nor would he endeavour to caſt it by making compariſons of the perſons; their Lordſhips knew them well enough* (42). *Then he wiſhed them to remember, that whenever before, as ſometimes it had happened, there had been a failing of the heir male in the direct line, not only the earldom of Oxford, but likewiſe the office of High Chamberlain, did revert unto the next collateral male of the ſame name and family. And laſtly, he wiſhed them to recollect, that this noble perſon who then made claim, was the 19th Vere who had borne that honourable title of Earl of Oxford, deſcended from Aubrey de Vere, Earl of Guiſnes in Normandy, and Beatrice his wife, ſiſter to King William the Conqueror. A family that had out-laſted three races of the blood-royal; a family that had ever been true to the Crown, and untainted in every branch of it; a family that had filled our hiſtories with the records of their noble actions, being ever, both in peace and war, moſt ſerviceable to the Crown of England. Concluding, that what Lord ſoever ſhould give a vote to take away that office from that family, he was not worthy to have the blood of a* Vere *in his veins.* But notwithſtanding this ſpeech, the right was carried by many voices for the Lord Willoughby (43). I remember (ſays our author) my Lord Clare came that day to dinner (which he ſeldom uſed to do in Parliament time), and ſitting down, he was ſilent a good while, looking very red, as he uſed to do when angry. At laſt he broke forth thus, *Well, this day I have parted with all my opinion of Parliaments, when I ſee that thoſe men, whoſe qualities and dignities ſhould render them the leaſt inclinable to fear or partiality, can yet, for fear of one great man, their fellow-ſubject, do an act ſo full of injuſtice as they have done this day in the cauſe of my Lord of* Oxford. And the next day entering the Houſe of Peers, he found four or five Biſhops talking together (all the Biſhops, by the Duke's inſtigation, had voted for the Lord Willoughby), whom he ſaluted, ſaying, *My Lords, I obſerved yeſterday you went all one way, and yet you ſhall not all be Biſhops of Canterbury.*

(41) The fee of this office was granted by Hen. I. to Alberic de Vere Earl of Oxford, the ſecond of that name, in the room of Robert Malet (Lord of the honour of Eye in Suffolk) who had been diſinherited and baniſhed in 2d Hen. I. for deſerting the King, and adhering to Robert Curthoſe. Pat. 1. Hen. VIII. p. 1. m. 26. cited in Hiſtorical Collections, &c. p. 218. by Collins.

(42) According to the Journal of the Houſe of Peers, Dodderidge, Yelverton, and Baron Trevor, gave their opinions for the heir-general: the other two, Lord Chief-Juſtice Crew, and Lord Chief-Baron Sir John Walter, for the heir-male. The major part thus declaring, the Lords voted accordingly. Journal of Parliament, 2 Car. I.

(43) Whereupon he was admitted into the Houſe, 13 Apr. 2 Car. I. with his ſtaff of that office, and took his place of all the Barons, according to the Act of Parliament of 31 Hen. VIII. cap. 10. N. B. This office has continued ever ſince in his family; His Grace Peregrine Bertie, Duke of Ancaſter, being deſcended from him.

[Q] *He was confined, and reprimanded at the council-board.*] This deſign, with a liſt of the ſeveral perſons names who were taken up and impriſoned for countenancing and for diſperſing the pamphlet in which it was written, is mentioned in our general hiſtories, to which we refer, and ſhall only obſerve, that the Earl of Clare was confined to the Biſhop of Wincheſter's houſe; and that though the Earl of Bedford very ſubmiſſively acknowledged his fault, and his Majeſty's favour in the liberty and pardon he granted him, yet the Earl of Clare would not ſpeak one word. Of which being told by ſome of his friends, he replied, *That he would thank the King for his favours, but not for his puniſhments, eſpecially when he could not underſtand that he had at all offended; for he could not think it a crime, deſerving impriſonment, to look on that paper, which had run through the hands of every man.*

[R] *He*

Whilſt the Earl continued under this cloud, the King making a progreſs into the North, together with the Prince Elector and Prince Rupert, who were then in England, continued ſeveral days at Rufford-Abbey, hunting in the foreſt of Shirwood. Whereupon, the Earl being then at Haughton, but four miles off, wrote a letter to the Prince Elector, (from whoſe mother, the Queen of Bohemia, he had found good reſpect) entreating his good offices for him with his Majeſty; which being performed, he came ſhortly after and kiſſed the King's hand [*R*]. Before this time he had altogether eſtranged himſelf from the Court; nor did he much repair to the city, but lived for the moſt part in the country, at his mannor of Haughton and his houſe in Nottingham, cheriſhing more quiet and contented thoughts in a retired life. He had by his lady ſix ſons, John, Denſil, Francis, William, and two who died infants of the name of Charles; and four daughters, Eleanor, Arabella, Elizabeth, and Margaret. The three younger ſons and Margaret died children, Elizabeth when ſhe was near marriageable, and Francis at 18 years of age *. So that, about twelve years before his death he had only four remaining, the two eldeſt of each ſex. Of theſe he ſaw both his ſons (of whom hereafter) and Lady Arabella married †, and lived to ſee grandchildren from all of them. Only Eleanor at his death continued a maid, afterwards married to Oliver Fitz-Williams Earl of Tyrconnel. The ſunday before he fell ill of that diſorder which carried him off, going from prayers at St Mary's-church in Nottingham, he ſuddenly ſtept (taking his lady with him) into a place in the church; where laying the end of his ſtaff upon the ground, he ſaid, *In this place will I be buried.* After he found himſelf ill, he ſent for Dr Plumtree, accounted the beſt Phyſician there, who gave him phyſic but it never wrought; whereupon he grew worſe, and after a few days delivered his ſoul into the hands of God, on Wedneſday the fourth of October *1637*, at his houſe called Clare-palace in Nottingham, aged 73 years and about 4 or 5 months, as the inſcription on his picture ſets forth. He was interred in Clare-iſle in St Mary's-church, the place where himſelf had appointed. There was no Will found after his death, except one made above 40 years before upon his going the iſland voyage, wherein were ſeveral legacies to perſons dead before him. But a day or two before his departure he called his daughter Eleanor to him, and told her he gave her 6000 pounds, which was ready in the houſe for her. Mr Gervaſe Holles has drawn a character of him, which is inſerted below [*S*]. His eldeſt ſon John, the ſecond Earl of Clare, was born at Haughton June

* See his monument in St Edmund's chapel in Weſtminſter-abbey, with an inſcription in Engliſh verſe by his father.

† Viz. To Sir Tho. Wentworth, afterwards Earl of Strafford. See his article.

[*R*] *He came to Rufford-abbey and kiſſed the King's hand.*] He then told his Majeſty, that *he found he had incurred his diſpleaſure, but he did not know for what, only he conceived it was by the miſinformation of ſome perſons that were ill affected to him: and humbly beſought his Majeſty, that when the like ſhould happen again, he would tell him of it, aſſuring him, that he would either clear himſelf, or acknowledge his error if he had offended, and aſk his pardon; which he could not doubt of, becauſe his errors would appear only errors of ignorance; and greater faults than theſe his Majeſty pardoned every day.* The King promiſed him he would, but the Earl ſaid, he forgot his promiſe. He would ſay of the courtiers at that time, *that they had little power to do good, but power enough to do hurt: for they could miſrepreſent any man to the King, and ſtamp an ill character upon him, and he ſhould never know who injured him, and in what he was injured.*

[*S*] *His character drawn by Mr Gervaſe Holles.*] The author having obſerved that Mr William Skipwith wrote a handſome elegy upon the Earl, which he once had, but had loſt it, proceeds thus. I ſhall now give ſome deſcription of his body and diſpoſition. He was a perſonage of a gallant preſence, full ſix feet high, ſtraight, and of a ſtrong limb. In his youth he was ſomewhat lean, but in his later days grew well in fleſh, though not corpulent: his hair was of a light brown, ſomething towards an aburne, his eyes grey, his ſkin white, and his cheeks roſy. In his face there was a ſtrong mixture of ſeverity and ſweetneſs, and his motion was ſtately, befitting ſo great a perſon. I heard a lady ſay, that he came when he was a young man to the Earl of Huntingdon's, where he found divers perſons of quality dancing, and he fell into the dance with them with his cloak and rapier on, which he performed with the beſt grace that ever ſhe had ſeen any thing done in her life. He had a moſt becoming ſeat on horſeback, and was an excellent horſeman. In his youth he had a very active body, nor was it at all unſerviceable in his old age; for I have ſeen him walk often from Chaloner-houſe in Clerkenwell, where he then lived, to the Parliament-houſe at Weſtminſter, his coach paſſing after him. And I remember he ſeeing his ſon Denſell fencing, he took the other foyle, and played with him, which he performed with great ſkill (for he was ſingularly good at his rapier), and with as active a delivery, as the youngeſt man of them all. Thus much as to his body. But his mind was yet the far nobler part, which was adorned with all the ornaments that the Univerſity, the Inns of Court, the King's Court, the Camp, Travayle, and Language could enrich him with. I muſt not forget the judgment of Sir John Brooke, now Lord Cobham (who was contemporary with him) which he delivered at the Lord Lexington's table in theſe words, *I have travailed the beſt partes of* Chriſtendome, *and have converſed with the moſt noble perſons where I came, yet in all my life I never met with ſo exactly accompliſhed a gentleman as my Lord of* Clare. He had a felicity of converſation beyond all other men. No perſon of what condition ſoever, that came to him, parted away uncontented; he had ſo juſt a penetration, that he quickly found the bottom of his capacity, and which way his genius lay, then would diſcourſe with him civilly in his own element, ſo as all men took their leave of him with a great deal of ſatisfaction. His table was in effect a continual *convivium philoſophale*; for after he had reaſonably well checked his appetite, he would ever ſtart ſome diſcourſe, either in divinity, philoſophy, or hiſtory, in all which he was excellent. So that every man there had his mind as well as his body feaſted. It hath often repented me, that I have not gathered and preſerved thoſe apophthegms, which fell from him at ſeveral times, which really would have weighed with the beſt of the Antients. His table was always good, and his retinue anſwerable, having ever the ſons of ſome gentlemen to follow him, who would ſend them to him, as to a ſchool of knowledge (44), virtue, and temperance, for he hated drunkenneſs and debauchery, nor would he endure exceſs in his buttery, which cauſed his houſe-keeping (in this lewd age where no entertainment is valued, that does not ſwim in drink) to be the leſs commended. The gentleman of his horſe once took the liberty to tell him, that his table was good, and a little charge more would make his houſe-keeping without exception, and much to his honour, viz. 100*l.* more yearly in his cellar, and as much in his ſtables: he replied, Watſon, Watſon, *look you to my profit, I will look to my honour myſelf* (45). He was exceeding eloquent, and in his familiar letters, had one of the beſt ſtiles that ever I met with. One diſcourſe he was writing, and I believe finiſhed before he died, but I have ſeen but a part of it. It was an anſwer to ſome paſſages in Sir Francis Bacon's Eſſay on Empire; wherein he ſays, that the errors of Princes for the moſt part proceed from a fatiety of government,

(44) He took care of the education of Mr Gervaſe Holles for more than 3 years, deſcending even to the pains of reading Logic and Philoſophy to him himſelf.

(45) Mr Gervaſe Holles obſerves, that his grandfather was more liberal this way, and even ſtiled the wonder of his age, *for* conſtant hoſpitality, which cauſed the Earl to let fall an unbecoming word, that *his grandfather ſent all his revenues down the privy-houſe.*

June 13, 1595; and marrying Elizabeth, eldeſt daughter and coheir of Horatio Lord Vere of Tilbury, beſides other children, had iſſue by her Gilbert, the third Earl of Clare; who was born at Hackney near London, April 24, 1633, and took to wife Grace, fourth daughter of the honourable William Pierpoint, ſecond ſon of Robert Earl of Kingſton, who brought him three ſons; the eldeſt of whom, John, born January 9, 1661-2, became the fourth Earl of Clare; and four daughters, of whom the youngeſt, Grace, being married to Sir Thomas Pelham of Suſſex, became mother to the preſent Duke of Newcaſtle; to which title, as alſo to that of Marquis of Clare, he by creation (*i*) ſucceeded her brother his uncle, the fourth Earl of Clare, who obtained the ſame by creation, May 14, 1694 (*k*), having married Margaret, third daughter and coheir of Henry Cavendiſh Duke of Newcaſtle, by whoſe Will he alſo ſucceeded to the whole of the Cavendiſh eſtate. But dying July 15, 1711, without male iſſue, the family of Holles thereby became extinct. His Grace made his laſt Will and Teſtament Auguſt 29, 1707, four years before his deceaſe; *Wherein he deſires his body may be buried in that vault in Weſtminſter-abbey, where the Lord* Tilbury *lies buried* *, *and that his funeral be performed in ſuch manner, and ſo much money be expended therein, as his executors ſhall think fit. And that they, in ſome convenient time after his deceaſe, ſhall cauſe a monument to be erected for him in ſuch part of the ſaid church as they ſhall think proper. He bequeaths to his wife Margaret, Lady-Ducheſs of Newcaſtle, his capital manſion-houſe, called Orton-houſe, with the appurtenances in Orton or elſewhere in the county of Huntingdon, which he purchaſed of the Earl of Kingſton, to her and her heirs and aſſigns for ever: but he deſires her Grace to diſpoſe of the ſame to his daughter the Lady Harriot Cavendiſh Holles, if by her duty and obedience to her mother ſhe ſhall merit and deſerve the ſame; and, confirming his wife's jointure, he alſo gives her the uſe of all his plate during her life, and all his jewels abſolutely. He bequeaths to his ſaid daughter and her heirs for ever, all his eſtates in the counties of Stafford, York, and Northumberland (except ſuch as are of his own purchaſing in the county of York), over and beſides* 20000 *pounds, which is provided to be paid her by his marriage-ſettlement; which ſettlement, as to the* 20000 *pounds, he alſo ratifies and confirms: and as for all other his eſtates, he gives and deviſes them to the honourable Thomas Pelham* (now Thomas Holles (*l*) Duke of Newcaſtle) *ſon and heir apparent of the Right Honourable Thomas Lord Pelham, entailing them on him and his heirs male; in default, to the Honourable Henry Pelham, one other of the ſons of the ſaid Thomas Lord Pelham, and his heirs male: in default, to the Honourable William Vane, ſecond ſon of Chriſtopher Lord Bernard, with like remainder: in default, to the Honourable Gilbert Vane* (*m*), *ſon and heir of the ſaid Lord Bernard and his iſſue male: in default, to the right heirs of him the ſaid John Duke of Newcaſtle. Provided that whoever ſhall poſſeſs the ſaid eſtates ſo deviſed, ſhall aſſume the name of Holles* ‖. His Grace was buried in Weſtminſter-

(*i*) He was firſt created Earl of Clare and Viſcount Haughton Oct. 26, 1714, and afterwards Duke of Newcaſtle and Marquis of Clare, Aug. 2. 1715, with remainder to his brother Henry Pelham.

(*k*) He was alſo created, by the ſame patent, Marquis of Clare. N. B. The Dukes of Shrewſbury, Leeds, Bedford, and Devonſhire, were all created ſo about the ſame time. Boyer's Life of Queen Anne.

* The family of Vere Earls of Oxford was then become extinct by the death of Aubrey de Vere, March 12, 1702-3, whoſe daughter Diana became his ſole heir, being married, Apr. 1694, to Charles Beauclerk Duke of St Albans, ſon to King Charles II. by Mrs Eleanor Gwin, from whom is deſcended George the preſent Duke of St Albans. Coſſins's Hiſt. Collect. &c. p. 282, 283.

(*l*) He aſſumed the name and arms of Holles, in purſuance to his uncle's Will, being therein adopted his heir.

(*m*) Theſe two Vanes were his Lordſhip's nephews, by his eldeſt ſiſter Elizabeth, wife to their father, Chriſtopher Lord Bernard.

‖ Ex Regiſt. vocat. Fagg. No. 548 quire 202. in Cur. Prærog. Cantuar.

vernment, which makes them deſcend many times, for variety, to low entertainments, as *Nero* to be a ſtage-player, *Commodus* a fencer, and the like. The Earl of Clare on the contrary proves, that the errors of Princes are in the perſons abuſing the office, and not in the office appropriated to a fit perſon. A diſcourſe worthy the public view, being clad in an excellent ſtile, and deſigned with a ſingular judgment. He was of a moſt courteous and affable diſpoſition, yet preſerved exactly the grandeur and diſtance of his quality: nor was it poſſible, but all men ſhould have loved him, had not the poiſon of envy ſwoln the ſtomachs of divers, who therefore were his enemies, becauſe they well knew, what little inconſiderable trifles they were in compariſon of him. His youth was lively and ſpiritful, and he would ſay, it was a prepoſterous thing to ſee a young man old; but his age was ever accompanied with a chearful gravity. I remember that endeavouring to reconcile a difference between two of his poor neighbours, the one of them let a very flovenly ſpeech fall concerning the other, at which the by-ſtanders fell a laughing; he preſently rebuked them ſaying, *Ye ought rather to pity the poor man, than deride him; for if God had given him better education, he would have expreſſed better manners.* A better huſband, that is a more kind or careful, lived not; and indeed he had the happineſs of a wife, that deſerved all goodneſs from a huſband. Neither was there a better father, or a better friend, more conſtant both in proſperity and adverſity; of which the Earl of Somerſet and the Biſhop of Lincoln had good experience. I well remember, that the firſt time I ſaw the former of theſe (after the Earl's deceaſe) he ſtood a pretty while ſad and mute after he had ſaluted me; then he began thus. *You and I, Mr Holles, have loſt a good friend.* And then throwing up his eyes, he thus proceeded. *Next the loſs of myſelf, the loſs of my Lord Clare was the greateſt calamity that ever befel me. I was once upon the top, when I was able to confer favours, and did ſo to ſome; though I muſt ſay, to my Lord of Clare, I never did one conſiderable courteſy. Yet I muſt tell you, bad I ſtood, he had riſen; but in my calamity, and when I was underfoot, whether I look upon your nation or my own countrymen that I had deſerved well of, I found not one faithful friend but my Lord of Clare.* One other paſſage concerning him I muſt not omit. His mortal enemy, Gervaſe Markham, being then ſheriff of Nottinghamſhire, (which as I take it was in 1625) was robbed of about 5000 l. during his abſence from home, by two of the Soubeys his reputed baſtards, and others. But purſuit being made after them, they hid about 2000 l. of the money in Gameleſton woods (a lordſhip of the Earl of Clare), which was found, and brought to the Earl, as lord of the fee, to whom, as felons goods, it eſcheated: but he preſently ſent the whole back to Gervaſe Markham from whom it was ſtolen, ſcorning to advantage himſelf by the ſpoils of his enemy. This act more enraged Markham than the loſs of his money, becauſe it impoſed upon him an obligation to his adverſary; yet after he had curſt and ſwore like a beggar, he impoſed upon himſelf ſo good manners, as to come to the Earl at Haughton, to give him thanks, which, from the time of their combat, was the only time, during their lives, that they had ſeen one another. He [the Earl] was naturally juſt, but nothing liberal, no man living being more ready to oblige by his intereſt and endeavours, but not at all by his purſe: which I have often fancied to be the reaſon, why our modern writers are ſo ſilent concerning him. For it is not merit ſo much as munificence that ſtuffs hiſtory with ſo many commendable characters. And writers for the moſt part remember not ſo willingly, who deſerve well, as who deſerves well of them. This little monument I have raiſed to his memory, which I hope ſhall laſt, as long as my poſterity laſts; at leaſt ſo long as any of them ſhall retain a love either to goodneſs, or to their anceſtors. I ſhall conclude concerning him, making uſe of that of Tacitus upon Agricola: *Quicquid & Eo amavimus, quicquid mirati ſumus, manet, manſurumque eſt in animis hominum, in æternitate temporum, fama rerum. Nam multos Veterum velut inglorios & ignobiles oblivio obruet, Clarenſis Poſteritati narratus & traditus ſuperſtes erit.*

Weſtminſter-abbey according to the appointment in his Will, Auguſt 9 following his deceaſe, and in 1723, his only child Henrietta Cavendiſh Holles Harley erected a magnificent monument to his memory (*n*), in the north croſs iſle near the entrance by Solomon's porch on the left hand. In the 5th of George I. there paſſed in Parliament an act, to render more effectual the agreements that have been made between Tho. Holles Duke of Newcaſtle, Henry Pelham Eſq; Edward Lord Harley, and the Lady Henrietta his wife, William Vane, and Gilbert Vane, Eſqrs. ſons of Chriſtopher Lord Bernard, or any of them, in relation to the will and eſtate of John late Duke of Newcaſtle; and for ſettling the ſame in ſuch manner as may be agreeable to the intent of the ſaid agreements, and for other purpoſes therein mentioned. Her Grace Margaret, Ducheſs-Dowager of Newcaſtle, deceaſed at London in the 65th year of her age, Dec. 24, 1716, and was interred with her anceſtors in the burial place of the Cavendiſhes, in the church of Bolſover, January 5 following. Their Graces only daughter and heir, the Lady Henrietta Cavendiſh Holles, is now [1752] Counteſs-dowager of Oxford, and reſides for the moſt part at Welbeck in Nottinghamſhire. Her Ladyſhip was married October 31, 1713, to the Right Honourable Edward Lord Harley, only ſon and heir of Robert Earl of Oxford and Earl Mortimer, Lord High-Treaſurer of England; and by the death of his father, May 21, 1724, ſucceeded to his honours and eſtate, and died June 16, 1741. They had iſſue an only daughter their heir, Lady Margaret Cavendiſh Harley, married July 11, 1734, to his Grace the preſent Duke of Portland. P

(*n*) See the inſcription on the monument.

• HOLLES [DENSIL], Baron of Iſfield in Suſſex, and ſecond ſon of the former, was born in 1597 at Haughton, his father's ſeat in Nottinghamſhire. He had a noble education ſuitable to his quality, and his excellent endowments appeared from his youth, having the advantage of ſo great a tutor as his father, who gave all his children an education equal to the beſt, and beyond moſt of the nobility (*a*); and this was his favourite ſon [*A*]. He had likewiſe the advantage of being for ſome time a companion and bedfellow to the Duke of York, afterwards King Charles I. who took great delight in him. However, as ſoon as he came to man's eſtate, falling in with the ſentiments of his father, he ſided with the party againſt the Court in the laſt Parliament of King James I. having obtained a ſeat there as one of the repreſentatives for Mitchel in Cornwall (*b*). He perſevered in the ſame temper after the acceſſion of King Charles I. to the throne, as has been already mentioned in the preceding article. Early in this reign he married [*B*] Dorothy, ſole

(*a*) Memoirs of the family of Holles, by Mr Gervaſe Holles, ubi ſupra.

(*b*) Willis's Notit. Parliament. p. 188.

[*A*] *Denſil was his favourite ſon.*] Mr Gervaſe Holles obſerves (1), that the Earl ſaw nothing but arguments of comfort in his children, ſave only a difference, which happened betwixt his two ſons, and which to his dying day he could not reconcile, they being both of great ſtomachs. Yet the ground at the firſt was ſlight, being only a trivial difference between their wives at cards, which drew in the huſbands to make a party. Though, continues he, ſomething of jealouſy might ſtick concerning their father's affection; the Earl ſeeming to diſcover more of kindneſs to his younger ſon; led to it paradventure by the ſame ground, which makes grand-fathers love beſt their grand-children, as thoſe that may be the leſs content to part with them.

(1) In Parentela & Parentalia Hollefiorum, MS. cited in the preceding article.

[*B*] *He married early in the reign of King Charles I.*] This is evident from the concluſion of the following letter (2), wrote by him to his brother-in-law Sir Thomas Wentworth (afterwards Earl of Strafford) then confined in Kent for refuſing to pay the loan money in 1626.

(2) Earl of Strafford's Letters, Vol. I. p. 40.

GOOD BROTHER,

'To begin without complement, as I wiſh we may 'ever ſo continue (3), I know not, how your foggy 'air, you complain of, may affect your brains; but I 'am ſure ſomething has played ſuch tricks in mine, 'that Jupiter's head aked not more, when Minerva 'was in it all in armour, than mine has done this 'fortnight; but if I had a Minerva, it was a *craſſa* 'Minerva, for I had never a whit the more wit for 'it; and God be thanked I am now pretty well eaſed 'of the pain, as I think by this time you are of your '*Marſhalſea* ill air (a thing fatal to all priſoners) and I 'like your remove better beyond ſea into Kent, than 'Currington's over Thames into the Fleet, but ſeeing 'he had not a horſe, I think their Lordſhips did well 'to ſend him a journey by water. I ſhall deſire to 'know where your rendezvous is, that I may now and 'then afflict you with ſome weſtern intelligence; for 'you know, we have the active ſpirits of the time, 'and accordingly we were the firſt that cried out upon 'the dull ſleepy time of peace, and deſired action, in 'which virtue does conſiſt. But we now to our coſt 'find the old logic rule true, there is no action without 'paſſion; for we ſuffer ſufficiently for it, and now we 'can cry out as faſt on the other ſide: that ſince theſe 'wars all our trading is dead, our wools lie upon our 'hands, our men are not ſet on work, our ſhips lie in 'our ports unoccupied, to be ſold as cheap as fire 'wood: land, ſheep, cattle, nothing will yield 'money; not to ſpeak of other petty inconveniences 'we have found by the ſoldiers raviſhing mens wives 'and daughters (getting them with child otherways 'was fair play, counted a favour); killing and carrying away beefs and ſheep off the ground (ſtealing of 'poultrey was not worth the ſpeaking of); killing and 'robbing men on the highway, nay in fairs and towns '(for to meet a man coming from the market with a 'pair of new ſhoes or a baſket of eggs or apples, and 'take them from him, was but ſport and merriment), 'and a thouſand ſuch other pretty pranks; come a 'a dozen of them to a Juſtice of Peace and Deputy 'Lieutenant's houſe, and make my lady give them five 'or ſix pieces to be gone. Why we weſtern lads reſpect not ſuch things as theſe, ſo we may have wars, 'and be in action; for as you ſay our prizes make 'amends for all; yea, but the craft is in the catching, 'and I'll aſſure you, we are not overburthened with 'the ſtore of them; and thoſe few that are, now and 'then a barque of fiſh, or canvas from our neighbours 'and late friends by alliance the French (4), by that 'time my Lord Admiral and his Vice-Admirals be ſatisfied, and all other rights and wrongs be diſcharged, 'a ſlender gleaning is left for the taker. And I do 'not find the country to be any thing the better ſerved 'for the ſale of them, for every thing is at a moſt exceſſive rate, I proteſt a great deal dearer than at London. No, the prizes moſt common now a-days are 'the *priſes des corps* of you rebellious gentlemen, who 'will not open your purſe-ſtrings, and ſupply his Majeſty's wants for the maintenance of the wars, and my 'Lord Duke's expences by ſea and land, in war and 'peace. I hear there are more of you ſent for, fourteen out of Yorkſhire, eight out of Cornwal, *cum multis aliis, quos nunc perſcribere longum eſt*, or rather *quos non proſcribere longum eſt*; for this is the Engliſh 'of it, it will not be long before many more of you be 'baniſhed your own homes. I hope now you ſee, we 'play fighting in earneſt; take towns, and countries, 'whol-

sole daughter and heir to Sir Francis Ashley *, one of the King's Serjeants at Law, and Recorder of Dorchester, whereby he became seated at Winterburne St Martin in Dorsetshire; and in the Parliament which met March 17, 1627, being returned for Dorchester †, he collected the three famous resolutions against Popery and Arminianism, and the King's right to tonnage and poundage, without consent of Parliament; and, together with Mr Valentine, held the Speaker of the House of Commons forcibly in the chair, while they were read by Sir John Elliot. He was, with the rest concerned, sharply prosecuted for this violence, which rendered him still more irreconcilable to the Court [C]; and being returned again for Dorchester, in the Long-Parliament called in 1640 ‖, he was then at the head of the moderate Presbyterian party [D]; and though he would not be concerned in the prosecution of his brother-in-law the Earl of Strafford, yet he carried up the general impeachment of Archbishop Laud. He was one of the five Members accused of high-treason by the King, in January 1641; and in consequence thereof, at the breaking out of the Rebellion, had a regiment conferred upon him by the Parliament; and having been nominated by the Commons as a fit person to be trusted with the militia (*c*), was made Lieutenant of Bristol, and exercised the militia there. Thus, notwithstanding he was well affected to the establishment both in Church and State, yet he unwarily concurred

'whole islands, scare our enemies, beggar ourselves; 'for the end of our victories, I am afraid, will be as 'the good wife said to my Lord Bishop by her medi- 'cine, we shall be never the better, nor they much 'the worse. In the mean time we have lost many 'good men, yet let us make the best of it, and I hope 'it will make our wives, instead of bearing wenches, 'which of late you say they have been much given to, 'fall to bringing of boys, young soldiers for the rein- 'crew of our army; and I know no reason, but mine 'should begin (5), and she had as good do it at first, 'for if she do not, at her peril I hope to make her 'go again for it; and when my sister Arabella shall 'see how mine is served, I hope she will take fair 'warning, and do as she should do, but I fear not her 'so much, for she has begun pretty well already (6). And 'now I will close my letter to you, as you do your's 'with thanks by the way for it (as also for the whole 'letter) heartily praying, she may so continue to make 'you a glad father of many goodly and godly boys, 'and some wenches among, least the seventh work 'miracles, as old wives will tell us; and herself be a 'joyful and good mother, as I know she is a good and 'loving wife, and long may she so be to your comfort 'and her own; and this is the prayer of,

'Your most affectionate

Dorchester,
Aug. 9, 1627. 'loving brother and servant,

'D. Holles.'

[C] *Sharply prosecuted for this behaviour, which rendered him more irreconcilable to the Court.*] Mr Gervase Holles (7) was of opinion, that his opposing the Court prejudiced his father the Earl of Clare in the King's judgment, and relates the following circumstance. A friend of the Earl's besought the King not to impute any miscarriage of the son to the Earl his father, nor let him suffer for the son's offence in his Majesty's opinion: the King replied, *He was sorry with all his heart for the miscarriage of his old companion and bedfellow; however he would be so far from reflecting on the father in it, that he would be content to bear the father in the son's behalf.* Yet, proceeds this author, was Denzil Holles kept close prisoner in the Tower for above twelve months, and when with much difficulty his liberty was procured, he was bound to his good behaviour for many years after. But he does not say that the father accepted the King's kindness in making the overture for an application, and strongly suggests the contrary both by his silence, and by the account he gives of the Earl's conduct at this time, as related in the preceding article. And it may be observed, that though Mr Holles was one of the five Members of the House of Commons accused of high-treason by his Majesty in January 1641. Yet being appointed of the committee to carry propositions agreed to be made to the King for a peace in the beginning of November 1644. His Majesty made no objection to him, as he had before to others that were accused, and nominated in former treaties (8). 'Tis true his eyes were then open, so that he discerned the designs of those, who were afterwards generally stiled *Root-and-Branch men* (9), and accordingly these propositions producing the treaty of Uxbridge, he was one of the commissioners there, who, as Lord Clarendon remarks (10), 'desired a peace upon much honester conditions 'than they durst own, and that he was the frankest 'among them in owning his animosity and indignation 'against all the independent party, and was no other- 'wise affected to the Presbyterians, than as they con- 'stituted a party, upon which he depended to oppose 'the other, foreseeing that many of those, who ap- 'peared most resolute to concur with him, would by 'degrees fall from him, purely for want of courage, 'in which he so abounded.' There are several instances of this signal courage, a very remarkable one is related by the same historian as follows. Holles one day upon a very hot debate in the house, and some rude expressions which fell from Ireton, persuaded him to walk out with him, and then told him, that *he should presently go over the water and fight him.* Ireton replying, *his conscience would not suffer him to fight a duel.* Holles in choler pulled him by the nose, telling him, *if his conscience would keep him from giving men satisfaction, it should keep him from provoking them* (11). We have another instance from Mr Whitlock (12), who was an eye-witness of it, being joined among others with Mr Holles to carry the Parliament's propositions for peace to the King at Oxford, in November, 1644. Soon after their arrival, some officers of the King's army coming into the hall of the inn, where they were lodged by the Governor's order, quarrelled with their servants, calling them, and their masters, and the Parliament, *rogues, rebels,* and *traytors,* and would not suffer them to come near the fire, on which there ensued a fray; and the servants acquainting their masters with it, Mr Holles went presently to one of the King's officers there, a tall, big, black man, and taking him by the collar, shook him, and told him it was basely and unworthily done to abuse their servants in their own quarters, and contrary to the King's safe conduct; and presently took his sword from him. This encouraged Mr Whitlock to do the like to another officer; and the result was, that the action being approved by the Governor, he sent the two disarmed officers to prison, and the commissioners were afterwards quier.

[D] *He was at the head of the moderate Presbyterian party.*] The last mentioned noble author gives him this character (14). 'That he was as much valued and 'esteemed by the whole party [against the Court] as 'any man; as he deserved to be, being of more ac- 'complished parts than any of them, and of great reputation by the part he acted against the Court and the 'Duke of Buckingham in the Parliament of the fourth 'year of the King, and his long imprisonment and sharp 'prosecution afterwards upon that account, of which he 'retained the memory with acrimony enough: but he 'would in no degree intermeddle in the counsels or pro- 'secution against the Earl of Strafford (which he could 'not prevent) who had married his sister, by whom he had all his children (15), so that he was a stranger to 'all those consultations, though it did not otherwise in- 'terrupt the friendship he had with the most violent of 'those prosecuters. In all other contrivances, he was in 'the most secret councils with those who most governed, 'and was respected by them with very submiss applica- 'tion as a man of authority.'

[E] *After*

concurred in all the measures of those who aimed at the utter extirpation of both, and thereby helped to put into their hands that sword which was employed against himself, when it was too late to oppose them *. After having suffered much from both sides, he joined heartily in bringing back [E] the King [Charles II.]; who for that service was pleased before his Coronation to advance him to the dignity of a Baron of England, by the style of Lord Holles of Isfield (d) in the county of Sussex, having before called him into his Privy-Council (e). He was afterwards employed in several weighty affairs of State; though

* When Cromwell had brought his designs to perfection, he said at Kingston in 1648, that he was able to rule the kingdom as Holles. Hist. of Independency, Part iii. p. 21[illegible] edit. 1648. 4to.

(d) The patent bears date 20 April, 13 Car. II. His son was also created a Baronet by patent, dated June 27, 1660, 12 Car. II. Heylin's Help to History, p. 634.

(e) Hist of Independency, 4th and last part, by T. M. p. 111. edit. 1660. 4to. Dugdale's Baronage, Vol. II. p. 433.

[E] *After having suffered much on both sides, he joined heartily in bringing back the King.*] We have already mentioned his sufferings in general from the King's side; and as these were so many instances of his merit on the side of the Parliament, he afterwards in his own justification to that party, *set forth* the particulars in the following account, which at the same time is a signal testimony of his singular disinterestedness in their service. Having taken notice how greatly those that adhered to the army, had bettered themselves in their fortunes, he proceeds, 'I myself for my 'sufferings after the Parliament 3 Car. which con'tinued many years, cost me some thousands of pounds, 'and prejudiced me more, had five thousand pounds 'given me by the house for my reparation. I refused 'it, and said, I would not receive a penny 'till the 'public debts were paid. Let any of them say so 'much. I desire whoever shall chance to read this, 'to pardon me this folly. I don't mean for not tak'ing the money, but seeming to boast of it. I must 'again repeat the Apostle's words, I am become a 'fool in glorying. but they have compelled me. It 'is true, I paid for a fine imposed in the King's-bench 'a thousand marks. This in the time of these trou'bles, when my whole estate was kept from me in the 'West, that for three years or thereabout, I received 'thence not one farthing, was reimbursed me (16).' Thus far on that side. On the other hand, from the year 1643, when he began (as has been already mentioned) to see into the destructive designs of the leading men in the army against the constitution, he opposed them with the same vigour and intrepidity as he had before shewn against the oppressions of the Court. To this end he found means continually to excite the King never to desist from offering propositions of peace to the Parliament even to the last, as their neglecting his gracious invitations would make them odious, if they continued in their obstinacy; and so early as 1644, advised the Earl of Essex to divest Cromwell of his command in the army, and pressed to have him accused to the Parliament as an *incendiary* *. Persevering with the same spirit in 1647 he made a motion in the House of Commons for disbanding the army, and even prevailed to have the foot regiments disbanded †. But it was now too late, and the army having got the absolute mastery impeached him of high-treason at the head of ten more of the principal members of his party. So that he was obliged to seek his safety by flying into France; where fixing his residence at *St Mere Eglide*, in Normandy, he wrote memoirs of the miseries that had befallen the kingdom. To which he prefixed the following dedication'

(16) Memoirs of Denzil Lord Holles, &c. p. 140.

* Whitlock, p. 111.

† Ibid. p. 252.

'*To the unparallelled couple,* Mr Oliver St John, *His 'Majesty's Sollicitor-General, and* Mr Oliver Crom'well, *the Parliament's Lieutenant-General, the 'two grand designers of the ruin of three kingdoms.*

'Gentlemen,

'As you have been principal in ministring of the 'matter of this discourse, and giving me the leisure of 'making it, by banishing me from my country and 'business, so it is reason I should particularly address 'it to you. You will find in it some representation of 'the grosser lines of your features, those outward enor'mities that make you remarkable, and your pictures 'easy to be known, which cannot be expected here so 'fully to the life, as I could wish. He only can do 'that, whose eye and hand have been with you in 'secret councils; who has seen you at your meetings, 'your sabbaths, where you have laid by your assumed 'shapes (with which you cozened the world) and re'sumed your own; imparting each to other, and 'and both of you to your fellow-witches the bottom 'of your designs, the policy of your actings, the turns 'of your contrivances, all your falshoods, cozenings, 'villainies, and cruelties, with your full intentions to 'ruin the three kingdoms. All I will say to you, is 'no more than what St *Peter* said to *Simon* the sorce'rer, *Repent therefore of this your wickedness, and 'pray God, if perhaps the thoughts of your hearts may 'be forgiven you.* And if you have not grace to pray 'for yourselves, (as it may be you have not) I have 'charity to do it for you, but not faith enough to 'trust you.

'So I remain,

At St Mere Eglide in Normandy this 14th of February, 1647, *St. V.*

I thank God, not in your power, and as little at your service,

Denzil Holles.

We have transcribed this address, as it is a true specimen of the temper which swayed Mr Holles's pen at that time. His indignation was indeed that of a patriot indisputably just and noble, and the general merit of the piece, does more than atone for his too hastily crediting the stories of others concerning Cromwell's cowardice at the battles of Marston-moor and Basing-house (17), especially when it is considered that he had been himself an eye-witness of that tyrant's cowardly behaviour at Edge-hill. However Mr Holles did not proceed to publish these memoirs *, restrained probably by an expectation, which there was some grounds to entertain soon afterwards, that he should be discharged by his own party in the House of Commons from the impeachment against him. This being effected in June 1648 (18), he returned home and resumed his seat in that house on the 14th of August (19), and was the first of the ten commoners in the treaty with the King at the Isle of Wight. When Colonel Pride seized on the forty-nine members, the very day that Cromwell returned from Scotland (20), Mr Holles being apprised of the inveteracy of the army against him, forbore coming to the House, whereby he escaped an imprisonment; and finding the Parliament submitted to their power, he consulted his own safety by retiring beyond the seas, and before the King's death went a second time into France. He now chose to reside in Brittany, and making use of such means as lay in his power for restoring King Charles II (21), he staid there 'till Monk came to London in the latter end of the year 1659, when he returned and took his seat in the House of Commons with the secluded members on the 21st of February. On the 2d of March, all votes against him were repealed, and the two acts of sequestrations of his estate, and on the 10th, they made him *Custos Rotulorum* of the county of Dorset. Upon the dissolution of that Parliament and the ordering writs for a new one on the 15th, he was appointed of the council of state to govern in the interim (22). During which he was one of those that held a conference at Northumberland house with Monk, where the King's restoration was proposed in direct terms, but not without some conditions (23). Hence it appears that he did not actually promote, though he readily concurred in and submitted to the Restoration, as it was afterwards brought about, without any terms or conditions. Upon the meeting of the Parliament, April 25, 1660, Mr Holles assisted by General Monk and Mr Pierpoint (ancestor to the present Duke of Kingston) placed Sir Harbottle Grimston, who was chosen speaker, in the chair (24). He was afterwards chairman of the committee of seven appointed to prepare an answer to his Majesty's letter delivered to the house May 1 (25), and was also of the committee appointed to confer with that of the Lords for preparing instructions for those who were to go with the letter of answer to his Majesty (26) and probably was the person who drew it up. Lastly, he was one of the twelve Commoners; who with six Lords, carried the Parliament's invitation to the King at the Hague to return (27), on which occasion he was pitched on to make the speech for the Commons (28), and accordingly returned with his Majesty shortly after.

Journals of that House, Vol X. p. 57.

though ſtill retaining his firſt principles, he always ſided with the country party. But for the particulars of his public employments and his conduct therein, we ſhall refer to the general hiſtories cited in the margin (*f*), the ſubſtance of which is put together in the account of his Lordſhip's life by Arthur Collins, Eſq; (*g*). 'Tis only in the view of making that account more perfect and compleat (which is the more immediate deſign of theſe memoirs), that ſome miſtakes committed therein are rectified below [*F*], and one conſiderable

(*f*) Viz. Clarendon, Whitlock, Ruſhworth, Journals of Parliament, &c.

(*g*) In his Hiſtorical Collections of the noble Families of Cavendiſhe, Holles, &c. from p. 109 to 162. Lond. 1752. fol.

[*F*] *Correct ſome miſtakes and miſrepreſentations.*] Theſe are as follow. Firſt, Speaking of the plot to bring up the army to awe the Parliament in 1641, he refers to Lord Clarendon's account of it (29), with this remark, that his Lordſhip's obſervations and concluſions may admit of ſome diſpute in readers, that will examine the ſeveral particulars that were then publiſhed. In ſupport of this general charge, nothing is produced but only that his Lordſhip aſſerts, '*That* 'Wilmot Aſhburnham *and* Pollard, *on their examinations upon oath denied their meeting at Mr Percy's* 'chamber, *and of a diſcourſe of the Parliament's neglect of the King, and favouring of the Scottiſh army,* 'the taking an oath of ſecrecy, *and ſome other particulars* [contained in Percy's letter]. Alſo alledging, 'that in all their teſtimonies produced, there was ſo little ſhew of proof of a real deſign or plot to bring up 'the army to awe the Parliament, that in truth it was 'very evident, there was no plot at all, only a free 'communication between perſons (the major part whereof was of the Houſe) of the ill arts that were gene- 'rally uſed to corrupt the affections of the people; and 'of ſome expedient, whereby in that ſo public infection 'the army (in which they had all conſiderable command, 'two of them being general officers) might be preſerved 'from being wrought upon and corrupted.' Our author apparently in the view of invalidating the force of theſe aſſertions, inſerts Percy's letter and the Earl of Northumberland's teſtimony concerning it given to Mr Holles (30), who was employed by the Houſe of Commons on this occaſion, and as it is upon his account only that this matter is introduced, it ſeems thereby to be inſinuated, that he would not have been concerned in the affair, had he not been perſuaded of the reality of the plot. But ſurely it ought to have been obſerved, in juſtice to the Earl of Clarendon, that it is no prejudice to the character of Mr Holles, to ſuppoſe him innocently drawn into this belief, and engaged in this affair by the artifices of thoſe with whom he was joined at this time, having then, as he himſelf intimated afterwards, no ſuſpicion of their deſigns (31); and that therefore Mr Holles's perſuaſion and behaviour thereupon, is far from being a ſufficient reaſon to diſpute the veracity of his Lordſhip's account, and eſpecially when it is conſidered, how very poſitive his Lordſhip is in maintaining his aſſertion concerning Percy's letter, and how well it is ſupported, a bare reference thereto may perhaps hardly be deemed enough to clear Mr Collins from the charge of partiality. The noble author having related what was generally believed afterwards concerning the letter, viz. 'That Percy finding the ſea- 'ports ſhut, and watches ſet for his apprehenſion in all 'thoſe places [beforementioned] whereby the tran- 'ſporting himſelf into foreign parts was very difficult, 'he found means to return to London, and to put 'himſelf into his brother's protection, where it is 'thought he was harboured, 'till his hurt was 'cured, the ſtrictneſs of the enquiry over, and 'till he 'had prepared that letter to his brother the Earl of 'Northumberland, which ſerved as far as in him lay 'to deſtroy all his companions.' His Lordſhip then proceeds thus. '*The truth is, that after his brother's* 'being accuſed of high-treaſon, and then upon his hurt 'in Suſſex coming directly to Nort humberland-houſe to 'ſhelter himſelf, the Earl, being in great trouble of mind 'to ſend him away beyond the ſeas after his wound 'was cured, adviſed with a confident friend then in 'power, whoſe affection to him he doubted not, and in- 'nocently enough brought Mr Pym *into the council, who* 'over-witted them both, by frankly conſenting that Mr 'Percy ſhould eſcape into France, which was all the care 'the Earl had; but then obliged him firſt to draw ſuch 'a letter from him, as might by the party be applied as 'an evidence of the reality of the plot after he was 'eſcaped; and in this manner the letter was procured, 'which made a laſting quarrel between the two 'brothers.' To confirm this his Lordſhip adds, as a ſufficient argument to evince what opinion the Houſe of Commons had of the letter, as well as of their other evidences of the plot, that they never proceeded againſt Wilmot, Aſhburnham, or Pollard, who were in their power, though they patiently attended, and importuned a trial above a year after their accuſation.

(31) In his Memoirs, &c. from the year 1641 to 1648. edit. 1699. 4to.

Another miſrepreſentation given by Mr Collins, and that founded upon a groſs miſtake concerning a matter of fact atteſted by the Earl of Clarendon, relates to the famous Proteſtation made by both Houſes, on occaſion of the ſame plot, to defend the Proteſtant Religion. His Lordſhip having recited the Proteſtation, proceeds thus. 'This oath of their own making to entangle the people (ſo like a covenant) by which ſuch admirable things had been compaſſed by their neighbours, and upon which they could make what gloſs they pleaſed when they had occaſion, as they did within two days after, ſome of their own party taking occaſion to inform the Houſe, that *it was apprehended by many well affected abroad, that if they ſhould take the Proteſtation, they ſhould thereby engage themſelves for the defence of the biſhops, &c.* Whereby without any great oppoſition, in a thin Houſe, the enſuing order was made. *Whereas ſome doubts have been raiſed by ſeveral perſons out of this Houſe, concerning the meaning of theſe words in the Proteſtation lately made by the members of this Houſe.* The true reformed Proteſtant Religion expreſſed in the doctrine of the Church of England, againſt all popery and popiſh innovations within this realm, contrary to the ſame doctrine. *This Houſe doth declare, that by thoſe words was and is meant, only the public doctrine profeſſed in the ſaid Church, ſo far as it is oppoſite to popery and popiſh innovations; and that the ſaid words are not to be extended to the maintaining of any form of worſhip, diſcipline, or government, nor of any rites or ceremonies of the ſaid Church of England.* His Lordſhip farther recites, that this Explanation was made in the Houſe of Commons, without ever adviſing with the Houſe of Peers; and that they ordered the Proteſtation, together with the Explanation, to be printed and publiſhed without conſulting with them (32). Upon this Mr Collins makes the following obſervation. That in the diurnal occurrences of thoſe times, wherein the proceedings of the Lords and Commons are ſet forth, ſome particulars relating to the Proteſtation, &c. are differently related; and, continues he, as Mr Holles (of whom I am treating) was choſen by the Commons to confer with the Lords thereon; I think it neceſſary to remark, that the Explanation beforementioned is not cited by any but the Earl of Clarendon (33). Strange eſcape! It is not only to be ſeen in Ruſhworth (34), together with the day, May 13, 1641, when it paſſed the Houſe, but was alſo printed and publiſhed that ſame year, together with Mr Holles's ſpeech on preſenting the Proteſtation to the Houſe of Peers, as alſo the Proteſtation itſelf, and the preamble; the whole concluding with the order for taking it, entitled, *Directions for more orderly making the aforeſaid Proteſtation* (35), which being not common to be met with, we ſhall inſert as follows. *It is thought fit that the Proteſtation which the Parliament lately made, be taken by the City of London, in the ſeveral pariſh-churches in the afternoon of ſome Lord's day after ſermon, before the congregation be diſſolved, by all maſters of families, their ſons, and men-ſervants, in manner and form following. Firſt, that forthwith notice of this intention be given to the miniſter, church-wardens, and ſome other meet perſons of each pariſh in London, liberties, and adjacent pariſhes, and ſome of them to give notice to the reſt of the pariſhioners. Secondly, That the miniſter be intreated (if he pleaſe) to acquaint his pariſh in his ſermon, either forenoon or afternoon, with the nature of the buſineſs, more or leſs, as he ſhall think fit, for the better and more ſolemn taking the ſaid Proteſtation; or if the miniſter refuſes it, that ſome other be intreated to preach, that will promote the buſineſs; or if neither of theſe may be had, that ſome other convenient courſe be taken by ſome well affected to the buſineſs, to ſtay the pariſh and communicate the matter to them. Thirdly, That the miniſter or miniſters of every congregation firſt take it in his or their own perſon, reading the ſaid Proteſtation in ſo diſtinct a voice, that all preſent may conveniently hear it, and that all the aſſembly preſent do*

(32) Hiſt. of the Rebellion, &c. Vol. I. p. 251, 252, 253, 8vo edition. This particular is confirmed by the author of the Diurnal occurrences of both Houſes of Parliament, from 3 Nov. 1640, to 3. Nov. 1641. P. 317—319.

(34) Ruſhworth's Collections, Part iii. Vol. I. p. 273. edit. 1692. folio.

(35) It does not appear by what authority theſe directions were drawn up, but it was evidently done in purſuance to the vote of the Houſe of Commons, die Ven. 30 July, 1641. *That this Houſe doth conceive, that the Proteſtation made by them is fit to be taken by every perſon that is well affected to Religion, and to the good of the Common wealth, &c.* Diurnal Occurrences, &c. p. 321.

conſiderable omiſſion ſupplied in remark [G]. His Lordſhip's firſt wife dying at Paris in 1665, whilſt he was Ambaſſador there, he was married in King Henry VIIth's chapel in Weſtminſter-

do make the ſame Proteſtation diſtinctly after this manner, every man taking this Proteſtation into his hand. I, A. B. do in the preſence of Almighty God, freely and heartily promiſe, vow, and proteſt, the ſame which the leading perſon took, naming the perſon. Fourthly, That there be a regiſter-book wherein every man taking this Vow or Proteſtation, ſubſcribe his name or mark, and that the names be taken of ſuch as do refuſe the ſame. Fifthly, That all the pariſhioners aboveſaid, whether in town or out of town, be earneſtly required to be preſent at their own pariſh-church in the afternoon of that Lord's-day wherein it ſhall be taken, that every man may take it in their own place, and if any be neceſſarily abſent, that they may be deſired to take it the next Lord's-day after, or as ſoon as may be with convenience. Sixthly and laſtly, That all whom it doth not immediately concern, be earneſtly required to depart. A copy of the whole lies now before me, intitled, *A True copy of the Speech made by the Honorable* Denzell Holles, Eſq; *at a Conference by a Committee of both Houſes of Parliament in the Painted Chamber, concerning the Proteſtation formed by the Houſe of Commons, which was ſolemnly made by every Member of the ſame; wherein is ſet forth the Proteſtation itſelf, and the reaſons inducing them to make it; together with their deſire that the Lords would concur with them in the ſame zeal and affection for the public ſafety, with an Explanation upon ſome doubts made upon the ſaid Proteſtation.* London printed MDCXLI. but without the printer's name. With regard to Mr Collins, it is obſervable that this famous Explanation being notoriouſly levelled againſt the Biſhops, is little conſonant to what he remarks in the introduction to his account of it concerning Mr Holles, who, ſays this author, as he was not only a ſon of the firſt Earl of Clare, and brother to the Earl Clare (a conſtant attendant of the Houſe of Peers), but had alſo by his learned and elegant ſpeeches in ſeveral debates gained great applauſe, the Houſe of Commons, in their conferences with the Lords, choſe him to deliver their ſentiments on the moſt important occaſions; *except*, continues he, *their proceedings againſt the Biſhops, wherein he would not be prevailed on to be concerned* (36). That is (as it muſt be underſtood) after he begun to ſee into their deſign againſt the Monarchy; for before that, he joined in every ſtep that was taken againſt Epiſcopacy. And beſides the Explanation (37) and Proteſtation juſt mentioned, and his ſpeech thereupon, there is in print another, and as tart a one as ever came from him, which he ſpoke againſt the Biſhops in the debate about taking away their votes in Parliament.

(36) Hiſtorical Collections, p. 115.

(37) Lord Clarendon obſerves, that this was voted in a thin Houſe; but if Mr Holles was not then preſent, he manifeſtly concurred in it afterwards.

[G] *Supply an omiſſion in that account.*] This omiſſion relates to a paſſage in his Lordſhip's private life, wherein his character being aſperſed, he printed and publiſhed his own defence, under the following title. *A true Relation of the unjuſt Accuſation of certain French gentlemen charged with a Robbery (of which they were moſt innocent) and the Proceedings upon it, with their Trial and Acquittance in the Court of King's-Bench in Eaſter Term laſt. Publiſhed by* Denzel Lord Holles. *Partly for a further Manifeſtation of their Innocency (of which, as he is informed, many do yet doubt) and partly for his own Vindication, in regard of ſome Paſſages at that Trial, which ſeemed very ſtrongly to reflect upon him.* In the introduction, having mentioned his reaſons (the ſame in ſubſtance as in the title) for publiſhing this account, he proceeds to the matter, wherein he obſerves, that theſe two gentlemen, one a youth of about ſeventeen, called *Valentine Simon, Chevalier de* [*that is Knight of*] *Hoeville*, he being deſigned it ſeems by his parents, to be a Knight of Malta, when it is uſual to give them the appellation of Knight even very young before their going thither to take upon them the vow and habit. The other, whoſe name was *Adrian Lampriere St des Maxieres*, nineteen years of age, and of a good family in Normandy, as well as the former, both of them neighbours to Lady Holles, and to her ſeat in thoſe parts, and their parents of acquaintance and friends to her Ladyſhip. That though they arrived in London on the third of November 1669, yet ſhe heard not of them, 'till they were made to cry to her out of Hertford goal, whither they were ſent on the eleventh of that month, having been ſeized with three more of their countrymen and acquaintance at Hatfield (38), for robbing four butchers upon Totternoll-hill in Bedfordſhire, on the eighth inſtant. His Lordſhip engaged with admirable diligence in their behalf, which was become abſolutely neceſſary by the behaviour of one of the butchers [Bellingham], who on every occaſion perſiſted ſteady in ſwearing very peremptorily againſt them. For that reaſon, notwithſtanding there was unqueſtionable evidence to prove their being in London on the ſame day and hour when the fact was charged upon them to be committed in Bedfordſhire, yet his Lordſhip was not ſatisfied till he had found the very perſons who actually committed the fact, and brought one of them [*Walrond*] to confeſs it in open court. 'Twas his Lordſhip's management in this laſt particular, which occaſioned the reflections upon him mentioned in the title page of his narrative, and of this he gives the following account. 'I was, ſays he, from the beginning as certain as of any thing that I had not ſeen with mine eyes, that the French gentleman were innocent, and therefore when Du Val and Mac Guy were taken up for a robbery, I did verily believe they had done this, and therefore I went with Mr Hall of Dorſetſhire to Newgate; but Du Val denied it.' Yet after two days, one of the French gentlemen came to him and told him, that Du Val had then confeſſed it to a Romiſh Prieſt an Engliſhman. 'It was upon a council-day, and, continues he, I was then going to council, where I acquainted the King with what had been told me that morning, and got the King's warrant to bring Bellingham to confront Du Val.' Whereupon taking two juſtices along with him they went to Newgate, where Du Val confeſſed the fact before the juſtices, and charged Walrond as an accomplice, who was then in the Gate-houſe on a general ſuſpicion only. His Lordſhip therefore went to him, and before Lady Broughton, keeper of the priſon, and the turnkey, aſked him, '*If he knew any thing of the robbery, &c. of which, ſays he, I deſired him but to tell me the truth. My Lord, anſwered he, as no body as yet hath come againſt me to accuſe me, ſo I have not been indicted, and if I ſhould accuſe myſelf, I might bring myſelf into trouble, and I have not yet my pardon, which I hope I ſhall obtain by the King's mercy. I replied, Mr Walrond, I will promiſe you, that whatever you ſay to me, ſhall not ariſe in judgment againſt you; his anſwer was, my Lord, I will acquit myſelf to you, and tell you all, and then did confeſs to me the whole matter, and told me many particulars; and then indeed I told him, that he had done well, and had told me, what I knew before, for that Du Val and Mac Guy had confeſſed the ſame thing; and as to his pardon, I did again aſſure him, that it ſhould be no prejudice to it, and happily it might be an advantage, for that I would endeavour all I could to help it forward. He afterwards put down in writing what he had ſaid, and I did move his Majeſty for his pardon, and got it paſſed for him in charity, as he had no money to pay for it.* But, continues his Lordſhip, he was terrified at the trial, and told, he had now confeſſed enough to be indicted for it, and ſo perplexed with queſtions, that he knew not almoſt what he ſaid, and left an impreſſion, I verily believe, with moſt of the ſtanders by, that he was gained by me to take this robbery upon himſelf, merely to ſave the Frenchmen at the bar, himſelf not at all guilty of it. But how undeſervedly that could be imputed to me, let my greateſt enemy be judge, if this my narrative be true, as I take the God of truth to witneſs that it is true, I mean for matter of fact, and for what I relate here as ſaid or done by me.' Having related the whole trial, with all the proceedings preparatory thereto, and the acquittal of the Frenchmen, he proceeds to obſerve the bad conſequences that would probably have followed, if theſe gentlemen had been condemned and ſuffered; that they had friends and kindred in their own country, who had courage enough to reſent, and very likely would have revenged it upon the next of the Engliſh they had found in France, and thence it might have bred a national quarrel. But that now they had received ſome reparation, for that having ſince brought their action againſt the butchers for an unjuſt and malicious proſecution, they had recovered four hundred pounds damages in the Common-Pleas before the Lord Chief-juſtice *Vaughan*. Lord Holles likewiſe received ſatisfaction for the

(38) They all went on horſe-back, firſt to viſit a merchant at Barnet, with whom they had ſome buſineſs, and miſſing of him, they went to ſee Hatfield-houſe, and were apprehended at the inn where they put up their horſes in that town. See a true Relation, &c. Lond. 1671. 4to. pt. 44 pages.

Weſtminſter-abbey, September 14, 1666, to Jane, eldeſt daughter and coheir of Sir John Shirley of Iſfield in Suſſex, Knight, widow of Sir Walter Court, Knight; and after her deceaſe, which happened in a few years (*b*), he married Heſter, ſecond daughter and coheir to Gideon de Lou, Lord of the Mannor of Columbiers in the duchy of Normandy in France, widow of James Richer, Lord of the Mannor of Cambernon in the ſame province. He had no iſſue by either of theſe latter wives. He died on Tueſday, 17 Feb. 1679-80, aged 81 years, 3 months, 16 days, and ſome hours, and was interred at Dorcheſter, being ſucceeded in honour and eſtate by his only ſon (*i*) Sir Francis Holles, Baronet [*H*], who, in the latter part of his life, reſided at the ſeat purchaſed by his father at Aldenham in Hertfordſhire (*k*), where he was buried. He died March 1, 1689-90, leaving an only ſon and heir, Denzel Lord Holles, born April 9, 1675. But his Lordſhip dying of a fever, January 25, 1693-4, unmarried, was the laſt of this branch of the family; whereby the honour became extinct, and his eſtate devolved on his heir John Holles Duke of Newcaſtle, mentioned in the preceding article, who in 1699 erected a ſtately monument, in the church of Dorcheſter, with an inſcription, in reverence to the memory of his great-uncle, Denzel Lord Holles, the firſt Baron of Iſfield, the ſubject of this article [*I*].

(*b*) He had married his 3d wife in 1669. See remark [*G*].

(*i*) He had three more ſons by his firſt wife, viz. Denzel, John, and another Denzel, who all died in their infancy. MS. de Famil. de Holles in bibl. Harleian.

(*k*) Chauncey's Hiſtory and Antiquities of Hertfordſhire, p. 491.

the affronts put upon him at the trial by the Lord Chief-Juſtice Keeling, who when he attempted to ſpeak to the characters of the Frenchmen, ſtopped him, ſaying, he muſt not interrupt the Court; and Lord Holles replying, that it was neither to interrupt the Court, nor to do them any wrong to inform them as much as poſſible of all paſſages, &c. The Chief-Juſtice anſwered again very angrily, *My Lord, you wrong not the Court, but you wrong yourſelf; and it is not the firſt time you have been obſerved to appear too much for ſtrangers.* 'So, ſays Lord Holles, I was ſnubbed and 'ſet down again, but I muſt ſay it was language I had 'not been uſed to, nor I think any of my condition, 'that had the honour to ſerve the King, in the qua-'lity, I do, of a Privy-counſellor.' The Lord Chief-Juſtice alſo upon Walrond's evidence declared (looking fully at Lord Holles, whence the whole Court underſtood it to be meant of him) *that there had been ſome foul doings.* Upon theſe injuries he petitioned the Houſe of Lords, who on Friday March 10, 1670, made the following order. 'This day the Lord Hol-'les produced ſeveral witneſſes to be examined con-'cerning his complaint on his petition of ſeveral indig-'nities put upon him by the Lord Chief-Juſtice of the 'Court of King's-Bench, at the trial of ſome French 'gentlemen in the ſaid Court of King's-Bench, who 'were there falſely accuſed of a robbery by four 'butchers in Eaſter-Term laſt. After the hearing of 'which witneſſes, the Lord Chief-Juſtice made his 'defence, and denied, that he intended any thing a-'gainſt the Lord Holles when he ſpoke thoſe words at 'the ſaid trial, that it was a foul contrivance, &c. as 'in the petition is ſet forth; to which defence the 'Lord Holles made a ſhort reply, and then voluntari-'ly withdrew himſelf, and the Lord Chief-Juſtice 'withdrew himſelf alſo. Upon which the Houſe took 'the whole matter into ſerious conſideration, and or-'dered, that the Lord Chief-Juſtice ſhould be called 'to his place as a Judge; and openly (in the preſence 'of the Lord Holles) the Lord-Keeper ſhould let him 'know, that this Houſe is not ſatisfied, with his car-'riage toward the Lord Holles in this buſineſs, and 'therefore has ordered, that he ſhould make this ac-'knowledgment, which is to be read by the Clerk as 'followeth, That he did not mean it of the Lord 'Holles when he ſpoke theſe words (that it was a foul 'contrivance) and that he is ſorry that by his beha-'viour or expreſſions, he gave any occaſion to inter-'pret it otherwiſe, and aſks the pardon of this Houſe 'and the Lord Holles. Then the Lord Chief-Juſtice 'of the Court of King's-Bench was called to his place, 'and (the Lord Holles being alſo preſent) the Lord-'Keeper performed the directions of the Houſe, and 'the Lord Chief Juſtice read the acknowledgment 'aforeſaid, only changing the ſtile into the firſt perſon.'

(41) Ex Regiſt. Eccleſ. Sti Petri apud Weſtmonaſ. They were married in Henry VIIth's chapel.

John Browne, Cleric. Parliamentorum (39).

[*H*] *Sir Francis Holles, Baronet.*] He was born Auguſt 19, 1627, at Dorcheſter, and created a Baronet in the life-time of his father (40). On the 22d of Auguſt, 1661 (41), he married Lucy, youngeſt daughter to Sir Robert Carr of Sleford in Lincolnſhire, Knight and Baronet, and had by her two daughters, Mary and Denzella, who both died in their infancy, and were buried in Holles's ſouth iſle adjoining to the church at Iſfield, and their mother dying September 15, 1667 (42), Sir Francis took to his ſecond wife, Anne, eldeſt daughter and coheir of Sir Francis Pile, the ſecond of that name of Compton-Beauchamp in Com. Berks, Baronet. She brought her huſband one daughter, Jane, who dying an infant, was interred in 1673, at Iſfield, as was alſo her mother, on Thurſday May 4, 1682. So that ſhe lived to be Baroneſs Holles, and died in the houſe of her Lord in Lincoln-ſquare, in Lincoln's-Inn Fields, Middleſex *.

(42) His Lordſhip had a remarkable ſuit in Chancery with Lady Carr, ſiter-in-law to his wife, for her portion, which was decreed in his favour in 1686. Vernon's Reports, Vol. I. p. 431. caſe 406.

* MS. de Famil. de Holles, in Bibl. Harleian.

[*I*] *An inſcription in reverence to the memory of the ſubject of this article.*] It is drawn up in the following terms.

To eternize the name and honour of Denzel Lord Holles, Baron of Iſfield.

His birth was equal to his virtues, being the ſecond ſon of John the firſt Earl of Clare, *who by ſea and land, at home and abroad, did not more ſignalize himſelf in the ſervice of his country, than he was meritoriouſly diſtinguiſhed and rewarded by Queen* Elizabeth *and King* James. *All that* Denzel's *wit or courage, probity or induſtry preſaged in his youth, he made good and exceeded, when a man. For as his excellent endowments and abilities made him early known to his Prince and country, ſo he could by his eloquence and valour intrepidly defend the liberty of the laſt, without refuſing the obedience that was due to the former. When the rights of the nation were barbarouſly invaded by that army, which the Parliament levied to ſecure them, he bore the violence and injuſtice of his enemies, as it became a finiſhed hero: nor could loſſes, exile, or his hatred to the factious, make him forget the love that he owed to* England. *After the reſtoration of monarchy, he was created Baron of Iſfield by King* Charles II, *and had the honour of repreſenting him in two extraordinary ambaſſies; the one to* Lewis *the* French *King, who no leſs admired the generoſity, whereby he maintained ſo high a character (43), than he dreaded that virtue he was not able to corrupt by his magnificent preſents, which were more princely refuſed, than offered. No part of his reputation was diminiſhed, when he went afterwards Plenipotentiary to the treaty at* Breda. *His learning was unaffected, uſeful, and general; but not to be exceeded by any in the knowledge of the ancient records of the kingdom (44), and the diſtinct powers of the ſeveral parts of the adminiſtration. So true a friend, that none could exceed or equal him.* He *was as great a patron to religious, as to civil liberty, which made him univerſally beloved and lamented, when he peaceably ended a long and glorious life, the ſeventeenth of February in the year of Chriſt, one thouſand ſix hundred and ſeventy-nine, and in the eighty-ſecond year of his age. This monument is therefore dedicated to his memory for the honour of the preſent age, as well as an example to poſterity, by his nephew's ſon and heir* John *Duke of* Newcaſtle.

MDCXCIX.

(43) Sir Henry Chauncey relates, that, during Mr Holles's Embaſſy in France, he continually kept a noble table, furniſhed with diſhes of meat after the Engliſh faſhion, and in contempt of the French mode. Antiq. of Hertfordſhire, p. 491.

(44) His Remains are an illuſtrious inſtance of this truth.

We have inſerted this inſcription, becauſe it contains an exact and particular account of his Lordſhip's character. And ſeveral articles of it are confirmed and illuſtrated by remarkable inſtances in the following letter, wrote, as appears, in confidence, and conveyed privately to Sir William Morrice, then Secretary of State (45).

Paris, $\frac{12}{22}$ July, —64.

'SIR,

'I have received your's of June 27, moſt welcome 'to me; and I give you my humble thanks for it, be 'the

(45) The original was communicated by Dr Birch to Mr Collins. Hiſtorical Collections, &c. p. 159.

'the contents what they will, which muſt be what the 'complexion of the time affords, and not always what 'you and I would deſire. Cloudy enough it is for the 'poor Proteſtants, methinks, in all quarters; and no 'where worſe than here. The poor people of Privas, 'that are forced from their lands and houſes, are not 'ſuffered to carry away their moveable goods with 'them, but are robbed of it as they go; and the coun-'try of Gex by Geneva, which had been antiently the 'Duke of Savoy's, taken from him by the Swiſſes of 'Berne, and upon the reſtitution of it back from them 'to him, agreed they ſhould ſtill enjoy their liberty of 'religion; which the Duke of Savoy ſtill ſuffered them 'to do, and afterwards paſſed it over to the King of 'France upon an exchange, but with that condition 'for the freedom of their religion, which they have 'ever ſince enjoyed from the time of Henry IV. being 'all Proteſtants: now all their temples are every one 'pulled down to the number of three and twenty, and 'the exerciſe of their religion ſuffered but in two pla-'ces, where they are glad to make uſe of barns; and 'no reaſon given for it to ſuch as have been deputed 'hither, both from them and from the Canton of 'Berne, to endeavour to obtain ſome favour in it, but '*Le Roy le veut*. Truly I doubt it will drive them 'to deſpair at laſt, and they will ſo wring them, that 'blood will come at laſt. Here is a report this week, 'that the Proteſtants of Hungary have made their 'agreement with the Turk; and probable enough, for 'the Emperor had uſed them moſt ſeverely; and cer-'tain it is, that the Proteſtant cantons of the Swiſſes 'are ſo ill ſatisfied with France, ſeeing the hard hand 'held here upon the Proteſtants, and their mediation 'for them ſo little conſidered, that they begin to 'hearken to the King of Spain, who hath made an 'offer to take off the Inquiſition in Spain, upon condi-'tion that they will enter into a league with him. 'One Veroldingues of the canton of Uri is the promo-'ter of it, and hath been with all the Proteſtant can-'tons about it, inſomuch as Berne have ſent their de-'puties to the Spaniſh Ambaſſador there, the Conde 'de Caſſati. The levies which Spain makes there are 'now perfected, and are upon their march, two thou-'ſand Swiſſes and two thouſand Griſons; and but need 'enough, for they are in Spain in a very bad condi-'tion, not able to take the field, a few horſe, about 'five thouſand, and in bad equipage, no foot at all; 'and the Portugueze on the other ſide as ſtrong, have 'taken Valença de Alcantara, a place of importance; 'and the very letters from Madrid ſay, may take Al-'buquerque after, and all Eſtramadura; for, ſay they, 'our councils are bewitched and our forces ſmall, 'that we have nothing to oppoſe them: and I think 'they are bewitched indeed, for weak as they are, 'they go not about to ſtrengthen themſelves, nor to 'make friends. I do not find that Sir Richard Fan-'ſhaw, from whom I had a letter this week, is well 'ſatisfied with them: his expreſſion is, that he does 'not find the middle to anſwer the beginning, whate-'ver the end will be, ſpeaking of his uſage there; 'and I hear his men and the Spaniards have been to-'gether by the ears. All ſeems to make for the great-'neſs of France. The weakneſs, and diviſions, and 'ill counſels, and ill ſucceſſes of the undertakings of 'all the other Chriſtian princes and ſtates, are the ele-'vation of this young king, who may be raiſed ſo 'high, that his brains may turn, and he may *fais vi-'ribus ruere*, commonly the fate of human greatneſs. 'Yet he hath certainly great advantages of his own, 'beſides what his neighbours contribute to make him 'great; a clear underſtanding, a good judgment, an 'indefatigable induſtry; then a vaſt treaſure and abſo-'lute power within his kingdom, all of them neceſſa-'ry qualifications for one that will carry on great de-'ſigns. Our war with Holland will be no hinderance 'to him, and may give way to his growth up at ſea, 'where his greateſt defect is, and he knows it; and 'therefore now bends all his thoughts and care to ſup-'ply it, and to that purpoſe hath ſet up an Eaſt-India 'company, to which himſelf contributes vaſt ſums, 'five millions; and allows great privileges to encou-'rage adventurers, who come in apace; and then for 'the Mediterranean ſea and the trade there, he hath 'now ſet out a fleet of thirteen ſhips, eight galleys, 'ſome fire-ſhips, and forty other veſſels of lading, with 'all manner of materials for the building a fort upon 'the coaſt of Afric, where he will land near upon ſe-'ven thouſand men, within ten, upon a juſt account. 'This under the command of Mr de Beaufort; and if 'once he can get to be conſiderable at ſea, he will be 'formidable indeed; and yet need not our maſter fear 'him except he will; and he only of all the princes of 'Chriſtendom is out of his reach, who can prejudice 'him, and receive no prejudice from him; except it 'be that the other plow with his heifer, get within 'his councils; ſo will he unriddle his riddles, and I 'doubt not doth now; otherwiſe I ſhould not have 'orders ſent me to go and viſit the Princes of the Blood, 'which is now a tame yielding of that up which we 'have ſtruggled for all this while, and had gotten with 'ſo much difficulty; for in every body's judgment that 'hears of it, it is giving them the precedency, and as 'great a diſhonour to the King as can be after all this 'buſtle; and to have carried it, as I may ſay, in the 'field, to be outwitted, and perſwaded out of it in his 'chamber. Sir, it makes me mad, that I wiſh my-'ſelf ten thouſand miles off, to be the unhappy man, 'that muſt be forced to deliver up the honour of my 'king and nation. Oh that I had never come hither! 'or that I might ſoon be ſuffered to return from hence '(46), where I ſhall be aſhamed hereafter to ſhew my 'face, which hitherto I could hold up with ſome com-'fort, though I received no favour nor kindneſs from 'them. Yet they got no ground of me; nay, they 'had loſt ground, which now they recover with ad-'vantage; for to recover a loſt game, is more than to 'have fortune give it at the firſt; it is the product of 'a greater virtue. I am full, and glad I can unbur-'then myſelf into a friend's boſom; all is, how I 'ſhall be ſure to get it thither, that it fall not into ano-'ther hand, which I hope I ſhall by the means of an 'honeſt merchant, which muſt be your way, when 'you write any thing you would have no-body elſe ſee. 'Remember my humble ſervice, I beſeech you, to our 'good Lord-General, whoſe humble ſervant I am, as 'I am alſo moſt affectionately,

'Sir,

'Your very faithful

'And moſt humble ſervant,

'HOLLES.'

(46) His Lordſhip entered on this embaſſy July 7, 1663. and propoſitions for an accomodation being made by the French, after their declaration of war, Jan. 27, 1665 (*a*), he did not come away preſently, but adverſing his Majeſty that they played a double game (*b*), he was recalled, and arrived at Whitehall 24 May, 1666 (*c*).

(*a*) Kennet's Hiſt. of Eng. Vol. III. p. 279.

(*b*) Pointer's Chron. Hiſt. Vol. I. p. 212.

(*c*) Salmon's Chron. Hiſt. under this year 1666.

There has been printed another of his Lordſhip's letters, written in the year 1676, which is evidently dictated by the ſame patriot ſpirit, and addreſſed to Mr Van Benninghen, who had been the Dutch Ambaſſador in England. But it is too long to be tranſcribed here *. We ſhall only take notice, that, among other memorable paſſages, his Lordſhip obſerves, that England was then in a very weak condition; which he aſcribes to two cauſes. (1.) To the change of the ballance from the nobility to the people. (2.) To a ſucceſſion of three weak princes together; in which caſe, ſays he, the government can hardly ſtand—'And therefore I make no doubt to affirm, that if the government of the Parliament had not been interpoſed in the middle, the government muſt have ſunk e're now; *for ſave what they did, we have not taken one true ſtep, nor ſtruck one true ſtroke, ſince Queen Elizabeth's time.*' Whoever compares this paſſage with the ſentiments of his Lordſhip's father, ſeen in the preceding article, concerning the Stuarts, will perhaps be inclined to think, that a diſguſt to that family was inbred in the ſon.

* It may be ſeen in Mr Collins's Hiſtorical Account, p. 152—157. who tranſcribed it from the Memoirs of the Holles Family; the author of which maintains, that it ought to be ſet in golden characters, and preſerved to all poſterity. See Kennet's Hiſt. of Eng. Vol. III. p. 341. &c. b.

Beſides what have been already mentioned, there came out in 1682, in 8vo, a piece intitled, 'LORD HOLLIS HIS REMAINS: being a ſecond letter to a friend, concerning the judicature of the Biſhops in Parliament. In the vindication of what he wrote in his firſt, and in anſwer to a book ſince publiſhed againſt it, entitled, *The Rights of the Biſhops to judge in Capital Caſes in Parliament, cleared*, &c. It contains likewiſe part of his intended anſwer to a ſecond tractate, entitled, *The Grand Queſtion touching the Biſhops Right to vote in Parliament, ſtated and argued* †.' In the preface, the editor, who hath added a tract of his own on the ſame ſubject, having aſſerted the authenticity of this piece, obſerves, that his Lordſhip lived not to finiſh his anſwer to the *Grand Queſtion*, &c. but often affirmed that he had conquered all the difficulties in it. 'Nature, continues he, *was ſpent.—And when we conſider that he had paſſed the age of man, having arrived to his eighty-firſt year, and that he continued ſtill writing for eternity—ſurely I cannot be taxed of impertinence, if I here ſtrew upon his hearſe ſome of* Cicero's *happy flowers, ſince one would think they ſprung up now for this*

† This diſpute was occaſioned by the debates in Parliament, preceding the trial of the five Popiſh Lords in 1675, on account of the Popiſh plot. Ibid. p. 365. 2d edit.

this very purpose. Eſt etiam quietæ & puræ atque elegantèr actæ ætatis placida ac lenis ſenectus, qualem accepimus Platonis, qui uno & octogeſimo ætatis anno ſcribens mortuus eſt (47).' (47) Cicero de Senectute.

HOOKE [ROBERT], an eminent mechanic genius, was born on the 18th of July, 1635 (*a*), upon a peninſula called Freſhwater, on the weſt ſide of the Iſle of Wight, where his father Mr John Hooke was miniſter. Being a very weakly child he was nurſed at home (*b*), with ſmall hopes of his life for the firſt ſeven years. Yet under this conſtitutional infirmity, which particularly ſubjected him to violent pains in the head, there appeared a ſprightly and active temper, which being accompanied with a quick apprehenſion and a promptneſs at his book, induced his father to think of breeding him to the Church; and, having taught him to read, he proceeded in that view to inſtruct him in Grammar for ſome time; but growing aged and infirm, was obliged to drop his deſign, not being able to go through a work wherein he met with too many diſcouraging hindrances, from the frequent returns of his ſon's head-ach. Thus left to himſelf, the boy followed the peculiar bent of his genius, which was naturally turned to Mechanics, and employed his time in making toys of that ſort with uncommon attention [*A*]. Theſe indications led his friends to think of ſome ingenious trade for him; and, as he had alſo a great fancy for drawing (*c*), ſo, after his father's death, which happened in the month of October 1648, he was placed with the celebrated Painter Sir Peter Lely; but the ſmell of the oil-colours increaſing his head-ach, he quitted that buſineſs in a ſhort time, being kindly taken thence by Dr Buſby into his houſe, and ſupported there while he attended Weſtminſter-ſchool. By this means, he not only acquired a competency of Latin and Greek, together with an inſight into Hebrew, and ſome other oriental languages, but alſo made himſelf maſter of a good part of Euclid's Elements, being encouraged therein by the doctor, who allowed him particular hours for that ſtudy (*d*). About the year 1653, he was removed to Chriſt-church-college in Oxford (*e*), a choriſter's place having been procured for him there, and he was admitted ſervitor to one Mr Goodman *. In 1655, he was introduced to the Philoſophical Society at Oxford (*f*); where, his inventive genius being obſerved, he was firſt employed to aſſiſt Mr (afterwards Dr) Thomas Willis, in his operations of Chemiſtry; and this eminent Phyſician recommending him to the honourable Robert Boyle Eſq; he afterwards ſerved that curious and inquiſitive gentleman in the ſame capacity for ſeveral years. The ſame year, 1655, he was inſtructed by Dr Seth Ward, Savilian Profeſſor of Aſtronomy, in that ſcience; and applying himſelf to improve the pendulum for Aſtronomical obſervations in the two ſubſequent years, he contrived a way to continue the motion of the pendulum, ſo much commended by Ricciolus in his Almageſt; which book had been recommended to him by Dr Ward. Having made ſome trials to this end which ſucceeded to his wiſh, the ſucceſs of theſe put him upon thinking to improve it further, for finding the longitude; and by the method he had made for mechanic inventions [*B*], being quickly led to the uſe of ſprings inſtead of gravity for the making a body vibrate in any poſture, he firſt of any one invented, in 1658 and the following year, what is now called the pendulum watch [*C*]. About the ſame time he alſo invented

(*a*) He was baptized the next day, Ath. Ox. Vol. II. c. 1039. probably on account of his weakneſs.

(*b*) All their other children were nurſed abroad. Life of Dr Hooke, prefixed to his Poſthumous Works, by Rich. Waller, Eſq; fol. 1705.

(*c*) He copied ſeveral prints with a pen ſo well, that Mr Hoſkyns (ſon of the famous Hoſkyns, Cowper's maſter) much admired they could be done by one not inſtructed. Ibid.

(*d*) Ibid. and Wood, ubi ſupra, who ſays, he likewiſe learned of his own accord to play 20 leſſons upon the organ, and invented 30 ways of flying, as himſelf and Dr Wilkins of Wadham-college had reported.

(*e*) Waller, p. 3. probably from our author's papers, there being now no entry of his admiſſion in the college regiſter. Whence Mr Wood, ubi ſupra, places it in 1650 doubtleſs on report only.

* Ibid. N. B. the choir-ſervice was then ſuppreſſed.

(*f*) See an account of this ſociety in the article of Dr Wallis.

(*g*) Journals of the Royal-Society, Vol. I. p. 104.

[*A*] *He made ſome mechanical toys with great attention.*] For inſtance, ſeeing an old braſs clock taken to pieces, he made a wooden one that would go; he likewiſe made a ſmall ſhip about a yard long, fitly ſhaped, maſted, and rigged, with a contrivance to make it fire ſmall guns, as it was ſailing croſs a haven of ſome breadth (1).

[*B*] *His method for mechanic inventions*] Mr Waller obſerves, that he never could meet with this method mentioned here, and in ſeveral other places of our author's works, and called ſometimes by him a *Mechanic Algebra* for ſolving any problem in mechanics, as eaſily and certainly as any geometric problem is ſolved by algebra, aſſerting that by this his method, he could readily determine whether any ſuch problem was poſſible, and if ſo, which was the eaſieſt and neareſt way of ſolving it (2).

[*C*] *He invented the pendulum watch in* 1658.] The invention whence this watch had it's name, is a ſpring faſtened at one end to the plate, and at the other end to the arbor of the ballance, to regulate it's ſtrokes and motion. That Mr Hook was the firſt inventor of this ſpring cannot be denied, if his firſt thought was conceived at the time here mentioned; and that it was ſo, is inferred from the following account of it given by himſelf, and confirmed by Mr Waller. In the poſtſcript to his treatiſe of *Helioſcopes*, publiſhed in 1675 *, expreſsly to vindicate his right to this invention, our author writes thus,** 'About ſeventeen years 'ſince †, being very inquiſitive about regulating the 'meaſure of time in order to find the longitude, I did 'from a mechanical algebra which I was then maſter 'of, find out and perfect this contrivance both in the 'theory and experimental verification thereof, of which 'I diſcourſed to ſeveral of my friends, but concealed 'the modus. About fifteen years ago, viz. in the year '1666, I was in treaty with divers perſons of honour 'for the diſcovery thereof upon propoſed articles of 'encouragement. This I can prove by undeniable 'witneſſes yet living; and I have ſtill all the papers, 'articles, and tranſactions of this matter by me in their 'own hand writing. In order to bring this treaty to 'paſs, I was neceſſitated to diſcover ſomething of my 'invention about meaſuring time, which was this way 'of applying ſprings to the arbor of the ballance of the 'watch, for regulating the vibrations thereof in all 'poſtures.' We find him alſo in another place (3), giving the ſame account, and naming Mr Boyle, as the particular friend to whom he firſt applied to on the occaſion, who imparting the affair to the Lord Brouncker and Sir Robert Moray, they adviſed the getting of a patent, and that Sir Robert drew up the form of one, 'The principal part whereof, continues our author, 'viz. the deſcription of the watch ſo regulated, is his 'own hand writing, which I have yet by me.' In confirmation of this account, Mr Waller ſays, that among Mr Hooke's papers, he met with a draught of an agreement to this purpoſe, between the Lord Brouncker, Mr Boyle, and Sir Robert Moray, with Robert Hooke, M. A ‖. The ſubſtance of which was, that Robert Hooke ſhould diſcover to them *the whole* of his invention, and ſhould have ſuch a ſhare of the profits to be made by it as is there ſet forth, and be publickly owned the author and inventor thereof. That there

‖ And conſequently not before 1663, when that degree was conferred upon him. See above in the text, and in note (g).

invented ſeveral aſtronomical inſtruments, for making obſervations both at ſea and land [*D*], and was alſo particularly ſerviceable to Mr Boyle, in compleating the invention of the air-pump (*b*) [*E*]. In 1660, he publiſhed a ſmall tract in 8vo. upon the riſing of water in ſlender glaſs pipes higher than in larger ones, and that in a certain proportion to their bores, together with the cauſe thereof [*F*]. This ſubject was taken into conſideration by the Royal-Society, and a committee appointed to examine into the truth of the fact, on the 28th of May, 1661 (*i*). Which year our author publiſhed another piece in 4to. intitled, *A Diſcourſe of a new Inſtrument* (lately invented by him) *to make more accurate obſervations in Aſtronomy than were yet made.* November 12, 1662, *Sir Robert Moray*, then Preſident, *propoſed him for Curator of Experiments to the Royal-Society*; *whereupon, being unanimouſly accepted of, it was ordered that Mr Boyle ſhould have the thanks of the Society, for diſpenſing with him for their uſe, and that he ſhould come and ſit among them, and both bring in every day of their meeting 3 or 4 experiments of his own, and take care of ſuch others as ſhould be mentioned to him by the Society* (*k*). He executed this office ſo much to ſatisfaction [*G*], that, upon the eſtabliſhment of that illuſtrious body by the royal charter, his name was in the liſt of thoſe who were firſt nominated by the Council, May 20, 1663 (*l*); and he was accordingly admitted, June 3 following, with a peculiar exemption from all payments (*m*); and he was frequently afterwards a member of the Council himſelf (*n*). The ſame year, on September 28, he was nominated by the Earl of Clarendon, Chancellor of Oxford, for the degree of Maſter of Arts (*o*); and on the 19th of October it was ordered, that the repoſitory of the Royal-Society ſhould be committed to his care, the weſt or white gallery in Greſham-college being appointed for that uſe (*p*). In the month of May, 1664, he begun to read the Aſtronomy lecture at Greſham for the Profeſſor Dr Pope, then in Italy *; and the ſame year he was made Profeſſor of Mechanics to the Royal-Society by Sir John Cutler, with a ſalary of fifty pounds per annum, which that gentleman

(*k*) Ibid. p. 125.

(*l*) Ibid. p. 150.

(*m*) This exemption was only peculiar, as it was ordered at his admiſſion; for at different times the like exemption was granted to other members, particularly to Dr Charlton and Dr Pell. Birch's Hiſt. of the R. S. Vol. II. p. 241.

(*n*) See their Journals.

(*o*) Wood's Ath. Ox. Vol. II. col. 1039, 1040. & Faſti, col. 156. but it does not appear by the Regiſter, whether he was then admitted or diplomated.

(*p*) Ward's Life of Dr Hooke, in the Lives of the Greſham Profeſſors, p. 174.

* Mr Hooke continued to read this lecture 'till Dr Pope's return ſome time in the following year. Ibid. p. 112.

there were ſome other draughts which differed only in the diviſion of the profits (4). Theſe circumſtances leave no room to doubt that the regulator was invented at the time here fixed for it. But it muſt not be omitted, that in the firſt invention, the form of this ſpring was not ſpiral (as now) but ſtreight (5), like the clock pendulum, which is of the ſame uſe in that machine, as this ſpring is in the watch, and was invented a little before it, viz. in the preceding year 1657, by Mr Huygens (6). Dr Derham, obſerving that one end of this tender ſtreight ſpring played backward and forward with the ballance, proceeds thus, 'ſo that the ballance 'was to the ſpring as the bob of a pendulum, and the 'little ſpring as the rod thereof.' This analogy indeed holds well enough with regard to the form as well as the reſpective poſition and motion of theſe contrivances; but in their reſpective uſes the order is inverſe, the ſpring in that view being to the ballance as the bob of a pendulum, and the ballance as the rod.

[*D*] *Several aſtronomical inſtruments, &c.*] Our author tells us, that he afterwards ſhewed theſe inſtruments to the Royal-Society, and Mr Waller thought they were thoſe inſtruments which are mentioned in his aſtronomical lectures, publiſhed in his poſthumous works (7). About the ſame time alſo, as Mr Hooke himſelf ſays, he contrived the circular pedulum and the uſe of it, for continuing the motion of another pendulum which he afterwards ſhewed to the Royal-Society in 1663, about which time and afterwards ſeveral particulars relating to it are inſerted in their journals as his (8). He alſo gives an account elſewhere of his bringing it into uſe in 1665, and exhibiting it to the ſaid Society the following year; and we are told by another author (9), that 'the motion of this pendulum being as regu'lar as the vibrating one, was contrived by Mr Hooke, 'to give warning at any moment of it's circumgyra'tion, either when it had turned a quarter, half, or 'any leſſer or greater part of it's circle. So that here 'you had notice not only of a ſecond, as in the pen'dulum vibrating ſeconds, but of the moſt minute 'part of a ſecond of time, by which means it was made 'very uſeful in aſtronomical obſervations (10).'

[*E*] *He was ſerviceable to Mr Boyle in perfecting the invention of the air-pump*] Our author tells us (11), that in 1658, or the following year, he contrived and perfected the air-pump for Mr Boyle, as it was printed in 1660, having firſt ſeen a contrivance to that purpoſe made for that excellent perſon by Mr Gratorix (or Greatrix (12)), which was too groſs to perform any great matter. Mr Hooke here aſſumes the honour of of perfecting that celebrated machine to himſelf. The ſequel of this memoir, will diſcover the exact weight of that authority as to ſuch claims. In the mean time 'tis certain, that he made a draught of the air-pump as then publiſhed by Mr Boyle. This draught was in the hands of Mr Waller, whom he informed, that Mr Boyle ſent him then to London to get the barrel and other parts of that engine made there, which could not be done at Oxford (13).

[*F*] *A tract about the riſing of water in ſlender pipes, &c.*] In the catalogue of our author's printed works by Mr Ward, the firſt is, *An attempt for the explication of the phænomena obſervable in an experiment publiſhed by the Honourable Robert Boyle, Eſq; in the XXXV experiment of his* Epiſtolical Diſcourſe *touching the air: in confirmation of a former conjecture made by R. H. London*, 1661, 8vo. Upon which that gentleman makes the following remark. Mr Waller, ſays he, informs us, '*That ſoon after the beginning of the Royal-Society* '*viz. about April* 1661, *a debate aroſe in the Society* '*occaſioned by a ſmall tract printed in* 1660, *about the* '*cauſe of the riſing of water in ſlender glaſs pipes higher* '*than in larger, and that in a certain proportion to their* '*bores. This diſcourſe was wrote and publiſhed by Hooke,* '*the explication of which difficult phænomenon made him* '*the more regarded. The ſum of his reaſonings upon* '*this ſubject he publiſhed afterwards in his* Micrography '*Obſervation VI. in which there are ſeveral very cu*'*rious, and then new remarks, and hints as to the nature* '*of fluidity and gravity, which laſt is farther proſecuted* '*in his* Treatiſe of Springs. This ſmall tract, con'tinues Mr Ward, here ſaid to have been written and 'publiſhed by Mr Hooke in 1660, ſeems to agree in 'all circumſtances with that, whoſe title I have here 'given, except in the year of it's publication 1661. 'But as it is well known, that books when printed are 'often antedated, and as I do not find upon the 'ſtricteſt enquiry, that he ever publiſhed any other ſe'parate diſcourſe upon that ſubject; I cannot but 'think this is the tract referred to by Mr Waller (14).'

[*G*] *He executed this office to their ſatisfaction.*] The journals of the Society are a ſufficient teſtimony of this truth, by the large number and variety of his experiments and inventions therein recorded. Some of theſe are taken notice of by Dr Spratt, in 1666 (15), and Mr Waller recited a great many of the moſt conſiderable of them, and ſuch as were brought neareſt to perfection in 1705 (16); ſeveral others were printed by Dr Derham afterwards in 1726 (17); and the reſt that are worth notice, will fall into the deſign of Dr Birch; who has publiſhed ſome of them this year, together with others, as a ſupplement to the Philoſophical Tranſactions (18); wherein likewiſe ſeveral of our author's experiments and obſervations may be found; and ſome years ago, about 1640, a large number of his original papers and draughts in the Society's poſſeſſion, were collected into one volume, and diſpoſed in order of time by Dr Tho. Stack, F. R. S.

[*H*] *His*

man, the founder, ſettled upon him for life (*q*). On the 4th of January, 1664-5, *It was ordered that the Society be ſummoned to meet on Wedneſday following, for the election of Mr Hooke as Curator by office, who was recommended from the Council to the Society by the Preſident.* Accordingly, at the next meeting, on January 11, *He was elected Curator by office to the Society, and that for perpetuity, with a ſalary of thirty pounds a year* pro tempore (*r*). And on the 20th of March following, he was elected Profeſſor of Geometry in Greſham-college (*s*). In 1665, he publiſhed at London in folio, his *Micrographia, or ſome Philoſophical Deſcriptions of minute bodies made by magnifying glaſſes, with Obſervations and Enquiries thereupon* [*H*]. And during the receſs of the Royal-Society on account of the plague, the ſame year, he attended Dr Wilkins and Sir William Petty, about the middle of July, to Durdens, a ſeat of the Earl of Berkeley near Epſom in Surry, where ſeveral experiments were made, which were afterwards communicated to the Royal-Society. And at one of their firſt meetings after their return to Greſham-college (*t*), he produced a very ſmall quadrant for obſerving accurately to minutes and ſeconds (*u*). September 19, 1666, he produced a model of his own deſign for rebuilding the city, deſtroyed by the great fire. This being approved by the court of the Lord-Mayor and Aldermen [*I*], though not carryed into execution, Mr Hooke was appointed City-Surveyor (*w*); in virtue of which office he laid out the ground to the ſeveral proprietors for rebuilding. As this proved a very gainful employ [*K*], ſo a great part of his time was ſpent upon it, which occaſioned an unavoidable interruption in the buſineſs of experiments. However, before the expiration of the year, in purſuance of an order by the Royal-Society on the 9th of January 1666 7, he begun to proſecute his obſervations of the earth's parallax, which had been propoſed by him formerly (*x*). He produced ſeveral new inventions in this and the four following years, the moſt conſiderable of which are printed in ſome of his works, or related by Mr Waller. But we muſt not omit to take notice, that, in 1668, Mr Hevelius, the famous Aſtronomer at Dantzick, having preſented a copy of his *Cometographia* to Mr Hooke (*y*), among other members of the Royal-Society, our author in return ſent the Conſul a deſcription of the dioptric teleſcope, with an account of the manner of uſing it, at the ſame time recommending it to him as greatly preferable to thoſe with plain ſights (*z*). This gave the firſt riſe to the diſpute between them, mentioned in a preceding Memoir (*a a*); wherein, though Mr Hooke had the beſt ſide of the queſtion, yet he managed it ſo as to be univerſally condemned [*L*]. But in 1671, he attacked Sir Iſaac Newton's New

(*q*) Both the ſubject and number of the lectures were to be appointed by the Society, who ordered their thanks to be returned to the founder, for his kindneſs to ſo worthy a member. Waller, p. 10. from the Journals of the R. S.

(*a a*) That of Dr Halley.

[*H*] *His Micrographia, &c.*] In the Philoſophical Tranſactions, No. 11. there is an account of this book (19). In which, as Mr Waller obſerves, 'It will hardly 'be denied that there are more excellent hints and 'philoſophical diſcoveries, than in moſt extant of it's 'bulk. The book, continues he, being well known, 'I ſhall only obſerve that there are deſcribed in it ſe-'veral ſorts of microſcopes, with the ways of uſing 'them. As alſo the baroſcope, hygroſcope, an inſtru-'ment to graduate thermometers. An engine to grind 'optic glaſſes. An inſtrument to try the refraction of 'liquors. I remember, ſays he, Mr Marſhall (20), 'when he deſired the Society's approbation of his new 'method of grinding ſpectacles, owned he had the firſt 'intimation of it from a hint of Mr Hooke's, in this 'book about poliſhing many of the ſmall microſcopic 'glaſſes at once (21).' But whatever merit this piece had, it never was printed but once; the later date 1667, found in ſome copies, being only put to a new title page (22).

(19) There is alſo an account of it in the Journal des Sçavans, for Dec. 1666.

(20) The famous Optician at that time.

(22) Ward, in our author's Life, p. 190.

[*I*] *His model was approved by the Lord-Mayor and Aldermen.*] Sir John Lawrence, the late Lord-Mayor, being preſent when the model was produced to the Society, acquainted them, that the ſaid court deſired it might be ſhewn to his Majeſty. However no notice was taken of this requeſt; probably becauſe Dr Wren's model had been then delivered to his Majeſty, and by him approved and laid before the Council; though as the Doctor had not an opportunity to communicate his either to the Royal-Society or the City, before it was ſent to the King, neither of them probably at that time had ſeen it; that is, in their corporate capacity, or at a public meeting, as it muſt be underſtood, for Mr Ward, who gives this account (23), refers therein to a letter wrote to Mr Boyle by Mr Oldenburg, September 18, 1666, of which he has, in the place referred to (24), tranſcribed the following extract. '*Dr Wren has, ſince my laſt, drawn a modell for a new 'citty, and preſented it to the King.—I was yeſterday 'morning with the Doctor, and ſaw the modell.——I 'then told him, that if I had had an opportunity to ſpeak 'with him ſooner, I ſhould have ſuggeſted to him, that 'ſuch a modell contrived by him, and reviewed and ap-'proved by the Royal-Society or a committee thereof, be-'fore it had come to the view of his Majeſty, would 'have given the Society a name, and made it popular, and 'availed not a little to ſilence thoſe, who aſk continually,* 'What have they done. *He anſwered, that he had 'been ſo preſſed to haſten it, before other deſſeins came in, 'that he could not poſſibly conſult the Society about it. 'However, ſince it is done without taking in the Society, 'it muſt ſuffice, that it is a member thereof that hath 'done it; and, by what I ſee, hath done it ſo, that 'other modells will not equall it. And I hope, that 'when it comes to be preſented to the Parliament, as the 'author will be named, ſo his relation to the Society will 'not be omitted.*' The date of this letter ſhews, that when Mr Hooke's model was produced to the Society, that of Dr Wren had been ſeen by Mr Oldenburg, and therefore probably by others, eſpecially as there was not the ſame reaſon for keeping the ſecret ſo ſtrictly after he had got the ſtart in preſenting it to the King. But the chief reaſon of inſerting this extract here, is the manifeſt diſguſt that appears in it on the occaſion of Dr Wren's not having communicated his model to the Society. This diſguſt doubtleſs had ſpread itſelf a good way among them; and thence it is obvious to conceive, how a perſon of Mr Hooke's temper might be encouraged to make the attempt, we have ſeen he did, upon them by his intereſt in the City; which behaviour, conſidering his competitor's great merit and eſteem, particularly in that Society, ſeems otherwiſe to be unaccountable.

(23) Ibid. p. 175.

(24) In the Life of Sir Chriſtopher Wren, p. 102.

[*K*] *This proved a gainful employ.*] The profits of it aroſe from the money which was given him by the ſeveral proprietors of the ground for diſpatch The whole amounted to ſeveral thouſand pounds in gold and ſilver, and he put it all into a large iron cheſt, which was found after his death locked down with a key in it, and a date of the time, ſhewing it to have been ſo ſhut up for above thirty years (25).

(25) Waller, ubi ſupra.

[*L*] *He managed it ſo as to be univerſally condemned.*] This controverſy at firſt was conducted with temper enough on both ſides, by means of Mr Oldenburg; who receiving Hevelius's letters, which were addreſſed to him, returned the ſubſtance of Hooke's anſwers thereto (26). However, theſe firſt letters diſcover the point in diſpute between them, which being carried to extremity on both ſides, furniſhed fuel for the flame that broke out afterwards. This point was, whether diſtances and altitudes could be taken with plain ſights any nearer than to a minute. Mr Hooke aſſerting they could not, whereas,

(26) See five of theſe letters in Ann. Climact. from p. 39 to 46. Our author ſeems never to have held any direct correſpondence with Hevelius.

new theory of light and colours, with ſomewhat better ſucceſs in regard to his reputation, though

whereas, with an inſtrument of a ſpan radius, by the help of a teleſcope, they might be determined to the exactneſs of a ſecond. Mr Hevelius on the other hand inſiſting, that by the advantage of a good eye and long uſe, he was able with his inſtruments to come up even to that exactneſs; and appealing to experience and facts, ſent by way of challege eight diſtances, each between two different ſtars, to be examined by our Profeſſor (27). Thus the affair reſted for ſome time with ſufficient outward decency, though not without ſome inward grudge on each ſide (28). In 1673, the Conſul publiſhed the firſt part of his *Machina Cœleſtis*, as a ſpecimen of the exactneſs both of his inſtruments and obſervations; and ſending ſeveral copies to be preſented as preſents to his friends in England, left out Mr Hooke. On the other hand the Cutlerian Profeſſor taking occaſion to read ſeveral lectures upon that book and the inſtruments therein deſcribed, printed them in 1674, with the title of *Animadverſions on the firſt Part of the* Machina Cœleſtis *of the learned and deſervedly famous Aſtronomer* Johan. Hevelius, *Conſul of* Dantzick. But now not being able to contain himſelf longer within the bounds of decency, he aſſumed a magiſterial air, and in that ſpirit threw out ſeveral unhandſome reflections upon the Conſul. How this behaviour was reſented, appears from a letter ſent by Hevelius to Mr Oldenburg, Aug. 31, 1675, wherein he writes as follows: Literas tuas, Vir honorande, die 16 Aprilis ſcriptas una cum tranſmiſſis illis libellis—accepi.———' *Inter libros autem* ' *illos—etiam Cl. Hoockii Animadverſiones in Machinam* ' *meam reperi, ſollicite quidem & anxie conſcriptas.——* ' *Quamprimum verſionem* [*in linguam Latinam*] *obtinuero,* ' *omnia debite, ut decet, reſpondebo. Regia So- ' cietate, cujus Symbolum NULLIUS IN VERBA (30).'

In 1679, Mr Halley, at the requeſt of the R. Society, went to Dantzic on occaſion of this diſpute, and after examining ſufficiently both the inſtruments and obſervations made therewith, gave, in a letter to the Conſul, that favourable opinion of both, which has been already related in his article (31). Mr Hevelius having beſides this received other letters ſtill more fully in his favour, took the opportunity of inſerting them among the aſtronomical obſervations in his *Annus Climactericus*, printed in 1685 (32). To which he prefixed a long preface, wherein grounding himſelf upon the ſtrength of theſe teſtimonies, he repeats what he had before wrote to Mr Oldenburg, with more confidence and greater indignation, and particularly exclaims againſt our author's dogmatical and magiſterial manner of aſſuming a kind of dictatorſhip over him. This book being ſent to the Royal-Society, an account was given of it at their requeſt by Dr Wallis, who therein, among other things, took notice, that the Conſul's obſervations had been miſrepreſented, ſince it appeared from this book, that he could diſtinguiſh by plain ſights to a ſmall part of a minute. About the ſame time Mr William Molyneux alſo wrote a letter to the Society in vindication of Hevelius, againſt our author's *Animadverſions*. Mr Hooke drew up an anſwer to this letter,

(27) One of theſe diſtances is that between *Regulus* and *Spica*, mention'd in Dr Halley's article, remark [K], p. 2498.

(28) Mr [illegible] afterwards [illegible] he [illegible] now [illegible]ly [illegible] See the [illegible]ence below at note (38). And Hevelius ſays, that the preference of teleſcopes to the degree here mentioned was inculcated by him in theſe letters *ad nauſeam*. Ann. Climact. in præfat. p. 9.

(29) This paſſage is referred to in note (37).

(30) Ann. Climact. p. 54 to p. 60.

(31) In remark [*K*], p. 2498.

(32) Among theſe there are ſeveral from Mr Flamſtead, who there ſpeaks with great contempt of our author's Aſtronomical merit. See particularly Ann. Climact. p. 65. There is alſo one from Oldenburg, aſſuring Hevelius, that the R. S. were ſtrangers to the publiſhing of Mr Hooke's book, and that it had not in the leaſt prejudiced their eſteem of him. Ibid. p. 95.

(33) Phil. Tranſ. No. 175.

though in respect to the argument he was forced to submit [*M*]. In 1673, he proposed a theory of the variation of the mariners compass, which has been already explained (*b b*). In

(*b b*) Ibid. rem. [*M*], col. b. p. 2500. He also proposed the making of an instrument to observe the variation, and there is a figure of one to that purpose in his Posthumous Works, p. 486.

letter, which was read likewise before the Society; wherein he observes, that he was not the first aggressor in print, as appeared from six pages in the *Machina Cœlestis* itself (34); that in his animadversions, he had no where expressed his doubt whether Hevelius's observations could be made true and always the same to two or three minutes, as Mr Molyneux had asserted (35), nor that an instrument of a span radius might be made that should perform observations sixty times more accurate than could be done with his best instruments (36); that as for any disrespectful or undervaluing sentiments he had of Hevelius or his performances, the contrary appears from the following passage, where he says, that '*he would not be understood by these animadversions, to undervalue the works and performances of a person so highly meriting the thanks of the learned world, for his great expence and vast pains in performing a work so highly useful to astronomy and navagation; that he did not in the least doubt, but that it would be work of perpetual esteem, and much preferable to any thing of the like kind yet done in the world; and that he had gone as far as possible for human industry to go with instruments of that kind, which were as complete and exact as instruments with plain sights could be made; and that Mr Hevelius had calculated them with all imaginable care and skill, and delivered them with the like candour and integrity.* But yet that it was my opinion, that this ought not to discourage others from making use of telescopic-sights, and to make better observations with instruments by that means more exact (37).' Our author concludes this defence in the following words. 'As to my not returning the observations of certain distances of stars which Hevelius desired, it is sufficiently known what inconveniences we lay under in this place after the fire of London; *and had I found conveniences, yet the unkind reception those things found, which I sent him, was enough to deter me from such a compliance* (38), *though he was sensible I had often been ready to gratify his curiosity in many other particulars* (39). But when his *Machina Cœlestis* was published, I was obliged to write those animadversions, in which I hope all unprejudiced readers will justify my procedure; at least, I am ready to prove any thing I have therein asserted.' It is observable, that though the unkind reception of the things sent is here expressly mentioned, yet no notice is taken of the particular reason given for it, which Hevelius had more than once declared to be the haughty imperious manner of obtruding them upon him; a behaviour which we shall see him hereafter charged with shewing to a much greater man than Hevelius.

(34) Viz. from p. 293 to p. 300.

(35) This imputation is often mentioned by Hevelius, though not expressly charged upon the Animadversions. See particularly Ann. Climact. p. 73. & in præf. p. 20.

(36) This is expressly charged upon him in præf. ad Ann. Climact. p. 9.

(37) Mr Hevelius particularly complains of this passage as a piece of mockery upon him, and declares he was reproached more than once in the Animadversions, ironically, with the expence of his useless instruments. Letter to Oldenburg, in Ann. Climact. p. 57, 59, 60.

(38) These are the words referred to in note (28).

(39) Mention is made in his Posthumous Works, p. 498. of a micrometer divider (there described) for Hevelius. And the late Will. Jones, Esq; was possessed of a letter of our author's, containing a description both of his manner of managing large telescopes and of their object-glasses together, with an offer of procuring them at the lowest price for Mr Hevelius.

(40) See remark [*Q*], where this letter is referred to at note (70).

[*M*] *He attacked Sir Isaac Newton's theory of light and colours.*] After what passed in the Transactions upon this subject, the theory gaining ground continually, our author took a contrary method, and instead of opposing, began to assume some part at least of the credit of it to himself; this appears by the following extract of a letter which Mr Newton wrote to Mr Oldenburg in December 1675. 'As to Mr Hooke's insinuation, that the sum of the hypothesis I sent you [on the 7th instant (40)] had been delivered by him in his Micrography. I need not be much concerned at the liberty he takes in that kind. Yet because you think it may do well, if I state the difference I take to be between them, I shall do it as briefly as I can, and that the rather, that I may avoid the savour of having done any thing unhandsome or unjustifiable towards Mr Hooke. But for this end, I must first (to see what it is) cast out what he has borrowed from Des Cartes or others, viz. that there is an æthereal medium. That light is the action of this medium; that this medium is less implicated in the parts of solid bodies, and so moves more freely in them, and transmits light more readily through them; and that after such a manner, as to accelerate the rays in a certain proportion. That refraction arises from this acceleration, and has sines proportional. That light is at first uniform. That it's colours are some disturbance or new modification of it's rays by refraction or reflexion. That the colours of a prism are made by means of the quiescent medium accelerating some motion of the rays on one side where red appears, and retarding it on the other side where blue appears; and that there are but these two original colours or colour-making modifications of light; which by their various degrees, or, as Mr Hooke calls it, dilatings, produce all intermediate ones. This rejected, the remainder of his hypothesis is, that he has changed Des Cartes's pressing or progressive motion of the medium to a vibrating one; the rotation of the globuli to the obliquation of pulses; and the accelerating their rotation on the one hand, and retarding it on the other by the quiescent medium to produce colours, to the like action of the medium on the two ends of his pulses for the same end. And having thus far modified his by the Cartesian hypothesis, he has extended it farther to explicate the phænomena of thin plates, and added another explication of the colours of natural bodies fluid and solid.

'This, I think, is in short the sum of his hypothesis, and in all this I have nothing common with him but the supposition that æther is a medium susceptible of vibrations, of which supposition I make a very different use, he supposing it light itself, which I suppose it is not. This is as great a difference, as is between him and Des Cartes. But besides this, the manner of refraction and reflexion, and the nature and production of colours in all cases (which takes up the body of my discourse) I explain very differently from him; and even in the colours of thin transparent substances, I explain every thing after a way so differing from him, that the experiments I ground my discourse on, destroy all he has said about them; and the two main experiments, without which the manner of the production of those colours is not to be found out, were not only unknown to him when he wrote his Micrography, but even last spring, as I understood in mentioning them to him. This therefore is the sum of what is common to us, that æther may vibrate; and so if he thinks fit to use that notion of colours arising from the various bigness of pulses (without which his hypothesis will do nothing) his will borrow as much from my answer to his objections, as that I sent you does from his Micrography.

'But it may be he means that I have made use of his observations; and of some I did, as that of the inflexion of rays, for which I quoted him; that of opacity arising from the interstices of the parts of bodies, which I insist not on; and that of plated bodies exhibiting colours, a phænomenon for the notice of which I thank him. But he left me to find out, and make such experiments about it, as might inform me of the manner of the production of those colours to ground an hypothesis on; he having given no further insight into it than this, that the colour depended on some certain thickness of the plate; though what that thickness was at every colour, he confesses in his Micrography he had attempted in vain to learn; and therefore seeing I was left to measure it myself, I suppose he will allow me to make use of what I took the pains to find out. And this, I hope, may vindicate me from what Mr Hooke has been pleased to charge me with.' Presently after the writing of this letter, our author persisting in his assertion insinuated the same thing before the Royal-Society, with which Mr Newton being acquainted by the Secretary, returned the following answer in a letter dated January 10, 1675-6. 'I am obliged to you, Sir, for your candour in acquainting me with Mr Hooke's insinuations. It is but a reasonable piece of justice I should have an opportunity to vindicate myself from what he undeservedly cast on me; and therefore since you have been pleased to be my representative there, and I have no means of knowing what is done but by you, I hope you will continue that equitable candour; though I think the present business of no great moment as to me, not imagining that the Royal Society are to be imposed on in a thing so plain, or that Mr Hooke himself will persist in his mistake, when he hears the difference stated. The only thing, I said, he could pretend taken from his hypothesis was, the disposition of æther to vibrate; and yet whilst he grasps at all, he is likely to fall short of this too. That æthereal vibrations are light is his; but that æther may vibrate (which is all I suppose) is to be had from a higher fountain; for that æther is a finer degree of air, and

air

In 1674, he publiſhed the two following books in 4to. (1.) *An Attempt to prove the Motion of the Earth from* Obſervations (*cc*) [*N*]. (2). *Animadverſions on the firſt part of the* Machina Cœleſtis *of the honourable, learned, and deſervedly famous Aſtronomer, Johannes Hevelius, Conſul at Dantzick: together with an explication of ſome inſtruments made by R. H* (*dd*). The Royal-Society having begun their meetings again at Greſham-college, on the 12th of November this year, the Greſham-Committee, December 19 following, allowed him forty pounds to erect a turret over part of his lodgings, for trying his inſtruments, and making aſtronomical obſervations (*ee*). In 1675, he publiſhed *A Deſcription of Helioſcopes, and ſome other inſtruments, made by* R. H. (*ff*), *with a Poſtſcript*, complaining of ſome injuſtice done him by Mr Oldenburg, the publiſher of the Philoſophical Tranſactions, in regard to his invention of pendulum watches. This charge drew him into a diſpute with that gentleman, which ended in a declaration of the Royal-Society in their Secretary's favour [*O*]. During this diſpute, our author publiſhed in 4to. 1667, his *Lampas:*

(*cc*) There is an account of it in Phil. Tranſ. No. 101.

(*dd*) There is an account of this book in Phil. Tranſ. No. 119, probably by himſelf, as Mr Ward thinks, ubi ſupra, p. 191.

(*ee*) Ibid. p. 278.

(*ff*) In this treatiſe he gave a deſcription of a reflecting teleſcope invented by him, which he had produced to the R. S. Feb. 28 preceding. Waller, ubi ſupra. Mr Ward is miſtaken in ſaying there is an account of this treatiſe by Mr Oldenburg, in Phil. Tranſ. No. 48. See below in note (49).

'air a vibrating medium, are old notions, and the 'principles I go upon. I deſire Mr Hooke to ſhew 'me therefore, I ſay not only the ſum of the hypo- 'theſis I wrote, which is his inſinuation, but any part 'of it taken out of his *Micrographia*. But then I ex- 'pect too, that he inſtance what is his own. It is moſt 'likely he will pretend I had from him the application 'of vibrations to the ſolution of the phænomena of 'thin plates; and yet all the uſe I make of vibrations, 'is to ſtrengthen or weaken the reflecting power of the 'æthereal ſuperficies; which is ſo far from being in his 'Micrographia, that the laſt ſpring, when I told him 'of the reflecting power of the æthereal ſuperficies, he 'took it for a new notion, having till then ſuppoſed 'light to be reflected by the parts of groſs bodies. 'To the things that he has from Des Cartes, pray add 'this, that the parts of ſolid bodies have a vibrating 'motion, leaſt he ſhould ſay I had from him what I 'ſay about heat. And his having from Des Cartes 'the reduction of all colours to two, you may, if need 'be, explain further for me thus: that as Des Cartes 'puts every globulus to be urged forward on one ſide 'by the illuminated medium, and impeded on the other 'by the dark one; ſo Mr Hooke puts every vibration 'to be promoted at one end, and retarded at the other 'by thoſe mediums, and thence both alike derive two 'modifications of light on the two ſides of the refract- 'ed beam for the production of all colours (41).'

[*N*] *An attempt to prove the motion of the earth from obſervations*.] He had begun theſe obſervations in 1666, as mentioned in the text; having for that purpoſe opened a paſſage of about a foot ſquare through the roof of his lodgings at Greſham-college (42), and therein fixed a tube perpendicular and upright, of about ten or twelve foot in length, and a foot ſquare, ſo as that the lower end thereof came through the cieling, and was open into the chamber underneath (43). But he had made no more than four obſervations, when he was obliged to deſiſt, partly on account of the weather, and partly by reaſon of his ill health. 'This hindrance in proceeding with the obſervations at 'that time, continues he, has been no ſmall trouble to 'me, having an extraordinary deſire to have made 'other obſervations with much more accurateneſs 'than I was able to make theſe, having ſince found 'ſome inconveniences in the inſtruments, which I have 'now regulated (44). Thus the deſign, like moſt of his, was left imperfect. However, the foundation which he had laid, proved a ſufficient encouragement to build upon. Mr Samuel Molyneux and Mr Bradley (45) reſumed the enquiry, and determined it by purſuing our author's plan, which had been preferred as the beſt for that purpoſe. The account we have in the Philoſophical Tranſactions, No 406. is a clear proof of this fact. We ſee there, that the obſervations made by theſe gentlemen, were begun, continued, and repeated, in hopes of verifying thoſe that Mr Hooke formerly communicated to the public concerning the parallax of the fixed ſtars. That therefore the ſame ſtar was made choice of, almoſt the ſame method followed, and the inſtrument conſtructed upon principles nearly the ſame, though indeed greatly exceeding the Doctor's in exactneſs (46).

[*O*] *A diſpute with Mr Oldenburg about pendulum watches*.] As this diſpute gave Mr Hooke an occaſion of aſſerting his right to the invention of theſe watches againſt Mr Huygens, it will be proper to give the following account of it. The diſpute had it's riſe from a letter of Mr Huygens, dated Jan. 30, 1674-5, to the Royal-Society, acquainting them with his invention, and the contrivance whereof he then concealed in an anagram; but explained it fully in a letter of February 20, following. The Society in their letter of thanks intimated to him, that a watch of the like contrivance had been invented ſome years before by Mr Hooke (47). Shortly after there being printed a figure of Mr Huygens's watch, with a deſcription in the Journal des Sçavans; an extract of that journal came out in the Philoſophical Tranſactions, March 12, 1674 (48), wherein no notice was taken of Mr Hooke. This he reſented in the poſtſcript mentioned in the text, and calls it *unhandſome proceedings*, maintaining not only that he was the firſt inventor, but that he had publiſhed the invention to the world long ſince in his Cutlerian lectures upon this ſubject, which were read in the open hall at Greſham-college before a great number of the Royal-Society and many ſtrangers, in 1664, and having alſo cauſed ſome of the ſaid watches to be made in that and the following year; and towards the concluſion, expreſſes his reſentment in the following words: '*I forbear now to mention any farther the 'carriage of the writer of the Tranſactions in this af- 'fair* (49).' Mr Oldenburg preſently returned both the accuſation and the reſentment as follows, 'It is 'certain, ſays he, that the deſcriber of helioſcopes 'ſome years ago, cauſed to be actually made ſome 'watches of this kind, yet without publiſhing a de- 'ſcription of them in print to the world. *And it is as 'true, that none of theſe watches ſucceeded, nor was 'any thing ſince done to amend the invention*, 'till Mr 'Huygens communicated his contrivance to the Society; 'the deſcription of which and figure being produced at 'one of their meetings, were not only ſeen, but a copy 'of the figure was then taken by Mr Hooke, who 'knew that both were deſigned to be publiſhed in the 'Tranſactions, and had he given to the editor of them 'the leaſt intimation that he deſired notice might be 'taken at the ſame time of his invention of the like 'kind, it would certainly have been complied with, as 'had been done on other occaſions. Witneſs ſeveral of 'the ſame tracts, wherein divers diſcoveries of this ac- 'cuſer have been formerly both printed, and vindicated 'from the uſurpation of others.' In proceeding he inſinuates ſtrongly that Huygens hit upon the invention as ſoon as Mr Hooke, and before he knew any thing of what Mr Hooke had done. Thus, concludes he, 'I 'ſhall diſmiſs him, not doubting but all candid readers 'will blame him for the expreſſion in p. 30. of his ſaid 'poſtſcript, which is, that he forbears to mention any 'further the carriage of the writer of the Tranſactions in 'this affair; and only add, that if this writer of mecha- 'nics will think fit to explain what he means by it, he 'ſhall certainly meet with a full anſwer, vindicating the 'integrity of the publiſher in ſuch a manner, that all 'impartial and good men will be abundantly ſatisfied 'therewith.' Our author, highly provoked with this nettling anſwer, made the following reply in his poſtſcript to his *Lampas* the following year. 'The 'publiſher of the Tranſactions, ſays he, in that of Oc- 'tober 1675, endeavours to cover former injuries 'by accumulating new ones—otherwiſe he would not 'have affirmed that *none of my watches ſucceeded*. For 'how could he be ſure of a negative, whom I have 'not acquainted with my inventions, ſince I looked on 'him as *one that made a trade of intelligence?* Next, 'whereas he denies their being publiſhed to the world 'in print, he prevaricates, and would have it believed, 'they were not publiſhed to the world, though they 'were publickly read of in Sir John Cutler's lectures, '——and though they were made, and ſhewn to thou- 'ſands,

(41) Theſe letters were formerly in the library of Will. Jones, Eſq; which is now in the poſſeſſion of George Earl of Macclesfield.

(42) That is in the Aſtronomy Profeſſor's apartments; his proper lodgings, as Geometry Profeſſor, being then taken up for the uſe of the city. Ward, p. 176. In note (*a*), and p. 112.

(43) Attempt to prove the Motion of the Earth, p. 27.

(44) Ibid. p. 24. The four obſervations were made July 6 and 9, Aug. 6, and Oct. 21, anno 1669.

(45) The preſent Aſtronomer royal.

(46) Theſe inſtruments were made by Mr G. Graham, F. R. S. Phil. Tranſ. No. 406.

(47) Phil. Tranſ. No. 118.

(48) No. 112.

(49) In No. 118. for Oct. 1675. under the article entitled, An Account of Mr Hooke's Treatiſe upon Helioſcopes. Which account is expreſsly omitted as needleſs, and this anſwer to the poſtſcript is inſerted in it's ſtead.

Lampas: or Descriptions of some Mechanical Improvements of Lamps and Water-poises. Together with some other Physical and Mechanical Discoveries. The same year he was succeeded in

'sands, both English and foreigners, and writ of to 'many, and lastly in 1666, published to the world in 'print in the History of the Royal-Society *.' To this Mr Oldenburg, by way of rejoinder, published the following advertisement at the end of the Transaction for the months of August and September 1676 (50). 'The publisher of this tract intends to take another 'opportunity of justifying himself against the asper-'sions and calumnies of an *immoral postscript* put to a 'book called Lampas, published by Robert Hooke. ''Till which time, 'tis hoped, the candid reader will 'suspend his judgment.' And to the next Transaction (51), was subjoined the following declaration of the Council of the Royal-Society. 'A declaration of the 'Council of the Royal-Society, passed November 20, '1676, relating to some passages in a late book of Mr 'Hooke, intituled *Lampas*, &c. Whereas the pub-'lisher of the Philosophical Transactions hath made 'complaint to the Council of the Royal-Society, of some 'passages in a late book of Mr Hooke's entituled *Lam-'pas*,&c (52). and printed by the printer of said Society, 'reflecting on the integrity and faithfulness of the said 'publisher in his management of the intelligence of the 'said Society; this Council hath thought fit to declare 'in the behalf of the publisher aforesaid, that they knew 'nothing of the publication of the said book; and fur-'ther, that the said publisher hath carried himself faith-'fully and honestly in the management of the intelli-'gence of the Royal-Society, and given no just cause of 'such reflections.' To this Mr Oldenburg subjoined what follows. 'The Council having justified the publisher, he will only add that part of a letter written to him by Mr Chr. Huygens de Zulichem, 20 Feb. 1675, which relates to the taking out a patent of his the said Mr Huygens's invention, and then let the world judge of the prescriber's accusation about an endeavour to defraud him of his contrivance. The words of the said letter englished, are thus. *For the rest, Sir, if you believe that a priviledge* (so he calls a patent) *in England would be worth something, and that either the Royal-Society or you might make some advantage thereof, I willingly offer you all I there might pretend to.* So that if there was a desire in the publisher to take out a patent of the invention, it was for no other contrivance, but that which was sent by Mr Huygens formerly to the Royal-Society, and was printed in No. 112 of these tracts.' Thus ended this controversy, which Mr Ward observes (53) might have been sooner over, had some warm expressions been forborn on either side. However, there is one expression in it that deserves to be considered, and *that* is, where Mr Oldenburg declares, *that the watches made by our author's directions in* 1665 *and* 1666, *did not succeed, and that nothing was since done to amend the invention, 'till Mr Huygens commucated his contrivance.* Mr Waller thought that this passage proceeded from passion (54), the invention and principle of Hooke's and Huygens's being, says he, the same as are now [in 1705] used (55), but he acknowledges at the same time that he never could learn whether Mr Hooke's watches were succesful or no; and it is observable, that Mr Hooke himself in his answer to Oldenburg does not assert it, but avoids the charge by retorting another, that his antagonist could not know the succes of his watches, to whom he had never shewn any of his inventions. Dr Derham indeed is very positive on the side of Mr Hooke, and having given him for the inventor both of the single and double ballance watches with the spiral spring, proceeds in these terms. 'The time of these inventions was a-'bout the year 1658, as appears from this inscription 'which I saw upon one of the aforesaid double bal-'lance watches presented to King Charles II, viz. '*Robert Hooke inven.* 1658. *T. Tompion fecit* 1675 '(56), and in confirmation of this, Mr Ward acquaints 'us that he had then (viz. in 1740) lately seen a round 'brass plate, which was formerly a cover to the bal-'lance of one of Mr Hooke's watches, that it was cut 'through in the form of sprigs, and had on it this in-'scription, *R. Hooke invenit an.* 1658. *T. Tompion 'fecit* 1675.' That this plate was then in the hands of George Graham, F. R. S. who informed him that he had heard Mr Tompion say, he was employed three months that year by Mr Hooke in making some parts of those watches, before he let him know for what use they were designed; and that Mr Tompion was likewise used to say, he thought the first invention of them was owing to Mr Hooke (57). But here it is obvious to observe, that notwithstanding the invention is placed so high as 1658, yet that date must have been put by Mr Hooke's direction, and that these watches were not made till 1675, that is a year after he had seen the abovementioned figure and description of Mr Huygen's watch. As to Mr Tompion's opinion, that the first invention of these watches was owing to Mr Hooke, it appears that Mr Waller was of the same opinion, and from him we have the foundation upon which it stands, as follows. 'Mr Hooke, says he, told me, that he having shewn a movement regulated by a spiral spring to the Lord Brouncker about the year 1660. Mr Huygens, who had for some time applied himself to invent several ways to regulate time-keepers (58) by the correspondence he held with Mr Oldenburg, among other matters had notice of this, for which there was afterwards an application made to procure a patent [*as abovementioned*]. This is indeed possible, continues Mr Waller, but whether it were so or not, I cannot determine. That Mr Hooke had, many years before Mr Huygens mentioned, discovered the invention is certain, by what is related in the History of the Royal-Society †, among several new inventions in these words: *There have been invented several kind of pendulum watches for the pocket, wherein the motion is regulated by springs, &c.* Now, though this does not mention the springs being spiral, or fastened to the arbor of the ballance, yet it appears it was so, by what is related above; and a passage I have seen in a letter from Sir Robert Moray to Mr Oldenburg, dated Oxon. Sept. 30, 1665, clears it, in which are these words: *You* [meaning Oldenburg] *will be the first that will know when his* [that is Huygens] *watches will be ready; and I will therefore expect from you an account of them, and if he imparts to you what he does, let me know it. To that purpose you may ask him, if he does not* apply a spring to the arbor of the ballance, *and that will give him occasion to say somewhat to you, if it be that, you may tell him what Hooke* HAS DONE IN THAT MATTER, AND WHAT HE INTENDS MORE (59). Although I cannot be sure what Oldenburg wrote to Monsieur Huygens, yet it is probable their intimacy procured what he knew; and it is evident that Huygens's discovery of this was first published in the *Journal des Sçavans*, and thence in the Philosophical Transactions for March 25, 1675, about ten years after that letter of Sir Robert Moray's, and near 15 after Hooke's first discovery of it.' Mr Waller concludes with the concession of Mr Oldenburg (60), to which may be added the attestation of the Royal-Society sent to Mr Huygens, both already mentioned. Upon the whole, there does not appear to be sufficient evidence for absolutely determining this dispute on either side, but it seems most probable that the rudiments of the invention were first laid by Mr Hooke, and that the watch was first perfected † by Mr Huygens. Thus perhaps the prize is divided in the fairest and most candid manner between the English and the Dutch. Yet after all it is observable, that a late French writer gives Mr Hooke's share to a countryman of his own, who deprived Mr Huygens also of all the advantage of his share; it is pleasant enough, what is advanced by him upon the occasion, with all the alertness peculiar to that nation. 'The movement, says 'he, of watches, was formerly regulated only by the 'ballance and the force of a large spring, which by 'the unwinding itself rendered the motion swifter or 'slower. But upon the 7th of July, 1674, the Abbot de Hautefeuille of Orleans, communicated to the members of the Royal-Academy, the method of regulating the motion of the ballance of watches, by means of a small streight spring fixed at one end to the edge of the plate, and at the other end to the edge ‖ of the ballance, and regulated it's motion, performing the office of a pendulum *. After this, Mr Huygens published a letter in the Journal des Sçavans, on the 25th of February, 1675, concerning a new invention of very exact and portable watches, wherein he pretended to be the author of that discovery, and accordingly ob tained a licence from the King to make the advantage of it. But Mr de Hautefeuille having opposed it's being registered, and proved that he was the first inventor, Mr

(52) The date in the title-page of the Lampas is 1667. but that seeming inconsistency with the date of this declaration is owing to the custom of the Printers, in beginning their year at Michaelmas.

(53) Ubi supra, p. 180.

(54) Life of Dr Hooke, p. 7.

(55) That is in the application of the spring to the ballance. But Mr Huygens's had a longer spring, and the beats were much slower, the ballance turning several rounds every vibration; whereas in Dr Hooke's it turned scarce quite round. Artificial Clockmaker, ch. viii. edit. 1734. Mr Hooke's way is that now in use.

(56) Ibid. Where the author informs us, that Dr Hooke had a grant the same year for a patent for these watches, but did not take it out, as thinking it not worth while, by reason the single ballance watches being much easier made and cheaper, were found to answer very well.

(57) Lives of the Gresham Professors, p. 182. note (*a*).

(58) Mr Huygens probably began to carry his thoughts to some other ways of regulating watches, upon the ill success of his pendulum ones, in finding out the longitude at sea, which was in the latter end of the year 1664.

† By Sprat, p. 247.

(59) It is here taken for granted by Mr Waller, that the spring which was then fixed to the arbor of the ballance was a spiral one; whereas Dr Derham intimates, that in Mr Hooke's first invention it was streight. See remark [*C*], sub finem.

(60) Waller's Life of Hooke, p. 6, 7.

† Viz. So far as in some measure to succeed.

‖ If so, then in this particular the Abbot's invention differed from that of Mess. Hooke and Huygens, by whom this other end of the spring was fixed to the arbor or verge of the ballance.

* It is remarkable, that, though the Artificial Clockmaker is abridged by this gentleman, yet he takes no notice of the proofs therein produced, to shew that Mr Hooke invented this spring long before.

in the office of Keeper of the Repository to the Royal-Society, by Mr Richard Shortgrave their Operator. And upon the decease of Mr Oldenburg, in August 1677, Mr Hooke being appointed to supply his place, began to take minutes at the meeting on the 5th of October, but did not publish the Transactions [P]. In 1678 he published in 4to *Lectures de Potentia Restitutiva: or of Springs, explaining the Powers of springing Bodies: To which are added some Collections* (*h h*). And the same year came out his *Lectures and Collections*, intitled, *Cometa & Microscopium* (*i i*) in 4to. Towards the end of this year, in pursuance of an order of the Royal-Society, he assisted in removing their library of books from Arundel-house to Gresham-college, but declined the offer of the Librarian's place, which was erected on the 7th of February ensuing (*k k*). In 1681, came out his *Philosophical Collections* (*l l*) (in seven distinct tracts (*m m*) from 1679 to 1682) in 4to. Not long after this, he grew more reserved than formerly; and though he read his Cutlerian lectures, and often made experiments, and shewed new inventions before the Royal-Society; yet he seldom left any full account of them to be entered in their registers; designing, as he said, to fit them himself and make them public, which he never performed (*n n*). In 1686, he laid claim to Sir Isaac Newton's Discovery concerning the Force and Action of Gravity, which was warmly resented by that great Philosopher [Q]. In the beginning of

(*h h*) There is no account of this book in the Phil. Trans. though Mr Oldenburg was dead.

(*i i*) There is an account of this treatise in the Transactions, No. 139. N. B. Our author stiles himself Secretary of the Royal-Society in both.

(*k k*) Ward, in our author's Life, ubi supra, p. 183.

(*l l*) Probably so called, tho' the plan was different from that of the 1st edition.

(*m m*) Among these were two of his own. *An Optical Discourse, proposing a way for helping short-sighted or purblind eyes*, No. iii, iv. p. 59. *A Mechanical Discourse, containing a description of the best form of horizontal sayls for a mill, and the ground of the inclined sayls of ships.* No. iii, v. p. 61.

(*n n*) Waller, p. 24.

Mr Huygens did not reap any benefit from that licence (61). This writer a little further explains himself to this effect, that the Abbot's streight spring, communicated in 1674, was afterwards improved by Mr Huygens's invention of the spiral one (62).

(62) Ibid. p. 243.

[P] *He did not publish the Philosophical Transactions.*] They were published by Dr Nehemiah Grew, who, notwithstanding Mr Hooke's election, being chosen Secretary November 30 1677, begun the publication of those papers with the month of January following, and carried them on to the end of February 1678 (63). After this, the Transactions were omitted till January 1682, and it was during this interval that Mr Hooke published his *Philosophical Collections* mentioned in the text. Upon the 30th of November, 1682, Dr Robert Plot being made Secretary in the room of Mr Hooke, the publication of the Transactions was revived, beginning with the month of January following, in the preface to which it is observed, that they had been discontinued for the four last years.

(63) They had been carried on to the month of June preceding by Mr Oldenburg, who first began them on March 6, 1664.

[Q] *He laid claim to Sir Isaac Newton's discovery, &c.*] We have an account of this matter in the following letters that passed between Sir Isaac and Dr Halley. The first sent by Sir Isaac to the Doctor, is dated from Cambridge, June 20, 1686, and runs thus.

SIR,

'In order to let you know the case between Mr 'Hook and me, I gave you an account of what passed 'between us in our letters, so far as I could remember. 'For 'tis long since they were writ, and I do not 'know that I have seen them since. I am almost confident by circumstances, that Sir Christopher Wren 'knew the duplicate proportion when I gave him a 'visit; and then Mr Hook, by his book *Cometa* (64), 'written afterwards, will prove the last of us three 'that knew it. I intended in this letter to let you 'understand the case fully, but it being a frivolous business, I shall content myself to give you the heads 'of it in short, viz. that I never extended the duplicate proportion lower than to the superficies of the 'earth, and before a certain demonstration I found the 'last year, have suspected it not to reach accurately 'enough down so low; and therefore in the doctrine 'of projectiles never used it, nor considered the motions of the heavens; and consequently Mr Hook 'could not from my letters, which were about projectiles, and the regions descending hence to the 'center, conclude me ignorant of the theory of the 'heavens. That what he told me of the duplicate 'proportion was erroneous, namely, that it reached 'down from hence to the center of the earth. That 'it is not candid to require me now to confess myself 'in print, then ignorant of the duplicate proportion 'in the heavens, for no other reason but because he 'had told it me in the case of projectiles, and so 'upon mistaken grounds accused me of that ignorance. 'That in my answer to his first letter, I refused his 'correspondence, told him I had laid philosophy aside, 'sent him only the experiment of projectiles (rather 'shortly hinted, than carefully described) in compliment to sweeten my answer, expected to hear no farther from him, could scarce persuade myself to answer his second letter, did not answer his third, was 'upon other things, thought no further of philosophical matters than his letters put me upon it, and 'therefore may be allowed not to have had my 'thoughts about me so well at that time. That by 'the same reason, he concluded me ignorant of the 'rest of the duplicate proportion, he may as well conclude me ignorant of that theory I had 'read before in his books. That in one of my papers 'writ (I cannot say what year, but I am sure some 'time before I had any correspondence with Mr 'Oldenburg, and that's) above fifteen years ago, the 'proportion of the forces of the planets to the 'sun reciprocally duplicate to their distances from him, 'and the proportion of our gravity to the moon's 'conatus recedendi a centro terræ is calculated, though 'not accurately enough. That when Huygenius put 'out his *Horol Oscill.* a copy being presented to me (65), in my letter of thanks to him I gave those 'rules in the end thereof a particular commendation 'for their usefulness in computing the forces of the 'moon from the earth, and the earth from the sun, in 'determining a problem about the moon's phase, 'and putting a limit to the parallax; which shews 'that I had then my eye upon the forces of the planets 'arising from their circular motion, and understood 'it; so that a while after, when Mr Hook propounded 'the problem solemnly in the end of his *Attempt to prove the motion of the earth* (66), if I had not 'known the duplicate proportion before, I could not 'but have found it out now. Between ten and eleven 'years ago, there is an hypothesis of mine registered 'in your books, wherein I hinted a cause of gravity 'towards the earth, sun, and planets, with the dependance of the celestial motions thereon; in which the 'proportion of the decrease of gravity from the superficies of the planet (though for brevity sake not there 'expressed) can be no other than reciprocally duplicate 'of the distance from the center. And I hope I shall 'not be urged to declare in print, that I understood 'not the obvious mathematical conditions of my own 'hypothesis. But grant I received it afterwards from 'Mr Hook, yet have I as great a right to it as to the 'ellipsis. For as Kepler knew the orb to be not circular but oval, and guessed it to be elliptical; so Mr 'Hook, without knowing what I have found out since 'his letters to me, can know no more, but that the 'proportion was duplicate *quam proxime* at great 'distances from the center, and only guessed it to be so 'accurately, and guessed amiss in extending that proportion down to the very center, whereas Kepler guessed 'right at the ellipsis; and so Mr Hook found less of 'the proportion, than Kepler did of the ellipsis. There 'is so strong an objection against the accurateness of 'of this proportion, that without my demonstrations, 'to which Mr Hook is yet a stranger, it cannot be believed by a judicious philosopher to be any where accurate. And so in stating this business I do pretend 'to have done for the proportion, as for the ellipsis, 'and to have as much right to the one from Mr Hook 'and all men, as to the other from Kepler; and therefore on this account also he must at least moderate his 'pretences.' Sir Isaac's *Principia* being at this time in the press under the care of Dr Halley, this letter concludes with some particulars upon that business, wherein he declares his intention to suppress the third book

(64) This was published in 1678.

(65) It was printed in 1673.

(66) This book was printed in 1674.

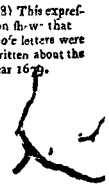
of the year 1687, he loſt his niece Mrs Grace Hooke (oo); who having lived with him many years, the grief for her death hardly ever wore off, being obſerved to be more melancholy

(oo) She was his brother's daughter.

book of that treatiſe, on the account of the trouble he had met with from Mr Hooke. After the concluſion, he goes on in a poſtſcript as follows. 'Since my writing this letter, I am told by one, who had it from another lately preſent at one of your meetings, how that Mr Hook ſhould make a great ſtir, pretending I had all from him, and deſiring they would ſee that he had juſtice done him. This carriage towards me is very ſtrange and undeſerved; ſo that I cannot forbear, in ſtating the point of juſtice, to tell you further, that he has publiſhed Borell's hypotheſis in his own name, and the aſſerting of this to himſelf, and completing it as his own, ſeems to me the ground of all the ſtir he makes. Borell did ſomething in it, and wrote modeſtly. He has done nothing, and yet written in ſuch a way, as if he knew, and had ſufficiently hinted all, but what remained to be determined by the drudgery of calculations and obſervations, excuſing himſelf from that labour by reaſon of his other buſineſs; whereas he ſhould rather have excuſed himſelf by reaſon of his inability: for it is very plain by his words, he knew not how to go about it. Now is not this very fine? Mathematicians that find out, ſettle, and do all the buſineſs, muſt content themſelves with being nothing but dry calculators and drudges; and another that does nothing, but pretend and graſp at all things, muſt carry away all the invention, as well of thoſe that were to follow him, as thoſe that went before. Much after the ſame manner were his letters writ to me, telling me, that gravity in deſcent from hence to the center of the earth, was reciprocally in a duplicate ratio of the altitude, that the figure deſcribed by projectiles in that region would be an ellipſis, and that all the motions of the heavens were thus to be accounted for, and this he did in ſuch a way, as if he had found out all, and knew it moſt certainly. And upon this information I muſt now acknowledge in print, I had all from him, and ſo did nothing myſelf but drudge in calculating, demonſtrating, and writing upon the inventions of this great man. And yet after all, the firſt of thoſe three things, he told me, is falſe, and very unphiloſophical; the ſecond is as falſe; and the third was more than he knew, or could affirm me ignorant of by any thing that paſſed between us in our letters. Nor do I underſtand by what right he claims it as his own; for as Borell wrote long before him, that by a tendency of the planets towards the ſun like that of gravity or magnetiſm the planets would move in ellipſes; ſo Bullialdus wrote, that all force reſpecting the ſun as it's center, and depending upon matter, muſt be in a reciprocally duplicate ratio of the diſtance from the center, and uſed that very argument for it, by which you, Sir, in the laſt Tranſactions (67) have proved this ratio in gravity. Now if Mr Hook by this general propoſition in Bullialdus might learn the proportion in gravity, why muſt this proportion here go for his invention? My letter to Huygenius, which I mentioned above, was directed to Mr Oldenburg, who uſed to keep the originals. His papers came into Mr Hook's poſſeſſion. Mr Hook knowing my hand, might have the curioſity to look into that letter, and there take the notion of comparing the forces of the planets ariſing from their circular motion, and ſo what he wrote to me afterwards about the rate of gravity might be nothing but the fruit of my own garden. And it is more than I can affirm, that the duplicate proportion was not expreſſed in that letter. However he knew it not (as I gather from his books) 'till five years after any mathematician could have told it him. For when Huygenius had told how to find the force in all caſes of circular motion, [in his Horol. Oſcill. publiſhed in 1673] he had told them how to do it in this as well as in others, and ſo the honour of doing it in this is due to Huygenius. For another five years after to claim it as his own invention [in his Cometa printed 1678] is as if ſome mechanic, who had learned the art of ſurveying from a maſter, ſhould after claim the ſurveying of this or that piece of ground for his own invention, and keep a heavy quarter to be in print for it. But what if this ſurveyor be a bungler, and give an erroneous ſurvey? Mr Hook has erred in the invention he pretends to, and his error is the cauſe of all the ſtir he makes. For his extending the duplicate proportion do n to the center (which I do not) made him correct me, and tell me the reſt of his theory as a new thing to me, and now ſtand upon it, that I had all from that his letter, notwithſtanding that he had told it to all the world before, and I had ſeen it in his printed books (68) all but the proportion, and why ſhould I record a man for an invention, who founds his claim upon an error therein, and on that ſcore gives me trouble. He imagines he obliged me by telling me his theory, but I thought myſelf diſobliged by being upon his own miſtake corrected magiſterially, and taught a theory which every body knew, and I had a truer notion of than himſelf. Should a man who thinks himſelf knowing, and loves to ſhew it in correcting and inſtructing others, come to you when you are buſy, and notwithſtanding your excuſes preſs diſcourſes upon you, and through his own miſtakes correct you, and multiply diſcourſes; and then make this uſe of it, to boaſt that he taught you all you ſpake, and oblige you to acknowledge it, and cry out injury and injuſtice if you do not; I believe you would think him a man of a ſtrange unſociable temper Mr Hook's letters in ſeveral reſpects abounded too much with that humour, which Hevelius and others complain of (69), and therefore he may do well in time to conſider, whether after this new provocation, I be much more bound (in doing him that juſtice he claims) to make an honourable mention of him in print, eſpecially ſince this is the third time that he has given me trouble in this kind.

(67) No. 179. See Dr Halley's article in remark [S], p. 2504.

(68) This expreſſion ſhews that tho'e letters were written about the year 1679.



(69) See remark [L].

'For your further ſatisfaction in this buſineſs, I beg the favour you would conſult your books for a paper of mine intituled an Hypotheſis explaining properties of light. It was dated December 7, 1675 (70), and regiſtred in your book about January or February following. Not far from the beginning there is a paragraph ending with theſe words: "and as the earth, ſo perhaps may the ſun imbibe this ſpirit copiouſly to "to conſerve his ſhining, and keep the planets from "receding further from him; and they that will, may "alſo ſuppoſe, that this ſpirit affords or carries thither "the ſolary fewel and material principle of light; and "that the vaſt ætherial ſpaces between us and the ſtars "are for a ſufficient repoſitory for this food of the ſun "and planets. But this of the conſtitution of æthereal "natures by the bye."

(70) See remark [M] at note (40).

'In theſe and the foregoing words, you have the common cauſe of gravity towards the earth, ſun, and all the planets, and that by this cauſe the planets are kept in their orbs about the ſun, and this is all the philoſophy Mr Hook pretends I had from his letters ſome years after, the duplicate proportion only excepted. The preceding words contain the cauſe of the phænomena of gravity as we find it on the ſurface of the earth, without any regard to the various diſtances from the center. For at firſt I deſigned to write of nothing more. Afterwards, as my manuſcript ſhews, I interlined the words above cited relating to the heavens, and in ſo ſhort and tranſitory an interlined hint of things, the expreſſion of the proportion may well be excuſed. But if you conſider the nature of the hypotheſis, you will find that gravity decreaſes upwards, and can be no other from the ſuperficies of the planet than reciprocally duplicate of the diſtance from the center. But downwards that proportion does not hold. This was but an hypotheſis, and ſo only to be looked upon as one of my gueſſes, which I did not rely on; but it ſufficiently explains to you, why in conſidering the deſcent of a body down to the center, I uſed not the duplicate proportion. In the ſmall aſcent and deſcent of projectiles above the earth, the variation of gravity is ſo inconſiderable, that mathematicians neglect it. Hence the vulgar hypotheſis with them is uniform gravity. And why might not I as a mathematician uſe it frequently, without thinking on the philoſophy of the heavens, or believing it to be philoſophically true?' To this Mr Halley returned an anſwer, dated London, 29 June, 1686, wherein he obſerves, that in 1683, Mr Hooke told him he had demonſtrated all the laws of the celeſtial motions by the reciprocally duplicate proportion of the force of gravity, but

lancholy and cynical, and leſs active from that time; and the year following he grew very weak and ill; which hindered his ſtudies; but ſtill he read ſome lectures when he was able

but that being offered forty ſhillings by Sir Chriſtopher Wren, to produce ſuch a demonſtration, his anſwer was, that he had it, but would conceal it for ſome time, that others trying and failing, might know how to value it, when he ſhould make it public; that he then promiſed to ſhew it to Sir Chriſtopher, but never had; that he was acquainted with the entring of Sir Iſaac's demonſtration into the regiſter books of the Royal-Society, and proceeds, Mr Halley, 'according 'to the philoſophically ambitious temper he is of, he 'would, had he been maſter of a like demonſtration, 'no longer have concealed it, the reaſon he told Sir 'Chriſtopher and me now ceaſing. But now he ſays, 'that is but one ſmall part of an excellent ſyſtem of 'nature, which he has conceived, but has not yet 'compleatly made out, ſo that he thinks not fit to pub-'liſh one part without the other. But I have plainly 'told him, that unleſs he produce another differing de-'monſtration and let the world judge of it, neither I 'nor any one elſe can believe it. As to the manner 'of Mr Hooke's claiming the diſcovery, I fear it has 'been repreſented in worſe colours than it ought; for 'he neither made public application to the Society for 'juſtice, nor pretended you had all from him The 'truth is this: Sir John Hoſkins, his particular friend, 'being in the chair, when Dr Vincent preſented your 'book, the Doctor gave it it's juſt encomium both as 'to the novelty and dignity of the ſubject. It was re-'plied by another gentleman, that you had carried the 'thing ſo far, that there was no more to be added; to 'which the Vice-Prefident replied, that it was ſo much 'the more to be prized, for that it was both invented 'and perfected at the ſame time. This gave Mr 'Hooke offence, that Sir John did not at the ſame 'time make mention of what he had, as he ſaid, diſ-'covered to him: upon which they two, who 'till 'then were the moſt inſeparable cronies, have ſince 'ſcarcely ſeen one another, and are utterly fallen out. 'After the breaking up of that meeting, being adjourned 'to the Coffee-houſe, Mr Hooke did there endeavour 'to gain belief, that he had ſome ſuch thing by him, 'and that he gave you the firſt hint of this invention. 'But I found that they were all of opinion, that nothing 'thereof appearing in print, nor on the books of the 'Society, you ought to be confidered as the inventor. 'And if in truth he knew it before you, he ought not 'to blame any but himſelf for having taken no more 'care to ſecure a diſcovery, which he puts ſo much 'value on. What application he has made in private, 'I know not, &c †.' Sir Iſaac's reply to this, dated *July* 14, 1686, was in theſe terms.

† See the reſt of this letter in Dr Halley's article, remark [T].

'SIR,

'....I am very ſenſible of the great kindneſs of the 'gentlemen of your Society to me, far beyond what-'ever I could expect or deſerve, and know how to di-'ſtinguiſh between their favour and another's humour. 'Now I underſtand he was in ſome reſpects miſrepre-'ſented to me, I wiſh I had ſpared the poſtſcript in 'my laſt. This is true, that his letters occaſioned my 'finding the method of determining figures, which I 'then tried in the ellipſis.—But for the duplicate pro-'portion, I can affirm that I gathered it from Kepler's 'theorem about 20 years ago.—There was another 'thing in Mr Hook's letters, which he will think I 'had from him, he told me that my propoſed experi-'ment about the deſcent of falling bodies, was not 'the only way to prove the motion of the earth; and 'ſo added the experiment of your pendulum clock at 'St Helena, as an argument of gravity's being leſſened 'at the æquator by the diurnal motion. The experi-'ment was new to me, but not the notion. For in 'the very paper which I told you was writ ſome time 'above 15 years ago, and to the beſt of my me-'mory was writ 18 or 19 years ago, I calculated 'the force of aſcent at the æquator ariſing from 'the earth's diurnal motion, in order to know what 'would be the diminution of gravity thereby. 'But yet to do this buſineſs right, is a thing of far 'greater difficulty than I was aware of. A third thing 'there was in his letters which was new to me, and I 'ſhall acknowledge it, if I make uſe of it; 'twas the 'deflection of falling bodies to the ſouth-eaſt in our 'latitude (71). And now having ſincerely told you 'the caſe between Mr Hook and me, I hope I ſhall 'be free for the future, from the prejudice of his let-'ters. I have conſidered how beſt to compoſe the 'preſent diſpute, and I think it may be done by the 'incloſed ſcholium to the fourth propoſition *.' After this letter, Sir Iſaac ſent the following.

(71) Mr Hooke ſhewed this by an experiment before the Royal-Society in December 1679. Waller, p. 22. the ſame year that his letters here mentioned were written to Sir Iſaac.

'SIR,

'Yeſterday I unexpectedly ſtruck upon a copy of the 'letter I told you of to Huygenius. 'Tis in the hand 'of one Mr John Wickins, who was then my chamber-'fellow, and is now parſon of Stoak Edith near Mon-'mouth, and ſo is authentick. It begins thus, being 'directed to Mr Oldenburg.

'*SIR*,

'*I received your letter, with Mr Huygens's kind pre-'ſent, which I have viewed with great ſatisfaction, 'finding it full of very ſubtle and uſeful ſpeculations, 'very worthy of the author. I am glad that we are to 'expect another diſcourſe of the* Vis centrifuga, *which 'ſpeculation may prove of good uſe in Natural Philoſo-'phy and Aſtronomy, as well as Mechanics. Thus, for 'inſtance, if the reaſon why the ſame ſide of the moon 'is ever towards the earth, be the greater conatus of 'the other ſide to recede from it, it will follow (upon 'ſuppoſition of the earth's motion about the ſun) that the 'greateſt diſtance of the ſun from the earth, is to the 'greateſt diſtance of the moon from the earth, not great-'er than* 10000 *to* 56, *and therefore the parallax of 'the ſun not leſs than* $\frac{56}{10000}$ *of the parallax of the 'moon; becauſe, were the ſun's diſtance leſs in propor-'tion to that of the moon, ſhe would have a greater 'conatus from the ſun than from the earth. I thought 'alſo ſome time that the moon's libration might depend 'upon her conatus from the ſun and earth compared to-'gether, 'till I apprehended a better cauſe.* Thus far this 'letter concerning the *vis centrifuga* The reſt of it, 'for the moſt part concerning colours, is printed in 'the Philoſophical Tranſactions of July 21, 1673, 'No. 96. Now from theſe words it is evident, that 'I was at that time verſed in the theory of the force 'ariſing from circular motion, and had an eye upon 'the forces of the planets, knowing how to compare 'them by the proportions of their periodical revolu-'tions, and diſtances from the center they move about: 'an inſtance of which you have here in the compariſon 'of the forces of the moon ariſing from her menſtrual 'motion about the earth, and annual about the ſun. 'So then in this theory I am plainly before Mr Hook. 'For he, about a year after, in his attempt to prove 'the motion of the earth declared expreſsly, that 'the degrees by which gravity decreaſed he had not 'then experimentally verified, that is, he knew not 'how to gather them from phænomena; and therefore 'he there recommends it to the proſecution of others.

'Now though I do not find the duplicate proportion 'expreſſed in this letter (as I hoped it might); yet if 'you compare this paſſage of it here tranſcribed, with 'that hypotheſis of mine regiſtered by Mr Oldenburg 'in your book, you will ſee that I then underſtood it. 'For I there ſuppoſe, that the deſcending ſpirit acts 'upon bodies here on the ſuperficies of the earth, 'with a force proportional to the ſuperficies of their 'parts; which cannot be, unleſs the diminution of 'it's velocity, in acting upon the firſt parts of any bo-'dy it meets, be recompenced by the increaſe of it's 'denſity ariſing from that retardation. Whether this 'be true is not material, it ſuffices that it was the hy-'potheſis. Now if this ſpirit deſcend from above 'with uniform velocity, it's denſity, and conſequently 'it's force, will be reciprocally proportional to the 'ſquare of it's diſtance from the center. But if it de-'ſcend with accelerated motion, it's denſity will every 'where diminiſh as much as it's velocity increaſes; 'and ſo it's force (according to the hypotheſis) will be 'the ſquare as before, that is, ſtill reciprocally as the 'ſquares of it's diſtance from the center.

'In ſhort, as theſe things compared together, ſhew 'that I was before Mr Hook in what he pretends to 'have been my maſter, ſo I learned nothing by his let-'ters but this, that bodies fall not only to the eaſt, but 'alſo in our latitude to the ſouth. In the reſt, his correct-'ing and informing me was to be complained of. And

'though

* This was done accordingly in theſe words, Schol. *Caſus Corollarii ſexti obtinet in corporibus cæleſtibus (ut ſeorſum collegerunt etiam noſtrates Wrennius, Hookius, & Hallcius), &c.* The ſixth Coroll. is, *Si tempora periodica ſint in ratione ſeſquiplicata radiorum, & proinde velocitates reciproce in radiorum ratione ſubduplicata; vires centripetæ erunt reciproce ut quadrata radiorum & contra.*

able. At the ſame time a Chancery-ſuit, in which he was concerned with Sir John Cutler, on account of his ſalary for reading the Cutlerian lectures, made him very uneaſy; and increaſed his diſorder; ſo that for ſome years he did little elſe beſides reading his lectures (*pp*). In 1691, he was employed in forming the plan of the hoſpital near Hoxton, founded by Robert Aſk Alderman of London [*R*], who appointed Archbiſhop Tillotſon one of his executors (*qq*); and in December the ſame year, our author was created Doctor of Phyſic, by a warrant from that prelate (*rr*). Upon the 27th of March, 1695, his Chancery-ſuit yet continuing, the Council of the Royal-Society granted him a certificate under their common ſeal, of his full performance of the Cutlerian lecture; and on the 18th of July the enſuing year, it was determined for him to his great ſatisfaction [*S*]. In June the ſame year, 1696, an order was granted to him for repeating moſt of his experiments at the expence of the Royal-Society, upon a promiſe of his finiſhing the accounts, obſervations, and deductions, from them, and of perfecting the deſcriptions of all the inſtruments contrived by him; but his increaſing weakneſs and general decay rendered him unable to perform it (*ss*). And Saturday April 10, 1697, he begun to write the Hiſtory of his own Life, but never finiſhed it (*tt*). He had for ſeveral years been often taken with a giddineſs in his head, which was ſometimes attended with much pain, little appetite, and great faintneſs. About July this year he begun to complain of the ſwelling and ſoreneſs of his legs, and was much torn with the ſcurvy; and about the ſame time being ſeized with a giddineſs, he fell down ſtairs and cut his head, bruiſed his ſhoulders, and hurt his ribs, of which he complained even to the laſt. He continued ſome years in this waſting condition; and, in February 1700, by reaſon of his illneſs (*uu*), Dr Halley drew up an account of his marine barometer, and read it before the Royal-Society (*ww*). For more than twelve months before his death, he was ſo very infirm as to be in a manner helpleſs, though he ſeldom went to bed all the time, but kept in his cloaths, ſo that the ſwelling in his legs broke, and at laſt, for want of care, mortified. Thus languiſhing 'till he was quite emaciated, he died March 3, 1702, at his lodgings in Greſham-college; whence his corpſe was conveyed to St Helen's church in Biſhopſgate-ſtreet, and interred there, the funeral being attended by all the members of the Royal-Society then in London (*xx*). He perſiſted to the laſt in affirming, that he knew a certain method of diſcovering the Longitude at ſea [*T*]. Mr Waller has given the following character of him, which ſeems to be drawn with a candid impartiality. He begins with a deſcription of his perſon, which made but a deſpicable figure; being ſhort of ſtature, very crooked (*yy*), pale, lean, and of a meagre aſpect, with dark-brown hair, very long, and hanging neglected over his face, uncut and lank (*zz*). His features were not the moſt regular, but in his younger days he had a ſharp ingenious look, and was very active. Suitable to this perſon, his temper was penurious, melancholy, miſtruſtful, and jealous, which increaſed upon him with his years; and theſe qualities were attended with a ſharpneſs of wit in diſcerning the temper of others, which ſometimes ſhewed itſelf in giving ſhrewd

(*pp*) Waller, ib.

(*tt*) He carried it on no farther than to the death of his father in 1648. Waller, p. 25.

(*uu*) Id. ibid.

(*ww*) It was printed in Phil. Tranſ. No. 269.

(*xx*) Waller, p. 26.

(*yy*) He uſed to ſay he was ſtreight 'till 16 years of age, when being of a thin and weak habit, he firſt grew awry by frequently uſing a turner's lathe, and other inclining exerciſes.

(*zz*) He wore this 'till within three years of his death, when he cut it off and wore a perriwig.

(72) When the experiment mentioned in note (71) was made, our author read a diſcourſe, to prove that the falling body would not deſcribe ſuch a ſpiral, as we ſee here Sir Iſaac then thought; but either an elliptiſpiral, after many revolutions reſting in the center at laſt, or elſe an elliptoid, according as it was or was not reſiſted by the medium. Waller's Life of Hooke, p. 22.

'though his correcting my ſpiral (72), occaſioned my 'finding the theorem, by which I afterward examined 'the ellipſis; yet am I not beholden to him for any 'light into the buſineſs, but only to the diverſion he 'gave me from my other ſtudies to think on theſe 'things, and for his dogmaticalneſs in writing, as if he 'had found the motion in the ellipſis, which inclined 'me to try it, after I ſaw by what method it was to be 'done.

'Sir,

'I am your affectionate friend

July 27, 1686. 'and humble ſervant,

'Is. Newton.'

[*R*] *He drew the plan of Alderman Aſk's hoſpital near Hoxton.*] This has been generally eſteemed a handſome building, but Dr Hooke blamed for exceeding the ſum at firſt allotted for it, and by that means leſſening the revenue. In anſwer to this charge he uſed to ſay, though the fact was true, yet it was not occaſioned by his fault or miſtake; but partly by additions and alterations of the firſt deſign, and chiefly by his not procuring and agreeing with the workmen himſelf (73).

(73) Ibid. p. 24.

[*S*] *It was determined for him to his great ſatisfaction.*] His joy on that occaſion was found in his Diary thus expreſſed, DOMSHLGISSA, that is, *Deo optimo maximo ſit honor laus gloria in ſæcula ſæculorum, Amen.* I was born on this day of July 1635, and God has given me a new birth; may I never forget his mercies to me, whilſt he gives me breath may I praiſe him (74).

(74) Id. ibid.

[*T*] *He perſiſted in it to the laſt, that he knew how to find out the longitude at ſea.*] Not many weeks before his death he told Mr Waller and others, that he knew a certain and infallible method to diſcover the true place of a veſſel at ſea, as to it's eaſt and weſt diſtance from the port departed from; Mr Waller ſuggeſts that this method might be by other time-keepers than watches, or elſe by ſome ſtill different ways; but rather thinks it was by watches, for the improvement of which, our author made many trials and read ſeveral diſcourſes (75). However, 'tis evident that his friends entertained his aſſeveration of the diſcovery with diſtruſt, and how little credit was then given to it in general, appears from Mr Waller's account therof. Mr Hooke, ſays he, 'ſuffering this invention to be undiſcovered to the laſt, 'gave ſome perſons cauſe to queſtion, whether he was 'ever poſſeſſor of it, and to doubt whether what 'in theory ſeemed very promiſing, would anſwer 'when put to the teſt of practice. Others indeed more 'ſeverely judged, that it was only a kind of boaſting 'in him to aſſert that, which had not yet been per-'formed, though attempted by many.' Thus ſtood the opinion of the world at our author's death, and as nothing has appeared ſince to alter it; ſo, to ſay the truth, it needs no other proof than his own account of the matter contained in the poſtſcript to his treatiſe of Helioſcopes (76), eſpecially if it be conſidered how apt he was in other ſubjects to make ſuch kind of affirmations as this concerning the longitude. For inſtance, about the time that Sir Iſaac Newton's reflecting teleſcope begun to gain eſteem, he affirmed, *coram multis*, that in 1664, he made a little tube about an inch long to put in his fob, which performed more than any teleſcope of fifty feet long made after the common manner; but the plague happening, which cauſed his abſence, and the fire, whence redounded profitable employments about the city, he neglected to proſecute the ſame, being unwilling the glaſs-grinders ſhould know any thing of the ſecret (77).

(75) Ibid. p. 61.

(76) See ſome paſſages, ſerving to explain that poſtſcript, in Birch's Hiſt. of the R. S. Vol. II. p. 22.

(77) Gen. Dict. Vol. VI. p. 216. in the notes (*a*).

[*U*] *Many*

ſhrewd gueſſes and ſmart characters. Thus framed, ſetting out in his youth with a collegiate or rather monaſtic recluſeneſs, he afterwards led the life of a cynical hermit, ſcarcely allowing himſelf neceſſaries, notwithſtanding the great increaſe of his fortune after the Fire of London (*a a a*). He declared ſometimes that he had a great project in his head as to the diſpoſal of the moſt part of his eſtate, for the advancement of natural knowledge, and to promote the ends and deſigns for which the Royal-Society was inſtituted; to build a handſome fabrick for the Society's uſe, with a library, repoſitory, laboratory, and other conveniences for making experiments; and to found and endow a Phyſico-mechanic lecture like that of Sir John Cutler. But though he was often ſollicited by his friends to put his deſigns down in writing, and make his Will as to the diſpoſal of his eſtate to his own mind in the time of health; and after, when himſelf and all others thought his end drew near; yet he could never be prevailed with to perfect it; ſtill procraſtinating, 'till at laſt this great deſign proved an airy phantom, and vaniſhed into nothing, and he died without any Will or Teſtament that could be found. In like manner, with reſpect to his philoſophical treaſures, when he firſt became known to the learned world, he was very communicative of his diſcoveries and inventions, but afterwards grew cloſe and reſerved to a fault, alledging for an excuſe, that ſome perſons challenged his diſcoveries for their own, and took occaſion from his hints to perfect what he had not; for which reaſon he would ſuggeſt nothing 'till he had time to perfect it himſelf, ſo that many things are loſt which he affirmed he knew (*b b b*). In the mean time, he was reſtleſs and indefatigable in acquiring theſe poſſeſſions, always contenting himſelf with little ſleep, and that very irregular; for he ſeldom went to bed 'till two or three o'clock in a morning, and frequently not at all, but purſued his ſtudies the whole night, and took a ſhort nap in the day. In the religious part of his character he was ſo far exemplary, that he always expreſſed a great veneration for the Deity, as may be ſeen in a great many paſſages of his writings; and ſeldom received any remarkable benefit from God, without thankfully acknowledging the mercy; he never made any conſiderable diſcovery in nature, invented any uſeful contrivance, or found out any difficult problem, without ſetting down his acknowledgment to God, as many places in his diary teſtified (*c c c*). And he frequently ſtudied the ſacred writings in the originals. For, to proceed to his endowments natural and acquired, he was well acquainted with the ancient languages, as well as with all parts of the mathematics. But that which diſtinguiſhed him was his mechanical genius, and ſagacity in penetrating into the ſecrets of nature. This ſhews itſelf in the great number of experiments made by him, amounting to ſeveral hundred; and in his new and uſeful inſtruments, that were numerous; as alſo in his happy talent of adapting theories to obſervations, and contriving eaſy and plain methods to prove thoſe theories, and confirm them by further trials. Had he been more ſteady in his purſuits, and perfected one diſcovery before he entered upon another, he might perhaps in ſome caſes have done greater ſervice to the public, and prevented what often gave him uneaſineſs, the fear of loſing the credit of them by others, who built upon his foundation (*d d d*). For many of his inventions were never brought to the perfection of which they were capable, nor put in practice 'till ſome other perſon improved upon them [*U*]. However, the various productions of his genius were eſteemed by the moſt learned Philoſophers both at home and abroad; and covering his failures with his merit, he may juſtly claim a place (though not in the front) among thoſe illuſtrious perſons who adorned the Royal-Society in the laſt age. His papers being put by his friends into the hands of R. Waller, Eſq; Secretary to the ſaid Society, that gentleman collected ſuch as were thought worthy of the preſs, and publiſhed them under the title of his Poſthumous Works [*W*] in 1705, to which he prefixed an account of his life, in folio.

(*a a a*) See rem. [*K*].

(*b b b*) In the courſe of this memoir, we have ſeen him frequently apt to carry thoſe pretenſions too far.

(*c c c*) It was often expreſſed in theſe letters, D. O. M. G. M. Deo opt. max. gratias max.

(*d d d*) Life of Dr Hooke, p. 27.

[*U*] *Many of his inventions were never brought to perfection.*] This might poſſibly ariſe from the fertility of his invention, which continually preſenting ſomewhat new to his mind, gave him both leſs time and inclination to attend to one thing long together. This is Mr Ward's remark, who ſupports it, by ſeveral of our author's letters written to Mr Boyle, wherein it was ſurpriſing to find what a number and variety of things he was in purſuit of at the ſame time (78).

(78) Theſe letters, 18 in number, were in the hands of Dr Miles of Tooting in Surrey in 1740. Lives of the Greſham Profeſſors, p. 288.

[*W*] *His poſthumous works.*] Theſe works contain, (I.) *A general ſcheme or idea of the preſent State of Natural Philoſophy, and how it's defects may be remedied by a methodical proceeding in making Experiments and collecting Obſervations, whereby to compile a Natural Hiſtory, as the ſolid baſis of the Superſtructure of true Philoſophy.* (II.) *Lectures of Light, explicating it's Nature, Properties, and Effects*, particularly that of the Sun and Comets. In theſe lectures he gives a mechanical explication of memory, as alſo of our ideas of time and duration. (III.) *A Diſcourſe of the Nature of Comets.* It appears by this diſcourſe that Mr Hooke went into the general miſtake concerning the comet of 1680, in believing it to be two comets from the intermiſſion of it's appearance while twiſting round the ſun. To this is added a *Diſcourſe of Gravity*, containing an hypotheſis of the cauſe of Gravitation and Magnetiſm. (IV.) *Obſervations upon Dr John Dee's Book of Spirits.* (V.) *Lectures and Diſcourſes of Earthquakes and ſubterraneous Eruptions; explicating the Cauſes of the rugged and uneven face of the Earth; and what Reaſon may be given for the frequent finding of Shells, and other Sea and Land petrified Subſtances ſcatterred over the whole terreſtrial Superficies* (79). He aſcribes all theſe phænomena to earthquakes, and as to ſhells, in anſwer particularly to the objection from the *Cornu Ammonis* found in the ſtone-quarries at Portland, which it was obſerved muſt needs contain a much larger fiſh than any found in theſe northern climates; he is even hardy enough to ſuppoſe that this our iſland might once ſtand in the torrid zone, and be removed thence into it's preſent ſituation by an earthquake; he gives the hiſtories of ſeveral remarkable earthquakes, and applies them to the explication of the fables in Ovid's Metamorphoſes, which book he maintains in the ſame humour to be an allegorical account of earthquakes. (VI.) *Lectures concerning Navigation and Aſtronomy.*

(79) Our author here follows Columna's opinion, that theſe ſhells and petrified ſubſtances are the *exuviæ* and parts of animals. He alſo aſſerts the ſame thing in his *Microg.* ch. xvii. and in his lecture *de Potentia Reſtitutiva* he maintains, not only that the race of Teneriffe is the product of an earthquake, but that moſt if not all other hills in the world were thus generated. See more of this ſubject in Dr John Woodward's article.

HOOKER [RICHARD], the celebrated author of *The Lawes of Eccleſiaſtical Politie*, was born in the year 1553 [*A*], at Heavy-tree near Exeter. His parents were more remarkable for their virtue and induſtry than for their extraction and riches (*a*); though ſome of his anceſtors had been Mayors of Exeter (*b*), and his uncle John Hooker (*c*) was then Chamberlain of the ſame, and accounted rich (*d*). He was deſigned by his parents for a trade; but his ſchool-maſter, who admired his modeſty, gravity, ſweetneſs of temper, and quick apprehenſion, perſwaded them to continue him at ſchool, 'till he could find out ſome means to eaſe them of part of the charge of his education. Accordingly, his uncle was prevailed upon to maintain him one year at the univerſity; and Dr Jewel Biſhop of Saliſbury was ſo kind as to allow him a penſion. He got him alſo admitted, in the year 1567, one of the Clerks of Corpus-Chriſti-college in Oxford [*B*]: but his penſion, and his chief hopes of ſubſiſtence, ceaſed with that good Biſhop's life in the year 1571. However, Providence raiſed him two other patrons, in Dr Cole then Preſident of the college, and Dr Edwin Sandys Biſhop of London [*C*], and afterwards Archbiſhop of York (*e*); by whoſe intereſt, on the 24th of December 1573, he was elected ſcholar of his college; which not only incorporated him into that learned body, but alſo afforded him a tolerable maintenance (*f*). On the 23d of February, 1576-7, he took the degree of Maſter of Arts, which he compleated the Act following, and was admitted Fellow of his college the ſame year. Among other parts of learning, being a good maſter of the oriental languages, he was appointed, July 14, 1579, Deputy-Profeſſor of the Hebrew tongue in the univerſity, in the room of Mr Kingſmill, who, by over ſtudy, was become diſordered in his ſenſes (*g*). But in October the ſame year, he and others were expelled the college by Dr John Barefoot, then Vice-Preſident: the cauſe, whatever it could be, was but trifling and inſufficient, for they were reſtored the ſame month. After that, he continued his ſtudies in all quietneſs, and with the utmoſt alacrity and ſucceſs, as may be gueſſed from his writings. He entered into Holy Orders about the year 1581, and ſoon after, being appointed to preach at St Paul's-croſs in London, he was ſo unhappy as to be drawn into a moſt unfortunate marriage, of which an account is given below in the note (*b*) [*D*]. Loſing by that his fellowſhip, he remained without preferment 'till December 9, 1584, when he was preſented by John Cheny, Eſq; to the rectory of Drayton-Beauchamp in Buckinghamſhire; where going to ſettle, he led an uncomfortable life with his

[*A*] *In the year* 1553.] A. Wood ſays, that it was 'about the time of Eaſter, *an.* 1554 (1).'

(1) Ath. Vol. I. edit. 1721. col. 302.

[*B*] *One of the Clerks of Corpus-Chriſti college in Oxford.*] He continued in that ſtation 'till the eighteenth year of his age: about which time he had a dangerous fit of ſickneſs, that had like to put an end to his life. As ſoon as he was perfectly recovered, he took a journey from Oxford to Exeter, to ſee his good mother, being accompanied with a countryman of his, and of his own college, and both on foot; which was then either more in faſhion, or elſe want of money, or their humility, made it ſo. They took Saliſbury in their way, purpoſely to ſee Biſhop Jewel, who made Mr Hooker and his companion dine with him at his own table. At their departure, the Biſhop gave him good counſel, and his benediction, but forgot to give him money: which when the Biſhop had conſidered, he ſent a ſervant in all haſte to call Richard back to him; and at Richard's return, the Biſhop ſaid to him, 'Richard, I ſent for you back to lend you a horſe 'which hath carried me many a mile, and I thank 'God, with much eaſe;' and then delivered into his hand a walking ſtaff, with which he profeſſed he had travelled through many parts of Germany; and he ſaid, 'Richard, I do not give but lend you my horſe; 'be ſure you be honeſt, and bring my horſe back to 'me at your return this way to Oxford. And I do now 'give you ten groats to bear your charges to Exeter; 'and here is ten groats more, which I charge you to 'deliver to your mother, and tell her, I ſend her a 'Biſhop's benediction, and beg the continuance of her 'prayers for me. And if you bring my horſe back to 'me, I will give you ten groats more to carry you on 'foot to the college, and ſo God bleſs you, good 'Richard (2).'

(2) Walton, as above, p. 163, 164.

[*C*] *And Dr Edwin Sandys, Biſhop of London.*] The way Mr Hooker came to be known to this good Biſhop, happened to be thus. He, and his old intimate friend, and fellow-exile Biſhop Jewel, meeting accidentally, the latter gave Biſhop Sandys ſuch a character of Mr Hooker's learning and good behaviour, that though Biſhop Sandys was educated at Cambridge, and had there many friends; yet he reſolved, that his ſon *Edwin* ſhould be ſent to Corpus-Chriſti-college in Oxford, and by all means be pupil to Mr Hooker, (who was then nineteen years of age, and five years ſtanding in the univerſity) though his ſon Edwin was not much younger than Mr Hooker. For the Biſhop ſaid, 'I will have a tutor for my ſon that ſhall teach 'him learning by inſtruction, and virtue by example; 'and my greateſt care ſhall be the laſt; and God wil- 'ling, this Richard Hooker ſhall be the man into 'whoſe hands I will commit my Edwin (3).' This Edwin was afterwards knighted, and wrote *Europæ Speculum*.——Mr Hooker had at the ſame time another conſiderable pupil, namely, *George Cranmer*, eldeſt ſon of Thomas Cranmer, ſon of Edmund, brother to the famous Archbiſhop Cranmer.——And, in proceſs of time, he became a very conſiderable tutor (4).

(3) Walton, p. 165, 166.

(4) Idem, p. 169 and 166.

[*D*] *He was ſo unhappy as to be drawn into a moſt unfortunate marriage.*] The manner in which he was intrapped into that marriage, is thus related by Mr Walton (5). There was then belonging to the church of St Paul's, a houſe called the Shunamite's houſe, ſet apart for the reception and entertainment of the preachers at St Paul's Croſs, two days before, and one day after, the ſermon. That houſe was then kept by Mr John Churchman, formerly a ſubſtantial draper in Watling-ſtreet, but now reduced to poverty. Mr Hooker came thither from Oxford, ſo wet and weary, that he was under the utmoſt anxiety, for fear he ſhould not be able to perform his duty the Sunday following. But Mrs Churchman nurſed him ſo well, that he was enabled by that means to diſcharge well the office of the day. For this he was ſo very thankful, that, as Mr Walton expreſſes it (6), 'he thought himſelf 'bound in conſcience to believe all that ſhe ſaid: ſo 'the good man came to be perſuaded by her, *That he 'was a man of a tender conſtitution; and that it was 'beſt for him to have a wife, that might prove a nurſe 'to him; ſuch an one as might both prolong his life, 'and make it more comfortable; and ſuch a one ſhe 'could and would provide for him, if he thought fit to 'marry.* He fearing no guile, becauſe he meant none, 'gave her a power to chuſe a wife for him; promiſing 'upon a fair ſummons to return to London, and ac- 'cept of her choice. And he did ſo, in that or the 'year following. Now, the wife provided for him 'was her daughter *Joan*, who brought him neither 'beauty nor portion: and, for her conditions, they 'were too like that wife's, which is by Solomon com- 'pared to a dripping houſe.'——Which A. Wood explains, by ſaying, that ſhe was a ſilly clowniſh woman, and withal a meer Xantippe (7).

(5) P. 173, 174, 175.

(6) Ibid.

(7) Ath. ut ſupra, col. 302.

[*E*] *Received*

his wife Joan. In that condition he continued about a year; and in the mean time received a visit from his two former pupils, Mr Edwin Sandys and Mr George Cranmer [*E*], who observed and pitied his unhappy situation. So that, at their return to London, Mr Sandys sollicited his father, who was then translated to the archbishopric of York, to remove him to some more suitable benefice. Accordingly, the mastership of the Temple becoming vacant soon after, the Archbishop made so strong interest in his behalf, that on the 17th of March, 1585, he was by patent fixed in that honourable employment, being then in the 34th year of his age (*i*). A country retirement would have better suited his natural disposition; however, he promised himself here that blessed tranquillity which he always prayed and laboured for. But it was soon impaired, and at length entirely destroyed, by the repeated vexations he met with from Mr Walter Travers, Lecturer of the Temple, and a rigid Puritan. This man being disappointed in his expectation of the mastership, and differing from Mr Hooker in many doctrinal points; his resentment, and their mutual differences, ended at last in a public opposition in their preaching (*k*). So that what Mr Hooker delivered in the forenoon, Mr Travers confuted in the afternoon (*l*). Thus it continued a long time, 'till the opposition became so visible, and the consequences so dangerous, especially in that place, that Archbishop Whitgift caused Mr Travers to be silenced by the High-Commission-Court. Upon that Mr Travers presented his *Supplication to the Privy-Council*; which being ineffectual, he made it public [*F*]. And that

(*i*) Idem, p. 177, 178, 179.

(*k*) Walton, p. 199, &c.

(*l*) Fuller's Church-History, b. ix. p. 216.

[*E*] *Received a visit from his two former pupils, Mr Edwin Sandys, and Mr George Cranmer.*] They found him with a Horace in his hand, tending his small allotment of sheep in a common field; which he told those gentlemen he was *forced* to do, because his servant was gone home, to dine, and assist his wife to do some necessary household business. When his servant returned and released him, his two pupils attended him to his house, where their best entertainment was his quiet company, which was presently denied them; for Richard was called *to rock the cradle*; and the rest of their welcome was so like this, that they staid but 'till next morning, which was time enough to discover and pity their tutor's condition. And having in that time remembred and paraphrased on many of the innocent recreations of their younger days, and by other such like diversions, given him as much present pleasure as their acceptable company and discourse could afford him, they were forced to leave him to the company of his wife Joan, and seek themselves a quieter lodging for next night. But at their parting from him Mr Cranmer said, *Good Tutor, I am sorry your lot is fallen in no better ground as to your Parsonage: and more sorry, your wife proves not a more comfortable companion after you have wearied your thoughts in your restless studies.* To whom the good man replied, *My dear* George, *if Saints have usually a double share in the miseries of this life, I that am none, ought not to repine at what my wise Creator hath appointed for me; but labour, as indeed I do daily, to submit to his will, and possess my soul in patience and peace* (8).

(8) Walton, p. 177.

[*F*] *Mr Travers presented his supplication to the Privy-Council; which being ineffectual, he made it public.*] I cannot find, that it was then made public otherwise than by dispersing written copies of it (9). For I believe it was first printed in 1612; and hath been subjoyned to most of the later editions of Mr Hooker's works, where it may be seen. When it was presented, the members of the council were much divided in their sentiments. All the Archbishop's enemies there were, of course, favourers of Mr Travers; who had, besides, many great and powerful friends at Court. But even their united endeavours could never move the Queen to revoke what the Archbishop had done: she left spiritual matters to his discretion; and, as one humorously expresses it (10), 'Whitgift's finger moved more in Church matters, than the hands of all the Privie Counsellers besides.' ——— From Mr Travers's *Supplication* it appears, that the reasons alledged for silencing him, were, 'That he was not 'lawfully called to the function of the Ministry, nor 'allowed to preach according to the laws of the 'Church of England: that he preached without li'cence: that he inveighed against certain points of 'doctrine taught by Mr Hooker, as erroneous; not 'conferring with him, nor complaining of it to the 'Bishop.'——Contrary to the order made in the 7th of her Majesty's reign, importing, 'that erroneous 'Doctrine, if it came to be publickly taught, should 'not be *publickly refuted*, but that notice thereof should 'be given to the Ordinary, to hear and determine such 'causes, to prevent publick disturbance (11).'——— The *unsound and erroneous Doctrines* charged by him upon Mr Hooker, were, 1. That Mr Hooker 'had 'taught certain things concerning *Predestination*, 'otherwise than the word of God doth, as it is under'stood by all Churches professing the Gospel, and not 'unlike that wherewith *Coranus* sometimes troubled 'his Church; "I [adds Mr Travers] both delivered "the truth of such points in a general doctrine, with"out any touch of him in particular, and conferred "with him also privately upon such articles. In "which conference, I remember, when I urged the "consent of all churches and writers against him that "I knew; and desired, if it were otherwise, what "authors he had seen of such doctrine? he answered "me, *That his best author was his own reason.*" 2. Another Doctrine maintained by Mr Hooker, and censured by Mr Travers, was, 'That the assurance of 'that we believe by the word, is not so certain, as of 'that we perceive by sense.' Upon which Travers observes, "I both taught the doctrine otherwise, "namely, the assurance of Faith to be greater, which "assured both of *things above, and contrarie to all* "*sense and human understanding*, and dealt with him "also privately upon that point." 3. He also highly condemned this other doctrine of Mr Hooker, 'That 'the Church of Rome is a true Church of Christ, and 'a sanctified Church by profession of that Truth, which 'God hath revealed unto us by his Son, though not a 'pure and perfect Church;' and further, 'That he 'doubted not, but that thousands of our fathers, who 'lived and dyed in the superstitions of that Church, 'were saved, because of their ignorance, which excu'seth them;' alledging to that end 1 Tim. i. 13. Or, as Mr Hooker himself reports these last words in his answer, 'I doubt not but God was merciful to save 'thousands of our fathers, living heretofore in the 'Popish superstition, inasmuch as they sinned igno'rantly.' Mr Travers's reflexions upon that point, are as follow. "The matter being of set purpose "openly and at large handled by him, [viz. Hooker] "and of that moment, that might prejudice the faith "of Christ, encourage the ill-affected to continue still "in their damnable ways, and others weak in faith to "suffer themselves easily to be seduced, to the de"struction of their souls; I thought it my most boun"den duty to God, and to his Church, whilst I might "have opportunity to speak with him, to teach the "truth in a general speech in such points of doctrine. "At which time I taught, That such as dye, or have "dyed at any time in the Church of Rome, holding "in their ignorance that Faith which is taught in it, "and namely *Justification in part by Works*, could not "be said by the Scriptures to be saved." 4. He charged likewise Mr Hooker, with 'so setting forth 'in one of his sermons, the agreement of the Church 'of Rome with us, and their disagreement from us, 'as if we had consented in the greatest and weightiest 'points, and differed onely in certain smaller matters.' 5. It appears further from Mr Hooker's answer (12), that Mr Travers found fault with him, for 'Praying 'in the entrance of his sermon only, and not in the 'end; for naming Bishops in his prayer; kneeling 'when

that obliged Mr Hooker to publiſh an anſwer [G], which he inſcribed to Archbiſhop Whitgift

' when he prayed, and when he received the Commu-
' nion.' — Such was the ſubſtance of Mr Travers's Supplication, and of his accuſations therein laid againſt Mr Hooker; to which, what anſwers Mr Hooker made, will be ſeen in the next note.

[G] *And that obliged Mr Hooker to publiſh an anſwer.*] In that anſwer, he makes a reply to the ſeveral articles of unſound doctrine charged upon him by Mr Travers, which it is not only expedient but alſo neceſſary to lay before the reader. 1. With regard to the firſt article, Mr Hooker explains himſelf in theſe words. ' In the other conference, he queſtioned about ' the matter of *Reprobation*, miſliking firſt, that I had ' termed God a permiſſive and no poſitive cauſe of ' the evil, which the ſchoolmen do call *malum culpæ*. ' Secondly, that to their objection, who ſay, *If I be ' elected, do what I will, I ſhall be ſaved*; I had anſwered, that the will of God in this thing is not abſolute, but conditional, to ſave his elect believing, ' fearing, and obediently ſerving him. Thirdly, that ' to ſtop the mouths of ſuch as grudge and repine ' againſt God for rejecting caſt-aways, I had taught ' that they are not rejected, no not in the purpoſe and ' counſel of God, without a foreſeen worthineſſe of ' rejection going, though not in time, yet in order, ' before. For, if God's electing do in order, as needs ' it muſt, preſuppoſe the foreſight of their being that ' are elected, though they be elected before they be; ' nor onely the poſitive foreſight of their being, ' but alſo the permiſſive of their being miſerable, ' becauſe election is through mercy, and mercy ' doth always preſuppoſe miſery: it followeth, that ' the very choſen of God acknowledge, to the praiſe ' of the riches of his exceeding free compaſſion, that ' when he in his ſecret determination ſet it down, ' *Thoſe ſhall live and not dye*, they lay as ugly ſpectacles before him, as lepers covered with dung and ' mire, as ulcers putrified in their fathers loyns, miſerable, worthy to be had in deteſtation. And ſhall ' any forſaken creature be able to ſay unto God, Thou ' didſt plunge me into the depth, and aſſign me unto ' endleſs torments, onely to ſatiſfie thine own will, ' finding nothing in me for which I could ſeem in thy ' ſight ſo well worthy to feel everlaſting flames? — ' When I was further aſked, what my grounds were? ' I anſwered, that St Paul's words concerning this ' cauſe were my grounds.' — And, with regard to that ſaying of his, alledged by Mr Travers, *That his beſt author was his own Reaſon*; he thus explains himſelf—inſtead of ' the teſtimonies and the ſayings of ' mortal men; I alledged that which might under no ' pretence in the world be diſallowed, namely *Reaſon*, ' not meaning thereby mine own Reaſon, as now it is ' reported, but true, ſound, divine reaſon; reaſon ' whereby thoſe concluſions might be out of St Paul ' demonſtrated, and not probably diſcourſed of onely; ' reaſon, proper to that ſcience whereby the things of ' God are known;—This is the *reaſon* which I intended.' 2. To the ſecond objection, viz. *That the aſſurance of things which we believe by the word, is not ſo certain as of that we perceive by ſenſe*; Mr Hooker thus replies, ' And is it as certain? yea, I ' taught, as he himſelf, I truſt, will not deny, that ' the things which God doth promiſe in his word, are ' ſurer unto us, than any thing which we touch, ' handle, or ſee. But are we ſo ſure and certain of ' them? if we be, why doth God ſo often prove his ' promiſes unto us, as he doth by argument taken from ' our ſenſible experience? We muſt be ſurer of the ' proof, than of the thing proved, otherwiſe it is no ' proof. How is it, that if ten men doe all look upon ' the moon, every one of them knoweth it as certainly ' to be the moon as another; but many believing one ' and the ſame promiſe, all have not one and the ſame ' fulneſſe of perſwaſion? How falleth it out, that men ' being aſſured of any thing by ſenſe, can be no ſurer ' of it than they are; whereas the ſtrongeſt in faith ' that liveth upon the earth, hath always need to labour, and ſtrive, and pray, that his aſſurance concerning heavenly and ſpiritual things, may grow, ' encreaſe, and be augmented.' 3. To the third and and fourth objections; about the *Salvation of the Papiſts*; *and the Church of England's Agreement with them*; he anſwers thus. ' In ſettling the queſtion be-
' tween the Church of Rome and us, about *Grace* and ' *Juſtification*, leſt I ſhould give them an occaſion to ſay, ' as commonly they doe, that when we cannot refute ' their opinions, we propoſe to ourſelves ſuch, inſtead ' of theirs, as we can refute; I took it for the beſt ' and moſt perſpicuous way of teaching, to declare ' firſt how farr we doe agree, and then to ſhew our ' diſagreement: not generally (as Mr Travers his ' words would carry it) but about the matter onely of ' Juſtification; for further I had no cauſe to meddle at ' this time.' ——The Sermon wherein he treated of that point, was a Diſcourſe about Juſtification, Works, &c. printed at the end of his Eccleſiaſticall Politie; where the words to our preſent purpoſe, are theſe.— ' This openeth a way to the underſtanding of that ' grand queſtion which hangeth yet in controverſie between us and the Church of Rome, about the matter ' of juſtifying Righteouſneſs. Firſt, although they ' imagine, that the Mother of our Lord and Saviour ' Jeſus Chriſt were, for his honour, and by his ſpecial ' protection, preſerved clean from all ſinne: yet touching the reſt, they teach as we doe, That infants that ' never did actually offend, have their natures defiled, ' deſtitute of juſtice, averted from God; That in making man righteous, none do efficiently work with ' God, but God. They teach as we do, that unto ' juſtice no man ever attained, but by the merits of ' Jeſus Chriſt. They teach as we do, That although ' Chriſt, as God, be the efficient; as man, the meritorious cauſe of our juſtice: yet in us alſo there is ' ſome thing required. God is the cauſe of our natural life, in him we live: but he quickneth not the ' Body without the Soul in the Body. Chriſt hath ' merited to make us juſt: but, as a medicine, which ' is made for health, doth not heal by being made, ' but by being applied; ſo, by the merits of Chriſt there ' can be no Juſtification, without the application of his ' merits. Thus farr we joyn hands with the Church ' of Rome. Wherein then do we *diſagree?* We diſagree about the nature and eſſence of the Medicine, ' whereby Chriſt cureth our diſeaſe; about the manner of applying it; about the number, and the ' power of means, which God requireth in us for the ' effectual applying thereof to our ſouls comfort—' ——With regard to that aſſertion of his, in particular, That he *doubted not but God was merciful to ſave thouſands of our fathers living heretofore in Popiſh ſuperſtition, inaſmuch as they ſinned ignorantly*; all that he ſays in his own vindication is, ' A man that ' ſhould read this, [Mr Travers's ſevere reflections] ' and not know what I had ſpoken, might imagine ' that I had at the leaſt denied the Divinity of Chriſt. ' But they which were preſent at my ſpeech, and can ' teſtifie, that nothing paſſed my lips more than is contained in their writings, whom, for ſoundneſſe of ' doctrine, learning, and judgment, Mr Travers himſelf doth, I dare ſay, not onely allow, but honour: ' ——and this ſpoken in a ſermon, the greateſt part ' whereof was againſt Popery, they will hardly be able ' to diſcern how *Chriſtianity* ſhould herewith be ſo ' grievouſly ſhaken (13).' The concluſion of Mr Hooker's anſwer breathes a truly charitable ſpirit. ' I ' take no joy, ſays he, in ſtriving. I have not been ' nuzled or trained up in it. *I would* to Chriſt *they* ' *which* have at this preſent enforced me hereunto, ' had ſo ruled their hands in any reaſonable time, that ' I might never have been conſtrained to ſtrike ſo much ' as in mine own defence. —— Sith there can come ' nothing of contention, but the mutual waſte of the ' parties contending, till a common enemy dance in ' the aſhes of them both, I do wiſh heartily that the ' grave advice which *Conſtantine* gave for re uniting of ' his clergy, ſo many times, upon ſome ſmall occaſions ' in ſo lamentable ſort divided; or rather the ſtrict ' commandment of Chriſt unto his, that they ſhould ' not be divided at all; may at the length, if it be his ' bleſſed will, prevail ſo farr, at leaſt in this corner of ' the Chriſtian world, to the burying and quite forgetting of ſtrife, together with the cauſes that have ' either bred it, or brought it up, that things of ſmall ' moment never diſjoyn them, whom one God, one ' Lord, one Faith, one Spirit, one Baptiſm, band of ' ſo great love have linked. —— Finally, that no ' ſtrife may ever be heard of again, but this, Who ſhall ' hate ſtrife moſt, who ſhall purſue peace and unity ' with ſwifteſt paces (14).'

[H] *He*

Whitgift (*m*). This anſwer procured him great reverence and encouragement from ſome, and as much neglect and hatred from others. In order therefore to undeceive and win theſe, he entered upon his famous work of the Lawes of Eccleſiaſtical Politie, and laid the foundation of it in the Temple. But finding that buſy place not ſo fit for ſtudy and cloſe attention, he earneſtly intreated Archbiſhop Whitgift to remove him to ſome quieter place [*H*]. The Archbiſhop having the diſpoſal of the preferments belonging to the dioceſe of Sarum, during the vacancy of that ſee, preſented him, in 1591, to the rectory of Boſcomb in Wiltſhire; and, on the 17th of July the ſame year, to the prebend of Nether-Haven in the ſaid church of Sarum, of which he was alſo made Sub-dean (*n*). At Boſcomb he finiſhed four books of his Eccleſiaſtical Politie, which were entered into the regiſter-book at Stationers-hall, March 9, 1592, but not publiſhed 'till 1594 (*o*) [*I*]. The year following, quitting Boſcomb, he was preſented, July 7, 1595, by Queen Elizabeth, to the rectory of Biſhops-Bourne in Kent, vacant by the promotion of Dr William Redman to the biſhopric of Norwich. In this living he continued 'till his death, without any addition of dignity or profit, diſcharging all the duties of his function in a regular and exemplary manner (*p*). He uſed to preach once every Sunday, and he or his curate to catechize after the ſecond leſſon in the evening ſervice. His ſermons were neither long nor earneſt, but pronounced with a grave zeal and an humble voice [*K*]; and where he fixed his eyes at the beginning of his ſermon, there they continued 'till it was ended, in order to prevent his imagination from wandering; ſo that he ſeemed to ſtudy as he ſpoke (*q*). Before he had been one year at Bourne, his books, and the innocency and ſanctity of his life, became ſo remarkable, that many turned out of the road (ſcholars eſpecially), on purpoſe to ſee Him whoſe life and learning were ſo much admired (*r*). In this place he compoſed the fifth book of his Eccleſiaſtical Politie, which was publiſhed by itſelf in the year 1597. He finiſhed there alſo the ſixth, ſeventh, and eighth books of that learned work; but whether we have them as left by himſelf hath been much queſtioned (*s*) [*L*].

About

[*H*] *He earneſtly intreated Archbiſhop Whitgift to remove him to ſome quieter place.*] His letter was to this effect.

'My Lord,

'When I loſt the freedom of my cell, which was 'my colledge, yet I found ſome degree of it in my 'quiet country parſonage. But I am weary of the 'noiſe and oppoſitions of this place; and indeed God 'and Nature did not intend me for contentions, but 'for ſtudy and quietneſs. And, my Lord, my parti'cular conteſts here with Mr Travers have proved the 'more unpleaſant to me, becauſe I believe him to be 'a good man; and that belief hath occaſioned me to 'examine mine own conſcience concerning his opinions; 'and, to ſatisfie that, I have conſulted the Holy Scrip'ture, and other laws both humane and divine, Whe'ther the conſcience of him, and others of his judg'ment, ought to be ſo far complied with by us, as to 'alter our frame of Church-government, our manner 'of God's worſhip, our praiſing and praying to him, 'and our eſtabliſht ceremonies, as often as their tender 'conſciences ſhall require it. And, in this examina'tion, I have not onely ſatisfied myſelf, but have be'gun a treatiſe, in which I intend the ſatisfaction of 'others, by a demonſtration of the reaſonableneſs of 'our *Lawes of Eccleſiaſtical Politie*.—But, my Lord, 'I ſhall never be able to finiſh what I have begun, un'leſs I be removed into ſome quiet countrey parſonage, 'where I may ſee God's bleſſings ſpring out of my 'mother earth, and eat mine own bread in peace and 'privacy. A place where I may, without diſturbance, 'meditate my approaching mortality, and that great 'account which all fleſh muſt, at the laſt great day, 'give to the God of all ſpirits—(15).'

(15) Walton, p. 209.

[*I*] *At Boſcomb he finiſhed four books of his Eccleſiaſtical Politie, &c.*] They were finiſhed in the year 1592, and the author ſent a manuſcript copy of them to the Lord Treaſurer Burghley, 'for his favourable 'approbation,' with a letter dated the thirteenth of March, 1592. But they were not publiſhed, as is ſaid above, 'till the year 1594, nor the fifth 'till the year 1597. 'It is, according to Mr Strype's judicious 'obſervation, a juſt Diſcourſe of the Eccleſiaſtical 'State of this Church, built upon great reaſon and 'judgment, managed with admirable clearneſs and 'conviction, and with a ſtrain of great learning and 'modeſty withal: deſigned for a vindication of the 'Church of England, as it ſtood reformed at firſt, and 'eſtabliſhed by law, againſt thoſe that, ſo much and 'ſo intemperately, cried out for another platform of 'government. Which that moſt judicious divine did 'happily refute (16).' It is 'the ſtanding defence of 'the Church of England,' and hath kept its value and reputation better than any other performance of the laſt century. But, as it is in almoſt every one's hands, no further account need be given of it here.

(16) Strype's Life of Abp Whitgift, p. 400, 421.

[*K*] *But pronounced with a grave zeal and an humble voice.*] The deſign of his ſermons, as indeed of all his diſcourſes, was, to ſhew reaſons for what he ſaid: and with theſe reaſons ſuch a kind of rhetoric, as did rather convince and perſwade, than frighten men into piety. Studying not ſo much for matter, which he never wanted, as for apt illuſtrations to inform and teach his unlearned hearers by familiar examples, and then make them better by convincing applications; never labouring by hard words, and then by needleſs diſtinctions and ſubdiſtinctions, to amuſe his hearers, and get glory to himſelf; but glory only to God. Which intention he would often ſay was as diſcernable in a preacher, as an artificial from a natural beauty (17).

(17) Walton, p. 220.

[*L*] *He finiſhed there alſo the 6th, 7th, and 8th, books of that learned work; but whether we have them as left by himſelf, hath been much queſtioned.*] What hath occaſioned any diſpute about the genuineneſs of thoſe books, is, that they contain certain aſſertions concerning the true Nature of the Legiſlative Power, the Original of Government, and the Regal Power as derived from the people; which R. Baxter, and other Puritan authors, have taken an advantage of; and which the writers on the other ſide have imagined and affirmed, could never have dropped from Mr Hooker's pen (18). Mr Walton having ſifted this point to the bottom, we ſhall here give the ſubſtance of what he hath ſaid upon it. He tells us then, that he had been informed 'by one, who very well knew Mr Hooker, 'and the affairs of his family, that about a month af'ter his death, Archbiſhop Whitgift ſent one of his 'Chaplains to enquire of Mrs Hooker for the three re'maining books of Polity, written by her huſband; 'of which ſhe would not, or could not give any ac'count.——That, about three months after that, the 'Archbiſhop procured her to be ſent for to London, 'in order to be examined by ſome of the Privy-Coun'cil, concerning the diſpoſal of thoſe books: but, by 'way of preparation for the next day's examination, 'the Archbiſhop invited her to Lambeth, and, after 'ſome friendly queſtions, ſhe confeſſed to him, *that 'one* Mr Charke, *and another miniſter that dwelt near 'Canterbury, came to her, and deſired that they might 'go into her huſband's ſtudy, and look upon ſome of his 'writings; and that there they two burnt and tore 'many of them, aſſuring her that they were writings 'not fit to be ſeen, and that ſhe knew nothing more con'cerning them.* Her lodging was then in King-ſtreet 'Weſtminſter, where ſhe was found next morning dead 'in her bed, and her new huſband (19) ſuſpected and 'queſtioned

(18) See Wood Ath. Vol. I. col. 304.

(19) She was married again very ſoon after Mr Hooker's death.

About the year 1600, and the 46th of his age, he fell into a long and ſharp ſickneſs, occaſioned by a cold he took in his paſſage by water between London and Graveſend. He continued,

'queſtioned for it; but was declared innocent of her 'death.——The three laſt perfect books being thus 'loſt; Dr John Spencer, who was of the ſame col- 'lege and contemporary with Mr Hooker; (betwixt 'whom there was ſo firm a friendſhip, that they con- 'tinually adviſed together in all their ſtudies, parti- 'cularly about the Books of Eccleſiaſticall Politie) had 'the three imperfect books, or rough draughts of 'them, delivered to him by Archbiſhop Whitgift; to 'be made as perfect as might be, by him, who both 'knew Mr Hooker's hand writing, and was beſt ac- 'quainted with his intentions.' For the truth of this, Mr Walton appeals to an epiſtle, firſt and uſually print- ed before Mr Hooker's five books, and ſigned with J. S. the two initial letters of Dr Spencer's name, but omitted in Dr Gauden's edition of 1662; wherein are theſe paſſages. 'There is a purpoſe of ſetting forth 'the three laſt books alſo, their Father's *poſthumi*.— 'And, though like Rachel, he died as it were in the 'travel of them, and haſtened death upon himſelf by 'haſtening to give them life; yet he held out to behold 'with his eyes theſe *partus ingenii*, theſe Benjamins, ſons 'of his right hand, though to him they were Beno- 'nies, ſons of pain and ſorrow. But ſome evil diſ- 'poſed minds, whether of malice or covetouſneſs, or 'wicked blind zeal, it is uncertain, as if they had 'been Egyptian midwives, as ſoon as they were born, 'and their father dead, ſmothered them, and by con- 'veying away the perfect copies left unto us nothing 'but old unperfect and mangled draughts, diſmembred 'into pieces;——no favour, no grace, not the ſha- 'dows of themſelves almoſt remaining in them.——— 'But ſeeing the importunities of many great and 'worthy perſons will not ſuffer them quietly to dye 'and to be buried, it is intended that they ſhall ſee 'them as they are.' Mr Walton goes on thus,—'the 'reader may note, that this epiſtle of Dr Spencer's 'was writ, and firſt printed, within four years after 'the death of Mr Hooker, in which time, all diligent 'ſearch had been made for the perfect copies; and 'then granted not recoverable, and therefore indea- 'voured to be compleated out of Mr Hooker's rough 'draughts. And I do profeſs by the faith of a Chri- 'ſtian (adds Mr Walton) that Dr Spencer's wife, who 'was my aunt and ſiſter to George Cranmer, told 'me forty years ſince, in theſe or in words to this pur- 'poſe, that *her huſband had made up or finiſht Mr 'Hooker's laſt three books; and that upon her huſband's 'death-bed, or in his laſt ſickneſs, he gave them into 'her hand, with a charge they ſhould not be ſeen by 'any man, but be by her delivered into the hands of the 'then Archbiſhop of Canterbury, which was Dr Abbot, 'or unto* Dr King, *Biſhop of London; and that ſhe did 'as he injoyn'd her* (20).'——Dr Henry King Biſhop of Chicheſter, ſon of this Dr King Biſhop of London, explains this latter part, in the following manner, in a letter to Mr Walton (21);—'My father's knowledge 'of Mr Hooker, was occaſioned by the learned Dr 'John Spencer, who, after the death of Mr Hooker, 'was ſo careful to preſerve his unvaluable ſixth, 'ſeventh, and eighth books of Eccleſiaſtical Polity, 'and his other writings, that he procured Henry Jack- 'ſon, then of Corpus-Chriſti colledge, to tranſcribe 'for him all Mr Hooker's remaining written papers, 'many of which were imperfect; for his ſtudy had 'been rifled or worſe uſed by Mr Clark (22), and an- 'other of principles too like his: but as theſe papers 'were, they were endeavored to be compleated by 'his dear friend Dr Spencer, who bequeathed them as 'a precious legacy to my father; after whoſe death 'they reſted in my hand, 'till Dr Abbot, then Arch- 'biſhop of Canterbury, commanded them out of my 'cuſtody, authoriſing Dr John Barkham (his Lord- 'ſhip's chaplain) to require and bring them to him to 'Lambeth. At which time I have heard they were 'put into the Biſhop's library, and that they remained 'there 'till the martyrdom of Archbiſhop Laud, and 'were then by the brethren of that faction given 'with the library to Hugh Peters, as a reward for his 'remarkable ſervice in thoſe ſad times of the Churches 'confuſion: and though they could hardly fall into a 'fouler hand, yet there wanted not other endeavours 'to corrupt and make them ſpeak that language, for 'which the faction then fought; which was, *To ſub- 'ject the ſovereign power to the people.*'———But to return to Mr Walton,—'he conceives, that from 'Dr Spencer's, and no other copy, there have been 'divers tranſcripts, to be found in ſeveral places; as 'namely in the Bodleian Library, in that of Dr An- 'drews late Biſhop of Wincheſter, in the late Lord 'Conway's, in Archbiſhop Uſher's, and many others; 'and moſt of theſe pretended to be the author's own 'hand, but much diſagreeing, being indeed altered 'and diminiſhed, as men have thought fitteſt to make 'Mr Hooker's judgment ſuit with their fancies, or 'give authority to their corrupt deſigns. For proof 'of a part of which, he gives the following teſtimo- 'nies: 1. Dr Barnard, ſometime Chaplain to Arch- 'biſhop Uſher, in a book of his called *Clavis Trabales*, 'printed in 1661, declared, that, in his ſearch and 'examination of that Archbiſhop's manuſcripts, he 'found the three written books, which were the ſup- 'poſed 6th, 7th, and 8th, books of Mr Hooker's Ec- 'cleſiaſtical Polity; and that in thoſe three books, now 'printed as Mr Hooker's, there are ſo many omiſſions 'that they amount to many paragraphs, and which 'cauſe many incoherencies. The omiſſions are by him 'ſet down at large in that book, to which the reader 'is referred. 2 Mr Fabian Phillips atteſted it under 'his hand, that he was ready to make oath if required, 'that Dr Sanderſon Biſhop of Lincoln did, a little be- 'fore his death, aſſure him, he had ſeen a manuſcript, 'affirmed to him to be the hand writing of Mr 'Richard Hooker, in which there was no mention 'made of the King or Supreme Governors being ac- 'comptable to the people. So that, as Mr Walton 'goes on, there appears to be both omiſſions and ad- 'ditions in the ſaid laſt three printed books. 3. King 'Charles I. declared, *they were not allowed to be Mr 'Hooker's books.*'——Mr Walton concludes his exami- nation in theſe words. 'In this relation concerning 'theſe three doubtful books of Mr Hooker's, my pur- 'poſe was to enquire, then ſet down what I obſerved 'and know; which I have done, not as an engaged 'perſon, but indifferently, and now leave my reader 'to give ſentence for their legitimation, as to himſelf, 'but ſo, as to leave others the ſame liberty of believ- 'ing or diſbelieving them to be Mr Hooker's (23).'— But, notwithſtanding all theſe arguments, Biſhop Gau- den (24), Mr Richard Baxter (25), and others (26), maintain, that thoſe three books are genuine, and not interpolated.

Of theſe three books, the ſixth and eighth were publiſhed at London in 1648, 4to, under this title, 'Of the Lawes of Eccleſiaſtical Politie; the ſixth and 'eighth Books. By Richard Hooker. A work long 'expected, and now publiſhed according to the moſt 'authentique copies.' In an advertiſement to the reader, it is ſaid, that they were then publiſhed, to prevent ſome erroneous, if not counterfeit copies, that were abroad: and that fruitleſs endeavours had been uſed to recover the *Seventh*, that they might have been publiſhed to the world's view at once. It is alſo ſaid, that, before publication, they had been compared with the ſeveral copies abovementioned.———But we are aſſured, that, long before that, even as early as the year 1617, all the *Eight* books, with certain tractates and ſermons, and the author's life, were publiſhed in two volumes folio (27). Nothwithſtanding which, as if they had never before ſeen the light, that enterpriz- ing divine, Biſhop Gauden, put them *out in 1662* fol. under this title, 'The Works of Mr *Richard Hooker*, '(that learned, godly, judicious, and eloquent divine) 'vindicating the Church of England, as truly chriſtian, 'and duly reformed: in eight books of Eccleſiaſtical 'Polity. Now compleated, as with the fifth and 'eighth, ſo with the *ſeventh*, (touching Epiſcopacy, 'as the Primitive, Catholic and Apoſtolick Govern- 'ment of the Church) out of his own Manuſcripts, 'never before publiſhed. With an Account of his 'holy Life, and happy Death, Written by Dr John 'Gauden, now Biſhop of Exeter. The entire edition 'dedicated to the Kings moſt excellent Majeſtie, 'Charls the II. By whoſe Royal Father (near his 'Martyrdom) the former Five Books (then onely ex- tant) were commended to his dear Children; as an 'excellent means to ſatiſfie private ſcruples, and ſettle 'the publique peace of this Church and Kingdom.'

continued, notwithſtanding, his ſtudies to the laſt [*M*]. Waſted at length with labour and his lingering illneſs, he expired on the 2d of November 1600 [*N*], and was buried in the church of Biſhops-Bourne, where a monument was afterwards erected to his memory by William Cowper, Eſq; *(t)* [*O*]. His character is given below in the note [*P*]. He left no ſon, only four daughters *(u)* [*Q*], none of which made any conſiderable figure in life. Beſides his Eccleſiaſtical Politie, and Anſwer to Mr Travers, he writ ſome other pieces [*R*], which were publiſhed after his deceaſe.

(t) Walton, p. 225, &c. 231.

(u) Id. p. 231.

It is ſomewhat unaccountable, that Dr Gauden ſhould inſinuate, (as he doth) that the *Seventh* book was now firſt publiſhed, when it had been out ever ſince the year 1617: and that he ſhould ſay, in his dedication to King Charles II, that the works of Mr Richard Hooker (which he preſented to him) were 'now augmented, and I hope [adds he] *compleated with the three laſt books*, ſo much deſired, and ſo long *concealed*,' when the 6th and 8th had been publiſhed by themſelves but thirteen or fourteen years before. Surely his ignorance or confidence was great!——— what he ſays further upon the ſame point, in his Life of Mr Hooker (28), deſerves notice; being as follows. ——Of theſe eight books, 'five have many years been extant in publique; the *laſt three* were thought to have been never finiſhed, and to be ſure they have been for many ages ſuppreſſed; which *are now come to light, after our late long troubles.*———Each of them is by learned criticks judged to be *genuine* or *authentick*, though poſſibly not ſo compleat and exact as the curious author intended: The *Seventh* book, by comparing the writing of it with other indiſputable papers, or known manuſcripts of Mr Hookers, is undoubtedly his *own hand* throughout: the *eighth* is written by *another hand* (as a copy) but interlined in many places with Mr Hookers *own characters*, as owned by him.' In the life of Mr Hooker, prefixed by Biſhop Gauden to this edition of his works, there were *many material Miſtakes, and more Omiſſions*; which to correct and ſupply, Mr Iſaac Walton wrote another life of Mr Hooker, that was publiſhed in 1665.

(28) Prefixed to his edition of 1662. p. 26.

[*M*] *He continued, notwithſtanding, his ſtudies to the laſt.*] He ſtrove particularly to finiſh his Eccleſiaſticall Politie; and ſaid often to Dr Saravia, who viſited him daily, 'That he did not beg a long life of God for any other reaſon, but to live to finiſh his three remaining books of Polity; and then, Lord, let thy ſervant depart in peace,' which was his uſual expreſſion. 'Tis thought he haſtened his own death, by his intenſe application to compleat that work. And how great a value he ſet upon it, appears from the following inſtance. A very few days before his death, his houſe was robbed; of which having notice, he aſked, *Are my books and written papers ſafe?* And being anſwered, *that they were:* his reply was, *then it matters not, for no other loſs can trouble me* (29).

(29) Walton, p. 225, 226.

[*N*] *He expired on the 2d of November,* 1600.] It is amazing how ſome of Mr Hooker's contemporaries ſhould be ſo much miſtaken, as they have been, about the exact time of his death. Mr Camden, from whom greater exactneſs might have been expected, places it under the year 1599 (30). The miſtake is yet greater in his epitaph: for that places it under the year 1603, and in the 50th of his age. But Mr Walton having made proper enquiry, was informed by Mr William Somner, Regiſter for the province of Canterbury, that Richard Hooker's Will bears date October 26, 1600, and was proved the 3d of December following. His death is particularly fixed on the 2d of November, by Archbiſhop Laud; who wrote the following memorandum in the title-page of Mr Hooker's Eccleſiaſtical Polity, then belonging to him, which came afterwards into the hands of the learned Mr William Fulman. *Richardus Hooker, vir ſummis doctrinæ dotibus ornatus, de Eccleſiâ præcipuè Anglicanâ optime meritus, obiit Novemb. 2, circiter horam ſecundam poſtmeridianam, anno* 1600 (31).

(30) Annales Regin. Eliz. Hoc anno animam cœlo reddidit Richardus Hookerus.

(31) Walton, as above, p. 231.

[*O*] *Where a monument was afterwards erected to his memory by William Cowper, Eſq;*] The inſcription upon it is in theſe words; *Richardus Hooker Exonienſis, Scholaris Sociuſq; Collegii Corp. Chriſti Oxon. deinde Londi. Templi interioris in ſacris Magiſter, Rectorq; hujus Eccleſiæ, ſcripſit octo libros Politiæ Eccleſiaſticæ Anglicanæ, quorum tres deſiderantur: Obiit An. Do.* M.DC.III. *Ætat. ſuæ* L. *Poſuit hoc piiſſimo viro monumentum An. Do.* M.DC.XXXV. *Guli. Cowper Armiger, in Chriſto Jeſu quem genuit per Evangelium.* 1 Corinth. iv. 15.

[*P*] *His character is given below.*] Mr Hooker, as to his perſon, was of a mean ſtature, and ſtooping; his face full of heat-pimples, cauſed by his inactivity and ſedentary life: and, though not purblind, he was ſhort or weak ſighted (32). His complexion was ſanguine, with a mixture of choler; his motion and ſpeech ſlow even in his youth, never expreſſing an earneſtneſs in either of them, but an humble gravity, ſuitable to the aged (33).—With regard to the qualities of his mind; he was a man of great humility, meekneſs, and piety (34): ſo baſhful, that as in his younger years his pupils might eaſily look him out of countenance, ſo neither then, nor in his more advanced age, did he ever willingly look any man in the face (35). He was never known to be angry, or paſſionate, or extream in any of his deſires; or ever heard to utter an unſeemly word—By his unwearied application, he attained to perfection in the learned languages; and had made the ſubtilty of all the arts eaſy and familiar to himſelf, and uſeful for the diſcovery of ſuch learning as lay hid from common ſearchers: ſo that, by theſe, added to his ſtrong reaſon, and joined to his reſtleſs induſtry, he did not only know more of cauſes and effects; but what he knew, he knew better than other men (36). Nor was he a ſtranger to Muſic and Poetry. He would often ſay, that God abhors confuſion as contrary to his nature; and that the Scripture was not written to beget diſputations, and pride, and oppoſition to government, but charity and humility, moderation, obedience to authority, and peace to mankind: of which virtues, he would as often ſay, no man did ever repent on his death-bed (37).

[*Q*] *He left only—four daughters.*] Whoſe names were Alice, Cecily, Jane, and Margaret. One of the eldeſt was married to Mr Chalinor, ſometime a Schoolmaſter in Chicheſter. Margaret, the youngeſt, was married to Ezekiel Clark, B. D. Rector of St Nicolas in Harbledown near Canterbury; and by him had a ſon, Ezekiel, Rector of Waldron in Suſſex, and a daughter. His other daughters died before they were marriageable. He left each of them a hundred pounds; and the inventory of his effects, which were moſtly books, amounted to 1092l. 9s. 2d. Mr Hooker had a ſiſter, named Elizabeth Harvey, which lived to the age of 121 years, and died in September 1663 (38).

(38) Walton, p. 231, 232.

[*R*] *Beſides his Eccleſiaſtical Politie, &c. he writ ſome other pieces.*] Namely, I. 'A Diſcourſe of Juſtification, Works, and how the foundation of Faith is overthrown; on Abak i. 4.' II. 'A Sermon of the Nature of Pride; on Abak. ii. 4.' III. 'A Remedie againſt Sorrow and Feare, delivered in a funeral Sermon, on John xiv. 27.' Theſe three printed at Oxford, 1612, 4to.' IV. 'Of the certaintie and perpetuitie of Faith in the Elect, eſpecially of the Prophet Abakkuk's faith; on Abak. i. 4.' V. 'Two Sermons upon part of St Jude's Epiſtle, viz. ver. 17, 18, 19, 20, 21.' Printed at Oxford, 1614, 4to. All theſe ſermons were firſt publiſhed by Mr Henry Jackſon, Fellow of Corpus-Chriſti-college Oxford; and have been ſeveral times ſince reprinted at the end of the Eccleſiaſticall Politie. VI. 'Cauſes of Contention concerning Church-government.' Oxon. 1641. 4to. VII. 'A Sermon on Matth. vii. 7. found in the ſtudy of Dr Andrews Biſhop of Wincheſter, and publiſhed by Iſaac Walton, at the end of his Life of Biſhop Sanderſon (39).'

(39) Wood Ath. Vol. I. col. 305.

HOUGH [JOHN], the good Biſhop of Worceſter, particularly diſtinguiſhed by the ſhare he had in bringing about the Revolution in 1688, was born in the county of Middleſex (*a*) in the year 1650 (*b*); and having acquired a true taſte of literature at the ſchool of Birmingham in Warwickſhire †, he was removed thence to Oxford, and elected Demy of Magdalen college in 1669 (*c*). He took his firſt degree in Arts, April 10, 1673 (*d*), and became Fellow of the college in 1675 *. On the 8th of June the following year, he proceeded Maſter of Arts (*e*), and having entered into Holy Orders, he exerciſed his function for ſome time at a place called North-Aſton in the dioceſe of Oxford (*f*). Upon the breaking out of the popiſh plot, Mr Hough's chamber in the college was ſearched by order of the Vicechancellor in 1679, upon ſuſpicion of his holding a correſpondence with a perſon of that religion [*A*]; but nothing of this kind could be found; and in 1681 he was appointed domeſtic-chaplain to the Duke of Ormond, Chancellor of the univerſity, who being then in Ireland Lord-Lieutenant of that kingdom, Mr Hough croſſed the ſea in February, and waited upon his Grace at Dublin. However, there happening no conſiderable vacancies in the Iriſh Church (*g*), he returned with his patron, in the beginning of May the following year 1682, unpreferred to England (*b*) [*B*]; where he was collated to a prebend in the church of Worceſter in 1685, being inſtalled March 12 the ſame year (*i*); and he was afterwards preſented to the rectory of Temsford in Bedfordſhire (*k*). On the 10th of March the year following he proceeded Bachelor of Divinity (*l*); and on the 15th of the next month, being April 1687, he was ſtatutably elected Preſident of his college by a majority of the Fellows, after they had rejected a *mandamus* from his Majeſty King James II. in behalf of one Anthony Farmer, A.M. of that houſe. Mr Hough's election was regularly confirmed by the Biſhop of Wincheſter, Viſitor of the college, and he was admitted Doctor of Divinity June the 22d following ‖, but the ſame day was removed from his preſidentſhip by the Eccleſiaſtical Commiſſioners, and Dr Samuel Parker Biſhop of Oxford put into his place. That prelate dying before the expiration of the year, was ſucceeded therein by Bonaventure Gifford, a Sorbon doctor and ſecular prieſt of the Romiſh Church; who being inſtalled by proxy on the 31ſt of March 1688, took poſſeſſion of the Preſident's lodgings June the 15th. But ſoon after, upon the Prince of Orange's declaration to come to England, an order paſſed, October 12, for reſtoring Magdalen-college to it's rights, and Dr Hough was reſtored, on the 25th of that month, to the preſidentſhip by the Biſhop of Wincheſter, commiſſioned by the King for that purpoſe [*C*]. After the Revolution, the Doctor was nominated by King William,

(3) Mr Wood tells us, that he was ſea-bound (as he terms it) in his voyage, by which means coming not time enough, he loſt preferment there upon the tranſlation and change of eccleſiaſtical places, vacant by the death of certain Biſhops of that country. Ibid. col. 1185.

(4) In the preface to his Life of the Duke of Ormond.

(5) The Duke ſpent two ſummers there, in the time that the Earl of Clarendon was in Ireland, Lord-Lieutenant of that country, in the firſt part of King James II's reign. See the article of Lord Chancellor Clarendon.

(6) In the juſt mentioned preface; where it appears, that the Chaplain had his patron's conſent for this undertaking; by whom, another writer aſſures us, he was juſtly valued and highly eſteemed. Some account of the Right Rev. Dr John Hough, &c. p. 6. 1dit. 1743. 4to.

[*A*] *His chamber was ſearched by the Vicechancellor.*] This perſon with whom he was ſuſpected to hold a correſpondence, was Thomas Kingſley, who had been ſometime his intimate acquaintance, but in 1671, had left the college as well as his country to embrace the Romiſh faith. The Vicechancellor was Dr John Nicholas, Warden of New-college, who, ſays Mr Wood in his uſual rough language, left no ſtone untouched to ſhew his activity againſt Papiſts or well-wiſhers to them, purpoſely to gain the good will of the Parliament then ſitting, and ſo conſequently preferment; but, continues he, the deſign to ſearch his [Mr Hough's] chamber, took no effect (1). This ſame Vicechancellor had alſo one William Joyner ſeized for a Prieſt or Jeſuit, who had been a fellow of the ſame college, and changed his religion (2).

[*B*] *He returned with the Duke to England.*] That he returned at the ſame time with the Duke, ſeems to be clearly inferred from the circumſtance alone of his coming back without any preferment in Ireland (3), and is further confirmed by what Mr Carte obſerves (4), that he lived ſeveral years in the Duke's family, which conſidering the time of his Grace's death, viz. in 1688, could hardly be ſaid with any tolerable degree of accuracy, if he had ſtaid longer in Ireland. The laſt mentioned author informs us, that Mr Hough had projected a deſign of writing the Duke's life, and made a conſiderable progreſs therein. But upon the coming of Sir Robert Southwel to Cornbury (5), in 1685, who claimed the right of performing that taſk to himſelf, the Doctor yielded it to him. A conceſſion which is greatly lamented by Mr Carte, who does not ſcruple to aſſert, that the world thereby loſt the ſight of as fine a pen as ever any age has produced. Mr Carte likewiſe aſſures us, that he had ſeveral particulars concerning the Duke's private life from the Doctor (6), whoſe authority in relating ſome of theſe, he has expreſsly cited. Among others it may not be amiſs to take notice of the following circumſtance, relating to the Duke's third ſon, Lord John Butler, created Earl of Gowram in 1676. 'That 'young nobleman died the ſame year at Paris, having 'gone thither a little before for the recovery of his 'health, much impaired by his irregularities. While 'he was there in a lingering and waſting way, the 'Duke of Ormond in a fatherly and chriſtian concern 'for his future welfare, put him in mind of his exceſſes, which had reduced him to that weak condition, and were like to put a ſpeedy period to his life, 'and ſuggeſted to him thoſe reflections, which perhaps had been too long deferred, though neceſſary 'to fit him for another world. There was ſomething, 'continues Mr Carte, ſo noble, juſt, pious, and chriſtian, in the ſentiments expreſſed in the letter, which 'his Grace wrote upon this occaſion, that I would 'fain have given it a place among others of that ſort 'in the *Appendix*, that the world might have ſeen one 'of the fineſt pieces of the kind that hath been ever 'written. For this is the character which I have of 'it from the preſent Biſhop of Worceſter, *(the beauty 'of whoſe pen renders him an excellent, and indiſputable judge of that of others)* who had preſerved a 'copy of it, but could not eaſily find it among his 'papers.' I am inclined to believe the reader will not think his patience abuſed in giving him the remainder of this narrative as follows. 'The Duke 'laid his ſon's manner of life to heart, but all his remonſtrances could not correct or reſtrain the impetuoſity of his youth. A repartee of his Grace's may 'not improperly be related on this occaſion. Mr 'Cottington of Holme-Patrick, about twelve miles 'from Dublin, had a fine houſe pleaſantly ſituated on 'the ſea ſide, and was often viſited by the Duke of 'Ormond and his ſons, and other great men, who delighted in the place for the pleaſure of it's ſituation, 'and the amuſements which the ſea afforded. He had 'undertaken to build a new chapel on the ruins of an 'old one, and aſked every body that came to his 'houſe, to contribute ſomething towards the building 'and ornament of the chapel. Among others, my 'Lord John Butler being applied to, had promiſed 'him the Ten Commandments to be put over the 'altar. Mr Cottington was much pleaſed with his 'Lordſhip's generoſity, and when he went to Dublin, 'could not forbear extolling the preſent, in a viſit 'which he made to the Duke. As he was making 'great encomiums on Lord John, his Grace replied, 'I could eaſily gueſs at the nature of my ſon's generoſity, 'he can readily part with things he does not care to 'keep himſelf (7).'

(7) Life of the D. of Ormond, Vol. II. p. 450.

[*C*] *He was elected, removed, and reſtored to his Preſidentſhip.*] A tranſaction of ſo great importance

as

William, in April 1690, Biſhop of Oxford (*m*), upon the death of Dr Timothy Hall. He was elected accordingly on the 29th of April, and being conſecrated in the Biſhop of London's chapel at Fulham on Sunday May 11, had then a licence to hold the preſidentſhip *in commendam* (*n*) [*D*] Upon the tranſlation of Mr William Lloyd to the ſee of Worceſter, Dr Hough ſucceeded him in that of Litchfield and Coventry, on the fifth of Auguſt 1699 (*o*). He was not only a conſiderable benefactor to this biſhopric †, but whilſt he continued there, he procured an Act of Parliament for annexing the living of Tattenhill to the deanery of Litchfield, on account of it's inſufficient maintenance; the income of which dignity is ſaid to be doubled by that augmentation (*p*). On the death of Dr Tenniſon, Archbiſhop of Canterbury, in 1715, that metropolitical chair was offered to our Biſhop, of which he declined the acceptance out of modeſty (*q*). But upon the deceaſe of Dr Lloyd ſucceeded him in the ſee of Worceſter [*E*], September 29, 1717 (*r*). He was now near ſeventy years of age; yet he lived upwards of twenty-ſix years Biſhop of Worceſter, in a conſtant exemplary reſidence upon his dioceſe, diſcharging all the duties of the epiſcopal function. In 1722 he buried his lady, Letitia, eldeſt daughter of Sir Thomas Fiſher of Parkington in Warwickſhire, Bart. and widow of Sir Charles Lee of Billeſley in the ſame county, Knight *. A little before his death, he wrote a remarkable letter to the Lord Digby, an extract of which ſhall be inſerted below [*F*]. The even temper of his mind bore ſo juſt a proportion to his well tempered conſtitution of body, as by an happy reſult of both, to extend his age to the beginning of his ninety-third year, and almoſt to the completion of the 53d year of his epiſcopate. His lamp of life burnt clear, if not bright, to the laſt; and though his body was weak, he had no pain or ſickneſs, as he himſelf acknowledged, not only on ſeveral occaſions, at a conſiderable diſtance of time from his death, but even a few minutes before he expired. It may well be doubted whether he felt the agonies that are uſual at the ſeparation of ſoul and body; but it is certain that he died very ſedately and with a quiet mind. His *end was peace*, and *he enjoyed* tranquillity *at the laſt*. The eaſineſs of his death ſeems to have been as much derived from the ſerenity of his mind and a good conſcience, as from his inſenſibly exhauſted ſpirits; or rather, by a concurrence of both, in the ſcripture language, he gently *fell aſleep*. He died March 8, 1743, *ſatisfied with a long life*, equally *full of days and honour*, and with a pleaſing proſpect of that *ſalvation* which God had ſhewed him (*s*) [*G*].

as this was to the kingdom, has been largely related in our general hiſtories, to which we refer the reader (8); and ſhall only inſert what is obſerved of it in relation to Dr Hough's memorable courage and conduct therein by a late writer (9). 'I willingly haſten, ſays he, to that critical juncture in the reign of King James II, when at the head of a ſociety, perhaps of the beſt endowed foundation in Europe (10), *St Mary Magdalen College* in *Oxford*, he made that noble ſtand in behalf of our reformed religion and our civil liberties, which contributed ſo much to the ſucceſs of our happy revolution. It is diſputable indeed whether he ſhewed greater courage and conſtancy, or prudence and temper, in the management of ſo important a conteſt with the miſguided Crown; and whether he diſplayed a greater love of the liberties of his country in baffling the inſtruments of an illegal eccleſiaſtical commiſſion, or integrity and conſcience in adhering ſo firmly to the ſtatutes of his college, and his own oath, in oppoſition to all the artifices as well as menaces of an arbitrary Court; in his engaging by his weighty influence the members of that learned body to act unanimouſly, and in confirming by his own example their reſolutions to ſacrifice their intereſt to their duty on that great occaſion. Under this article I ſhall only add, that his Lordſhip equally retained the ſame inviolable love of his country in all publick exigencies, whilſt he ſat in Parliament, and during his retirement from buſineſs on account of the infirmities of his advanced age, even to the laſt moments of his life.'

(9) Some Account of the Life of Dr John Hough, p. 6, 7.

(10) Biſhop Burnet obſerves, that though the reſerved rents make up no more than 5000 l. yet the extended value amounts to 40000 l. a year. Hiſtory of his own times, ubi ſupra. To which it may be added, that the whole town of Calais in France, when in the hands of the Engliſh, was a part of it's endowment. Wood's Hiſt. and Antiq. of Oxford, in the ſection relating to Magdalen college.

[*D*] *He held his preſidentſhip in commendam.*] He always retained a very particular regard and affection for his college, of which that ſociety received ſeveral valuable atteſtations. For beſides what he expended in repairing and ornamenting the lodgings of the Preſident while he enjoyed that ſtation, he afterwards gave the ſum of one thouſand pounds, as his own grateful contribution towards the new buildings of that place of his education, as well as ſcene of his government for ſeveral years (11). In that capacity he endeavoured to encourage learning in the moſt obliging manner; he both diſtinguiſhed ſtudious and ſober young men by his own favour, and recommended thoſe of a more promiſing genius to the favour of their ſuperiors, that by the intereſt of great men, they might meet with ſuitable rewards of their ſeveral ſtudies (12).

(11) He held it as long as he continued in the ſee of Oxford.

(12) Some Account of the Life &c. p. 8.

[*E*] *He ſucceeded Biſhop Lloyd in the ſee of Worceſter.*] When his Lordſhip removed from the ſee of Oxford to that of Litchfield and Coventry, he did not merely repair, but almoſt rebuild as well as adorn the epiſcopal houſe at Eccleſhall; and made ſuch alterations in what was left by his predeceſſor in an imperfect ſtate [upon his tranſlation to the ſee of Worceſter] as to render it a commodious and agreeable ſeat. Biſhop Lloyd had cauſed the ruins of the old epiſcopal caſtle at Eccleſhall, a ſeat that had not been inhabitable from the times of the confuſion, to be removed; and erected a houſe on the ſite of part of them, though not finiſhed in ſo ample a manner as he propoſed to do, nor with that elegant taſte, that was ſhewn by his ſucceſſor Biſhop Hough, in the reformation of his plan, which however was carried on at a very conſiderable expence of them both. But the moſt beneficial inſtance of Biſhop Hough's public generoſity, was given upon his tranſlation to the See of Worceſter, when he rebuilt ſo great a part of the epiſcopal palace at Worceſter, and made ſuch improvements in his other ſeat [the caſtle] at Hartlebury, that (as is aſſerted by good hands) he expended upon both thoſe houſes, at leaſt ſeven thouſand pounds. And theſe ſchemes were executed with ſo nice a judgment, that his Lordſhip has left little to be ſuperadded by any of his ſucceſſors towards perfecting both thoſe epiſcopal ſees (13).

(13) Ibid. p. 8—10. and Willis's Account of the Cathedrals, Vol. III. p. 657.

[*F*] *An extract of his letter to the Lord Digby given below.*] That Lord was a perſon eminently diſtinguiſhed by his goodneſs and piety (14), and there had been a long friendſhip between them, after an acknowledgement of which, and of his own ſincere regard for Lord Digby's noble family and relations, the Biſhop uſes theſe memorable words of himſelf. '*I am weak and forgetful——In other reſpects I have eaſe to a degree beyond what I durſt have thought on, when years began to multiply upon me: I wait contentedly for a deliverance out of this life into a better, in humble confidence, that, by the mercy of God through the merits of his Son, I ſhall ſtand at the reſurrection on his right hand. And when you, my Lord, have ended thoſe days that are to come (which I pray may be many and comfortable) as innocently and exemplarily as thoſe that are paſſed, I doubt not of our meeting in that ſtate, where the joys are unſpeakable, and will always endure* (15).'

(14) See ſeveral letters to a perſon of this family by Mr Pope, in the volumes of his Work containing his letters.

(15) Some Account, &c. p. 15, 16.

[*G*] *A pleaſing proſpect of that ſalvation which God had ſhewed him.*] The author of Some Account of the Biſhop's Life, has given his character at length, an extract of which we ſhall lay before the reader as follows. Having ſpoken of his Lordſhip's public benefactions, he proceeds in theſe terms. 'As for his more

' private acts of charity, there is good reaſon to be-
' lieve (from ſeveral proper intimations) that they con-
' ſtantly ran very high, and were very extenſive. And
' with regard to his occaſional charities, it is well
' known to thoſe that were more particularly acquain-
' ted with his Lordſhip, and the numerous objects of
' them, that they were diſtributed with a very liberal
' hand, and in an uncommon proportion. With re-
' ſpect to his uſual manner of living, it was very a-
' greeable to his function; hoſpitable without profuſe-
' neſs, and adjuſted ſuitably to his own circumſtances,
' and to thoſe with whom he had any buſineſs or cor-
' reſpondence. His converſation with all perſons was
' full of humanity and candour, as well as it was pru-
' dent and inſtructive. And as he treated all ſorts of
' perſons, and of what party ſoever in ſecular affairs
' with courteouſneſs and affability; ſo he ſhewed a
' great equality of temper, and a largeneſs of ſoul, to-
' wards ſuch as differed from him in religious mat-
' ters. Indeed I know but of one exception in his
' conduct towards the latter ſort of men; namely,
' that he had formed ſo juſt an idea of the groſs abuſes
' of the Church of Rome,—that if ever he expreſſed a
' more than ordinary warmth, or rather ſome degree of
' indignation, it was ſhewn in expoſing thoſe doctrines
' and practices of that Church.——But his kindneſs to
' his particular friends ſhone moſt brightly in the en-
' tertainments of his converſation with them, in his
' affectionate correſpondence with the abſent part of
' them, in his readineſs to uſe all opportunities of
' ſerving them, and in the firmneſs and conſtancy of
' his profeſſions of friendſhip throughout the courſe of
' ſo long a life. He mixed the gentleman and the bi-
' ſhop on all proper occaſions, and eſpecially with re-
' gard to his own clergy, whom he treated with ſuch
' a brotherly condeſcenſion, and in ſo obliging a man-
' ner, as to be intirely beloved by them, and at the
' ſame time he well knew how to preſerve the dignity
' of his ſtation, and the reverence due to the epiſcopal
' character; a behaviour that equally procured him
' the affection and veneration of the clergy, and the
' reſpect and honour of the moſt diſtinguiſhed part of
' the laity. It would be inexcuſable if I omitted here
' to take notice of that peculiar happineſs of his
' Lordſhip's compoſitions, which is ſo very conſpicu-
' ous not only in his more elaborate diſcourſes from
' the pulpit, but in the gentlemanly, polite, and
' friendly manner of his epiſtolary correſpondence; in
' which latter kind of writing, he muſt be allowed to
' have excelled.' The author having recommended a well choſen collection of theſe letters, as very worthy of the public view, proceeds thus. ' But how much
' ſoever that valuable accompliſhment, of which his
' Lordſhip was ſo great a maſter, may be admired by
' the beſt judges, it muſt at the ſame time be allowed
' to admit of no manner of compariſon with the more
' ſolid ornaments of his moral excellencies, that were
' raiſed to ſo high a degree of perfection, and of ſo
' genuine and unaffected a piety as he was endued
' with. Of theſe his more exalted qualities, all that
' had the honour of his friendſhip and correſpondence
' in any part of his life, are irrefragable witneſſes.
' But more eſpecially his heavenly temper of mind,
' his contempt of the world, and his indifference for
' life, were moſt viſible in the latter period of his own.
' His aſpirations after a better ſtate, as founded upon
' chriſtian principles, appeared clearly on many for-
' mer occaſions; but his firm faith in the promiſes of
' the goſpel, exerted itſelf moſt remarkably in his de-
' clining years, as well in converſation with ſome
' of his friends about his hopes of a better ſtate, and
' even his own private thoughts of the nature of that
' ſtate, as in ſeveral letters to others of them about the
' gradual decays of his body, the juſt ſenſe he had of
' his approaching diſſolution, and his intire reſignation
' to the will of God.' This writer concludes his account in the following words. ' Though his [the Biſhop's] friends might have been for ſome time pre-
' pared for his final change, by the infirmities that
' muſt be ſuppoſed to attend a life ſpun out to ſo un-
' common a length; yet the loſs of ſo good a man is as
' much lamented by all that knew him, as if they had
' been deprived of him in his earlier years, and the
' more active part of his life. But their greateſt con-
' ſolation is, that his whole life here, though compa-
' ratively long, was but a ſhort education for that in-
' conceivably happy ſtate, of which, without doubt,
' he is now in as full poſſeſſion, as can be expected
' antecedently to the joyful re-union of ſoul and body
' at the conſummation of all things (16).

' June 29, 1743.'

p

HOWARD [CHARLES], of the moſt noble Houſe of Norfolk, an able Stateſman, an experienced Seaman, and moſt loyal Courtier, which raiſed him ſucceſſively, from his hereditary honour of Baron of Effingham, to thoſe of Lord-Chamberlain of the Houſhold, Knight of the Garter, Lord High-Admiral of England, Earl of Nottingham, and Lord Chief-Juſtice in Eyre of all the foreſts, &c. ſouth of Trent. He was born in the year 1536 (*a*), in the latter end of the reign of King Henry the Eighth, his father having then the title only of Lord William Howard. His mother's name was Margaret, the daughter of Sir Thomas Gamage of Glamorganſhire. Lord William being by letters patent, dated March 11, 1553, in the firſt year of the reign of Queen Mary, raiſed to the title of Baron of Effingham (*b*), and, on the 20th of the ſame month, declared alſo Lord High-Admiral, his ſon ſerved under him in ſeveral expeditions, 'till the acceſſion of Queen Elizabeth (*c*), when he was about twenty-two years of age. His father coming into great favour with that princeſs, he enjoyed a conſiderable ſhare of it, and in 1559 was ſent over into France, to compliment Charles the Ninth (*d*), who had juſt aſcended that throne. Nine years afterwards he was appointed General of the Horſe, in the expedition made by the Earl of Warwick againſt the Earls of Northumberland and Weſtmorland, who had taken arms in the North; and in cruſhing which rebellion he was very active (*e*). In the following year he commanded a ſquadron of men of war, which the Queen was pleaſed to direct to eſcort Anne of Auſtria (*f*), daughter to the Emperor Maximilian, to the coaſt of Spain. Upon this occaſion the Spaniſh fleet were obliged to take in their flags, while they continued in the Britiſh ſeas, having been ſufficiently inſtructed in that point of ceremonial, in their paſſage to Flanders, by Sir John Hawkins (*g*). In 1571, he was choſen to repreſent the freeholders in Parliament as Knight of the Shire for the county of Surry; and very ſoon after ſucceeded his father in his title and eſtate, who died January 12, 1573 (*b*), in the great office of Lord Privy-Seal, and very highly in the Queen's favour [*A*]. Her

[*A*] *And very highly in the Queen's favour.*] There are ſeveral circumſtances that determined us to give theſe memoirs a place in this collection, ſuch as his being the great author of this nation's ſafety in the defeat of the Spaniſh Armada, the high character he bore in the Court of Queen Elizabeth, and his being at the head of thoſe, who formed an oppoſition to the Earl of Eſſex. Without this life, many of thoſe already given had remained incompleat, and the lights thrown upon that reign, one of the moſt memorable in our hiſtory, had been imperfect and obſcure. That the reader may enter into it the more perfectly, it will be requiſite to ſay ſomething in this note concerning his father, that a ſhort ſketch of his character, alliances, and connections

Her Majeſty, with good reaſon, diſtinguiſhed the ſon as ſhe had done the father, by promoting him to the greateſt offices in the kingdom, not haſtily, but, as her manner was, by a due progreſſion. He became firſt Chamberlain of the Houſhold, an office which his father had alſo enjoyed; and on the 24th of April, 1573, he was elected Knight of the Garter (*i*). Some of the writers of thoſe times ſay, that he was raiſed to check (*l*) Leiceſter's greatneſs; which is thus far probable, that they were certainly the moſt oppoſite people in the world in their tempers. For whereas Leiceſter was, at leaſt if the beſt authors of thoſe times deſerve credit, a deep diſſembler, exceſſively ambitious, and one who ſought to govern all things; the Lord-Chamberlain, on the other hand, was an open, generous, public ſpirited man, in the good graces of the Queen from his known affection to her perſon, and exceedingly popular, as well on account of his hoſpitality, affability, and other good qualities, as for the ſake of his moſt loyal and heroic family. When therefore the Earl of Lincoln died in 1585, the Queen immediately determined to raiſe the Lord Effingham to the poſt of High-Admiral (*m*), which ſhe did with the general approbation of her ſubjects, and much to the ſatisfaction of the ſeamen, by whom he was ſo deſervedly beloved [*B*]. After the Spaniards had ſpent three years in preparing their Armada, and ſent it, in their own opinion, to the aſſured conqueſt of the kingdom of England, the Queen willingly intruſted the care of herſelf and the nation to this noble Lord, of whoſe conduct ſhe had the higheſt opinion, and of whoſe fortune ſhe had equal hopes. As ſoon as he knew that the Spaniſh fleet was ready to ſail, he put to ſea, and continued cruizing for ſome time; 'till the Court having received advice that the Spaniards would be unable to make any attempt that year, and the lateneſs of the ſeaſon rendering this intelligence probable, Secretary Walſingham wrote to him, directing that four of the largeſt ſhips ſhould be ſent into port, and the ſeamen diſcharged, to ſave expence. The Admiral wrote back, to excuſe his not obeying this direction, and in the cloſe of the letter deſired, 'That if his reaſons were thought inſufficient, the ſhips might remain at his 'expence

nections may appear, which will illuſtrate ſeveral paſſages that are but very briefly mentioned in this life of the ſon.

This Lord William Howard, was the ſon of Thomas Duke of Norfolk, and Lord High-Treaſurer of England, by his ſecond wife. He was half brother to Elizabeth Counteſs of Wiltſhire and Ormond, mother to Queen Anne, and grand-mother to Queen Elizabeth (1). He was alſo half brother to Lord Edmund Howard, whoſe daughter Katherine was conſort to Henry the Eighth, and had a ſhare in her misfortunes, being condemned with his wife to perpetual impriſonment, to the forfeiture of his goods, and of the profit of his lands for life, but was quickly pardoned. He was Governor of Calais in the reign of Edward the Sixth, Lord High-Admiral in that of Queen Mary, Lord-Chamberlain, and afterwards Lord Privy-Seal in the time of Queen Elizabeth, to whom by the mother's ſide as we have ſeen, he was nearly related (2). His firſt wife Katherine, was the daughter of John Broughton, Eſq; by whom he had an only daughter, Agnes, who eſpouſed William Powlett Marquis of Wincheſter (3). But by his ſecond wife Margaret, daughter to Sir Thomas Gamage of Glouceſterſhire, he was the father of Charles, of whom in this article, and of Sir William Howard of Lingfield in Surry, and five daughters (4). Douglas, who was firſt the wife of John Lord Sheffield, afterwards of Robert Earl of Leiceſter, by whom ſhe became mother of Sir Robert Dudley, and being diſowned by her huſband, was obliged to marry in his life-time for her own ſafety, Sir Edward Stafford, Knight. Mary, who firſt eſpouſed Edward Lord Dudley, and afterwards Richard Mompeſſon, Eſq; Frances, who became the wife of Edward Earl of Hertford. Martha, who eſpouſed Sir George Bourchier, third ſon to the Earl of Bath, and Katherine, who died young (5). He directed by his laſt will and teſtament, that a tomb ſhould be built for him in the chancel of the church at Rygate, which was accordingly performed (6). This being then, and for ſome generations after, the chief reſidence of his family, one of the moſt diſtinguiſhed branches of the moſt illuſtrious houſe of Howard (7).

[*B*] *By whom he was deſervedly beloved.*] There had been ſo many of the family of Howard honoured with this high office, they had ſerved with ſo much reputation, had ſhewn ſuch indulgence to the ſeamen, and ſo high a regard to the honour of the Engliſh flag, that it was no wonder this nobleman ſtood in ſo high credit with all the ſeafaring part of the nation. But beſides theſe, there were ſome very peculiar circumſtances that operated in his favour. His father had been Lord High-Admiral, and had vindicated the honour of the Engliſh flag, when he eſcorted King Philip, for which he was adored by the ſeamen (8). He was one of the adventurers in, as well as patrons of, the Ruſſia company at it's firſt inſtitution, which made him very acceptable to the merchants (9). This Lord himſelf, though very young, had behaved, while he bore a public character in France, with that dignity and ſpirit which did honour in thoſe times to this nation. Yet all theſe conſiderations together, were nothing when put in balance with a ſingle act of his own in the character of the Queen's Admiral in the narrow ſeas, which perhaps the reader will not be diſpleaſed to ſee in the words of that worthy collector of voyages and diſcoveries Mr Hakluyt, who ſpeaks of it thus to this nobleman himſelf (10). 'When the Emperor's ſiſter, 'the ſpouſe of Spain, with a fleet of an hundred and 'thirty ſail, ſtoutly and proudly paſſed the narrow 'ſeas, your Lordſhip, accompanied with ten ſhips only 'of her Majeſty's navy royal, environed their fleet in 'moſt ſtrange and warlike ſort, enforced them to 'ſtoope gallant, and to vaile their bonnets for the 'Queen of England, and made them perfectly to underſtand that old ſpeech of the prince of poets.

'Non illi imperium pelagi ſævumque tridentem,
'Sed tibi ſorte datum.

'Yet after they had acknowledged their duty, your 'Lordſhip, on her Majeſty's behalf, conducted her 'ſafely through our Engliſh channel, and performed 'all good offices of honour and humanity to that 'foreign princeſs. At that time all England beholding your moſt honourable carriage of yourſelf in that 'ſo weighty ſervice, began to caſt an extraordinary 'eye upon your Lordſhip, and deeply to conceive that 'ſingular hope, which ſince, by your moſt worthy and 'wonderful ſervice, your Lordſhip hath more then fully 'ſatisfied.' It was not much the cuſtom of thoſe times, more eſpecially in diſcourſes of this kind, to be very particular either in reſpect to facts or dates; in order to ſupply theſe, it is proper to acquaint the reader, that this event happened in 1570, and that the Princeſs herein mentioned, was the Archduchеſs Anne, daughter to the Emperor Maximilian, who paſſed from Zealand into Spain to eſpouſe Philip the Second (11). We ſhall ſee in another place, that this did not proceed from any extraordinary heat or impetuoſity in Lord Effingham's temper, which prompted him to raſh actions to gratify his own humour, which, in reference even to the Flag, was ſo cool and temperate (except with regard to foreigners) that he could willingly ſhare any honours even with his rivals (12); ſo that from hence we may collect, he looked on this act of vigour as a thing of neceſſity.

[*C*] *Should*

'expence (*u*).' When he received intelligence from Captain Fleming of the approach of the Spaniſh fleet, and ſaw of what mighty conſequence it was to get out what few ſhips were ready in the port of Plymouth, he, to encourage others, not only appeared and gave orders in every thing himſelf, but wrought alſo with his own hands, and with no more than ſix ſhips got the firſt night out of Plymouth; and the next morning, having no greater force than thirty ſail, and thoſe the ſmalleſt of the fleet, attacked the Spaniſh Navy (*o*). He ſhewed his conduct and prudence, by diſpatching his brother-in-law Sir Edward Hobby to the Queen, to inform her of the great diſproportion between the enemy's force and his own, to deſire her to make the proper diſpoſition of her land forces for the ſecurity of the coaſts, and to haſten as many ſhips as poſſible to his aſſiſtance (*p*). His valour was conſpicuouſly diſplayed in the repeated attacks he made on a ſuperior enemy; and the coolneſs of his temper, a quality, though leſs ſhining, yet no leſs uſeful, appeared in his paſſing a whole night in the midſt of the Spaniſh fleet, and retiring as ſoon as he had light enough to diſcover his own without loſs (*q*). It was owing to his magnanimity and prudence that the victory was ſo great; and ſuch as have ſuggeſted that it might have been ſtill greater, readily acknowledge that this did not happen through any fault of the Admiral's, who always ſhewed the utmoſt alacrity in his country's ſervice (*r*). The Queen expreſſed her ſenſe of his merit in the moſt honourable terms, and, though naturally extremely frugal, beſtowed upon him a penſion for life, and, at his requeſt, granted a pardon and a penſion likewiſe to Captain Fleming the Pyrate (*s*), who firſt brought the news of the Spaniſh fleet's being on our coaſts; which ſhews how careful this great man was, that the merits of meaner perſons ſhould not paſs unrewarded or be overlooked [*C*]. In 1596, he commanded in chief at ſea, as the Earl of Eſſex did by land, the forces ſent againſt Spain (*t*), and was at very great expence out of his own private fortune in providing for that expedition. His prudence and moderation, as well as his great experience and reputation with the ſeamen and ſoldiers, were amongſt the principal cauſes of the ſucceſs the Engliſh met with in that great and glorious enterprize (*u*); and his conduct throughout the whole was ſo wiſe and fortunate, that upon his return home, the Queen, on the 22d of October the next year, advanced him to the dignity and title of Earl of Nottingham (*w*), the reaſons of which are inſerted in his patent [*D*]. To this mark of favour,

[*C*] *Should not paſs unrewarded or be overlooked.*] It is not intended in this note, to enter into a long hiſtorical account of that great action which belongs properly to our hiſtories. It is ſufficient to ſay, that it was the greateſt and moſt important naval victory that this or perhaps any other nation ever gained; beſides, our principal buſineſs here, ſhall be to point out ſome particular circumſtances that eſpecially relate to the perſonal hiſtory of the Lord High-Admiral Howard, which could not be ſo conveniently inſerted in the text. He was always ready to hear whatever could be offered in council, and from thence formed his reſolutions; but having once deliberated, he was quick and determined in execution, and not to be driven from his own mature thoughts by the haſty conceptions and bold undertakings of others (13). On the twentieth of July, the Spaniſh Armada paſſed by Plymouth, when the Admiral having gained the wind, ſtood after them and engaged them very briſkly with the ſhips he had with him. He carried his flag on board the Ark Royal, which was a veſſel of eight hundred tons burthen, her complement four hundred men, of which thirty-two were gunners, and continued to chace and fight that mighty fleet 'till the 28th of the ſame month, when he ſent in twelve fire ſhips amongſt them (14). He engaged the enemy again the next day with equal courage and ſucceſs before Graveline; and at length having forced them, contrary to all probability, and even to his own expectation, to place their ſafety in a general and ill ordered flight, he continued the purſuit to the 4th of Auguſt, and then returned to Harwich (15). In the courſe of this fight, he reſiſted the intreaties of the braveſt and boldeſt officers in his fleet, who perſwaded him to board them. But he conſidered that they had numbers of regular troops, and he none, that their ſhips were larger, better built, and higher moulded, ſo that this would have given them great advantages, and have expoſed his own people extremely. By this forbearance he kept the advantage of wind and tide, and thereby preſerved the ſuperiority which he had gained, by the ſame ſkill and prudence ſo much improved it, that he ſunk, took, and ſpoiled many, and loſt of his own, only one ſmall pinnace (16).

They might perhaps in this have been purſued further, and with yet greater advantage; that they were not, proceeded not at all from any fault in the Lord High-Admiral, but his fleet was ill furniſhed with proviſion, and his ammunition all ſpent (17). This likewiſe put it out of his power to detach a ſquadron to the Weſt of Ireland, which would have prevented even the ſorry remains of that fleet from getting home; as it was, of one hundred thirty-four ſail, of which the Spaniſh Armada was compoſed when the Admiral left Portugal; there returned but fifty three (18), and thoſe in a very ſhattered and deplorable condition. It was univerſally acknowledged, that the honour gained in ſo unequal a conteſt, was entirely due to the vigilance, prudence, and wiſe reſolution of the Admiral, and to his care in keeping the Duke of Parma's forces blocked up by Lord Henry Seymour, with his ſquadron of ſmall ſhips on the coaſt of Flanders (19). But after all, this wonderful victory was chiefly to be attributed to Providence, ſince, if the Engliſh fleet had not been driven into Plymouth by foul weather, the Duke de Medina Sidonia had never been tempted by the arguments of Don Diego Flores de Valdes, in breach of his maſter's orders, to bear away for that port, in hopes of burning and deſtroying (20) them, which he might likewiſe have performed, if Thomas Fleming had not brought the Admiral news of their being at ſea. If they had prevailed, their deſign was to have ſailed up the Thames with their lighter ſhips, and to have attempted London. But if inſtead of this they had followed their King's orders and proceeded to Calais, which they might have done without the knowledge of the Engliſh fleet, and detached from thence a ſquadron ſtrong enough to have forced the Engliſh and Dutch ſhips from before Dunkirk, the Duke of Parma might have joined them, and the expedition conducted according to his original intention (21). In this caſe the whole order of things had been changed, and the Queen muſt have put her cauſe entirely upon her army, which though numerous and well provided, commanded by the flower of her nobility and gentry, was compoſed chiefly of new raiſed men, and muſt have diſputed with a ſuperior force of veteran troops, commanded by the greateſt Captain of that age, and who was himſelf ſuſpected of having particular views on, and conſiderable intelligence in, this iſland.

[*D*] *The reaſons of which are inſerted in his patent.*] While preparations were making for the voyage to Cadiz, one great deſign of which was to prevent a new invaſion, by the deſtruction of the force the Spaniards were preparing for that purpoſe, the Queen received advice that Calais was beſieged by the Spaniards; the Earl of Eſſex was ſent to the coaſt to command ſome land forces raiſed upon that occaſion, but being of a very active and generous ſpirit, he with ſeveral other young noblemen

favour, the Queen ſhortly added another, making him Juſtice Itinerant of all the foreſts ſouth of Trent for life (x). But as there cannot be a more ſlippery ſituation than in a Court, the

(x) Pat. 39 E liz. p. 1.

noblemen and perſons of diſtinction (22), embarked on board the Rainbow, commanded by Sir William Monſon. The Lord High-Admiral haſtened alſo into the Downs on board the Vanguard, and on the ſight of his flag, Sir William Monſon took in that which he bore. The Admiral upon this, ſent his boat with orders to carry his flag in the top equal with his own, which out of modeſty the Earl of Eſſex oppoſed, but Sir William Monſon (23), notwithſtanding, obeyed; which ſufficiently ſhews this noble Peer was not ſo ambitious of rank, or ſo deſirous of ſhewing ſuperiority, as men frequently are in ſuch high ſtations. But the news coming that Calais was ſurrendered, the Earl and the Admiral returned to the proſecution of their firſt deſign, towards which they contributed largely out of their private fortunes. The Engliſh fleet, commanded jointly by theſe two Lords, having upwards of ſeven thouſand land troops on board, and being joined by a Dutch ſquadron of twenty-four ſhips, ſailed from Plymouth on the firſt of June 1596, and arrived before Cadiz on the 20th of the ſame month. The iſſue of that expedition is well known, and has been already repreſented in another place; however we ſhall inſert part of a letter (24) from the Lord Admiral to the Lord Hunſdon his father in-law, who did not live to receive it, to ſhew his ſenſe of things, and in a particular manner his candour with reſpect to Eſſex.

(24) Memoirs of the Reign of Queen Elizabeth, by Dr Birch, Vol. II. p. 54, 55.

'My Lord,

'I can aſſure you there is not a braver man in the 'world than the Earl is, and I proteſt in my ſimple 'poor judgment, a grave ſoldier, for what he doth is 'in great order and good diſcipline performed. The 'number of gentlemen in the town was great, for the 'principal men of Xeres, and thoſe parts of Andaluſia 'neareſt hereabouts, did put themſelves in. For we 'were deſcried from Cape St Mary (which we could 'no ways avoid) yea, and I think from Cape St Vin-'cent. This gentleman, Sir Anthony Aſhley, the 'bearer, who hath behaved himſelf both wiſely and 'valiantly, will ſhew you all the particulars, which it 'is not poſſible for me to write. But I muſt not forget 'to let your Lordſhip know, that all men did generally well, but the chiefeſt for the ſervice done by ſea, 'beſides the Earl, were the Lord Thomas Howard, 'Sir Walter Ralegh, and my ſon Southwell, who had 'the leading, and performed it notably. The place 'was ſo narrow, that although many ſhips would have 'come up to them, yet they could not poſſibly, ſince the 'preſs was ſo thick, that one of our ſhips was aboard 'another. The while that the ſhips fought, the town 'and the forts played upon us at their pleaſure. This 'was all performed, and all things quieted in twenty-'four hours, to God's glory and her Majeſty's honour 'and renown, which will ſpread over all theſe parts of 'the world. The King's loſs is thus great: firſt, the 'loſs of his ſhips, which was a great part of his 'ſtrength. Then the goods laden into them for the 'Indies, which were burned, confeſſed to be worth 'eleven millions, the like whereof was never ſeen at 'one time before. If they had not been burned that 'night, by the expreſs commandment of the Duke of 'Medina, we ſhould have had two millions of the 'merchants, for ſo it was agreed upon. Beſides this, 'the town is of wonderful importance, ſtanding as it 'doth, and of great ſtrength, which we cauſed to be 'burned on Sunday laſt, the day before we came away 'from thence, which was the fifth of this preſent July. 'The mercy and clemency which hath been ſhewed, 'will be ſpoken of through thoſe parts of the world. 'No cold blood touched, no woman defiled, but have 'been with great care embarked and ſent to St Mary port. 'All the ladies, which were many, and all the nuns, 'and other women and children, which were likewiſe 'ſent thither, have been ſuffered to carry away with 'them all their apparel, money, and jewels, which 'they had about them, and were not ſearched. 'Having ended our buſineſs in Cadiz by Saturday 'the third day of July, the next day being Sunday 'aforeſaid, we ſhipped our men, and ſet fire to the 'town of Cadiz and the forts, reſerving nothing from 'the fire but the churches, and on Monday the fifth of 'July we ſet ſail out of the port in a very circumſpect 'order, to keep our ſmall men, and ſuch fly-boats as 'carried ſoldiers, and were ill able to make defence, 'might be ſafely protected from any attempt that the 'gallies in any calm weather might make againſt them; 'ſince which time we have made ſail with ſlender 'winds and leſs adventures, as high as Cape St 'Mary.'

As in moſt conjunct expeditions, ſo in this, there was much diſagreement between the chiefs, though no public falling out. We find not that the Admiral charged Eſſex with any thing; but that Earl, after admitting that the whole project of the voyage was laid by his collegue, makes four capital objections to the manner in which it was executed (25), viz. that they did not poſſeſs the Indian fleet; that they did not leave a garriſon in Cadiz; that they did not wait for the homeward bound ſhips; and that they did not viſit and ranſack the reſt of the ports of Spain in their return. The two former he aſcribes to the Lord-Admiral, and the two laſt to Sir Walter Ralegh. One may with juſtice, even at this diſtance of time, acquit the Admiral of the firſt, becauſe taking the Indian fleet would have turned chiefly to the advantage of the ſeamen. Sir William Monſon, who was the Earl of Eſſex's Captain, ſays very impartially, that it was his own fault, through his eagerneſs in landing and attacking the city, which put the Admiral under the neceſſity of doing the ſame (26). *In reſpect to the ſecond*, the fleet could not furniſh proviſions ſufficient for a garriſon of four thouſand men. On the whole, it ſeems highly probable that both the Earl and the Admiral were very public ſpirited men, and had nothing in view but the common good, though they differed about the means of promoting it. The Earl thought, that keeping of the city and iſle of Cadiz, would diſcredit the power of Spain, and diſtract the King's meaſures; the Lord Admiral thought there was danger in this, and that the end would be more effectually accompliſhed by deſtruction, and for this reaſon he delayed the treaty for the ranſom of the ſhips, though offered two millions, that he might give the Spaniards time to take and execute their own purpoſe of burning them. At their return, the Earl of Eſſex took every meaſure to ſet his own conduct in a fair light, and to obtain the applauſe of the people at leaſt, if not the approbation of the Court. The Queen, as her cuſtom was, did not appear entirely ſatisfied, becauſe on the foot of the account exactly ſtated, ſhe was ſixty-four thouſand pounds out of pocket by this Cadiz expedition (27). An outward reconciliation at leaſt was procured between the two Lords; but the Earl going the next year upon the iſland voyage, the Admiral, as we have mentioned in the text, procured himſelf to be created Earl of Nottingham, with this clauſe in the patent (28).

'That by the victory obtained, anno 1588, he had 'ſecured the kingdom of England from the invaſion of 'Spain, and other impending dangers; and did alſo, 'in conjunction with our dear couſin Robert Earl of 'Eſſex, ſeize by force the iſle and ſtrongly fortified 'city of Cadiz, in the fartheſt part of Spain; and did 'likewiſe entirely rout and defeat another fleet of the 'King of Spain, prepared in that port againſt this 'kingdom.'

The title of Nottingham had belonged to the Mowbray's, Dukes of Norfolk (29). John Lord Mowbray, in the life time of his father, was created Earl Warren and Surry, by the virtuous King Henry VI, after his death became Duke of Norfolk, Earl of Nottingham, and Earl Marſhal of England; he married Elizabeth, daughter to John Talbot, the firſt Earl of Shrewſbury, and by her had iſſue an only daughter, Anne, eſpouſed to Richard Duke of York, who in her right was created Earl of Nottingham (30). But they both dying without iſſue, as her father likewiſe did, all the eſtates and titles of the Mowbray's came to the Howards and the Berkeleys. William Lord Berkely, was created Earl of Nottingham and Earl Marſhal of England by Richard the Third, and was advanced to the title of Marquis Berkeley by Henry the Seventh, to whom, dying without iſſue, he left moſt of his eſtate (31). Henry the Eighth beſtowed the title of Nottingham, with other high titles, upon his natural ſon, whom he married to Mary, daughter of Thomas Howard Duke of Norfolk (32), ſo that the Admiral affected this honour, as being deſcended from the Mowbray's, it's ancient

the Earl of Eſſex, at his return from that which was ſtiled the Iſland Voyage, though coolly received at firſt, quickly after gained ſuch an aſcendancy over the Queen his miſtreſs, as to procure what he had long ſought, the poſt of Earl-Marſhal; which giving precedence of the Earl of Nottingham, his Lordſhip reſigned (*y*) his white ſtaff, and for ſome time remained at Chelſey, rather through chagrin than in diſgrace [*E*]. It was not long before the Queen recalled and reſtored him to her favour in as high a degree as ever, notwithſtanding all the practices of the oppoſite faction. In demonſtration of his loyal gratitude, the next eminent ſervice in which his Lordſhip engaged was in 1599 (*z*), when the State was in very great danger. On one ſide, the Spaniards ſeemed to meditate a new invaſion, and ſome intelligence was received they were on the very point of executing it, having aſſembled a great fleet at the Groyne, on board of which many Engliſh fugitives were directed to repair. On the other hand, the Earl of Eſſex, who was then Lord-Lieutenant of Ireland, acted in a ſtrange manner, treating with the rebels, more eſpecially the Earl of Tyrone, whom he was ſent to reduce, and forming ſome deſigns of employing the troops, with the command of which he was intruſted by the Queen, to the diſturbance of her government. Her Majeſty, who always placed her ſafety in being too quick for her enemies, iſſued her orders to the city of London, to furniſh immediately ſixteen ſhips for the reinforcement of the navy, and ſix thouſand men for her ſervice by land. The like directions being ſent into other parts of the kingdom, ſuch a fleet and ſuch an army were drawn together in a fortnight's ſpace, as took away all appearance of ſucceſs from foreign and domeſtic enemies; and to ſhew the confidence ſhe had in the Admiral's fidelity and capacity, ſhe was pleaſed to repoſe in him the ſole and ſupreme command both of fleet and army, with the high title of LORD-LIEUTENANT-GENERAL of all ENGLAND (*a*), an office unknown to ſucceeding times, and which he held with almoſt regal authority for the ſpace of ſix weeks; being ſometimes with the fleet in the Downs, and ſometimes on ſhore with the forces. In the mean time, the reſtleſs and unfortunate Earl of Eſſex having taken a ſudden reſolution to leave his command in Ireland and return to England, the Queen thought fit to puniſh this contempt with a ſhort reſtraint, and afterwards ſeemed inclined to have received him again into favour; but he, either hurried on by his own raſh diſpoſition, or inſtigated thereto by ſome deſperate perſons about him, attempted to raiſe a force ſufficient to compel the Queen to do what he thought expedient; and failing in this, after an irruption from thence, and traverſing the city, retired with ſuch as were about him to Eſſex-houſe in the Strand, where he fortified himſelf, and confined the Chancellor, the Chief-Juſtice of England, and other Privy-Counſellors, ſent by the Queen to enquire into the grievances he pretended had compelled and authorized his extraordinary conduct. This was on the 8th of February (*b*), 1600, when the Queen ſaw herſelf in the decline of her life, and, after ſhe had triumphed over foreign foes, in the utmoſt danger of being impriſoned or depoſed. In this perilous ſituation,

ancient poſſeſſors. Yet he did not think proper at this time to inſiſt upon that topic, or to claim any precedency, for reaſons which the reader will find in the next note: in the enſuing reign however he availed himſelf of his deſcent, and procured a grant from King James, by which his ſeat in the Houſe of Peers, as Earl of Nottingham, was aſſigned him, according to the original creation in the time of Richard the Second, and not from this new patent (33); and this is a ſtrong confirmation that the grounds mentioned in the next notes, were the true ſources of the animoſity between the two Earls.

(33) Camden's Annals of King James.

[*E*] *Rather through chagrin than in diſgrace.*] The Lord Admiral had ſcarce received his new dignity, before his rival the Earl of Eſſex returned from the Iſland Voyage, and on account of ſome miſcarriages therein, was at firſt a little under a cloud; from whence, however, it was not long before he emerged with greater ſplendor than ever. It was then that he began at leaſt openly to expreſs great reſentment in reference to the Earl of Nottingham's patent; which though at this time it may ſeem very extraordinary, and not the leſs ſo, conſidering the times in which it happened, yet, as we have ſhewn elſewhere, it was not altogether groundleſs or without colour of juſtice (34). The Earl of Eſſex, in virtue of his title, had the precedence of the Admiral; but in conſequence of his being created Earl of Nottingham, the great offices he enjoyed, gave him precedence before all Earls, except the Earl of Oxford, and conſequently of the Earl of Eſſex, who thought this hard, becauſe, in the preamble of the patent, the motive of creating mentioned, was his ſervice at Cadiz, in conjunction with the Earl of Eſſex; who having the precedence then, and loſing it by this creation, conſidered this new honour as injurious to himſelf, and as expreſſive of ſuperior merit in the new Earl over him. According to his uſual warmth he carried this very high, talking ſometimes of demanding a commiſſion to examine the patent; ſometimes of challenging the Earl of Nottingham, or any of his ſons; and at others, of referring what he took to be a grievance to the Queen's pleaſure (35). But in all probability there was another cauſe unnoticed by any writer of thoſe times, which might augment his uneaſineſs; ſince there is nothing improbable in ſuppoſing that he ſuſpected the new Earl in taking the title of Nottingham, had in view the obtaining the office of Earl Marſhal, which his anceſtors with the ſame title had borne. However this is certain, that on the 18th of November, his abſence in the Houſe of Peers was excuſed on account of indiſpoſition, the Earls of Worceſter and Southampton teſtifying his ſickneſs (36). The Queen directed Sir Walter Raleigh to interpoſe for the accommodation of this high diſpute, during which the Earl ſtill continued to abſtain from appearing in the Houſe (37). At length it was in ſome meaſure adjuſted by the grant of that high office which the Earl of Eſſex ſo much deſired, and in all probability it was to give room for that, that by the Queen's expreſs command, the Houſe was adjourned from Tueſday the 20th of December to Wedneſday the 11th of January following, when the Earl of Eſſex took his ſeat as Earl Marſhal of England, and thereby recovered his precedency (38). But with reſpect to the Earl of Nottingham's reſigning his white ſtaff in diſguſt, it ſeems not to be true, ſince, on the day beforementioned, he likewiſe took his ſeat immediately after the new Earl Marſhal as Lord High Steward of the Queen's houſhold, and continued to enjoy that office during the remaining part of this reign, as appears clearly from the Journal of Parliament (39). It is alſo evident that this victory of the Earl of Eſſex, was not gained ſo much over the Earl of Nottingham, as over the Queen herſelf, who granted it with a kind of conſtraint, and with viſible marks of reluctance, which, as ſigns of his triumph, the Earl of Eſſex was pleaſed with at the time, though it proved afterwards his ruin (40).

[*F*] *With*

tion, ſhe had recourſe to the loyalty of her people, and to the courage and conduct of her nobility, giving the command of all to the Lord-Admiral, who ſhe often ſaid (c) was born to ſerve and to ſave his country. He performed on this occaſion, as on all others, the utmoſt the Queen could expect; for he reduced the Earl of Eſſex to ſuch diſtreſs, that he was content to yield himſelf without terms; and when he had ſo done, the Lord High-Admiral treated him with all the lenity and kindneſs poſſible (d) [F]. The Earl of Nottingham was one of the peers ſummoned to ſit in judgment on that unhappy Earl, February 19, 1600, and ſhewed an earneſt deſire to come at the truth of that myſterious and melancholy affair. The Earl of Southampton, who was condemned at the ſame time, applied himſelf particularly to the Earl of Nottingham to intercede for him with the Queen; and he did it ſo effectually, that he was for the preſent reprieved (e), and afterwards pardoned. The ſame year his Lordſhip was appointed one of the Commiſſioners for executing the office of Earl-Marſhal of England (f), and immediately added this poſt to his title, as we ſee in the Journal of the enſuing Parliament (g). In the Queen's laſt ſickneſs he was abſent from Court for ſome time, by reaſon of his conſort's indiſpoſition and death; concerning which, whatever ſecret hiſtory may report, we muſt be ſtrangely credulous to believe it was owing to the Queen's reproaches about the death of Eſſex (h) [G]; more eſpecially if we conſider he was ſent for when ſhe was in extremity, to

[F] *With all the kindneſs and lenity poſſible.*] It does no ſmall honour to the memory of the Earl of Nottingham, that when the Queen and kingdom was in danger, he was ever called, and came to their relief. On the inſurrection of the Earl of Eſſex, which threw the Court into the greateſt conſternation, he was immediately choſen to command thoſe who ſtill remained attached to their duty. His courage was equal and his ſkill and popularity not inferior to thoſe of the Earl of Eſſex. But though on this and ſome other occaſions, he ſtood as it were the head of the oppoſite faction, yet in reality it was Eſſex who had declared againſt Nottingham, rather than the latter againſt him. In another place it has been ſhewn, that Earl was driven into rebellion, partly through the violence of his own temper, but chiefly through the arts of his enemies, from the number of which, however, the Earl of Nottingham is juſtly excluded (41). The blame is commonly laid upon Sir Robert Cecil and Sir Walter Ralegh, never upon the Earl of Nottingham, who was not called upon to act his part 'till the very laſt ſcene, and then acted, as he always did, with great openneſs and honour. He inveſted Eſſex-houſe; he procured the liberty of the Privy Counſellors confined there; he abſolutely refuſed either hoſtages or terms to the Earl of Eſſex, and gave his reaſons plainly, that rebels had no title to either; but of his own accord he offered courteouſly to ſuffer the ladies to go out; and when the Earl demanded two hours time to fortify the paſſage through which the Counteſs of Eſſex and Lady Rich went out, he conſented to that too; and when Eſſex, before that time expired, propoſed three things, firſt, that they ſhould be civily treated, that the Lord Admiral poſitively promiſed; next, that their cauſe ſhould be juſtly and lawfully heard, he ſaid that was not to be doubted; and laſtly, that Mr Aſhton the miniſter might attend him in priſon; the Lord Admiral engaged to intercede with the Queen, and it was accordingly granted (42). On this they ſurrendered at ten at night, February the 8th, 1600, when the Lord Admiral carried the Earls of Eſſex and Southampton, not to the Tower, but to the Archbiſhop's palace at Lambeth. There is a curious letter of Secretary Cecil's, afterwards Earl of Saliſbury, written immediately after the thing happened, addreſſed to the then Lord Preſident of Munſter, which the reader will not be diſpleaſed to ſee. It is conceived in the following terms, and, though ſhort, contains the beſt account of this ſtrange affair (43).

(43) Birch's Memoirs of Queen Elizabeth, Vol. II. p. 468, 469.

' Sir GEORGE CAREW,

' Becauſe I am not ignorant that greateſt accidents are moſt ſubject to be miſreported by ſuch as ' are either in paſſion or ignorance. I have thought ' very fit, with all convenient ſpeed, to acquaint you ' with a moſt dangerous attempt which hath happened ' on Sunday laſt, wherein both her Majeſty's own perſon, and the uſurpation of this kingdom, was openly ' ſhot at. By this Proclamation, the proceedings of ' the Earl of Eſſex will appear, and therefore I ſhall ' only need ſay this unto you, that I think by that ' time my letters ſhall come unto you, both he and the ' Earl of Southampton, with ſome others of the principals, ſhall have loſt their heads. I ſend you the ' note of moſt of them that were in open action with ' them. If the Queen had not put herſelf in ſtrength ' that very morning, and barricaded Charing-croſs and ' other places of the back parts of Weſtminſter, their ' reſolution was to have been at Court by noon; whereof, when they underſtood, they put themſelves into ' London, and from thence, hoping to have been followed by the city, they reſolved to come back; but ' being repulſed at Ludgate by a ſtand of pikes, and ' the city holding faſt for the Queen, they and ſome ' fifty of their complices ran to the water and put ' themſelves into Eſſex-houſe, which the Earl had furniſhed with all manner of warlike proviſions, and ' then defended themſelves 'till towards ſix o'clock in the ' evening, at which time the Lord Admiral ſent unto ' them, that if they would not yield, he would blow ' up the houſe, which he might have done ſooner, ' but that the Lady Eſſex and the Lady Rich were ' within it. Whereupon, notwithſtanding their great ' batteries, they all yielded to her Majeſty's mercy. ' Thus you have a true relation of this dangerous acci' dent, unto which I will only add this, that even ' when a falſe alarm was brought to the Queen that ' the city was revolted with them, ſhe never was more ' amazed, than ſhe would have been to have heard of ' a fray in Fleet-ſtreet. And thus much for this time, ' I thought good to let you know, 'till further oppor' tunity, committing you to God's protection.

Your loving

RO. CECIL.

The commanders of our little army were:

The Lord-Admiral, Lord-General,
Earl of Cumberland, Lord-Lieutenant,
Lord Thomas Howard, Marſhal,
Lord Grey, General of the Horſe,
Lord Burghley, Colonel-General of the Foot,

' who with ſome ten horſe went into London and pro' claimed the Earl of Eſſex a traitor, with all his adhe' rents, by the mouth of the King of Arms, notwith' ſtanding that my Lord of Eſſex with all his complices ' were in the city.'

After his condemnation, the Earl of Eſſex, who began to change his opinions, and to ſee that he had acted very raſhly, and had aſperſed many who had done him no wrong, thought it his duty with great humility to aſk their pardon, and amongſt the reſt, of the Earl of Nottingham, who went frequently to ſee him in the Tower, but was not preſent at his execution, or ſo far as any authentic hiſtory records, any way inſtrumental in his death (44). His credit with the Queen and with the nation was not in danger of ſuffering if the Earl had been ſpared.

(44) Winwood's Memorials, Vol. I. p. 300, 301.

[G] *That it was owing to the Queen's reproaches about the death of Eſſex.*] There are always marvellous traditions floating in the minds of men upon remarkable events, and after paſſing from hand to hand, without ever being brought to public view during the age to which they belong, ſtart up ſometimes in the next,

to perſwade her to thoſe things which were requiſite in her condition, particularly to go into and remain in bed, which none could do but himſelf, and in which he ſucceeded (*i*). It was to him ſhe ſaid, when near her end, *My throne has been held, in the way of* ſucceſſion, *by* princes, *and ought not to go to any but my next and immediate* heir. This being by him reported to the Privy-Council, they appointed him, in conjunction with the Lord-Keeper and the Secretary, to deſire a more expreſs deſignation of the ſucceſſor; and upon this, ſhe named the *King* of *Scots*, her neareſt kinſman (*k*). He farther provided with all poſſible prudence for the peaceable coming in of the ſucceſſor, by cauſing a ſtout ſquadron, commanded by Sir Richard Leviſon and Sir William Monſon, to be ſtationed in the Downs during the Queen's illneſs, which awed the Arch-Duke and the French; and, on the Admiral's order, King James was proclaimed, with all imaginable alacrity, on the 25th of March, the day after the Queen's death (*l*). This ſervice at that juncture, when, as it afterwards appeared by Lord Cobham's and the powder plot, there wanted not ſome who meditated public confuſion, could not but be repreſented and received in the moſt favourable light, by a prince, to whom, as a Howard, this noble peer was remarkably agreeable; all that family having been conſtantly attached to his title, and Lord Henry Howard (*m*) the principal correſpondent his Majeſty had in England. Upon the acceſſion of King James, he not only retained his great office, and was honoured with a large ſhare of that prince's confidence, but, as a ſignal mark of favour, was likewiſe made choice of to officiate as Lord High-Steward at the ceremony of the Coronation (*n*). Soon after this, he was named Ambaſſador to the Court of Spain, for the concluſion of a ſtrict intercourſe

next, and paſs for authentic hiſtory. We have in another place given the reader that account of this matter, which an eminent French writer had from Sir Dudley Carleton; we will here produce another from an eminent writer of our own, whoſe indefatigable reſearches have thrown great lights upon this period of our hiſtory (45). 'I ſhall add, ſays he, as the beſt 'commentary upon the Earl of Monmouth's memoirs, 'a ſtory which was frequently told by his great-grand-'daughter the late Lady Elizabeth Spelman, whoſe 'father, John Earl of Middleton, married Martha, 'daughter of Henry Earl of Monmouth, eldeſt ſon of 'Earl Robert, author of the Memoirs. When Katherine Counteſs of Nottingham, wife of the Lord 'High-Admiral, and ſiſter of the Earl of Monmouth 'was dying, as ſhe did according to his Lordſhip's own 'account, about a fortnight before the Queen, ſhe 'ſent to her Majeſty to deſire that ſhe might ſee her, 'in order to reveal ſomething to her Majeſty, without 'the diſcovery of which ſhe could not die in peace. 'Upon the Queen's coming, Lady Nottingham told 'her, that while the Earl of Eſſex lay under ſentence 'of death, he was deſirous of aſking her Majeſty's 'mercy in the manner preſcribed by herſelf during the 'height of his favour, the Queen having given him 'a ring, which being ſent to her as a token of his di-'ſtreſs, might entitle him to her protection. But the 'Earl, jealous of thoſe about him, and not caring to 'truſt any one of them with it; as he was looking out 'of his window one morning, ſaw a boy, with whoſe 'appearance he was pleaſed, and engaging him by 'money and promiſes, directed him to carry the ring, 'which he took from his finger, and threw down, to 'Lady Scroope, a ſiſter of the Counteſs of Nottingham, and a friend of his Lordſhip, who attended 'upon the Queen, and to beg of her that ſhe would 'preſent it to her Majeſty. The boy by miſtake carried to Lady Nottingham, who ſhewed it to her huſband the Admiral, an enemy of Lord Eſſex, in order 'to take his advice. The Admiral forbad her to carry 'it or return any anſwer to the meſſage, but inſiſted 'upon her keeping the ring. The Counteſs of Nottingham having made this diſcovery, begged the 'Queen's forgiveneſs, but her Majeſty anſwered, God 'may forgive you but I never can, and left the room 'with great emotion. Her mind was ſo ſtruck with 'this ſtory, that ſhe never went into bed, nor took 'any ſuſtenance from that inſtant; for Camden (46) 'is of opinion, that her chief reaſon for ſuffering the 'Earl to be executed, was his ſuppoſed obſtinacy in 'not applying to her for mercy.' This ſtory differs remarkably in one particular from that of Sir Dudley Carleton; for whereas here it is made an accident that the ring fell into the hands of the Counteſs of Nottingham; in that account it is expreſsly ſaid, the Earl ſent it to her as being his relation. There are ſome other circumſtances which impeach the credit of this ſtory. In the month of June in the year preceding, her Majeſty, in a converſation with the Count de Beaumont, Ambaſſador from France (47), after owning herſelf to be weary of life, with ſighs and tears in her eyes, touched upon the ſubject of the Earl's death, and ſaid, that having been apprehenſive, from the impetuoſity of his temper and his ambition, that he would precipitate himſelf into deſtruction by ſome ill deſign; ſhe had adviſed him above two years before, to content himſelf with pleaſing her on all occaſions, and not to ſhew ſuch an inſolent contempt for her as he did, but to take care not to touch her ſcepter, leſt ſhe ſhould be obliged to puniſh him according to the laws of England, and not according to her own, which he had found too mild and favourable for him to fear any ſuffering from them; but her advices, however ſalutary and affectionate, could not prevent his ruin. It is very clear from hence that the Queen was melancholy, and melancholy on the account of Eſſex, nine months before her death, and when it was impoſſible ſhe ſhould have heard of this ſtory. It appears alſo from the letters of the ſame miniſter, that the Counteſs of Nottingham died almoſt a month before the Queen, and which is ſtill more extraordinary, the Queen declined giving him audience on account of her great grief and concern for the death of that lady. But what ſhocks the credibility of this tale moſt of all, are thoſe marks of confidence ſhewn by the Queen, to the very laſt, towards the Earl of Nottingham himſelf, who if it had been true, was infinitely more culpable than his Counteſs. Her words about the ſucceſſion (48) are very remarkable; ſhe ſaid, ſhe deſired no other ſucceſſor than the King of Scots, and not that her kingdom ſhould fall into the hands of raſcals. It is well enough known, that Sir Robert Cecil, then Secretary of State, and thoſe of his faction, were fallen into ſuſpicion with the Queen, and in ſome degree into her diſpleaſure, and this chiefly becauſe ſhe ſaw them exerciſe a power which ſhe was no longer able to controul. A very little before, they had compelled her to pardon the Earl of Tyrone againſt her judgment, which ſhe reſented exceedingly, and this was the true cauſe of her regretting the Earl of Eſſex, and lamenting his death as ſhe did, becauſe ſhe ſaw, that with him ended that balance which with great dexterity ſhe had maintained for ſo many years, and that her miniſters were now become her maſters. This accounts ſo thoroughly for all the publick and private narratives of that long and great diſquiet, which brought upon her her laſt ſickneſs, is ſo natural a commentary on her laſt words; and, if it was neceſſary, might be ſupported and illuſtrated by ſo many uncontroverted paſſages in the hiſtory of theſe times, that there is no need to have recourſe to ſuch kind of traditional reports. It may be, the circumſtance of the ring might be taken from Lady Scrope's ſending one to King James as a token, by her brother, that the Queen was really dead. The name of this lady was Philadelphia, youngeſt ſiſter of Katherine Counteſs of Nottingham, and wife of Thomas Lord Scrope of Bolton (49). What adds ſome weight to this conjecture is, that this ring ſent by the Lady Scrope to King James, was alſo thrown out of a window (50).

intercourſe of friendſhip with that Crown, in purſuance of the treaty made at London the eighteenth of Auguſt, 1604 (*o*), wherein alſo his Lordſhip was an acting Commiſſioner. It was very requiſite that extraordinary ſtate ſhould be kept up in this embaſſy, and therefore the Miniſtry fixed upon the Earl of Nottingham, not as a nobleman of very great fortune, but from his high birth, eſtabliſhed reputation, and from the known generoſity of his temper and the number of his dependants, who were content, at their own expence, to accompany him in this voyage. Accordingly he ſet out for Spain, with a retinue, wherein were four Lords and twenty-ſix knights (*p*); and, for the ſupport of this great train, he had an appointment of fifteen thouſand pounds, which fell, however, very far ſhort of his expences. He left England in the latter end of March, having three men of war and four other veſſels for himſelf and his retinue; he landed at Corunna on the 16th of April, and, after making his public entry into Madrid with all poſſible marks of deference and reſpect, had his firſt audience of his Catholic Majeſty on the 18th of May (*q*). Sir Charles Cornwallis, who accompanied him, and who was left Ambaſſador in Ordinary, reports the Earl's conduct to have been ſuch, as was highly honourable for himſelf, his maſter, and the Engliſh nation; and that the Spaniards exceedingly admired and reverenced (according to the honourable diſpoſition of that people) the hero, whoſe courage and conduct had overcome their Invincible Armada. He took the Spaniſh King's oath for the due obſervation of the treaty, and obtained an aſſurance, that the ſecret articles conſented to by the Conſtable, ſhould be as punctually obſerved as if inſerted in the treaty, according to the tenor of his inſtructions [*H*]. He had his audience of leave, to which he

(*q*) Winwood's Memorials, Vol. II. p. 68, 69.

[*H*] *According to the tenor of his inſtructions.*] We have mentioned in the text, the motives which induced the Court to make choice of the Earl of Nottingham for this extraordinary embaſſy, on which the eyes of Europe were fixed, and in regard to which, it imported the King and his Miniſters extremely, that it ſhould be conducted with equal diſcretion and dignity. The inſtructions given him upon this occaſion, are of like importance to our public and to his perſonal hiſtory, and for this reaſon we thought it abſolutely neceſſary to inſert them (51). They were conceived in the following terms.

(51) Bibl. Cott. Veſpaſian. c. ix.

'You are ſo well acquainted with the ſtate and condition of our affairs ſince our coming to this Crown of England, and with the reaſon and particular carriage in our late treaty with our good brethren the King of Spain and the Arch-Dukes, as we ſhall not need to make any larger deduction thereof, ſeeing you have been both a principal commiſſioner in debating and concluding of the ſaid treaty, and have ſince aſſiſted in all the conferences ſucceeding thereupon about the due execution of the ſame. And therefore leaving all theſe particular to the recognition of your own judgment and memory, we will now only repreſent unto you, that where we ſtand bound already by our oath, which we have taken for the ſatisfaction of the ſaid Princes, before the Conſtable of Caſtile and the Ambaſſadors of the Arch-Dukes, being thereunto ſpecially authoriſed for the due obſervation of all and every particular contained in the ſaid treaties of peace, wherein, by the aſſiſtance of God, we never intend for our part to be defective; we have now thought fit according to the ſaid treaties, to require the like oath and obligation at the hands of the ſaid Princes with whom we have contracted that amity. Wherein, when we obſerve how careful the King of Spain was to ſend to us a perſonage of great birth and qualitie about him, we likewiſe reſolve to requite our ſaid brother with the like proportion of honour, by ſending ſome ſuch perſon, as for his quality and birth, may diſcharge that ſervice to our both contentments: of the which ſort, having none more eminent or proper in all reſpects, in regard of your birth, place, and antiquity in council, or the great commandments you have had of the armies of this kingdom both by land and ſea, joined with the aſſurance we have, as well of your ancient affection to our perſon and title, as of your duty and loyalty to us (ſince we became your ſovereign) than we do eſteem and acknowledge you to be. We having made election of you for this employment, and no other, you ſhall therefore, upon receipt of our commiſſion and diſpatch, repair from hence into Spain, to ſuch place where you ſhall underſtand that our good brother is abiding: and for your better paſſage, we have appointed certain of our ſhips to attend you for your tranſportation by ſea, leaving it to your own choice and election, to take ſuch way by land or ſea as your knowledge and judgment of the places will direct you unto. After your arrival there, you ſhall preſent to our good brother the King of Spain, our kindeſt ſalutation, with offer of friendſhip, and princely offices towards him and his, and then preſent our letters of credence. After all which, you may ſignifie unto him in our name, that as ſoon as the ſeaſon of the year hath permitted, we would no longer defer to ſend you unto him, as well to make demonſtration of our gratitude and thankful accepting of the honour and kindneſs he hath done; as firſt, in ſending the Count Villa Mediana, to congratulate our coming to the Crown, with expreſſing of his deſire to revive and continue the kind amity which of long time hath been entertained between us, our kingdoms and eſtates; as afterwards, then reaſons of ſtate and other dependencies of diſcord between him and this our realm of England, required a further treaty for reconciling and taking away all former differences, and eſtabliſhing of an abſolute and perfect amity between us; that then he ſent unto us the Conſtable of Caſtile, a perſonage ſo near unto him, and of ſo great honour, ſufficiency, and truſt, by whoſe care and orderly conduct, things have been facilitated and brought to ſuch a happy and deſired iſſue as now we ſee they are, to the glory of Almighty God, and the peace and tranquillity, not only of his and our kingdoms and dominions, greatly hazarded and entangled by the calamity of the former war, but alſo to the whole repoſe of Chriſtendom, which by participation was not a little embarraſſed and diſtracted thereby. Next, you may confidently report unto him, that as before our coming to this Crown, there never paſſed any other but friendly offices and correſpondency between him and us; ſo now, ſeeing it hath pleaſed God not only to ſettle us peaceably in the poſſeſſion of this Crown (which our undoubtful right hath caſt upon us) but by our treaties of peace, to take away alſo all future occaſions to revive the former troubles that were depending between him and theſe our realms of England; ſo there is nothing more religious unto us, and next to our duty to God, nothing more acceptable in this world, than to maintain firmly and inviolably, all good correſpondence with him, according to the true conſtruction of the treaties, accounting it one of the greateſt bleſſings that God hath endowed us with all to be in perfect peace and amity with all the princes and eſtates in Chriſtendom; the conſervation whereof, ſhall ever be highly recommended unto us.

'For proof and confirmation whereof, as alſo to give teſtimony to the world of the love and reſpect we bear to him, we have ſent you expreſsly to viſit him in our behalf, and to receive reciprocally in our name, the oath which is to be taken by the ſaid King, for the preſerving of the ſaid peace and concord between us, wherein you ſhall refer the time and order to his preſcription; only we forewarn you, that in the performing of that ceremony, which is likely to be done in the King's chapel, you have eſpecial care, that it be not done in the forenoon, in the time of maſs, to the ſcandal of our religion, but rather

he was conducted by the Conſtable on the 7th of June (r), when the King put on his finger a diamond ring of the value of three thouſand pounds, and on the 15th he embarked at the port of St Andero for England. During the whole time that he reſided at the Court of King Philip the Third, he was treated with the utmoſt diſtinction and regard, maintained, to the admiration of the Spaniards, his dignity, and did the higheſt credit to the nation. At his departure, the King of Spain made him preſents, which amounted to twenty thouſand pounds (s). On his return, he was not ſo well received at Court as he had the ſtrongeſt reaſons to expect, which was by no means owing to his ill conduct, or to any fault of the King's, himſelf being injured, and his maſter abuſed by falſe reports, that the Admiral, while employed in this embaſſy, had aſſumed more ſtate, and acted with leſs precaution, than became him (t). However, he quickly recovered his maſter's good graces, attended on the Lady Elizabeth when ſhe was married to the Elector Palatine, and afterwards, as Lord Admiral, eſcorted her with a ſquadron of the royal navy to Fluſhing (u). This was the laſt ſervice he did his country in that capacity; for being now grown very old and infirm, it was thought expedient by ſome of his beſt friends, that he ſhould reſign his office to the new favourite, Villiers, at that time Earl, and afterwards Marquis and Duke of Buckingham. Some of the memoir writers (w) of thoſe days treat this matter in a way highly prejudicial to the King's memory, exceedingly diſgraceful to Buckingham, and not much for the reputation of the Earl of Nottingham. It appears, however, upon due enquiry and impartial and ſerious conſideration, that moſt of theſe ſtories are very ill founded, and that, in reality, the Earl of Nottingham's laying down his poſt, after he had enjoyed it with great honour thirty-two years, was not either uneaſy to him, or in the manner of it capable of fixing any diſgrace on his maſter. The propoſition came firſt from himſelf, without any knowledge of the Marquis, and was very eaſily agreed to. His eſtate was not great; and, at the beginning of the King's reign, he had married a young wife, the daughter of the Earl of Murray, for whom he was deſirous of providing as well as for her children. The terms, therefore, on which he conſented to reſign, were theſe, that a debt of eighteen hundred pounds, due from him to the Crown, ſhould be remitted (x); that he ſhould have an annual penſion of a thouſand pounds (y); and that, as Earl of Nottingham, he ſhould take place in the Houſe according to the deſcent of his anceſtors, and not according to the date of his patent (z). Theſe terms were quickly adjuſted. The Marquis went in perſon to ſee him, and to return him thanks for reſigning, as of his own motive he did, and by recommending him for his ſucceſſor did it in his favour; at the ſame time, the Marquis made the young Counteſs a preſent of extraordinary value, that is, three thouſand pounds, as we have reaſon to believe. He carried his reſpect to this venerable old man as far, and preſerved it as long, as poſſible, calling him always father, and bending his knee whenever he approached him, to the day of his death (a). The true cauſe of the Earl's inclination to reſign his employment was, his being ſenſible of a decay in his abilities, which becoming prejudicial to the King's intereſts, might in time have tarniſhed his former ſervices; and that upon his reſignation he might be honourably and kindly treated, he was deſirous of having the King's favourite for his ſucceſſor. It may not be amiſs to remark upon this, that, to prevent the Marquis's youth and inexperience from being as detrimental to the Crown as the

(a) By comparing the different accounts of this buſineſs.

'rather in the afternoon, at what time their ſervice is 'more free from note of ſuperſtition.

'Then you may addreſs yourſelf to the Queen our 'ſiſter, if occaſion be ſo offered, and preſent the like 'ſalutations to her from us and our dear wife the 'Queen, with aſſurance of our kind affections towards 'her; aſſuring them both, that it was one of our eſpecial charges to you, to adverтiſe us of their good 'health immediately after your arrival.

'At the next acceſs to the King, and before the performance of the ceremony of the oath, our pleaſure 'is, that you preſent unto the King, our ſervant Sir 'Charles Cornwallis, Knight, with this declaration, 'that foraſmuch as we have appointed him our Ambaſſador reſident with the ſaid King, we do deſire him 'to receive him in charge, and on all occaſions to give 'him favourable acceſs and hearing, as one of whom 'we have made eſpecial choice to uſe in that employment, for his integrity and ſufficiency to do us ſervice, and for the confidence that we repoſe in him, 'that he will carefully diſcharge his duty in the entertaining of the good amity between us and the ſaid 'King, our countries and ſtates.

'Theſe things being thus performed, you are to require an inſtrument in authentic form, of the King's 'ratification of the ſaid treaties of peace, ſigned with 'his hand, and ſealed with his Great-Seal, as we already delivered the like to the Conſtable of Caſtile; 'and as it is requiſite by the preſcription of the treaties, wherein you muſt be careful, that the private 'articles be not omitted, which the Conſtable condeſcended unto after the ſigning of the treaty, and undertook to procure the ratification thereof by the 'King his maſter. You are likewiſe to require an inſtrument of the King's oath, ſigned by him, and atteſted by his Secretary, reciting the names of ſuch 'principal perſons of the nobility as were preſent at 'the ſwearing thereof, according as we have given the 'like here to the Conſtable.

'For all other things which by diſcourſe or complement may occur, either with the King, the Queen, 'the Princes their children; the grandees, or the Ambaſſadors of other princes that reſide in that Court, 'and ſhall come to viſit you; we hold it needleſs further to inſtruct you, who are ſo well experienced in 'all things belonging to matters of honour and affairs.'

We have a very large and diſtinct account of this embaſſy printed, the very title of which will convince the reader in what point of light it was conſidered at that time, and how much honour was ſuppoſed to reſult therefrom, to the King and kingdom. Thus it run:

'A Relation of ſuch Things as were obſerved to 'happen in the Journey of the Right Honourable 'Charles Earl of Nottingham, Lord High-Admiral of 'England, his Highneſs's Ambaſſador to the King of 'Spain: Being ſent thither to take the oath of the 'ſaid King, for the Maintenance of Peace between the 'two famous Kings of Great-Britain and Spain, according to the ſeveral Articles formerly concluded on 'by the Conſtable of Caſtile in England in the Month 'of Auguſt, 1604. Set forth by Authority. By 'Rob. Treſwell, Eſq; Somerſet Herald, London, '1605, 4to.'

the old age and infirmities of the Earl, and to put the navy under a better regulation than ever; it was reſolved that the new Lord High-Admiral ſhould have an experienced Council placed about him, without whoſe advice he was to do nothing. Theſe, for their names are ſtill preſerved, were Meſſieurs Forteſcue, Oſborn, Gaughton, Sutton, and Pits, on whom, upon this occaſion, the King conferred the honour of knighthood; and this regulation had very good effects (*b*). All theſe meaſures ſeem to have been concerted before the reſignation, which made Buckingham ſhew ſo much reverence and affection for the Earl of Nottingham, and ſpeak of him always, and upon all occaſions, as one to whom he was under the higheſt obligations (*c*). Beſides all this, Sir Robert Manſel, who though of a very honourable and ſince noble family, yet being a younger brother, had been once the Earl of Nottingham's menial ſervant, but was then Vice-Admiral during pleaſure, by the favour of the Duke had that office confirmed to him for life by patent; which exerciſe of his influence in favour of Sir Robert, his old maſter took ſo kindly, that aged and infirm as he was, he made Buckingham a viſit to return him thanks (*d*). On the whole, therefore, there ſeems to be nothing diſhonourable in this tranſaction; for all parties were gratified in their particular views, and all ſeem to have been perfectly content. What is ſaid to the contrary, flows evidently from a deſire of prejudicing the world againſt the memory of men from ſurmiſes and conjectures, a method of all others the moſt deſtructive of the end and fruit of hiſtory, which ought to diſcover the truth, and inſtruct thereby ſuch as peruſe it. As for the few remaining years of his life, they were ſpent by the Earl of Nottingham in honourable eaſe and retirement to the time of his deceaſe, which happened on the 14th of December, 1624, when he was in his eighty-ſeventh year (*e*). He was a perſon extremely graceful in his appearance, of a juſt and honeſt diſpoſition, incapable either of doing bad things, or ſeeing them done without expoſing them. His ſteady loyalty to the Crown preſerved his reputation unſtained, and his fortune unhurt, when the reſt of his family were in the utmoſt danger (*f*). Queen Elizabeth knew and valued his integrity, and preferred his candour to the policy of ſome of her greateſt favourites. She had a peculiar felicity in ſuiting the employments of men to their capacities, and this never appeared more clearly than on thoſe occaſions wherein ſhe made choice of this nobleman, whoſe courage no danger could daunt, whoſe fidelity no temptation could impeach, much leſs corrupt. In public employments he affected magnificence, as much as he did hoſpitality in private life, keeping ſeven ſtanding houſes, as Dr Fuller phraſes it (*g*), at once. It is true, we meet with oppoſite accounts of this Lord's character and conduct, eſpecially in the latter part of his life; but as theſe are only in private letters, written by one (*h*) apparently prejudiced againſt him of whom he ſpeaks; and as the rough ſoldier-like behaviour of Elizabeth's active times, ſuited little with the ſtiff and ſolemn air of the Stateſmen in King James's Court, we need not wonder that among theſe the Earl of Nottingham met with ſome detractors His actions are ſufficient to ſilence envy, and to deſtroy the credit of all ſuch malicious cenſurers. He who beat the Spaniſh Armada, equipped a fleet, ſufficient to aſſert the ſovereignty of the ſea, in a fortnight's time, and, by his preſence alone, diſpirited the Earl of Eſſex's adherents, muſt have been a very extraordinary man, though we ſhould grant his enemies, that he was not very learned, expreſſed himſelf a little bluntly, and, though a perſon of ſo high quality, had little or no tincture of thoſe arts, which, peculiar as they are, do no great honour to a Court [*I*]. The corpſe of this noble lord was interred on the 23d of December, in the year beforementioned, in the family vault under the chancel in the church of Ryegate in Surry (*i*), and John Taylor, the famous water poet, celebrated his memory in a long elegy (*k*). His Lordſhip, as we have before had occaſion to mention, was twice married, firſt to Catherine, daughter to Henry Cary Lord Hunſdon, by whom he had iſſue two ſons, William, who was ſummoned by writ to ſeveral Parliaments during his father's life-time, and eſpouſed Anne, daughter and ſole heir to John Lord St John of Bletſho; which Lady Anne died 11 June, 1638, and was buried at Weſtminſter (*l*). He deceaſed in his father's life-time, leaving Elizabeth, his ſole daughter and heir, married to John Lord Mordaunt (*m*), afterwards Earl of Peterborough; ſo that his ſecond ſon, Charles, was his ſucceſſor in his honours (*n*); alſo three daughters, Elizabeth, married to Sir Robert Southwell of Wood-Riſing in Norfolk, Knight, and afterwards to John Stuart Earl of Carrick

[*I*] *Do no great honour to a Court.*] Though theſe memoirs have ſwelled to a greater length than we originally intended, yet we cannot forbear mentioning ſome particulars in this note, which ſerve to diſtinguiſh this great man, and ſhew his fortunes in a very ſingular point of light; he lived under five reigns, that is, from the 28th of Henry the Eighth, to the twenty-ſecond of James the Firſt, in a conſtant ſtream of proſperity, and with ſcarce any eclipſe of his ſovereign's favour. He was upwards of half a century Privy-Counſellor and Knight of the Garter; he ſerved in great ſtations from the firſt to the laſt year of Elizabeth, which can ſcarce be ſaid of any nobleman beſide. At the demiſe of that princeſs, he had the three greateſt offices in his hands, that of Earl Marſhal of England, Lord High-Steward of the Houſhold, and Lord High-Admiral of England. In the laſt Parliament of that Queen, he had eight proxies, and amongſt them thoſe of the Earl of Rutland and Lord Sandes, who had been both dipped in the unhappy affair of the Earl of Eſſex (52). We may from hence pronounce, that few, very few, noblemen have ever ſtood ſo high in this kingdom, without meeting either with fall or reproach. His fidelity was never ſo much as ſuſpected by Queen Elizabeth, who heaped employments upon him, which ſhe gave ſo ſparingly to others. With all his favour he was never envied by the nobility, and through his whole life he was exceedingly popular. The only cenſure paſſed upon him was, that he took too much ſtate in Spain, and even this, though it gave offence to ſome of the flatterers at Court, endeared him to the nation.

[*K*] *And*

Carrick in Scotland (o); Frances, firſt to Henry Fitzgerald Earl of Kildare in Ireland, and ſecondly to Henry Brook Lord Cobham (p); and Margaret, to Sir Richard Leviſon of Trentham in the county of Stafford, Knight, Vice-Admiral of England (q). His ſecond counteſs was Margaret, daughter to James Stuart Earl of Murray in Scotland, in right of his wife Elizabeth, eldeſt daughter and coheir to James Earl of Murray, natural ſon to King James the Fifth of Scotland (r). And by her, who was naturalized in Parliament the firſt of James the Firſt, he had iſſue two ſons, James, who died young, and Sir Charles Howard, Knight, ſucceſſor to his brother in the title of Earl of Nottingham (s). This lady ſurviving him, became the conſort of Sir William Monſon, Knight, Viſcount Caſtlemain in Ireland (t). The laſt mentioned Sir Charles Howard ſucceeding to the title, died April 26, 1681, and was alſo buried at Ryegate (u). In him the earldom extinguiſhed, but the title of Baron of Effingham devolved on Francis Howard, Eſq; great-grandſon of Sir William Howard of Lingfield in the county of Surry (w), brother to Charles Earl of Nottingham, to whom this article belongs; whoſe lineal deſcendant, Francis Baron of Effingham (x), was raiſed to the rank of Earl, by the ſame title, by letters patent bearing date December 8, 1731 (y), being at the ſame time Deputy Earl-Marſhal of England (z).

It may not be amiſs to add here, in the nature of an appendix to this life, that this noble perſon's ſurviving, ſo long as he did, the reign of his glorious miſtreſs, was of ſome conſequence to the Church of England. The Papiſts in Queen Elizabeth's time affected to diſpute the validity of Dr Matthew Parker Archbiſhop of Canterbury's conſecration, on a ſuppoſition, that, becauſe none of the Biſhops who adhered to the fee of Rome aſſiſted thereat, it could not be valid (a). But in proceſs of time, and when it was apprehended that all who could contradict directly ſo ill digeſted a ſtory, it was very boldly aſſerted, that Archbiſhop Parker was never conſecrated at all; to countenance which, this fable was deviſed, of which one Neale, Chaplain to Dr Bonner Biſhop of London, was alledged to be the author. He pretended, that his maſter having required the Biſhop of Llandaff not to do any thing in his dioceſe, he refuſed to obey the Queen's mandate, or to be preſent at the conſecration. Upon this, the Biſhops elect met at the Nag's-Head Tavern in Cheapſide, and Neale, who had watched them thither, peeping through the hole of the door, ſaw them in great diſorder, on account of the Biſhop of Llandaff's being intractable. At length, Biſhop Scorey bid them all kneel, and then laid the Bible upon every one of their heads or ſhoulders, ſaying, *Take thou authority to preach the Word of God ſincerely*; and ſo, according to Neale's report, they all roſe up Biſhops (b). In order to refute this tale, the Lambeth regiſters were cited, by which it clearly appeared, that Dr Matthew Parker was conſecrated, with the uſual ceremonies, in the chapel at Lambeth-palace, on the 17th of December, 1559 (c). But the Papiſts having once publiſhed ſuch an invention as this, thought themſelves obliged to maintain it; and in order to this, they gave out that theſe records were forged, inſinuating, that if they had been authentic, they would have been produced before; whereas the old diſpute turned upon quite another point, and therefore it had been to no purpoſe to produce them [K]. The Papiſts

(c) Maſon de Miniſt. Eccleſ. Anglic. lib. iii. cap. 8, 9.

[K] *And therefore it had been to no purpoſe to produce them*] The controverſy between Papiſts and Proteſtants ran ſo very high within a few years after the conſecration of Dr Parker, Archbiſhop of Canterbury, that it is impoſſible to doubt this tale of the Nag's-head Conſecration, if it had been invented, would have been then publiſhed; it goes therefore as we have obſerved in the text, not a little againſt the credit of this ſtory, that it was never heard of publickly, 'till it appeared difficult, if not impoſſible to refute it; but when it did appear, Mr Maſon, who undertook to refute it, gave a full, clear, and circumſtantial narrative of whatever regarded the electing, confirming, and conſecration of the Archbiſhop, and as the moſt authentic evidence that could be produced in ſuch a cauſe, cited Archbiſhop Parker's regiſter (53). The modern Papiſts, following the examples of their predeceſſors, have again taken the advantage of the diſtance of time, and have very warmly inveighed againſt that learned writer, as if he had either forged thoſe records himſelf, or had made uſe of them, though he knew they were forged by others (54). In this, as they tread in the ſteps, ſo they are equally unlucky with thoſe who invented the original calumny; for their ſpirit and conduct being well known, Dr George Abbot, Archbiſhop of Canterbury, ſent for Alexander Faircloth, Thomas Laithwaite, alias Scot, both Jeſuits; John Colleton, who, after the death of Birkhead, had the title of Arch-Prieſt; and Thomas Leake a Prieſt, then priſoners in the Clink for religion; and on the 12th of May, 1613, in the preſence of the Biſhops of Ely, Lincoln, and Rocheſter, produced to them the very original regiſter of Archbiſhop Parker, remarkably fair and clean, as having been carefully kept amongſt the public records; and after allowing them to turn it over and examine it at leiſure, procured a certificate under their hands, which was ſent by Dr Kelliſon, ſuperior of the Engliſh college at Douay, to Father Thomas Fitzherbert, then at Rome; teſtifying to him, and to all the Catholicks in general, that this regiſter was a true genuine record (55). This ſilenced the diſpute at that time, but the famous Mr Thomas Ward, either not knowing this fact, or concealing it, has attempted to revive the old thread bare tale of the Nag's-head Ordination, and to revive the calumny of Maſon's forging records to refute it. However, zealous and conſcientious Catholicks have long ago given up this point (56), as indeed they well might; for conſidering the regiſter of the Archbiſhop thus ſingularly proved, the authentic inſtrument of his conſecration at the chapel of Lambeth, and the then living teſtimony of the Earl of Nottingham preſent at the ceremony, and at the feaſt which followed it in the palace, and not at the tavern, we may ſafely affirm this is, if any point of ſuch a nature can be, put beyond all doubt. As to the other cavils that have been raiſed about the venerable prelates who aſſiſted at this conſecration, and the reaſons why it was ſo long poſtponed, the curious reader may find abundant ſatisfaction in our Eccleſiaſtical Hiſtorians, who by a diligent ſearch into, and collating of our old records, have ſet every thing in the cleareſt and moſt ſatisfactory light, more eſpecially one of them, who has very plainly opened the political motives which were the great impediments to Archbiſhop Parker's entering into the full poſſeſſion of his dignity (57). It is true, that in this he pays no great complement to the ſpirit that then prevailed in the government, and may in that perhaps have done the Papiſts a pleaſure; but by ſo doing, he has utterly overturned all their objections, and aſſigned a probable and

Papiſts likewiſe endeavour to avail themſelves of the ſilence of John Stowe, and to help out this lame argument, pretended that hiſtorian had privately told ſome friend of his the tale of the nag's-head ordination *(d)*; but all theſe dreams were clearly refuted by the declaration of Charles Earl of Nottingham; that being invited by his relation Dr Parker, he was preſent at his conſecration, deſcribed all the circumſtances of it, and dined afterwards in the palace of Lambeth with thoſe who aſſiſted at it. The Lord Chancellor Egerton likewiſe told Biſhop Williams, that the ſtory of the nag's-head ordination aroſe from hence, that whenever biſhops came to be confirmed at Bow-church, it was uſual to cauſe a dinner to be provided, for the civilians who aſſiſted at that ceremony, at the nag's-head tavern, as being in the neighbourhood *(e)*. The very original inſtrument of the Archbiſhop's conſecration is at this time preſerved in the library of Corpus-Chriſti-college in the univerſity of Cambridge *(f)*, and is the moſt authentic proof that can be deſired of the ſolemnity of this conſecration, and of the falſhood of this ridiculous ſtory, upon which the Papiſts, however, to this hour, inſiſt as if it had never been enquired into and refuted *(g)*.

and adequate cauſe for an event, which for want of knowing that cauſe, the Papiſts have repreſented as full of inconſiſtencies and abſurdities, and from thence deduced an argument in favour of their own inventions, as if the fact as before ſtated by Proteſtant writers, was not only improbable, but could not poſſibly happen. This ſhews how much better it is to tell the naked truth on all occaſions, than by endeavouring to hide it, furniſh pretences at leaſt to thoſe, who, though they endeavour to ſerve another cauſe, are very attentive in the peruſal of what regards the Hiſtory of our Church, and have a wonderful faculty of twiſting and diſtorting whatever they find there, to their own advantage.

E

HOWELL [JAMES], ſon of Thomas Howell, Clerk, Miniſter of Abernant in Caermarthenſhire, was born upon the Brynn of Llangammarch near Brecknock in Wales, about the year 1596 [*A*]. At a proper age he was ſent to the free-ſchool at Hereford, under *a learned but laſhing maſter (a)*; from whoſe rugged diſcipline he removed to Oxford, and entered of Jeſus-college in the beginning of the year 1610, his elder brother, Thomas Howell, being a Fellow of that ſociety [*B*]. Our author, though very young, brought with him a ſingular appetite for learning to the univerſity, and having alſo a ready wit, he had made a good progreſs in his academical ſtudies, when he commenced Bachelor of Arts, December 17, 1613 *(b)*. But he left the college without taking any other degree, and removed to London. He was a cadet of a numerous family *(c)*, and obliged to puſh his fortune; and being not ſo much inclined to a ſedentary as to an active life, this ſituation placed him more in the eye of ſuch of *his friends as could be of ſervice to him in that* way. The firſt employ he got was that of *Steward to a glaſs-houſe in Broad-ſtreet (d)*, which was procured for him by Sir Robert Manſel *(e)*, who was principally concerned therein [*C*]. Our young cadet had not been a great while in this ſtation *(f)*, when the proprietors

(b) Wood's Faſti, Vol. I. col. 194.

(c) There was 15 children in it. Fam. Letters, ubi ſupra.

(d) Ibid.

(e) Mr Howell's friend with Sir Robert was probably his brother Dr Francis Manſel, twice Principal of Jeſus-college. Hiſt. & Ant. Oxon. Univ. lib. ii. p. 102.

(f) He takes notice to Dr *Manſel that he had ſupervised the glaſs-houſe a ſmall time.* Letter 3 in Familiar Letters.

[*A*] *Was born upon the Brynn near Brecknock, about* 1596.] Mr Wood declares (1), he could not preciſely tell what year he was born in, though he found him entered in the Matriculation book at Oxford in the beginning of 1610, aged ſixteen years. He ſeems therefore to ſuſpect the accuracy of that entrance, eſpecially as he takes notice of an expreſſion in a letter of Mr Howell (2), where he ſays, *his aſcendant was that hot conſtellation of Cancer about the midſt of the Dog-days*; ſince in the ſame letter, dated in 1645, it is obſerved by our author, that *he had then paſſed nine luſtres of years, and ſome winters more.* Whence allowing theſe winters to be four (which is the moſt they could be), it follows, that he was not more than fourteen years of age in 1610, and therefore could not be born before 1596; nor is the authority of the date to this letter infringed by Mr Wood's remark, that no time is kept with the dates of theſe letters; for that obſervation (of which more hereafter) is no ways applicable to the letter here mentioned, which is inſerted in the firſt volume of the letters publiſhed in 1645. Thus the preciſe time of our author's birth is matter of conjecture only; neither is the place of it any better aſcertained. Mr Wood ſpeaks doubtfully in relation to Abernant (3), and the elder brother Thomas, he ſays, was born at a place called the Brynn, or (as James Howell informed Dr Fuller) at Llangammarch in Brecknockſhire, near Brecknock town (4); that is (the word Brynn in the Welſh language ſignifying a hill or mountain) at the Brynn of Llangammarch near Brecknock, and as our author in the letter abovementioned teſtifies that the ground whereon himſelf was born, was the belly of a huge hill. It ſeems moſt probable that the two brothers had the ſame birth place.

[*B*] *Thomas Howell, a fellow of that ſociety*] This gentleman, to whom ſeveral of our author's letters are inſcribed, after taking the degrees in Arts, went into orders, and preached about Oxford for ſome time. Afterwards he became King's chaplain, Rector of Weſt-Horſley in Surry, and of St Stephen's in Walbrook near London, D. D (5), and an. 1636 Canon of Windſor. In the beginning of the Civil Wars, being ſequeſtred from his livings by the Parliament, he was nominated to the ſee of Briſtol by the King, in July 1644, and afterwards conſecrated by Primate Uſher and other Biſhops. He died in 1646, and was buried in the cathedral at Briſtol, near the entrance out of the ſouth iſle into the choir, a plain ſtone being laid over him with only this word upon it, *Expergiſcar*. Mr Wood (6) tells us he was a good preacher and of a meek diſpoſition, and that his Majeſty promoted him to the biſhopric, promiſing himſelf good effects from his great candour, ſolid judgment, ſweet temper, and good repute, and accordingly it was ſaid of him, that like Gregory Thaumaturgus, who found but fifteen Chriſtians in his dioceſe, and left but fifteen heathens, he found at Briſtol few affected to the Church, and left but few diſaffected; upon which account the city in gratitude took care of the education of his children, of whom he had eleven. Mrs Katharine Philips, Orinda, brought up one of his ſons, Charles Howell, who was her godſon. One of his ſons called Griffith, was a great Herald; another, George, was fellow of All-Soul's college, took his maſter's degree in 1662, and lived near Chicheſter, where his ſon Robert Howell was living in 1695.

(5) In Letter 16, Vol. I. ſect. i. dated 1628, James writes thus. Brother, I have ſent you here incloſed warrants for 4 brace of bucks and a ſtag, the laſt procured of the King, towards keeping your act. I have ſent you alſo a warrant for a brace of bucks out of Whaddon-chace; beſides, you ſhall receive by this carrier a great wicker-hamper with two geouls of ſturgeon, ſix barrels of pickled oyſters, three barrels of Bologna olives, and ſome other Spaniſh commodities. Hence it appears how expenſive and ſumptuous the entertainments were at that time on this occaſion.

(6) Ubi ſupra.

[*C*] *A glaſs work, in which he had the principal concern.*] Sir Robert had for his partners in the patent, the Earl of Pembroke Lord Chamberlain, and ſeveral others of the prime nobility and courtiers (7). Nor is it any wonder to find the chief of our nobility giving a particular attention to the manufacture of glaſs in thoſe times. Mr Howell informs us, that the art was then in ſo great eſteem at Venice, that all of the profeſſion were gentlemen *ipſo facto* (8); and 'tis well known that the French made an arret, whereby it was provided, that the working of glaſs ſhould not only not derogate from the nobility, but even that

(7) Familiar Letters, No. 2.

(8) Ibid. No. 29.

proprietors of the work, to ſave the expence of wood-fuel, obtained the ſole patent of making all ſorts of glaſs with pit-coal; and being intent to improve the manufactory, they came to a reſolution to ſend an agent abroad, who ſhould procure the beſt materials and workmen that could be got. Their Steward was pitched upon as a fit perſon for this agency; and a warrant being accordingly procured for him from the Lords of the Council, to travel for three years any where, Rome and St Omers excepted (*g*), he left England about the end of March in the beginning of the year 1619, and viſited ſeveral of the principal places in Holland, Flanders, France, Spain, and Italy (*b*). Mr Howell made all the improvement in his perſonal qualifications that the opportunity of theſe travels afforded him, and particularly acquired that maſterly knowledge in the modern languages (*i*) which directed the ſubſequent courſe of his fortune. In the mean time he did not neglect the immediate buſineſs of his agency, in the execution of which we find him ſupplying the glaſs-work with the beſt Barillia at a cheap rate from Alicant [*D*], and engaging

(*g*) Ibid. No. 2. Notwithſtanding this, we find one of his letters during theſe travels dated from Rome, viz. No. 39.

(*b*) See his Letters, in Vol. I. § 1. which contain a particular account of the ſeveral ſteps throughout the whole rout.

(*i*) Thank God, ſays he, I have this fruit of my foreign travels, that I can pray unto him every day of the week in a ſeparate language, and upon Sunday in ſeven. Vol. I. § 6. No. 37. of his Fam. Letters.

none beſides noblemen ſhould be allowed to work therein *.

[*D*] *He ſent Barillia from Alicant*] Mr Howell gives the name of Barillia to the plant, and ſays it grows no where in ſuch perfection as at Alicant. 'The Venetians, continues he, have it hence, and it is a commodity whereby this maritime town (he was then at the place) partly ſubſiſts, being an ingredient in the beſt Caſtile ſoap. 'Tis a round thick ſhrub, that bears berries like barberries betwixt blue and green. It lies cloſe to the ground, and when it is ripe, they dig it up by the roots, and put it together in cocks like hay; then they make a pit of a fathom deep in the earth, and taking the tufts with a prong ſet them on fire, which diſſolves the berries into an azure liquor. This falling into the pit, when that is full, they dam it up; and in the ſpace of four days the juice turns to a blue ſtone ſo hard, that it is ſcarce malleable. It is ſold at one hundred crowns a tun, but I had it for leſs. There is alſo a ſpurious flower called *Gazul*, that grows here, but the glaſs that is made of it, is not ſo reſplendent and clear.' Thus far our traveller (9), but the art is greatly improved ſince his time. *Barillia*, now uſually called *Polverine* or *Rochetta*, is not the name of the plant (for that is called Kali) but of the ſalt, or rather powder obtained by burning the plant upon a hot iron, and is brought at preſent chiefly from Alexandria and Tripoli; and in theſe countries the art of glaſs making was firſt invented, at leaſt according to Pliny, who gives this account of it. There is a part of Syria, ſays he (10), called Phœnicia, bordering upon Judea, near the foot of mount Carmel, the ſhore of which yields very good ſand for making glaſs, and it was for many ages eſteemed the only ſand in the world for that purpoſe, concerning the diſcovery of it the ſtory is, that formerly a trading veſſel laden with nitre, touching upon the coaſt, the ſailors went a-ſhore to regale, where inſtead of raiſing their pillows with ſtones, they made uſe of lumps of nitre, which mixing with the ſand took fire, and produced certain ſtreams of a noble tranſparent liquor, whence is derived the origin of glaſs. Hence Sidon, the capital city of that country, celebrated by Homer (11) for many excellent arts, is alſo ſaid to be famous for it's glaſs-works, and to be the inventreſs of glaſs ſpecula (12). As to the antiquity and eſteem of theſe veſſels, it is certain they were uſed as great delicacies by the Perſians before the time of Alexander the Great; this appears from a paſſage in a play of Ariſtophanes (13), where ſome Ambaſſadors are introduced as lately returned from Perſia, who, extolling the luxury and magnificence of that prince, give it for a proof, that *he drank ſweet wine out of gold and glaſs cups*. Moreover two glaſs cups, or rather two cup-boards of them, are mentioned by Athenæus (14), to be produced to the people out of the royal treaſury of Ptolemy Philadelphus by way of pomp at Alexandria; and the ſame author informs us from an ancient epigram, that there were in the ſame age glaſs ſhops at Leſbos, and that the Grecians in their feaſts made uſe of a glaſs cup, to which they gave the name of *Leſbium* (15). However this art flouriſhed in later times chiefly in Egypt, where Strabo tells us (16), he *had heard the* Alexandrian glaſs-workers ſay, that a kind of glaſſy earth was found there, without which it was impoſſible to make any cups of value, or ſuch as were variouſly coloured. From Alexandria this luxury was brought to Rome (17), and particularly became more general there *after the reduction of Egypt into* a Roman Province, but was ſtill in the higheſt eſteem; upon which account we find, that when a ſervant of Vedius Pollio happened to break a glaſs at a ſupper where Auguſtus was his gueſt, Vedius immediately ordered him to be taken and thrown into his fiſh pond, to be devoured by the murenæ; this was reckoned a vulgar kind of death, and the boy having the good luck to make his eſcape, threw himſelf at Cæſar's feet, not begging his life, but only that he might die ſome other way, and not be made a bait for fiſh. Cæſar ſtruck with indignation at this new ſpecies of cruelty, did not only order the boy to be diſmiſſed, but commanded all the glaſs veſſels to be broken, and the fiſh pond to be filled up (18). In the reign of Tiberius the art, we are told, was brought to that perfection, that glaſs was made flexible and even malleable; concerning which, the following remarkable ſtory is told by Petronius (19). 'There was an artificer, ſays he, who made glaſs veſſels of ſuch a tenacity, that there was no breaking of them any more than thoſe made of gold or ſilver; having finiſhed a phial of this rare metal, he reſolved to preſent it to Cæſar as worthy of the Emperor alone.' Accordingly he was admitted with his preſent to Tiberius; when both the ſpecies of the gift and the ingenuity of the artiſt were highly extolled, and the devout reſpect of the giver graciouſly accepted. The man ſeeing this, in order to raiſe the admiration of the beholders into amazement, begged the phial again, and taking it from Cæſar's hand, threw *it* againſt the pavement with a force capable of bruiſing the firmeſt and moſt ſolid braſs. The Emperor was more than aſtoniſhed; the thing ſtruck a terror into *him* of the conſequences of ſuch an art. But the artiſt proceeds, and taking up the phial which was only bruiſed, he pulls a mallet from his boſom, and beats out all the bruiſes very exactly, as if it had been made of braſs. Plumed with the ſucceſs, he now concluded himſelf ſecure of Cæſar's higheſt favours, and even began to think of chuſing his own ſeat among the gods, when the event miſerably deceived him. For the Emperor enquiring if any one elſe was poſſeſſed of this ſecret, and being told not, preſently condemned our artiſt to loſe his head; alledging this for a reaſon, that if ſuch an art ſhould once come to be commonly known, gold and ſilver would be looked on as meer dirt. Whatever reception this ſtory may meet with, which, to ſpeak the truth, is but little credited by Pliny (20), yet it is certain that glaſs was in the higheſt eſteem after theſe times. We are told it was commonly ſaid of the Emperor Claudius, that he would reward any perſon with the privilege of a Roman citizen, who ſhould bring him any glaſs veſſels, even tho' they were broken (21); and Pliny (22) relates, that in the time of Nero an improvement was made in the art, which raiſed it's value ſo much, that two moderately ſized cups called pterotæ (23), were ſold for 6000 ſeſterces, that is about fifty pound ſterling. At that time the manufacture appears to be wrought in the ſame manner as it is at this day. For Seneca (24) contending againſt Poſidonius, who maintains that none of the arts which are uſeful to life were the produce of philoſophy, wiſhes that he could have ſhewn Poſidonius one of the workers in glaſs, forming that ſubſtance with his breath into various figures ſo curiouſly faſhioned, that the ſkilfuleſt hand might almoſt deſpair of equalling them. *Cuperem Poſidonio vitriariun aliquem oſtendere, qui ſpiritu vitrum in habitus plurimos format, qui vix diligenti manu effingerentur. Hæc inventa ſunt, poſtquam ſapientem invenire deſtivimus.* Theſe words ſeem to indicate, that this way of making glaſs was then recent at Rome, being unknown to Poſidonius, who flouriſhed in the time of Pompey. But Pliny

ging the beſt workmen he could pick up every where, eſpecially at Venice [*E*]. About Chriſtmas 1621 he returned to London, and not long after was welcomed with the good news of being appointed Fellow of Jeſus college upon the new foundation by Sir Eubule Theloall (*k*). But finding his friend and patron Sir Robert Manſel, who was Vice-Admiral of England, abroad with the fleet in the Mediterranean, and ſeeing no good proſpect of doing any thing for himſelf in the glaſs buſineſs (*l*), he turned his views a different way, and ſought how to make the beſt advantage of his newly acquired merit [*F*]. He had taſted the delights of travelling, and reſolved if poſſible to continue them. The firſt attempt he made of this kind was to go Secretary to Sir John Ayres to Conſtantinople, but coming too late for that poſt (*m*), Sir James Crofts preſently after recommended him to travel with two ſons of the Lord Savage in quality of governor, and with this view he was taken into that family, and handſomely entertained by his Lordſhip; but his ſtay there was ſhort (*n*), for being young and of a different religion, he declined the charge intended, and cloſed with an offer that was made him by a young gentleman of his acquaintance, to attend him as a companion in making the tour of France (*o*) [*G*]. He paſſed the year 1622

(*m*) Ibid.

(*n*) Ibid. No. 7 and 12. He ſeems to have parted honourably with this family, and he afterwards kept a correſpondence from France with his Lordſhip at his requeſt. He alſo taught Spaniſh to one of the young ladies. See No. 19. and ſeveral others. Beſides No. 14. § 4.

(*o*) Ibid. No. 16 and 12.

(*k*) He had taken care to cultivate his intereſt there all along, as appears by ſeveral letters before this of thanks in Vol. I. § 2. No. 6. to Sir Eubule Theloall, to whom his expreſſion is, that he will reſerve it [the fellowſhip], and lay it by as a good warm garment againſt rough weather, if any fall on him. And in this he was followed by Mr Prior, who alledged the like reaſon for keeping his fellowſhip at Cambridge, ſee his article. Concerning Sir Eubule's benefaction, ſee Wood's Antiq. Oxon. l. 2.

(*l*) Fam. Letters, Vol. II. § 2. No. 5.

Pliny informs us (25), that a few years after this, the uſe of glaſs cups drove out thoſe of gold and ſilver.

(25) Ubi ſupra.

[*E*] *Eſpecially at Venice.*] He ſent one Signior Antonio Miotti from Middleburgh in Zealand, where he had been maſter of a glaſs furnace a long time, and was reckoned one of the ableſt men in that way in Chriſtendom (26). From Venice, he mentions the ſending of two Italians, who by report there, were the beſt gentlemen workmen that ever blew cryſtal, one of them allied to *Antonio Miotti*, the other to *Mazalao* (27). 'I have met, continues he to Sir Robert Manſel, with Camillo your conſaorman, and could he be ſure of entertainment, he would return to ſerve you again, and I believe for leſs ſalary.' In the ſame letter he relates that he had been at Murano, where the Venetians made their glaſs, a little i[illegible] from Venice, about the diſtance of Vaux-hall from Lond[illegible] Theſe people finding they could not hinder their beſt workmen from going, when ſufficiently encouraged, into other countries; in order to prevent [illegible] loſs of their trade, induſtriouſly ſpread it about, tha[illegible] you ſhould tranſplant a glaſs furnace from Mur[illegible] herſelf, or any of the little iſlands abou[illegible] y other parts of the earth, and uſe all [illegible] the ſame workmen, the ſelf ſame [illegible] every way, yet you cannot make make cryſtal gl[illegible] n that perfection for beauty and luſtre as at Murano. This they then took care to impute to ſome ſecret quality in the air of that iſland, and our novice ſeems to be the dupe of ſuch an idle ſtory, but neither did this nor any other ſhift prove effectual. The art was firſt got from them by the French, who afterwards found out the ſecret of caſting *large* table-glaſs, which was propoſed by the Sieur Theodart in 1688 *. But this hath been ſince improved by the Engliſh, and is now made at Vaux-hall in greater perfection than any where elſe in the world.

[*F*] *His newly acquired merit.*] Viz. His ſkill in the languages, and his knowledge of the policies and manners of the ſeveral ſtates through which he paſſed. With regard to the firſt, beſides what is already mentioned, it was of ſervice to him afterwards towards his ſubſiſtance, qualifying him to write the following books. (1.) *Lexicon Tetraglotton, An Engliſh, French, Italian, Spaniſh Dictionary*, Lond. 1660, fol. To which is added, *A particular Vocabulary, or Nomenclature, in Engliſh, Italian, French, and Spaniſh, of the proper Terms belonging to ſeveral Arts and Sciences. to common Profeſſions and Callings, both liberal and mechanic, &c. and likewiſe Proverbs, or old ſayed ſawes and adages in Engliſh, or the Saxon Tongue, Italian, French and Spaniſh, whereunto the Britiſh for their great Antiquity and Weight are added* (2.) *A French Grammar, and a Dialogue conſiſting of all Galliciſms, with Additions of the moſt uſeful and ſignificant Proverbs, printed at London twice, the laſt time in* 1673. *fol.* (3.) *A French and Engliſh Dictionary, compiled by* Mr Randal Cotgreve: *With another in Engliſh and French; whereunto are added, Animadverſions, with Supplements of many hundreds of Words never before printed*, by James Howell, Eſq; Lond. 1650, fol. (4.) *A new Engliſh Grammar for Foreigners to learn Engliſh, with a Grammar for the Spaniſh or Caſtilian Tongue, with ſpecial Remarks on the Portugueſe Dialect, for the Service of her Majeſty, London,* 1662, 8*vo*. He likewiſe applied this ſkill to tranſlate ſeveral pieces, as (1) *St Paul's late Progreſs upon Earth, about a Divorce 'twixt Chriſt and the Church of Rome, by Reaſon of her Differences and Exceſſes, &c. London*, 1644, 8*vo*. The author of this book publiſhed it about the year 1642, and being obliged to fly from Rome on that account, in the company, and under the conduct, of one who pretended friendſhip to *him*, was betrayed at Avignon, and there hanged, and then burnt. (2.) *A Venetian Looking-Glaſs: Or a Letter written very lately from London to Cardinal* Barberini *at Rome, by a Venetian Clariſſimo, touching the preſent Diſtempers in England*, 1648, 3 ſheets 4to. (3.) *An Exact Hiſtory of the late Revolutions in Naples, and of their monſtrous Succeſſes, not to be paralled by any ancient or modern Hiſtory. Lond.* 1650, 8*vo* (28). (4.) *A Letter of Advice ſent from the Prime Stateſmen of Florence, how England may come to herſelf again, dated at Florence, March* 12, 1659. Theſe were all tranſlated from the Italian: he rendered alſo from the French into Engliſh, *The Nuptials of Peleus and Thetis, conſiſting of a Maſk and a Comedy, or the Great Royal Ball, acted lately in Paris ſix times, &c.* Lond. 1654. 4to. and from Spaniſh into Engliſh, *The Proceſs and Pleadings in the Court of Spain upon the Death of Anthony Aſcham, Reſident for the Parliament of England, and of John Baptiſta Riva his Interpreter, &c.* Lond 1651, fol. This Aſcham was deſcended from a genteel family, and bred at Eaton ſchool and King's college in Cambridge, where he took the degree of A. M. and in the Civil Wars ſiding with the Parliament, he was by their authority made tutor to James Duke of York In 1648, he publiſhed *A Diſcourſe wherein is examined what is particularly lawful during the Confuſions and Revolutions of Government, &c* (29) He was appointed reſident to Spain in the latter end of 1649, and arriving at Madrid in June following, had an apartment in the palace, where he was murthered. Six Engliſh gentlemen, viz. John Guillim, William Spark, Valentine Progers, Jo. Halſal, William Arnet, and Henry Progers, went to his chambers, and two of them ſtaying at the bottom of the ſtairs, and two others at the top, the remaining two entered the room, of whom Spark being the firſt, drew up to the table where Aſcham and his interpreter were ſitting, and pulling off his hat, ſaid, Gentlemen, I kiſs your hands, pray which is the Reſident; upon which the Reſident riſing, Guillim took him by the hair, and with a dagger gave him a thruſt that overthrew him; then came Spark and gave him another, and to make ſure work they gave him five ſtabs, of which he inſtantly died. Whereupon his interpreter thinking to retire to his own chamber, the other four gave him four wounds whereof he preſently expired. Five of the Engliſh took ſanctuary, whence they were haled, impriſoned, and condemned, and Spark † ſuffered The ſixth, Henry Progers, fled to the Venetian ambaſſador's houſe, and ſo eſcaped (30).

The reſt being re-delivered to the ſame church, had proviſions ſent to them by perſons of quality, 'till they found an opportunity of making their eſcape. Thurloe' State Papers. Vol. I. p. 189 & alibi.

(30) Wood's Athen. Oxon. Vol. II. col. 385. According to the account in Thurloe, Aſcham was murdered at an inn, before the others came for his removal into the palace.

[*G*] *He went to France with a young gentleman*] Viz. Mr Richard Altham, a younger ſon of Baron Altham, Mr Howell became acquainted with him at Stains while his brother Howell was there. Our author ſpeaks of him as a nonpareil. 'I hold him, ſays he (31), to be one of the hopefuleſt young men of this kingdom for parts and perſon; he is full of excellent ſolid knowledge, the mathematicks, the law, and other

(31) Vol. I. § 2. No. 12. ibid. No. 18.

1622 greatly to his ſatisfaction with this friend abroad, and not many months after his return kiſſed the King's hand for an agency to the court of Spain, where he went to ſollicit the recovery of a rich Engliſh ſhip, which had been ſeized by that King's Viceroy at Sardinia upon a pretence of carrying contraband goods [*H*]. Three Ambaſſadors had been already employed in negotiating this affair, yet Mr Howell brought the matter nearer to a ſucceſsful iſſue than had been done before [*I*]; but when he was juſt upon the point of completing it to the ſatisfaction of both parties, the Prince of Wales (afterwards King Charles I.) coming to Madrid on account of the Infanta, firſt put a ſtop to Mr Howell's proceeding; and the breaking of the Spaniſh match afterwards broke the neck of the whole buſineſs, and of all our agent's proſpects of advantage thereby [*K*]; and he returned

other material ſtudies;' in ſhort, he was evidently Howell's white boy, molded exactly to his heart's wiſh. In his company he was completely bleſt, and ſays, he envied no man's happineſs (32). He ſeems to have had the ſame warmth in his temper with our cadet, which not long after their return drew them into a rencounter (33) with the Sergeants in Lombard ſtreet. But in this tour Mr Howell was in great danger of loſing his life by too cloſe an application to his ſtudies. For having retired with his comrade to Poiſſy for privacy, and ſole converſe with the nation, he there taſked himſelf to read ſo many books in ſuch a compaſs of time, and to perform it, he frequently watched many nights together in the depth of winter. Whereupon returning to Paris he was ſeized with an impoſthume in his head, whereof he lay ſick above forty days, being eighteen of them without any ſleep, except ſuch ſhort imperfect ſlumbers as were procured by potions; at laſt a tumour ſettled in his throat, ſo that he could hardly fetch his breath; but after cauterizing it, an iſſue was made in his cheek, which, he ſays, ſaved his life. It is obſervable that he was much ſubject to this diſtemper, a defluxion fell into his throat while he was at Oxford, which diſtilling upon the uvula impeached his utterance a long time after; he found the ſame diſorder again at Venice in his firſt travels, where he had an iſſue made in his left arm for it: on his return homewards, he fell ſick again at Rouen of a pain in the head, which, with the iſſue he brought to England. Here Dr Harvey, whom he conſulted, apprehending it might turn to a conſumption, ſtopped his iſſue, telling him *There was no danger, in regard he had not worn it a full twelve month*. After which he quickly recovered by the aſſiſtance of that celebrated Phyſician (34).

(32) See his Letter to him, Vol. I. § 1, No. 2 and 18. and § 2, No. 30, 32.

(33) Ibid. § 3. No. 8 and 10. Our author had ſuch another ſcuffle as that mentioned here, at Paris, of which he gave this friend an account in a letter from that city. Ib. No. 17. § 1.

(34) Ibid. No. 1 and 22. § 2.

[*H*] *Seized for carrying contraband goods.*] Mr Howell gives the following account of this affair. There was a large Turkey ſhip called the *Vineyard*, which ſailing through the Streights for Conſtantinople, was forced by ſtreſs of weather into a little port called Milo in Sardinia; here the ſearchers came on board, and finding her richly laden (her cargo of broad-cloth at prime coſt being worth 300001. ſterling), they cavilled at ſome ſmall quantity of lead and tin, which though only for the ſhip's uſe, they alledged to be *Ropa de contrabando*, prohibited goods (35); and the Vice roy of Sardinia accordingly ſeized the ſhip and cargo, and landed the maſter and men in Spain (36).

(35) By an article of peace with Spain, nothing was to be carried to Turky that might arm and victual.

(36) Fam. Lett. Vol. I. § 3. No. 6.

[*I*] *Three Ambaſſadors had been employed, but Mr Howell did more than all.*] The Ambaſſadors were Sir Ch. Cornwallis once, and Lord Digby twice, in that character. The firſt of theſe being Ambaſſador in Spain when the maſter and men were put aſhore there as abovementioned, they immediately addreſſed themſelves to him, but finding him able to do them little good, they came to England and complained to the King and Council. Whereupon his Majeſty ſent a particular commiſſion in his own name to demand reſtitution and juſtice upon the Vice-roy. Sir Ch Cornwallis (together with Sir Paul Pindar a while) laboured the buſineſs and commenced a ſuit in law, but was called home, before he could do any thing to purpoſe. To him ſucceeded Sir John (afterwards Lord) Digby, in the ſame character, and being inveſted with the ſame commiſſion, diſpatched Mr Walſingham Greſsley to Sardinia, who happened to be taken priſoner by ſome Turkiſh men of war, and carried into Algiers. Lord Digby being remanded home, left the buſineſs in the hands of Mr Cottington, then an agent at Madrid, but reſumed it at his return; yet it proved ſuch a tedious intricate ſuit, that his Lordſhip went back to England again without finiſhing the work; and going now Ambaſſador extraordinary upon the buſineſs of the Spaniſh match and the reſtitution of the Palatinate, deſired this particular commiſſion might be given to another, whom he promiſed to aſſiſt to the utmoſt of his power, having himſelf alſo a good round ſhare in the buſineſs (37). His Lordſhip's declining it was the ſtep which helped Mr Howell to the employ; who, meeting with the like delays his predeceſſors had done in the law-courts, preſented a memorial, that a particular junta of ſome of the Council of State and War might be appointed to determine the buſineſs. Upon this referees were accordingly nominated, who paſſed ſentence in favour of the complainants, by virtue of which he got an execution againſt the goods of the Vice-roy, and afterwards obtained a royal cedule with a power to arreſt his perſon, ſuch as he was told by his lawyers, had never been granted in Spain before (38).

(37) Ibid.

(38) Id. § 3. No. 10 and 14.

[*K*] *Broke the neck of the whole buſineſs, and of all his proſpects therein.*] He had been in Sardinia, and brought the Vice-roy to offer a compoſition, and finding him unable to ſatisfy the debt, he had framed another memorial and preſented it to the King, deſiring that, as the ſaid Vice-roy was inſolvent, his Majeſty would be pleaſed to grant a warrant (for the relief of both parties) to lade ſo many thouſand ſterills or meaſures of corn out of Sardinia and Sicily cuſtom free, as ſhould be equivalent to the debt. He had gone far towards obtaining ſuch a warrant, when Sir Francis Cottington, Secretary to the Prince of Wales, ſent for him, and required him in the Prince's name to proceed no further herein 'till his Royal Highneſs was departed from Spain (39). After the breach, Mr Howell had acceſs to Olivarez the Prime-Miniſter, once or twice, and likewiſe to the King, to whom he now preſented a memorial, that intimated letters of mart, unleſs ſatisfaction was had in his affair. The King gave him a gracious anſwer, but Olivarez, ſays he, told me, that *when the Spaniards had juſtice in England, we ſhould have juſtice here* (40). This was plain dealing, and put a compleat end to our agent's negotiation. He had undertaken this affair upon what he calls very good terms. For beſides all his expences borne, he was to have 3000 l. ſterling reward, if he ſucceeded. And that, which no doubt, ſweetned the employ more, was the company of his dear friend Mr Richard Altham (41), who went with him to Madrid, and probably had a great hand in procuring it for him, being a near relation to Captain Leat, a principal perſon concerned. Mr Howell having liquidated the whole ſum, principal and intereſt upon intereſt (the uſage in thoſe times) with all ſorts of damages and proceſſal charges, found it to amount to upwards of 250,000 crowns, of theſe Captain Leat's ſhare came to above 40,000, a ſum, which the commiſſioner obſerves, might ſerve him for a good Alderman's eſtate (42).

(39) Ib. No. 17.

(40) Ibid. No. 33. Mr Howell afterwards applied to Lord Cottington, on his going Ambaſſador Extraordinary to Spain in 1629, who did ſomething in it, but with what ſucceſs does not appear. § 5. No. 28 and 35.

(41) He returned home a year before Mr Howell, on account of his brother's death, whom he did not ſurvive a great many years. Ib. No. 23 and 45. § 6.

(42) Ibid. No. 8 and 10.

Our author as ſervant of the Crown, had his paſſage home in company of Mr (afterwards Sir) Peter Wych, in the convoy of the Prince of Wales's jewels, which, he ſays, were valued at above 100,000 l. and among others there was a great table diamond for Olivarez of eighteen carats weight, but the richeſt preſent was to the Infanta, being a chain of great orient pearl to the number of 276, weighing 9 oz (43). Our author alſo relates ſeveral curious particulars in the Prince's courtſhip, hardly elſewhere to be met with. As firſt, that in a poem of Lope de Vegas upon this occaſion, there was this excellent ſtanza).

Carlos Eſtuardo Soy
Que fiendo Amor mi guia,
Al cielo d'Eſpana voy
Por ver mi Eſtrella Maria (44).

(43) Ibid. § 4. No. 1.

(44) It is no wonder to find our author approving this ſtrain of the Spaniard, when we read the following lines of his own.
Could I thoſe whitely ſtars go nigh,
Which make the milky way in ſky,
I'de poach them, and at moon-ſhine dreſs,
To make my Delia a curious meſs.
Ibid. Vol. II. § 1. No. 22.

2. That the comedians came once a week to the palace, where under a great canopy the Queen and the Infanta ſat

returned to England toward the latter end of the year 1624 (p). This unexpected diſappointment put him again to his ſhifts for a ſupport. In this exigence he made his court to the Duke of Buckingham as the ſole diſpoſer of all preferments †, and he received many noble reſpects from his Grace; but finding after two years attendance that he was thought to be too much Digbyfied to have any place of truſt under that minion, who was then at high enmity with the Earl of Briſtol, he liſtened to a propoſal that was made to him in 1626 by Lord Conway then Secretary of State; which was to go into Italy in quality of a moving agent for the King (q). But the demand of 100 l. a quarter, which he thought that ſervice deſerved, not being complied with, he miſſed likewiſe of this employ. However, the loſs was in a ſhort time abundantly made up to him; for the ſame year he was appointed Secretary to Emmanuel Lord Scrope (afterwards Earl of Sunderland), who was made Lord-Preſident of the North (r). This poſt brought Mr Howell to York; and while he reſided there, the corporation of Richmond, without any application from himſelf, and againſt ſeveral competitors, choſe him one of their repreſentatives to ſit in the Parliament which began in 1627 (s). The following year Lord Scrope fell into a languiſhing diſorder (t), and reſigning his poſt the year after, was ſucceeded therein by the Lord-Wentworth, afterwards Earl of Strafford (u), who at his entrance into that office, out of regard to Mr Howell, and in conſideration of his loſs, gave him the diſpoſal of the next Attorney's place that became vacant at York *. This grant was of ſome advantage to him [L], and he continued in the ſervice of his old maſter 'till his Lordſhip's death [M]. In 1632, he went Secretary to Robert Earl of Leiceſter, appointed Ambaſſador Extraordinary to the court of Denmark, on occaſion of the death of the Queen

(p) See Ibid. § 4. No. 1. dated Dec. 10. 1624. when newly returned from Spain.

† He was recommended by ſome noblemen his friends, that had intimacy with the Duke, 'About whom, 'ſays he, though 'he hath 3 Se- 'cretaries alrea- 'dy, I hope to 'have ſome em- 'ployment.' Ib. and No. 10.

* Howell's Letters, § 6. No. 18.

ſat in the middle, the Prince of Wales and Don Carlos on the Queen's right hand; the King and the little Cardinal on the Infanta's left hand. 'I have ſeen, ſays he, the Prince have his eyes immoveably fixed upon the Infanta half an hour together in a thoughtful ſpeculative poſture;' upon which part of his behaviour, Olivarez made the unhandſome compariſon, that he watched her as a cat does a mouſe. 3. That the Prince being informed the Infanta uſed to go ſome mornings to the *Caſa de campo*, a ſummer-houſe of the King's on the other ſide of the river of Madrid to gather May-dew, he roſe early and went thither, taking Mr Endymion Porter with him. They were let into the houſe and into the garden, but the Infanta was in the orchard, and there being a high partition wall between, and the door doubly bolted, the Prince got on the top of the wall and ſprung down a great height and ſo made towards her, but ſhe, ſpying him firſt of all the reſt, gave a ſhriek, and ran back; the old Marquis that was then her guardian, came towards the Prince, and fell on his knees, conjuring his Highneſs to retire, in regard he hazarded his head, if he admitted any to her company; ſo the door was opened, and the Prince came out under that wall over which he had got in. I have ſeen him, continues our author, watch a long hour together in a cloſe coach in the open ſtreet to ſee her as ſhe went abroad (45).

(45) Ibid. § 3. No. 18.

[L] *This grant was ſome advantage.*] One of theſe places became vacant the ſame year, and he was offered 300l. for it: but herein, it ſeems, he met with a conſiderable diſappointment, *for 'ſome*, ſays he, *got betwixt 'me and home, ſo that I was forced to go away 'contented with one hundred pieces* Mr Ratcliffe *deli- 'vered me in his chamber at Gray's-Inn, and ſo to part 'with the legal inſtrument I had, which I did rather 'than conteſt* (46).' This grant is an inſtance of his Lordſhip's noble diſpoſition, ſince he had never liked his predeceſſor Lord Scroop (47) [afterwards Earl of Sunderland]; and beſides, Mr Howell had been choſen Member of Parliament for Richmond, againſt his Lordſhip's couſin and particular favourite Mr Chriſtopher Wandſford (48). The inſtrument for the attorney's place, was returned to his Lordſhip with the following letter.

(46) Ibid. § 5. No. 24. The truth is, this was not a ſeaſon fit for conteſting it, that court itſelf being then become one of the grievances univerſally complained of, and two years afterwards, it was aboliſhed as illegal. See the Earl of Clarendon's article.

(47) See the Earl of Strafford's article.

(48) Ibid. and Howell's Letters Vol. I. § 5. No. 4.

To the Lord Viſcount Wentworth, Lord Preſident of the North.

'*My ever honoured good Lord,*

'*Herewith I ſend your Lordſhip the inſtrument you 'pleaſed to paſs unto me for the reverſion of the next 'Attorney's place in York, for which, by your Lord- 'ſhip's appointment, Mr Ratcliffe hath given me ſatiſ- 'faction. I was always, and ſhall ever continue ſo 'ſenſible of ſo free and noble a favour, that in the 'whole courſe of my life, I ſhall endeavour to make 'expreſſions of my thankfulneſs, and how much I 'am,*

My Lord,

your Lordſhip's

St Martin's-lane, May, 5, 1629. *moſt true and humble ſervant,*

JA. HOWELL.

This letter has been lately printed among the State Papers and Letters of the Earl of Strafford (49), where there are twelve more from Mr Howell to his Lordſhip, wrote monthly, during the courſe of the year 1635*, all upon the ſame ſubject of public news and occurrences with thoſe three to his Lordſhip, printed by Mr Howell himſelf in his familiar letters (50), and written antecedently to that year, if we may rely upon their dates, which are partly confirmed by the beginning of his firſt monthly letter in 1634, printed in the State Papers, &c. where he intimates, that he had paid this tribute of his obſervance, though not regularly before. This circumſtance is mentioned in the view of vindicating the authenticity of Mr Howell's Familiar Letters from the aſperſion thrown upon them by Mr Wood, who tells us, 'that many of the ſaid letters were never written 'before the author of them was in the Fleet as he pre- 'tends, only feigned, no time being kept with their 'dates (51).' But ſome inaccuracy in the dates, is no good argument againſt their genuineneſs, ſince in ſuch letters, as many or moſt of theſe are, 'tis not unuſual in the copy (there being no neceſſity for it) to omit the dates, which therefore (as the originals were then out of his hands) muſt be often ſupplied by memory alone †; and hence probably it is, that we find the year frequently omitted.

(49) In two vols fol. 1739. Vol. I. p. 50.

* The firſt is dated Feb. 1, 1634-5. and the laſt March 15, 1635-6.

(50) Sect. 5. No. 31. and § 6. No. 12 and 25.

(51) Athen. Oxon. Vol. II. col. 382. N. B. In the firſt edition the letters had no dates, and that want was ſupplied in the ſecond. See the title-page to that edition in 1650.

† For inſtance, the letter in Vol. I. § 6. No. 31 containing our author's *deceaſe* on the death of Ben. Johnſon, is dated May 1, 1636, whereas that Poet did not die 'till Aug. 16, 1637. Yet that the letter with the deceaſe was actually ſent, appears from it's being in the collection entituled *Johnſonus Virbius*, printed in 1638. 4to.

[M] *He continued in the ſervice of his old maſter 'till his Lordſhip's death.*] The profits of his Secretary's office had been very conſiderable; not long after his ſettlement in it, he writes to a friend from York thus. 'For this preſent condition of life, I thank 'God I live well contented, I have a fee from the 'King, diet for myſelf and two ſervants, livery for a 'horſe, and a part of the King's houſe for my lodg- 'ing, and other privileges which I am told no Secre- 'tary before me had.' He alſo mentions his having built himſelf a new ſtudy (52). My Lord gave him next year, 1628, the patronage of the living of Hambledon near Henley upon Thames, a rectory worth 500 l. a year (53). However, after his Lordſhip's reſignation, he complains, that the perquiſites of his place, taking the King's fee away, came very ſhort of what his Lordſhip promiſed him at his firſt coming to him, in regard of his non reſidence at York; he therefore hoped his Lordſhip would conſider it ſome other way, in which view he ſtill continued in his ſervice (54). But we find at laſt, he had met with ſome difficulty in

(52) Fam. Lett. Vol. I. § 5. No. 1.

(53) Ibid. No. 16.

(54) Ibid. No. 34.

Queen-dowager, who was grandmother to King Charles I. [*N*]. Our author gave ſome proofs of his oratorical talents in ſeveral Latin ſpeeches before the King of Denmark and other princes of Germany (*w*). He alſo was very ſerviceable in procuring a grant of ſome privileges to our Eaſtland company, which never could be obtained before [*O*]. Soon after his return to England, he received the unwelcome news of his father's death [*P*], a loſs which muſt needs be more ſenſibly felt by him, as his fortune proved afterwards more unſtable than ever. For except an inconſiderable affair, upon which he was diſpatched to Orleans in France by Secretary Windebank in 1635 (*x*), he was deſtitute of any employment for ſome years, meeting with the not uncommon lot of thoſe who are thrown into a life of dependency (*y*). Under theſe difficulties he ſet his face at laſt towards Ireland, where Lord Wentworth being Deputy was then reſident. He had received many warm profeſſions of kindneſs from his Lordſhip, and was now determined to put his ſincerity to the trial (*z*). With this reſolution he went in 1639 to Dublin, where he was well received; and finding one of the Clerks of the Council moſt opportunely very aged and bed-rid, he applied for the reverſion of the place, and obtained a grant thereof. In the interim, the Lord-Deputy employed him as an Aſſiſtant-Clerk upon ſome buſineſs to Edinburgh, and afterwards to London (*aa*); but all his riſing hopes were ruined in the unhappy fate which the Earl of Strafford met with ſoon after. However, in 1640 he was diſpatched upon ſome buſineſs to France (*bb*), whither he carried a French tranſlation of his poem called Dodona's Grove, or the Vocal Foreſt, which was publiſhed that year [*Q*]; and upon New-Year's-day following, he preſented to his Majeſty a poem entitled THE VOTE [*R*]; and the ſame year, Sir Edward Nicholas being promoted to be Secretary

(*w*) His ſpeech to the Dutcheſs of Holſtein drew tears from her. Fam. Lett. Vol. I. § 6. No. 2.

(*x*) Ibid. No. 19.

(*y*) It is very probable that he laid the plan at this time of his *Dodona's Grove*, that poem being finiſhed in 1639. See his Letters, No. 39.

(*z*) No. 34.

(*aa*) No. 36, 38.

(*bb*) What this was is not known, but he was introduced to Cardinal Richelieu, who made him ſuch propoſitions, as, he ſays, it were a vanity in him to mention. Ibid. No. 44. In this letter he gives ſome remarkable inſtances of the groſs flatteries addreſſed by the French to that Miniſter in verſe. One of theſe is the following diſtich,

Richleio intranti Rupellæ [*Rupellæ*] porta pateſcit
Chriſto infernales ut patuere fores.

in ſettling his accounts with Lady Sunderland, as appears from the letter cited in the margin (55), addreſſed to her Ladyſhip, which begins thus:

(55) Ibid. § 6. No. 18.

'*Madam,*

'*Here incloſed, I ſend your Ladyſhip a letter from the Lord-Deputy of Ireland, wherein he declares, that the diſpoſal of the Attorneyſhip in York, which he paſſed over to me, had no relation to my Lord at all, but it was merely done out of a particular reſpect to me: your Ladyſhip may pleaſe to think of it accordingly touching the accounts.*'

From this paſſage her Ladyſhip ſeems to have made the value of that attorneyſhip an article in her favour, grounding it probably upon the anſwer ſent by Lord Wentworth to the following letter from the Earl of Sunderland on that occaſion.

'*My very good Lord,*

'*I underſtand your Lordſhip hath beſtowed the next Attorney's place in reverſion at York, upon James Howell my Secretary. I muſt thank you for it, and the rather, becauſe he hath deſervingly and faithfully ſerved me in that place, wherein I bear your Lordſhip hath ſucceeded me. I wiſh you much happineſs in it, and reſt very faithfully,*

St Martyn's lane, Dec. 15, 1628.

Your humble ſervant,

E. SUNDERLAND †.'

† Strafford's State Papers and Letters, &c. Vol. I.

[*N*] *Grandmother to King Charles I.*] She was the Duke of Mecklenburgh's daughter, her huſband Chriſtian III. dying young, her portion, which was 40,000l. was reſtored to her, and living a widow forty-four years after, ſhe grew to be ſo great a houſe-wife (ſetting three or four hundred people at work) that ſhe died worth near two millions of dollars, ſo that ſhe was reputed the richeſt Queen in Chriſtendom. By the conſtitution of Denmark, this eſtate was diviſible amongſt her children, whereof ſhe had five, the King of Denmark, the Ducheſs of Saxony, the Ducheſs of Brunſwick, Queen Anne, conſort to King James I. and the Ducheſs of Holſtein. The King being male was to have two ſhares, and King Charles I. then our King and his ſiſter the Princeſs Palatine were to have their mother's ſhare divided between them (56), which amounted to 160,000l. ſterling. This the Ambaſſador aſked for, but the King not complying, by reaſon of ſome demands he had upon the Crown of England; my Lord Leiceſter then deſired, in regard he was to paſs through the Hague, that part which belonged to my Lady Elizabeth, becauſe his Majeſty knew well what croſſes and afflictions ſhe had ſuffered, and what a numerous iſſue ſhe had to maintain; and his Lordſhip ſaid, he would engage his honour and all the eſtate he had in the world, that this ſhould no way prejudice the accompts. The King of Denmark highly extolled the nobleneſs of this motion, but proteſted his coffers were empty: hereupon my Lord was feaſted, and that was all he could get (57).

(56) Fam. Lett. § 5. No. 40.

[*O*] *He procured ſome privileges for the Eaſtland Company.*] The ſhips of that company in paſſing through the Sound, had been forced to ſtay there ſeveral days on account of taking up money at high intereſt to pay diverſe tolls for the merchandizes, before they could expoſe them to vent; but it was now granted, that it ſhould be ſufficient for the merchant to regiſter an invoice of his cargo in the Cuſtom-houſe book, and give his bond to pay all duties at his return after he had made his market, which no Ambaſſador had been able to obtain before. There had been likewiſe a new toll demanded of late from the Hamburgh merchants at Luckſtadt, a fort commanding the entrance into the Elbe, which at the Ambaſſador's ſuit was now taken off (58).

(57) Ibid. § 6. No. 5.

(58) The old toll was a roſe noble for every ſhip, which had been of late interpreted to be for every ſail. Ibid. Nos. 4 and 5.

[*P*] *He received the news of his father's death.*] This was ſent to him by Dr Field, Biſhop of St Davids, and he obſerves, that it was the heavieſt news that ever was ſent him. 'But, continues he, when I recollect myſelf, and conſider the fairneſs and maturity of his age, and that it was rather a gentle diſſolution than death. When I contemplate the infinite advantage he hath got by this change and tranſmigration, it much lightens the weight of my grief. For if ever human ſoul entered Heaven, ſurely his is there; ſuch was his conſtant piety to God, his rare indulgence to his children, his charity to his neighbours, and his candour in reconciling differences; ſuch was the gentleneſs of his diſpoſition; his unwearied courſe in actions of virtue, that I wiſh *my* ſoul no other felicity, when ſhe has ſhaken off theſe rags of fleſh, than to aſcend to his, and co-enjoy the ſame bliſs (59).' Such an amiable inſtance of filial piety was thought worthy of a place in theſe memoirs.

(59) Ibid. No. 7.

[*Q*] *Dodona's Grove, or the Vocal Foreſt, publiſhed in* 1640, *in* 4*to.*] The Engliſh poem was publiſhed in reality at the latter end of 1639 (60), and the author having tranſlated it into French, carried it to be reviſed at Paris; after which he ſent a copy from that city to Lord Herbert of Cherbury, with this recommendation, that it was done in the neweſt French; for though the verſion was his own, yet he had got one of the *Academie des beaux Eſprits* there to run it over, to correct and refine the language, and reduce it to the moſt modern dialect. It took ſo here, continues he, that the Academy of Wits have given a far higher elogium of it than it deſerves (61).

(60) Ibid. No. 39.

(61) No. 44. It went through ſeveral editions; and being ſo well received, he made uſe of it to carry off other pieces, as *His Parables*, &c. in the 2d edit. in 1644, 4to. and in the 3d, at Cambridge, in 1655, 12mo. were added *England's Tears*, &c. and *The Preheminence and Pedigree of Parliaments*, &c. together with his *Vindication* againſt Mr Prynne.

[*R*] *The Vote.*] The whole title is, *The Vote; or a Poem preſented to his Majeſty for a New-Year's-Gift by Way of Diſcourſe betwixt the Poet and his Muſe. Kal.* January 1641, 4to. The method he took of prefixing it to the ſecond volume of his familiar letters has preſerved it, otherwiſe it muſt have periſhed long ago, being indeed a very indifferent performance. Our author exerciſed his poetical talent in verſe on other occaſions. As in a piece intituled, *Ah, Ha*, Tumulus, Thalamus; *Two Counter Poems, The firſt an Elegy upon*

Secretary of State, Mr Howell ſucceeded him in the Clerkſhip of the Council (*c c*). This poſt was the moſt fixed in point of reſidence, and the moſt permanent in it's nature, of any he had ever enjoyed. But the reſidence of theſe Clerks was now rendered very unſettled upon the King's departure from his palace at Whitehall, and the permanency in their office became thereby ſo precarious, that it was not in the power of his royal maſter to ſecure his continuance long in it. For in 1643, being come to London upon ſome buſineſs of his own, all his papers were ſeized by a committee of the Parliament, his perſon ſecured, and in a few days after committed cloſe priſoner to the Fleet [*S*]. He had before this time, partly through want of employment, and partly by bad œconomy, run himſelf conſiderably in debt (*f f*), ſo that he had now nothing to truſt to but his pen (*g g*). He applied himſelf therefore wholly to write and tranſlate books, which buſineſs he managed ſo well, that it brought him in a comfortable ſubſiſtence during his long ſtay in that priſon, where he was confined 'till ſome time after the King's death; and as he got nothing by his diſcharge thence beſides his liberty, he was obliged to continue the ſame employ afterwards. His numerous productions are an undeniable proof of the readineſs of his wit, and in the light of criticiſm they ought to be looked on as works of neceſſity more than of choice. Preſently after his impriſonment, Mr Prynne, in a piece entitled *The Popiſh Royal Favourite*, charging him with *being no friend to Parliaments, and a malignant*, our author publiſhed a vindication of himſelf in 1644 [*T*]; and the ſame year, being informed that the King was diſpleaſed at ſome things publiſhed in his name ſince his confinement, as ſhewing an indifference to his Majeſty's ſervice, he took the liberty of addreſſing a letter (*b b*) to his Majeſty then at Oxford, wherein he makes uſe of the ſtrongeſt terms to purge himſelf from that imputation, and expreſſes a warm zeal for the royal cauſe; yet at the ſame time he makes free to beſeech the King to return to his parliament

(*g g*) Before this he publiſhed, Inſtructions for Travel, ſhewing by what Courſe, and in what Compaſſe of time, one may take an exact Survey of the Kingdomes and States of Chriſtendome, and arrive to the practicall Knowledge of the Languages to good purpoſe. Lond. 1642. 12mo. dedicated to Prince Charles

(*b b*) Vol. 2. No. 65.

upon Edward late Earl of Dorſet; the ſecond, an Epithalamium to the L. Marquis of Dorcheſter; with an Hymenæum, or bridal Sonnet of four Stanzas, according to a choice Air ſet thereunto, by Mr William Webb, Lond 1653, two ſheets quarto. Alſo another poetical piece called, *The Parley of Beaſts, or Morphandia Queen of the enchanted Iſland, &c.* Tom. I. Lond. 1660. And in 1663, there came out in octavo, written by him, *Poems on ſeveral choice and various Subjects, occaſionally compoſed by an eminent Author, collected and publiſhed by Serjeant-Major, P. F.* [Payne Fiſher, ſometime Poet-Lauret to Oliver Cromwell] who obſerves in the preface, that Mr Howell may 'be called 'the prodigy of the age for the variety of his volumes; 'for from his Δενδρολογία, or parley of trees, to his 'Θηριολογία, his parley of beaſts, not inferior to the 'other, there has paſſed the preſs above forty of his 'works on various ſubjects, uſeful not only to the preſent times, but to all poſterity. And it is to be obſerved, that in all his writings there is ſomething ſtill 'new either in the matter, method, or fancy, and in 'an untrodden track.' Of the poetical kind, may be reckoned alſo, (1.) His Winter Dream, though written in proſe, Lond. 1649, in three ſheets, 4to (2.) *A Trance; or News from Hell, brought firſt to Town, by Merc. Acheronticus*, Lond. 1649, two ſheets and a half. (3.) A Viſion, or Dialogue between the Soul and Body, Lond 1651, 8vo. (4.) *A Nocturnal Progreſs; or a Perambulation of moſt Countries in Chriſtendom, performed in one Night by ſtrength of Imagination*, Lond. 1645.

[*S*] *Committed cloſe priſoner to the Fleet.*] The circumſtances of it were, that one morning there ruſhed into his chamber five armed men with ſwords, piſtols, and bills, and told him they had a warrant from the Parliament for him, which though they refuſed to ſhew for a while, yet at laſt one of them pulled a greazy paper out of his pocket and ſhewed him only three names ſubſcribed and no more. So they ruſhed into his cloſet, and ſeizing all his papers, letters, and manuſcripts, beſides ſeveral printed books, they carried them away. Having taken phyſic that morning, they ſuffered him (yet not without much ado) to ſtay in his chamber with two guards upon him 'till the evening, when he was carried before the committee for examination, where he was well uſed, and being brought up to the cloſe committee, was ordered to be forth-coming, 'till his papers were peruſed by Mr Corbet, who was appointed to do it. Some days after he came to Mr Corbet, who told him he had peruſed them accordingly, and could find nothing that might give offence. 'Hereupon, continues our author, I deſired him to make his report to the Houſe, which (as I was told) he did very fairly; yet ſuch was my hard hap, that I was committed to the Fleet, where I am now under cloſe confinement.' This account Mr Howell gives (62) of the cauſe of his impriſonment. But Mr Wood inſinuates that he was thrown into priſon for debts contracted through his own extravagancy (63). And indeed ſome of our author's letters give room enough to ſuſpect it (64). And in one he ſeems to impute the apprehending of him to the indiſcretion of one of his acquaintance, who diſcovered his abode (65). But whatever was either the firſt occaſion of his impriſonment, or of his detention ſo long there, he was certainly very cheerful under it; of which, among others, the following epitaph upon himſelf is an inſtance.

Heer lies entomb'd a walking thing,
Whom Fortune (with the States) did fling
Between theſe walls. Why? Aſk not that,
That blind whore doth ſhe knows not what (66).

[*T*] *A vindication of himſelf in* 1644.] This defence likewiſe contained a *Clearing of ſome Occurrences in Spain at his Majeſty's being there, cited by the* ſaid Mr Prynn out of the Vocal Foreſt; by J. H. Eſq; one of the Clerks of his Majeſty's moſt honourable Privy-Council. Publiſhed by ſpecial order, Lond, 1644. In it he declares (67), that Mr Prynn had traduced him in the charge abovementioned, and is confident it never could be proved againſt him from any action, words, or letters (though ſeveral of his had been intercepted), or any other miſdemeanour, though ſome things had been fathered upon him which never dropped from his quill. 'Alas, continues he, how un-'worthy and uncapable am I to cenſure the proceed-'ings of that great Senate, that high Synedrion where-'in the wiſdom of the whole Senate is epitomized.' Before this, our author had publiſhed ſeveral pieces upon the times; the firſt of which was written preſently after the battle of Edge-hill, and was the firſt book that came out on the King's ſide, entitled, *Caſual Diſcourſes and Interlocutions between* Patricius *and* Peregrin, *touching the Diſtractions of the times.* (2.) Mercurius Hibernicus, *or a Diſcourſe of that horrid Inſurrection and Maſſacre which happened lately in Ireland*, written in the Fleet, 1643. Briſtol, 1644. in two ſheets and a half, 4to. (3.) *Parables reflecting upon the Times*, Lond. 1644. in two ſheets, 4to. ſubjoined to the ſecond edition of *Dodona's Grove.* (4.) *England's Tears for the preſent Wars* (68), *which for the Nature of the Quarrel, the Quality of the Strength, the Diverſity of Battles, Skirmiſhes, Encounters, and Sieges, happened in ſo ſhort a compaſs of time, cannot be parallelled in any preceding Age*, Lond. 1644. in two ſheets and a half, 4to. (5.) *Preheminence and Pedigree of Parliaments*, in two ſections, Lond. 1644. 12mo. To this was ſubjoined his *Vindication*, &c. mentioned in the beginning of this remark.

[*U*] *He*

ment and palace at Whitehall [U]. It is true, he appears to be no friend to the meaſures purſued by Buckingham, Laud, and Strafford, and was far from approving the impoſition of ſhip-money, and the policy of creating and multiplying monopolies (*i i*). Yet the ſenſe of his own ſufferings, and the miſery brought upon the nation during the civil wars, by the unbridled inſolence and outrage of the commonalty, gave him an utter diſlike to any kind of popular ſway in England; in which view he was not diſpleaſed, when Oliver aſſumed the ſovereign power in the ſpecious title of Protector, and in this light it was that he addreſſed the Uſurper in a fair ſpeech on that occaſion [W]. If his circumſtances requiring it, he (as well as many others of unqueſtionable loyalty) yielded prudentially to the neceſſity of the times under Cromwell's tyranny, yet at the Reſtoration this conduct was judged not inexcuſable. King Charles II. thought him worthy of his notice and favour, and his former poſt under the Council being otherwiſe diſpoſed of, a new place was created, by the grant of which he became the firſt Hiſtoriographer Royal * in England [X]. In

[U] *He beſeeches the King to return to his Parliament.*] In this letter he confeſſes that ſome of his things were more moderate than others, yet alledges (under favour) that there were none of them but diſplayed the heart of a conſtant, true, loyal ſubject; and takes notice that he had been informed by ſome of the moſt zealous in his Majeſty's ſervice, that they had the good ſucceſs to rectify multitudes of people in their opinion of ſome things. Mr Howell always thought it moſt adviſable for his Majeſty to be reconciled to his Parliament. In his vindication againſt Mr Prynn, mentioned already, he obſerves that 'the principal 'fountain whence the King derives his happineſs and 'ſafety is his Parliament (69).' And in another place he enforces his opinion as follows, having lamented the ſtrange ſpirit of the people. 'I remember, ſays he, 'to have read a tale of the ape in Paris, who having 'got a child out of the cradle, and carried him up to 'the top of the tiles, and there ſat with him upon the 'ridge, the parents beholding this ruthful ſpectacle, 'gave the ape fair and ſmooth language, ſo he gently 'brought the child down again, and replaced him in 'the cradle (70). Our country is in the ſame caſe this 'child was in, and I hope there will be ſweet and 'gentle means uſed to preſerve it from precipitation.' Our author ſeems to have formed himſelf, with regard to this part of his conduct, upon the example of the Earl of Dorſet (71) his maſter, to whom he afterwards dedicated the 3d volume of his Letters in 1650, and alſo wrote an elegy upon his Lordſhip's death in 1653, as abovementioned.

(69) P. 13.

(70) Fam. Lett. Vol. 1. § 6. No. 50. it is dated in 1643. N. B. This ſtory of the ape is borrowed and altered for his purpoſe by Dean Swift in Gulliver's Travels to Brobdignag.

(71) See his article.

[W] *He addreſſed the Protector in a fair ſpeech.*] This was in the following piece, *Some ſober Inſpections made into the Carriage and Conſults of the late Long-Parliament, whereby occaſion is taken to ſpeak of Parliaments in former times, and of Magna Charta, with ſome Reflections upon Government in general.* Lond. 1653. 12mo. It is dedicated to his Highneſs the Lord Protector, whom he compliments upon his diſſolving the Long-Parliament. 'Thereby, ſays he, your 'Highneſs, Hercules like, may be ſaid to have quelled 'a monſter with many heads, ſuch a monſter, that 'was like to gormandize and devour the whole nation.' So far is conſiſtent enough with the Royaliſt; but in comparing the Protector to Charles Martel, the flattery is manifeſtly cooked to his patron's palate. 'There 'is a remarkable ſaying, continues he, of Charles 'Martel, in that mighty revolution in France, when 'he introduced the ſecond race of Kings, that in the 'purſuit of all his actions he uſed to ſay, that he fol-'lowed not the ambition of his heart ſo much as the 'inſpiration of his ſoul, and the deſigns of Providence. '*This may be applied to your Highneſs in the conduct of 'your great affairs and admirable ſucceſſes.*' In the ſame ſtrain of flattery in the work itſelf (72), having condemned Ariſtocracy and Democracy as unconſtitutional, and even not ſo agreeable to the mind of the Bible, he goes on to ſhew the neceſſity of having but one pilot to ſit at the helm of the State, and 'It is requi-'ſite alſo, adds he, that this ſingle perſon ſhould be at-'tended with a viſible ſtanding veteran army, to be 'paid well, and puniſhed well if there be cauſe, to 'awe as well as to ſecure the people; for there is not 'ſuch a wavering windy thing, nor ſuch an humerſome 'and croſs-grained animal in the world, as the com-'mon-people.' The fourth edition of this piece was publiſhed with ſeveral additions in 1660.

(72) P. 182.

(73) So 'tis ſtiled by Mr Cowley in his Viſion. See his Works, Vol. III.

[X] *Hiſtoriographer's place created for him.*] Notwithſtanding Mr Howell's ſacrifice of adulation offered to the omnipotent (73) power of Oliver, one reaſon for which, beſides the abovementioned, doubtleſs was the ſame with that given by the Indians for worſhiping the Devil. He ſeems to be very far from ſiding with the Commonwealth's men (as Mr Wood intimates (74)) to the prejudice or diſparagement of the royal cauſe, as far as can be judged by his writings. Which before the Reſtoration, beſides thoſe already mentioned, are, (1.) *Epiſtolæ Ho-Elianæ, or Familiar Letters*, &c. ſo often quoted in theſe memoirs by reaſon they contain (as he expreſſes it) a legend of his life *; and the method of caſting it into the form of letters is no mean inſtance of his ingenuity. For by that means he has introduced likewiſe the hiſtory of his own times, and the whole is interſperſed with ſo many pleaſant ſtories, adagies, &c. appoſitely applied, as to be very entertaining. Accordingly, the work has paſſed through ſeveral editions ſince it's firſt appearance in 1645. Another collection being publiſhed in 1647, both theſe with the addition of a third came out in 1650. A few additional letters appeared in ſome ſubſequent editions, of which the 11th was printed in 1754 †. It cannot be denied he has given way frequently to very low witticiſms (75); but this may be ſaid in his excuſe, that he was led into it by the humour of the times. He endeavours to introduce a new orthography by cutting off (what he calls) the ſuperfluous vowels, ſo as to make the Engliſh write as they ſpeak: and in leaving out the Dutch *k* in the words *Phyſic, Logic*, &c. he has been followed; but to retrench all, was a reformation that exceeded the reach of his authority to compaſs; at which we cannot be ſurprized, ſince Dr Sprat (76), in a more polite age, attempted the like in ſome inſtances only with no better ſucceſs (2.) Luſtra Ludovici, *or the Life of Lewis XIII. King of France, and of his Cardinal de* Richelieu. Lond. 1646. fol. divided into 7 luſtres, and dedicated to Prince Charles at his court in the iſle of Jerſey. (3.) *An Account of the deplorable and deſperate Condition that England ſtands in anno* 1647, *in a Letter to Francis Cardinal Barberini*, written from the Fleet in 1647. (4.) *A Letter to the Earl of Pembroke concerning the Times and the ſad Condition both of Prince and People.* Printed 1647. in 2 ſheets, 4to. (5.) *Bella Scot Anglica. A Brief of all the Battles and martial encounters which have happened 'twixt England and Scotland, from all times to this preſent, printed in* 1648. *as alſo a Corollary, declaring the Cauſes whereby the Scot is come of late Years to be ſo heightened in his Spirits.* Theſe two are in three ſheets, 4to. (6.) *The Inſtruments of a King; or a Short Diſcourſe of the Sword, Scepter, and Crown*, Lond. 1648. in two ſheets, 4to. (7.) *Inquiſition after Blood to the Parliament* in ſtatu quo nunc, *and the Army Regnant*, printed in 1649. in two ſheets, 4to (77) (8) *A Survey of the Signory of Venice, of her admired Polity, and Method of government*, Lond. 1651. in a thin folio. To this is added, *A Diſcourſe of the Intereſts of the Republic of Venice, with the reſt of the States of Italy*, printed with the Survey. (9.) *Hiſtory of the Wars of Jeruſalem epitomized*, 8vo. (10.) *The German Diet: or the Ballance of Europe, wherein the Power and Weakneſs, Glory and Reproach, Virtues and Vices, &c. of all the Kingdoms and States, &c. of Chriſtendom, are impartially poiſed*, Lond. 1653. folio. The author's picture at full length is prefixed to the title. (11.) *Parthenopœia, or the Hiſtory of the moſt renowned Kingdom of Naples, with a Liſt of her Kings*, &c. Lond. 1654. folio. The ſecond part only was compiled by our author, the firſt part of it being written by Scipio Mazzella, and tranſlated into Engliſh from the Italian by Sampſon Lennard, Herald of Arms. (12) Londinopolis: *An Hiſtorical Diſcourſe*

* Vol. 2. No. 43.

† An imperfect edition was printed at Aberdeen in 1753.

(74) Ubi ſupra, col. 381.

(75) The moſt unpardonable inſtance of this is his remark upon King Charles I's death, where he ſays, I will attend with patience how England will thrive, now that ſhe is let blood in the baſilical vein, and cured, as they ſay, of the King's-evil. Vol. 3. No. 24. And the moſt pardonable is his motto, *Seneſco non ſegneſco.*

(76) In his Hiſtory of the R. S. publiſhed in 1667. 4to.

(77) The ſame year he alſo publiſhed the late King's Declaration in Latin, French, and Engliſh; as he did likewiſe *Cottoni Poſthuma*, Divers choice Pieces of that renowned Antiquary Sir Robert Cotton, Knt. and Bart. in 1651, 8vo.

In 1661 he published a piece, intitled, *A Cordial for the Cavaliers*, which being attacked by Mr (afterwards Sir) Roger L'Estrange, occasioned a controversy between them (*k k*); but that being presently concluded, our author printed the same year *The second part of Casual Discourses and Interlocutions between* Patricius *and* Peregrin, &c. (*l l*); besides *Twelve Treatises of the late Revolutions*, 8vo. and in 1663 he published a *Treatise concerning the Precedency of Kings*, folio. As also the following year, *A Treatise concerning Ambassadors* [Y], and another *concerning the surrender of Dunkirk, that it was done upon good grounds*; both in 8vo. He died in the beginning of November 1666, and was interred in the north side of the Temple church London, where a monument was erected to his memory with the following inscription upon it, *Jacobus Howell Cambro-Britannus Regius Historiographus (in Anglia Primus) qui post varias peregrinationes tandem naturæ cursum peregit satur annorum & famæ, domi forisque, huc usque erraticus, hic fixus* [Z] 1666 (*m m*).

(*k k*) Sir Roger's answer is intitled *A Caveat for the Cavaliers*; to which our author replied in *Some Sober Inspections* [illegible] *composition of a late Cordial for the Cavaliers*. Upon this Sir Roger animadverted at the close of *A Modest Plea both for the Caveat and Author of it.*

(*l l*) It was printed in a book intituled, *Divers Historical Discourses of the late popular Insurrections in Great-Britain and Ireland.* To which is added, *An Apology of Fables mythologized.*

(*m m*) Wood's Athen. Oxon. Vol. II. col. 385. This monument was taken down when the church was repaired in 1683, and has not been since replaced.

Discourse or Perlustration of the City of London and Westminster, with the Courts of Justice, Antiquities, and new Buildings, Lond. 1657. folio. (13.) *A Discourse of the Empire, and of the Election of the King of the Romans*, &c. Lond. 1658. 8vo. Mr Howell also wrote a recommendatory letter to William Sanderson, Esq; which is prefixed by that author to his History of King Charles I. Lond. 1658. folio. It was wrote at the author's request to stamp a credit upon his book, and is therefore here mentioned as being an undeniable proof of Mr Howell's reputation and merit as an Historian, before he was appointed King's Historiographer.

[Y] *A Treatise concerning Ambassadors.*] This was translated into Latin by John Harman of Magdalen-college in Oxford. Our author had before published, with a dedication by himself to Lord Lisle, a piece upon the same subject, entitled, 'Fineti Philoxenis: Some choice Observations touching the Reception and Precedency, the Treatment and Audience, the Punctilios and Contests, of Foreign Ambassadors in England.' Lond. 1656. 8vo. This treatise was written by Sir John Finet, Knight, who was the son of Robert Finet of Soulton near Dover in Kent, and great grandson to John Finet of Siena, of an antient family in Italy; who coming to England in the train of Cardinal Campejus, Legate a lateré from the Pope, married one Martell's daughter, Maid of Honour to Queen Katharine, King Henry VIIIth's consort. Sir John was always bred in the Court, where by his wit, innocent mirth, and great skill in composing songs, he was much in the favour of King James I. who sent him into France upon some affair of public concern in 1614, and knighted him the year after; about which time he was made assistant to the Master of the Ceremonies, with a grant of the reversion of that post; and upon the death of Sir Lewis Lewknore, Master, had the office conferred upon him March 12, 1626, being then in good esteem with King Charles I. Besides the piece already mentioned, he translated from French into English, *The Beginning, Continuance, and Decay, of Estates*, &c. Lond. 1606. 4to (78). He died July 12, 1641; and was buried in the north side of St Martin's-church in the Fields, Westminster, by the body of Jane, some time his wife, daughter of Henry Lord Wentworth of Nettlestead in Suffolk, and sister to the Earl of Cleaveland (79).

[Z] *An inscription, &c.*] It seems to have been drawn up, or at least intimated, by himself. In one of his letters from the Fleet, speaking of a sickness he had lately lain under in that prison, he writes (80), That having a lucid interval therein, he fell a thinking how to make his last Will; and running over the several particulars thereof, he concludes with the following directions concerning his burial. 'This little sack-full 'of bones, says he, I thought to bequeath to West'minster-abbey, to be interred in the cloyster within 'the south side of the garden, close to the wall, where 'I would have desired Sir H. F. (my dear friend) to 'have inlayed a small piece of black marble, and cau'sed this motto to have been insculped upon it, *Huc 'usque peregrinus, heic domi*; or this, which I would 'have left to his choice, *Huc usque erraticus, hic fixus.*' That ingenious author was in the like humour, when he started the following epitaph on the death of the celebrated Dr Byfield, who invented the *sal volatile oleosum*, and was not less distinguished in his time by a kind of rambling volatility of wit. *Hic jacet Dr Byfield, diu volatilis, tandem fixus.* P

(78) The original was written by R. de Lusing.

(80) Vol. 2. No. 29.

HUDSON [Henry], a skilful English navigator in the beginning of the last century, who gave name to a bay in the northern parts of America, from whence one of our mercantile companies receive their denomination. It is but just and decent, that those brave and industrious adventurers, who brought so much honour and advantage to this nation, should have their memories preserved, and transmitted to posterity: therefore, we shall endeavour here, as far as we can, to do that justice to Captain Hudson. Where he was born and educated, we have no certain account: but, by his name, it seems to have been in the north parts of England. The laudable custom of discovering foreign countries for the benefit of trade, which had been so zealously pursued during Queen Elizabeth's reign not dying with that glorious princess; Mr Hudson, among others, attempted to find out a passage by the north to Japan and China. His first voyage was in the year 1607, at the charge of some London Merchants: and his first attempt was for the north-east passage. He departed therefore from Gravesend May 1, 1607, with a small company, his ship's crew consisting only of ten men and a boy, besides himself: on the 26th of that month, they were six leagues to the eastward of Shetland, in 60 deg. 12 min. north latitude. The 11th of June steering north-north-west, they discovered (two days after) a promontory before them, which they named *Young's Cape*, and a very high mountain near it, the *Mount of God's Mercy*. Their sails and shrouds were then frozen: and, from the second to the twentieth of June they did not see the sun. The 21st they saw part of the coast of Groenland, which they named *Hold with hope.* They kept a north-easterly course, meeting with many fogs and calms, and much ice driving in the sea, and on the 27th discovered Greenland. The ice lay very thick along the shore, which they coasted, having no ground at 100 fathoms, four leagues from the coast. They found themselves, the next day, between the land and the ice, *Vogel hook* bearing east. On the first of July, by their own observation, they were in 78 deg. 42 min. latitude, whereby they imagined that they were over against *the great Indraught*: but it clearing up in the evening, they found themselves a good way into the inlet, being almost a bay encompassed with very high mountains, and had no ground at 100 fathoms. To the southward they found an open sea, and proceeded as far as 78 deg. 56 min. of latitude: but, instead of advancing

advancing further north, were, on the ſixth, in 77 deg. 30 min. when they entered firſt into a green, and then into a black ſea [*A*], which laſt proved to be an open paſſage (*a*). On the 11th they were advanced to 79 deg. 17 min. latitude; and, the two next days, proceeded as far as 80 deg. and 80 deg. 23 min. But the ice ſtopping them, they were forced to alter their courſe, and ſteer ſouth-eaſt and by eaſt. The 14th of July, they had land on the eaſt, and diſcovered a bay open to the weſt [*B*]. At the mouth of it, they called a high but ſmall iſland *Collins's Cape*, from their boatſwain's name, who firſt ſaw it. They had then thirty fathoms water, afterwards 26, and, further in, had no ground at 100 fathoms; therefore judged it rather a ſound than a bay. The next day, clear weather, and the ſun ſhining warm, they could ſee the high land of Greenland, 20 leagues from them to the north-eaſt, ſtretching, by their account, into 81 degrees of latitude. The day following, being July the 16th, they were encompaſſed with ice; and having now run toward the furtheſt part of the land diſcovered by them, which for the moſt part lay north-eaſt and ſouth-weſt, they could diſcern more land joining the ſame, ſtretching far north into 82 degrees of latitude, and by the bowing and appearance of the ſky, or horizon, much further. When they firſt ſaw it, they hoped to find an open ſea between the land and the ice, and intended to have returned by the north of Greenland to Davis's ſtreights, and thence into England. But finding it impoſſible ſo to do, by reaſon of the great quantity of ice that lay to the north of them; and plainly perceiving, that there is no paſſage that way, between the 78th deg. 30 min. and the 82d degree of latitude, they ſhaped their courſe for England, and arrived in the Thames the 15th of September (*b*).—The year following, 1608, Mr Hudſon undertook a ſecond voyage for diſcovering a paſſage to the Eaſt-Indies by the north-eaſt. Accordingly he ſet ſail from St Catherine's, with fifteen perſons only, on the 22d of April; and by the 20th of May they were in 64 deg. 52 min. northern latitude. The 3d of June they had ſight of the north cape, on the coaſt of Finmark, bearing ſouth-weſt, eight leagues from them. And, on the 7th, being in 75 deg. 29 min. latitude, came to the firſt ice they had ſeen this voyage. They entered into it, with hopes of getting through, keeping on their courſe to the north-eaſt: but when they were got four or five leagues in, they found the ice before them ſo thick, that they were forced to return (*c*) [*C*]. On the 18th and 21ſt of June, they perceived there was a current ſetting to the north, which gave them ſome encouragement. But when they came into 72 deg. 52 min. latitude, they loſt all hopes of a paſſage that way, by reaſon of their nearneſs to Nova Zembla, and the great quantities of ice. However, ſome of the company went on ſhore, and viewed the country [*D*]. And the ſhip anchoring near a bay, the Captain diſpatched five of his men to ſearch a ſound or river in the bottom of the bay, that ſent out a great ſtream to the northward, againſt the tide which came from thence. This ſtream was ſo ſtrong, that it carried away the ice or any thing elſe againſt the flood: and flows from the north three hours, and ebbs nine. At their return, they informed him, that the great river or ſound was two or three leagues broad; had no ground at twenty fathom; that the ſtream did ſtrongly ſet out of it; was of the colour of the ſea, and very ſalt. But, upon further examination, and after having gone ſix or ſeven leagues up the ſtream, they found that it ended in a ſhallow of four feet. Had it continued as it firſt appeared, it might have yielded an excellent paſſage to a more eaſterly ſea. Full of grief and diſappointment, and being now void of all hopes of a north-eaſt paſſage, they reſolved to ſail to the north-weſt, and to make trial of the place called *Lumley's-Inlet*, and the furious over-fall mentioned by Captain Davis. But meeting with contrary winds, and having ſpent more than half the time before they had gone the ſhorteſt part of the way, they returned homewards, and arrived at Gravefend Auguſt 26, 1608.—Not diſheartened by his two former unſucceſsful voyages, Captain Hudſon undertook again, in 1609, a third voyage to the ſame parts, for further diſcoveries. But, whether his former patrons and ſupporters were dead or diſcouraged, or for what other reaſons, is

(*a*) Purchas, his Pilgrimes, Part. iii. ed. 1625. p. 567, &c. and Harris's Collect. of Voyages, Vol. I. ed. 1705. p. 564, &c.

(*b*) Purchas and Harris, as above.

(*c*) Purchas, as above, p. 575.

[*A*] *Into a green, and then into a black ſea.*] Capt. Hudſon obſerves, that where the ſea looked *green*, it was freeſt from ice: but when it appeared with a deep azure or blue, next to black, it was very icy (1).

(1) Purchas, as above, p. 571.

[*B*] *And diſcovered a bay open to the weſt.*] Mr Lediard is very much out, when he ſuppoſes this bay to be the ſame as is now called Hudſon's Bay. His words are theſe, 'The fourteenth of July they came 'into the bay, which has ſince bore his name.'——(2) For this bay was many degrees, both of longitude and latitude, diſtant from that which was afterwards called Hudſon's Bay; and this latter was not diſcovered by Mr Hudſon, till his fourth and laſt voyage in 1610.

(2) Naval Hiſt. of Eng. ed. 1735, fol. p. 419.

[*C*] *That they were forced to return.*] The next occurrence after that, mentioned in Captain Hudſon's journal, was the ſight of a Mermaid; of which take the account in his own words. 'The 15th [of June] 'one of our company looking over-board ſaw a Mer 'maid, and calling up ſome of the company to ſee her, 'one more came up, and ſhe was then come cloſe to 'the ſhip's ſide, looking earneſtly on the men: ſoon 'after a ſea came and overturned her. From the 'navel upwards her back and breaſts were like a 'woman's, her body as big as one of us, her ſkin very 'white, and long black hair hanging down behind. 'In her going down they ſaw her tail, like the tail of 'a porpus, and ſpeckled like a mackarel (3).'

(3) Purchas, p. 575. and Harris, as above, p. 566.

[*D*] *And viewed the country.*] They found graſs on the ſhore of the laſt year's growth, and young graſs come up amongſt it. It was very hot; the ground boggy: and they ſaw the footing of many bears, deers, and foxes. There was a croſs ſtanding on the ſhore, much drift wood, and ſigns of fire that had been made there.——Generally, all the country of Nova Zembla they ſaw, was pleaſant to the eye; much high land, with no ſnow on it, looking in ſome places green, and deer feeding thereon. 'Tis no wonder there is ſo much ice in the ſea towards the pole, there being ſo many ſounds and rivers in Nova Zembla, Greenland, Groenland, Tartary, Ruſſia, and Lapland, to produce it: from whence he concluded there could be no navigable paſſage that way (4)

(4) Purchas, as above, p. 579.

[*E*] *The*

is unknown; he was this time fitted out by the Dutch East-India Company. They furniſhed him with a fly-boat, equipped with all neceſſaries and proviſions, and with twenty men Engliſh and Dutch. He ſailed from Amſterdam March 25, O. S. and on the 25th of April doubled the north cape of Finmark in Norway (*d*). He kept going along the coaſts of Lapland towards Nova Zembla, but found the ſea ſo full of ice, that he had no hopes of going through it that year. Some of his ſailors who had been in the East-Indies could not endure the cold, and therefore quarrelled with the reſt. Captain Hudſon propoſed two things to them: firſt, to go towards the coaſts of America, in 40 deg. latitude; truſting to ſome maps ſent him from Virginia by one Captain Smith, in which was marked down a ſea, affording a paſſage round about the Engliſh plantations, and from thence into the South-Sea; though it was a miſtake. The other thing he propoſed to his men, was to find a paſſage through the ſtreight of Davis; which was generally approved. So, the 14th of May, they ſailed that way, and the 29th of the ſame month arrived at the iſlands of Ferro [*E*], where they ſtayed about a day and a half to take in freſh water. Afterwards, they kept on their courſe weſt-north-weſt, 'till the 18th of July, and came upon the coaſt of New-France, where they landed to get a new maſt, having loſt their fore-maſt ever ſince the 15th of June (*e*). The place was very proper to catch cods and lobſters in, and to traffick ſkins and furrs with good advantage [*F*]: but the ſailors treated the people of that country very ill, and took away their goods by force [*G*], which cauſed many quarrels. The Engliſh, who were not the ſtouteſt, had a mind to go further: accordingly, July the 26th, coming out again to ſea, they proceeded forward 'till the third of Auguſt, when they landed near Cape-Cod in New-England, in 41 deg. 45 min. latitude, and found good grapes and roſe-trees (*f*). The natives ſeemed glad of their arrival; and one came on board, and ate and drank with them. They went over the bar of Virginia, the 18th of Auguſt, being the entrance into the river of Virginia; now better known by the name of the bay of Cheſeapeak. Getting into that bay, on the 28th, they kept ſailing up into it, and ſome of the rivers that diſcharge themſelves into the ſame, for about five weeks: during which time, they had frequent communication with the ſavage natives that dwelt on or near the banks; ſome of which they ſeem to have well uſed, and ſome otherwiſe (*g*). They came out again the fourth of October, and ſtood to ſea; but would have done their buſineſs better, if the ſailors had been well affected to it, and had not wanted neceſſaries. When they were at ſea, they conſulted what to do, but were of different opinions. The Maſter's mate, a Dutchman, was for wintering in Newfoundland, and ſeeking out Davis's paſſage to the north-weſt. Captain Hudſon oppoſed it, fearing that his ſhip's company, which had threatned him before, would take an opportunity to mutiny again, and that the cold weather would conſume their proviſions, and put them into an impoſſibility of returning into Holland, many of the ſeamen being then ſick. Purſuing therefore their voyage homewards, they arrived, the 7th of November, N. S. at Dartmouth in Devonſhire; and gave advice of it to the Directors in Holland, ſending them alſo a journal of their voyage. Captain Hudſon offered to go again to diſcover the paſſage through the north-weſt, provided they would give him 500 livres in money, more proviſions than he had before, and the ſame wages. And he propoſed to ſail from Dartmouth the firſt of March, ſpend the month of April, and half of May, in killing whales and other creatures near the iſland of Panar; after that ſail to the north-weſt; ſtay there 'till the middle of September, and then return to Holland by the north of Scotland (*b*): but, it ſeems, his propoſal was not accepted.—For, in his fourth and laſt voyage, in 1610, he was fitted out by Sir Thomas Smith, Sir Dudley Digges, Mr John Woſtenholme, and ſome of their friends, in a bark named the Diſcovery. His commiſſion was, to try if through any of thoſe inlets which Captain Davis ſaw but durſt not enter, on the weſtern ſide of Davis's ſtreights, any paſſage might be found to the South-Sea (*i*). They ſailed from St Catherine's April 17, and fell in with the eaſtern part of Iceland on the 11th of May. Endeavouring to ſail round the north of that iſland, and being ſtopped by the ice, they plyed round the ſouth of the ſame, and came into a good harbour, which they named *Louſy Bay*; where they found a Bath, of which the water was ſo hot that it would ſcald a fowl. The fourth of June, they came within ſight of Groenland: that night the ſun, according to their obſervation, went down due north, and roſe the next morning north-north-eaſt. The ninth they were off Forbiſher's ſtreights, and keeping on ſouth-weſtward, came on the fifteenth in ſight of Cape Deſolation (*k*). Thence

[*E*] *The iſlands of Ferro.*] The iſlands of Ferro, or Farro, are ſeventeen in number, and lye between the north of Scotland and the iſle of Iceland, from 61 to near 63 degrees of northern latitude. They are ſubject to the King of Denmark.

[*F*] *And to traffick ſkins and furrs with good advantage,*] The natives brought to them many beaver-ſkins, and other fine furrs, which they would have changed for red gowns. For the French did even then trade with them for red caſſocks, knives, hatchets, copper, kettles, trivets, beads, and other trifles (5).

(5) Purchas, as above, p. 586.

[*G*] *And took away their goods by force.*] They often mention, in their journal, that they *ſtood upon their guard*; which may be a neceſſary caution amongſt thoſe ſavage and barbarous people. But, no real cauſe is aſſigned, for our ſailors treating thoſe poor people ſo ill. Theſe are the words of the journal, upon that occaſion. 'The 25th [of July]——wee manned our 'ſcute with foure muſkets, and fixe men, and tooke 'one of their ſhallops and brought it aboord. Then 'we manned our boat and ſcute with twelve men and 'muſkets, and two ſtone pieces or murderers, and 'drave the ſalvages from their houſes, and tooke the 'ſpoyle of them, *as they would have done* of us (6).' But it is not ſaid that they actually attempted ſo to do.

(6) Purchas, ibid.

[*H*] *Among*

Thence they proceeded north-weſtward, among great quantities of ice [*H*], until they came to 60 deg. latitude, being the mouth of the *ſtreights* that bear *Hudſon*'s name. The land that he firſt diſcovered there, he named *Deſire provoketh*. They advanced in thoſe ſtreights weſterly, as the land and ice would permit, 'till the 11th of July; when fearing a ſtorm, they anchored on the north ſide of the ſtreights, by three rocky iſlands, which he named the *Iſles of God's Mercies*. As they went on, a point of land, on the oppoſite ſouthern ſide of the ſame ſtreights, he called *Hope advanced*: and an iſland, a little weſt of the ſame, *Hold with hope*. Keeping weſt, on the ſouth ſide of the ſtreights, along the weſtern point of North America, that ſhoots into thoſe ſtreights and the adjoining bay, he named three promontories there, *Prince Henry's Cape*, *King James's*, and *Queen Anne's Capes*: and to the country itſelf he gave the name of *Magna Britannia* (*l*). After having thus ſailed *three hundred* leagues weſt, in the ſtreights now called Hudſon's Streights; he came Auguſt 2 to a narrower paſſage, about two leagues over, and very deep (*m*), having two head-lands; of which he called that on the ſouth, *Cape Woſtenholme*, the oppoſite one on the north-weſt, *Digges's Iſland*; another promontory in a neighbouring iſle, *Cape Saliſbury*; and a high hill to the ſouth-weſt upon the main land, *Mount Charles*. This narrow paſſage brought them into the bay, which has ever ſince been honoured with the brave but unfortunate diſcoverer's name, and is to this day called HUDSON's-BAY. He ſailed above 100 leagues ſouth into this bay, being confident that he had found the deſired paſſage. But finding at length that it was only a bay, he imprudently reſolved to winter in the moſt ſouthern point of it, with an intention of purſuing his diſcoveries the following ſpring; little conſidering how unprovided he was with all manner of neceſſaries to ſupport himſelf during a ſevere winter in that deſolate place. However, they drew their ſhip, on the third of November, in a ſmall creek; where they would all infallibly have periſhed, if they had not met with unexpected and providential ſupplies of proviſions (*n*) [*I*]. In the ſpring, when the ice began to waſte, one of the ſavages came to viſit them; and, for a knife, looking glaſs, buttons, and a hatchet, gave them in exchange three deer-ſkins and three beaver-ſkins. After making ſeveral ſigns that there were many people to the north and ſouth, and that after ſo many *ſleeps* he would come again, he went his way, but never returned (*o*). Captain Hudſon, being bent upon compleating his diſcovery; as ſoon as the ſeaſon would permit, he furniſhed his ſhallop with eight or nine days proviſions, and ſailed about to the ſouth and ſouth-weſt of the bay. But, notwithſtanding his utmoſt endeavours, he could meet with none of the natives, nor induce them to come to him, though they were very near him, and frequently ſet the woods on fire in his ſight. Finding himſelf now abſolutely neceſſitated to abandon his enterprize, and to make the beſt of his way home, he diſtributed to his men, with tears in his eyes, all the bread he had left, which was only a pound to each [*K*]: and very little fiſh they could catch. In his deſpair and utmoſt uneaſineſs, having let fall ſome threatning words, of ſetting ſome of his men on ſhore; a few of the ſturdieſt of them (who before had been very mutinous) entered his cabin in the night, tied his arms behind him, and expoſed him in his own ſhallop, at the weſt end of his ſtreights; with eight of the moſt ſick and infirm of his men [*L*]. There they turned them adrift, and 'tis thought

(*l*) Purchas, as above, Vol. III. p. 596, 597. 598, 599.

(*m*) It had no ground at 100 fathoms. Ibid. p. 597.

(*n*) Purchas, p. 600, 602.

(*o*) Ibid, p. 602.

[*H*] *Among great quantities of ice.*] In time they became ſo well acquainted with the ice, that when night, or foggy, or foul weather took them, they would ſeek out the broadeſt iſland of ice, and there come to anchor, and run, and ſport, and fill water that ſtood on the ice in ponds, both ſweet and good (7).

(7) Purchas, as above, p. 598.

[*I*] *If they had not met with unexpected and providential ſupplies of proviſions.*] The account of it is given by Abacuc Pricket, one of the ſhip's crew, in the following words. 'I muſt not forget to ſhew, 'how mercifully God dealt with us in this time; for 'the ſpace of three moneths wee had ſuch ſtore of 'fowle of one kinde (which were partridges as white 'as milke) that wee killed above an hundred dozen; 'beſides others of ſundry ſorts. The ſpring coming, 'this fowle left us, yet they were with us all the ex'treme cold. Then in their places came divers ſort 'of other fowle, as ſwanne, geeſe, duck, and teale, 'but hard to come by. Our maſter hoped they would 'have bred in thoſe broken grounds, but they doe not: 'but came from the ſouth, and flew to the north, fur'ther than we were this voyage: if they be taken 'ſhort with the wind at north, or north-weſt or north'eaſt, then they fall and ſtay till the winde ſerve 'them, and then flye to the north. Now in time 'theſe fowles are gone, and few or none to be 'ſeene. Then wee went into the woods, hilles, and 'valleyes, for all things that had any ſhew of ſubſtance 'in them, how vile ſoever: the moſſe of the ground, 'than the which I take the powder of a poſt to 'bee much better, and the frogge (in his ingendring 'time as loathſome as a toade) was not ſpared. But 'amongſt the divers ſorts of buds, it pleaſed God that 'Thomas Woodhouſe brought home a budde of a tree, 'full of a turpentine ſubſtance. [It bloſſomed in De'cember, and had leaves green and yellow, of an 'aromatic ſavour, and being boyled, yielded an oily 'ſubſtance, which proved an excellent ſalve; the de'coction being drunk, was an effectual cure for the 'ſcurvy, ſciatica, cramp, convulſions, and other diſ'eaſes occaſioned by the coldneſs of the climate.] 'Of this our Surgeon made a decoction to drinke, and 'applyed the buddes hot to them that were troubled 'with ach in any part of their bodies; and for my 'part, I confeſſe, I received great and preſent eaſe of 'my paine.——The ice being out of the ſounds, ſo 'that our boat might go from one place unto another, 'a company of men were appointed by the Maſter to 'go a fiſhing with our net. Theſe men, the firſt day 'they went, caught five-hundred fiſh, as big as good 'herrings, and ſome trootes: which put us all in 'ſome hope to have our wants ſupplied, and our com'mons amended: but theſe were the moſt that they 'ever got in one day, for many dayes they got not a 'quarter ſo many (8).'

(8) Purchas, as above, Vol. III. p. 602. See alſo Vol. V. p. 817, &c.

[*K*] *Which was only a pound to each.*] But the men that afterwards ran away with the ſhip, upon ranſacking it, found, one veſſel of meal whole, and the other half ſpent; for they had but two. They found alſo two firkins of butter, 27 pieces of pork, half a buſhel of peaſe: and, in the cabin, 200 of biſket cakes, a peck of meal, and of beer to the quantity of a butt (9).

(9) See Purchas, Vol. III. p. 605.

[*L*] *With eight of the moſt ſick and infirm of his men.*] The perſons thus cruelly expoſed, were, Captain Henry Hudſon, his ſon John Hudſon, Thomas Widowes or Woodhouſe, Arnold Ludlo, Sidrach Faner,

thought they all miſerably periſhed, being never heard of more. Such was the unhappy end of the brave Captain Hudſon. As for the reſt of his rebellious crew, they proceeded with the ſhip for England. But going on ſhore, July 29, near the Streights mouth, four of the ſtrongeſt of them were ſet upon and cut off by the ſavages. The reſt, after enduring the greateſt hardſhips [*M*], arrived at Plymouth in September 1611 (*p*).

(*p*) Purchas, as above, Vol. III. p. 602—608.

Faner, Adam Moore, Henry King, Michael Bute, and the carpenter Philip Staffe of Ipſwich, who voluntarily choſe to undergo the ſame fate with his worthy maſter Captain Hudſon, rather than conſort with barbarous rebels (10).

(10) Purchas, as above, Vol. III. p. 604, 605.

[*M*] *The reſt enduring the greateſt hardſhips.*] They killed ſome quantities of wild fowl in Hudſon's Streights, which ſupported them a while. At length, they were reduced to hard allowance; as half a fowl a day, with the pottage, or liquor, they were boiled in. Being further preſſed with hunger, they tried every thing; and having flea'd their fowls, (for they would not pull,) they made uſe of their ſkins by burning off the feathers; ſo they became a great diſh. And as for the garbage it was not thrown away. In proceſs of time, their cook made a meſs of the bones of the fowls, frying them with candle-greaſe till they were criſp, and with vinegar put to them, made what they thought a good diſh of meat. Their vinegar was ſhared, and to every man a pound of candles delivered for a week, as a great dainty. The men became ſo weak, that they could not ſtand at the helm, but were forced to ſit or lye. One died for mere want. In that diſtreſſed condition they continued above a month or ſix weeks: and of the twenty-three men that went out, not above ſix or ſeven at moſt reached England again (11).

(11) Purchas, Vol. III. p. 606, 608.

C

HUDSON [JOHN], a very learned critic, and editor of many valuable books, was born at Widehope near Cockermouth in Cumberland, in the year 1662 [*A*]. After having been educated in grammar-learning by Mr Jerom Hechſtetter who lived in the neighbourhood, he was admitted, in the year 1676, and at the age of fourteen, into Queen's-college in Oxford; where he made a very great progreſs in Philoſophy, and more eſpecially in polite literature, under the tuition of Mr Thomas Croſthwaite (*a*). He took the degree of Bachelor of Arts July 4, 1681 (*b*), and that of Maſter Feb. 12, 1684 (*c*). Soon after having taken the laſt degree, he removed to Univerſity-college, of which he was choſen Fellow March 29, 1686 (*d*) [*B*], and became a moſt conſiderable and eſteemed tutor. On the 5th of June 1701, he accumulated the degrees of Bachelor and Doctor in Divinity (*e*): having been, the April before, elected Head-keeper of the Bodleian Library [*C*], in the room of the learned Dr Thomas Hyde, who had reſigned (*f*). With it he kept his fellowſhip, 'till June 14, 1711, when, according to the ſtatutes of the college, he was obliged to reſign it; having juſt before married Margaret, daughter of Sir Robert Harriſon, Knight, an Alderman of the city of Oxford, and a Mercer (*g*). In 1712, he was appointed Principal of St Mary-hall by the Chancellor of the univerſity, through the intereſt and ſollicitations of the famous Dr John Ratcliffe (*h*). And to Dr Hudſon is the univerſity of Oxford obliged for the moſt ample benefactions ſhe received from Dr Ratcliffe; who was always expreſſing his deſigns of doing ſomething very great, but undetermined in what way, 'till his reſolutions were fixed at length by Dr Hudſon's advice and perſwaſion (*i*). In the mean time, our learned author obliged the world with curious editions of many of the beſt ancient writers, of which an account is given in the note below [*D*]. The laſt he employed his learned pains about, was

(*g*) From Memoirs communicated to us.

(*h*) A. Hall, ubi ſupra.

(*i*) From the foreſaid Memoirs.

[*A*] *In the year* 1662.] Mr A. Hall ſays only, in general, that he was born ſoon after the Reſtoration, *paulo poſt inſtauratam apud Britannos Monarchiam.* But, from A. Wood, who affirms, that he was aged fourteen years, in 1676, at his admiſſion in the Univerſity (1); and from his age at the time of his death, as mentioned below, it plainly appears that he was born in the year 1662.

(1) Wood Ath. edit. 1721. Vol. II. col. 940.

[*B*] *Of which he was choſen Fellow, March* 29, 1686.] That he was choſen *unanimouſly*, is atteſted, in their Election-book, by the famous Obadiah Walker, then Maſter.

[*C*] *Having been, the April before, elected Head-keeper of the Bodleian Library.*] Mr Hudſon met with a more ſtrenuous oppoſition than he at firſt expected. His competitor was Mr Wallis of Magdalen-college, afterwards Profeſſor of Arabic, a man well known at that time for his great parts and ingenuity, though he never publiſhed any thing.

[*D*] *In the mean time, our learned author obliged the world with curious editions of many of the beſt ancient writers.*] They are as follows, according to the order of time in which he publiſhed them. I. *M. Velleii Paterculi quæ ſuperſunt: Cum variis Lectionibus optimarum Editionum; doctorum Virorum conjecturis & caſtigationibus; et indice locupletiſſimo*, Oxon, 1693, 8vo. It was printed through the incouragement, and at the charge of Arthur Charlet, D. D. Maſter of Univerſity-college, to be given to his ſcholars and friends at New-year's-day 1692-3. And, beſides the expence of the impreſſion, he gave Mr Hudſon ten pounds (2). A ſecond edition was publiſhed in 1711, wherein the notes are inlarged. II. *Thucydidis de Bello Peloponneſiaco Libri VIII.* Oxon. 1696, fol. This is a neat and beautiful edition, and well diſpoſed: the years of the Peloponneſian war, of the Olympiads, and of the foundation of Rome, as calculated by the learned Mr H. Dodwell, are placed at the top of every page. But this edition has been ſomewhat eclipſed by the ſubſequent one of Meſſieurs Duker and Waſſe. III. *Geographiæ Veteris Scriptores Græci minores, Græce & Latine, cum diſſertationibus & annotationibus Henrici Dodwelli: accedunt Geographica Arabica cum notis*, Oxon. in four volumes, 8vo. publiſhed at different times; the firſt in 1698, the ſecond in 1703, and the third and fourth in 1712. The ſeveral pieces which thoſe volumes contain, will appear by this liſt of them. The contents therefore of the firſt volume, are, 1. *Hannonis Carthaginienſis Periplus.* It is allowed not to have been written by the famous Carthaginian General of that name. 2. *Scylacis Periplus Maris habitabilis Europæ, Aſiæ, Lybiæque.* 3. *Agatharcides de Mari Rubro.* 4. *Arriani Periplus Ponti Euxini.* 5. *Periplus Maris Erythræi.* 6. *Nearchi Periplus, ex Arriani Indicis.* 7. *Marciani Heracleotæ Periplus, cum fragmentis Artemidori & Menippi.* 8. *Anonymi Periplus Maris Euxini.* The ſecond volume contains. 1. *Dicæarchus de Statu Græciæ.* 2. *Ejuſdem fragmentum de Monte Pelio.* 3. *Iſidorus Characenus de Manſionibus Parthicis.* 4. *Scymni Chii Periegeſis.* 5. *Ejuſdem fragmenta a Luca Holſtenio collecta.* 6. *Plutarchus de Fluminibus.* 7. *Agathemeris Compendiarium Geographiæ expoſitionum Libri duo.* 8. *Strabonis epitome.* The contents of the third volume, are, 1. *Dionyſius Byzantinus de Boſphoro Thracio.* 2. *Deſcriptio Ponti Euxini.* 3. *Excerpta ex Chryſococca.* 4. *Ptolemæi Tabula Urbium inſignium.* 5. *Anonymi à Gothofredo editi Expoſitio totius Mundi.* 6. *Variæ Lectiones Geographi Ravennatis.* 7. *Ptolemæi Arabia.* 8. *Abulfedæ Arabis Deſcriptio Choraſmiæ.* 9. *Abulfedæ Arabia.* 10. *Ta-*

(2) From a note prefixed to the title-page of one of thoſe books, in Dr Charlet's own hand-writing.

was Josephus; whom he just finished, but did not live to publish [E]. His studious and sedentary way of life, and too great abstemiousness withal, brought him into an ill habit of body; which turning to a dropsy, kept him about a year in a very languishing condition. At last he died, November 27, 1719, at St Mary-hall, and was buried in the chancel of St Mary's-church: where there is no monument erected, nor so much as any particular stone laid over him; only upon one of the little squares of the pavement there is an inscription, given in the note below [F]. He left one daughter [G]; and his widow was married again afterwards to the learned Dr Antony Hall (k). Such, to the great loss of learning, was the too early end of this truly learned man. If he had lived to dispose of Josephus, he would have gone on to publish the Catalogue of the Bodleian Library; in order to which he had caused it to be fairly transcribed in six large volumes in folio. He was likewise a great assistant to several editors in Oxford; particularly to Dr Gregory in his edition of Euclid's Works; and to the industrious Thomas Hearne [H], in his new editions of Pliny's Epistles, Eutropius, Justin, and Livy: the latter especially owes its correctness to the Doctor's care and inspection (l). He assisted also, and corresponded with, many of the most eminent men in foreign parts [I]; namely, Lud. Antonio Muratori, Joh. Maria Salvini, and Francisco Bianchini, in Italy; John Boivin, Lewis Kuster, and Michael Lequien, in France; Godefrid Olearius, Joh. Burchard Menckenius, Joh. Christopher Wolfius, Henry Lewis Schurtzfleisch, Joh. George Eccard

10. *Tabulæ Geographicæ Nassir Edini, & Ulug Beigi.* 11. *Catalogus Stellarum fixarum Ptolemaicus.* And the *fourth volume contains, 1. Dionysii Descriptio Mundi. 2. Rufi Festi Avieni Descriptio Orbis terræ. 3. Prisciani Periegesis. 4. Rufi Festi Avieni Ora maritima. 5. Anonymi Paraphrasis in Descriptionem Dionysii. IV. Dionysii Halicarnassensis Opera omnia, Græce & Latine cum Annotationibus*, Oxon. 1704, 2 tomes in folio, a beautiful and valuable edition; enriched with the various readings of an ancient copy in the Vatican Library, and of several MSS. in France. The learned editor has interspersed among the various readings, several notes of Sylburgius, Portus, Stephens, Casaubon, Valesius, and some of his own. V. *Dionysii Longini de Sublimitate Libellus, cum Præfatione de Vita & Scriptis Longini, notis, indicibus, & variis lectionibus*, Oxon. 1710, 4to. and 1718, 8vo. a very beautiful edition. VI. *Moeris Atticista de Vocibus Atticis & Hellenicis. Gregorius Martinus de Græcarum Literarum pronuntiatione*, Oxon. 1712, 8vo. VII. *Fabularum Æsopicarum Collectio quotquot Græce reperiuntur. Accedit Interpretatio Latina*, Oxon. 1718, 8vo. —He published also, *Introductio ad Chronographiam: sive ars Chronologica in epitome redacta*, Oxon. 1691, 8vo. 'An Introduction to Chronology,' extracted from Dr Beveridge's Treatise on that subject, for the use of his pupils. And had the oversight of a new edition of *Erasmi Dialogus Ciceronianus*; adding some Letters of Erasmus, and other things relating to the same subject (3).

(3) See Wood Ath. Vol. II. col. 940, 941.

[E] *The last he employed his learned pains about, was Josephus, whom he just finished, but did not live to publish.*] He had proceeded as far as the third index, when finding himself unable to go quite through, he recommended the work to his intimate friend Mr Antony Hall, who published it in 1720, in two vols. fol. 'Tis a neat and beautiful edition, and superior, both with respect to the paper and the largeness and elegancy of the types, to the subsequent one of Mr Havercamp. But the latter surpasses it with regard to the number and value of the notes; for Dr Hudson's notes, in his editions of books, are all very short. The learned editor did not meet with suitable encouragement in this work, and therefore was ready to faint under the burden both of the labour and expence of it; when he received a seasonable and unexpected cordial from the munificence of that truly generous 'encourager of liberal arts,' the Earl of Caernarvon afterwards Duke of Chandos, 'the greatness of whose soul was always 'superior to his great fortune (4).' And the occasion of it was thus. His Lordship enquiring of some Oxford gentlemen, at his table, what learned performances were then on foot, and who were the persons of most distinguished abilities in the University, Dr Hudson was mentioned to him, together with the great and expensive work which he was then engaged in (5): and it was not many days after, that the Doctor received a letter from his Lordship, with a note inclosed in it of two hundred guineas, which he desired he might have leave to present him with, as a token of the regard he had to his merit, and for the furtherance of his most useful undertaking (6). This generous benefaction the Doctor thankfully acknowledges, in the dedication to Æsop's Fables, which he published soon after, and inscribed to the Earl's eldest son, the Lord Viscount Wilton: but he more thankfully and particularly acknowledges it, in the dedication of his Josephus to that noble Earl, then newly created a Duke. His words are these. *Cum post multorum annorum laborem improbum, & magnos sumptus Josepho impensos, pene languerem, Tu solus, Vir ill. strissime, benignitate Tua me labantem excitasti, & munificentia Tua effecisti, ut Operi tam difficili & laborioso par essem perficiundo.*——After Dr Hudson's decease, several sets of his Josephus were disposed of by his widow at *twelve shillings* a set, the booksellers refusing to give more; but when they had got them into their own hands, they immediately raised the price to 25 s. Our learned author had been long conversant with Josephus; for he revised Sir Roger L'Estrange's translation of that author with the original Greek, and added critical remarks here and there at the bottom of the page: and also digested and finished Dr Willes's two discourses prefixed to the same (7).

(4) As is justly observed in the patent for creating him a Duke.

(5) Viz. his Josephus.

(6) From the Memoirs, as above.

(7) See the Preface.

[F] *There is an inscription.*] Which is in these words.

Mr S.
Viri Doctissimi
Johannis Hudsoni S. T. P.
Aulæ B. M. V. Principalis,
Et
Protobibliothecarii Bodleiani.
Obiit Nov. 26. A. D. 1719.
Ætatis 57.

[G] *He left one daughter.*] Named Margaret, after her mother's name. One John Goole Vicar of Eynsham, and school-master at Whitney, both in Oxfordshire, an old fellow of fifty and upwards, drew her, or pretended to have drawn her, into a contract of marriage, and sued for half her fortune; publishing some letters that had passed between them: wherein he made it appear, that he had no more wit, and less discretion, than the young lady. She was married July 29, 1731, to the Reverend Mr John Boyce, Rector of Saintbury in Gloucestershire, son of Sir John Boyce, Alderman of Oxford, and Mayor of that city at the time of his present Majesty's coronation.

[H] *And to the industrious Tho. Hearne.*] Mr Hearne was, from his youth, intimate with the Doctor, and in effect his pupil. He it was, that first put Mr Hearne upon critical studies, and was his constant guide and assistant in the prosecution of them (8).

(8) From the abovesaid Memoirs.

[I] *And corresponded with many of the most eminent men in foreign parts.*] Several letters from his correspondents abroad, with copies of his answers to them, were lately in the possession of his son-in-law Mr Boyce, who hath transmitted them to Dr Rawlinson, in order to inrich his additions to Wood's *Athenæ*.

card, and, whom he chiefly eſteemed, Joh. Albert Fabricius, in Germany; Eric Benzel in Sweden; Frederic Roſtgard in Denmark; James Pezron, Hadrian Reland, and John Le Clerc, in Holland, &c (*m*). In a word, he was in ſo great repute abroad, that he uſed frequently to complain of the expence of foreign letters, and ſeemed to look upon this as too ſevere a tax for being eminent. If not leſs known at home, he appears at leaſt to have been leſs regarded, having never been poſſeſſed of any eccleſiaſtical preferment: and he uſed to make frequent and heavy complaints upon that ſubject (*n*). He was a man of great probity, of a ſanguine complection, a handſome and agreeable countenance, a moderate ſtature, and a very good conſtitution, 'till he impaired it by inceſſant ſtudy and application (*o*).

(*m*) A. Hall Præfat. ad Joſephum, ut ſupra.

(*n*) From the foreſaid Memoirs.

C

HUGHES [JOHN], an excellent poet, a candid critic, and a very agreeable writer in proſe, whoſe memory will do honour to the preſent century, in the beginning of which he flouriſhed. He was the ſon of a very worthy citizen of London, by Anne, the daughter of Iſaac Burgeſs, Eſq; of an antient family and a competent fortune in Wiltſhire, where, in the town of Marlborough, our author was born January 29, 1677 (*a*). He was early brought to London, received the firſt rudiments of letters in ſome of the leſſer ſchools of this metropolis, and, by the extraordinary care of his maſter, invited by his own diligence, his various acquiſitions, and the manner in which they were applied, did no ſmall honour to a private education (*b*). He became early and thoroughly acquainted with the Antients, which gave him a true taſte and a correct judgment, at an age when, by many who yet are intended for ſcholars, thoſe terms are ſcarce underſtood. He had a weak or at leaſt a delicate conſtitution, which perhaps diverted him from ſeverer ſtudies, and inclined him to ſeek in the company of the ſiſter arts, of Deſigning, Poetry, and Muſic, that amuſement, which his valetudinary ſtate of health rendered one of the greateſt bleſſings of life (*c*). At nineteen he drew the outlines of a tragedy, and about the ſame time turned into Engliſh one of the moſt celebrated, but at the ſame time one of the moſt difficult, odes in Horace, in a manner and with a facility that indicated true genius [*A*]. His acquaintance with the Muſes did not render him averſe to buſineſs; he

(*c*) MS. Memoirs, communicated by Mr Duncombe.

[*A*] *That indicated true genius.*] The firſt ſtrokes of genius, like the firſt bloſſoms of a tree, inſtruct us what kind of fruit we are to expect. It is true, that ſubſequent culture, may alter both; but it is alſo true, of ſome genii, as of ſome trees, that from a natural excellence, they produce a very high flavoured fruit at firſt, very little inferior, to what all the art and care poſſible, can afterwards bring them to yield. The following tranſlation is a proof of this (1). In it our young writer propoſes not barely to render, but to expand and amplify the thoughts of his author, without extenuating, or varying his ſenſe (2). It is a ſingular method of putting an ancient poet into Engliſh, and together with the verſion of his language, comprehends a commentary upon his ſentiments; at leaſt, ſuch are our notions (3). The reader, upon a ſerious peruſal, will decide how far we have done Horace, or Mr Hughes juſtice.

(1) Originally publiſhed in the tranſlation into Engliſh of the Odes, &c. of Horace, by ſeveral hands.

(3) See our author's own ſenſe in note [*C*].

Horace, Book I. Ode XXII.

Imitated in Paraphraſe.

I.

Hence ſlaviſh fear! thy Stygian wings diſplay!
Thou ugly fiend of Hell away!
Wrapp'd in thick clouds, and ſhades of night,
To conſcious ſouls direct thy flight!
There brood on guilt, fix there a loath'd embrace,
And propagate vain terrors, frights,
Dreams, goblins, and imagin'd ſprights,
Thy viſionary tribe, thy black and monſtrous race.
Go haunt the ſlave that ſtains his hands in gore!
Poſſeſs the perjur'd mind, and rack the uſurer more,
Than his oppreſſion did the poor before.

II.

Vainly, you feeble wretches, you prepare
The glitt'ring forgery of war;
The poiſon'd ſhaft, the Parthian bow and ſpear
Like that the warlike Moor is wont to wield,
Which pois'd and guided from his ear
He hurls impetuous thro' the field:
In vain you lace the helm, and heave in vain the ſhield;
He's only ſafe, whoſe armour of defence
Is adamantine innocence.

III.

If o'er the ſteepy Alps he go,
Vaſt mountains of eternal ſnow,
Or where fam'd Ganges and Hydaſpes flow.
If o'er parch'd Libya's deſert land
Where, threatning from afar,
Th' affrighted traveller
Encounters moving hills of ſand;
No ſenſe of danger can diſturb his reſt,
He fears no human force, nor ſavage beaſt;
Impenetrable courage ſteels his manly breaſt.

IV.

Thus late within the ſabine grove,
While free from care and full of love
I raiſe my tuneful voice, and ſtray
Regardleſs of myſelf and way,
A grizly wolf, with equal eye
View'd me unarm'd, yet paſs'd unhurtful by.
A fiercer monſter ne'er in queſt of food
Apulian foreſts did moleſt;
Numidia never ſaw a more prodigious beaſt;
Numidia mother of the yellow brood
Where the ſtern Lion ſhakes his knotted mane,
And roars aloud for prey, and ſcours the ſpacious plain.

V.

Place me where no ſoft breeze of ſummer wind
Did e'er the ſtiffen'd ſoil unbind,
Where no refreſhing warmth e'er durſt invade,
But winter holds his unmoleſted ſeat,
In all his hoary robes array'd,
And rattling ſtorms of hail, and noiſy tempeſts beat.
Place me beneath the ſcorching blaze
Of the fierce ſun's immediate rays,
Where houſe or cottage ne'er were ſeen,

Nor

he had a place in the Office of Ordnance, and was Secretary to ſeveral Commiſſions under the Great Seal for purchaſing lands, in order to the better ſecuring the royal docks and yards, at Portſmouth, Chatham, and Harwich (*d*). He continued, however, to purſue his natural inclination to letters, and added to his thorough knowledge of the learned as intimate an acquaintance with the modern languages. The firſt public teſtimony he gave of his poetic vein, was in a poem on the treaty of Ryſwick, which appeared in 1697, and was received with an approbation rarely beſtowed, and indeed very rarely deſerved by a young poet of twenty (*e*). It is barely rendering juſtice to his character, to ſay that it was at once an elegant and a ſprightly performance, exhibiting thoſe qualities that are but ſeldom united, and in which, however, conſiſt the great merit of his writings, eaſe and exactneſs [*B*]. The ſucceſs that attended this poem encouraged him to write again, and in 1699 he publiſhed his Court of Neptune, on the return of King William from Holland, which he addreſſed to Charles Montague, Eſq; afterwards Earl of Halifax, the then diſtinguiſhed patron of the Muſes. By this poem he not only maintained, but added to the reputation he had acquired. Strength of ſentiment, and an eaſy verſification, added luſtre and ſweetneſs to the charms of a poetic fancy, that might alone have ſecured the ſucceſs of his poem (*f*). He wrote the ſame year a ſong upon the Duke of Glouceſter's birth-day (*g*). It ſometimes happens, that thoſe who excel in verſe are not equally happy in proſe compoſitions; but this was not the caſe of our author, he had a great turn to contemplation, ſtudied the faculties of the human mind, and made ſuch deep and curious reflections on the diſorders to which it is liable, as give him a title to be conſidered as one of the ableſt, as well as one of the moſt entertaining, eſſay writers in our language. This which probably was the firſt, or at leaſt one of the firſt, of his performances in this kind, conſidering he was but twenty-four when he wrote it, is really ſurpriſing, and is entitled, 'Of the Pleaſure of being deceived (*b*).' In 1702 he publiſhed, on the death of King William, a Pindaric ode, entitled, 'Of the Houſe of Naſſau,' which he dedicated to Charles Duke of Somerſet. At the cloſe of this truly poetic performance, there is a very fine and a very prophetic complement to Queen Anne (*i*). He continued to employ his leiſure hours in tranſlations and imitations of the Antients, and particularly of Horace, whoſe genius he juſtly admired, and whoſe writings he perfectly underſtood (*k*). His ſentiments, as to the propereſt manner of tranſlating him, are ſo judicious, and, withal, ſo modeſtly expreſſed in a letter to a friend, that we could not avoid giving them a place in the notes [*C*]. In 1703, his 'Ode in praiſe of Muſic' was performed at Stationers-Hall, with

Nor rooted plant or tree, nor ſpringing green;
Yet, lovely Lalage, my generous flame
Shall ne'er expire; I'll boldly ſing of thee,
Charm'd with the muſic of thy name,
And guarded by the gods of love and poetry.

[B] Eaſe and exactneſs.] This poem opens with an invocation to the muſe, who, at the author's earneſt requeſt, having wrapped him high above the world, he firſt diſcerns in looking down an obſcure diſturbed and troubled ſcene, which being diſperſed by the bright effulgence of an eaſtern light, diſcovers clearly Europe to his view (4). He then proceeds thus,

(4) Hughes's Works, Vol. I. p. 12, 13.

Of various ſtates, the various bounds appear;
There wide Hiſpania, fruitful Gallia here;
Belgia's moiſt ſoil, conſpicuous from afar,
And Flandria, long the field of a deſtructive war.
Germania too with cluſter'd vines o'erſpread
And lovely Albion from her wat'ry bed,
Beauteous above the reſt, rears her auſpicious head.
Beneath her chalky cliffs, ſea nymphs reſort,
And awful Neptune keeps his reedy court;
His darling Thames rich preſents in his hand
Of bounteous Ceres traverſes the land;
And ſeems a mighty ſnake whoſe ſhining pride
Does thro' the meads in ſinuous volumes glide.
Ah charming iſle! faireſt of all the main!
Too long thou doſt my willing eye detain.
For ſee a heroe on the adverſe ſtrand,
And lo! a blooming virgin in his hand!
All hail, celeſtial pair!——a goddeſs ſhe,
Of heav'nly birth conſeſt, a more than mortal he
Victorious laurels on his brows he wears;
Th' attending fair a branching olive bears;
Slender her ſhape, in ſilver bands confin'd;
Her ſnowy garments looſely flow behind,
Rich with embroider'd ſtars, and ruffle in the wind.
But once ſuch diff'ring beauty met before,
When warrior Mars did Love's bright Queen adore;
E'en Love's bright Queen might ſeem leſs winning fair,
And Mars ſubmit to his heroic air.
Not Jove himſelf, imperial Jove, can ſhow
A nobler mien, or more undaunted brow,
When his ſtrong arm, thro' Heav'n's ætherial plains
Compels the kindled bolt, and awful rule maintains.
And now embark'd they ſeek the Britiſh iſles,
Pleas'd with the charge, propitious ocean ſmiles.
Before, old Neptune ſmooths the liquid way;
Obſequious tritons on the ſurface play;
And ſportful dolphins, with a nimble glance,
To the bright Sun their glitt'ring ſcales advance.
In oozy beds profound, the billows ſleep,
No clamorous winds awake the ſilent deep;
Rebuk'd, they whiſper in a gentle breeze,
And all around is univerſal peace.
Proceed my muſe! the following pomp declare;
Say who, and what the bright attendants were!
Firſt Ceres, in her chariot ſeated high,
By harneſs'd dragons drawn along the ſky;
A cornucopia fill'd her weaker hand,
Charg'd with the various off-ſpring of the land,
Fruit, flowers, and corn; her right a ſickle bore;
A yellow wreath of twiſted wheat ſhe wore.
Next father Bacchus with his tigers grac'd
The ſhow, and, ſqueezing cluſters as he paſs'd,
Quaff'd flowing goblets of rich flavour'd wine
In order, laſt ſucceed the tuneful Nine;
Apollo too was there; behind him hung
His uſeleſs quiver, and his bow unſtrung;
He touch'd his golden lyre, and thus he ſung.

[*C*] *In the notes.*] In a former note, we have taken ſome pains to explain our author's manner of tranſlating Horace, one of the moſt agreeable, and for that

with great applauſe (*l*). He was allowed by the beſt judges to have been wonderfully happy in this, which is one of the moſt difficult kinds of compoſition; and as his merit in this way was great, ſo he may be juſtly eſteemed fortunate, in having his pieces ſet by the greateſt maſters this country has produced, ſuch as the famous Daniel Purcell, the celebrated Dr Pepuſch, Mr Galliard, Mr Handel, and others (*m*). We ſhall the leſs wonder at his ſucceſs in this kind of poetry, if we conſider the rational and judicious theory which he has laid down in the preface to thoſe ſix cantata's, ſet to muſic by Dr Pepuſch; and publiſhed, but without our author's name; in which he gives ſo conſpicuous; and at the ſame time ſo ſuccinct, an account of the true grounds of this kind of poetry, that we cannot have a better ſpecimen of his abilities as a critic, or a ſtronger inſtance of that candour with which he communicated to the public, what a poet of a more contracted mind would have reſerved to himſelf as the great myſtery of his art (*n*) [*D*]. His great delight in

(*n*) Jacob's Lives of the Poets, Vol. I. p. 82.

that reaſon, one of the Latin Poets, moſt difficult to render into any other language than that in which he wrote. In this, our author ſhall give the reaſons which induced him to adopt this looſe open manner of tranſlating; from which it will appear, that he did not therein conſult ſo much his own eaſe, as the ſatisfaction of his reader, by making, not the ſenſe only, but the manner of his author perfectly underſtood. To the friend to whom he addreſſes the ode in verſe, he writes thus in proſe (5).

(5) Duncombe's Account of the Life and Writings of Mr Hughes, p. 10—15.

SIR, 26 Dec. 1702.

I am ſorry I could not wait on you yeſterday as I intended; when I ſee you next, you ſhall know the reaſon, in the mean time I ſend this to beg your pardon, and have incloſed what I ſpoke to you of. That incomparable Ode which Horace has addreſſed to his friend Groſphus (6), I have choſen to preſent to one of the beſt of my friends in as good an Engliſh dreſs as I am capable of giving it. The original is one of thoſe pieces in which Horace has ſhewn himſelf ſo great a maſter of human life, and given us at once, a view of his good ſenſe and good humour. And this addreſs is uſual to him, for in the graveſt of his odes, he does not ſeem to make his remarks on life like a pedant, to make you out of love with it, or to fright you from pleaſure, but to invite you to the true enjoyment of it, and thus far he was certainly in the right, though in the choice of his pleaſures he was often irregular (7). In this, as well as in all other reſpects, his moral odes infinitely exceed the chorus's in Seneca's tragedies; for in the firſt, you have the free and unaffected morality of a Gentleman, but in the latter, the ſplenetic air of a ſevere Stoic. This ode has been in Engliſh before, more than once, but whether well or ill tranſlated, I leave others to judge; I ſhall only ſay, that I have ſeen very few tranſlations of Horace that I can be pleaſed with, for moſt have copied only his thoughts, without any thing of his diction, which is his principal beauty: 'tis that vivacity in his ſtile, and particularly in his epithets, which Petronius Arbiter calls a curioſa felicitas, and in which no man ever (in my opinion) reſembled him ſo much as Petronius himſelf, whoſe proſe is as inimitable as Horace's poetry. Indeed in the time of Pope Urban VIII. (who was a poet himſelf) Caſimire, a Polander and a jeſuit, writ ſeveral odes in imitation of Horace, in which there appears a good genius, but his Latin is not pure, and, beſides the diſadvantage of writing in a dead language, he is defective in judgment, and his fancy is not always well governed. Thoſe who have ſucceeded beſt in their attempts on Horace in Engliſh, have choſen the way of paraphraſe as the moſt proper; for his ſenſe is cloſe wrought, and would appear ſtiff and obſcure in a literal tranſlation (if ſuch a one could be made) and there are many good hints in him worth purſuing. None have pretended to copy his numbers for the Pindaric, which ſeems the fitteſt for us, and gives us a greater liberty, and variety does not anſwer the Latin meaſures. Yet I remember, I once ſaw an attempt to write Engliſh ſapphicks (but it never was printed), and Sir Philip Sidney has compoſed hexameters and other verſes after the Latin meaſure, but they are unnatural to our language for this reaſon, chiefly, becauſe we abound ſo much in monoſyllables. The ſapphic meaſure is indeed very muſical, and what Horace ſeems beſt to have practiſed, but methinks it is too ſoft, and fit only to be employed on love and pleaſant eaſy ſubjects; it ſeems too much confined, like the uſual meaſure of our ſongs, and the lofty ſenſe of ſome of his odes is above it. Our Engliſh Pindaric is undoubtedly more muſical if it be well contrived; and the various length and ſhortneſs of the lines, as well as the mixture and returns of the rhime well choſen; and therefore, as I ſaid before, it is the moſt proper for ſuch odes as have any thing of the ſublime in them: I wonder Horace did not introduce ſomething like it into his language, being ſo great an admirer of Pindar, and having in other reſpects imitated him ſo finely, notwithſtanding his declaration Pindarum quiſquis, &c. that Pindar was inimitable, in which ode he commends him in theſe words.

(6) Horat. lib. i. carm. 16.

(7) Hughes's Works, Vol. I. p. 216.

Laureâ donandus Apollinari,
Seu per audaces nova dithyrambos
Verba devolvit, numeriſque fertur
Lege ſolutis. Lib. IV. Ode II.

Thus tranſlated by Mr Cowley,

So Pindar does new words and figures roll
Down his impetuous dithyrambick tide,
Which in no channel deigns t' abide,
Which neither banks nor dikes controul.

But this does not anſwer to the numeris lege ſolutis, by which Horace means only that Pindar's numbers were unlimited, and not confined to any ſet meaſure in thoſe odes that were called dithyrambick, which had the moſt heat and fury, being firſt invented in honour of Bacchus. And methinks Horace might ſometimes have attempted this dithyrambick meaſure, eſpecially in that ode, Quo me, Bacche, rapis, &c.

But to return to the ode which I have here endeavoured to imitate; I have taken a liberty in the paraphraſe, the firſt ſtanza is added, and a ſimile or two, but nothing more than what is agreeable to his ſenſe, and what I thought would make him appear to the beſt advantage. Such as it is, Sir, I ſubmit it entirely to your judgment, ſince it was firſt attempted for your pleaſure. 'Tis upon an agreeable ſubject, viz. Tranquillity, and if it fails giving you any entertainment, I will readily acknowledge it to be my own fault, for I know you to be maſter of ſo much ſenſe, ſo good a taſte, and ſuch juſt notions of human life, that I am ſure Horace muſt pleaſe you, if he be not murthered in an ill tranſlation. You may perceive, Sir, that as I cannot think the time long which I ſpend in your company, ſo neither can I think a letter long which I am writing to you; but I may be tempted to treſpaſs upon you in one as well as the other, therefore I would do as perſons ſhould, after a tedious viſit, uſe a ſhort ceremony and withdraw.

I am, &c.

[*D*] *As the great myſtery of his art.*] The following extract, from our author's preface, contains abundance of curious and ſenſible reflections, which are not to be met with any where elſe, and for this reaſon chiefly, have had a place aſſigned them here. His criticiſm is clear and candid; he was at great pains to acquire knowledge before he ventured to write, and yet parts with that knowledge, though ſo hardly attained, with that eaſe and freedom, which is natural to a great and good mind, delighting no leſs in the propagation of ſcience, than in the poſſeſſion of it (8).

(8) Ibid. p. 127.

'It may be proper to acquaint the public, ſays he, that theſe are the firſt *Eſſays* of this kind, and were written as an experiment of introducing a ſort of *Compoſition*

in muſic led him to a cloſe acquaintance with the Italian writers, which induced the proprietors of a new tranſlation of the celebrated work of Boccalini, to apply themſelves to him to review that tranſlation, and to give them his paſſport to the public; which he was prevailed upon to do; and the reader will ſee, within the compaſs of a ſhort preface, as true and judicious a repreſentation of that very ſingular, and in many reſpects valuable, performance, and as juſt and impartial an account of the author, as can be deſired (*o*). Pieces of this kind are, generally ſpeaking, of little importance; but, to the honour of our author, it muſt be obſerved, that, whatever he condeſcended to do, bore the genuine and indiſputable marks of genius and ſcience; ſo that this character of Boccalini, and his book, may be conſidered as a detached piece, expreſſive of our author's ſkill, in a very peculiar kind of critical learning (*p*) [*E*]. This excellent diſpoſition being generally known

(*o*) Duncombe's Account of the Life and Writings of J. Hughes, Eſqj p. 29. 30.

(*p*) Prefixed to the two editions in folio, 1706, 1719.

poſition which had never been naturalized in our language. Thoſe who are affectedly partial to the *Italian* tongue, will ſcarce allow muſic to ſpeak any other. But if reaſon may be admitted to have any ſhare in theſe entertainments, nothing is more neceſſary than that the *words* ſhould be underſtood; without which, the end of *vocal* muſic is loſt. The want of this, occaſions a common complaint, and is the chief if not the only reaſon that the beſt works of SCARLATI, and other *Italians*, except thoſe performed in *Opera's*, are generally but little known or regarded here. Beſides it may be obſerved, without any diſhonour to a language which has been adorned by ſome writers of excellent genius, and was the firſt among the moderns, in which the art of poetry was revived and brought to any perfection, that in the great number of their *Operas*, *Serenatas*, and *Cantatas*, the words are often much inferior to the *compoſition*; and though by their abounding in vowels, they have an inimitable aptneſs and facility for notes, the writers for muſic have not always made the beſt uſe of this advantage, or ſeem to have relied on it ſo much as to have regarded little elſe; ſo that Mr *Waller*'s remark on another occaſion may be frequently applied to them,

Soft words with nothing in them make a ſong.

Yet ſo great is the force of *ſounds* well choſen and ſkilfully executed, that as they can hide indifferent *ſenſe*, and a kind of aſſociated pleaſure ariſes from the words, though they are but mean; ſo the impreſſion cannot fail of being in proportion much greater when the thoughts are natural and proper, and the expreſſions unaffected and agreeable.

Since therefore the *Engliſh* language, though inferior in *ſmoothneſs*, has been found not incapable of *harmony*, nothing would perhaps be wanting towards introducing the moſt elegant STILE of *muſic* in a nation which has given ſuch generous encouragements to it; if our beſt poets would ſometimes aſſiſt this deſign, and make it their diverſion to improve a ſort of verſe in regular meaſures purpoſely fitted for muſic, and which of all the modern kinds, ſeems to be the only one that can now properly be called LYRICK.

It cannot but be obſerved on this occaſion, that ſince POETRY and MUSIC are ſo nearly allied, it is a misfortune that thoſe who excel in one, are often perfect ſtrangers to the other. If therefore a better correſpondence were ſettled between the two *Siſter* ARTS, they would probably contribute to each other's improvement. The expreſſions of harmony, *cadence*, and a *good ear*, which are ſaid to be ſo neceſſary in *poetry*, being all borrowed from *muſic*, ſhew at leaſt, if they ſignify any thing, that it would be no improper help for a poet to underſtand more than the *metaphorical* ſenſe of them. And on the other hand, a *compoſer* can never judge where to lay the *accent* of his *muſic*, who does not know, or is not made ſenſible, where the words have the greateſt *beauty* and *force*.

There is one thing in compoſitions of this ſort, which ſeems a little to want explaining, and that is the RECITATIVE muſic, which many people hear without pleaſure, the reaſon of which is, perhaps, that they have a miſtaken notion of it. They are accuſtomed to think that all muſic ſhould be AIR, and being diſappointed of what they expect, they loſe the beauty that is in it of a different kind. It may be proper to obſerve therefore, that the *recitative* ſtile in compoſition, is founded on that variety of *accent* which pleaſes in the pronunciation of a *good Orator*, with as little deviation from it as poſſible. The different *tones* of the *voice* in aſtoniſhment, joy, ſorrow, rage, tenderneſs in affirmations, apoſtrophes, interrogations, and all the other varieties of ſpeech make a ſort of natural muſic, which is very agreeable, and this is what is intended to be imitated with ſome helps by the *compoſer*, but without approaching to what we call a TUNE or AIR; ſo that it is but a kind of *improved elocution*, or pronouncing of the words in *muſical cadences*, and is indeed wholly at the *mercy* of the *performer* to make it agreeable or not, according to his ſkill or ignorance; like the *reading* of *verſe*, which is not every one's *talent*. This ſhort account may poſſibly ſuffice to ſhew how properly the RECITATIVE has a place in compoſitions of any length to relieve the *ear* with a variety, and to introduce the AIRS with the greater advantage.'

[*E*] *Of critical learning.*] The light in which our author has been hitherto conſidered in the world, is almoſt ſolely as a poet, whereas he ought to be looked upon in the light of a general ſcholar, an able critic, and an excellent writer in proſe as well as verſe. To juſtify this character in it's full extent, and in ſome meaſure to revive that of Boccalini, far leſs known and regarded than it deſerves, or than it was at the beginning of this century, we have made an extract from Mr Hughes's preface, which will effectually anſwer both the points we had in view.

'The deſign of this book, as the author declares in his own preface, was to make a happy mixture of the pleaſant and the profitable, and in this 'twill be allowed by all good judges, that he has ſucceeded to admiration. Whatever can be expected from a moſt fruitful and facetious wit; from a great variety of ſolid and polite learning, an improved converſation, and an accurate diſcernment in human affairs, is to be found aſſembled in this diverting and uſeful miſcellany, which has long had the reputation of a maſter-piece in Italian, and is ſo well known by the many tranſlations of it into the beſt languages of Europe, that few who are converſant with books and learning, can be wholly unacquainted with it's merit.

It is a new invented kind of fable, very different from any thing which had ever been written before, and therefore it may juſtly be eſteemed an original, a character which Boccalini boldly aſſumes to himſelf in his preface, 'and in the twenty-eighth of his advices, though a concealed witling would lately have robbed him of that honour. It is very plain that this happy Italian genius is no copier, but that his project is *his* own, for he is the firſt that erected a Secretary's office in Parnaſſus, and gave advices from thence of what paſſed among the Virtuoſi of that place; and therefore, for the novelty of his invention, he compares himſelf to Chriſtopher Columbus, the diſcoverer of a new world.

But this ſimile being liable to ſome exception, may perhaps with more advantage to him be changed Parnaſſus was not indeed firſt diſcovered by Boccalini, for the Antients touched upon the coaſt long before, and placed there Apollo, the nine Muſes, and Pegaſus. But our author adventured further into the country, and was the firſt that planted, peopled, improved it with laws, and gave us that entertaining deſcription of it, and thoſe excellent leſſons of inſtruction from thence, which are contained in the following ſheets.

There is no need to inſiſt upon the uſefulneſs of this way of conveying truth by allegory, which employs at once the utmoſt judgment and fancy of the writer, and is obſerved to make more lively impreſſions on the reader, than reaſon in it's undreſs can do, though it have ever ſo many native charms.

But there is one thing which ſhould particularly recommend our author to Engliſhmen, and that is his zeal for liberty, and his generous abhorrence of thoſe wicked politics which have ſo much diſturbed the peace of the world, and the happineſs of nations. It is no wonder

known in the literary world, our author was frequently applied to (though he ſeldom liſtened to ſuch applications) upon like occaſions. Amongſt the few that merited his attention, one was, the compoſing a moſt admirable preface to the great collection of the Hiſtory of England, by various hands, called the Complete Hiſtory of England, and becauſe the third volume was written by Dr Kennet, more frequently ſtiled Kennet's Hiſtory. This preface was, on it's publication, very much eſteemed, and certainly gives as clear, as ſatisfactory, and as impartial an account of the Hiſtorians there collected, as can be deſired, and that in a ſtile and manner very pleaſing and natural; but at the ſame time ſo particular to Mr Hughes, that it would be difficult to name any introduction of this ſort that could be put in competion with it. The ſucceeding year, on the demiſe of William Duke of Devonſhire, Auguſt 18, 1707, our author compoſed an ode ſet to muſic in honour of his memory, in the manner of a dialogue between Britannia and Auguſta; the part of the former performed by Signiora Margarita, and the latter by the famous Mrs Toſts (*q*). It is eaſy to apprehend how difficult it muſt have been to ſucceed in a compoſition almoſt without a precedent, and of which, no queſtion, there was the higheſt expectations; and yet, whoever reads our author's performance, will have little doubt of it's giving full ſatisfaction. The ſucceſs which had attended the tranſlation of Boccalini, brought a new application, in favour of one of the beſt received pieces of the celebrated Mr Fontenelle, which our author had tranſlated for his amuſement, and which, after it had lain by him ſix years, he permitted to ſee the light (*r*). In this tranſlation, the ſenſe of the author is clearly and happily expreſſed, and with ſuch a degree of freedom and ſpirit, that if the fame of Mr Fontenelle had been leſs extenſive, it might have paſſed for an original [*F*]. His numerous performances in verſe and proſe, his unblemiſhed reputation, and

(*q*) Hughes's Works, Vol. I. p. 178.

(*r*) Duncombe's Account of the Life and Writings of J. Hughes, Eſq; p. 19. Hughes's Works, Vol. II. p. 79.

wonder if this afforded him a large ſubject for that matchleſs vein of juſt and well directed ſatire, which at laſt proved as fatal to this modern Roman, as the gift of eloquence did to that famous antient one Cicero; ſo dangerous it is to poſſeſs any extraordinary talent which keeps the vices of men in awe, and will not ſuffer them to do miſchief ſecurely.

And this brings us to give ſome account of Boccalini's life, all that is left us remarkable of him, may be diſpatched in a few lines, which let the reader take as follows.

He was born at Rome about the latter end of the ſixteenth century: his father was an architect, and probably not very illuſtrious in his profeſſion, for it ſeems he wanted wherewithal to encourage his ſon in his ſtudies; but Boccalini's way was to be made purely by his own merit, and though he ſet out into the world under great diſadvantages, he ſoon met with conſiderable friends, who were charmed with his ingenious and entertaining qualities. The Italian academies received him with the greateſt pleaſure imaginable, and honoured him with marks of their eſteem. He had a large ſhare of wit and humour, which early took an unlucky turn towards ſatire, and the applauſe he met with for ſome curious pieces of that kind, which he communicated in manuſcript to his familiars, drew him on to further attempts; ſo that thinking himſelf ſecure under the protection of his illuſtrious patrons, and particularly the Cardinals Borgheſe and Cajetan, he publiſhed his Advices from Parnaſſus, and afterwards his Political Touchſtone. Both theſe pieces met with extraordinary applauſe, but the latter was very bold and ſevere, and as our ingenious Lord Bacon expreſſes it, He that follows truth too cloſe at the heels, may have his brains kickt out; ſo it fared with Boccalini, for the Spaniards who were chiefly laſhed in that ſatire, complained againſt him and purſued their revenge. This drove him in a fright to Venice, where he found new patrons, and there he employed his hours of ſtudy in writing political diſcourſes on Tacitus, which how well he could have performed, the reader may judge by ſeveral paſſages in the following advices. But this work was cut ſhort by a bad accident, for while his friend with whom he lodged was gone out early one morning, and left Boccalini in bed, four bravo's ruſhed into his chamber and beat him to death with ſand bags: diligent enquiry was made after the contrivers of this villainy, but they were never diſcovered. Thus died Trajano Boccalini, much regretted among men of the beſt learning and principles.'

We have mentioned in the text, that the proprietors of this new tranſlation, relied very much upon the credit which the reviſion of it by Mr Hughes would give it in the learned world. This ſhocked the natural modeſty of our author to ſuch a degree, that he excuſed it in the following manner, which will certainly endear him to every candid reader.

'The perſons concerned in this tranſlation, having thought that my reviewing the ſtile might be uſeful to them, I was prevailed with to do ſomething in this kind, of which I have given ſome account in the preface. I wiſh the advantage the book may have received by this ſmall aſſiſtance, were at all proportionable to the pleaſure with which it entertained my leiſure hours. I cannot think the prefixing my name any recommendation of it; but ſince they deſired it, I thought it not worth while to refuſe ſo ſlight a gratification.'

J. HUGHES.

[*F*] *It might have paſſed for an original.*] The title of our author's tranſlation runs at large thus:

Fontenelle's *Dialogues of the Dead, in* three *Parts*. I. *Dialogues of the* Antients. II. *The* Antients *with the* Moderns. III. *The* Moderns; *tranſlated from the* French, *with a Reply to ſome* Remarks *in a* Critique *called*, The Judgment of *Pluto*, &c. *and two* Original Dialogues. London: *Printed for* Jacob Tonſon, *within* Gray's-Inn-Gate, *next* Gray's-Inn-Lane, 1708.

This work is dedicated to Thomas Earl of Wharton, and in that dedication he has in a ſingle paragraph done juſtice to his patron, his author, and himſelf. It runs thus, 'I appeal to all the World who knows my author's character, whether I could have made a more proper application. His wit, his learning, his knowledge of mankind, his exquiſite taſte in all that is polite; the fire of his imagination; the uncommon felicity of his eloquence, and the ready turn of his expreſſion, are reaſons which the public will think very natural to direct me in this addreſs to your Lordſhip. And ſince my particular obligations have made it a duty, I could not omit any opportunity of acknowledging your Lordſhip's favours, which are attended with all the circumſtances proper to leave the moſt grateful impreſſions.'

The diſcourſe prefixed to the dialogues in defence of his author, is equally ſhining and ſolid, but in a manner ſo very different from the reſt of Mr Hughes's works, that it gives one a very high idea of his capacity of ſuiting his thoughts and his language, exactly to what ever ſubject employed his care. The tranſlation is at once both lively and correct, and therefore we need not wonder, that it met with a very unuſual honour abroad (9), being mentioned in the French Literary Journal, as extremely well wrote, and very exact. Indeed he entered ſo thoroughly into the ſpirit of his author, that we find at the cloſe of his performance, two dialogues entirely in his manner; and it is very much to be regretted, that he did not give us at leaſt a volume. The *firſt* of theſe dialogues is between *Lucius Junius Brutus*, and *Auguſtus Cæſar*; to ſhew that the greateſt characters may be criticized. The *other* between *Empedocles*, and *Lucilio Vanini*, to prove that multitudes have been martyrs to folly.

(9) Journal des Sçavans, Tom. XLI. p. 214.

Some

and his exemplary candour and modeſty, had by this time introduced him, not only to the moſt conſiderable members of the Republic of Letters, ſuch as Mr Addiſon, Mr Congreve, Mr Pope, Mr Southerne, Mr Rowe, and many others (*s*); but alſo to ſome of the greateſt men in the kingdom, and amongſt theſe, to Thomas, Earl, and afterwards Marquis, of Wharton, who, to expreſs his regard for Mr Hughes, offered to carry him over, and provide for him, when appointed Lord-Lieutenant of Ireland. But depending on the promiſes of another great man, who had undertaken to diſpoſe of him more agreeably at home, he declined that obliging offer, which brought upon him a diſappointment that gave him ſome uneaſineſs, though he had nothing in him of a narrow or ſelfiſh ſpirit (*t*). He amuſed himſelf about this time with the tranſlation of one of Moliere's plays, which he performed with equal judgment and ſpirit, and entertained ſo great a liking for that excellent comic writer, that at his leiſure hours he turned ſeveral ſcenes of his into Engliſh; one of which, that deſerves the public notice, the reader will meet with in the notes (*u*) [G]. His friend Mr, afterwards Sir Richard, Steele, having ſet up that agreeable paper

(*s*) Duncombe's Account of the Life and Writings of J. Hughes, Eſq; p. 5.

(*t*) From the information of a friend of Mr Hughes's.

(*u*) Duncombe's Account of the Life and Writings of J. Hughes, Eſq; p. 16. Hughes's Works, Vol. I. p. 221.

Some years after he tranſlated Mr *Fontenelle*'s diſcourſe concerning the *Antients* and *Moderns*, with which Sir William Temple was ſo highly offended, which was printed with Mr Glanville's tranſlation of the ſame author's *Converſations* with the *Lady* on the *Plurality* of *Words*, which Sir William has as highly applauded. The publick is alſo indebted to Mr Hughes for another tranſlation, which from the nature of it's ſubject, as well as the beauties beſtowed upon it by his pen, has been better received than the reſt, and ran through many editions. The title at large runs thus.

Letters of Abelard *and* Heloiſe, *to which is prefixed, a particular Account of their Lives, Amours, and Misfortunes, extracted chiefly from Monſieur* Bayle.

[G] *In the notes*] The Miſanthrope, or Man Hater, which is by many of the beſt critics eſteemed the moſt perfect of Moliere's performances, was tranſlated and publiſhed by Mr Hughes in the month of May 1709, with an excellent preface. This play has been ſince reprinted in the compleat collection of Moliere's plays in Engliſh, but without any notice of the tranſlator, and the preface omitted, which is the reaſon that we have preſerved it here, ſcarce any copies of the original edition being to be met with, and this piece become as rare as if it was a MS.

'Though that variety of thought and humour, which is uſual in free governments, has been generally obſerved to furniſh the Engliſh writers of comedy, with advantages above thoſe of any other nation; yet ſince the chief of them have not ſcrupled to borrow ſometimes from Moliere, they have by thus acknowledging his merit, made it unneceſſary to offer any thing in excuſe of the following tranſlation. In which the original is followed as ſtrictly as poſſible, which perhaps it muſt not have been, if intended for the ſtage.

The French Drama is indeed very different from ours. Our writers chooſing to neglect the mechanic beauties, have commonly introduced more perſons than were neceſſary; divided the action by under-plots; multiplied the incidents, lengthened the time beyond a due proportion, and ſhifted the ſcene frequently in the ſame act and to very diſtant places: yet they ſhine wonderfully in the dialogue and raillery, and depending wholly on the force and ſpirit of their writing, have thought it no defect not to be eſteemed the moſt regular builders.

The French on the other hand chiefly valuing themſelves upon criticiſm, in which they are allowed to excel, have been very regular in the ſtructure of their plots: that of the following comedy is formed with an open plainneſs and ſimplicity, which when there is no genius wanting in the execution, has certainly a proper grace. There are but three perſons introduced in the firſt act; two of them continue the whole time. The place is not changed throughout the whole play; and what they call the Liaiſon des Scenes, is obſerved ſo ſtrictly, that the ſtage is not once left by all the perſons together, except at the end of an act.

But theſe it muſt be owned are beauties of an inferior rank. What makes this piece much more conſiderable, is the remarkable vein of good ſenſe and genteel converſation that runs through it, without any mixture of low humour, and eſpecially the part of Alceſtes, which one may almoſt venture to ſay, would have been ſpoiled in any hand but Moliere's. It required a judgment of the fineſt diſtinction, to repreſent in ſuch lively colours, the infirmity of a man of the juſteſt ſenſe, who is always angry without brutality, and a bold ſpeaker without malice or ill manners. There is beſides in this and the part of Celimene, if I may be allowed to borrow a word from painting, the fineſt contraſt or oppoſition of character that could poſſibly have been invented. Her wit, which is her only good quality, needs a pardon, while his faults are beautiful; and that too great ſeverity of taſte which unfits him for the world, qualifies him to make the trueſt reflections upon it imaginable: for which too the poet has judiciouſly prepared him by a law-ſuit, to keep him conſtantly out of humour, and ſhew him in the ſtrongeſt lights.

It is certain that the author deſigned this for the entertainment of the better ſort of judges, and he ſucceeded in it accordingly: for Rapin, the exacteſt critic of his nation, and who frequently treats his countrymen with the utmoſt ſeverity, declares, that in his opinion, the Miſantrope is the moſt finiſhed, and yet the moſt ſingular character that was ever brought upon the ſtage. And the beſt of their poets, Boileau, even when he cenſures Moliere for too much humouring the people in ſome of his farces, marks out this comedy as a model of the beſt kind.

Dans ce ſac ridicule au Scapin s'enveloppe
Je ne reconnois plus l'auteur du Miſantrope.

When in his ſack I ſee poor Scapin toſt,
The author of the Miſanthrope is loſt.

On the other hand, the crowd of the audience were very little entertained at the firſt three repreſentations of it. They looked for no pleaſure, but the groſs diverſion of laughing, and were diſappointed in meeting with ſomething too refined for their taſte; ſo that at the fourth time of it's acting, the author was forced to give them what they liked better, one of his worſt farces at the end of it. By that means however they were brought to be acquainted with it by degrees, and had learned to like it ſo well, that the next time there was no need of the farce, but the Miſantrope was received with the general applauſe of the town, as it had before gained that of the Court and the beſt judges.

And this may ſerve to excuſe the author's trifling a little in that ſhort ſcene at the end of the fourth act, where Alceſtes's footman delivers a meſſage to his maſter. The ſaucy pertneſs of a French valet de chambre, may make it ſeem not unnatural; and the lightneſs of the humour, was probably intended to relieve the gravity of the ſcene immediately preceding it.

When I mentioned the difference between the French ſtage and ours, I ought to have taken notice that this comedy is entirely written in rhyme. But though cuſtom may have eſtabliſhed that effeminate practice among them, and Moliere has ſhewn a facility in it, which is indeed wonderful, there was no reaſon why it ſhould be followed in a tranſlation. It was therefore thought a more likely way of doing juſtice to his thoughts, to turn them into proſe, with ſuch an air as ſhould appear more natural for dialogue and converſation.

There is one thing, which I hope every reader will obſerve, that notwithſtanding the juſt cenſure dramatic poetry has frequently incurred by the looſeneſs of ſome writers, who in their plays have tranſcribed their own manners; there is nothing in this comedy but what is decent, moral, and inſtructive. I wiſh we had no occaſion to be taught by our neighbours in this.

But

paper the Tatler, Mr Hughes contributed his aſſiſtance, as he likewiſe did in the Spectator (*w*). If the reader has a mind to be acquainted with the particular papers he wrote, which were as well received as any, in either of thoſe celebrated collections, he will meet with the neceſſary informations at the bottom of the page [*H*]. In 1712, he tranſlated the

(*w*) Duncombe's Account of the Life and Writings of J. Hughes, Eſq; p. 24, 25.

But ſince we have often appeared ſo fond of learning their follies, why may we not without offence, recommend the imitation of their virtues? and as our beſt writers excel moſt of theirs in wit, they may at a very cheap rate, if they pleaſe, equal them in regularity and decorum.'

Our author afterwards tranſlated the firſt Act of the Miſer, but how he came not to finiſh that play, is not come to our knowledge. The following ſcene may be conſidered as a detached piece, admirable in it's kind, and elegantly tranſlated; from whence the Engliſh reader may be convinced, that if there be any thing flat, dry, or unpleaſant, in any of the comedies of this author, they are not to be placed to the account of Moliere, but to his who attempted to put them into Engliſh, which certainly is no eaſy taſk, and therefore the greater praiſe is due to him whoſe verſion has the air of an original.

(10) Communicated by Mr Duncombe to the author of this article.

Buffle and *Frankly* meeting (10).

Buff. Dear Mr Frankly, you are well met. I was going to look for you.

Frank. Upon what occaſion pray?

Buff. You muſt know I have an affair upon my hands, a matter, I aſſure you, of conſequence; and it is always prudent upon ſuch occaſions, to take the advice of ſome ſolid and judicious friend.

Frank. I'm obliged to you. Pray what is it?

Buff. I'll tell you. But firſt you ſhall ſwear not to flatter me. Don't imagine I am to be put off with a complement: I muſt have your real opinion.

Frank. You ſhall.

Buff. I know the way of the world; ſincerity is ſcarce. But I deſpiſe the man who calls himſelf my friend and will not ſpeak freely.

Frank. Well, you are in the right. But to the affair.

Buff. You promiſe me then, upon the faith of a friend, that you'll be very ſincere with me.

Frank. I do. But your affair?

Buff. Why, what do you think if I ſhould marry.

Frank. Who! You marry! What my friend Mr Buffle marry!

Buff. Yes, I; I myſelf, in my own proper perſon; your friend and ſervant Jeffrey Buffle.

Frank. I can't tell. You muſt anſwer me a queſtion or two before I can adviſe you——In the firſt place how old are you?

Buff. How old am I?——I don't know——How old?——Why what ſignifies age? I am ſound, as you ſee, and hearty,——troth, I can't very well tell how old?

Frank. No! That's ſtrange. Pray how old were you when we firſt became acquainted?

Buff. I don't know——twenty, I believe; it could not be more.

Frank. I think we were eight years together at Rome.

Buff. Well.

Frank. Seven years I have heard you ſay you were in France.

Buff. Well.

Frank. How long did you ſtay afterwards in Holland?

Buff. Five years and a half.

Frank. Do you remember in what year you came home to England?

Buff. In the year 1695.

Frank. From 1695, to 1713, is eighteen years I take it; and five years in Holland, is three and twenty. Seven in France, makes thirty. Eight at Rome, is thirty-eight, and twenty is fifty-eight, ſo that by your own account, Mr Buffle, you muſt be now about your fifty-eighth or fifty-ninth year. Is not this true?

Buff. True! No. 'Tis impoſſible. You are miſtaken, Mr Frankly; you are out in your reckoning.

Frank. Pardon me, I'm not out in my reckoning. Look you, Mr Buffle, you have made me promiſe to be ſincere with you; and therefore in plain terms, marriage, in my opinion is not your buſineſs. It is a matter on which young people ſhould think deliberately before they enter upon it, and old ones not at all; and if it ſometimes happens to be a folly, how inexcuſable would that folly be, at an age in which we are expected to be wiſe? I ſpeak my naked thoughts. Marriage is honourable, but for a man of your years to think of marrying! Come, come, you are well as you are at preſent, and why will you venture a change which may prove for the worſe?

Buff. Hark you, Frankly, I am reſolved to marry d'ye ſee? I have not told you yet who the dear creature is: look you, Sir, I ſhall not be ſo ridiculous as you imagine.

Frank. O that alters the caſe, you did not tell me that.

Buff. Such a woman, Mr Frankly, ſo fine a woman! In ſhort I am in love with her.

Frank. You are in love you ſay?

Buff. Poſitively, and I have ſettled matters with her father.

Frank. With her father!

Buff. Moſt certainly. You muſt know we are to be marry'd to-morrow morning.

Frank. O your humble ſervant, marry by all means.

Buff. Why aye——I can't do better, I think my age quoth'a? Why what ſignifies my age? I am no cripple, you ſee I can walk; I don't want either a coach or a chair. I have a ſtomach like a ploughman ——I deſpiſe your young dogs of thirty. Look in my face, I am hale, freſh, and ſtrong, and have all my teeth in my head as ſound as a Blackamoor's—My age quoth'a?——Ha, Mr Frankly, what d'ye ſay to me now.

Frank. Marry.

Buff. I will. You muſt know I had once a great averſion to matrimony; but I have altered my opinion, I would be loth the race of the Buffles ſhould be loſt.

Frank. O by no means.

Buff. Then you adviſe me to marry?

Frank. Adviſe you! you muſt, you ſhall marry, I'll never forgive you if you don't; you loſe time, diſpatch your affair as ſoon as poſſible.

Buff. Is that your opinion?

Frank. Certainly.

Buff. Dear Mr Frankly, let me embrace you. Well a faithful friend is a jewel.

Frank. One word more. Pray who is to be the happy Lady?

Buff. Arietta.

Frank. Arietta! What, the young, the bright, the gay Arietta?

Buff. The ſame.

Frank. Bleſs me! What Trapwell's fine daughter?

Buff. Aye.——What, you know her? Ha, what do you ſay to it Mr Frankly?

Frank. O marry, marry her by all means. You'll be finely marry'd.

Buff. D'ye think ſo? Well, you've charmed me: I am infinitely obliged to you for your advice. Pray come to my wedding.

Frank. I will——The young, the gay, the beautifull Arietta! to Mr Jeffrey Buffle, who is but fifty-eight!——A moſt agreeable match! A delicious match! Mr Buffle, I kiſs your hands.

Buff. Honeſt Frankly, fare thee well——Hark ye, beſure you don't fail to come——I don't know how it happens, but all the world is merry that hears of this match; I ſhall be prodigiouſly happy. Well, I am now the moſt ſatisfied of mortals.

[*H*] *At the bottom of the page.*] Theſe admirable papers, which, in point of invention, do honour not barely to this age, but to this nation, afforded every genius an opportunity of exerting itſelf, and of taking the ſenſe of the public on the performance, without appearing in perſon at the bar of that tribunal, before which the ableſt writers do not come without concern. Mr Hughes, as we have already obſerved, had an early turn to eſſay writing; could vary his ſtile according to his

'the Abbé Vertot's Revolutions in Portugal,' and thereby gratified the Engliſh reader with a very curious piece of hiſtory, written in a very peculiar manner, and with equal vivacity of ſtile and ſentiment; to which he did ſo much juſtice, that the tranſlation was as well received in England as the work itſelf had been in France (*x*). The celebrated Mr Addiſon, whoſe character was equally reſpected as an excellent poet and a judicicious critic, had a ſincere regard for, and a high opinion of, our author's merit; and being ſenſible of his too great diffidence, preſſed him extremely to publiſh an Ode to the Creator of the world, compoſed from the fragments of Orpheus, and which he thought very capable of inſpiring the minds of his readers with a rational and elevated piety (*z*). In deference to that great man's opinion, Mr Hughes accordingly gratified the public with that admirable performance, and his friend joined his public applauſe, which had a juſt weight with the world in favour of a piece which he had privately approved (*a*) [*I*]. The ſame year he brought upon the ſtage his Opera of Calypſo and Telemachus; in favour of which, under the patronage of Duke Hamilton, for Mr Hughes's merit and modeſty procured him friends with all parties, he raiſed a conſiderable ſubſcription. The Italians were alarmed at this; and when it was on the point of being acted at the theatre in the Haymarket, they obtained from the then Lord-Chamberlain, the Duke of Shrewſbury, an order either to act at common prices, or not to act at all (*b*). Under this diſcouragement, however, it was performed, and performed with applauſe; juſtifying fully the ſenſe of it's author, that the Engliſh language, though not ſo ſoft, is nevertheleſs as capable of harmony as the Italian (*c*). He had the honour to find, beſides the approbation of the public, the judgment of the moſt able critics on his ſide, and, which muſt have given him ſingular ſatisfaction, the open teſtimony of Mr Addiſon in his favour (*d*) [*K*]. We learn from

his ſubject, and a very general fund of knowledge, as well in men as books, ſo that there is nothing ſtrange in his ſucceeding ſo well in theſe ſmall pieces.

In the TATLER, he wrote:

No. 64. A Letter ſigned *Joſiah Couplet.*
No. 73. A Letter againſt *Gamſters*, ſigned WILLIAM TRUSTY.

Mr *Tickell* alludes to this letter, in a copy of verſes addreſſed to the *Spectator*. No. 532.

From Felon Gameſters *the raw* 'Squire *is free,*
And Britain *owes her reſcu'd* Oaks *to Thee.*

No. 113. The Inventory of a Beau.

In the SPECTATOR, the following papers were his:

No. 33. A Letter on the Art of improving Beauty.
53. A Second Letter on the ſame Subject.
66. Two Letters concerning fine Breeding.
91. The Hiſtory of *Honoria*: Or the *Rival Mother*.
104. A Letter on Riding Habits for Ladies.
141. Remarks on a Comedy entitled, The *Lancaſhire Witches*.
210. On the Immortality of the Soul.
220. A Letter concerning Expedients for Wit.
230. All, except the laſt Letter.
231. A Letter on the Awe of appearing before Public Aſſemblies.
237. On Divine Providence.
252. A Letter on the Eloquence of Tears and fainting fits.
302. The Character of *Emilia*.
311. A Letter from the Father of a great Fortune.
375. A Picture of Virtue in Diſtreſs.
525. On Conjugal Love.
537. On the Dignity of Human Nature.
541. Rules for Pronunciation and Action, chiefly collected from *Cicero*.
554. On the Improvement of *Genius*, illuſtrated in the Characters of the Lord *Bacon*, Mr *Boyle*, Sir *Iſaac Newton*, and *Leonardo da Vinci*.

[*I*] *Which he had privately approved.*] In a very ſhort introduction prefixed to this ode, our author obſerves, that whether thoſe fragments from which it was compoſed, were indeed written by that celebrated father of poetry and muſic, who preceded Homer, or by Onomacritus, who lived about the time of Piſiſtratus, and only contain ſome of the doctrines of Orpheus, is a queſtion of little uſe or importance. This ode conſiſts of ten ſtanza's, and Mr Addiſon at the cloſe of one of his criticiſms upon Milton, gives it the following character (11). 'I cannot conclude this book upon the Creation, without mentioning a poem which has lately appeared under that title. The work was undertaken with ſo good an intention, and is executed with ſo great a maſtery, that it deſerves to be looked upon as one of the moſt uſeful and noble productions in our Engliſh verſe. The reader cannot but be pleaſed to find the depths of philoſophy enlivened with all the charms of poetry; and to ſee ſo great a ſtrength of reaſon, amidſt ſo beautiful a redundancy of the imagination. The author has ſhewn us that deſign in all the works of nature, which neceſſarily leads us to the knowledge of it's firſt cauſe. In ſhort, he has illuſtrated by numberleſs and inconteſtable inſtances, that divine wiſdom which the ſon of Sirach has ſo nobly aſcribed to the Supreme Being in his formation of the world, when he tells us, that he created her, and ſaw her, and numbered her, and poured her out upon all his works.'

(11) Spectator, No. 339.

[*K*] *Of Mr Addiſon in his favour.*] The provocation which our author had received from the meaſures taken to embarraſs, or even to defeat, the performance of his opera, might have excuſed at leaſt, his revenging himſelf from the preſs for the injury he had ſuſtained in the theatre. But ſuch was the habitual calmneſs of Mr Hughes, ſuch the natural candour of his temper, that without taking notice how ill he had been uſed, the point he principally labours in his preface, is to ſhew that he was in the right; that it was not the affectation merely of introducing foreign diverſions, that brought the Italian opera here into ſuch credit; that this rather aroſe from the refined taſte, and correct judgment of the Engliſh nation, always deſirous of having the moſt perfect models before them, not barely to gaze at, but to work from; that therefore the encouraging Engliſh opera's, was the natural and proper conſequence of bringing Italian performances into faſhion; and that it was falſe and pedantic, to believe the Italian tongue had an excluſive privilege of being aptly and ſucceſsfully ſet to muſic. 'He owns, that from the frequency of vowels, it is ſmooth and melodious; but he likewiſe obſerves, that the redundancy of them makes it ſo open and looſe, as to border on effeminacy. He inſiſts, that conſonants are ſometimes neceſſary to bind the language; and that Engliſh words, artfully diſpoſed, are capable in every reſpect, of conveying the moſt delightful harmony. ——— Having eſtabliſhed theſe principles, he proceeds thus (12).

'But what is certainly of much more conſequence in dramatical entertainments, is, that they ſhould be performed in a language underſtood by the audience. One would think there ſhould be no need to prove this. The great pleaſure in hearing vocal muſic, ariſes from the aſſociation of the ideas raiſed at the ſame time by the expreſſions and the ſounds. Where theſe ideas are ſeparated, half the impreſſion is wanting; and where they are improperly joined, it is imperfect.

(12) Hughes's Works, Vol. II. P. 13.

from the preface prefixed to the Guardian, that Mr Hughes, amongſt the other great wits and able writers of thoſe times, contributed not a little to the ſupport of that agreeable as well as uſeful work; but we have no account of the particular papers that he wrote, except one, which contains very judicious remarks upon the tragedy of Othello, in which the beauties and the blemiſhes of that affecting play are critically and candidly repreſented. Amongſt the other projects formed by Mr Tonſon, in conſequence of his acquaintance with the moſt conſiderable wits of the age, was an Engliſh tranſlation of the works of Lucan, and, as was very natural, he applied himſelf to Mr Hughes, who at his requeſt tranſlated the tenth book with great elegance; but by ſome means or other this deſign was then laid aſide, and Mr Rowe afterwards undertook and accompliſhed the tranſlation of the whole, though he died before it was publiſhed. It is the more neceſſary to ſet this little tranſaction in a true light, to prevent an apprehenſion that either of theſe gentlemen had ever an intention to interfere with the other in a matter of this nature, which had been inconſiſtent with that friendſhip which they profeſſed for each other, and which, as we have ſhewn in the text, ſubſiſted 'till the death of Mr Rowe without interruption or coolneſs. As the world was obliged to Mr Addiſon for the ſublime ode beforementioned, we are aſſured, that it owed to Mr Hughes the prevailing upon his friend, contrary to the judgment of others, and amongſt them one of the moſt able and eſteemed critics of of that time, the bringing his tragedy of Cato upon the ſtage (*e*). The hiſtory of this tranſaction is curious, and the conduct of Mr Hughes throughout, ſo perfectly conſiſtent with the character he had eſtabliſhed in point of probity and candour, that we have given it a place in the notes, for the ſatisfaction of the inquiſitive reader (*f*) [*L*]. His next performance

(*e*) Duncombe's Account of the Life and Writings of J. Hughes, Eſq; p. 20, 21.

(*f*) See the note.

'imperfect. It is probable too, that the pleaſure we 'receive from the moſt pathetical ſtrains of inſtrumental muſic, is in part aſſiſted by ſome ideas, which we 'affix to them of paſſions, which ſeem to be expreſſed 'by thoſe ſtrains. If the airs in opera's may be heard 'with delight; for the ſame reaſon, even when the 'words are not underſtood, yet it is impoſſible the recitative ſhould give pleaſure which can raiſe no ſuch 'ideas, this being not ſo poperly ſinging, as ſpeaking 'in muſical cadences. And the uſe of it ſeems to be 'introduced, for the very ſame reaſon which is given 'by Ariſtotle for the eſtabliſhing the uſe of the Iambick verſe in the Greek tragedy, which is that, 'though it has not the charms of ſome other kinds 'of verſe, yet it is more proper for action and 'dialogue, as it approaches nearer to common 'ſpeech.'

(13) Spectator, No. 405.

Mr Addiſon opens one of his Spectators thus (13). 'I am very ſorry to find by the Opera bills for this 'day, that we are likely to loſe the greateſt performer 'in dramatic muſick that is now living, or that 'perhaps ever appeared upon a ſtage. I need not acquaint my reader, that I am ſpeaking of Signior 'Nicolini. The town is highly obliged to that excellent artiſt, for having ſhewn us the Italian muſic 'in it's perfection, as well as for that generous approbation he lately gave to an opera of our own country, in which the compoſer endeavoured to do juſtice 'to the beauty of the words, by following that noble 'example which has been ſet him by the greateſt 'foreign maſters in that art.'

This opera was that of *Calypſo* and *Telemachus*, and the compoſer Mr *Galliard*, to whom alſo our author in his preface makes the higheſt acknowledgments, and is even ſo modeſt to ſay, that he had offered a much more prevailing argument than any himſelf could urge, to ſhew, that the Engliſh language is capable of the moſt agreeable graces of harmony.

[*L*] *Of the inquiſitive reader.*] We ſhall give this ſingular piece of poetical hiſtory in the very words of the author, who from his own knowledge relates it (14). 'It has been often ſaid, by very good judges, that Cato was no proper ſubject for a dramatic poem: that the character of a Stoic philoſopher is inconſiſtent with the hurry and tumult of action and paſſion, which are the ſoul of tragedy. That the ingenious author miſcarried in the plan of his work, but ſupported it by the dignity, the purity, the beauty, and the juſtneſs of the ſentiments.

(14) Eſſay on Criticiſm, Lond. 1728. p. 6.

This was ſo much the opinion of Mr Maynwaring, who was generally allowed to be the beſt critic of our time, that he was againſt bringing the play upon the ſtage, and it lay by unfiniſhed many years. That it was played at laſt was owing to Mr Hughes. He had read the four acts which were finiſhed, and rightly thought it would be of ſervice to the public to have it repreſented at the latter end of Queen Anne's reign, when the old Engliſh ſpirit of liberty was as likely to be loſt, as it had ever been ſince the Conqueſt. He endeavoured to bring Mr Addiſon into his opinion, which he did ſo far, as to procure his conſent that it ſhould be acted, if Mr Hughes would write the laſt act, and he offered him the ſcenary for his aſſiſtance, excuſing his not finiſhing it himſelf, on account of ſome other avocations. He preſſed Mr Hughes to do it ſo earneſtly, that he was prevailed on and ſet about it. But a week after ſeeing Mr Addiſon again, with an intention to communicate to him what he had thought of it, he was agreeably ſurprized at his producing ſome papers, where near half of the act was written by the author himſelf, who took fire at the hint, that it would be ſerviceable; and upon a ſecond reflexion, went through with the fifth act. Not that he was diffident of Mr Hughes's ability, but knowing that no man could have ſo perfect a notion of his deſign as himſelf, who had been ſo long and ſo carefully thinking of it. I was told this by Mr Hughes; and I tell it to ſhew, that it was not for the love-ſcenes that Mr Addiſon conſented to have his tragedy acted, but to ſupport the old Roman and Engliſh public ſpirit, which was then ſo near being ſuppreſſed by faction and bigotry.'

Soon after the Tragedy of Cato was acted, Mr Hughes ſent the author a copy of verſes in praiſe of it, which were afterwards printed before it, with ſeveral other copies. On this occaſion, and a reſolution taken not to publiſh it immediately, Mr Addiſon wrote the following letter (15).

(15) Duncombe's Account of the Life and Writings of John Hughes, Eſq; p. 22, 23.

Dear Sir, 24 April, 1713.

'This is to acquaint you, that I am forced to practiſe a great piece of ſelf-denial. In ſhort, I muſt 'deprive my play of the noble ornament you deſigned 'for it. My friends, who all of them concur with me 'in admiring your beautiful copy of verſes, are however 'of opinion, that it will draw upon me an imputation 'of vanity; and as my play has met with an unexpected reception, I muſt take particular care not to aggravate the envy and ill-nature that will riſe on courſe 'upon me. Beſides, to tell you truly, I have received 'other poems upon the ſame occaſion, and one or two 'from perſons of quality, who will never pardon me, 'if I do not give them a place at the ſame time that I 'print any other.

'I know your good ſenſe and friendſhip towards me, 'will not let you put a wrong interpretation on this 'matter; and I am ſure I need not tell you, with how 'much ſincerity and eſteem, I am,

SIR,

Your moſt obliged, and moſt faithful humble ſervant,

To Mr Hughes. J. Addison.

To this Mr Hughes returned the following modeſt reply.

Dear

performance which attracted the attention of the public, was his edition of Spenſer's Works, which the lovers of Engliſh hiſtory, as well as poetry, had long wiſhed, and which, as our author carefully and judiciouſly performed, ſo it was perfectly well received (g). There was, indeed, no man of his time more equal to the taſk; and, on the other hand, there was probably no taſk that could have proved more acceptable to him. Spenſer and Hughes ſeem to be allied by genius. Both great poets, both remarkable for their ſtrict morals, both public ſpirited men, both well received by the great, and yet neither of them much indebted to fortune (b). It was happy for the memory of Spenſer, that the revival and illuſtration of his writings were committed to a perſon of ſuch candour and capacity. It muſt have been a very pleaſing labour to Mr Hughes, to reſtore the ſenſe, to revive the honour, to repair and deck with freſh garlands, the monument of ſo worthy a man. The ſpirit and elegance with which he diſcharged his truſt as an editor, are inconteſtable proofs of all that we have advanced (i) [M]. The ſame year his Apollo and Daphne appeared upon the ſtage, in the fate of which his friend Sir Richard Steele intereſted himſelf very much (k). Their acquaintance had been of a long ſtanding; and we may remark, to the honour of our author, that, though he very eaſily made, he very rarely loſt, a friend [N]. He was no leſs in the good graces of Mr Pope, of whom he had a very high opinion, and a generous and kind concern for the ſucceſs of his Homer; which, as it was very natural for him to do, Mr Pope received with a proper degree of gratitude and reſpect, as his own letters very clearly expreſs, which for that reaſon have a place given them in the notes (l) [O]. Our author lived alſo in a conſtant courſe of intimacy

(k) Hughes's Works, Vol. II. p. 109.

(l) Communicated by Mr Duncombe.

Dear Sir, 25 April, 1713.

'I am extremely obliged to you for your kind letter. The warm expreſſions of friendſhip in it, give 'me a much more ſenſible pleaſure than any I could 'receive from the approbation of my verſes. I 'own, when they were writ, I had no thoughts of 'your printing them; and though nothing would flatter me ſo much in the making them public, as the 'ſatisfaction of ſeeing my name with your's: yet I am 'one of thoſe friends, who think your preſent reſolution perfectly right, and entirely acquieſce in your 'reaſons. I cannot but applaud, at the ſame time, 'your chaſte enjoyment of fame, which I think equally 'above envy, and incapable of receiving any addition.

I am with all poſſible eſteem,

SIR,

Your moſt affectionate, and moſt

obedient humble ſervant,

To Mr ADDISON. J. HUGHES.

[M] *Of all that we have advanced.*] This work was printed by ſubſcription, and his reputation being now thoroughly eſtabliſhed, was of greater conſequence to Mr Hughes, than any thing he had hitherto publiſhed. It is dedicated to John Lord Somers, whom he complements upon his having brought Milton into reputation, by patronizing a magnificent edition of his Paradiſe Loſt, which induced him to put Spenſer, who was in ſome ſort Milton's maſter, under his Lordſhip's protection likewiſe. His life of Spenſer is ſuccinct, but written with great ſolidity, affords a fair and true picture of the author, without the leaſt mixture of fuſtian panegyric. The diſcourſe on allegoric poetry, is a clear, learned, and comprehenſive ſyſtem of the rules, requiſite to be underſtood, in order to writing or judging properly of that kind of poetry; and is not only inſtructive and entertaining, but very curious likewiſe, as it was a ſubject untouched by any of the critics who went before him. The remarks on the *Fairy Queen*, are very judicious and impartial, give the reader a true idea of the nature, deſign, and diſpoſition of that work, which was extremely neceſſary towards it's being generally and thoroughly underſtood. In this ſhort piece, Mr Hughes has pointed out the principal beauties of that ſingular poem, ſome of which are perhaps ſuperior to thoſe of any other, in any age or language. He has likewiſe ſhewn the blemiſhes in a manner becoming a candid critic, and one who thought himſelf obliged to furniſh his reader with all the information that lay in his power. His diſcourſe on the *Shepherd's Kalendar*, and the ſmaller pieces of Spenſer, is likewiſe very ſenſibly and correctly written, and contains ſome new and very uſeful reflections on paſtoral and elegiac poetry. There is likewiſe a ſhort, perhaps too ſhort, gloſſary, for the explanation of the antique words, which Spenſer had adopted from his great veneration of Chaucer. On the whole, he may be truly ſaid, to have given an elegant and pleaſing edition of all the works extant of that admired writer, in a manner that did great credit to himſelf, at the ſame time, that it revived and reſtored the writings of one of our greateſt poets, which had ſuffered exceedingly from the incorrectneſs and want of critical judgment in former editors. The proſe works, and the letters of Spenſer and his friend Mr Gabriel Harvey, with the admirable Latin tranſlation of the Shepherd's Kalendar, by Bathurſt, are alſo contained in this edition, which was as kindly received by the public as it deſerved.

[N] *He very rarely loſt a friend.*] It may not be amiſs to obſerve here, that our author had formerly exerciſed his genius upon the ſame ſubject; and we find a cantata with this very title, ſet by Mr Galliard, from which however, he borrowed only the laſt air, which is the ſame both in the cantata and in the maſque. The letter from Sir Richard Steele, was this (16).

(16) Communicated by William Duncombe, Eſq;

St James's-ſtreet,

Dear Sir, Jan. 8, 1715.

A paper called the Town-Talk is particularly deſigned to be helpful to the ſtage. If you have not ſent the Maſque which is to come out on Thurſday to preſs, if you pleaſe to ſend me the copy, it ſhall be recommended to the Town, and publiſhed on Thurſday night with that paper.

Your affectionate friend,

and moſt humble ſervant,

RICHARD STEELE.

[O] *In the notes.*] Our author had ſome years before, interpoſed his advice in reſpect to Mr Pope's tranſlation of Homer, and like a poet and a friend, propoſed it in verſe (17). If the reader will conſider the occaſion, the nature of the counſel given, and the delicacy of the complement, he cannot but conceive highly of our author's capacity as well as candour.

(17) Hughes's Works, Vol. II. P. 90.

O thou, who with a happy genius born,
Can'ſt tuneful verſe in flowing numbers turn,
Crown'd on thy Windſor's plains with early bays,
Be early wiſe, nor truſt to barren praiſe.
Blind was the bard that ſung Achilles' rage,
He ſung and begg'd, and curs'd th' ungiving age;
If Britain his tranſlated ſong wou'd hear,
Firſt take the gold——then charm the liſt'ning ear,
So ſhall thy father Homer ſmile to ſee
His penſion paid,——tho' late, and paid to thee.

The

intimacy and friendſhip with Mr Nicholas Rowe (*m*), and there is ſome reaſon to believe, compoſed, at his requeſt, the New-Year's Ode for the year 1717, as the reader may collect from a paper which is preſerved at the bottom of the page [*P*]. It was in this year that Earl Cowper, to whom he had been but lately made known, appointed him Secretary to the Commiſſions of the Peace, an honourable employment, and of conſiderable value, and conferred upon him many other marks of friendſhip and favour (*n*). Theſe were returned by Mr Hughes with all poſſible teſtimonies of the moſt reſpectful gratitude, as appears by ſeveral poems addreſſed to that noble Lord (*o*), whoſe concern for Mr Hughes was ſo great, that, when he reſigned his own employment, he by a letter, of which Mr Hughes himſelf was the bearer, made it his requeſt to Lord Parker, afterwards Earl of Macclesfield, to continue him in the office which he had beſtowed upon him (*p*); which his Lordſhip, who was alſo a true lover of learning, and a kind patron to learned men, very willingly did; and to him alſo our author paid his tributary verſe, in a manner ſuitable to the favour beſtowed (*q*). About this time he publiſhed, in a little pamphlet, a very ſingular piece, entitled 'CHARON: or, the Ferry-Boat, a Viſion.' This, with Mr Walſh's ESCULAPIUS, or the Hoſpital of Fools, has always been eſteemed, not inferior to any thing preſerved to us from the Antients. It ſtands now very juſtly placed amongſt his works; but we regret the dedication to the Swiſs Count, which, out of prudential reaſons, is omitted, though it contained a ſatirical viſion, no leſs entertaining and inſtructive than the little performance to which it is an introduction (*r*). But the manager of the maſquerades was thought too great a character to be ſo ſlightly treated. Yet, as he was himſelf a man of true humour, with a great fund of good ſenſe, it might poſſibly have kept it's poſt undiſturbed, had he been conſulted. It was highly admired by the judicious Earl Cowper. His circumſtances were now eaſy, but his health, which was never good, grew daily worſe and worſe, from the nature of his diſtemper, a lingering incurable conſumption. Yet happily the decay of his body did not affect either his temper or his mind. The ſame ſerenity, the ſame gentleneſs of ſpirit, the ſame goodneſs of heart, as well as the ſame warmth of friendſhip, and the ſame ſolidity of underſtanding, appeared to the very laſt (*s*). Sir Godfrey Kneller, with whom he had long lived in great intimacy, painted his picture, which, a few weeks before he died, Mr Hughes preſented to Earl Cowper, who wrote him a very affectionate letter in return (*t*). This was not the ultimate act of his zealous gratitude to that noble peer; for, but ten days preceding his death, he compoſed the dedication of his laſt work, written with as much ſpirit, eaſe, and accuracy, as any thing that ever fell from his pen, as the final acknowledgment of his patron's goodneſs (*u*). This laſt work, was his tragedy, entitled the SIEGE of DAMASCUS; in which the ſublimity of the ſentiment, the correctneſs of the language, the propriety of the characters, the pathetic pictures of paſſion, and the judicious diſpoſition of the whole piece, render it worthy of the lateſt cares of ſo eminent a poet and ſo good a man (*w*). It was brought upon the ſtage February 17, 1719-20, the very day it's author died, and

met

The ſame friendly diſpoſition which induced Mr Hughes to interpoſe originally, inclined him to enquire alſo after the progreſs of the undertaking, with a friendly zeal that deſerved and received the approbation of Mr Pope, as the following letter will ſhew (18).

(18) Communicated by William Duncombe, Eſq;

Dear Sir,

Ever ſince I had the pleaſure to know you, I have believed you one of that uncommon rank of authors who are undeſigning men, and ſincere friends; and who, when they commend another, have not any view of being praiſed themſelves. I ſhould be therefore aſhamed to offer, at ſaying any of thoſe civil things in return to your obliging complements in regard to my tranſlation of Homer, only I have too great a value for you, not to be pleaſed with them; and yet I aſſure you, I receive praiſes from you with leſs pleaſure than I have often paid them to your merit before, and ſhall, I doubt not, have frequent occaſions of doing again, from thoſe uſeful pieces you are ſtill obliging us with.

If you was pleaſed with my preface, you have paid me for that pleaſure in the ſame kind, by your entertaining and judicious eſſays on Spenſer. The preſent you make me, is of the moſt agreeable nature imaginable, for Spenſer has been ever a favourite poet to me. He is like a miſtreſs, whoſe faults we ſee, but love her with them all.

What has deferred my thanks 'till now, was a ramble I have been taking about the country, from which I returned home, and found your kind letter, but yeſterday. A teſtimony of that kind, from a man of your turn, is to be valued at a better rate than the ordinary eſtimate of letters will amount to.

I ſhall rejoice in all opportunities of cultivating a friendſhip I ſo truly eſteem, and hope very ſhortly to tell you in town, how much I am,

SIR,

Your obliged and faithful

humble ſervant,

7 Oct. 1715. A. POPE.

Since you deſire to hear of my progreſs in the tranſlation, I muſt tell you, that I have gone through four more books, which with the remarks, will make the ſecond volume.

[*P*] *At the bottom of the page*] There is ſomething in the following letter (19), which does great honour to Mr Hughes; it ſhews that his parts were confeſſed, and at the ſame time his capacity eſteemed, not only by thoſe who were the beſt judges, but by thoſe, who if his candour and friendly turn had not been to the full as conſpicuous as his abilities, would very probably have conſidered him as their rival.

(19) Communicated by the ſame hand.

Covent-Garden,

Dear Sir, Oct. 22, 1716.

As you were ſo good formerly to promiſe me a little of your poetical aſſiſtance, you can never give it me at a time when it will be more uſeful than now. I beg you will be ſo good to think of ſome words for Mr Eccles on the New Year. The entertainment is not to conſiſt of above half an hour in time at moſt; three or four airs, with ſome little recitative between, is what the compoſer will be glad of. I need not tell you,

met with the higheſt applauſe (x) [Q]. After his deceaſe was publiſhed a philoſophical ode of his, called the ECSTACY, in which there is a very fine complement to Sir Iſaac Newton; and the whole, which contains eleven ſtanzas, is not inferior to any in our language (y). The only ſiſter of this gentleman, a moſt ingenious and amiable woman, married, in the year 1726, William Duncombe, Eſq; younger brother of John Duncombe, of Stocks in the county of Hertford, Eſq; who is the editor of Mr Hughes's Works, which he dedicated to the preſent Earl Cowper; adding, to thoſe that had been before made public, ſome poems that were in the hands of the author's dear friend, Alexander Strahan, Eſq; to whom the world is indebted for the ſix firſt books of Virgil's Æneid in Miltonic verſe. Mrs Duncombe died in 1735, leaving an only ſon, the Reverend John Duncombe, M. A. Fellow of Corpus-Chriſti-college in the univerſity of Cambridge. This young gentleman, treading in the ſteps of his worthy uncle, has publiſhed ſome poetical pieces which have been well received, and is the only near relation of Mr Hughes that ſtill ſurvives. We will conclude this article with a ſhort character of our author, from Remarks upon the Writings of our modern Engliſh Poets, not yet publiſhed. This gentleman, Mr John Hughes, was more ſollicitous to deſerve fame than ambitious of poſſeſſing it. He was by nature addicted to ſtudy, and, with a great genius, had a vaſt fund of diligence, an exquiſite taſte, a correct judgment; but, with all theſe qualities, was modeſt, and even diffident to a ſurpriſing degree; which hindered him from collecting or publiſhing many valuable pieces of poetry, and ſome of proſe likewiſe. How well he was acquainted with the Antients, and how proper a uſe he made of that acquaintance, appears from his tranſlations and imitations of Orpheus, Tyrtæus, Pindar, Anacreon, and Euripides, amongſt the Greeks; as well as from Horace, Ovid, Lucan, and Claudian, amongſt the Romans. This did not, however, prejudice him againſt the Moderns; he tranſlated alſo from the French; and his Birth of the Roſe, from a writer of that country, is not the leaſt beautiful piece amongſt his works. His ſkill in muſic, which was exquiſite, gave him ſuch an advantage over other poets, as might with proper encouragement have carried the Engliſh opera as high as the Italian. His talent for lyric poetry was juſtly admired, and his tragedy of the ſiege of Damaſcus was an inſtance that pain and ſickneſs could not abate the fire of his genius, or hinder him from giving marks of it as long as he lived. He did not write, at leaſt he did not publiſh, much; but if we conſider him as invalid almoſt through his whole life, his avocations on account of buſineſs, and that he was but forty-two when he ceaſed to live, and alſo call to mind how correct every thing was that came from him, we muſt retract our aſſertion, and allow he publiſhed a great deal. His character as a critic was at leaſt equal to his character as a poet, but were both exceeded by his character as a man and a chriſtian. His religion was ſincere without ſeverity, his morals ſtrict but not auſtere, his converſation equally inſtructive and pleaſant. To ſay all of him he deſerved would be a hard taſk. Let it ſuffice then——the man whom the Biſhop of Wincheſter eſteemed as a friend, the man whom Mr Addiſon admired as a poet, the man whoſe goodneſs and integrity Mr Pope had in veneration [R]——could be no ordinary man.

(x) Jacob's Lives of the Poets, Vol. I. p. 327.

(y) Hughes's Works, Vol. II. p. 299.

you, that you are the fitteſt man in the world for this occaſion, by your equal knowledge of muſic and poetry. I will only beg you now, for friendſhip's ſake, to have compaſſion on,

Dear Sir,

Your moſt affectionate, and

faithful humble ſervant,

N. ROWE.

[Q] *And met with the higheſt applauſe.*] There have been very few plays which have ſucceeded ſo well as this, more eſpecially when it is remembered, that the author could not attend the performance of his own play, or give thoſe directions before it was brought on, which none but he could give; it was well received however then, and has maintained it's credit ever ſince. It pleaſes the many and the few, and is equally acceptable on the ſtage and in the cloſet; at the firſt repreſentation, there was much notice taken of a ſcene in the third act (20), where the reflections upon death are equally ſolemn and pathetic. Caled, who commands the Saracen army, thus ſpeaks to Phocyas, who is the Hero of the drama.

(20) Hughes's Works, Vol. II. p. 233, 234.

——Thou haſt an hour to live
If thou art wiſe, thou may'ſt prolong that term;
If not——why——fare thee well, and think of death.

Phocyas alone.

Farewel, and think of death!——was it not ſo?
Do murtherers then preach morality?——
But how to think of what the living know not,
And the dead cannot, or elſe may not tell?——
What art thou, O thou great myſterious terror!
The way to thee we know; diſeaſes, famine,
Sword, fire, and all thy ever-open gates
That day and night ſtand ready to receive us.
But what's beyond them——who will draw that veil?
Yet death's not there—No; 'tis a point of time
The verge 'twixt mortal and immortal being.
It mocks our thought!—On this ſide all is life;
And when we've reach'd it, in that very inſtant
'Tis paſt the thinking of!——O! if it be
The pangs, the throes, the agonizing ſtruggle
When ſoul and body part, ſure I have felt it,
And there's no more to fear.

Sir Richard Steele applied this ſcene to the author's dying in a manner while it was acting, in a paper which he dedicated to his memory (21); which was alſo celebrated in a poem by a Lady, and in ſome very fine copies of verſes by William Cowper, William Duncombe, John Bunce, Eſquires, and other friends; ſo that as none could be more juſtly, none was more deeply regretted than Mr Hughes.

(21) The Theater, No. 15.

[R] *Mr Pope had in veneration.*] In ſupport of this, conſidered as a point of fact, which does equal honour to both their memories, we will give the reader in this note, ſome letters of Mr Pope to our author, and others addreſſed to ſome of his neareſt relations, which very fairly and fully expreſs his ſentiments of him as a poet and an honeſt man. The two firſt were written upon Mr Hughes's ſubmitting the Siege of Damaſcus

(22) Duncombe's Account of the Life and Writings of John Hughes, Eſq; p. 25.

maſcus to his peruſal; the third was addreſſed to him the very day after he died (22).

Twickenham, 22 Jan. 1719-20.

Dear Sir,

Your letter found me, as I have long been, in a ſtate of health, almoſt as bad as that you complain of; and indeed what makes me utterly incapable of attending to any poetical taſk, even that of Homer.

I can only ſay with ſincerity, I am heartily concerned for your illneſs, and the more uneaſy with my own, in that it hinders me from ſerving you.

I truly wiſh you health and life, to enjoy that reputation and thoſe advantages which ſo much ingenuity joined with ſo much virtue, deſerves.

As ſoon as I am able to be in town, I will wait on you with the play, in which, and in every thing elſe, I wiſh you all ſucceſs.

I am,

Dear Sir,

Your faithful, and moſt

obedient ſervant,

To Mr HUGHES.

A. POPE.

Dear Sir,

I return you the play ſooner than I am willing to part with what I like ſo extremely well, becauſe you preſs it. Upon my word, I think it every way worthy of you, and make not the leaſt doubt, but the world will do you the juſtice you deſerve, in the acceptation of it

I continue very much out of order, but muſt be forced to be in town (well or ill) ſome days this week, upon indiſpenſable affairs: When I will wait upon you and tell you my ſincere thoughts, none of which is more ſincere, than that I am truly,

Your moſt obliged, and moſt

faithful ſervant,

To Mr HUGHES.

A. POPE.

Twickenham, Feb. 18, 1719-20.

Dear Sir,

I have been much concerned not to have waited upon you you as I deſigned, ſince you obliged me with your play. I am ſince much more troubled to hear of the continuance of your illneſs.

Would to God you might live as long as I am ſure the reputation of your tragedy muſt! I am a fellow-ſufferer with you, in not being able to ſee it played, having been and ſtill being too much indiſpoſed to go to any public place. But I could be extremely glad ſome particular friends of mine had that pleaſure I cannot enjoy: you would highly favour me, in letting three or four ladies have a ſide box, who have ſent into the country to me, upon information, that the boxes are diſpoſed of by you.

I am ſorry to give you this trouble, when perhaps for your health's ſake you ſhould not have a moment's diſturbance, and I could not ſend ſooner at this diſtance. Pray think I wiſh you all the ſucceſs you deſerve, and all the health you want.

I am,

Dear Sir,

Your moſt affectionate

humble ſervant,

A. POPE.

After the death of Mr Hughes, upon his brother's ſending Mr Pope, amongſt other friends to the author, his play of the Siege of Damaſcus. Mr Pope in return wrote him the following letter, to condole his loſs, and to acknowledge his civility.

February 26, 1719-20.

SIR,

I can't omit the acknowledgment I really think I owe your great civility, eſpecially at ſo melancholy and affecting a moment, as that of your worthy brother's death muſt have been to you. Indeed even his common acquaintance muſt have known enough of him to regret his loſs, and I moſt heartily condole with you upon it.

I believe I am further obliged to you for his play which I received yeſterday, and read over again with more concern and ſorrow than I ever felt in the reading any tragedy. The real loſs of a good man, may be called a diſtreſs to the world, and ought to affect us more than any feigned or ancient diſtreſs how finely drawn ſoever.

I am glad of an occaſion to give you under my hand this teſtimony, both how excellent I think this work to be, and how excellent I thought the author.

I am, with my hearty thanks to you,

Sir,

Your moſt obliged, and moſt

humble ſervant,

To Mr JABEZ HUGHES.

A. POPE.

When Mr Pope was applied to by Mr Duncombe to permit part of this laſt letter to appear as it does in the memoirs; he wrote him a very frank anſwer, and another very kind letter upon his receiving thoſe works with the memoirs, both of which follow (23).

(23) Theſe letters are communicated by William Duncombe, Eſq;

Twitnam, Nov. 5, 1734.

SIR,

I am extremely willing to bear any teſtimony of my real regard for Mr Hughes, and therefore what you mention of my letter to his brother after his death, will be a greater inſtance of the ſincerity with which it was given: it is perfectly at your ſervice.

I thank you for the tenderneſs with which you deal in this matter toward me, and I eſteem you for that which you ſhew to the memory of your kinſman. I doubt not but you will diſcharge it in a becoming manner, and am,

Sir,

Your moſt obedient,

humble ſervant,

To Mr DUNCOMBE.

A. POPE.

Twitnam, 6 May, 1735.

SIR,

Many thanks for your kind preſent in which I find ſeveral very pleaſing and very correct pieces of his, which are new to me.

I beg you to accept of the new volume of my things juſt printed, which will be delivered by Mr Dodſley, the author of the Toyſhop, who is juſt ſet up as a Bookſeller.

I am,

SIR,

Your moſt obliged,

humble ſervant,

To Mr DUNCOMBE.

A. POPE.

HUNTINGTON

HUNTINGTON [ROBERT], a learned Biſhop in the beginning of this century, was the ſecond ſon of Robert Huntington, Miniſter of Deorhyrſt in Glouceſterſhire, and born at that place in February 1636. Having been educated in Grammar-learning at the free-ſchool in Briſtol, he was admitted, at the age of ſixteen, a Portioniſt of Merton-college in Oxford (*a*); where he took the degree of Bachelor of Arts March 9, 1657-8 (*b*). By his ingenuity, learning, and good behaviour, he ſo ingratiated himſelf with the members of that ſociety, that they unanimouſly choſe him Fellow, as ſoon as qualified by their ſtatutes (*c*). On the 21ſt of January, 1662-3, he took the degree of Maſter of Arts (*d*); and having run through the uſual courſe of arts and ſciences, applied himſelf with the utmoſt diligence to the ſtudy of Divinity, and of the Oriental languages. The latter became of infinite ſervice to him afterwards: for, upon the reſignation of Mr Robert Frampton [*A*], Chaplain to the Engliſh Factory at Aleppo, he was choſen his ſucceſſor in that honourable employment; wherein he acquitted himſelf much to his own credit, as well as that of his conſtituents, and of the whole Engliſh nation. He ſailed from England in September 1670 [*B*], and in about four months reached Scandarone; from whence he travelled to Aleppo, where he was received with great reſpect by the Factory (*e*). During his eleven years reſidence in this place, he applied himſelf particularly, next to the duties of his function, to ſearch for and procure manuſcripts [*C*]. And, for that purpoſe, kept a correſpondence with the learned and eminent of every profeſſion and degree [*D*]; which his knowledge in the Eaſtern languages, eſpecially the Arabic, enabled him to do (*f*). He travelled alſo, for his diverſion and improvement, not only in the adjacent, but likewiſe in diſtant places. And after having carefully viſited almoſt all Galilee and Samaria [*E*], he took a journey to Jeruſalem, with ſome of his congregation

(*a*) D. Roberti Huntingtoni Vita, ſcriptore Tho. Smitho, Lond. 1704. 8vo. p. 1, 2.

(*f*) Smith, ut ſupra, p. 5, 6, 7, 8, 9, 20, 21.

[*A*] *Upon the reſignation of Mr Robert Frampton.*] The ſame that afterwards became *Biſhop of Glouceſter*. But to give a more particular account of him: he was born at Pimpern in Dorſetſhire, anno. 1622, admitted into Corpus-Chriſti-college in Oxford in 1637, elected thence a Student of Chriſt's-church, where he took a Bachelor of Arts degree, 25 June, 1641. Upon the breaking out of the civil wars, he retired to his native country, and kept a ſchool at Turnwood: ſome time after, he was made chaplain of a man of war; and, either upon the ſhip's going into the Eaſt, or through his intereſt with the leading members of the Turkey-company, he was appointed, in 1654, chaplain to the Engliſh factory at Aleppo. In that ſtation he continued ſixteen years, namely 'till 1670. And at his final departure brought over ſuch ample teſtimonials of his eminent ſervices, that in 1672, he was made Prebendary both of Saliſbury and Glouceſter. In 1673, he was advanced to the Deanry of Glouceſter; and March 27, 1681, conſecrated Biſhop of the ſame. But he was deprived of it February 1, 1690-1, for refuſing to take the oaths to King William III. Thereupon he retired to Standiſh near Glouceſter, where he died 25 May, 1708, aged 86 (1).

(1) Wood, Faſti, edit. 1721. Vol. II. col. 1180. and Br. Willis's Survey of the Cathedrals, Vol. I. p. 726.

[*B*] *He ſailed from England, in September* 1670.] During the voyage, the ſhip touching at one of the iſlands in the Archipelago, to take in water, Mr Huntington and ſeveral others went on ſhore, and aſcended up a hill, in order to view the iſland, the ſea, and the country adjacent. Some of the thieviſh and vagabond Greeks on the continent obſerving them, landed with all expedition in the oppoſite part of the iſland, with a view of intercepting them, and cutting off their retreat. For, thoſe places abound with neſts of plunderers and pirates (2). But our travellers obſerving them in time, and gueſſing their deſign, prevented them, and ran to their ſhip with the utmoſt precipitation (3).

(2) See Ricaut's Preſent State of the Greek Church, Lond. 1679. p. 337.

(3) Smith, ut ſupra, p. 3, 4.

[*C*] *To ſearch for, and procure manuſcripts.*] The Europeans, and eſpecially the Engliſh, began to apply themſelves zealouſly, in the laſt century, to the procuring of manuſcripts from all parts, eſpecially from the Eaſtern countries. Archbiſhop Laud led the way, and with what ſucceſs his generous benefaction to the Bodleian Library (4) abundantly teſtifies. Moſt of his ſucceſſors followed his example, even down to the late Archbiſhop Wake, who had perſons in pay to ſearch for and purchaſe all the MSS. they could meet with in the Eaſt, eſpecially any parts of the Holy Scriptures. Dr Narciſſus Marſh, late Archbiſhop of Armagh, the moſt excellent Biſhop Fell, and other public-ſpirited perſons, encouraged the ſame ſearch; and by them principally it was that Mr Huntington was employed. What they wanted moſt particularly, was good copies, or the Syriac tranſlation, of St Ignatius's Epiſtles; which, however, he ſought in vain. But he had better ſucceſs in procuring the works of St Ephraim, or Ephrem Syrus, which were, 'till then, very little known in Europe (5).

(4) Of above 1300 M.SS. See Wood, Hiſt. & Antiq. Univ. Oxon. lib. ii. p. 53. and the Archbiſhop's Diary, in his Life by H. Wharton; and in Rushworth's Collect. Vol. III. p. 885.

(5) Smith, p. 5—10.

[*D*] *And, for that purpoſe, kept a correſpondence with the learned and eminent of every profeſſion and degree.*] This ſufficiently appears from ſome of his letters publiſhed by Dr Smith, at the end of his life. And that learned author gives us this further account of Mr Huntington's diligence in that reſpect. *Quo autem voti tam ſancti compos fieret, Græcorum, Syrorum, Armenorum, etiam Judæorum, Samaritanorum, & Mohammedanorum, prout occaſio ſeſe obtulerat, operâ uſus eſt: quam quoque Romanæ communionis Myſtæ, per orientem Sparſi, rem ſacram ex inſtituto vitæ ordiniſque, cui ſeſe addixerint, Religioſi, miro zelo procurantes, ipſi oblatam abundè & cumulatiſſimè pro ſumma ſua humanitate & candore præſtiterunt* (6).

(6) Ibid. p. 5, 6.

[*E*] *And Samaria.*] His chief deſign in viſiting this, and the neighbouring town of Sichem (once called Neapolis or the *new city*, becauſe built out of the ruins of the other by Herod, and now by corruption Naploſa) was, to converſe with the remains of the ancient Samaritans, then reduced to between twenty and thirty families; and to inform himſelf of their faith, opinions, cuſtoms, religious ceremonies, and to enquire what books they had. In his converſation with them, they aſked him, whether there were any Hebrews in England? He, ſuppoſing they meant *Jews*, replied in the affirmative; not underſtanding yet, that they appropriated to themſelves the names of Hebrews and Iſraelites, and retained ſtill their old extreme contempt and averſion for the Jewiſh nation. And when they found he could read their language, they cried out in an extaſy of joy, 'They are certainly Iſraelites 'and Hebrews, and our very brethren:' not imagining, he could poſſibly have learned their language from any but Samaritans. When he found they would not be undeceived, he adviſed them to ſend their book of the Law, and an account of their Religion, &c. to England: which produced the epiſtolary correſpondence between them and the learned Dr Thomas Marſhall; publiſhed by Job Ludolf, among his Samaritan letters. They having affirmed in thoſe letters, 'That 'their Book of the Law, or Samaritan Pentateuch, 'was the very original, written by Abiſha, ſon of 'Pinchas, ſon of Eleazar, ſon of Aaron the Prieſt, in 'the thirteenth year after the entrance of the Iſraelites 'into the land of Canaan:' Out of a curioſity to ſee ſo valuable a treaſure, our author took a ſecond journey to Naploſa, five years after the firſt. But upon examining that Pentateuch, which they kept, with another, in their ſynagogue, he found that it was not above five hundred years old. When he came too cloſely to examine it, they told him, that there was a memorandum in it containing the above account, which had been cut out by ſome ſacrilegious hand.——Beſides that Pentateuch, they had, ſome Forms of Prayers; the book of Joſhua, or rather a ſhort chronicle from the creation of the world down to Mohammed; a ſhort commentary on the Law, and a larger expoſition, in Arabic (7).——The Samaritans were once flouriſhing

(7) Smith, ibid. p. 12, 13, 14. & Huntingtoni Epiſt. p. 48, 49, 50, 55, 56, &c.

tion at the Factory: who univerſally make it a rule, not to return into their own country, without having ſeen that holy city (g) [F]. In February 1677, he ſailed into Cyprus, on purpoſe to have the pleaſure of examining the library of Hilarion Cigala, Archbiſhop of Juſtiniana Nova, and Primate of that iſland: but he miſſed of him, becauſe he was forced then to lie hid, for fear of the Turks, who, out of ſome prejudice, threatened his life or liberty (h). An earneſt deſire of beholding the venerable ruins of the once noble and glorious city of Palmyra, cauſed him alſo to undertake, in 1678, a tedious and difficult journey of ſix days, or 150 miles; (for ſo far was it from Aleppo) and with no better ſucceſs than his laſt expedition. For, inſtead of having an opportunity of viewing the place, he and his company were very near being deſtroyed by two Arabian Princes, who had taken poſſeſſion of thoſe parts (i). But he had better ſucceſs in a journey he took to Egypt in 1680, where he picked up ſeveral curioſities and manuſcripts [G]; and had the pleaſure of converſing with John Laſcaris, Archbiſhop of Mount Sinai. He took a ſecond voyage to Egypt, towards the end of the year 1681, in order to converſe again with that Prelate, having been informed that he was at Cairo, but the information was falſe (k). Thus he continued, during the whole time of his reſidence in the Eaſt, to improve himſelf, and benefit his country, by the many valuable manuſcripts he collected or procured [H]. But having now been there eleven years, he grew impatient for returning into England. At length, his ſucceſſor being arrived, he embarked in 1682, and landed in Italy. Having viſited Rome, Naples, and other the moſt conſiderable places; and taken Paris in his way, where he ſtayed a few weeks, he arrived, after all his dangers and difficulties, ſafe into his own country. Immediately he retired to his fellowſhip in Merton-college, where he led a quiet but not an idle life; being naturally very diligent and ſtudious (l). On the 15th of June 1683, he accumulated the degrees of Bachelor and Doctor in Divinity (m): and, about the ſame time, through the recommendation of Biſhop Fell, being appointed Maſter of Trinity-college in Dublin, though not much to his liking [I], he ſet out for that place towards the end of the year. In that ſtation he behaved in a moſt uſeful and worthy manner, encouraging good literature, and taking all proper care of the revenues of his college. He greatly promoted, at the ſame time, the Iriſh tranſlation of the Bible, which was done through the ſpecial encouragement of Dr Narciſſus Marſh, Biſhop of Leighlin and Fernes, and at the ſole charge of the Honourable Robert Boyle (n). But, the troubles that happened in Ireland, at the Revolution, put an end to his quiet ſettlement, and his good works and deſigns. For, upon King James's deſcent there in 1688-9, Dr Huntington judged it neceſſary to conſult for his ſafety, by a timely retreat into England; giving all his valuable manuſcripts for loſt: however, they remained ſafe. After the reduction of Ireland, he went back, and continued thither about a year. But having taken a firm reſolution of not fixing himſelf in that kingdom, he reſigned his Maſterſhip in 1691, and returned to England. In the mean time, he ſold for 700 pounds his fine collection of manuſcripts, about ſix hundred in number, to the Curators of the Bodleian Library; having before made a preſent to the ſame library of five and thirty valuable manuſcripts (o). In Auguſt 1692, he was preſented by Sir Edward Turnor to the Rectory of Great Hallingbury in Eſſex, a living of 200 pounds a year (p). As he wanted a companion in that ſolitary place [K], he married,

(p) Newcourt Repertor. Vol. II. p. 296.

ing at Damaſcus, but now their name is quite forgotten there. They were alſo numerous at Cairo, and ſo (according to their own account) they are ſtill in Egypt; but our author could find none there, except an old man and woman, in a very poor condition. Some families of them remain at Joppa and Gaza: and they are generally employed by the Turks for toll or taxgatherers: in which ſtation was Merchib Ibn Yacob, the writer of the Samaritan letters abovementioned. But upon ſome unjuſt accuſation, he was forced to withdraw to Leghorn (8).

(8) Ibid. viz. R. Huntingt. Epiſt. p. 48, 49, 58.

[F] *Who univerſally make it a rule, not to return into their own country, without having ſeen that holy city.*] Or, as Dr Smith expreſſes it (9); *Apud enim advenas hoſce præſertim poſt naves, opulentis mercibus onuſtas, e portu ſolutas, quo tempore feriari datum eſt, mos iſte ſolennis Hieroſolyma adeundi ita inolevit, ut pene ceſſerit in religionem; vixque quiſpiam repertus eſt, quin ſentiat, haud ſe, ſalva fama, ne dicam conſcientia, niſi confecto iſtoc ſacro itinere, in Angliam redire poſſe aut debere.*

(9) P. 11.

[G] *Where he picked up ſeveral curioſities and manuſcripts.*] Particularly, the nuts and ſeeds, of the Egyptian Sycomore, and of other curious plants and ſhrubs, which were ſet in the Phyſic-garden at Oxford (10).——Among the MSS. he got there, ſeveral were in the Coptic, or Copto Arabic, language; eſpecially two copies of the Goſpels, one of which he purchaſed at Cairo, and the other in the deſert of Nitria. He procured alſo copies of two volumes of the Councils, with an appendix to the Council of Chalcedon; and other curious books, relating to polite literature, and natural hiſtory (11).

(10) Smith, ut ſupra, p. 22.

(11) Ibid. p. 17, 18, 22.

[H] *By the many valuable manuſcripts he collected, or procured.*] He took a great deal of pains to procure three volumes, relating to the Sabæan or Mendeſian Religion; two of which they pretend to have been delivered to Adam by God himſelf; and the third to have been brought down by Angels from Heaven, three hundred and thirty thouſand years before the creation of the world. To obtain thoſe volumes, our learned author kept a correſpondence with father Agathangel de Sta Thereſia, a bare-footed Carmelite, and Preſident of the Miſſion at Baſſora, who at length tranſmitted thoſe three volumes to him into England, in the year 1683. But, as Dr Smith obſerves, they will be of no uſe, 'till ſome perſon is found that can underſtand and tranſlate them (12).——For an account of the Sabæans, the inquiſitive reader will be pleaſed to conſult Dr Hyde's learned and curious book, *De Religione veterum Perſarum.*

(12) Ibid. p. 21, 22. Vide etiam R. Huntingtoni Epiſt. p. 37—44. & p. 82—87.

[I] *Though not much to his liking.*] Dr Smith, in his life (13), informs us, That he earneſtly refuſed at firſt that place, though very honorable and advantagious, and looked upon it as a ſort of baniſhment.—— *Onus iſtud, licet tanto cum honore conjunctum, averſiſſimo animo primo recuſat, & a ſe obnixè, deprecatione interpoſita, amolitur: ſed tandem illius* (14) *precibus & conſiliis expugnatus, ceſſit, planè invitus.——Compertum habeo, illum de hac relegatione, quaſi in exilium, apud amicos interioris notæ queri conſueviſſe.*

(13) P. 27.

(14) Bp. Fell's.

[K] *As he wanted a companion in that ſolitary place.*] He ſeems not to have much liked that place, otherwiſe a healthful and agreeable one, becauſe the houſe was bad, and he wanted there the company and converſation of the learned. In one of his letters, he ſays,

ried, the ſame year, a ſiſter of Sir John Powell, one of the Juſtices of the King's-Bench, which made him an excellent wife. He was offered, about that time, the Biſhopric of Kilmore and Ardagh in Ireland, vacant by the deprivation of Dr William Sheridan for not taking the oaths, but he abſolutely refuſed it (*q*). However, in 1701, he accepted of the Biſhopric of Raphoe in the foreſaid kingdom, to which he was promoted through the intereſt of the Earls of Clarendon and Rocheſter. Thereupon, he reſigned his living, and went over to Ireland in July; and, on the 20th of Auguſt following, he was conſecrated in Chriſt-church Dublin, by his intimate friend Dr Narciſſus Marſh, then Archbiſhop of Dublin, and afterwards of Armagh. But, to the great loſs of learning, of Ireland, and of the whole Chriſtian world, he enjoyed his new dignity but a very ſhort time. For he died the 2d of September 1701, twelve days after his conſecration, in the ſixty-ſixth year of his age: and was buried in the chapel of Trinity-college, over which he had preſided with ſo much honour (*r*). His memory will be always dear among all true lovers of oriental learning; and he may juſtly be ſaid to have been born for the ſervice and ornament of his country (*s*). All that he publiſhed himſelf, was 'An Account of the Porphyry Pillars in Egypt (*t*) [*L*].' Some of his obſervations are printed in 'A Collection of curious Travels and Voyages,' in two tomes, 8vo. publiſhed by the ingenious Mr J. Ray. Mr T. Oſborne had, in ſome of his late ſales, a collection of our author's letters, written between the years 1684 and 1688, relating to the affairs of Trinity-college in Dublin. And thirty-nine of his letters, chiefly written by him whilſt abroad, were publiſhed by Dr T. Smith at the end of his life. We ſhall give ſome extracts from one of them [*M*].

ſays, he was condemned to the country——*ruri damnandus* (15): And in another letter to Dr Allix, he has theſe words——*Tugurio ſiquidem caduco & perſtillanti male conveniunt theſauri, codices quantivis pretii, & auro contra non cari.* [He was there ſpeaking of his Coptic Pentateuch, which he had lodged in the Bodleian Library.] Then he adds, *Tu vero cum agnoveris* infelicitatem *amici tui, a libris ſociiſque, conſortio ſcilicet & viventium & vita defunctorum exulantis; perpende quæſo, quanto ipſe* (16) *felicior, qui utriſque ex animo frueris.* i. e. 'When you know my 'unhappineſs, in being baniſhed from books and agreeable friends, namely from the living and the dead; conſider how much happier you yourſelf are, who enjoy both, to your heart's content.'

(15) P. 57.

(16) Viz. Dr. Allix.

[*L*] *An account of the Porphyry pillars in Egypt.*] He deſcribes, and gives figures of two of them, viz. one at the Matarea, 3 or 4 miles eaſt of Grand-Cairo, 67 feet high, and the bigneſs 7 ½. The other at Alexandria, feet high. After having obſerved, that there is no quarry, or rather rock, of Porphyry in all the lower parts of Egypt; he ſays, 'That 'ſuch vaſt monuments might be removed from place 'to place, is difficult indeed, but not impoſſible; for 'ſome of theſe mountains are near the Red Sea; and 'Suſs from Cairo is but two or three days from the 'Nile. How poſſible it is to convey mighty weights 'by water, let the obeliſks at Rome declare, which 'were all of them brought from this very country. 'And that ſuch things may be done by land too, 'though not by every one, is plain enough, becauſe 'we ſee they have been done. At Baalbec, which is 'fourteen hours from Damaſcus (for thence I went) 'there is a ſtone about 66 foot long on the north ſide 'of the caſtle-wall, and two more of 60 each: and I 'believe we ſaw the way they travelled, having left 'one of their company, though not quite ſo big, in 'the road, as a monument thereof to this very day.'

[*M*] *We ſhall give ſome extracts from one of them.*] It is written to Dr Allix, in anſwer to ſome queſtions propoſed by Monſieur Picques, who, was about an accurate Map of Egypt. Some of our author's obſervations therein, are as follows. The name of the *Nile* is derived from נחל, i. e. *The River*, by way of eminence. It riſes in the mountains of Abyſſinia; and, after a courſe of two hundred miles, diſcharges itſelf into the Mediterranean ſea, by two mouths, formerly ſeven. It's overflowing is occaſioned by the continual rains, that fall, during the winter months, in Abyſſinia, and upper Egypt.——Grand Cairo is named by the inhabitants, and neighbouring nations, *Meſer*, from Miſraim the ſon of Ham. 'Tis leſs than Paris, but extremely populous. For, in the year 1679, there died in it of the plague five hundred and ten thouſand perſons: notwithſtanding which, the very next year, when our author was there, it ſwarmed with inhabitants.——Four miles from it is a village called Matarea, where the Virgin Mary is ſaid to have reſided, when ſhe fled into Egypt for fear of Herod's cruelty. ——Natron, Latrón, or Nitre, ſwims like ice on the top of a lake of ſtagnant water, in the deſert of Nitria; and is produced from the ſaltneſs of the water. It is very much like ice, but harder; & ſometimes reddiſh. ——What he ſays about the pyramids and mummies, &c. little differs from the accounts given by Mr John Greaves, and others.

C

HYDE [Dr THOMAS], one of the moſt learned writers of the XVIIth century. He was the ſon of the Reverend Mr Ralph Hyde, Vicar of Billingſley near Bridgenorth in Shropſhire, where he was born June 29, 1636, under whoſe care he received the firſt rudiments of learning; and having a natural propenſity to the ſtudy of the oriental languages, his father encouraged and aſſiſted him ſo far as was in his power, and when he was above ſixteen years of age, ſent him to the univerſity of Cambridge, where he was entered of King's-college (*a*). There he became acquainted with the celebrated Mr Abraham Wheelock, equally famous for his ſkill in languages, and his willingneſs to promote and recommend young perſons of parts and application to the utmoſt of his power (*b*). By him Mr Thomas Hyde, when he was only in his eighteenth year, was ſent to London to the learned Mr Brian Walton, afterwards Biſhop of Cheſter, as a perſon very capable of helping him in that arduous work the Polyglot Bible, in which he was then engaged, and which was executed in ſuch a manner, as not only did honour to him but credit to the nation (*c*). The ſervices rendered him by Mr Hyde were many and great; for he tranſcribed the Perſian Pentateuch out of the Hebrew characters, in which it was firſt printed at Conſtantinople, into the proper characters of the language; which, in the opinion of the learned Archbiſhop Uſher, would have proved a taſk impoſſible to a native Perſian, becauſe one Hebrew character anſwered ſometimes to one Perſian letter ſometimes to another, which it was exceeding difficult to diſtinguiſh (*d*). He alſo added a Latin tranſlation (*e*). He farther aſſiſted in correcting different parts of that work, in the Arabic, Syriac, and Samaritan

maritan languages, and thereby merited the high character given him by the editor, that his ſkill in the oriental languages was ſuch as ſurpaſſed his years (*f*). In the next year, after the publication of the Polyglot Bible, he went to Oxford, was admitted of Queen's-college, and was ſoon after made Hebrew reader (*g*). The ſucceeding year Mr Richard Cromwell, then Chancellor of the univerſity, directed his letters to the Delegates of the univerſity, ſignifying that he was of full ſtanding, from the time of his admiſſion at Cambridge, for the degree of Maſter of Arts, and had given public teſtimony of his more than ordinary abilities and learning in the oriental languages; upon which they made an order, that he ſhould accumulate that degree, by reading only a lecture in one of the oriental languages in the ſchools; and having accordingly read upon the Perſian tongue, he was created Maſter of Arts April 13, 1659 (*h*). Soon after the reſtoration of King Charles the Second, he was made Under-Keeper of the Bodleian library, upon the ejection of the famous Henry Stubbe, which gave him an opportunity of purſuing his ſtudies with ſingular advantage (*i*). His diligent behaviour in this employment recommended him ſo much, that when Dr Thomas Lockey reſigned the office of Head-Keeper, he was elected by the Doctors and Maſters of the univerſity with general applauſe, and recommended himſelf likewiſe to the public by ſome very learned writings (*k*) [*A*]. About this time he became known to that great patron of all ſound literature, the Honourable Mr Robert Boyle, to whom he was uſeful in many reſpects, and to whom he communicated ſeveral remarkable paſſages relating to Chemiſtry, Phyſic, and Natural Hiſtory, in oriental writers (*l*). In October 1666, upon the Death of Dr John Wall, Canon of Chriſt-Church, Rector of St Aldate's Oxford, and Prebendary of Sarum, he ſucceeded him in his laſt preferment (*m*). On the 14th of December, 1678, on the demiſe of Mr John Gregory, he had the Archdeaconry of Glouceſter conferred upon him by Dr John Pricket, then Biſhop of that dioceſe, and was inſtalled on the 12th of January following (*n*). On the third of April, 1682, he was admitted Doctor of Divinity (*o*). He continued his ſtudies without remiſſion, and gave many ſhining proofs of his ſingular ſkill in all kinds of oriental learning, for which he was univerſally admired, and became juſtly famous over all Europe; the pieces he publiſhed being full, not only of new and curious, but alſo of very uſeful particulars [*B*]. On the 22d of December 1691, he was elected Arabic Profeſſor, on

[*A*] *By ſome very learned writings.*] It was in all probability, the patronage of the learned Abraham Wheelock at Cambridge, that determined our author's inclinations in ſo eminent a degree to the Perſian language, of which that excellent perſon was a great maſter. At Oxford there was a ſpirit of encouraging oriental literature; and yet our author remained there for many years in narrow circumſtances, which kept him very probably the cloſer to his ſtudies, and enabled him, by comparing and conſidering the ſeveral languages of the Eaſt, to acquire a facility in writing and ſpeaking ſeveral of them, beyond what many, even of the learned, thought poſſible. The title of the firſt work he publiſhed, ran thus:

(1.) *Verſio Latina e lingua* Perſica, *& Commentarii in Obſervationes* Vlugh-Beigi, *de Tabulis Longitudinis & Latitudinis ſtellarum fixarum*, Oxon. 1655, 4to, that is, 'A Latin Tranſlation out of the Perſian 'Tongue, together with Commentaries on the Obſer-'vations of *Vlugh Beg*, and his Tables of the Longi-'tude and Latitude of the fixed Stars.' It may not be unacceptable to inform the reader, that this Vlugh Beg was a great Tartar Monarch, the ſon of Shâhrokh, and the grandſon of Timur Beg, or, as we commonly call him, Tamerlane. The proper title of this Prince's treatiſe, is, Zig Ulug Beg, and in the preface he informs us, that the great occupations of government, hindered him from performing in perſon ſo much as he would have done towards the compleating this uſeful work, but that he had relied chiefly on his miniſter Salaheddin, ſirnamed Cadhi Zadehal Roumi, and that he dying before the work was finiſhed, his collegue Gaïatheddin Giamſhid, and his ſon Ali al Couſhi, were afterwards employed, who put the laſt hand to it. This work, written originally in Arabic, and of which there are two Perſian tranſlations, one by Ali al Couſhi, and the other by Mohammed Ben Mohammed, is in four parts. The firſt treats of Æras and Epochs in five chapters. The ſecond, of the Diſtinction of Times, in twenty-two chapters. The third, of the Courſe of the Planets, in thirteen chapters; and the fourth, regards the fixed Stars, in two hundred ſections. Theſe tables are thought the moſt correct of any publiſhed by the Orientals, and are calculated for the latitude of Samarcand, which was the capital of Ulugh Beg's dominions. To this is added, Mohamedes Tizinus his tables of the declenſion and aſcenſion of the fixed ſtars.

(2.) *Catalogus impreſſorum librorum Bibliothecæ* Bodleianæ *in Academia*, Oxon. 1674, fol. that is, 'A 'Catalogue of the printed Books in the Bodleian Li-'brary in the Univerſity of Oxford.'

(3.) *Epiſtola de menſuris & ponderibus* Serum *ſive* Senenſium, *&c.* Oxon. 1688, 8vo. that is, 'An E-'piſtle on the Weights and Meaſures of the Chineſe.' This is printed at the end of Dr Edward Bernard's book, entitled, *De Menſuris & Ponderibus antiquis libri tres*, that is, 'A Treatiſe of ancient Weights and 'Meaſures, in three Books:' as alſo, *Epiſtola N. F. D. de mari æneo Salomonis*, annexed thereunto by Dr Hyde.

[*B*] *But alſo of very uſeful particulars.*] He alſo publiſhed,

(4.) *Quatuor* Evangelia *&* Acta Apoſtolorum *lingua* Malaicâ, *Characteribus* Europæis, Oxon. 1677, 4to. that is, 'The Four Goſpels and the Acts of the Apo-'ſtles in the Malayan tongue.' Which were printed at the expence of Mr Boyle, and before them is prefixed an excellent preface by Dr Thomas Marſhal in Engliſh.

(5.) *Specimen Libri* More Nevochim, Maimonidis; *Arabicè & Latinè edendi* (Dec. 10, 1690) Oxon. 1691, 4to. that is, 'A Specimen of Maimonides's Guide of 'the Doubtfull in Arabic and Latin.'

(6.) *De* Ludis Orientalibus *Libri duo*, ſc. Mandragorias, *ſeu Hiſtoria* Shahiludii *Latine*, Oxon. 1693, 8vo. *Hiſtoria* Shahiludii *ſeu Trias* Judæorum *de* Ludo Schacorum Heb. Lat. Oxon. 1693, 8vo. *Hiſtoria* Nordiludii *& reliquorum* Ludorum Orientalium *ubi* Arabum Perſarum Indorum & Chineſium *Ludi varii*, Oxon. 1693, 8vo. Before the former of theſe, there is a kind of dedication to Sidney Godolphin Lord Rialton, afterwards Earl of Godolphin, and Lord High-Treaſurer of England; and to the latter, is prefixed a dedicatory epiſtle to Richard, ſon to John Hampden, Eſq;

(7.) *Tractatus* Alberti Bobovii, *Turcarum Imp.* Mohammedis IVti *olim Interpretis primarii de* Turcarum *Liturgia, pregrinatione Meccana, Circumciſione, ægrotorum viſitatione, &c. ' the Viſitation of the Sick, &c. with Notes occa-
' ſionally interſperſed, by Dr Thomas Hyde.'

This, though a very ſhort, is a very curious and very uſeful treatiſe. The author of it was by birth a Poſe, and his name in his own language was Bobowſki. He was carried away while a youth by the Tartars, ſold to the Turks, who perceiving the pregnancy of his parts, cauſed him to be very carefully brought up in the Seraglio, where he ſpent twenty years. After this he went in the ſervice of ſome great man to Egypt, where in conſequence of his excellent behaviour, being made free, he, according to the cuſtom of the Turks, had a new name impoſed on him, viz. that of Ali-Beigh, or Ali Bei, as it is vulgarly pronounced. On his return to Conſtantinople, his general ſkill in the languages both of the Weſt and of the Eaſt, gradually advanced him to the rank of Tergjumân Baſhi, or firſt interpreter of the Porte, under the reign of Mahomet the Fourth. He compoſed a Grammar and a Lexicon of the Turkiſh language, about the year 1553, he tranſlated, at the requeſt of Dr Baſire, the Catechiſm of the Church of England into the Turkiſh language, and at the requeſt of another gentleman, the whole Bible, which being ſent into Europe to be printed, remains ſtill in the public library at Leyden. Our author, Dr Hyde, alſo had in his poſſeſſion, the Pſalms tranſlated and written in his own hand. His death, which happened a few years before the publication of this work, was exceedingly regretted by the Chriſtians at Conſtantinople, but more eſpecially by the Engliſh, for whom he had a ſingular affection and eſteem, inſomuch that he often intimated his deſire to have retired into England, and to have returned into the boſom of the Chriſtian Church, if any means could have been found to afford him a tolerable maintenance.

This treatiſe was brought over by the celebrated Dr Thomas Smith, who made a preſent of it to our author, and adviſed him to tranſlate it. It is certainly the moſt ſuccinct, and in all probability the moſt genuine and authentic account that is any where extant of the religious ceremonies of the Turks, penned with ſo much plainneſs and ſimplicity, that it is impoſſible to ſuſpect the author; and as the Doctor himſelf obſerves, there is ſuch a very ſtrange mixture of piety and puerility as is not to be accounted for. For example, in the viſitation of the ſick, we are told, that on the one hand they exhort the dying man to a ſincere repentance, and to place his hopes in God; and on the other, they intreat him to pare his nails, becauſe this is a thing not lawful after his deceaſe. They diſtribute alms, and they make prayers for the departed ſoul; but while the man is expiring, they hollow in his ears continually a ſhort confeſſion of their faith, and earneſtly exhort him not to apoſtatize from the religion of Mohammed in another world. They waſh the dead body three, five, or ſeven times, and carry it very decently to the tomb, where they believe it is viſited by the two angels of Death, Munkir and Nehir, at whoſe command the ſoul returns, and immediately the dead body ſtands up upon it's feet, and gives direct anſwers to their queſtions. After this, they ſay the body diſſolves, and the ſoul goes forthwith to Paradiſe, or a place of torture. This ſhort delay they call Berzach, which ſome have injudiciouſly taken for a middle ſtate, whereas in truth, it is ſtrictly a middle time, or the intervening ſpace between death and judgment. This notion agrees ſo exactly with the ſuperſtitions of the Jews, that there is not the leaſt room to doubt the one is a copy of the other.

The notes of our author throughout, contain an infinity of ſhort, curious, and inſtructive remarks, many of which the reader would little expect to find in ſuch a treatiſe. To this piece he ſubjoined *Caſtigatio in* Angelum à S^to^ Joſeph, *aliàs dictum* de la Broſſe *Carmelitam diſcalceatum ſui Ordinis in* Iſpâhan *Perſides olim Præfectum*. That is, ' A Reproof to Angelus of St ' Joſeph, alias Father de la Broſſe, a barefooted Car-
' melite, formerly Superior of his Order at Iſpahan in
' Perſia.' This man had attacked the Perſian goſpels in the Engliſh Polyglot, and the Latin verſion of them by Dr Samuel Clarke. Our author out of zeal for his collegues in that great work, for no offence was offered to himſelf, wrote a letter to this Monk, in which he expoſtulated the matter, and ſhewed him his miſtakes, without receiving any anſwer; at length in 1688, he came over to England, went to Oxford, and procured himſelf to be introduced to Dr Walton, without letting him know who he was, though afterwards he owned his name to be La Broſſe, and that he came over to juſtify what he had advanced. After a ſhort diſpute, which was managed in Latin, he began of a ſudden to ſpeak the Perſian language, in which, to his great ſurprize he found Dr Hyde more ready than himſelf, ſo that not being able to maintain his criticiſms, he promiſed to come another time, and either defend them better, or retract them, which however he did not perform, and this induced Dr Hyde to make the diſpute public. In his reproof, he firſt ſtates the Carmelite's objections, then ſhews them to be very weak and trifling, ſpringing from his own ignorance in the true idiom of the Perſian tongue, which rendered him incapable of comprehending with how much accuracy and elegance that verſion was made to which he had objected. As the principal deſign of this attack upon the London, was to raiſe the credit of the Paris Polyglot, Dr Hyde's reproof produced an admirable effect, as not only maintaining the credit of the Engliſh work, but ſhewing alſo what lamentable critics theſe Monks were, notwithſtanding the high eſteem in which they ſtood in their own country for Oriental learning.

[C] *In regard to this branch of learning.*] The title of this work is, *Iggéreth Orchoth Olam*, id eſt, *Itinera Mundi ſic dicta nempe Coſmographia Autore*, Abrahamo Peritſol, *Latinâ Verſione donavit & Notas paſſim adjecit* Thomas Hyde, S. T. D. *è Coll. Reginæ* Oxon. *Protobibliotbecarius Bodleianus*, Oxon. 1691, 4to. that is, ' The Tour of the World, or the ' Coſmography of *Abraham Peritſol* with a Latin tran-
' ſlation, and notes by Dr *Thomas Hyde*, &c.'

This work was written by Abraham Peritſol or Pariſol, (which ſignifies an umbrella) in the city of Ferrara, a little before the Engliſh Reformation. The Hebrew title is taken from the following paſſage in Job, *Haſt thou marked the old way which wicked men have trodden, which were cut down out of time.* It is written in a very pure Hebrew ſtile, with a very ſmall mixture of the rabbinical phraſes. The author wrote beſides, a controverſial treatiſe entitled the Shield of Abraham, alluding to his own name, in ſupport of the Jewiſh religion againſt the Chriſtians, as alſo a Commentary upon the Book of Job. As for this Coſmography it is very ſhort, containing thirty chapters; but notwithſtanding this, there are many things in it curious, and which cannot fail of delighting the judicious reader. A ſpecimen perhaps may not prove unpleaſant, we will take the ſixteenth chapter, which is very ſhort, and regards the firſt diſcovery, or rather the firſt endeavours to diſcover the the Eaſt-Indies. It is conceived in the following terms.

' Our readers are to underſtand, that the ſubjects of
' the Monarch of Portugal, were the firſt who navi-
' gated their ſhips, and expoſed themſelves to the
' hazard of ſeeking, by this new route, places of which
' their anceſtors had not ſo much as an idea. For
' this reaſon, through the ſudden alteration of air,
' and the diſagreement of theſe new climates with
' their conſtitutions, multitudes of the ſeamen and paſ-
' ſengers were carried away by diſeaſes, 'till by de-
' grees, and through experience, they learned the pro-
' per times to depart and to return with the leaſt poſ-
' ſible danger. Thus overcoming all the difficulties
' that were ſo formidable in the beginning, they now
' ſailed

of Chriſt-Church, being, on ſome diſpute about the oaths, removed from both preferments, Dr Hyde became poſſeſſed of them (the one being annexed to the other) July 19, 1697 (r). Three years after he publiſhed an excellent work, now become extremely ſcarce, on a ſubject very little known even to the learned themſelves, "the Religion of the "antient Perſians;" a work of ſuch profound and various erudition, abounding with ſo many new lights on the moſt curious and intereſting ſubjects, filled with ſuch authentic teſtimonies, which none but himſelf could bring to the public view, and adorned with ſo many learned ingenious conjectures, in reference to the theology, hiſtory, and learning, of the eaſtern nations, that it was received with delight even by the greateſt critics; a work which does honour to the times and nation in which he flouriſhed; and which, if he had left no other monument of his ſtudies, had been ſufficient to eſtabliſh and preſerve his reputation, as long as any taſte for antient learning ſhall remain [D]. It was, however, a great

(r) Willis's Survey of the Cathedrals, Vol. III. p. 461.

'ſailed to and from theſe places without any conſider-
'able loſs, and the way round this Æthiopic continent,
'through the ocean, is as pervious to the Portugueſe
'at this day, and navigated with the ſame eaſe and
'ſafety as the Mediterranean and Adriatic ſeas by the
'Venetians and the Genoeſe.

'Behold! the Portugueſe firſt leaving their own
'coaſts, and ſeeking thoſe of the lower Æthiopia be-
'fore mentioned, ſtanding at a diſtance from the conti-
'nent, and ſteering a ſouth-weſt courſe, diſcovered
'the iſland of Porto Santo, which 'till then remained
'uninhabited. The King of Portugal ſent thither
'young people of both ſexes, and cauſed it to be ſtock-
'ed with ſheep and with oxen. This, as I have heard
'from the compelled, was about the time of the exile
'of the children *. There they found abundance of
'wild hogs, multitudes of rabbets, and innumerable
'pigeons, ſingular in this, that they were not in the
'leaſt afraid of men. There they likewiſe met with
'prodigious quantities both of honey and of wax; thoſe
'who made the diſcovery affirm, that the like in point
'of excellence had never been before ſeen. Beſides,
'they found thoſe trees, from the gum diſtilling out
'of which dragon's blood is made. The method in
'which they proceed is thus, ſuch as are employed at
'a proper ſeaſon, gives ſeveral ſtrokes with an ax to
'the tree as it grows in the ground. The following
'year, at the proper time, they come and collect with
'great care the gum that has flowed through theſe
'wounds; and after melting and cleanſing it from
'all droſs and filth, they bring it in little round lumps
'to market. This is what is called, Dam Tannin,
'Sanguis Draconis, or Dragon's Blood. They ſay,
'that this tree in the month of March, produces fair
'and fine fruit, in ſize and form reſembling cherries of
'a green colour, and of a moſt delicious flavour.
'The ſea round this iſland of Porto Santo winds into
'many pleaſant bays, affording infinite quantities of
'excellent fiſh. The country is of ſmall extent, ſome
'twenty-five miles in circuit, every where diverſified
'with verdant hills, and plentifully watered by cryſtal
'rivulets.'

* The author means the expulſion of his nation out of Portugal by King Emanuel, to gratify Iſabella of Caſtile in A. D. 1492. The *compelled* are thoſe who ſtaid and diſſembled, the *exiled children* thoſe who departed.

This ſpecimen will afford the reader ſome notion of that elegant ſimplicity with which this book is written. Dr Hyde has illuſtrated this chapter with ſome very learned notes. He tells us, that the Arabic name anſwering to dragon's blood, did not ariſe barely from the colour of the gum, but from the very ſingular appearance of the fruit, the ſkin of which being taken off, there appears within-ſide a little dragon, moſt clearly and neatly expreſſed, with a long neck, an open mouth, a ſharp briſtly back, long tail, and ſhort feet. The dragon's blood is the red juice flowing from that tree, ſo well known to us by the name of the Brazil wood, and ſo much uſed by our Dyers. He tells us farther, that the Arabians, Perſians, and Turks, call it the blood of the two brothers. The latter alſo ſtile it Er Cani, Hominis Sanguis, or Man's Blood, equivalent to which, is the Arabic word, Dam Adam; the Italians call it Verzino, and we Brazil wood. becauſe moſt of it comes to us from that country. He farther remarks, that there is beſides this another ſort brought likewiſe from the Eaſt-Indies, but brighter, better, and at leaſt twice as dear, called by the Engliſh merchant's, Dragon's Blood in Drops, flowing from a kind of broken reed, which from thence is ſtiled Dragon's Blood Cane, of which he had one given him by John Tyrrel, Eſq; captain of a man of war, which was four feet long. Out of the knots of this cane proceed leaves with fruit, of which, ſays he, I have two kinds, formerly given me by Mr John Engliſh, a merchant; the former round, and of the ſize of a very ſmall filberd; the other long, and as large as the biggeſt filberd, but both of a rough ſuperficies like that of a mulberry. Being broke, there appears in the inſide, a ſtone like that of a cherry. The outer ſubſtance dry and tough, but may be eaſily broken, and rubbed with the fingers, which if wiped on paper produces a beautiful red colour. It is from this ſort of dragon's blood, that the varniſh is made, ſo much in uſe among the Chineſe in adorning their cheſts and cabinets. This red matter being ſcraped into warm water, and being ſuffered to ſteep there a long time, at length ſinks to the bottom, and the water being either gently poured off or evaporated, the dragons blood is collected concreted into little drops or tears.

[D] *For antient learning ſhall remain.*] The title of this large and curious work, runs thus:

Hiſtoria Religionis Veterum Perſarum *eorumque* Magorum. *Ubi etiam nova* Abrahami, & Mithræ, & Veſtæ, & Manethis *Hiſtoria*, &c. *atque Angelorum Officia & Præfecturas ex Veterum* Perſarum *ſententiâ. Item*, Perſarum *annus antiquiſſimus tangitur, is τῦ Giemſhid, detegitur, verus τῦ* Yeſdegherd *de novo proditur, is τῦ Meliſſháb expenditur, is τῦ* Selgiûk & *τῦ* Chorzemſhad *notatur, & is τῦ*; Katâ & *τῦ*; Oighûr *explicatur.* Zoroaſtris *Vita ejuſque & aliorum Vaticinia de* Meſſiah è Perſarum *aliorumque Monumentis eruuntur: Primitivæ Opiniones de* Deo & *de Hominum origine referantur; Originale Orientalis* Sibyllæ, *Myſterium recluditur: Atque Magorum liber Sadder* (Zoroaſtris præcepta ſeu Religionis Canones continens) è Perſico traductus exhibetur. Auctor eſt* Thomas Hyde, S. T. D. *Ling. Hebraicæ in Univerſitate Oxon. Profeſſor Regius & Ling. Arab. Prof. Laudianus. Præmiſſo Capitum Elencho accedunt Icones & Appendix variarum Diſſertationum*, Oxon. 1700, 4to. pages 556, that is, 'The Religion of the ancient 'Perſians and their Magi.'

There is no need of tranſlating the reſt of this long title, becauſe the particulars contained in it, which are in effect the contents of the whole book, will ſufficiently appear in the courſe of this note. The indefatigable Mr Bayle, the judicious Mr Bernard, and ſeveral other foreign writers of great eminence, ſpeak of this very elaborate performance with equal admiration and applauſe. To ſay the truth, it was a ſubject almoſt wholly new and untouched; and this, notwithſtanding, that without it many of their own hiſtorians, and moſt of the antient Greek writers, are often obſcure, in ſeveral places altogether unintelligible. His diligence, his accuracy, his freedom of thought, his ſagacity, his extenſive ſkill in the oriental languages, his zeal for truth, and his perfect candour, are equally conſpicuous. But the only way to acquire a competent notion of a work, which is now become dearer than a volume of this, is to run through the analyſis of the whole; which, following the track of a very able and ingenious writer, we ſhall therefore exhibit to the reader's view, to whom, tho' it muſt ſeem long, it is impoſſible that it ſhould appear tedious.

It appears from the title, that Dr Hyde's deſign is not to give us a plan of the religion of the modern Perſians, which is to be found in the Korân, the Mahometan being the eſtabliſhed religion in Perſia now. In the firſt chapter he diſtinguiſhes the Perſians into antient and modern; the antient Perſians had a religion entirely different from that of the modern, and it has been ſtill preſerved among ſome of their deſcendants;

a great misfortune, that the value of his extraordinary talents and uncommon erudition; was

the modern Perſians are a mixture of ſeveral different nations, Saracens, Tartars, Parthians, Medes, old Perſians, become Mahometans, and women of Georgia and other countries tranſplanted into Perſia, who have formed a language compounded out of thoſe of all theſe different nations. Our author, before he enters into particulars, gives us, in this firſt chapter, a general idea of the religion of theſe antient Perſians. There are ſome ſtill who profeſs this both in Perſia and in India, and live ſeparately from the reſt as much as poſſible, and eat only with thoſe of their own religion, in order to preſerve their purity. This religion has paſſed through three different ſtates. The firſt was a ſtate of purity; thoſe who profeſſed it worſhipped only the true God, of whom they had very juſt notions, which they had received from their anceſtors, *Shem* and *Elam*. The ſecond ſtate is that in which *Sabaiſm* was mixed with the knowledge and worſhip of the true God. They did not indeed worſhip the ſun and the planets, but they had too much reverence for thoſe ſtars, and fell into ſuperſtition in that reſpect. Abraham oppoſed with the utmoſt vigour all kinds of falſe worſhip, and all the ſuperſtitions of his age; and as the Perſians highly revere that Patriarch, and acknowledge that they received their Religion from him, Dr Hyde is perſwaded that Abraham reduced them from their errors, and reſtored amongſt them the worſhip of the true God in all it's purity. But they afterwards fell back into their former ſuperſtitions, though without loſing the knowledge of the true God, of whoſe ſervice they were always ſo jealous, that they abominated all adoration of images. The third ſtate of the religion of the antient Perſians commenced, when, in imitation of the fire preſerved upon the altar in the temple of Jeruſalem, they kept likewiſe a perpetual fire upon an altar; which cuſtom was obſerved likewiſe by the Greeks and Romans. This gave occaſion to the common opinion, that the antient Perſians worſhipped fire; but our author endeavours to juſtify them from that imputation.

He owns that they regarded this fire as a thing ſacred, and paid to it a kind of ſervice, which he calls *Pyrodulia*; but he denies that they ever paid to it a proper adoration, which he ſtiles *Pyrolatria*. We are not to be ſurprized that practices have been imputed to theſe people, which they never obſerved. It is very difficult to know thoroughly their religion, ſince *Zoroaſter*, their great prophet, has expreſsly prohibited them to inſtruct ſtrangers in it, or in their language. However, our author having deſired one of his friends who lived in Perſia, to inform himſelf of the Prieſts of that religion concerning the worſhip paid by them to *Mithra*, which is the *ſun*, they anſwered, that they did not pay any divine worſhip to it, or to the *moon*, or to the *ſtars*, but only turned towards the ſun when they prayed, becauſe the nature of it nearly reſembles that of fire. They regarded it likewiſe as the image of God, and ſome of them have ſaid that God reſides in it, and others have imagined that it will be the ſeat of the bleſſed. Theſe are the true grounds of their reſpect for the ſun, but this reſpect does not go ſo far as adoration. It is the ſame caſe with regard to fire; when they are aſked whether they worſhip it, they conſtantly deny it, affirming that they worſhip God alone. But as they had a great reſpect for their ſacred fire, if any one of them was obliged to take an oath, he uſed to do it before this fire burning upon an altar, as the Jews did before the altar at Jeruſalem, upon which there was fire. It was likewiſe the cuſtom of the Pagan Arabians, who, when they ſuſpected that the perſon who was about to ſwear would take a falſe oath, privately caſt ſalt into the fire, in order to ſtrike a terror upon him by the crackling noiſe which it made. As the Jews burnt their ſacrifices in the ſacred fire, the Perſians did the ſame, imagining that the ſacrifices would not pollute the fire like other prophane things; but if any perſon threw filth or ſpit into it, they held it was a crime that ought to be puniſhed with death.

The Kings of Perſia, and other wealthy perſons, ſometimes caſt into the fire pearls, ſpices, and precious oils, in order to nouriſh the flames more delicately; and this they called *fire feaſts*. But they did this to the honour of God, and referred to him ultimately all that they did with reſpect to the fire, or by means of it. But this was not the only element which they ſhewed their reverence to; for they reſpected the air, water, and earth, and conſidered them as the principles of all things. They had, and ſtill have, curators of theſe four elements, who are employed to take care of the waters, the rivers, and fountains, to prevent, as much as poſſible, the air from being infected with any ſtink, the fire from being polluted with any filth, or the earth with any dead body. It is out of regard to the earth that they do not bury their dead, and, for fear of infecting the air, they keep crows and vultures to devour the corpſes, which have no other tombs than the entrails of theſe birds of prey. It was for the ſame reaſon, that Numa appointed that the Veſtals ſhould take care of the four elements; ſo that the word *veſta* is ſometimes uſed for fire, and ſometimes for the earth. The Veſtals were alſo obliged to look after the fountain of the Muſes near their temple. The Perſians abominate all noxious animals, and, on the contrary, have a prodigious eſteem for a dog and a cock. Zoroaſter expreſsly commands them to maintain dogs; and they are ſo fond of cocks, becauſe they are a kind of living clocks, that they would expoſe themſelves to the ſevereſt ſufferings, rather than cut off the head of one of theſe animals. Hence it is that Ariſtophanes calls a cock the bird of Perſia or Media, and there are ſuch a vaſt number of them in thoſe countries, that our travellers ſcarce eat any thing elſe; and from hence that uſeful bird has been propagated over the whole world.

In the *ſecond* chapter our author mentions how the Perſians boaſt of having received their religion from Abraham, which gives him occaſion to introduce the hiſtory of the life of that patriarch, to examine into his true ſentiments with regard to religion, and to compare them with thoſe of the Perſians. He explains, in a manner quite new, divers Chaldee words, the true ſignification of which was before unknown. He ſhews that Abraham became famous over the whole world, and that God's command to him to offer up his ſon, which the Pagans imagined to have been executed, led them to think, that, in order to obtain ſome ſignal favour from Heaven, the ſureſt way was to offer up one of their children to God. The Indian idolaters ſtiled their Chief Prieſt *Brahma*, or *Brahama*, which is nothing elſe but the name of Abraham. This Patriarch, according to the Jews and eaſtern people, of whoſe opinion our author does not diſapprove, lived in the time of Nimrod, who was the Ninus of the Pagans, and was the ſon of Cuſh. The latter lived in the territory of Babylon; but Chaldea being too ſmall for his deſcendants, they removed into the neighbouring country and ſettled there. This country was called at firſt from their father's name the land of Cuſh, and afterwards the land of Havilah; and it had the name of Arabia from Yaarab the ſon of Joktan, who dwelt in that country and poſſeſſed it. From this remark and ſome others Dr Hyde concludes, that it is a miſtake to underſtand Ethiopia to be the land of Cuſh mentioned in Scripture, ſince the word is not taken in that ſenſe in any part of the Bible, but always ſignifies the territory of Babylon or Arabia. There are ſeveral other curious obſervations in this chapter. Some authors are of opinion that Abraham was educated from his birth in the true religion, which was that of Eber, one of his anceſtors; but Dr Hyde thinks the common notion more probable, viz. that Abraham was at firſt an idolater, but afterwards converted to the knowledge of the true God by the particular interpoſition of Heaven. It is impoſſible to ſay at what age he was converted. The opinion of the Perſians, who aſſert that he was then fifteen years of age, or that of Cedrenus, who tells us that he was twenty-four years old, is not diſapproved by our author, who makes a great many other curious remarks upon Abraham, and upon his father Terah, his country, actions, &c.

In the *third* chapter, Dr Hyde examines more particularly into the religion of the Perſians, and ſhews in what it agreed, and in what it ſtill agrees, with that of Abraham. He treats alſo of the *Sabaites* and their religion. The Perſians knew the hiſtory of the creation of the world, having learned it from the Jews, or from Zoroaſter; and they kept it more pure than any other nation. As Moſes has ſaid nothing of the creation of good or bad angels, the Perſians have likewiſe omitted it. Our author is of opinion, that though angels are created beings, and conſequently not ſo antient

was not, after the demiſe of his firſt patrons, ſufficiently underſtood, ſo as to encourage him

tient as their creator, yet it is not to be doubted, but that they exiſted an infinite time before the creation of the world, and are ſo antient, that it is impoſſible for the mind of man to form a juſt idea of their duration; for it is not, ſays he, pious or fit to imagine, that God was at any time without miniſters, and we ought to believe that he had always angels ready to ſerve, and diſpoſed at all times to execute his commands. Our author ſuppoſes likewiſe, that the apoſtate angels tranſgreſſed before the creation of the world, though not long before it. He thinks, that as the Perſians were deſcended from Shem, they received alſo from him the knowledge of the true God, though they fell afterwards into a kind of *Sabaiſm* like the reſt of the world. They were recovered from their errors by Abraham, upon which account they gave the name of that Patriarch to their religion, calling it the religion of Abraham. He conquered Chedorlaomer King of Perſia, and it is probable that this prince and his allies embraced the religion of the conqueror, and that this example was followed by the ſubjects of theſe princes, as theſe people generally follow the religion of their governors. With regard to the *Sabaites*, the doctor informs us, that this is not the name of a particular nation, as that of the Sabeans, who were called ſo from Saba, a city in Arabia Felix. It is the name of a ſect, diſperſed over ſeveral nations, who worſhipped ſtars and idols. The Arabians have not ſucceeded in explaining this name, ſince they imagined that the word Sabaa ſignified to change one's religion. The word Sabaite comes from the Hebrew Saba, which ſignifies troops, or an army or hoſt; and the name of *Sabaites* was given to thoſe who worſhipped the *hoſt* of *Heaven*, that is the ſtars. There were two kinds of *Sabaites*, one of whom worſhipped the *ſtars*, and the other *idols*. The former were of two kinds, viz. the *Greek Sabaites*, who chiefly addreſſed their devotion to the *planets*, and the *Indian Sabaites*, who addreſſed it to the *fixed ſtars*. The doctor corrects here ſeveral profane writers, who have ſpoken very differently and confuſedly of the religion of the Perſians, and rectifies their accounts by diſtinguiſhing the times. He agrees with *Herodotus* and *Strabo*, that there was a time when the Perſians had not either temples nor altars. It was when they addreſſed their prayers only to the planets, or to God to procure their propitious influences. But when they began to build certain places, in which to keep the ſacred fire, and which the doctor calls *Pyrea*, they began likewiſe to have altars, upon which they ſometimes offered ſacrifices. It is not abſolutely true what thoſe authors have written, that the Perſians had no images, ſince *Giemſhid*, one of their Kings, is accuſed of idolatry, and ſince, towards the end of their empire, they worſhipped Venus in temples appointed for that purpoſe, where that goddeſs had her prieſts and prieſteſſes. Herodotus relates, that there was a law at Babylon, which ordered that the women ſhould come once in their lives to the temple of Venus, and proſtitute themſelves to the firſt paſſenger who would have any commerce with them, and that they could not refuſe this. The richer ſort went in a chariot with a magnificent equipage. When they were once come to the temple, they were obliged not to return 'till ſome paſſenger had pity on them. Thoſe who were handſome, continues Herodotus, returned ſoon, but ſome ordinary women ſtayed ſeveral years before they received their paſſport. Dr Hyde obſerves, that he had not read any where that the Perſians had any other ſtatues but that of Venus.

The *fourth* chapter is deſigned to prove, againſt the Greek and Latin writers, that the worſhip paid to *Mithra*, or the *ſun*, was not a divine adoration properly ſo called. The *fifth* chapter contains a kind of digreſſion upon the modern *Sabaiſm*, and the idolatry of the nations who made idols under the influences of the planets. In the *ſixth* chapter we ſee the care which the antient Perſians took of the water and fire; for though they endeavoured to preſerve the purity of all the four elements, yet they took a more particular care of the water and fire, ſince theſe two elements were moſt obnoxious to pollution. They believed that there was an angel eſpecially appointed to guard the water, and called him Ardiſur or Arduiſur. They celebrated his praiſes, and deſired him to continue in his office. The *ſeventh* chapter treats of the goddeſs Veſta, adored by the Greeks and Romans. The *eighth* chapter treats of the goddeſs Veſta of the Perſians, and the care which the Magi, their prieſts, took to preſerve the fire. Theſe prieſts were obliged to be married, becauſe, among thoſe people, it was meritorious with regard both to this world and that which is to come, to increaſe the number of the faithful by propagating the ſpecies. The doctor is of opinion, that the Perſians uſed to maintain the ſacred fire long before the reformation of their religion by Zoroaſter. Hence it follows, that before his time they had likewiſe covered places in the form of temples, ſince they could not otherwiſe have preſerved the fire. Zoroaſter only augmented the number, as our author proves. There is ſtill extant a Perſian book, intitled *Gjâvidân Chrad*, i. e. 'The Eternal Wiſdom,' which is older than all the writings of Zoroaſter, and aſcribed to one of their Kings, named *Hûſhang*. This book proves evidently, that the people of thoſe times worſhipped the only true God. The ſame appears from ſome other books cited by the doctor.

The *ninth* chapter treats of the two principles of all things, according to the notions of the Perſians, of the names given to them, and of their opinions with regard to the Deity, and the creation of all things. They eſtabliſhed two principles; the firſt of theſe, which is ſingle and eternal, the author and principle of all good, is God, whom they called *Yezâd*, *Ixâd*, or *Izid*, that is, he who ought to be prayed to. They called him likewiſe *Ormùzd*, or *Hormùz*, or *Hormiſda*; and by joining a more modern name, *Hormiſda Choda!* that is, O great God! or O ſupreme God! It is from this word that the Greeks formed that of Oromaſdes. Beſides this principle, they laid down another created one, which they ſuppoſed to be the principle of evil, and called it Ahâriman, Ahreman, Ahrîman, and ſometimes in poetry Ahrimanân; whence the Greeks, who wrote the hiſtory of Perſia, took their Ἀρειμανίος. This word is compounded of two others, which are ſynonymous, and ſignify impure, polluted; ſo that theſe two words being joined, ſignify very impure, and very much polluted. In their antient books, to ſhew the abhorrence which they had to the demon whom they called by this name, they wrote it in an inverted manner, thus, ɯɯıɹʎɐ. With reſpect to the creation, the Perſians taught with the Scriptures, that it was performed in ſix ſpaces of time. But they pretend that they are not ſimple days, and that by a day we are to underſtand the ſpace of ſeveral days.

The manner in which they divide theſe ſix periods of time, and the names which they give to them, was thus. They called the *firſt Mid-yuzeram*, containing the ſpace of *forty-five* days, in which God created *the heavens*. The *ſecond* was called *Mid-yûſham*, containing *ſixty* days, employed in creating *the waters*. The *third* was called *Pitiſhoſhim*, and comprehends *ſeventy-five* days, in which *the earth* was created. The *fourth* was called *Iyaſeram*, and contains *thirty* days, in which *the trees* were produced. The *fifth* was called *Midiyârim*, and comprehends *eighty* days, during which all *the creatures* were made. An author cited by the doctor tells us, that in this *fifth* period God created *the beaſts* and *birds*, namely, an *hundred* and *ſeventy-two* kinds of *beaſts*, and an *hundred* and *ten* kinds of *birds*. The *ſixth* period was called *Hamſpitamidim*, and contains *ſeventy-five* days, in which *man* was created. All theſe periods together make *three hundred* and *ſixty-five* days, which form one year. According to the Perſians, the creation began about May and ended in the ſame month, ſo that Adam, when he roſe from the hands of God, ſaw the whole earth covered with fruits. Zoroaſter appointed, that for each of theſe ſix periods employed in the creation, there ſhould be obſerved five feſtival days.

In the *ninth* chapter our author treats of the origin of mankind, of the deluge, of divers imaginary terreſtrial paradiſes, of Moſes and Solomon, and ſhews that the religion of the antient Perſians agrees in many points with that of the Jews, and was derived from it. Thoſe people believed that *Adam* and *Eve* were the ſtock from whence mankind deſcended, though ſome among them gave our firſt parents different names. They believed an univerſal deluge which covered the whole earth. But all were not of this opinion; ſome denied the deluge, others ſaid that it was not univerſal, and

him to ſend his learned treatiſes to the preſs; which he would willingly have done, not from

and that it did not riſe above the top of a mountain near Hulvan, a city upon the frontiers of Aſſyria and Perſia. The Perſians have ſpoken of divers terreſtrial paradiſes, and ſometimes given different names to the ſame place. This was occaſioned, becauſe the true ſituation of the garden of Eden was uncertain. Some fixed it at Jeruſalem, others at other places. The Perſians had ſome knowledge of Moſes, whom they ſtiled the ruddy Shepherd, who holds a ſtaff, becauſe he was a ſhepherd when he lived with Jethro his father-in-law, and becauſe he performed all his miracles, in Egypt and the wilderneſs, by means of his rod. They had knowledge alſo of Solomon, whom they called *Gjem*, which is likewiſe the name of one of their kings.

The *eleventh*, *twelfth*, and *thirteenth* chapters, contain the names and attributes which they gave to God, to angels, and to the devil. In the ſeven following chapters, the doctor treats of the year, and the different epochas of the antient Perſians and other nations, and of the names of the angels, whom they imagined to preſide over every month of the year. The antient Perſian year was ſolar, and not lunar; but as it conſiſted only of twelve months of thirty days each, it did not anſwer exactly to the time in which the ſun paſſes through the ecliptic, by which means the beginning of their year anſwered ſucceſſively to all the degrees of the ſigns of the zodiac, and ran through all the ſeaſons, 'till, after a revolution of fourteen hundred and ſixty years, it returned to the ſame point where it had begun. King *Giemſhid* leaving this manner of eſtimating time for civil purpoſes, eſtabliſhed another for religion, in order that, in a certain period of time, the ſame feſtivals might come together at the ſame ſeaſon of the year. For this purpoſe he ordered, that, at the end of one hundred and twenty years, there ſhould be an intercalation of a whole month, which ſhould receive it's name from the month after which it was intercalated. *Yeſdegherd* eſtabliſhed another epocha, and ordered the years to be computed from the beginning of his reign, and fixed the beginning of the year at March, from which it was very different when that prince began his reign. He aboliſhed the names of the angels which the months bore, and gave them natural names, taken from the ſeaſon prevailing in each month. He altered alſo the names of the days, and gave them ſuch as were taken from ſome remarkable event; calling one, for inſtance, Abundance of Riches, another by a name which expreſſed ſome great rejoicing upon it, another from the revenge which he had taken of ſome of his enemies, from ſome battle, or other ſingular event. He aboliſhed, in conſequence of this, all the feaſts and divine ſervice obſerved on certain days; ſo that in his Kalendar there was no feſtival but that of the new year. But *Yeſdegherd* reigning but twenty years, the Perſians, who had not forgotten their ceremonies, returned after his death to their old method of computation, reſtoring to the months and days the names which they had before the reign of that prince. It is a miſtake therefore of ſeveral Eaſtern and European writers, to call this antient epocha the epocha of *Yeſdegherd*, ſince, on the contrary, that epocha was aboliſhed by that prince, who eſtabliſhed another, which continued no longer than his reign. It appears, that the antient Perſians did not know the diſtinction of the year into weeks, but that they divided it only into twelve equal parts, and all the days of the months had their particular names, as thoſe of the weeks have with us. Dr Hyde gives us alſo an explanation of the epochas of the Tartars and Chineſe; and in the *nineteenth* and *twentieth* chapters, he mentions the different offices aſcribed to the angels by the Perſians, and obſerves that the antient and modern Perſians, as well as the Mahometans, imagined that every man has two genii attending him, one good the other bad.

In the *twenty firſt* and *twenty-ſecond* chapters, he treats of the legiſlators of the antient Perſians, of the ſtate of their primitive and orthodox Church, of the hereſies, ſects, and heretics among them, and particularly of *Manes*, *Mazdek*, and ſome others. After Abraham, their eldeſt legiſlator was *Zoroaſter*, or *Zerduſht*, who lived in the time of Darius the ſon of Hyſtaſpes; and aſſuming the character of a prophet, after ſome difficulty procured the King to approve his religion, who eſtabliſhed it in his dominions. It was the antient religion purged from *Sabaiſm*, with the addition of ſome particular rites and ceremonies. This religion is retained by many of the Perſians to this day. The works of *Zoroaſter*, which contain divers precepts relating to doctrine and manners, are in the ſame eſteem with them as the Bible with Chriſtians. However, if we judge by the book, a tranſlation of which is ſubjoined to our author's work, among ſeveral noble rules of morality there are a great number of ſuperſtitious and trifling things. The religion of *Zoroaſter* did not always continue in the ſame ſtate; it ſuffered ſeveral changes, as particularly under the reign of Alexander the Great, who conquered Perſia; and under ſome other princes. King *Ardeſhîr Babeân*, who reigned two hundred years after Chriſt, called together a kind of council, in order to conſult the prieſts of his dominions upon ſeveral important points of religion, and by this means cleared it from ſeveral errors, with which it had been before in a manner diſfigured. This reformation was brought about by the aſſiſtance of a certain legiſlator, named *Erdæviráph*. But it did not long continue, for *Manes* propagated his monſtrous notions over Perſia, where he was born.

In the *twenty-third* chapter, Dr Hyde gives us an account of the life of Darius Hyſtapes; and in the *twenty fourth*, that of *Zoroaſter*. He obſerves, that his true name is *Zerduſht*, that of Zoroaſter being invented by the Greeks, who in order to accommodate foreign names to their own language, have generally diſfigured them in ſuch a manner, that it is impoſſible to gueſs at the true name. They have likewiſe often given the ſame name to different perſons, on account of ſome reſemblance, and this has happened upon the preſent occaſion, ſo that there are almoſt as many Zoroaſters as there were Hercules's. But the Perſians ſpeak only of one, and agree about the age in which he lived, though they differ about his country. Some relate that he came from China, and others from Europe, by which, perhaps, they mean Paleſtine, which is not far diſtant from it. The moſt certain opinion is, that he was born in Perſia, but that his father being poor, he became ſervant to the prophet Eſdras; and ſeeing his maſter working divers miracles, he was induced to attempt the ſame, or at leaſt to pretend it, in order to eſtabliſh a new religion, or to reform that which was already eſtabliſhed. Monſieur Bernard remarks in this account of our author's book, that he does not find that Eſdras ever worked any miracles; but that if Zoroaſter really was a ſervant of his, we may aſſert with greater probability, that he learned of that prophet all the miracles which Moſes and the other prophets performed. Dr Hyde gives a long account of the artifices made uſe of by Zoroaſter to attain his end. He ſpent but four or five years in digeſting and propagating his doctrines, and then was killed, together with eighty other prieſts. But it is probable, that before he undertook his reformation, he wrote and prepared a conſiderable number of books, which he publiſhed afterwards. Our author rejects what the Greeks have written concerning his death.

He employs his *twenty fifth* chapter in explaining the general name of *Zend* or *Zendaveſtâ*, which Zoroaſter gave to his work. The word Zend is Arabic, and that of Eſhta, Hebræo-Chaldaic, and ſignifies *fire*, ſo that we may tranſlate the word Zendaveſtâ, an inſtrument to ſtrike fire with; Zoroaſter intimating by this, that the deſign of his works was to kindle the fire of zeal and piety in the hearts of men. In the *twenty-ſixth* chapter, the Doctor treats particularly of Zoroaſter's books, and of the language and character in which they are written. The original of Zendaveſta was written upon twelve ſkins in the Perſian language, but in ancient characters, not underſtood at all by the modern Perſians. All his works are in proſe, ſo that whatever is in verſe and aſcribed to him, *is* abſolutely ſpurious. It is true, that ſome Perſian prieſts have tranſlated into verſe, a ſmall part of their legiſlator's writings, becauſe the people did not underſtand the language of the original, but they did not begin to do it 'till two hundred years ago, and the ancient Perſians never undertook any thing of that kind.

In the *twenty ſeventh* chapter, our author treats of the nature of fire, the manner of keeping it among the Perſians, the ſignal uſed to call them to public aſſemblies, their manner of behaving in their temples, their

uſe

from motives of vanity or profit, but from a communicative ſpirit, and a laudable deſire of

uſe of rods in divine ſervice, their daily repeating of their prayers in a low voice, and their ſilence. In the city of Nuſſari in India, the followers of Zoroaſter aſſemble at the ſound of a little bell; but at Iſpahan, the capital of Perſia, they know the proper times of aſſembling without any ſignal, or by only making uſe of a large piece of wood which they ſtrike, and this they do to avoid offending the Mahometans, who will not permit the uſe of bells, becauſe they were invented by the Chriſtians. When the Perſians pray, they place themſelves at a ſmall diſtance from the fire which burns in their great temples, for fear of polluting it with their breath, but in ſmall temples there is only a lamp. For the greater precaution, they cover their mouth with a ſquare piece of linnen called Panâm. They pray with a low voice, and only murmur between their teeth. The prieſt advances nearer to the fire, he has alſo his mouth covered and a cap with ears on his head, and is covered with an albe, holding in one hand a book, and in the other ſeveral white rods. He chants likewiſe the prayers, and recites the office taken from the book Zend. Sometimes in the warmth of devotion, he ſtands upon one foot, in imitation of their great prophet. After prayers follow the offerings. Every perſon who is able, caſts into the fire precious ointments, ſpices, pearls, or at leaſt corn or fleſh.

In the *twenty eighth* chapter, our author treats of the prieſthood and hierarchy of the Magi, at the time when their Church was in it's flouriſhing ſtate, and even at preſent. He tells us, that this hierarchy was not much different from that which ſubſiſts now in thoſe Chriſtian Churches in which the ſeveral orders are diſtinguiſhed. The clergy were formerly very rich, but they are in very different circumſtances now, under the oppreſſion of the Mahometans. The revenue of the prieſts, conſiſts chiefly of this, that upon the 24th of April, all the inhabitants of a pariſh extinguiſh the fire in their houſes, and go to light it again by the fire of their prieſt, paying him each of them for his permiſſion, about ſix ſhillings and three-pence. They likewiſe pay tythes.

In the *twenty-ninth* and *thirtieth* capters, the author treats further of the fire, mentions the names given it by the Perſians, and ſpeaks of the temples built to preſerve it; of the manner in which the Magi behave themſelves in them; of the reproachful names given by the Mahometans to the followers of Zoroaſter; of thoſe given to each order of their prieſthood, their ſeveral ſacred orders, and the particular names given them, and of the habits of the prieſts. In the thirty-firſt chapter, he diſcourſes of the Perſian Magi in general, and particularly of thoſe who came to worſhip Chriſt immediately after his birth. The Perſians by the word *mogh*, mean their wiſe-men and prieſts. The Chaldeans have taken from this, their word *mag*, and the Greeks adding their termination, have changed it into Μάγος, which ſignifies not a magician, but a philoſopher or wiſe-man. Such were thoſe who came to Bethlehem, and not Kings, as is commonly ſaid without any foundation. Dr Hyde thinks, after Petavius, that they came from Perſia, and not from Arabia, which they only paſſed through, or to ſpeak more exactly, from the country of the Parthians, where there was the ſame religion and magi as in Perſia, and where the ſeat of the empire was at the birth of Chriſt. The Prince who ſent theſe magi, or permitted them to go, was the ſame Phraates the ſon of Orodes, who ſent his four ſons to Rome to be educated there, who did homage to Auguſtus, and reſtored to the Romans the enſigns which his father Orodes had taken from Craſſus. The goſpel, according to Dr Hyde and divers learned writers, informs us, that the birth of Chriſt was revealed to the Perſians. They had this advantage over many other nations, as well that the Chriſtian Revelation might be immediately known in the moſt diſtant places, as becauſe the Perſians were the only people except the Jews, who had preſerved the knowledge and worſhip of the true God, though mixed with ſome ſuperſtitions. What the prophet Iſaiah foretold concerning Cyrus two hundred years before the birth of that prince, is a ſufficient proof of the particular regard which God had for the Perſians. But whence could these Magi learn that a Meſſiah was to be born among the Jews? Daniel, and ſome other prophets had been in their country. Beſides, we find ſome predictions in the writings of their pretended prophet Zoroaſter, who was ſometimes inſpired by God, as Balaam had been before. Add to this, that the prophecies of the Old Teſtament were not unknown to them.

In the *thirty-ſecond* chapter, our author ſhews the original of all the fabulous ſtories relating to the *Sibyls*, and the books aſcribed to them; and in the *thirty-third* chapter, he gives a ſhort account of the religion of the ancient Perſians. He ſhews, that they conſtantly believed one God, Almighty and Eternal, poſſeſſed of all perfections which Chriſtians aſcribe to him. They believe an univerſal reſurrection both of the good and bad, and a laſt judgment, in which every one will receive according to his works; the good, a life of eternal happineſs; and the vicious, an eternity of miſery; God having prepared for the former a Paradiſe of cryſtal, and for the latter an abyſs to plunge them into. They believe that they offend God every day, but they proteſt that they repent of all their ſins both of mind and body, by their thoughts, words, and actions. They believe that God has given the government of cities and provinces to planets and angels. That they are ſent for the good or puniſhment of mankind when he thinks proper. That every man has his good and evil angel, the former of whom inclines him to virtue, and the latter to evil. That the devil is an irreconcileable enemy to mankind. That God favours certain perſons with an infuſed light, which qualifies them to govern other men, and to become ſkilful in arts and ſciences. The good likewiſe receive ſuch a light. But Dr Hyde is of opinion, that this ſignifies only natural light or reaſon. The Perſians believe, that in the life to come, the vicious will be tormented with different kinds of puniſhment; but inſtead of fire, they ſpeak of darkneſs and a black ſtinking river, the waters of which are cold as ſnow, and ſuppoſe them to be formed of tears ſhed for the dead, and which ſerve only to enhance their puniſhment. They have not all the ſame notions concerning the place of happineſs, ſome have fixed it in the ſun with the Manicheans and other heretics; others have imagined, that after the reſurrection, the bleſſed will live upon the earth, which ſhall be renewed after having paſſed through a conflagration. They ſpeak likewiſe of a bridge built upon the abyſs, over which the ſouls ſeparated from the bodies are to paſs into the ſeat of immortality; and they mention ſeveral other ſtrange things related by our author. In the *thirty-fourth* chapter, he treats of the marriage of the Perſians, of their baptiſms and ablutions, and of their funeral rites. In the laſt chapter, he treats of the names of Perſia and the Perſians, and of their ancient and modern language and it's different dialects, that is, of the language of the Perſians, Medes, and other people of Aſia.

To theſe thirty-five chapters is ſubjoined a Latin tranſlation of a book uſed by the Magi, intitled Sadder, containing the laws and precepts of Zoroaſter. It was written above two hundred years ago in verſe, in the modern Perſian language, by one of their prieſts, the ſon of Melicſhâh, a man of great learning and ſkill in the old Perſian, and in the antient books written in that language. In the fourth porta or chapter, the author exhorts ſinners not to deſpair of the mercy of God, ſince he is ready to give much and receive but little. He mentions upon this occaſion, that while Zoroaſter was converſing familiarly with God, that prophet ſaw a man whoſe whole body was in hell except his right foot. He aſked who he was, and God anſwered, that it was a prince who had reigned over thirty-three cities, and done no good during his life, having given up himſelf to oppreſſion, injuſtice, and violence, and made his people ſuffer a thouſand evils. But that having one day met with a ſheep bound at ſuch a diſtance from his food that it could not reach it, he thruſt it towards the ſheep with his foot, which for this reaſon was exempted from the torments of hell, to which the reſt of his body was expoſed, In the twenty-fifth porta, the author diſſwades from faſting, and teaches that the true faſt conſiſts in abſtinence from ſin. In the ſixty-ſeventh, he places lying among the worſt of ſins. The appendix of Dr Hyde, contains ſeveral curious obſervations, and extends to fifty-ſeven pages. This learned work was exceedingly well received abroad, and highly admired and eſteemed by the learned at home. However the ſale of it was ſo inconſiderable,

of promoting oriental literature; a taſk to which he was at leaſt as equal as any man of his age. But by an unaccountable fatality, while trivial or at leaſt leſs important ſtudies met with ample recompences, theſe were overlooked, or rather their worth was not ſufficiently underſtood; in conſequence of which, this learned perſon's abilities, application, and ſtrong inclination, to enrich the Republic of Letters, with the numerous acquiſitions of a moſt laborious ſearch through the courſe of a very long life, were neglected 'till it was too late, and the loſs has been ever ſince (though to no purpoſe) deſervedly regretted. Beſides theſe, he had compleated ſome, and begun to prepare many other, works for the preſs, the titles of which are all that we can communicate to the reader, and theſe will be found at the bottom of the page (*s*) [*E*]. On the 9th of April 1701, he

(*s*) See the note.

inconſiderable, that a great part of the impreſſion was deſtroyed, which is the reaſon of the extreme ſcarcity and high price of the few copies that remain. The learned Dr Prideaux has made great uſe of this hiſtory in his valuable performance, and indeed, if truth be the moſt valuable thing in hiſtory, there are more important truths to be learned out of this ſmall work in relation to the oriental nations, than from any other book ancient or modern, and yet we ſhall find in the next note, that even this very learned and laborious work, was but a ſpecimen of what our author could have done, if he had been properly ſupported and encouraged.

[*E*] *At the bottom of the page.*] We owe this catalogue of our author's works to honeſt Anthony Wood, who tells us, that at the time he wrote, Dr Hyde had done ſomething towards all of them, and deſigned, if he lived, to finiſh them for the preſs. The very catalogue is a curioſity, and lets us more thoroughly into the character of this learned man, than the moſt laboured panegyric; at the ſame time, that it muſt raiſe in us a great concern, that we know not the fate of any of theſe manuſcripts, of which, in the courſe of ſo long a life, many no doubt were far advanced, and ſome perhaps abſolutely finiſhed.

1. *Grammatica pro Linguâ Perſica:* that is, A Grammar for the Perſian Tongue, 4to.

2. *Lexicon Perſico Latinum:* That is a Dictionary of the Perſian and Latin, in a thick 4to.

3. *Lexicon Turcico Latinum:* that is a Dictionary Turkiſh and Latin, in a thick 4to.

4. *Nomenclator Mogolo-Tataricum, cum Grammaticâ ejuſdem Linguæ:* that is, A Nomenclator of the Mogul language, with a Grammar of the ſame Tongue.

5. *Diſſertatio de Tartariâ. Item, Hiſtoria Chartiludii; & Diſſertatio de Numerorum Notis earundemque origine & combinandi ratione doctrinâ novâ:* that is, A Diſſertation concerning Tartary. The Hiſtory of Card Playing; as alſo a Diſſertation on the Origin of Figures, and the Art of combining them according to a new Method, 8vo.

6. *Curioſa Chinenſia & Selanenſia:* that is, Chineſe and Ceyloneſe Curioſities, 8vo.

7. *Hiſtoria Gemmarum Arabicè & Latinè cum Notis:* that is, The Hiſtory of Gems, Arabic and Latin, with Notes, 8vo.

8. *Hiſtoria* Tamerlanis *Arabicè & Latinè cum Notis:* that is, The Hiſtory of Tamerlane (Timur Bec) in Arabic and Latin, 4to.

9, *Liber* Buſtân *Perſicè & Latinè cum Notis. Liber elegantiſſimus autore Scheia Shadi:* that is, The Poem Buſtan or *(Boſtan)* in Perſian and Latin, with Notes. The moſt elegant Performance of Scheia Shadi, 4to. The name of this celebrated Perſian writer was, *Sheik Moſlehedin Saadi Al Shirazi.* This laſt implies no more than Shiraſian, or a native of Shiras. The title of this poem BOSTAN, ſignifies literally a *Garden of Fruits, an Orchard,* and is admired through all the Eaſt, as one of the fineſt pieces ever compoſed by man. The language of this treatiſe is mixed, partly verſe and partly proſe, the book itſelf being a miſcellany of Politics, Hiſtory, and Morality, many of the greateſt wits in Aſia have wrote commentaries upon it, and there have been likewiſe ſeveral imitations.

10. *Divini Poetæ Hâphix Opus. Perſicè & Latinè cum Notis:* that is, The work of the Divine Poet Haphix, in Perſian and Latin, 4to. We find this famous author called by other learned writers, Hafedh or Hafez, which was but a kind of ſurname, ſince he was properly called Mohammed Schamſeddin. He was a native of Shiras, and lived in the time that Timur Bec, or Tamerlane, made himſelf maſter of that country, and was well received and much reſpected by that conqueror; he died about the time that Sultan Babor, the grandſon of Timur, reduced the city of Shiras, and the tutor or preceptor of that prince, Mohammed Mimai, not only erected a monument to his memory, but alſo an oratory or chapel over the place where he was interred. Seid Caſſem Anovar, rendered him yet a greater honour, for he collected and publiſhed in one volume all his poetical works, which he intitled, Divan Khovageh Hafedh Schirazi, which is the very book our author tranſlated. This poet's ſentiments were ſo refined, and he expreſſed himſelf ſo myſtically, that he obtained the ſurname of Leſſan Gaib, the ſpeaker of myſteries. Ahmed Feridoun explained them in the Turkiſh language. They are penned in the ſtile of the Canticles, and it may not be amiſs to obſerve, that this Perſian poet was not a little ſuſpected in point of religion, that is, he was thought to prefer the Goſpel morals to thoſe of the Koran.

11. *Abulfedæ Geographia, Arabicè & Latinè, cum Notis:* that is, Abulfeda's Geography, in Arabic and Latin, with Notes, 4to.

12. *Liber Bahariſtân, eloquentiſſimo ſtylo, conſcriptus meri ingenii Specimina, continens Librum Guliſtan æquans ſi non ſuperans Perſice & Latine, cum Notis:* that is, The Bahariſtân, written in a moſt elegant ſtile, abounding with ſublime ſtrokes of wit, equal, and if not excelling, the Guliſtan, in Perſian and Latin, with Notes, 4to.

13. *Maimonidis Liber More Nevochim, tranſcriptus ex Characteribus Hebraicis, quibus a Maimonide ſcriptum eſt, in proprios Arabicos, cum novâ Verſione & Notis Arabicè & Latinè:* that is, The Book of Moſes the Son of Maimon, entitled, The Guide of the Doubtful, tranſcribed out of the Hebrew Characters, in which it was wrote by the Author, into the Arabic, in which language it is wrote, with a new Tranſlation and Notes Arabic and Latin, in a thick quarto.

14. *Hiſtoria Regum Perſicæ, ex ipſorum Monumentis & Autoribus extracta:* that is, The Hiſtory of the Perſian Kings, extracted from the Authors and Monuments of that Nation, 4to.

15. *Annotationes in difficiliora Loca Biblica ex Literaturâ Orientali:* that is, Annotations upon difficult Texts of Scripture, the true ſenſe of which can be only attained from Oriental Literature, in a thick quarto.

16. *Periplus Marium Mediterranei & Archipelagi, Turcicè & Latinè, cum circulo ventorum in variis Linguis, Arabicâ, Perſicâ, Chineſi,* &c. That is, The Navigation of the Mediterranean and the Archipelago, in Turkiſh and Latin; together with the Names of the Winds marked upon the Compaſs in ſeveral Languages, Arabic, Perſic, Chineſe, &c. 8vo.

17. *Zoroaſtris Perſo-Medi Opera omnia Mathematico-medico-phyſico-theologica, Perſicè & Latinè:* that is, The Theological, Mathematical, Medical, and Phyſical Works of Zoroaſter or Zerduſht, in Perſian and Latin, folio.

18. *Liber Erdaviraph-name, Perſice & Latine:* that is, The Erdaviraph-name, in Perſian and Latin, quarto.

19. *Lexicon Hebraicum, emendatum ex MSS. Lexicis Rabbi Pinchon, R. Jonæ & R. Jeſaiæ, atque ex collatione cum Linguis Arabicâ & Perſicâ, & aliis Linguis Orientalibus:* that is, The Hebrew Lexicon, corrected from the Manuſcript Lexicons of Rabbi Pinchon, Rabbi Jonas, and Rabbi Jeſaas, as alſo by Collation with the Arabic, Perſic, and other Oriental Tongues, quarto.

20. *Cœlum Orientale Arabico-Perſicum atque Occidentale Græco-Latinum, una cum Saphii Figurationibus Stellarum duplici ſitu, prout in Cœlo, & prout in Globo apparent, cum earum nominibus, ſecundum harum gentium doctrinam:* that is, The Eaſtern Firmament, Arabic and Perſian, as alſo the Weſtern Greek and Latin, with the figures of Saphius, of the double Poſition

he reſigned the office of Head-Keeper of the Bodleian library on account of his age and infirmities (t). He had occupied the poſt of Interpreter and Secretary in the oriental languages, during the reigns of Charles the Second, James the Second, and William the Third, with great ſufficiency; and, in the courſe of his employment, had made himſelf ſurprizingly maſter of whatever regarded the policy, ceremonies, and cuſtoms, of the oriental nations (u). He ended his days February 18, 1702, at his lodgings in Chriſt-Church, in the ſixty-ſeventh year of his age, and lies buried at Hamborough in the county of Oxford (w). He was ſucceeded in his Archdeaconry of Glouceſter by Mr Robert Parſons (x), and, which is very ſingular, in the chair of Hebrew Profeſſor and Canon of Chriſt-Church by his predeceſſor Dr Roger Altham (y).

27. *Dialogi Arabico-Perſico-Turcici; Latinè verſi:* that is, Arabic, Perſic, Turkiſh Dialogues, with a Latin Tranſlation, 8vo.

28. *Liber de Turcarum opinionibus, in rebus religioſis, Turcicè & Latinè:* that is, A Treatiſe on the Sentiments of the Turks in Points of Religion, Turkiſh and Latin, 8vo.

29. *Utilia menſalia, ſcil. quid in Converſatione Convivali decorum eſt, Arabice & Latine:* that is, Uſeful Table-Talk, being the Converſation at Meals, properly expreſſed in Arabic and Latin, 8vo.

30. *Rivolæ Lexicon Armeniacum, cum Linguis Orientalibus (ſcil. Arabicâ, Perſicâ, & Turcicâ) collatum, & in margine notatum;* that is, The Armenian Lexicon of Rivola, collated with other Oriental Languages, with marginal References, 4to.

31. *Evangelium Lucæ, & Acta Apoſtolorum Linguâ & Charactere Malaico:* that is, The Goſpel of Luke, and the Acts of the Apoſtles in the Malayan Tongue and Character, 4to.

E

HYDE [EDWARD], Earl of Clarendon, and Lord High-Chancellor of England, was deſcended from an ancient family in Cheſhire [A], and had his birth at a place called Dinton near Hindon in Wiltſhire on the 16th of February 1608 (a). Having made a quick progreſs in grammar learning at ſchool, he was ſent to Oxford at the age of fourteen, and entered of Magdalen-hall in Lent term 1622 (b), being put under the tuition of Mr John Oliver of Magdalen-college [B]. He had diſtinguiſhed himſelf in the univerſity

[A] *Deſcended of a family originally from Cheſhire.*] It appears from the Wiltſhire Viſitation book (1), in the Herald's-office, that Sir Robert Hyde of Hyde, Knt. in the county of Cheſter, temp. Henry III. had iſſue Robert Hyde of the ſame place, who by his wife, the couſin and next heir to Thomas Norbury de Norbury in the ſame county, had iſſue two ſons, Sir John Hyde of Norbury, Knt. and Alexander Hyde of Denton in Wiltſhire. Sir John married twice, and by his firſt wife Ann, daughter of ——— Baguly, of Baguly in Cheſhire, had iſſue William Hyde of Norbury, from whom by a younger ſon deſcended the Hydes of Hopton-Wafre in Salop. But the elder ſon of the ſaid William, had iſſue Thomas Hyde, whoſe ſon Robert Hyde continued at Norbury, and having had three wives, by the firſt had Hamnet or Hamlet Hyde, whoſe poſterity remain ſtill at Norbury; and by the third wife, he had Laurence Hyde of Guſſage St Michael in Dorſetſhire (2), and of Weſt-Hatch in Wiltſhire, which Laurence had four ſons, 1. Robert of Weſt-Hatch the eldeſt. 2. Henry. 3. Sir Nicolas Hyde Lord Chief-Juſtice. 4. Sir Laurence Hyde of Saliſbury, Attorney to Queen Anne conſort to King James I. Of theſe, Henry the ſecond ſon was of Pyrton in Wiltſhire, and marrying Mary, daughter and heir of Edward Langford of Trowbridge in the ſame county, had iſſue by her five daughters, beſides Edward, the ſubject of this article (3).

(3) Peerage of England, 4th edit. under the title Clarendon.

[B] *Under the tuition of Mr John Oliver.*] Of this worthy perſon, we have the following account by Mr Wood (4). 'That he was a Kentiſh-man born, and being removed from Merton-college to Magdalen, became ſucceſſively Demy and Fellow there; that for his eminence in learning and orthodox principles in religion, he was made domeſtic chaplain to Archbiſhop Laud, and promoted in the church; but loſing all in the time of the rebellion, he was elected preſident of his college in April 1644, upon the advancement of Dr Frewen to the ſee of Lichfield. That in the latter end of 1647, he was turned out of his preſidentſhip by the Committee of Parliament for the reformation of the Univerſity, and in the beginning of the next year by the viſitors. That afterwards living obſcurely and in great hardſhip, he wanted the charities, which he before beſtowed on the poor and the public, being in a manner the object of charity himſelf. That on the 18th of May 1660, about a fortnight before his Majeſty's return, he was by the authority of Parliament reſtored to his preſidentſhip, and on the 22d took poſſeſſion thereof, being the firſt of all loyal heads that were reſtored at Oxford. That ſoon after he was nominated by his Majeſty Dean of Worceſter, and inſtalled therein Sept. 12, 1660, and holding that dignity to his deceaſe, which happened 27 October 1661, he was buried in Magdalen-college chapel. That this moſt learned, meek, and pious perſon, was ſtrangely deſirous to leave this world, though few alive had then ſuch temptations to ſtay in it. And that the little which he had got ſince his Majeſty's return, he gave to pious uſes, either to the poor; or to the reparation of churches, viz. St Paul's, Winchеſter of which he was Prebendary, Worceſter; and to his college.' 'Dr 'Oliver, concludes this author, left alſo a legacy ſealed 'up in a paper to Sir Edward Hyde, then Earl of 'Clarendon and Lord Chancellor of England, ſome 'time his pupil while he was in the univerſity, for

'upon

verſity by his excellent talents in polite literature, oratory, and poetry, when he took the degree of Bachelor of Arts on February 14, 1625 (c); and being deſirous of a ſettlement therein, he ſtood candidate for a Wiltſhire fellowſhip in Exeter-college [C]; but loſing the election, he removed to the Middle-Temple (d), and applied himſelf to the ſtudy of the Law; and being called to the bar, in a few years became eminent in that profeſſion *. Accordingly, when the Lawyers reſolved to give a public teſtimony of their diſſent to the new doctrine advanced in Mr Prynne's Hiſtriomaſtrix, Mr Hyde was appointed one of the managers of the maſk, preſented on that occaſion to their Majeſties at Whitehall, on Candlemas-day 1633-4 (e) [D]. At the ſame time he teſtified, upon all occaſions, his utter diſlike to that exceſs of power which was exerciſed by the Court [E], and ſupported by the Judges in Weſtminſter-hall. In this ſpirit he condemned the oppreſſive proceedings of the High-Commiſſion Court, the Star-Chamber, the Council-Board, the Earl-Marſhal's Court or Court of Honour, and the Court of York. Theſe appeared to him to be ſo many arbitrary invaſions upon the legal eſtabliſhment of the Church and the Monarchy, to both which he was moſt firmly and zealouſly attached (f). In this diſpoſition, and with theſe principles, he was elected a member for Wotton-Baſſet in Wiltſhire, in the Short-Parliament which met at Weſtminſter April 10, 1640. This ſituation gave him the beſt opportunity of diſcerning the ſeveral characters of the leading men at that time,

* About this time he wrote *The Difference and Diſparity between the Eſtates and Conditions of* George Duke of Buckingham and Robert Earl of Eſſex. Printed in *Reliquiæ Wottonianæ*, 1672, 8vo. Athen. Oxon. ubi ſupra.

(e) See his Life, ubi ſupra.

(f) See below in remarks [G], [H], and [I].

' upon the Chancellor's motion it was, that he was ' made Dean of Worceſter.'

[C] *He ſtood for a fellowſhip of Exeter-college.*] I believe it will hardly be diſputed, that at this time his deſign was for holy orders, the fellowſhip probably required it, and his inclination was naturally bent in favour of the Church, and he was likewiſe greatly devoted to the univerſity. There is a paſſage in his *Animadverſions upon Mr Creſſy's book againſt Stillingfleet's Irenicum* (5), which ſhews that he took more than ordinary notice of particular occurrences, where the honour of that learned body was concerned, and was uncommonly affected with them. Mr Creſſy having aſſerted, that Stillingfleet had produced on his ſtage in antique dreſſes, the famous teachers and erectors of ſchools for contemplation, S. Bennet, S. Romeulde, S. Bruno, S. Francis, S. Dominique, and Ignatius, expoſing them to the deriſion of prophane perſons, proceeds to obſerve, that ' this prophanely employed wit, as he calls it, was no new invention, for that he had heard that kind of wit before, when he was a young ſtudent in Oxford, in a repetition ſermon to the univerſity, which, continues he, if fancy be alone conſidered, far better deſerved applauſe, wherein the preacher deſcanting upon the whole life of our Saviour, rendered him and his attendants, men and women, objects of the utmoſt ſcorn and averſion, as if they, all of them, had been only a pack of diſſolute vagabonds and cheats: but preſently the preacher changing his ſtile, as became a diſciple of Chriſt, with ſuch admirable dexterity and force of reaſon anſwered all the cavillations and invectives made before, that the loudly repeated applauſe of his hearers hindered him a good ſpace from proceeding; *notwithſtanding which, the grave doctors and governors of the univerſity, though much ſatisfied with his abilities, yet wiſely conſidering, that a petulant hiſtorical ſtile even in objections did not fit ſo ſacred a ſubject, and that it was not lawful too naturally to perſonate a deriding Jew, obliged the preacher to a public recantation ſermon in the ſame pulpit the ſunday following.* To this pretty tale, ſays the Earl of Clarendon, I ſhall make no reply, ſince in the judgment of any diſpaſſioned man, it cannot be thought to be parallel to any thing the Doctor [Stillingfleet] hath ſaid or done. *Yet I ſhall endeavour to convince Mr Creſſy, that his memory hath not been faithful to him in preſerving the merit of that caſe and ſentence, and ſhall give him cauſe to believe, that I was likewiſe preſent at that ſermon, by putting him in mind, that it was preached by one Mr Luſhington, a man eminent for his parts, upon thoſe words of the Evangeliſt,* And his diſciples came and took him away whilſt we ſlept [Mat. viii. 13.], *which gave him occaſion to help the ſouldiers in their defence*; in which he gave them leave to uſe ſome light expreſſions againſt the witneſſes for the reſurrection, which were not decent upon that *ſubject*; but *that* part was quickly ended when he put into the mouths of the diſciples, to whom he likewiſe aſſigned a part, words very worthy of them, and fit to be uttered in that place, and with which the graveſt auditors were abundantly ſatisfied, though they were diſpleaſed with ſome light and ſcandalous expreſſions in ſome other parts of the ſermon: which he began with *qu'elle nouvelle*, as if he came thither to aſk and hear news. *But under favour of Mr Creſſy's memory*, proceeds his Lordſhip, *nothing of this was the ground of the ſentence or of his recantation; but a Parliament being then ſitting, the preacher had unwarily and very unneceſſarily let fall ſome words, which reflected upon their proceedings, particularly, that now every peaſant in Parliament by the priviledge of his vote there, cared not how he behaved himſelf toward the King or the Church, or to that effect* (6), *which made thoſe who loved him beſt, willing to cenſure him there, that he might eſcape a harder judgment in another place:* whereupon the Vice-Chancellor, who was Dr Pierce (afterwards Biſhop of Bath and Wells) commanded a copy of the ſermon, which being delivered and peruſed by him, and a delegacy of the Doctors, Mr Luſhington was reprehended for the light and ſcandalous expreſſions he had uſed upon a ſubject too much above thoſe exceſſes, and was ordered to make a recantation ſermon for what he had ſaid of the Parliament, and had a text likewiſe given him to that purpoſe; the words concerning the Apoſtles in that of the Acts [ii. 1.] *And they aſſembled together with one accord in one place:* which recantation he performed with great ingenuity and much applauſe. If theſe particular recollections, concludes the Earl, do not induce Mr Creſſy to concur in the truth of the relation, I am afraid we ſhall find few equal arbiters to determine the difference between us; for this ſermon, if I am not very much deceived, was preached in April 1624 or 1625 (7), of which I believe that there be not many ſurviving auditors beſides Mr Creſſy and myſelf.'

(5) P. 21 to 24.

(6) Mr Wood ſays the words were, *Now the peaſant thinks it comes to his turn, under pretence of his privilege in Parliament, that he ſhould diſpoſe of Kings and Commonwealths*, &c. and that there were ſeveral other paſſages reflecting upon the reſolution for war with Spain, and upon the Spaniſh match. Athen. Oxon. Vol. II. col. 262. where may be ſeen ſome paſſages of the recantation ſermon, which evince the juſtice of Lord Clarendon's remark upon it

(7) It was preached on Eaſter Monday, in 1624. Id. ibid.

[D] *He was one of the managers of the Maſque, &c.*] Mr Whitlocke was choſen with him for the Middle-Temple, Sir Edward Herbert and Mr Selden for the Inner-Temple, Mr Noy, the Attorney-General, and Mr Gerling for Lincoln's-Inn, and Sir John Finch and another gentleman for Gray's-Inn (8). It is certain, that the *Hiſtriomaſtrix* was univerſally condemned for the faulineſs of the language, wherein was ſhewn an utter diſregard of all manner of decency and reſpect to the Crown; a ſpirit againſt which Mr Hyde had by nature a particular indignation, and when it grew afterwards to the moſt enormous exceſs, was always moſt warmly oppoſed, and with a ſingular deteſtation by him, as is evident from the whole tenor of his Hiſtory of the Rebellion.

(8) Whitlocke's Memorials, &c. P. 19. edit. 1732.

[E] *He diſliked the exceſs of power exerciſed by the Court, &c.*] Biſhop Burnet (9) relates a ſtory of him, which implies, that in the view of ambition, he was diſpoſed at his firſt ſetting out, to fall into all the meaſures of the Court, and that he was brought to a juſter conduct by the following incident. ' When he firſt ' began, ſays that Hiſtorian, to grow eminent in his ' profeſſion of the Law, he went down to viſit his father ' in Wiltſhire, who one day, as they were walking in the ' fields together, obſerved to him, that men of his pro- ' feſſion were apt to ſtretch the Prerogative too far, and ' injure liberty; but charged him, if ever he came to ' any eminence in his profeſſion, never to ſacrifice ' the laws and liberty of his country to his own intereſt ' or the will of his Prince.' He repeated this twice, and immediately fell into a fit of apoplexy, of which he died in a few hours; and this advice had ſo laſting an influence on the ſon, that he ever after obſerved and purſued it.

(9) Hiſtory of his own Times, Vol. I. b. 2.

time, for which he had ſuch an admirable talent; and he gave a conſpicuous proof of his own abilities and weight in the Houſe of Commons, as well as of his ſincere and hearty affection for the King [F]. Theſe diſtinguiſhing merits procured him a ſeat in the Long-Parliament for the borough of Saltaſh in Cornwall, where he perſevered ſteadily under the conduct of the ſame principles, and ſhewed himſelf not leſs zealous for redreſſing the real grievances of the nation, than watchful for the honour of the Crown and the juſt rights of the Church. The limits preſcribed to this work will not allow us to do juſtice to Mr Hyde's memory, by entering into the detail of his conduct; while he ſat in the Houſe at Weſtminſter. But he has done that juſtice for himſelf, and in ſuch a manner, that the reader will thank us for referring him to the peruſal of it *. We ſhall only mention, by way of ſupplement to his own account, that he was a member of the Committee for preparing the charge againſt the Earl of Strafford (g) [G]; and being afterwards appointed a manager at the conference with the Houſe of Lords, for aboliſhing the Court of York, whereof that Earl had been ſeveral years Preſident, he made an excellent ſpeech on that occaſion, which is inſerted below [H]. The general eſteem of his abilities had before placed

* In his Hiſtory of the Rebellion.

(g) See the Earl's trial, by Ruſhworth.

[F] *A proof of his weight in the Houſe, and of his affection for the King.*] The occaſion which furniſhed this opportunity is related by himſelf, but a bare reference thereto will not, 'tis preſumed, be judged ſufficient for our purpoſe, ſince it gives us ſo clear an idea of the principles upon which he ſteered the courſe of his actions from this time. 'His Majeſty having acquainted the Houſe of Commons that he would releaſe the ſhip-money, if they would grant him twelve ſubſidies, to be paid in three years. This meſſage occaſioned great debates that day and the next, when Mr Hampden ſeeing the matter ripe for the queſtion, deſired it might be put, *Whether the Houſe ſhould comply with the propoſition made by the King, as it was contained in the meſſage.* Hereupon Serjeant Glanvile the Speaker (for the Houſe was then in a committee) endeavoured in a pathetical ſpeech to perſuade them to comply with the King, and ſo reconcile him to Parliaments for ever. No ſpeech ever united the inclination of a popular council more to the Speaker than this did; and if the queſtion had been preſently put, it was believed that few would have oppoſed it. But after a ſhort ſilence, the other ſide recovering new courage, called again with ſome earneſtneſs, that Mr Hampden's queſtion ſhould be put; which being like to meet with a concurrence, Mr Hyde, being very ſollicitous to keep things in ſome tolerable calmneſs, then ſtood up, and giving his reaſons for his diſlike to that queſtion, propoſed, that to the end every man might freely give his yea or no, the queſtion might be put only upon giving the King a ſupply; and if this was carried, another might be put upon the manner and proportion, if not, it would have the ſame effect with the other propoſed by Mr Hampden. This, after it had been ſome time oppoſed and diverted by other propoſitions, which were anſwered by Mr Hyde, would, as it was generally believed, have been put and carried in the affirmative, though poſitively oppoſed by Herbert the Sollicitor-General, if Sir Henry Vane the Secretary had not ſtood up, and aſſured them as from his Majeſty, that if they ſhould paſs a vote for a ſupply and not in the proportion propoſed in his Majeſty's meſſage, it would not be accepted by him, and therefore deſired that the queſtion might be laid aſide. This being again urged by the Sollicitor-General, and it being near five in the afternoon, it was readily conſented to, that the Houſe ſhould adjourn 'till the next morning, at which they were ſuddenly diſſolved. And within an hour after, Mr Hyde met Mr St John, who was ſeldom known to ſmile, but then had a moſt chearful aſpect, and obſerving Mr Hyde melancholy, aſked him, *what troubled him?* who anſwered, the ſame he believed, that troubled moſt good men, that if a time of ſo much confuſion, ſo wiſe a Parliament ſhould be ſo imprudently diſſolved. Mr St John replied ſomewhat warmly, that all was well, that things muſt grow worſe before they would grow better, and that *that* Parliament would never have done what was requiſite (10).

[G] *He was one of the committee for preparing the charge againſt the Earl of Strafford.*] He actually ſat in that committee for a while. But as ſoon as he ſaw the unjuſtifiable and unreaſonable violence with which that proſecution was puſhed, he left them, and oppoſed the bill of attainder warmly. How long he ſat among them is not certain; but there is a paſſage in his hiſtory which ſeems to throw ſome light into it. In preparing for the trial, he takes notice, that, 'for the 'proſecution they had no mind to truſt the King's 'Counſel, who neither knew their ſecret evidence, 'nor being informed, were like to apply or preſs it ſo 'vigorouſly as the buſineſs would require: and *therefore* 'they appointed that committee which prepared the 'charge to give in the evidence, and in the name of 'all the Commons of England, to proſecute the im'peachment.' *It* was on the 27th of February 1640, upon Whitlock's report from the committee, that the Houſe declared they were well ſatisfied that the evidence to be produced at the trial, ſhould be managed by thoſe members (11), and as Mr Hyde was not among theſe managers, he muſt probably have left them about that time. Mr Oldmixon, not adverting to theſe facts of his firſt being of the committee and afterwards leaving it, was led into a ridicule, by endeavouring to throw a ſlur upon the laſt cited paſſage in the Hiſtory of the Rebellion, in a remark, that '*the arguing therein is prodigious, and if one mortal in the Houſe of Commons ever thought of ſuch a thing; ſure he could not be ſo weak as to mention it* (12).' Now he might have learned from Ruſhworth, that ſuch preliminary circumſtances were not debated in the Houſe, but in the ſecret committee, whoſe reſolutions being afterwards reported, were agreed to, and confirmed by the Houſe. What prodigy then was it, that even ſtranger things than this ſhould be freely diſcourſed in a ſelect company, where no-body ſuſpected that one of their number would ſhortly leave them, and diſcover all that had paſſed amongſt them.

(12) In his piece intituled Clarendon and Whitlocke compared.

[H] *He made a ſpeech for aboliſhing the Court of York.*] This ſpeech was printed in 4to. the ſame year it was ſpoken, and again in Ruſhworth (13), but both copies being very imperfect, we have endeavoured, by comparing them together, to give it more correctly, as it was ſpoken, in the following terms:

(13) Collections, Vol. I. part ii.

My Lords,

'I am commanded by the Knights, Citizens, and 'Burgeſſes of the Houſe of Commons, to preſent to 'your Lordſhips a great and crying grievance, which 'though it be complained of in the preſent preſſures, 'but by the northern parts, yet by the logic and conſequences of it, is the grievance of the whole kingdom; the Court of the Preſident and Council of 'the North, or as it is more uſually called the Court 'of York: Which by the ſpirit and ambition of the 'miniſters entruſted there, or by the natural inclination 'of Courts to inlarge their own power and juriſdiction, 'hath ſo prodigiouſly broken down the banks of the 'firſt channels in which it ran, that it hath almoſt 'overwhelmed that country under the ſea of arbitrary 'power, and involved the people in a labyrinth of di'ſtemper, oppreſſion, and poverty.

'Your Lordſhips will give me leave (not with preſumption to inform your great underſtandings, but 'that you may know what moved the Houſe of Commons to their reſolutions) to remember your Lordſhips of the foundation and erecting of this court, and 'of the progreſs and growth of it.

'Your Lordſhips well know, that by the ſuppreſſion 'of all religious houſes to ſuch a value, in the twenty-'ſeventh year of Henry VIII. from that time to the '30th of that King's reign, many (not fewer than ſix)

placed him in the chair of the committee which took that affair into conſideration (*b*), as it

(*b*) Ruſhworth's Collection, Vol. I. Part it.

inſurrections were made in the northern parts under pretence of that quarrel, moſt of them under the command of ſome eminent perſon of that country, the which being quelled before the end of the 30th year, that great King well knowing his own mind, and what he meant to do with the great houſes of religion in the year following, for the prevention of any inconveniencies that might enſue to him upon ſuch diſtemper, granted a commiſſion in the 31ſt of his reign, to the Biſhop of Landaff, the firſt Preſident, and others, for the quiet government of the counties of York, Northumberland, Cumberland, and Weſtmoreland, the Biſhopric of Durham, the counties of the city of York, Kingſton upon Hull, and Newcaſtle upon Tyne. But, my Lords, this commiſſion was no other than a commiſſion of *oyer and terminer*, only it had a clauſe at the end of it for the hearing of all cauſes real and perſonal, *Quando ambo partes vel altera pars ita gravata paupertate fuerit, quod commode jus ſuum ſecundum leges regni noſtri aliter perſequi non poſſit*; which clauſe how illegal ſoever (for that it is illegal and void in Law, little doubt can be made) yet whether they exerciſed that part of the commiſſion at all, or ſo ſparingly exerciſed it, that poor people found eaſe and benefit by it, I know not; but at that time I find no complaint againſt it. 'Till the coming in of King James, the commiſſion continued ſtill the ſame, and *that* in the firſt year of *his* reign, to the Lord Sheffield, varied no otherwiſe from the former, ſave only that it had reference to inſtructions, which ſhould be ſent; and whether any were ſent or no, is uncertain, for we can find none.

'In June, in the 7th year of the reign of King James, a new commiſſion was granted to the ſame man (Sheffield) very different from all that went before, it being left out that they ſhould enquire, *per ſacramentum bonorum & legalium hominum*, and to hear and determine, *ſecundum leges Angliæ*, relation being had only to the inſtructions; which were the firſt inſtructions we can find were ſent thither, though I told your Lordſhips there were ſome mention of ſome in the 1. Jac. I will not trouble your Lordſhips with thoſe inſtructions, nor with the other, which followed in 14 Jac. to the ſame man, nor thoſe in the 16 Jac. when a new commiſſion was granted to Lord Sunderland, nor indeed with any, 'till we come to theſe preſent inſtructions and commiſſion under which that part of the kingdom groans and languiſhes.

'My Lord of Strafford came to that government in December 4 Car. and the commiſſion hath been three ſeveral times renewed ſince; in the 5th year in March, in the 8th in November, and in the 13th of his Majeſty's reign. Into that commiſſion of the 8th and 13th, there was ſcrewed a new clauſe for the granting, ſequeſtring, and eſtabliſhing poſſeſſions according to the inſtructions, under which crowded in a maſs of new exorbitant and intolerable power. Though our complaint be againſt this commiſſion itſelf, and againſt the whole body of theſe inſtructions, I will not miſpend your Lordſhips precious time in deſiring to have the whole read, but will preſume to trouble your Lordſhips only with five or ſix of the inſtructions, and by the vaſt irregularity of theſe, your Lordſhips may judge how inſupportable the whole burthen is. I ſhall not trouble your Lordſhips with the 9th inſtruction, though it is but ſhort, which introduced that *miſeram ſervitutem ubi jus eſt vagum & incognitum*, by requiring an obedience to ſuch ordinances and determinations as be or ſhall be made by the council-table, or high-commiſſion-court, a grievance, my Lords, howſoever *conſuetudo & peccantium claritas nobilitaverit hanc culpam*, of ſo tranſcendent a nature, that your Lordſhips noble juſtice will provide a remedy for it with no leſs care, than you would reſcue the life and blood of the Common-wealth. Be pleaſed to read the 17th, 22d, 23d, 24th, 29th, and 30th, I will not trouble your Lordſhips with reading more, there being fifty-eight inſtructions in the whole, and among them, ſcarce one that is not againſt or beſides the law.

'Whether his Majeſty may canton out a part of his kingdom to be tried by commiſſions, though according to the rules of the law, ſince the whole kingdom is under the laws and government of the courts eſtabliſhed at Weſtminſter; and by this reaſon, ſeveral parts of the kingdom may be deprived of that privilege will not now be the queſtion, that his Majeſty cannot by commiſſion erect a new court of Chancery, or a proceeding according to the rules of the Star-chamber, is moſt clear to all who have read *Magna Charta*, which allows no proceeding *niſi per legale judicium parium & per legem terræ*: for the Court of Chancery here, by long uſage and preſcription, is grown to be as it were *lex terræ*. But, my Lords, the 30th inſtruction goes further, and erects ſuch an empire, ſuch a dominion, as will be liable to no controul.

'The Courts of Weſtminſter, my Lords, have a ſuperintendency over all inferior courts to regulate their juriſdictions. If they exceed their limits as to hold plea of greater value or the like in the exerciſe of their juriſdiction, the judges are ſworn to grant or ſend prohibitions; and to ſtop the granting of theſe prohibitions, or to neglect them when they are granted, is the greateſt and boldeſt ſcorn of the law, and the law-makers, that can be imagined.

'The King's Courts at Weſtminſter have been always of that awful and reverend eſteem with inferior judges, that the inſtances of ſuch contempts againſt them are very rare, and exemplary in the puniſhment. The Biſhop of Norwich in Trin. Term 20 Edw. III. Rot. 28. in the Common-pleas. In Hil. Term, Rot. 21. in the King's-Bench, was attached for diſobeying a prohibition at the ſuit of Stracill: upon full and ſolemn diſcuſſion of the whole matter, the court reſolved, that the proceedings of the biſhop were *inobedientiam & diminutionem Domini & poteſtatis regiæ, authoritatis ſuæ ejectionem, & coronæ ſuæ exheredationem manifeſtam*, &c. as the words of the record are, and therefore adjudged the temporalities of the Biſhop to be ſeized into the King's hands, and great very great damages to be paid to the plaintiffs. And whoſoever gave directions for theſe ſtout inſtructions, might have remembred, that no longer ſince than Mich. in the 7th of Elizabeth, Rot. 31. an attachment was granted againſt the Archbiſhop of York, then Preſident of that council, for forbidding the jaylor of York to deliver one Lambert his priſoner, who was ſent for by a *habeas corpus* from the King's bench. And if they would have believed the reſolution of all the judges in England in Trin. Term, 6. of King James, they would have known, how unfit it had been to enlarge their juriſdiction, ſince moſt of their proceedings being of an inferior nature to what they are now grown, were then declared to be illegal, and inconſiſtent with the liberties of the ſubject.

'And can ſuch a Court as this, my Lords, deſerve to live! what a compendious abridgment hath York got of all the Courts in Weſtminſter-hall; whatſoever falls within the cogniſance and juriſdiction of any of the courts here, is compleatly determinable within that one court at York; beſides the power they have with the Eccleſiaſtical and High commiſſion Courts.

'What have the good Northern people done, that they only muſt be diſfranchiſed of all the privileges of *Magna Charta* and the *Petition of Right*; for to what purpoſe ſerve thoſe ſtatutes, if they may be fined and impriſoned without law, according to the diſcretion of the commiſſioners. What have they done, that they, and they alone, of all the people of this happy iſland, muſt be diſinherited of their birthright, of their inheritance? for prohibitions, writs of *habeas corpus*, writs of error, are the birthright, the inheritance of the ſubjects.

'And it is here worth your Lordſhips obſervation, that to thoſe many prohibitions which have been granted from above (for 'till of late, the Court of York had not the courage to oppoſe prohibitions, nor indeed 'till the Courts here had not the courage to grant them) 'twas never known that *that* Court pleaded the juriſdiction of their Council; which without doubt they would have done, by the advantage of many great perſons in whoſe protection they have always been, had they not known that the law could not be miſinterpreted enough to allow it.

'Your Lordſhips may remember the direction I mentioned of *Magna Charta*, that all proceedings

'ſhall

it did of ſeveral other committees, appointed upon the moſt important occaſions [I], as long as he continued his preſence among them. But when they began to put in execution their ordinance for raiſing the militia againſt his Majeſty, Mr Hyde being perſwaded that this was an act of open rebellion, left them (*i*); and they felt the blow given to their authority by his abſence ſo ſenſibly, that, in their inſtructions ſhortly after to the Earl of Eſſex, their General, he was excepted with a few others from any grace or favour from them (*k*). He withdrew to the King at York, having firſt obtained the great ſeal to be ſent thither on May 20, 1642 (*l*). As he had been from the beginning of the Parliament among thoſe who were moſt truſted by his Majeſty, ſo, upon his arrival at York, he was taken into the greateſt confidence, though he was not under any character in the court for ſome months. But, towards the latter end of the year, upon the promotion of Sir John Colepeper to be Maſter of the Rolls, he ſucceeded him in the Chancellorſhip of the

(*i*) Athen. Oxon. where laſt cited, and rem. [K].

(*k*) Whitlocke's Memorials, p. 62. 2d edit. and Clarendon's Hiſtory of the Rebellion, Vol. II. p. 22, folio edit.

(*l*) Hiſtory of the Rebellion, Vol. II. and Salmon's Chronological Hiſtorian, under that year.

'ſhall be *per legale judicium parium et per legem terræ*. 'Now this juriſdiction tells you, you ſhall proceed ac- 'cording to your diſcretion, that is, you ſhall do what 'you pleaſe. Nay, that we may not ſuſpect *that* diſ- 'cretion will be gentler and kinder to us than the law, 'ſpecial proviſion is made, that no fine, no puniſh- 'ment, ſhall be leſs than by the law is appointed, by 'no means; but as much greater as you ſhall think fit. 'And in this improvement we find arbitrary Courts 'are very pregnant; if the law requires my good be- 'haviour, this diſcretion makes me cloſe priſoner; if 'the law ſets me upon the pillory, this diſcretion ap- 'points me to leave my ears there.

'But this proceeding according to diſcretion, is no 'new expreſſion, 'twas in the firſt commiſſion I told 'your Lordſhips of in 31 Hen. VIII. that they ſhould 'proceed *ſecundum legem et conſuetudinem regni Angliæ* '*vel aliter*, as the words are, *ſecundum ſanas diſcre-* '*tiones veſtras*, which in the interpretation of the law, 'and that is the beſt interpretation, ſignifies the ſame 'thing; to proceed according to diſcretion, is to 'proceed according to law, which is *ſumma diſcretio*; 'but not according to their private conceit or affec- 'tion, for *talis diſcretio*, as the law ſays, *diſcretionem* '*confundit*. And ſuch a confuſion hath this diſcretion 'theſe inſtructions produced, as if diſcretion were only 'moved from rage and fury: no inconvenience, no 'miſchief, no diſgrace, that the malice or inſolence, 'or curioſity of the commiſſioners had a mind to 'bring upon that people, but through the latitude and 'power of this diſcretion hath been the quickſand 'which hath ſwallowed up their property, their li- 'berty: I beſeech your Lordſhips, reſcue them from 'this diſcretion.

'Beſides, the charge that this court is to his Maje- 'ſty, which is near 1300 l. a year, your Lordſhips will 'eaſily gueſs what an inſupportable burthen the many 'officers (whoſe places are of great value) the attor- 'neys, clerks, and regiſters, and above a thouſand 'ſollicitors, that attend the Courts, muſt be to that 'people. Inſomuch, that the country ſeems to be di- 'vided into officers and dependants upon that Court, 'and the people upon whom thoſe officers of that 'Court prey and commit rapines: as he ſaid in Petro- 'nius, *omnes hic aut captantur aut captant, omnes aut* '*cadavera qui lacerantur, aut corvi qui lacerant*.

'Truly theſe vexed worn people of the North, 'are not ſuitors to your Lordſhips to regulate this 'Court, and to reform the judges of it, but for the 'extripating theſe judges, and for the utter aboliſhing 'this Court. They are of Cato's mind, who would 'not ſubmit to Cæſar for his life, ſaying, he would 'not be beholding to a tyrant for injuſtice, for it was 'injuſtice in him to take upon him to ſave a man's 'life, over whom he had no power. So theſe gentle- 'men deſire, not to be beholden to this Court hereafter 'for injuſtice, the very adminiſtration of injuſtice found- 'ed upon illegal principles, being a grievance and an 'oppreſſion to the ſubject.

'Upon the whole matter, the Houſe of Commons is 'of opinion, 1. That the commiſſion and inſtructions 'whereupon the Preſident and Council of the North 'exerciſe a juriſdiction, is illegal both in the creation 'and execution. 2. And that it is unprofitable to his 'Majeſty. For beſides ſo much as 1300 l. taken out 'of his Majeſty's revenue every year, his Majeſty 'loſeth the great benefit which would accrue to him 'upon writs and upon fines, upon outlawries, and 'other profits, which redound to his Majeſty out of 'his courts here. And, which I had almoſt forgot 'to tell your Lordſhips of, that his Majeſty may be 'ſure to have no benefit from that court, notable care 'is taken by the fifty inſtructions, that if any money 'remains over and above all diſburſements, it ſhall be 'beſtowed in providing houſhold-ſtuff and furniture 'for the houſe where the Lord Preſident and Council 'uſed to be. 3. And laſtly, that it is inconvenient 'and grievous to his Majeſty's ſubjects of thoſe 'parts.

'And therefore they are humble ſuitors to your 'Lordſhips and the Houſe of Commons in this behalf, 'that ſince this people do, and have in all matters of 'duty and affection, contended with the beſt of his 'Majeſty's ſubjects, that they may not be diſtinguiſh- 'ed from them in the manner of his juſtice and pro- 'tection, ſince this Court originally inſtituted and 'erected by his Majeſty for the uſe and benefit of his 'ſubjects, is apparently inverted to the burthen and diſ- 'comfort of them, that your Lordſhips will join with 'the Houſe of Commons, in beſeeching his Majeſty, 'that the preſent commiſſion may be revoked, and no 'more ſuch granted for the future.'

[I] *He was chairman in ſeveral committees.*] How zealouſly he acted on theſe occaſions in defence of the Church is related by himſelf, to which account we refer the reader for the reaſon already mentioned: but it would be injuſtice to another part of his character, to omit his having the chair in the committee appointed to conſider the complaints made againſt the Court of Honour. The members of this committee were Mr Selden, Mr Hollis, Mr Hyde, Lord Faulkland, Dr Eden Maſter of Trinity-hall in Cambridge, Mr Palmer, Sir John Colepeper, Mr Maynard, and Dr Parry, LL.D. They had power to receive all petitions concerning the High-Conſtable, and Earl Marſhal's Court, and to enquire after the office of High-Conſtable and Earl-Marſhal, and the Heralds fees, and to conſider of the proceedings and power of the High-Conſtable and Earl-Marſhal's Court, and to report the ſtate of the whole matter to the Houſe. Mr Hyde being called to the chair by the committee made the following report. 1. That the Conſtable's and Earl-Marſhal's Court have no juriſdiction to hold plea of words. 2. That the Earl-Marſhal can make no Court without the Conſtable. 3. That the Earl-Marſhal's Court is a grievance. All which were confirmed by the Houſe (14). In the ſame view it muſt be obſerved, that when the Houſe reſolved to impeach the judges for their irregular proceedings, Mr Hyde was ſent up with the impeachment of the Barons of the Exchequer to the Lords, and the ſpeech which he made in preſenting it, is inferior to none of thoſe that were ſpoken on that occaſion againſt the iniquity of thoſe judges. Yet at the ſame time he forgets not to preſerve his Majeſty's honour, and to do that juſtice to his integrity and uprightneſs, which he was perſuaded was Cæſar's due. 'My Lords, ſays he, towards the con- 'cluſion of his ſpeech. In this argument I am not 'willing to ſay much. 'Tis enough that your Lord- 'ſhips know tonnage and poundage is not a duty to 'the Crown, but a ſubſidy, and ſo granted *in ſub-* '*ſidium*, ſometimes *pro una vice tantum*, ſometimes 'for years, and then ceaſed when the time did expire: 'that when it was granted for life, it was with this 'clauſe, *ita quod non trahatur in exemplum futuris* '*regibus: But 'tis abundantly enough known, that* '*his ſacred Majeſty cannot be tainted with the advice* '*and judgments of theſe men, but looks on this duty ſingly* '*as the meer affection and bounty of his ſubjects, the* '*which, no doubt, he ſhall never want* (15).

[K] *He*

the Exchequer, and at the ſame time was knighted and made a Privy-Counſellor (*m*). With theſe characters he ſat in the Parliament aſſembled at Oxford in January 1643, and was one of the King's Commiſſioners for the treaty at Uxbridge in January the following year [*K*]. That treaty ended on the 22d of February (*n*), and, in the beginning of March, Sir Edward attended the Prince of Wales to Briſtol, being appointed by the King one of the Council to his Royal Highneſs in his ſuperintendency of the Weſt (*o*). Soon after his arrival in that city, he entered by his Majeſty's command into a correſpondence with the Marquis of Ormond [*L*]; and from this beginning there grew that remarkable friendſhip between them which has been already mentioned in this work (*p*), and the courſe of this memoir will neceſſarily lead us to take notice of ſeveral affecting inſtances thereof. Upon the declining of the King's affairs, he ſailed with the Lords Capel and Colepeper from Pendennis-caſtle in Cornwall to Scilly, and thence to Jerſey. He arrived there in the beginning of March 1645 (*q*), and being greatly diſguſted at the Prince's removal thence the following year into France, he obtained leave to ſtay in that iſland [*M*]. During this retirement, he began to write his Hiſtory of the Rebellion, &c which had been particularly recommended to him, and in which he was aſſiſted alſo by the King, who

(*n*) Dugdale's Short View of the Troubles, &c. p. 737.

(*o*) See the next remark.

(*p*) In the Duke of Ormond's article, Vol. II.

(*q*) Carte's Collection of Letters, &c. No. 43. in a letter dated March 5. 1645. where Sir Edw. Hyde writes, that the Prince ſailed from Pendennis on Monday, and arrived there [at Jerſey] on Wednesday.

[*K*] *He was one of the King's Commiſſioners at the treaty of Uxbridge.*] Mr Whitlock intimates, that Sir Edward had a particular friendſhip for ſome of thoſe who ſtill continued at Weſtminſter. Thus, when Mr Holles and that author, among others, came from them in November 1644, with propoſitions for an accommodation to the King at Oxford; immmediately upon their arrival, divers of his Majeſty's great officers and lords came to viſit them, and ſome had their particular friends, among whom, Sir Edward Hyde (afterwards Earl of Clarendon) came to diſcourſe in general about the propoſitions for peace, profeſſing his earneſt deſire that they might take effect. The ſame author obſerves likewiſe, that when the commiſſioners for the treaty on both parts met at Uxbridge, on the 29th of January, 1644-5, ſeveral viſits paſſed betwixt particular commiſſioners the ſame evening, and that Sir Edward Hyde came to viſit Mr Holles and himſelf, and they had a long diſcourſe to perſuade one another to a compliance. But when the militia came to be treated on, Sir Edward would have argued, *That the whole power of the militia, by the law of England, is in the King only.* Mr Whitlock denied it to be ſo clear, and ſaid, *He doubted not but to ſatisfy the commiſſioners in that point.* On which it was moved, that a day might be appointed to hear their arguments. But this, with ſome compliments to the abilities of the diſputants, by the Earl of Southampton on the one ſide and Mr Holles on the other, was over-ruled, as being more likely to inflame than compoſe the difference between them *.

* Whitlocke's Memorials, p. 122 and 124.

[*L*] *He begun a correſpondence with the Marquis of Ormond.*] It runs in theſe terms:

'My Lord,

'I have not the vanity to believe myſelf in any degree known or remembered by your Lordſhip, tho' 'I have ſometimes had the honour of waiting upon 'your Lordſhip in London; but I have a great ambi'tion to be received by you as one who holds your 'Lordſhip in ſingular admiration, and I hope your 'extraordinary comportment in theſe degenerate times, 'will have ſo great an influence upon other noble 'breaſts, that if neither virtue nor conſcience make 'any impreſſion, even envy may make them follow 'your Lordſhip's example, that they may in ſome de'gree have the recompence of ſuch an excellent fame 'and eſtimation.

'When I came from Oxford (which is not a week 'ſince), having by his Majeſty's command the honour 'of waiting upon the Prince into theſe parts, I had a 'ſpecial command from the King to uſe all means to 'give your Lordſhip frequent advertiſements of what 'paſſes here, and to endeavour to underſtand the con'dition of affairs in that kingdom, where your Lord'ſhip worthily ſits at the helm; and finding the Prince 'ſo ſollicitous to write to your Lordſhip, that I think 'he hath committed a duplicate of his letter to three 'ſeveral hands, I find it no leſs my duty than my in'clination to make this addreſs to your Lordſhip. In'deed the Prince much pleaſes himſelf with the hopes 'of a few men from you for his guard of firelocks, 'being informed of the rare diligence and activity in 'light marches of theſe men. But whether it be con'venient for you to ſpare any of your numbers I know 'not. I ſhould be very glad to hear that your Lord'ſhip were in any probable forwardneſs of uniting the 'affections of that kingdom. But I confeſs I have not 'ſkill enough to underſtand the meaning of thoſe with 'whom you are to treat, be their pretences never ſo 'ſpecious. But as your Lordſhip's great power and 'admirable vivacity hath hitherto ſupported that mi'ſerable kingdom, ſo the preſervation of it is reſerved 'only for you, when, at the diſtance we ſtand in, the 'means ſeem moſt difficult. I aſk your Lordſhip's 'pardon for,

'My Lord,

Briſtol, the 14th day of March, 1644. 'Your Lorſhip's &c.

'EDWARD HYDE (16).' (16) Collection of Letters to and from the Duke of Ormond, No. CCCLXXVIII.

[*M*] *He begged leave to ſtay in Jerſey.*] Some time after the Prince's departure, Sir Edward unboſomed himſelf to the Marquis of Ormond in the following pathetic letter.

'My Lord, June 22, 1646.

'Your Lordſhip hath been long ſince informed whi'ther my Lord Digby attended the Prince, and from 'thence have pardoned my not acknowledging of your 'Grace's favours to me, from the impoſſibility of pre'ſenting it to you. I confeſs in that conjuncture of 'time I thought the remove from Jerſey to Ireland to 'be very fit to be deliberately weighed, before at'tempted; but I would have choſen it much more 'chearfully than this that is embraced, which I hope 'will be a memorial to my weakneſs; for it is my 'misfortune to differ from thoſe with whom I have 'hitherto agreed, and eſpecially with my beſt friend, 'which I hope will not render me the leſs fit for your 'charity, though I may be for your conſideration. 'Indeed there is not light enough for me to ſee my 'way, and I can't well walk in the dark, and there'fore I have deſired leave of the Prince to breathe in 'this iſland a little for my refreſhment, 'till I may 'diſcern ſome way in which I may ſerve his Majeſty. 'I hope your Lordſhip will never meet with any in'terruption in the exercife of that devotion, which 'hath rendered you the envied example of three king'doms, and that I ſhall yet find an opportunity to 'attend upon your Lordſhip, and have the honour to 'be received by you in the capacity of,

'My Lord,

'Your Lordſhip's &c.

'EDWARD HYDE (17). (17) Ibid. No. CCCCLVIII.

We ſee here not barely a diſlike, but an extraordinary reſentment, ſhewn to the Prince's going to Paris; and I believe it will not be diſputed, that the chief ground of this reſentment lay in the manifeſt danger into which his religion was thereby brought, from the reſtleſs endeavours of his mother. 'Tis notorious, that the Chancellor was never in any tolerable terms with her Majeſty, on the account of his watchfulneſs againſt every attempt of this kind, of which more will be ſeen preſently. And the particular way which he pitched upon to ſerve the King, while he continued in Jerſey, is the ſubject of the enſuing remark.

[*N*] *He*

who supplied him with several of the materials for it [N]. At the same time he spent some of his leisure hours in composing part of his *Contemplations and Reflections upon the Psalms of David* (r); and before his departure he published, *A full Answer to an infamous and traiterous Pamphlet, intituled*, A Declaration of the Commons of England in Parliament assembled, expressing the Reasons and Grounds of passing their late Resolutions; touching no farther Address or Application to be made to the King. This was printed in 4to. at London in 1648, and about the middle of May that year he received a letter from the Queen to call him to Paris (s). After the King's death, he was continued both in his seat at the Privy-Council, and in his office of the Exchequer, by King Charles II. who sent him with the Lord Cottington, his Ambassador Extraordinary, into Spain, in November the following year, to apply for that monarch's assistance in the recovery of his Crown (t). He returned without success to his Majesty in July 1651 (u). Soon after his arrival, the King gave him that account (which is printed in the History of the Rebellion (w)) of his escape after the battle of Worcester, in that unfortunate expedition to Scotland, which had been undertaken during Sir Edward's absence, and was utterly disapproved by him (x). He now resided for some time at Antwerp, but left no means unattempted which lay in his power, by letters and messages to England, for compassing the Restoration *; wherein, however, he relied solely upon the Episcopal party [O]. In 1653,

(r) The first is dated Jersey Dec. 26, 1647. His Eik—Sacrifice is also dated on a fast day at Jersey, 1641. in which, as to the year, there seems to be a mistake.

(t) Lord Cottington did not return with him, but having changed his religion continued in Spain the rest of his life. Ibid Vol. III. folio edit.

(u) His Contemplations upon the 68th and two following Psalms are dated Antwerp, 16 July, 1651, which he says in the address prefixed to that work were written a little after his return from Spain.

(w) Vol. III. folio edit.

(x) See the next remark [O].

* Several of these may be seen in Thurloe's State Papers.

[N] *He began in Jersey his History of the Rebellion, &c.*] Besides an express and direct declaration of this fact in one passage of the work itself, we are assured in another, that, upon the Lord Capel's waiting upon the King at Hampton-court in 1647, his Majesty writ to the Chancellor, 'thanking him for undertaking the work he 'was upon, and telling him, that he might expect speedily to receive some contribution from him towards it, '&c. (18)'. Agreeable to this, the ninth book opens with declaring, that 'the work was first undertaken 'with the King's approbation and by his encouragement, and particularly that many important points 'were transmitted to the author by the King's immediate direction and order, even after he was in the 'hands and power of the enemy, out of his own Memorials and Journals.' Thus far the time of beginning this history is ascertained from the history itself; but there is a passage in a letter from the Marquis of Ormond to the author, which helps to fix it to a greater exactness, and induces a great probability, that it was entered upon not long after the Prince's departure in 1646. The letter is in these terms.

(18) Vol. V. p. 70. 8vo. edition.

'*S I R*,

'*My Lord* Digby *will give me leave to profess, that 'the satisfaction I received at his coming hither, suffered much abatement in that you came not with him. 'And I shall never deny that I value your approbation 'of the actions I shall have part in, next after theirs, 'whose commands I dispute not, but obey.*

'*The peace so long treated on is concluded here, and I 'hope it will prove as it is intended, a foundation for an 'happy settlement in his Majesty's other kingdoms.* 'Whatsoever it be as to that public aim, if it shall 'please you to make use of it to enlarge your imprisonment, by removing into this bigger island, I can 'promise you what retiredness you please, and what 'else may conduce to your contentment, that is in the 'power of

Your most obedient,

Dublin-Castle, 7 Aug. 1646. humble servant,

ORMONDE (19).

(19) Carte's Collection, No. CCCCLXVIII.

So much for the exact time when this history was begun, and now we are upon the subject, we shall proceed to fix the time when it was finished, which may be ascertained to the same degree of exactness, from the dedication of our author's *survey of the* Leviathan, wherein he addresses himself to King Charles II. in these terms. 'As soon as I had finished (as far as I am able 'without the supply of those memorials and records 'which are fit to be inquired into) a work at least re'commended, if not enjoyned to me by your blessed 'father, and approved, and in some degree perused by 'your Majesty (which I hope will be to the honour 'of his Majesty's memory, and your own magnanimous sufferings) I could not think of, &c.' This dedication is dated, Moulins, May 10, 1673, whence it appears that the history was not compleated 'till the beginning of that, or the latter end of the preceding year (20). The use of this remark is, that it accounts for those passages in the history, wherein facts are related which happened long after the Restoration; as for instance, that 'Sir John Digby lived *many years* 'after the King's return (21);' and that the Earl of Sandwich's 'expedition in waiting on the King with 'the fleet, was *never* forgiven him by some men (22),' which we see might very consistently be observed in this history, though that Earl did not lose his life 'till 1672.

(20) Mr Oldmixon is positive that it was finished after the Restoration. Clarendon and Whitlocke compared, in the introduction.

(21) Vol. V. p. 192. 8vo. edit.

(22) Vol. VI. p. 768.

[O] *He relied solely upon the Episcopal party to bring about the Restoration.*] His steadiness in this resolution, created him several enemies, and much opposition was raised against him in the little court which attended the King in his exile. These divisions did not escape the observations of Cromwell's spies about that Court. Accordingly there are several letters and papers concerning it in Thurloe's Collection. We shall give an extract of the first intelligence upon this subject which occurs there. It is a paper of Colonel Bampfield, and intitled, *The Conditions and Sentiments of the Titular King of Scots, and of those abroad who are interested in his Affairs.* It appears to be wrote after the reduction of Scotland by Cromwell, in the latter end of the year 1651. The informer sets out with an account of the King's Council, 'who, says he, are his 'mother, the Duke of York, Prince Rupert, and the 'Duke of Buckingham, the Marquis of Ormonde, Earl 'of Rochester, the Lords Percy, Jermin, Inchiquin, — 'Taaffe, lately made, and Sir Edward Hyde. The 'four first are of a faction directly opposite to 'Hyde; and the other party, who for the most part 'entirely govern in his councils, and their designs 'seem to be as different as their inclination. Ormonde, Hyde, and their party have, contrary to the 'sense of the rest, advised and prevailed with their 'King totally to abandon the party and principles of 'the Presbyterians, and to rely intirely upon his old 'episcopal party, which they persuade him comprehends the whole nobility, gentry, and bulk of the 'kingdom, who would not rise with him in his late 'march into England, because he was believed to go 'upon grounds disagreeable both to their affection and 'interests, and to the good of the nation, and inconsistent to the ancient constitution both in Church and 'State. And to this purpose Sir Giles Talbot, about 'a year and a half ago, or little more, was employed 'with a message from England; and to second this, 'afterwards Colonel Philips went with another, and 'albeit, I believe there is much of reality in this message, yet I don't doubt but the persons and their designs were represented by Hyde and Ormonde (who 'procured them to be recommended as fittest for a 'trust) with greater advantage, than either could produce, for the strengthening of their own credit with 'their master; by which means they weaned the King 'from the government of his mother's counsel, and 'have ever since bound him absolutely up to their 'own sense, to cast himself totally upon the Episcopal 'Party. As for Scotland, it being (to use their own 'phrase) under the slavery of the English conquest, 'they would now embrace the King's interest upon his 'own terms, to free themselves from their present 'bandage (23).' In another letter of the same collection written in 1655, there is advice, that Hyde is not trusted

(23) Thurloe's State Papers, Vol. II. p. 511.

1653, he was accuſed of holding a correſpondence with Cromwell, and receiving a penſion from him for intelligence, but was fully cleared by a declaration of the King and Council, on January 13 the following year [*P*]. This attempt to ruin him with his Majeſty was made by the Old Royaliſts, and it turned ſo much to his advantage, that he was advanced to be Secretary of State afterwards, upon the removal of Mr Robert Long, who had been concerned in it (*y*). In 1657, two more attacks were made, one by the Papiſts and the other by the Preſbyterians, with the ſame deſign and with no better ſucceſs (*z*); and he was made Lord High-Chancellor of England the ſame year (*a a*). It would be tedious to mention the ſeveral particulars of that part which he managed in 1659, to prepare matters for his Majeſty's reception. This was a ſweet employ, and the more ſo, ſince, as he had always adviſed his Majeſty to depend upon the epiſcopal party for the recovery of his Crown; ſo he had the honour and ſatisfaction to ſee it brought about by thoſe means, in which he was a principal inſtrument. And his prudence, juſtice, and moderation, in ſettling the juſt boundaries betwixt the prerogative of the Crown and the liberties of the people at the Reſtoration, are largely related likewiſe to his honour in all the general hiſtories of England [*Q*]. However, in reducing ſo much confuſion into order, where ſo many claſhing intereſts in point of property were concerned, it was not in the power of man to ſatisfy every body. And as the act of indemnity on the one hand raiſed him thoſe enemies among the Royaliſts, which afterwards proved the greateſt inſtruments of his ruin (*c c*); ſo the act of uniformity on the other hand was never forgiven him by the Preſbyterians (*d d*). With regard to his own particular, wherein he had been one of the greateſt ſharers in his maſter's ſufferings, he had a proportionable ſhare of his glory. Beſides the poſt of Lord High-Chancellor, in which he was continued (*e e*), he was choſen Chancellor of the Univerſity of Oxford, October 27, 1660 *. In the beginning of November he was created a peer, by the title of Baron Hyde of Hindon in Wiltſhire (*f f*); to which were added, in April the following year (*g g*), the titles of Viſcount Cornbury in Oxfordſhire, and Earl of Clarendon in Wiltſhire. Upon the death of Henry Lord Falkland in 1663 he was made Lord-Lieutenant of the county of Oxford (*h h*); to which may be added, that he was Steward of the King's manor of Woodſtock (*i i*). With theſe honours he held the firſt place in his Majeſty's confidence, and was Prime Manager, if not Prime Miniſter (*k k*), under him. And he alſo received ſeveral grants from the Crown of conſiderable value [*R*]. Laſtly, to compleat his happineſs, theſe extraordinary favours, at the time

(*e e*) Soon after he was [illegible] to this office he drew up *a Collection of the Rules and Orders heretofore uſed in Chancery*, done by the advice and aſſiſtance of Sir Harbottle Grimſton, Maſter of the Rolls, which was printed at London, 1661, 8vo.

* Wood ubi ſupra.

(*f f*) The patent bears date Nov. 3. 1660. Peerage of England, under the name of Hyde.

(*g g*) On the 20th of April, 1661. Id. ibid. He had obtained this manor of the King, to whom it was forfeited by Sir John Danvers, one of the Judges of King Charles I. Wood, Vol. II. col. 534. As to ſuch as are properly Crown lands, the Earl aſſures us, that he had none of his Majeſty's lands but what he bought for as much as any body would pay for them. See his Vindication, &c. in his Tracts, p. 25. Lond. 1727. folio. (*h h*) Wood, where laſt cited, and Vol. I. col. 586. (*i i*) His Vindication, &c. Art. 14. and it appears by the 6th art. that for a ſhort time after the Reſtoration, he was a Commiſſioner of the Treaſury and aſſiſted in the Cuſtoms; ſo that he was Lord High-Chancellor of England, Chancellor of the Exchequer, Secretary of State, Commiſſioner of the Treaſury, and acted as Commiſſioner of the Cuſtoms, all at once. He was alſo unanimouſly choſen F. R. S. Feb. 8, 1664-5. Birch's Hiſt. of the R. S. Vol. II. p. 12. (*k k*) There is no ſuch poſt in England as that of Prime-Miniſter.

trusted by the Preſbyterians *. What his opinion was of their aſſiſtance in this caſe, he did himſelf expreſsly declare on another occaſion, in the following very ſtrong terms, where ſpeaking of the Reſtoration, he ſays, 'It pleaſed God, by a chain of miracles, at laſt to bring that to paſs which all the world thought impoſſible to be done. He ſuffered the King to make all thoſe attempts for his own vindication which his reaſon, induſtry, and virtue, could dictate to him; to endeavour by a union and conjunction with his own ſubjects, who had been the original of all his ſufferings, to conquer thoſe, who had been worſe than they; but God bleſſed not that union and conjunction, thoſe hands were too weak to hold up in battle, and too proud to hold up in prayer: God would not ſuffer that people to redeem the miſchief they had done, by any noble action, but condemned them to undergo the penalty of it by very notable ſufferings, by, and under thoſe who had been enabled by them, to commit much greater wickedneſs ‖.'

[*P*] *He was cleared by the King and Council.*] Notwithſtanding this advantage, if we may believe Thurloe's intelligence, he thought himſelf in ſome danger the following year from the Queen's party. In a letter from Manning, dated June 1, 1655, N. S. that informer writes thus, '*I need not tell you by whom Prince Rupert was turned from Court, yet perhaps you have not known, that* Hyde *then offered Charles Stuart* 50000 *men ſhould be in arms in England before a year went about, if he would quit the Queen's Court, and the Prince's party* (24).' Upon the ſame ſubject, in another letter dated from Cologne, November 9, 1655, there is this advice. *Hyde is very fearful of being laid aſide, which makes him omit no way which may keep himſelf up, though to the ruin of thouſands. This cauſed him to promiſe much to be done in his deſign on England and Scotland before Chriſtmas* (25). The ſame perſon, November 17, following, from the ſame place, uſes theſe terms: Charles Stuart daily tells us, *Have patience a little, and you will not fail of action both in England and Scotland, or elſe adieu Ormonde and Hyde* (26). But all this ſtorm being quelled by the Chancellor, there is a letter dated June 24, 1656, which contains the following information. *I underſtand that C. R. is in a poor condition and equipage, and that almoſt every body forſakes him. All ſpeak ill of his Chancellor Hyde, that he doth poſſeſs and govern him ſolely* (27).

[*Q*] *His moderation in ſettling affairs at the Reſtoration, &c.*] The moſt remarkable inſtances of this moderation are, that he neither ſet aſide the petition of right, nor endeavoured to raiſe the Star-chamber or High Comiſſion Courts again when it was in his power, nor did he attempt to repeal the bill for Triennial Parliaments; though at the ſame he took care to repeal all things extorted by the long Parliament from King Charles I. and to ſettle the militia affairs. But other acts relating to the Prerogative, he did not touch upon, as tonnage, poundage, ſhip-money, &c. and when he might have obtained two millions for the ſtanding revenue, he aſked but 1,200,000 per ann. which he thought would ſtill put the King under a neceſſity of having recourſe to his Parliaments (28).

[*R*] *He received ſeveral valuable grants from the Crown.*] Beſides the manor of Cornbury mentioned above, and the ground for his houſe near St James's palace, he had alſo a grant for 25000 l. to be paid out of the forfeited eſtates in Ireland, of which we have the following account from himſelf (29): 'Amongſt the bills, ſays he, 'which were firſt tranſmitted from Ireland after his 'Majeſty's happy return, there was an impoſition of 'a certain ſum of money upon ſome ſpecified lands in 'the ſeveral provinces, which were to be paid to his 'Majeſty within a limited time, and to be diſpoſed 'of by his Majeſty to ſuch perſons who had ſerved him 'faithfully, and ſuffered in ſo doing, or words to that 'effect, for I am moſt confident, that I never heard of 'it at the time when it paſſed. But very near two 'years after his Majeſty's return, I received a letter 'from the Earl of Orrery, that there would be in his 'hands, and the two other Lords (who had been ap-'pointed treaſurers to receive the money raiſed by that 'act) a good ſum of money for me, and deſiring 'that

time when they were beſtowed, were generally eſteemed to be ſo many inſtances of the King's juſtice to his perſonal merit and his paſt ſervices, and were reckoned as a part of thoſe bleſſings, the ſenſe of which then ſo remarkably filled the hearts of all people with a flood of joy. But it was not poſſible to ſtand many years in a ſituation ſo much diſtinguiſhed above others, without becoming the object of envy [S]; which being the natural parent of malice, created him ſuch enemies as both wiſhed and attempted his ruin, and at laſt effected it. The firſt open attack upon him was made by the Earl of Briſtol, who, in 1663, exhibited a charge of high-treaſon againſt him to the Houſe of Lords [T]; and though

' that I would ſpeedily ſend my direction for the diſpoſal thereof; becauſe he was confident, that the ' money would be paid in at leaſt by the time that my ' letter could arrive there. No man can be ſurprized ' with any thing, more than I was, at the receipt of ' this letter; believing that there was ſome miſtake in ' it, and that my name might have been uſed in truſt ' by ſome-body who had given me no notice of it, ' and without returning any anſwer to the Earl of Orrery, I writ by that poſt to the Lord Lieutenant, to ' inform him, what my Lord of Orrery had writ to ' to me, and to deſire him to inform me by his own ' inquiry, what the meaning of it might be. Before I ' had an anſwer from the Lord Lieutenant, and indeed ' before my letter could come to his hands, I received ' a ſecond letter from the Earl of Orrery, in which he ' informed me, that there was now paid in to my uſe ' the ſum of 12600 l. and that there would be the like ' ſum again received at the end of ſix months, ſending ' me likewiſe a particular direction to what perſon and ' in what form I was to ſend my order for the payment of the money. I forbore likewiſe to anſwer this ' letter 'till I had received an anſwer from the Lord ' Lieutenant, who then informed me at large, what ' title I had to this money, and how I came to have ' it: that ſhortly after paſſing that Act of Parliament a' bovementioned, the Earl of Orrery had come to him, ' and putting him in mind, how the Chancellor had ' rejected all overtures which had been made to him, ' of benefit out of that kingdom, (which refuſal, and ' and many others, which ſhew how unſollicitous I ' have always been in the way of getting, is not more ' known to any man living than to the Lord Lieutenant) wiſhed, that he would move his Majeſty to ' confer ſome part of that money upon him, which ' the Lord Lieutenant very willingly did, and his Majeſty as chearfully granted: that a letter was accordingly prepared, and his Majeſty's royal ſignature ' procured by Mr Secretary Nicholas, who was at the ' ſame time commanded by the King not to let me ' know of it; and to which purpoſe there was likewiſe a clauſe in the letter, whereby it was provided, ' that I ſhould have no notice of it, which the Lord ' Lieutenant ſaid, was by his Majeſty's directions, or ' with his approbation; becauſe it was ſaid, that if I ' had notice of it, I ſhould be ſo fooliſh as to obſtruct ' it myſelf: and that there was a clauſe likewiſe in the ' ſaid letter, which directed the payment of the ſaid ' money to my heirs, executors, or aſſigns, if I ſhould ' die before the receipt thereof. Of all which, being ' thus fully advertiſed by the Lord Lieutenant, of ' which, 'till that time, I had not the leaſt notice or ' imagination, I deſired Mr Secretary Nicholas to ' give me a copy of that letter (which had been ſince ' paſſed as a grant unto me under the great ſeal of ' Ireland) which he gave me, with a larger account ' of many gracious circumſtances in the King's granting it, and the obligation laid upon him of ſecrecy; ' and the great caution uſed, that I might have no ' notice of it.'——He then obſerves, that he waited upon his Majeſty with his thanks, who enlarged his bounty with expreſſions of favour; that upon the proſpect of this money, he agreed for the purchaſe of a manor called Blunſden in Wiltſhire, joining to an eſtate he had there; and that he promiſed to pay more money together than is uſual in ſuch purchaſes, preſuming that he could not at all be diſappointed of the mentioned ſum of money from Ireland, which was the ſole ground and encouragement he had to undertake that bargain. But that the very next letters he received from thence informed him, that the neceſſities of that kingdom had been ſuch, that they could only return him 6000 l. and that they had been forced to make uſe of the reſt for the public, which would without doubt take care to repay him again within few months. ' And ſo, continues he, I ' found myſelf engaged in a purchaſe which I could ' not retract, upon a preſumption of money, which in ' that manner I was diſappointed of: and I have not ' only never ſince received a penny of what was due ' upon the ſecond payment, (and which I preſumed ' would have been ſo certain, that I aſſigned it upon ' the marriage of my ſecond ſon, to him as part of ' his portion) but the remainder of the firſt ſum, was ' ſo borrowed or taken from me, that no part of it hath ' been ſince paid to me or to my uſe: by which, and ' the inconveniencies and damage which have ſince ' enſued to me from thence, I may reaſonably ſay, ' that I am yet a loſer, and involved in a great debt by ' that ſignal bounty of his Majeſty, which I hope will ' in due time be made good to me, under ſo good a ' ſecurity as an Act of Parliament: and I have great ' reaſon to complain of thoſe my very good friends, ' who firſt diſpoſed his Majeſty to that act of grace, ' and were not afterwards ſollicitous enough in their ' ſeveral places to make it effectual to me.'

[S] *Without becoming the object of envy.*] Nothing ſerved more, if ſo much, to inflame this paſſion, than the incident of his eldeſt daughter's marriage with the Duke of York, which happened in a few months after the King's return. She had been one of the Maids of Honour to the Princeſs Royal Henrietta, ſome time during the exile, when the Duke fell in love with her; and being diſappointed by the defeat of Sir George Booth, in a deſign he had formed of coming with ſome forces to England in 1659, he went to Breda, where his ſiſter then reſided (30); and ſpending ſome weeks there, he took this opportunity, if we may believe Biſhop Burnet (31), of ſolliciting Miſs Hyde to a compliance without marriage; but ſhe managed the matter with ſuch addreſs that, in concluſion, he married her there on the fourth of November that year (32). However, this was done with all poſſible ſecrecy, and unknown to her father. After their arrival in England, growing big with child and near her time, ſhe called upon the Duke to own his marriage; and though he endeavoured to draw her from claiming him, both by great promiſes and great threatenings, yet ſhe had the ſpirit and wiſdom to tell him, She would have it known that ſhe was his wife, let him uſe her afterwards as he pleaſed. The King ordered ſome Biſhops and Judges to peruſe the proofs of her marriage; and they reporting that it was according to the doctrine of the Goſpel and the Law of England (33), he told his brother he would not break with the Earl of Clarendon, he muſt live with her whom he had made his wife. Accordingly, on the third of September, 1660, they were remarried at Worceſter houſe, where the Earl of Clarendon then lived, by Dr Joſeph Crowther the Duke's chaplain (34). The ſame author obſerves, that the father ſolemnly proteſted he knew nothing of it 'till it broke out in the manner here related; and that he looked on it as that which would end in his ruin (35).

(33) She had been cautious to have an undeniable evidence of it in the Earl of Oſſory, who was preſent, and the only perſon that was preſent at it. Carte, ubi ſupra.

[T] *A charge of high-treaſon.*] The ſubſtance of it was, that the Chancellor had ſaid that his Majeſty was dangerouſly corrupted in his religion, and inclined to Popery; that perſons of that religion had ſuch acceſs and ſuch credit with him, that unleſs a careful eye were had upon it, the Proteſtant Religion would be overthrown; and that were it not for his [the Chancellor's] ſtanding in the gap, Popery would be introduced; and that he was the zealous upholder of the Proteſtant Religion. That upon Sir Henry Bennet's being made Secretary of State in the room of Sir Edward Nicholas, he ſaid, that his Majeſty had given 10,000 l. to remove a zealous Proteſtant, that he might bring into that high place a concealed Papiſt. That he had perſwaded the King, contrary to his reaſon, to allow his name to be uſed to the Pope and ſeveral Cardinals, in the ſollicitations of a Cardinal's cap for the Lord Aubigney, Great Almoner to the Queen; to effect which, he had employed Richard Bealing, a known

(35) Burnet, where laſt cited, and Echard's Hiſtory of England, ad annum 1660. B. I. c. i. N. B. This remarriage ſeems to have been performed to prevent the clamours that might otherwiſe poſſibly be raiſed about the legitimacy of the iſſue.

though this proſecution ended greatly to the honour of the Chancellor [*U*], yet his enemies advanced very conſiderably by it in their deſign, to make himſelf gracious to his maſter,

known Papiſt, and promiſed great favour to the Papiſts here in caſe it ſhould be effected; and that he hoped to compaſs the taking away all penal laws againſt the Papiſts. That being intruſted with the treaty betwixt his Majeſty and the Queen, he concluded the King's marriage upon articles ſcandalous and dangerous to the Proteſtant Religion. That he had vented opprobrious ſcandals againſt his Majeſty's courſe of life; and that he had ſuggeſted to the Duke of York, that his Majeſty intended to legitimate the Duke of Monmouth; that he had perſwaded the King, againſt the advice of the Lord-General, to withdraw the Engliſh garriſons out of Scotland, and demoliſh all the forts built there, without expecting the advice of Parliament. That he had told his Majeſty there never was ſo weak and inconſiderable a Houſe of Lords, nor never ſo weak and heady a Houſe of Commons; and particularly, that it was better to ſell Dunkirk, than to be at their mercy for want of money; and that he adviſed and effected the ſale of the ſame to the French King. That he had inriched himſelf by the ſale of offices, contrary to law, and had converted to his own uſe vaſt ſums of public money, raiſed in Ireland by way of ſubſidy, to defray the charge of the government in that kingdom; and that he had procured his Majeſty's cuſtoms to be farmed at a lower rate than others offered, and that to perſons with ſome of whom he went a ſhare, and in other parts of money reſulting from his Majeſty's revenue. It has been obſerved, that the words concerning the King's private inclinations and debaucheries were generally thought to have been the real expreſſions or ſuggeſtions of the Chancellor, but ſurely not altogether without a cauſe; that they may be thought the effect of an indecent freedom, but can hardly be ſuppoſed to proceed from any want of integrity or loyalty (36). However, we ſhall ſee preſently that theſe freedoms, by the artful aggravations of his enemies, became the principal if not the ſole cauſe of his ruin. At preſent, it will be more to our purpoſe to take notice, that though the Chancellor is here charged with being intruſted to negotiate the treaty of the Portugal match, and concluding it, yet it is not ſaid that he propoſed that marriage, which is the more neceſſary to attend to, becauſe this reflection, among others, has been lately thrown upon the Chancellor's memory by a noble author, who, by way of proving the truth of it, quotes a long paſſage from the Memoirs of Portugal, written by the Sieur d'Ablancourt, Reſident from France at the Court of Portugal when this marriage propoſal was made, *in which France itſelf*, ſays his Lordſhip, *was too much intereſted not to be well informed* (37). As this aſſertion is directly contrary to what is ſuggeſted in the preface to the *Hiſtory of the Rebellion*, where the authors mention his having oppoſed that match, on account of the general belief that the Infanta [as it ſhould ſeem through ſome mal-formation of the parts] could have no children. We ſhall produce the following account by Mr Carte, which will perhaps be thought deciſive in the Chancellor's vindication, ſince it is grounded upon a relation to that author by Dr Hough the late Biſhop of Worceſter, (whoſe character may be ſeen in this work) (38), from the Duke of Ormond's own mouth and Sir Robert Southwell's Narrative. 'The King's reſolution to marry the Infanta, 'ſays Mr Carte, was taken without the knowledge either of the Duke of Ormonde or the Lord Chancellor 'Clarendon. The King firſt communicated it to the 'Chancellor, and told him at the ſame time that he 'had agreed to the match. The Chancellor ſaid he 'hoped his Majeſty was not determined, for there 'were ſeveral things deſerved to be maturely conſi'dered in that affair, which he was ready to offer, if 'his Majeſty had not prevented it, by telling him 'that he was abſolutely determined. The Chancellor 'acquainting the Duke of Ormond and the Earl of 'Southampton with the matter, it was agreed among 'them, that he ſhould deſire the King to grant them 'all three an audience together. This was granted: 'they attended him in the room which was called 'Tom Chiffinch's cloſet, where the rarities ſtood, and 'gave him their reaſons againſt the match. The 'Chancellor opened the ſubject, and particularly urged, 'not only what the Spaniard had objected as to the 'barrenneſs of the lady propoſed, but the accounts 'and reaſons which he had from other hands, to be'lieve that the Infanta would never prove with child; 'that if it proved ſo in the event, it would be a great 'infelicity to the whole kingdom; and this was a conſideration ſo very important, that the Portugal mi'niſter ought to be talked to plainly on the ſubject, 'and the matter ſeriouſly examined (39). The King 'replied, that he was ſatisfied that accuſation came 'originally from the malice of the Spaniards, and was 'without foundation; and in fine, told them he had 'proceeded ſo far in the matter, that it was now too 'late for him to retreat, and he muſt go on with the 'treaty. During this audience, upon their remon'ſtrating againſt his marrying a Roman-Catholic wife, 'the King aſked, *Where is there a Proteſtant fit for 'me to marry?* It was ſaid his Majeſty could be at no 'loſs in that point, for there were ladies enough in 'Germany of that religion, and of families fit for the 'alliance of any prince. *Cods fiſh*, ſaid the King, *'they are all foggy, and I can't like any one of them 'for a wife.* Upon this anſwer, which excluded all 'Proteſtants that could be propoſed, the Duke of Or'monde was clearly convinced, that the reſolution was 'taken for the King to marry none but a Roman-Ca'tholic. It was a point indeed, concludes Mr Carte, 'which his mother, and thoſe of that religion who 'were in the ſecret of the change he had made in his, 'had extremely at heart, and thought of the utmoſt con'ſequence, as well to fix him theirs, as to advance the 'cauſe of Catholicity (40).' As the Chancellor's oppoſing this marriage on account of the lady's barrenneſs was an inſtance of his integrity; ſo the oppoſition which he gave to the intended divorce, for which that cauſe among others was alledged, is another inſtance of the ſame integrity, which redounds equally at leaſt to his honour. The perſon deſigned to ſupply her Majeſty's place was Mrs Stuart, a beautiful young lady, who was related to the King, and had ſome office under the Queen. The Chancellor, to prevent this, ſent for the Duke of Richmond, who was of the ſame name; and ſeeming to be ſorry that a perſon of his worth and relation to his Majeſty ſhould receive no marks of his favour, adviſed him to marry this lady, as the moſt likely means to advance himſelf. The young nobleman, liking the perſon, followed the advice, made immediate application to the lady, who was ignorant of the King's intentions, and in a few days married her. The King, thus diſappointed, and ſoon after informed how the match was brought about, baniſhed the Duke with his new Ducheſs from Court, and reſerved his reſentment againſt the Chancellor to a more convenient opportunity. This account by Mr Echard (41) is inſerted here, becauſe the truth of it has not as we know of been diſputed. Mr Carte indeed (not finding any thing deciſive concerning it in the Duke of Ormond's papers) obſerves that it doth not appear whether the Chancellor actually encouraged the Duke of Richmond's marriage or no. 'But I find, 'ſays that author by way of confirming it, that he '[the Chancellor] was ſo ſtrongly poſſeſſed of the 'King's inclination to a divorce, that even after his 'diſgrace he was perſwaded the Duke of Buckingham 'had undertaken to carry that matter through the 'Parliament. It is certain too, continues he, that 'the King confidered him as the chief promoter of 'that marriage, and reſented it in the higheſt degree '(42).' The charge of the Chancellor's adviſing the ſale of Dunkirk ſhall be conſidered in an enſuing remark.

[*U*] *It ended greatly to the Chancellor's honour.*] It is obſervable, that there had been a long courſe of friendſhip both in adverſity and proſperity between the Chancellor and the Earl of Briſtol; but they gradually falling into different meaſures upon the account of religion or politics, and the Chancellor refuſing a ſmall boon, as the Earl took it to be, which was ſaid to be the paſſing a patent in favour of a Court lady, the latter thought himſelf ſo diſobliged, that letting looſe his fiery temper, he thought of nothing but revenge (43). The ſame author who makes this remark obſerves, that there appears a perverſe turn in the Earl of Briſtol's articles, wherein the Chancellor is firſt repreſented as jealous of Popery, and complaining of the King's inclination to it by chooſing new miniſters popiſhly affected;

master, less respected in parliament, and less beloved by the people (*ll*). The building of a magnificent house, which was begun in the following year 1664, furnished fresh matter for obloquy [*W*]. In the mean time, though he was very sensible that he continually lost ground in his Majesty's favour, yet he disdained to stoop to those arts which were become necessary to prevent the mischievous consequences thereof [*X*]; so that by degrees

(*ll*) Complete History of England, Vol. III. p. 266. 2d edit.

fected; and yet after all, he *is* made the instrument of those very designs laid for Popery, and the professed promoter of them. This is somewhat surprizing; and what has since made the designed revenge more apparent is, that the articles should tax the Chancellor with saying, that Sir Henry Bennet was a concealed Papist, when the Earl of Bristol himself was the same, and had been privy to all that the King had done at Fonterabia at the Pyrenean treaty. His revenge was returned upon the prosecutor abundantly to the vindication and honour of the Chancellor by the House of Lords; who shewed themselves very sensible of the malice of the prosecution, and as soon as the articles were exhibited and read before them, after a short consideration made the following order: 'That a copy of the articles or charge of high-treason, exhibited 'this day by the Earl of Bristol against the Lord Chancellor, be delivered to the Lord Chief-Justice, who 'with all the rest of the Judges are to consider, whether the said charge hath been brought in regularly 'and legally; and whether it may be proceeded on, 'and how; and whether there be any treason in it or 'no; and make report thereof to *this* House *on* Monday next if *they* can, or else as soon after as possibly 'they can.' Upon this important occasion, all the Judges met at Serjeant's-Inn, and the Earl of Bristol repaired to them, desiring to see their order; which being read, he told them, that *he came out of respect to know of them, whether they were informed how it came into the House of Peers, whether as a charge or not.* But one of the Judges, who had been present when it was delivered in, saying, that *they were tied up by their orders*, the Earl took some exception at the manner of his expression, as if his address was unnecessary at that time, and taking it as a rebuke upon him, departed. And, according to their order, which supposed it to be a charge of *high-treason*, and not mentioning *misdemeanors*, having considered the matter, they unanimously agreed upon this answer, which the Lord Chief-Justice Foster delivered into the House of Lords: 'We conceive that a charge of high-treason cannot, by the laws and statutes of this realm, be originally 'exhibited by one Peer against another unto the House 'of Peers: and that therefore a charge of high-treason 'by the Earl of Bristol against the Chancellor, mentioned in the order of reference to us on the 10th of 'this instant July, hath not been regularly and legally 'brought in; and if the matters alledged in the said 'charge were admitted to be true, although alledged 'to be traiterously done, yet there is no treason in it.' Upon the reading of this answer, the Earl of Bristol took exceptions at it, and some of the Lords, who were friends to the Chancellor, inferred, that 'If it 'was not regularly and legally brought in, it was a libel, and ought to be condemned, and the author of 'it censured.' To satisfy the House, one of the Judges, upon conference with his brethren, did the next day deliver the reasons of the opinion of the Judges in their answer; when the Earl of Bristol, a little to extenuate the matter, said, that *the articles were not intended by him as a charge, but an information.* Hereupon their Lordships, upon a fair debate of the question, did unanimously resolve to declare their concurrence with the opinion of the Judges.

(44) See his Life, prefixed to his Tracts, in 1712, 4to. and note (48).

(45) The proprietor of Worcester-house, where he resided, had resolved to [illegible] himself upon the expiration of the [illegible]'s lease.

(46) Mr Carte observes, that [illegible] him [illegible] by [illegible] with [illegible] Life of the Duke of Ormond, Vol. II. p. [illegible] also the Chancellor's Letter to his Grace in remark [*Z*].

[*W*] *The building of his house furnished fresh matter of obloquy.*] We shall take the account of this matter from Bishop Burnet, who has not spared to censure the Earl's indiscretion on that step, which indeed he was himself not insensible of, and afterwards lamented (44). 'The King, says that historian, had granted him, as 'has been already observed, a large piece of ground 'near St James's palace to build upon (45); he intended a good ordinary house, but not understanding 'those matters himself, he put the management of it 'into the hands of others, who run him into a vast 'expence of above 50,000*l.* three times as much as 'he had designed to lay out upon it (46). During 'the war, and in the plague year [1665], he had 'about 300 men at work, which he thought would 'have been an acceptable thing, when so many men 'were kept at work, and so much money as was daily 'paid circulated about. But it had a contrary effect, 'it raised a great outcry against him. Some called it '*Dunkirk house*, intimating that it was built by his 'share of the price of Dunkirk. Others called it '*Holland-house*, because he was believed to be no 'friend to the war; so it was given out he had the 'money from the Dutch: it was visible that, in a 'time of public calamity, he was building a very noble palace. Another accident was, that before the 'war there were some designs on foot for the repairing 'of St Paul's, and many stones were brought thither 'for the purpose. That project was laid aside: he 'upon that bought the stones, and made use of them 'in building his own house. This, how slight soever 'it may seem to be, yet it had a great effect by the 'management of his enemies (47).' To the Bishop's remark it may be added, that this stately pile was not finished 'till 1667 (48); so that *it* stood a growing monument for the popular odium to feed on, almost the whole interval between his first and his last impeachment; and to aggravate and spread that odium, there was published a most virulent satirical song, intituled Clarendon's House-warming, consisting of many stanzas, each of four hendecasyllables, to which, by way of sting at the tail, was added the following clumsy but bitter epigram.

(47) Burnet's History of his own Times, Vol. I. p. 249. folio edition.

(48) He did not go into it 'till April that year. Carte, where last cited. At his entrance he said, this house will one day be my ruin. It stood at the upper end of St James's street, where Albemarle street and the streets adjoining now are. Echard, Vol. III. p. 192.

* State Poems, from Oliver Cromwell to King James II. p. 247. Lond. 1697, 8vo.

[*X*] *Though he was sensible of his losing ground, yet he disdained those arts which were become necessary, &c.*] From the time that Sir Henry Bennet (afterwards Lord Arlington) was made Secretary of State, he was apt to complain, upon occasion that he had no credit at Court, which disobliged the King; and when his advice, prudently and honestly given, was over-ruled, he did not care to intermeddle, but left it to wiser men, as he stiled them, to follow their own measures, and to perform what they had confidently undertaken for the King's service. This manner of conduct made him neglect his interest (of which few ministers have ever had a greater share, and yet founded upon virtue) in the House of Commons, 'till at last it was utterly ruined (49). This observation of Mr Carte's is agreeable to all the general histories. But there is an instance of this conduct related by the Earl himself, which sets it in the fullest light, as follows. In 1667, the insult by the Dutch at Chatham happening soon after the Earl was settled in Clarendon-house, the clamours of the populace on that occasion were all levelled at him as the author of all the calamities of the kingdom; so that he was in continual apprehensions they would pull down his house, and that he should fall a sacrifice to their fury (50). In the mean time, 'the distraction was so great in court and city, as if 'an army of 100,000 men had encompassed it; and 'though the Dutch fleet advanced no farther than 'Chatham, and returned out of the Thames; yet it 'remained still upon the coast, and landing about 'Harwich, attempted the castle of Langhorne-point, 'and kept the counties of Essex, Norfolk, and Suffolk, in perpetual alarm for many days: the trainbands, which had been drawn together, pretended 'the time was expired that they were obliged to maintain themselves, and therefore required pay or liberty to depart, though the enemy was in view, and 'themselves like to be made the first prey. The regiments

(50) Carte, where last cited, and the Earl's Vindication, passim.

degrees the King was brought at length to entertain an unconquerable averſion to him [Y]; and having firſt taken away the great ſeal in Auguſt 1667 [Z], afterward encouraged an impeachment

ments which had been raiſed without charge to the King, upon the intereſt of ſeveral perſons of honour and great reputation, had upon the firſt muſters received one month's pay; but that time was expired, and they muſt either receive another pay, or take free quarter upon the country, which the time would not bear. In this perplexity, ſome perſons had adviſed the King to ſummon the Parliament to convene upon a ſhort day, notwithſtanding it ſtood prorogued *till* October. And, continues the Earl, when his Majeſty aſked my opinion of it, I told him I thought it could not be done; I was ſure it never had been done. To which his Majeſty replied, that he was aſſured by many that he might do it, and named Mr Prynne to be of that opinion. Shortly after, his Majeſty appointed the whole council to meet upon the debate, of which I knew nothing 'till I came into the room. The King himſelf told us what we were to debate upon; that we all ſaw the ſtraits we were in, the general diſtemper of the nation, the inſolence of the enemy; that there was a neceſſity of having an army, that he had no money, nor knew where to get any, nor could imagine any other way to provide againſt the inconveniences which were in view, than by calling the Parliament; of which, and any other expedient, he would receive our advice, expreſſing ſo much of his own ſenſe, that it was plain enough he inclined to that remedy: upon which, three or four of thoſe who ſat at the lower end of the table, and who were known to have contrived the council, expreſſed themſelves at large; ſeemed very confident that it might lawfully be done; that no other way could be found to raiſe money; that men could not be kept together without money; and deſired that they who were of another opinion would propoſe ſome other counſel. I don't deny their reaſons did in no degree ſatisfy me; and though I knew very well that the reſolution was upon the matter already taken, that there was a great deſire in ſome men, whoſe malice to me was enough known, to lead me into ſome expreſſions of which they might take advantage; yet the obligation of my oath to deliver myſelf freely, the conceived ſecurity of that place, and the opinion that the thing was not reaſonable, and would produce many inconveniences to the King's ſervice, prevailed with me to diſcharge my own conſcience, God knows, according to the beſt of my underſtanding; I ſaid, I knew well the diſadvantage upon which I ſpoke in ſo tender a point, and how unpopular a thing it was to be againſt the convening of the Parliament in a time of ſo great ſtraits, when no other remedy could be found; yet *that* appearing to me not practicable, I thought it not to be embraced; that it was confeſſed by all hands, that in the point of law, the convening them before the time to which they were adjourned was at leaſt very doubtful; and to me, upon all the diſquiſition I could make, it was very clear it could not be done; that the temper of both Houſes was well known; and it could not but be preſumed, that when they came together, the firſt debate they would fall upon, would be upon the manner of their coming, and whether they were in a capacity to act; and I doubted very much, that there would be very few who would be willing to paſs an Act of Parliament in ſo doubtful a ſeaſon, and then if their meeting was only to confer, when they might ſay any thing and conclude nothing, I thought it well worth the conſidering, whether, in ſo general a diſtemper, ſuch an aſſembly might not interrupt all other conſiderations and expedients, and yet propoſe none, and ſo increaſe the confuſion: I ſaid if the neceſſities were ſo urgent, that it was neceſſary to have a Parliament convened, and that they could not lawfully re-aſſemble that which was prorogued, 'till the day to which it was prorogued, as I was confident it could not be, there could be no doubt but that it was in the King's power to diſſolve that Parliament, and forthwith iſſue out writs for calling another, which might be regularly aſſembled more than a month before the prorogued Parliament could meet.' There were many more for this expedient as the beſt way; but many others declaring againſt it, the King himſelf, with ſome quickneſs, aſked the Chancellor what he would adviſe, upon which he ſaid, that 'till a new Parliament could meet, for the preſent ſupport of thoſe troops which were to guard the coaſts, to avoid the worſt ſort of free quarters made by the ſoldiers themſelves, the only way that appeared to him to be practicable, would be to write letters to the Lieutenants and Deputy-Lieutenants of thoſe counties where the troops were obliged to remain, to cauſe proviſions to be brought into their quarters; as alſo to write the like letters to the neighbouring counties, to raiſe money by way of contribution, as had heretofore been done. 'And it is poſſible, concludes he, that in the earneſtneſs of this debate, and the frequent interruptions which were given, I might uſe that expreſſion of raiſing contribution as had been done in the late civil war (51).' Thus he ventured too boldly to oppoſe the majority of the Council, with the King at their head; and the conſequence was, that this opinion of his appeared at the head of the articles of treaſon ſoon after exhibited againſt him, dreſſed up in the following terms: 'That the Earl of Clarendon hath deſigned a ſtanding army to be raiſed, and to govern the kingdom thereby; adviſing the King to diſſolve the preſent Parliament; to lay aſide all thoughts of Parliaments for the future; to govern by military power, and to maintain the ſame by free quarter and contribution.'

(51) Vindication of himſelf againſt the firſt article of the Houſe of Commons, printed in his Tracts, edit. 1727, folio.

[Y] *He was brought by degrees to an unconquerable averſion for him*] There can be no clearer proof of his innocence and real worth, than the low methods taken by his adverſaries to beget this averſion in his Majeſty, the particulars of which are finely and delicately touched in the preface to the firſt volume of his Hiſtory of the Rebellion. But it will not be amiſs to lay before the reader ſome circumſtances of that ſingular one, which has been generally thought to have the greateſt ſhare in creating the ſaid averſion. It is allowed on all hands, that the Chancellor was not without the pride of conſcious virtue †, 'where his perſonal carriage was attended with a kind of gravity and haughtineſs, which ſtruck a very diſagreeable awe into a Court filled with licentious perſons of both ſexes; that he often took the liberty to give ſuch reproofs to theſe perſons of mirth and gallantry, as were very unacceptable to them, and ſometimes thought it his duty to adviſe the King himſelf in ſuch a manner, that they took advantage of him, and as he paſſed in Court would often ſay to his Majeſty, *There goes your ſchoolmaſter*. The chief of theſe was the Duke of Buckingham, who had a ſurpriſing talent of ridicule and buffoonery; and that he might make a way to his ruin, he often acted and mimicked the Chancellor in the preſence of the King, walking ſtately with a pair of bellows before him for the purſe, and Colonel Titus carrying a fire-ſhovel on his ſhoulder for the mace; with which ſort of banter and farce, ſays Mr Echard, the King was too much delighted and captivated (52).' Accordingly, as ſoon as the ſeal was taken from him and delivered to the King, Mr May, well knowing the compliment that would be the moſt grateful to his Majeſty on that occaſion, upon kiſſing his hand told him, *He was then King of England and never before* (53). But we have ſtill a more undeniable evidence that it was this part of his behaviour which was reſented above any thing elſe by his Majeſty, and that is the King himſelf, who, in a letter wrote expreſsly to ſatisfy the the Duke of Ormonde what the Chancellor had done to diſpleaſe him, beſides the diſſatisfaction of the world on his account, does not offer to charge him with any crime, but only with a certain *perviſhneſs of temper* which gave him offence (54).

† He acknowledges it himſelf in his Vindication, &c. where he calls it the pride of a good conſcience, p. 9.

(52) Echard's Hiſtory of England, ad annum 1667. B. 1. c. 3.

(53) The Chancellor's Vindication of himſelf, &c. ubi ſupra, p. 8.

[Z] *The ſeal was taken from him.*] Upon this occaſion he wrote the following letter to the Duke of Ormond.

(54) Life of the Duke of Ormonde, Vol. I. p. 353. and Echard's Hiſtory, where laſt cited.

'Though I have great reaſon to take heed what I write and what I ſay, and therefore have given over ſending all letters by the poſt, yet I ſatisfy myſelf, that this bearer will carefully deliver into your hands this ſcribble; and your's of the 26th is ſo full of kindneſs, that I muſt not leave it unacknowledged.

'The truth is, I know not what to ſay, the world is ſo much altered ſince I wrote laſt. The great affliction I lay under from the unexpected loſs of my wife, which I did not apprehend full two days, had, I thought, pretty well prepared me to quit the world; yet I cannot

impeachment of high-treafon, which was brought againft him by the Houfe of Commons [*A A*] in November; and laftly, during the profecution, procured him to leave the kingdom [*B B*] in the beginning of December; whereupon, an act of banifhment was paffed againft

'cannot tell you, that the other which followed within 'a few days, did not exceedingly furprize me, and 'even aftonifh me; nor in truth am I yet recovered 'out of that trance. 'Nor can I imagine, how, from 'being thought a pretty wife fellow, I am become 'fuddenly to have no underftanding, and to be of no 'ufe. It fell upon me in an ill time, and how I fhall 'fhift I know not, being under a vaft debt, and pof-'feffed of a very fmall eftate, and fo like to be in 'ftraits enough. Nor do I know what is more in-'tended. I thank God I fear nothing that my ene-'mies can bring againft me, though the number of 'them is great, and thofe of my friends fewer than I 'could imagine ‡.

‡ He loft, on May 16, his chief friend the Earl of Southampton, upon whofe death the treafury was put into the hands of the Duke of Albemarle, Lord Afhley, Sir Thomas Clifton, Sir William Coventry, and Sir John Duncombe, none of them well affected to the Chancellor. Carte, Vol. II. p. 351.

'Upon all the reflections I can make with myfelf, 'I am not confcious of having done or faid any thing 'in difcharge of my public truft, which I would not 'have done or faid if I had been that moment to 'expire. I am accufed of infolence and fawcinefs in 'debates, of which 'tis faid I had directions long fince 'to advertife me. In truth, I think I have been fre-'quently bold enough, in which I am fure my inten-'tions were always full of duty; and I am confident 'you will fwear for me that that duty will never 'decline. If I know myfelf, I fhall never be lefs 'warm in all the King's concernment than I have 'ever been, and it is not impoffible that I may yet 'do him more fervice under his difpleafure, than I 'have been able to do in his favour.

'There are now other expedients defigned to his 'fervice than I could travel in. I am pretty well 'compofed in my mind, and if I am fuffered, fhall be 'glad to fpend this winter here, and at the fpring fhall 'retire into fome corner in the country, where I may 'be able to get bread. I muft not omit to tell you, 'that the Duke of York hath been and is as gracious 'to me, and as much concerned for me as poffible; I 'have not many other friends to brag of. I confefs I 'have fo much mortification upon the obfervation of 'the humours of men, that the very ridiculoufnefs 'thereof is fome allay to the melancholic. God prof-'per you and your's, and keep your mafter firm to 'you, for I believe I have few enemies who don't de-'fire to oblige you the fame way they have done me *. 'I pray God to provide well for the public here, and 'bring you and me once more together.

* The fincere and inviolable friendfhip between thefe two worthy Statefmen is very exemplary. We have feen the commencement of it, and it was cemented by an uninterrupted feries of mutual kindneffes; one of which, on the Chancellor's part, was his writing the *Hiftory of the Rebellion and Civil Wars in Ireland*, from the papers communicated to him by the Duke. This piece was printed at London, 1726, 8vo.

'CLARENDON (55).'

(55) Life of the Duke of Ormonde, Vol. II. in the Appendix, No. LII.

[*A A*] *The King encouraged an impeachment of high-treafon, &c.*] Two inftances of this are given, one by Mr Carte, who relates (56), that his Majefty obferving Sir John Finch to be filent in the Houfe, when this point came in queftion, gave him pofitive orders to be active, and to promote the bufinefs. And Mr Echard tells us (57), that the King very fharply rebuked Sir Stephen Fox for voting againft the impeachment. And befides thefe exprefs declarations of his temper on this occafion the Earl hath not fpared to affert, that, as foon as the Parliament came together, it quickly appeared that my enemies (they are his own words) had fo far prevailed with his Majefty, as to declare his own difpleafure againft me, and againft all thofe who appeared to have no ill opinion of me; and then nothing was fpoken fo much of as the refolution to take my life, and the lady Caftlemain declared that the Duke of Buckingham was to fit Lord High-Steward of England upon my trial, many wagers being laid in the Court that I fhould lofe my head; and Sir Thomas Ofborne, a perfon of great intimacy with the Duke, had declared in the country before he came up to Parliament, that if the Chancellor was not hanged he would be hanged himfelf; all which was done, he intimates, in the view of driving him out of the land (58), a thing which his Majefty had indeed fixed upon, and which was compaffed in the manner related in the next remark.

(56) Ibid. Vol. II. p. 353.

(57) Echard's Hiftory of England, Vol. III.

(58) Vidication of himfelf, in the conclufion.

[*B B*] *Procured him to leave the kingdom.*] As this part of his conduct was condemned by many of his friends (59), and particularly by the Duke of Ormonde, who had in a manner engaged for his fteadinefs and courage to ftand a trial (60) he drew up a particular account of it, as follows. 'From the beginning of 'the profecution in Parliament againft me, fome per-'fons who wifhed me very well, informed of the feve-'ral intentions againft me, earneftly advifed me to 'withdraw myfelf, and thereby to provide for my fe-'curity, which I utterly refufed to do. And it is 'well known, that the day when the Houfe of Com-'mons fent up their general impeachment, that my 'coach was ready, and waited three or four hours to 'carry me to the Houfe, I expecting to be fent for ''till their rifing. When the debate grew fo hot in 'the Houfe of Peers, that many expoftulations from 'the Lower Houfe, they ftill refufed to commit me to 'prifon, I received new importunities from my friends 'to make my efcape. And they were perfwaded by 'fome who had had the greateft hand in contriving 'my ruin, to believe that it would be grateful to the 'King, and that there fhould be no means ufed to 'obftruct my going away: and when nothing of this 'could work upon me, the Bifhop of Hereford (who 'had not carried himfelf fo well toward me as fome 'men thought I had deferved from him †) firft fent to 'the Bifhop of Winchefter to perfwade him to get me 'out of the kingdom, and confeffed to him, that it 'was the King's defire, though he would not own it 'to any body elfe; and then came to me himfelf, 'preffing the fame thing to me, and undertook upon 'his falvation (which was his own expreffion) that I 'fhould neither be ftopped in my paffage, nor fuffer 'the leaft degree in my honour or my fortune by my 'abfence; which he faid I could not believe he would 'undertake without very good authority, and there-'upon enlarged upon the calamities the kingdom muft 'fuffer upon this difference between the two Houfes, 'of which I fhould be looked upon to be the fole 'caufe, and therefore had reafon to apprehend what 'fenfe the people were like to have of it: and Mr 'Seymour had the confidence to tell a noble Lord of 'the Houfe, who had vigoroufly oppofed my commit-'ment, that if the Houfe of Peers did not comply 'with the Houfe of Commons, the people would not 'only pull down my houfe, but the houfes of all thofe 'Lords who adhered to me. I told the Bifhop I was 'very innocent in all things laid to my charge, and 'therefore was not to be terrified by threats; howe-'ver, if it were thought fit for his Majefty's fervice 'that I abfented myfelf, I would without any confide-'ration how far I might fuffer in point of reputation, 'fubmit to his Majefty's direction; only I defired, 'that I might have fuch a pafs as might fecure me 'from being ftopped, and expofed as a fpectacle to 'the people, and as a man running away from juftice; 'which the Bifhop thought I might reafonably require, 'and made no doubt of fending it me accordingly: 'but the next morning he told the Bifhop of Winche-'fter, that if the King fhould grant fuch a pafs, it 'might give great offence to the Parliament; which 'hazard his Majefty would not run; but renewed all 'the affurances he had before given for the fecurity of 'my paffage; and I as pofitively refufed to accept 'thereof; and fo continued in my houfe, and fpoke 'every day publickly with many perfons a full week 'after the time that the Bifhop had been with me, 'notwithftanding the daily advice and importunity I 'received from my friends and neareft relations to 'withdraw.

(60) Life of the Duke of Ormonde, Vol. II. in the Appendix, No. LXVII. See alfo a Letter from the Duke to the Lord Arlington, dated Sept. 3, 1667, in the fame volume, p. [illegible] and in remark [*A*] of the enfuing article.

† His name will be feen prefently among the protefting Lords.

'It pleafed God, that the Duke of York had been 'for fome weeks fick of the fmall-pox, fo that nobody 'had fpoken with him about any bufinefs for the fpace 'of near a month; but the malignity of the difeafe 'being fpent, his Majefty himfelf had, upon the laft 'Friday in November, vifited his Royal Highnefs; 'and faying little more than to congratulate his reco-'very and exprefs his own great joy in it, he came 'again the next morning early, and had fome private 'conference with him. And the King no fooner de-'parted from him, but the Duke bid his wife fend pre-'fently to me, and conjure me prefently to be gone ‖; 'that fhe fhould let me know that it was abfolutely 'neceffary for the King's fervice, and that I might be 'very confident and fecure that I fhould meet with no 'obftruction in the way, nor undergo the leaft damage 'in my honour or fortune by being gone. And upon 'this

‖ The Duke's intereft was in fome danger, a project being on foot to procure a declaration from the King that he had been married to the Duke of Monmouth's mother; and the perfons appointed by his Majefty to reduce his expences had propofed the cutting off the 200 l. a week allowed for the Duke's table. General Hiftory of England, and Carte, p. 355.

againſt him on the 19th of that month. Before his departure, he drew up an apology * in a petition to the Houſe of Lords, which being delivered by his eldeſt ſon, the Lord Cornbury, to the Earl of Denbigh, was preſented by him to the Houſe on the third of December. His friends were divided in their opinions about the part which he took of withdrawing, but they all thought him ill adviſed in the matter of his petition (*m m*), wherein he vindicated himſelf from any way contributing to the late miſcarriages, in ſuch a manner as laid the blame at the ſame time upon others [*C C*]. He retired to Normandy, where, if not the malice, at leaſt the miſrepreſentations, of his enemies purſued him. As he was going in the latter end of March following from Rouen to Paris, he ſtopped for ſome time towards the end of April at a town called Evreux, on the ſouth ſide of the Seine; where he was aſſaulted by ſome ſeamen, and very narrowly eſcaped with his life [*D D*]. Being greatly afflicted with the gout, and finding himſelf not ſecure in that part of

* It is printed in Rapin's Hiſtory of England under this year.

(*m m*) Life of the Duke of Ormonde, Vol. II. p. 354.

'* this authority and command I did, upon Saturday
' the laſt of November, 1667, leave my own houſe,
' and went by coach to Erith, where I embarked;
' and it pleaſed God, after ſome days ſtruggling with
' ill wind and weather, I arrived at Calais the Wed-
' neſday following *And I did no more in this adven-*
' *ture, whatever prejudice I have undergone by it, than*
' *I ſhall always do in ſacrificing my honour and my life*
' *itſelf upon the leaſt inſinuation of his Majeſty's plea-*
' *ſure*, and whenever he thinks his ſervice may be ad-
' vanced by it. And if any man ſhall yet think, not-
' withſtanding all that I have ſaid, that I ought not to
' have withdrawn myſelf, but to have remained there
' in priſon, or in any other condition they would have
' put me, until I had been fully cleared upon a fair
' trial, he will, I hope, have ſo much compaſſion of
' me, as to think I had great difficulties to contend
' with, and will lament, on my behalf, that I am
' forced to undergo ſo hard a fate after the age of
' threeſcore years, whereof thirty have been ſpent in
' the ſervice of the Crown; and for the proſperity
' whereof, and the happineſs of his Majeſty's royal
' perſon, my daily prayers ſhall be poured out in what
' condition ſoever I am, and in what corner ſoever
' of the world I ſhall be confined or condemned to (61).'
This abſolute reſignation, not only of his life but of his honour too, to the King's pleaſure, will perhaps be looked on at this time of day, (if any thing more than a ſtrain of Court language) to be a rare example of the influence of the doctrine of unlimited paſſive obedience, which was preached up in thoſe days, and for which his Lordſhip may be juſtly honoured with the title of a Confeſſor. But though that principle ought, in juſtice to his univerſally acknowledged integrity, to be allowed the firſt place among the motives which prevailed upon him to withdraw; yet as he declares at the ſame time that he had great difficulties to contend with; ſo no injury will be done to him, in ſuppoſing that the principle of ſelf-preſervation held the ſecond place among thoſe motives. There is a letter of his ſon the Lord Cornbury to the Duke of Ormonde, which furniſhes a ſufficient warrant for this aſſertion. It is dated December 8, four days after his father's landing at Calais, and was wrote to excuſe that reſolution. In this view, having alledged the ſeveral other reaſons for it, he cloſes the number as follows: that
' being informed from very creditable hands, that
' there was a deſign to prorogue the Parliament, on
' purpoſe to try him by a jury of Peers, (by which
' means he might fall into the hands of the proteſting
' Lords) he reſolved to withdraw.*.' Accordingly Mr Carte informs us, that it appeared from Lord Arlington's Letters to the Duke of Ormonde, that it was expected a week before the vote [for committing him], that if the Lords would not recede from their privilege, the Commons would either take the way of remonſtrating [as they did] againſt it ‡, or bring a bill of attainder. The laſt, which would ſtill have left the whole Houſe of Lords to judge, afforded the proſecutors little hopes of ſucceſs, eſpecially ſince the Biſhops would have voted on that occaſion; and therefore a trial by commiſſion, directed to twenty-four Peers, wasdeemed more eligible; and the Lord Clarendon, with all his innocence and integrity, had reaſon to dread the judgment of twenty-four ſuch perſons as ſhould be packed by the Duke of Buckingham †. The number twenty-four of this jury plainly points to the Lords who proteſted againſt the vote for not committing the Earl, which were D. Bucks, D. Albemarle, Teynham, St David's, T. Lucas, Ch. Garrard, Berkſhire, Powlet, Howard of Charlton, Pembroke, Rocheſter, W. Dureſme, T. Sandes, Jo. Berkley, Northampton, Kent, Carliſle, Dover, Norwich, Vaughan, Hen. Hereford, Byron, Bath, Briſtol, Arlington, Say and Seal, Powis. In number twenty-four, beſides the three Biſhops ‖.

(61) His Vindition, in the concluſion.

* Life of the Duke of Ormonde, Vol. II. in the Appendix, No. LIII.

‡ The debate which ended in that remonſtrance was uſhered in by the Duke of Albemarle's ſon, a youth of 14 or 15 years of age, ſuch being allowed then to ſit in the Houſe of Commons. Ibid. in the body of the work, p. 349.

† Ibid.

[*C C*] *As laid the blame upon others*] The Lord Arlington, who thought himſelf particularly ſtruck at in the petition, called it a libel in the Houſe, and after reading it, the Lords ſent two of the Judges to acquaint the Commons of it, and to deſire a conference. The Duke of Buckingham, who was alſo plainly aimed at in the petition, delivered it to the Commons, and in his uſual way of inſult and ridicule, ſaid, The Lords have commanded me to deliver to you this ſcandalous and ſeditious paper ſent from the Earl of Clarendon. They bid me preſent it to you, and deſire you in a convenient time to ſend it to them again, for it has a ſtyle which they are in love with, and therefore deſire to keep it. Upon the reading of it in that Houſe, it was voted to be *ſcandalous, malicious, and a reproach to the juſtice of the nation*; whereupon they moved the Lords that it might be burnt by the hands of the common hangman, which was ordered, and executed accordingly (62).

‖ Compleat collection of the Lords Proteſts, under the year 1667. Lond. 1737. 8vo.

[*D D*] *He narrowly eſcaped with his life.*] This aſſault was made on the 23d of April, as appears from the following account of it in a letter to Sir William Coventry, Secretary of State, by Mr Oliver Long. dated at Evreux, April 26, 1668 (63). ' As I was travel-
' ling from Rouen towards Orleans, it was my fortune,
' April 23, N.S. to overtake the Earl of Clarendon (then
' in his unhappy and unmerited exile) who was going to-
' wards Bourbon, but took up his lodging at a private
' hôtel in a ſmall walled town called Evreux, ſome
' leagues from Rouen. I, as moſt Engliſh gentlemen did
' to ſo valuable a patriot, went to pay him a viſit near
' ſupper-time, when he was, as uſual, very civil to me.
' Before ſupper was done, twenty or thirty Engliſh ſea-
' men and more, came and demanded entrance at the
' great gate, which being ſtrongly barred, kept them
' out for ſome time; but in a ſhort ſpace they brake
' it, and preſently drove all they found, by their ad-
' vantage of numbers, into the Earl's chamber, where
' by the aſſiſtance of only three ſwords and piſtols,
' we kept them out for half an hour, in which diſpute
' many of us were wounded by their ſwords and piſtols,
' whereof they had many. To conclude, they broke
' the windows and doors, and under the conduct of
' one *Howard* an Iriſhman (who has three brothers, as
' I am told, in the King of England's ſervice), and an
' enſign in the company of cannoneers; they quickly
' found the Earl in his bed, not able to ſtand by the
' violence of the gout; whence after they had given
' him many blows with their ſwords and ſtaves, mixed
' with horrible curſes and oaths, they dragged him on
' the ground into the middle of the yard, where they
' encompaſſed him around with their ſwords, and after
' they had told him in their own language, how *he had*
' *ſold the kingdom and robbed them of their pay*, Howard
' commanded them all, as one man, to run their
' ſwords through his body. But what difference aroſe
' among themſelves before they could agree, God a-
' bove, who alone ſent this ſpirit of diſſenſion, only
' knows. In this interval, their lieutenant, one
' *Swaine*, came and diſarmed them. Sixteen of the
' ringleaders were put into priſon, and many of thoſe
' things which they had rifled from him found again,
' which were reſtored, and of great value. Monſieur L
' Fonde, a great man belonging to the King of France's
' bed-chamber, ſent to conduct the Earl on his way
' hither, was ſo deſperately wounded in the head, that
' there were but little hopes of his life. Many of
' theſe aſſaſſins were grievouſly wounded, and this ac-
' tion is ſo much reſented by all here, that many of
' theſe

(62) State Trials, in that of the Earl of Clarendon, Vol. II. p. 572.

(63) The original is in the Bodleian library.

of France, he went in the ſummer to Montpelier, where, being more at eaſe [*E E*], he drew up his *Diſcouſe by way of Vindication of himſelf, from the Charge of High-Treaſon brought againſt him by the Houſe of Commons in November* 1667 [*F F*]. Recovering his health to a good degree, he continued at Montpelier three or four years, ſpending a good

' theſe criminals will meet with an uſage equal to their ' merit.'

[*E E*] *He was more at eaſe at Montpelier.*] In the dedication of the *Contemplations, &c. upon the Pſalms*, having taken notice of the ſevere treatment he met with at Evreux, he declares he was in no place which he could confidently reſide in 'till he came to Montpelier, where he found very good reception and accommodation, through the extraordinary civility and addreſs of Lady Mordaunt. Who having obtained a very great eſteem from all perſons there, had taken ſome pains by her good mention of him, and the poſt that he had ſuſtained, and ſome advantageous diſcourſe of his relations ‖, to prepare them in ſuch a manner to bid him welcome, that he found a very extraordinary reſpect from all perſons of quality, men and women; which continued during his ſtay there (64). Upon this mention of Lady Mordaunt's kindneſs to the Earl, we ſhall take on opportunity of vindicating the Chancellor's ſhare in the Reſtoration, with regard to one particular, wherein the Lord Mordaunt was concerned. It was no inconſiderable part of Monke's inſtructions to Sir John Greenvile, that he ſhould not return 'till he had ſeen the King out of the Spaniſh dominions, and his Majeſty was deſired to make haſte to Breda, and from thence diſpatch all the letters and papers he ſhould ſend to England. ' I have taken notice of this particular, continues Mr Carte, as well to do an act of juſtice to General Monke, by ſhewing that his application to the King, was earlier than is generally repreſented, and that he did not ſtay 'till he had ſeen the iſſue of the election, by which he might judge of the temper of the members, as to do another to the Marquis of Ormonde (from whom no body I believe will ſeparate the Lord Chancellor) by ſhewing, that he was not unacquainted with Monke's affairs and inſtructions. The ſurmiſe that thoſe were kept a ſecret from theſe two noble perſons is ſo far from truth, that on the very next day after Lord Mordaunt and Sir John Greenvile parted from the King, Lord Mordaunt, upon ſome freſh advices received from England, of Monke's meaſures and further communications of his deſigns, ſent a letter to the Marquis of Ormonde, deſiring him to diſpatch *Hartvile Baron* with the commiſſion for the General, and ſuch further inſtructions as were neceſſary *.'

[*F F*] *A vindication of himſelf from the charge of high-treaſon, &c.*] This charge conſiſts of ſeventeen articles, which to go over here would be tedious, eſpecially ſince notwithſtanding the challenge made by his ſon Mr Laurence Hyde, defying the Houſe to prove any one of them, yet no proof was ever attempted there (65). The article which charges him with adviſing the ſale of Dunkirk to the French, is the only one that ever made the leaſt impreſſion to the diſadvantage of his memory; and ſince a late noble author, already quoted in this memoir, hath produced a circumſtance, which, if not rightly underſtood, may be thought to ſupport the opinion, that he even adviſed the parting with it in general; we ſhall endeavour to ſet that matter in it's true light. The Earl of Clarendon begins his defence againſt this article in theſe terms. It is very well known to his Majeſty and to ſeveral perſons yet alive, that the parting with Dunkirk was reſolved upon before ever I heard of it; and that the purpoſe was therefore concealed from me, becauſe it was believed that I was not of that opinion, and would not concur in the advice †. However in proceeding he confeſſes, that when it was firſt propoſed and debated in the Council, he was not only preſent, but agreed with the majority in their opinion for the ſale of it; and that in a ſecond debate, he alſo concurred with his Majeſty's propoſal for making the firſt offer to France; and that in purſuance of this reſolution, he was one of thoſe four five Lords of the Privy-Council appointed to treat with Mr *Eſtrades*, who was come privately to England for that purpoſe, and that after ſeveral conferences with him, the bargain was concluded (66). Thus the Chancellor's own ſtate of the caſe confirms the obſervation of Lord Lanſdowne (67) from the *letters and negotiations of the Count D'Eſtrades* that the firſt motion came from the Chancellor in a letter dated at Hampton-Court, June 29, 1662, and ſigned *Clarendon*; that is, the firſt motion to that Count; which may be very true, and yet it may be as true, that the reſolution for parting with Dunkirk was taken before ever the Chancellor heard of it, as he himſelf avers. But in juſtice to our readers, we muſt not omit mentioning one particular concerning this treaty, though it may ſeem to bear a little hard upon his memory. Having recounted the ſeveral ſteps taken in negotiating this affair 'till it was brought to a concluſion, by agreeing upon 500000 piſtoles, to be paid in ſpecie, for the purchaſe, he proceeds thus: ' Which I believe was a ' greater ſum of money than was ever paid at one pay- ' ment by any Prince in Chriſtendom, upon what oc- ' caſion ſoever. And, continues he, that all this ' ſhould not amount to a greater value than the ammu- ' nition, artillery, and ſtores were worth, which were ' delivered with it, is very ſtrange, and cannot be ſup- ' poſed by any reaſonable computation †. I do very ' well remember, that in the treaty, we did with ' much earneſtneſs inſiſt upon the detaining the cannon ' and other artillery and ammunition. But M. D'E- ' ſtrades would not conſent to it, being neceſſary, as he ' ſaid, for the defence of the place, which probably might ' be attacked by the Spaniards in a few days after the ' delivery of it into the hands of his maſter; and upon ' inferting that exception of the cannon, &c. in our ' demand, he was at laſt induced to conſent to the pay- ' ment of 500000 piſtoles, which he had never before ' yielded unto; he concludes with obſerving, that his ' Majeſty cauſed ſome eſtimate to be made of the ' cannon, &c. and that the value did not ariſe to more ' than 20000 l. ſterling, or thereabouts.' It is evident, that in this account, the Chancellor had an eye upon the ſpeech which was made to his Majeſty by Sir Edward Harley, who had been governor of Dunkirk * 'till the ſale was projected, when being removed and returning to England, on the delivery of his accounts, he took his leave of the King, telling him before the Duke of Albemarle, who had procured him that government, that the guns, ſtores, and ammunition he left at Dunkirk, were worth more money than the French were to give for the place (68). He told him alſo, that he would leave him one thing more, which his Majeſty did not think of, and that was 10000 l. he had ſaved in his iron cheſt againſt a ſiege, or any other exigence that might happen (69). It may not be improper to obſerve likewiſe here, ſince it made the ſurrendry of the place more unpopular; that this gentleman, during the ſhort ſpace of time he held that government, had recruited the garriſon to above 9000 men, and began many fortifications, which were afterwards perfected by the French (70); that on his removal he left in the hands of the deputy-treaſurer, the ſum of 127752 l. 15 s. (71); that he ſtrenuouſly oppoſed the ſale of it, and by his intereſt in the Houſe of Commons, procured the reſolution that it ſhould never be alienated, but be made a part of the King's hereditary dominions (72), and that he refuſed an offer made him by a certain great man, of 10000 l. to be paſſive in the ſurrendry of it (73); that being offered the peerage, with the title of Viſcount, for his ſignal ſervices at and before the Reſtoration, he refuſed that honour, giving this reaſon for it, *leaſt his zeal and his ſervices for the Reſtoration of the ancient government ſhould be reproached as 'proceeding from ambition, and not conſcience.* And laſtly his being made Knight of the Bath, was done without his knowledge when he was at Dunkirk, the King inſerting his name in the liſt with his own hand (74). Upon the whole it cannot, I think, be denied, that the Earl of Clarendon had a principal ſhare both in propoſing and effecting the ſale of Dunkirk to the French. Yet at the ſame time it ought to be obſerved in his behalf, that therein he yielded to the opinion of others, and eſpecially to his Majeſty's particular deſire. In reſpect to which, he was united with the Duke of Ormond in making it an inviolable rule of his duty, to ſerve the King his own way (75).

‖ Of theſe Mr Wood mentions eleven, who were all preferred by the Chancellor's intereſt. Athen. Oxon. Vol. II. col. 1151, 1152, 1153. and the Chancellor's Life, ubi ſupra, p. 2. He had alſo a brother-in-law, Colonel Gunter, who, in purſuance of advices received from the Chancellor, concerted meaſures for furthering a deſign of the King's landing in Suſſex in 1657. Thurloe, Vol. VII. p. 77.

good part of his time (*n n*) in that devout work beforementioned, *The Contemplations and Reflections upon the Psalms*, which he finiſhed there, and prefixed to it a moſt pathetic addreſs to his children (*o o*). In 1672 he reſided at Moulins, where he wrote his *Animadverſions upon Mr* Creſſy's *book, intituled, Fanaticiſm fanatically imputed to the Catholic Church by Dr Stillingfleet, and the Imputation refuted and retorted, by* J. C. [*G G*]. He alſo drew up his Survey of Mr Hobbes's Leviathan the following year at Moulins [*p p*], having lately finiſhed his great work the *Hiſtory of the Rebellion*, &c. there *; and removing thence to Rouen, he paid his laſt debt to nature, on the ninth of December 1674, in that city; whence his body was brought to England, and interred on the north ſide of King Henry VIIth's chapel in Weſtminſter-abbey (*q q*). He was twice married; firſt to Anne, daughter of Sir Gregory Ayloffe of Robſon in Wiltſhire, Knt; and this lady dying without iſſue by him, he married, in July 1634, at St Margaret's Weſtminſter, Frances, daughter, and at length heir, to Sir Thomas Ayleſbury, Bart. who brought him ſeveral children (*r r*), beſides Henry the eldeſt ſon who ſucceeded him in the honour and eſtate. We ſhall give an account of them all below [*H H*].

(*n n*) The greateſt part of his Eſſays are alſo dated at Montpelier.

(*o o*) It is dated $\frac{18}{28}$ Feb. 1670-1, and conſequently wrote before he had heard of the Ducheſs of York's changing her religion, in whom he declares himſelf ſingularly happy, that tho' her condition had made his duty a debt to her, yet ſhe had behaved to him with the ſame kindneſs, tenderneſs, and duty, as if ſhe were ſtill under the dependance and diſcipline of his own family.

(*p p*) The dedication to his Majeſty is dated at Moulins, May 10, 167[illegible]. Hobbes's article.

(*r r*) She died much lamented by him a few days before he was deprived of the Great-Seal. Vindication of himſelf, &c. in the concluſion.

[*G G*] *His anſwer to Creſſy.*] What firſt induced him to undertake this taſk (76), was the knowledge he had of Mr Creſſy, by means of an acquaintance which had commenced at Oxford (77), where that gentleman was his contemporary, and being choſen Fellow of Merton-college in 1625 (78), took the degree of A. M. and afterwards entring into holy orders, was no inconſiderable preacher, and became chaplain to the Lord Wentworth, then Preſident of the North (79), and continued ſo after he was Deputy of Ireland, whither he went in 1638 with Lucius Lord Falkland (80), probably as chaplain; and in 1642, his Lordſhip being Secretary of State, procured him a canonry of Windſor, and the deanry of Leighlen in Ireland was conferred upon him about the ſame time, but he was never inſtalled into the deanry, and never received any profits from either of theſe dignities, by reaſon of the confuſion of the times (81); ſo that being reduced to very narrow circumſtances, eſpecially after the death of the Lord Falkland at the battle of Newbury in September 1643, he travelled as a tutor with Charles Berkley, Eſq; (afterwards Earl of Falmouth) in 1644. But upon a foreſight (if we may believe himſelf (82)) that the Church of England would ſoon terminate by the reſtleſs attempts of the Sectaries, he began to think of ſettling himſelf in the Church of Rome. Accordingly going by the way of Paris to that city, he publickly renounced his religion there in 1646; after which returning to Paris, he publiſhed his *Exomologeſis; or a faithful Narrative of the Occaſions and Motives of his Converſion to Catholic Unity*, 1647, 12mo. Soon after it was printed, he ſent a copy to Dr Henry Hammond who had been his familiar acquaintance, and having a kindneſs for him on account of his modeſty, learning, and parts, invited him into England, aſſuring him that he ſhould be provided with a ſufficient ſubſiſtence to live comfortably, and not be moleſted about his religion and conſcience, but he declined the offer; and in 1653, there came out a ſecond edition of his *Exomologeſis*, with ſeveral alterations and additions made by the direction of the Benedictine Monks (83), of which order he had then taken the habit in the Engliſh college at Doway. He was ſupplied at Paris with 100 crowns for this journey by the Queen-mother of England; and after the Reſtoration, upon the marriage of King Charles II. to the Infanta of Portugal, he was taken into the ſervice of that Queen, and lived moſtly in Somerſet-houſe in the Strand. At length dying in the houſe of one Mr Caryl, at Eaſt-Grinſtead in Suſſex, Auguſt 10, 1674, he was buried in the church there, as Mr Wood was informed, by the ſuperior of his order on this ſide the river Trent in England, one *Gregory Mallet, alias John Jackſon*, who dying alſo September 10, 1681, in the Sheldonian family, was buried in the chancel of Long-Compton church in Warwickſhire (84). This Creſſy wrote ſeveral other things, particularly a piece intitled *Sancta Sophia*, or Directions for the Prayer of Contemplation, &c. (85) which ſhews, that he fell into the doctrine and principles of Quietiſm and the myſtic divinity. However he was long eſteemed the Coryphæus of the Roman party, and his *Exomologeſis*, we are told, was the golden calf to which the Engliſh Papiſts fell down and worſhipped, boaſting that it was unanſwerable, and had given a total overthrow to the Chillingworthians, and to the book and tenets of Lucius Lord Falkland (86). He had in his anſwer to Stillingfleet's *Irenicum*, dropped ſome expreſſions which ſeemed to inſinuate that his Lordſhip, as well as Mr Chillingworth, was tainted with Socinianiſm. This was warmly reſented, eſpecially in the behalf of Lord Falkland, by the Earl of Clarendon, in the treatiſe now under conſideration; where he laments, that this attempt to traduce the memory of that incomparable Lord, had found credit enough with two or three perſons of the Church of England, '(who, ſays he, never knew, and I think 'never ſaw that excellent perſon) to take upon them 'to aſperſe a nobleman of the moſt prodigious learning, the moſt exemplary manners, and ſingular good 'nature, of the moſt unblemiſhed integrity, and the 'greateſt ornament of the nation, that any age hath 'produced.' He afterwards proceeds to defend this deſervedly darling friend in the following terms. 'If 'the having read Socinus, and the commending that 'in him, which no-body can reaſonably diſcommend 'in him, and the making uſe of that reaſon which 'God hath given to man for the examining of that 'which is moſt properly examined by reaſon, and to 'avoid the weak arguments of ſome men, how ſu'perciliouſly ſoever inſiſted upon, or to diſcover the 'fallacies of others, be the definition of a Socinian, 'the party will be very ſtrong in all Churches; but 'if a perfect deteſtation of all thoſe opinions a'gainſt the perſon and divinity of our Saviour, or any 'other doctrine that is contrary to the Church of 'England, (and the Church of England hath more 'formally condemned Socinianiſm, than any other 'Church hath done, as appears by the canons of 1640) 'can free a man from that reproach, as without doubt 'it ought to do, I can very warrantably declare, that 'that unparallelled Lord was no Socinian; nor is it 'poſſible for any man who is a true ſon of the Church 'of England, to be corrupted with thoſe opinions '(87).' Accordingly Mr Creſſy, a little before his death, wrote an anſwer to the Animadverſions, wherein diſavowing the deſign imputed to him by the Earl, of charging Lord Falkland with Socinianiſm, he joins with his honourable antagoniſt in clearing his Lordſhip from that aſperſion which had been thrown upon him by others (88).

(76) It was rendered eaſy likewiſe to him, by what he had written in his Eſſay, dated at Moulins the year before, againſt multiplying controverſies, &c. which furniſhed him with a good part of theſe animadverſions. Miſcellaneous Works, &c. p. 240, & ſeq. 2d edit. 1752.

(77) Animadverſions, p. 7.

(78) The ſame year that the Earl had ſtood for a fellowſhip of Exeter-college, as above-mentioned.

(79) Mr Creſſy was born at Wakefield in Yorkſhire, where his father practiſed the Law as a Counſellor, for which town his Lordſhip, while a Commoner, had been a Member of Parliament. Athen. Oxon. Vol. II. col. 528. and the Earl of Strafford's article.

(80) He had been long known to his Lordſhip. See his article in Vol. II. p. 1183. remark [*E*].

(88) Epiſtle apologetical to a Perſon of Honour, § 7. edit. 1674, 8vo.

[*H H*] *We ſhall give an account below.*] By his ſecond Lady he had four ſons and two daughters. Of theſe Anne, the eldeſt, married as already mentioned, to the Duke of York, by that match became mother to two daughters, Mary and Anne, who were ſucceſſively Queens of England. Beſides theſe, ſhe brought the Duke four ſons and three daughters, who all died in their infancy *. The laſt was born February 9, 1670-1, and her mother deceaſed the 31ſt of March following, having a little before her death changed her religion †, to the great grief of her father, who on that occaſion wrote a moſt pathetic letter to her, and another to the Duke her conſ[illegible]. Biſhop Burnet gives her the following character. 'The Ducheſs of York, ſays he, was a very extraordi[illegible] wom[illegible]

* She brought a child every year after her marriage, except that of 1661. Salmon's Chron. Hiſt. from 1660 to 1670.

† See a paper left by her in St James's palace, dated Aug. 20, 1670.

|| They are both printed in the Life of Edward Earl of Clarendon, 8vo, 1[illegible] ſecond edit. See Kennet's Hiſt. of England, Vol. III. in the notes, at p. 321. She died before the letter reached England. Burnet's Hiſtory of his own times, vol. I. p. 340.

'woman, had great knowledge and a lively ſenſe of 'things: ſhe ſoon underſtood what belonged to a 'princeſs, and took ſtate on her rather too much; 'ſhe wrote well, and had began the Duke's life, of 'which ſhe ſhewed a volume, all drawn from the 'Duke's journal. She was bred to great ſtrictneſs in 'religion, and practiſed ſecret confeſſion, as Morley 'Biſhop of Wincheſter told me, and that he was her 'confeſſor; ſhe began at twelve years old, and con-'tinued under his direction, 'till upon her father's diſ-'grace he was put from Court.' The Biſhop concludes her character with this remark, according to his uſual manner, 'that ſhe was generous and friendly, 'but was too ſevere an enemy †.' The Chancellor's ſecond daughter Frances, married Thomas Keightley of Hertingfordbury in Hertfordſhire, created a Knight of the Bath to attend on the coronation of King Charles II §. This lady was poſſeſſed of the MS containing her father's tracts, which a little before her death ſhe put into the hands of the booksellers, to have them printed in purſuance of the Chancellor's will, which was performed accordingly ‡. Of the Earl's ſons, James the youngeſt was drowned on board the Glouceſter frigate, going with the Duke of York to Scotland in 1682 *. Edward the third ſon, was a ſtudent in the Middle-Temple, and died unmarried; the ſecond ſon Laurence, is the ſubject of the next article; and of Henry, we ſhall give ſome account here, as follows. Having received the rudiments of his education, he was early entered into buſineſs. For his father apprehending of what fatal conſequence it would have been to the King's affairs, if his correſpondence had been diſcovered by unfaithful ſecretaries, engaged him when very young, to write all his letters in cypher; ſo that he was generally half the day writing in cypher or decyphering, and was ſo diſcreet as well as faithful, that nothing was ever diſcovered by him (89). After the Reſtoration, he was created A. M. at Oxford, Feb. 14, 1660, and upon ſettling the Queen's houſhold the following year, he was appointed Chamberlain to her Majeſty (90). Upon his father's leaving the kingdom in 1667, he wrote a letter to the Marquis of Ormonde, entreating the continuance of his friendſhip to the family. This letter was apparently wrote by the direction of his father, and begins thus:

'May it pleaſe your Grace.

'Having the opportunity of a ſafe meſſenger, I pre-'ſume to give your Grace the trouble of this paper, 'to ſend you ſome account of the ſad condition of our 'miſerable family; which having conſtantly received 'ſo much countenance from your Grace's protection, 'I flatter myſelf you will now afford (in this extremity) 'a ſhare of your compaſſion, and a continuance of 'your favour, 'till you find cauſe to withdraw it, 'which I am ſure never will be.' He then proceeds to give his Grace the particulars of the proceedings againſt his father, whereof we have given a ſhort extract already, which he concludes in theſe terms. 'Thus your Grace ſees the inevitable ruin and de-'ſtruction of a perſon who has ſpent near thirty years 'in the ſervice of the Crown, for part of which time 'your Grace is able to give him ſome teſtimony. If 'this ſtorm proceeded only from the power and malice 'of a particular faction it were to be ſtruggled with; 'but being from the anger and diſpleaſure of the King, '(the ground whereof he could never yet by any means 'diſcover) makes his misfortunes inſupportable. I 'preſume not to give your Grace an account of any 'further proceedings in Parliament upon this affair, 'knowing you will have it from better hands; but 'one thing I muſt not omit telling your Grace, which 'is, that Lord Berkeley very induſtriouſly ſpreads a-'broad a rumour, that to his knowledge, your Grace 'hath broken all friendſhip with my father for above 'theſe two years, which I am ſure a better authority 'than his can't make me believe. Your Grace hath 'too much generoſity to abandon one whom you 'have ſo long protected, without telling him of it '(91): my brother and myſelf are yet in our employ-'ments (92), but we are told that we ſhall not long 'continue ſo: neither are we to expect much favour, 'having none to reſort to but the Duke [of York], 'who indeed hath all along very graciouſly and vigo-'rouſly appeared in all the concerns of our family; but 'wanting intereſt and credit to ſupport the father, we 'dare not to hope that he can have enough to protect 'the children.

'Thus your Grace ſees how I preſume upon your 'favour, in giving you this impertinent trouble; but 'to torment you more with apologies, would make 'my crime the greater. Therefore I will conclude, 'with begging the continuance of your Grace's pro-'tection to our family, and particularly to,

'May it pleaſe your Grace,

'your Grace's moſt dutiful,

Whitehall, 8 Dec. 1687. 'and moſt obedient ſervant,

'CORNBURY (93).'

His Lordſhip ſo highly reſented his father's ill uſage from the King, that he ſtruck in with the party againſt the Court (94); and upon taking his ſeat in the Houſe of Peers, we find him joining even with Buckingham and Shafteſbury, in a proteſt againſt the vote for returning thanks to his Majeſty for his ſpeech at the opening of the ſeſſion in April 1675 (95). However he ſtill held his poſt of Chamberlain to the Queen (96), and afterwards ſhewing himſelf no leſs zealous againſt the bill of excluſion to diſinherit the Duke of York (97), he was taken into favour and made a Privy-Counſellor, May 26, 1680 (98). Upon King James's acceſſion to the throne (99), the Marquis of Halifax being made Preſident of the Council, was ſucceeded in the Privy-Seal by the Earl of Clarendon, February 18, 1684-5 (100), and being conſtituted Lord Lieutenant of Ireland (101) in the beginning of December (102), he ſet out for that kingdom on the 16th of that month (103); but being too firmly attached to the Proteſtant religion for thoſe times (104), he was diſplaced on the 6th of February, 1686-7 (105); and on the 11th of March following, was removed from the Privy-Seal, which had been put into commiſſion during his abſence (106). About this time he was made High-Steward of the Univerſity of Oxford (107). After the landing of the Prince of Orange, he was one of the Proteſtant Lords, who being ſummoned, waited upon King James at Whitehall November 26, and among other things adviſed his Majeſty to ſend commiſſioners to treat with the Prince (108), and ſoon after went to the Prince near Saliſbury (109); and upon the King's return from Feverſham to Whitehall on the 16th of December, his Lordſhip propoſed ſending his Majeſty to Breda (110). Upon the Revolution, he refuſed to take the oaths to King William, and in 1690, being accuſed of joining with the Bp of Ely and others in a plot againſt the government, he was ſent to the Tower of London; however, after ſome months he was releaſed thence, but confined to his houſe in the country (111). He paſſed his time afterwards in a private manner to his death, which happened Oct. 22, 1709. Beſides the places held by him already mentioned, he was governor of New-England, as alſo F. R. S. He married twice, 1. Theodoſia, third ſurviving daughter of Arthur Lord Capel (beheaded by the rebels in March 1648-9). 2. Flower, daughter and ſole heir to William Backhouſe of Swallowfield, Eſq; and widow of Sir William Backhouſe, Bart. He had no iſſue from this laſt match, and his firſt Lady, whom he married in the year of the Reſtoration, brought him the following year, an only ſon Edward, who returning from his travels in 1682, being then twenty one years of age, was afterwards made maſter of the horſe to Prince George of Denmark, and in November 1688, he went over to the Prince of Orange with almoſt three intire regiments (112), being ſoon followed by Prince George, who ſent him the following year to compliment in his name the embaſſadors from the States-General, on their arrival to congratulate King William and Queen Mary on their acceſſion to the Crown. In the reign of Queen Anne, he was Governor of New-York, and Envoy-Extraordinary to the Court of Hanover (113). He married Katherine, daughter to Henry Lord O-Brian of Ireland, eldeſt ſon and heir of Henry Earl of Thomond, by whom he had iſſue one ſon Edward, and two daughters, Katherine and Theodoſia, the firſt of which died unmarried in 1708, and the other married John Blighe, Eſq. The ſon, Edward, became Baron of Clifton in right of his mother, who ſucceeded to that title upon the deceaſe of her mother, being ſiſter and ſole heir to Charles Duke of Lenox and Richmond

* Peerage, under Hyde, Vol. II. edit. 1741.

HYDE [LAURENCE], ſecond ſon of the Chancellor, was endued by nature with excellent talents, which, notwithſtanding the miſerable ſtate at that time of his father's fortunes, were very carefully improved by a genteel education. He applied himſelf with uncommon aſſiduity to his ſtudies (*a*); ſo that the progreſs he had made therein at the Reſtoration, gave him a juſt claim to the degree of Maſter of Arts, which the univerſity of Oxford conferred on him, as well as on his elder brother, by diploma, February 14, 1660 (*b*). From this beginning he grew afterwards to be equal to the firſt employments in the State, and became both the ornament and ſupport of his family. He ſoon appeared on the public ſtage of affairs, being choſen a member for the juſt mentioned univerſity in the firſt Parliament of King Charles II. which met May 8, 1661 (*c*). In October the ſame year, during the receſs of Parliament, he accompanied the Lord Crofts and Sir Charles Berkeley to Paris, who were ſent to congratulate the King of France on the birth of the Dauphin. Mr Hyde bore no public character, yet he was received at that Court with particular marks of diſtinction (*d*), and ſoon after his return home was appointed Maſter of the Robes to his Majeſty, in whoſe good opinion he daily gained ground by his polite and prudent behaviour (*e*). In 1665, he was one of the four gentlemen commiſſioned by the Houſe of Commons to thank the univerſity for their loyalty to his Majeſty and to King Charles I. (*f*); and when, by a Court intrigue, as mentioned in the preceding article, his father fell under an impeachment by the Houſe of Commons in 1667, he undertook his defence with great modeſty and reſolution (*g*) [*A*]. The misfortunes which oppreſſed the Chancellor had no ill effect upon his ſon, whoſe abilities became daily more conſpicuous; and in 1676, he was appointed Ambaſſador-Extraordinary to John Sobieſki King

(*g*) See remark [*FF*] in the preceding article.

[*A*] *He undertook his father's defence with great modeſty and reſolution.*] When the articles of impeachment were read to the Houſe, he moved in his father's name, that, for the diſpatch of buſineſs, thoſe who knew beſt what their evidence was, would ſingle out any one of the articles, which they thought could be beſt proved; and if they could make proof of that, he would ſubmit to the cenſure due upon them all. Sir Charles Wheeler on this occaſion (in confidence of the aſſurances of others who pretended to have proofs ready) got up, and anſwered for the proof of every one of them; of which he was afterwards much aſhamed, when he found, upon further inquiry, that there was not ſo much as evidence to ſupport any one of them. How far the ſale of Dunkirk may be thought an exception to what is advanced by Mr Carte (1), has been obſerved in it's proper place (2), where alſo the particular perſons combined to effect the Chancellor's ruin have been named. But as he himſelf was clearly perſuaded, that the prime ringleader and his moſt miſchievous enemy in that combination, was the Lord Arlington, we ſhall here produce one remarkable inſtance in confirmation of the Chancellor's ſentiments concerning his Lordſhip. In order to ſet this in a clear light, it will be neceſſary to obſerve, that there had been all along, and ſtill ſubſiſted, what in Court-language is ſtiled a good underſtanding, that is, an exact obſervance of all the external forms of civility and friendſhip between this Lord and the Duke of Ormonde, at the time of the Chancellor's diſgrace. That when the King's purpoſe of taking the ſeal was intimated to him by the Duke of York, he deſired his highneſs would procure him an audience with his Majeſty, which was granted, and a conference had at the Chancellor's apartment at Whitehall, Auguſt 26, 1667, no perſon whatever being preſent beſides the three here mentioned; and therefore, though the reſult of this conference was the King's expreſs declaration of his purpoſe to remove the Chancellor (3), yet that was ſtill a ſecret. Under all that diſtracting anxiety which the dread of being diſappointed always produces in a ſtate of uncertainty, Lord Arlington wrote a letter to the Duke of Ormonde the next day after the conference, but before he knew the reſult of it, wherein he acquaints his Grace, that the King was perſuaded his affairs would be much embarraſſed, and the Lord Chancellor much expoſed in the next Seſſion, and therefore had recommended it to the Duke of York to prepare his Lordſhip to retire; that his Royal Highneſs brought his Majeſty ſuch an anſwer back again, as he believed the thing would be eaſily done. But ſince that anſwer, the Duke and all Lord Clarendon's friends, believing that ſuch a ſtep would tend highly to his prejudice, had been very earneſt with the King to change his mind, and the Lord Chancellor had been with him yeſterday; that he could not really tell what his Majeſty had finally determined, but was afraid he would be prevailed with to change his mind; for in that caſe, the next would prove a very troubleſome Seſſion of Parliament, and thoſe things whereof the government ſtood moſt eſſentially in need, would very hardly be obtained, and even the Chancellor himſelf would ſuffer more than he would have done, if he had retired; concluding his ſenſe of that matter in theſe words: '*I heartily pray* '*it may be otherwiſe, but I fear I ſhall be a true pro-*' *phet, and then not be expoſed to ſo much cenſure as I* '*am for my opinion now.*' This letter was carried with great expedition to Dublin; for on the third of September, the Duke of Ormonde returned an anſwer, wherein he thus expreſſes his ſenſe of that matter, which he wiſhes might be repreſented to his Majeſty. 'I am able, ſays he, to make no judgment on the expedient his Majeſty found to give himſelf eaſe, and 'the Lord Chancellor ſecurity at the next meeting of 'Parliament. If my Lord Chancellor could perſuade 'himſelf, that the demiſſion of his charge would facilitate a good intelligence between the King and his 'ſubjects, and gain thoſe aſſiſtances from them to ſupport the government, which are ſo evidently neceſſary, he is not ſo good a ſervant, or ſo wiſe a man, 'as I hope he will be found, if he would not on his 'own accord lay the Seals at his Majeſty's feet, and 'beſeech him to take them from him; but if there remains any doubt of the ſucceſs of forcing him to retire, or if he is not chargeable with ſome crime, ſuch 'as put into the ballance of many years faithful, painful, and comfortleſs ſervice, will outweigh it, 'I know the King is too good a maſter to ſet him aſide, 'which in effect is to condemn him unheard, upon popular clamours and for uncertain advantages, where-'of the one will always find men of buſineſs, who riſe 'by it, and the other will never be brought in competition with honour and juſtice, which are the only 'laſting ſupports to greatneſs, and can hardly fail, 'ſince they can ſo hardly be found without the aſſiſtance of ſteadineſs and courage.' Lord Arlington received this letter on the thirteenth at night, and read it next day to his Majeſty, who thereupon, ſaid he would write that night to the Lord Lieutenant, and give him an account of what the Lord Clarendon had done to diſpleaſe him, beſides the diſſatisfaction of the world on his account (4). The purport of the King's letter, as far as it regards the Chancellor, has been already related (5).

(5) In remark [*BB*] of the preceding article.

King of Poland, with orders to repair from thence to the Imperial Court, to condole the Emperor Leopold on the death of the Empreſs; but on his arrival at Vienna, finding the Emperor married again, he paſſed privately homeward, and coming to Holland, found there a commiſſion, appointing him one of the Ambaſſadors Mediators at the treaty of Nimeguen (*b*). He had not been long returned from thence when the King ſent him again to Holland, not only to act as a Mediator at Nimeguen, but to treat privately with the Prince of Orange on a general peace; and though ſome diſagreement in the ſentiments of his Majeſty and the Prince of Orange on this laſt ſubject ended that commiſſion, yet when King Charles, finding the French provoked at the terms of the treaty, reſolved on a league with the States-General to force both France and Spain to the terms propoſed, Mr Hyde was employed on that occaſion, and procured the League to be ſigned in 1677. The next year, the Dutch entering into a ſeparate peace with France, he was again ſent to Holland, with propoſals to the Prince of Orange to declare war againſt France; which, though it did not anſwer the King's intent, yet he was ſo ſatisfied with Mr Hyde's good conduct therein, that March 26, 1679 (*i*), he made him one of the Lords of the Treaſury; and upon the Earl of Eſſex (*k*) reſigning his place of Firſt-Commiſſioner at that board, Mr Hyde ſucceeded him on the 19th of November following (*l*). He had in the interim obtained a new ſeat in the Houſe of Commons, as a Burgeſs for Wotton-Baſſet in Wiltſhire, in the new Parliament which was called to meet October 7 this year (*m*). He was now ſworn a Privy-Counſellor, and Mr Sydney Godolphin being brought into the Council along with him, they two joining in confidence with the Earl of Sunderland, formed a triumvirate, which at that juncture had the principal management of the King's affairs. But theſe miniſters having been ſomewhat remiſs in the diſcovery and proſecution of the Popiſh plot, and Mr Hyde in particular, on account of his relation to the Duke of York and his education at Court, having appeared at the head of thoſe who oppoſed the bill of excluſion, the Commons, in 1680, addreſſed the King to remove him, with his brother the Earl of Clarendon, and ſome others, from his council and affairs for ever (*n*). But his Majeſty was ſo far from complying with the requeſt, that on the 23d of April the following year, 1681, he created him Baron of Wotton-Baſſet in Wiltſhire, and Viſcount Hyde of Kennilworth in Warwickſhire; and upon the death of Charles the young Earl of Rocheſter, he ſucceeded to that title November 29, 1682 (*o*). He was made Lord-Preſident of the Council on the 25th of Auguſt (*p*), 1684, and before the end of that year was nominated Lord-Lieutenant of Ireland in the room of the Duke of Ormonde [*B*]; but that appointment determining with the death of his Majeſty, the white

[*B*] *Was nominated to be Lord Lieutenant of Ireland, &c.*] This was intimated to him by the King in Oct. 1684 (6), as is evident from the following letter to the Duke of Ormonde, dated at Whitehall, Oct. 13, 1684.

(6) His Majeſty had acquainted the Duke with it in a letter dated at Newmarket October 19. Carte's Ormonde, Vol. III. No CCXXVIII.

'Having been made acquainted that the King has 'written, or is about to write, to your Grace upon a 'ſubject that concerns yourſelf. Though it be a very 'tender point for me to ſay any thing upon, I had 'rather do that which is decent and natural for a man 'in my circumſtances to do upon ſuch an occaſion, let 'the conſequences of it be what it will to me, than 'ſeem to have been privy to deſigns which I would 'not own. I muſt confeſs that I have ſuſpected 'ſomething of this kind going on almoſt ever ſince you 'went from hence. And you may remember, that 'not long ago, when I gave your Grace an account of 'ſome letters of your's that I laid before the King, 'I hinted to you, that his Majeſty was not ſatisfied 'with ſeveral of the officers of the army, though I 'told you at the ſame time I was not directed to ſay 'ſo much. But I did not believe, that what was then 'in the King's mind would have gone ſo far; and 'upon my word, from the moment I found it did, I 'have done all that was in me to hinder it, and at laſt 'to delay it, and would have contributed any thing I 'could think of to continue it in the ſame hands it is.

'I am not inſenſible how hard a conſtruction it may 'bear in the world, that a man ſo much concerned 'as I am, to ſupport all your intereſts, ſhould appear 'as it were undermining you in one of your moſt emi'nent ſtations. Nor am I ignorant, that if you are 'not well ſatisfied to leave your employment, no man 'who is to ſucceed you will find great comfort to [illegible] 'it, or be able to do the King great ſervice in 'it.

'Theſe two conſiderations will ſerve, I hope, to 'convince your Grace, that I have not been the 'author of this matter; and when you ſhall be 'ſatisfied, that the King had determined it before 'he reſolved who ſhould ſucceed, I will flatter 'myſelf that you will not be diſpleaſed, if you 'muſt have a ſucceſſor, that he ſhould be one, 'that can never have an intereſt different from your 'Grace: but as he muſt ever depend upon your aſſiſtance, protection, and advice, ſo he will make it 'his whole buſineſs to let you ſee, that he is moſt 'faithfully, and entirely,

'Your Grace's moſt humble,

'and obedient ſervant,

'ROCHESTER (7).'

(7) Carte, &c. No. CXXXI.

It muſt be obſerved, that the ſubject of this addreſs was become the more delicate for his Lordſhip to touch upon, as his eldeſt daughter had a few years before been married to his Grace's grandſon [afterwards Duke of Ormonde]. Accordingly, when the Earl wrote upon the twentieth following, for ſome advice relating to his behaviour in the government, he begs to know his Grace's ſentiments concerning the diſpoſal of the young couple, in caſe of their grandfather's removal to England (8). To this the Duke ſent an anſwer on the third of December, to which the Earl replied on the thirteenth of that month, acquainting his Grace, that ſeveral officers in the army were to be removed, the Council changed, and ſome powers of the Lord Lieutenant reſtrained (9). For theſe reaſons the Earl was in no great haſte to go to Ireland, in order to take upon him that government: he ſaw how the Duke of Ormonde's enemies had prevailed againſt him in his abſence (10), and was apprehenſive that he might loſe his own intereſt at Court by the like abſence. On this occaſion, he remembered a ſtory of the Duke of Buckingham, who was deſigned to go as Lord Lieutenant of Ireland, and received the compliments of all the Court upon that account except one old courtier, who he knew was much attached to him, and yet was entirely ſilent upon the ſubject. The Duke aſked how it came to paſs that he alone was ſilent, when all the world were expreſſing their good wiſhes to him? he replied, that his Grace always had his beſt wiſhes, but he differed from others in the ſenſe he had of that preferment. For as he was an old attendant upon Courts, he had never obſerved any man turn his back upon the Court, but

(10) The Duke went to Ireland in Auguſt preceding. See his article.

white ſtaff was again put into the Earl of Rocheſter's hands by King James II. on the 16th of February the ſame year (*q*). July 22, 1685, he was inſtalled Knight of the Garter (*r*). He was likewiſe put into the Eccleſiaſtical Commiſſion (*s*); but afterwards endeavouring to prevent Tyrconnel's being made Lord-Lieutenant of Ireland, he found his intereſt with the King too weak to prevail in that point, and indeed ſcarce ſufficient to ſupport himſelf; for refuſing to comply with the King's requeſt to change his religion [C], he was obliged to reſign his commiſſion of Lord High-Treaſurer (*t*). However, in lieu thereof he had a penſion of 4000 l. a year aſſigned him out of the Poſt-Office (*u*) [D], which ſo much engaged him to the King, that he afterward went over to Holland to take care of his Majeſty's intereſt. At the Revolution, he concurred with the Lords in ſeveral acts during the adminiſtration of the inter-regnum; but in the Convention-Parliament, he warmly inſiſted upon the grand point of hereditary right, and, in conſequence of that principle, preſſed vehemently for a regent [E]. However, the vote declaring

(*t*) Echard, p. 208.

(*u*) Ducheſs of Marlborough's Conduct, § 1. It was granted for his own life and that of his eldeſt ſon Henry, afterwards Earl of Clarendon and Rocheſter. Collins, in Peerage, Vol. II. edit. 1741, p. 304, ſays it was 5000 l.

he preſently caught cold in it. There were likewiſe ſome reſtraints to be put upon the Earl of Rocheſter, which he did not like. For he was not to have the nomination of the loweſt commiſſioned officer in the army, which was to be put under the command of a a Lieutenant-General to be particularly appointed; there were changes alſo to be made both in the civil and military officers, and probably in neither to his mind. It was intended in truth, to make a general alteration in all employments, which it was thought the Duke of Ormonde would not approve, and was therefore improper to be put under his direction. This was the very reaſon aſſigned by the King for his removal. This change, continues Mr Carte, ſeems to be calculated for the advantage of the Roman Catholicks, as appears from a paſſage in his Grace's letter of December 15, 1684, to Lord Arlington, and it was by their intereſt, that the Duke of Ormonde ſeems to have been now removed, as appears from another letter of December 19 following (11).

(11) Carte, Vol. II. p. 540.

[C] *Refuſing to comply with the King's requeſt to change his religion.*] Biſhop Burnet having obſerved, that the Earl's being put into the High-commiſſion Court, which he accepted with no good will, rendered him ſuſpected by thoſe who were no favourers of King James's proceedings, and his oppoſing Tyrconnel's being made Lord-Lieutenant of Ireland, and ſome other ſteps in Council, laid him equally under the jealouſy and ſuſpicion of the Papiſts, proceeds in theſe terms: The latter put his Majeſty upon the experiment of trying his affection for the Church of Rome, who, from the many favours he had beſtowed on him, and the conſtant readineſs he had always ſhewn in his ſervice, thought he had ſufficient grounds to faſten that requeſt upon him. He told the King he was fully ſatisfied about his religion, but on his Majeſty's preſſing that he would hear his prieſts, he then deſired to have ſome of the Engliſh clergy preſent, to which the King conſented, only excepted Tillotſon and Stillingfleet, on which the Earl ſaid, he would take the chaplains in waiting (for the forms of the chaplains were ſtill kept up), which were Dr Patrick and Dr Jane. At the appointed time the prieſts began the taſk, and when they had done, the Earl ſaid, if they had nothing ſtronger to urge, he was ſure he could anſwer all he had heard; and without troubling Patrick and Jane, anſwered them with much heat and ſpirit, not without ſome ſcorn, ſaying, Were theſe the grounds to perſuade men to change their religion? whereupon the King, who was preſent, broke off the conference, charging all that were there, to ſay nothing of it, and ſoon after he [the Earl] loſt his white ſtaff (12).

(12) Burnet's Hiſtory of his own Times, Vol. I. p. 684.

[D] *He loſt the Treaſurer's ſtaff, but had a penſion.*] The following particular is a conſpicuous proof of his Lordſhip's œconomy in this poſt, and therefore well deſerves a place here, eſpecially as we have it from a writer who appears to have good authority for the facts advanced by him, whatever gloſſes he may have put upon thoſe facts, in a piece profeſſedly written in defence of a party. His words are theſe. 'Not long after (13) Miſs Jennings [afterwards Lady Churchill and Ducheſs of Marlborough] was taken into the ſervice of the Princeſs of Denmark, her Highneſs had the misfortune to find that her expences had exceeded her income between ſix and ſeven thouſand pounds, which they had never done before, and was forced to apply to her royal father (14) for that ſum, to enable her to diſcharge her debts, which he readily and chearfully complied with. The next year her highneſs fell into the like difficulty, was forced to make the like application and received the like indulgence: but was ſoon after ſurprized with a viſit from his Majeſty, ſo ſudden and unexpected, that Lady Churchill, and a certain other Lady of her Highneſs's Court, had but juſt time enough to hide themſelves in a cloſet adjoining; from whence they overheard the King charging his daughter with having *ſomebody about her*, for whoſe ſake ſhe plunged herſelf into theſe inconveniencies, and recommending to her a more exact œconomy for the future. To this the Princeſs made no reply but with her tears; and the King being withdrawn, Lady Churchill to pacify her for the preſent, and anſwer ſeveral other obvious ends, quitted the place of her concealment, with the following decent expreſſions in her mouth: *Oh Madam! all this is owing to that old R—— your uncle* (15).'

(13) It ſhould be ſome time after, for Miſs Jennings was in the Princeſs's ſervice when ſhe was married to Colonel Churchill in 1681. See the Duke of Marlborough's article.

(14) This fact is partly confirmed by the Princeſs's letter to Lady Marlborough, printed in the Account of the Conduct of the Ducheſs of M—, &c. p. 87. Lond. 1742, 8vo. where ſhe writes thus, *When we were firſt married we had but 20,000 l. a year* (and it is true, indeed, the King was ſo kind to pay my debts).

[E] *He inſiſted on the point of hereditary right, and preſſed for a regent.*] It is the remark of the laſt cited author in vindication of his Lordſhip's underſtanding, which had been unhandſomely made a jeſt of by the Ducheſs of Marlborough (16). That the Earl's noble defence of his great father when impeached, and conſcientious oppoſition of the *excluſion bill*, however unpopular, were equal proofs of his genius and his virtue; but the ſhrewd light in which he ſtated the Vote of Abdication in the general conference between the Lords and Commons, which left the moſt forward undertakers for our late deliverer without a reply, will for ever render his name venerable (17). In ſupport of this aſſertion, it is obſerved, That the Convention, which upon the Prince of Orange's letters, met on the 22d of Jan. 1688, having on the 28th of the ſame month come to the following reſolutions, viz. 'That 'King James II. having endeavoured to ſubvert the 'conſtitution of the kingdom, by breaking the original 'contract between King and people; and by the advice 'of Jeſuits and other wicked perſons, having violated 'the fundamental laws, and withdrawn himſelf out of 'the kingdom, had abdicated the government, and that 'the throne is thereby vacant:' The Lords concurred with this reſolution with amendments; for inſtead of the word *abdicated*, they put in *deſerted*, and quite left out that *the throne is thereby vacant*. This occaſioned a free conference between the Lords and Commons, and my Lord Rocheſter concluded the debate about the firſt amendment in theſe words. 'The Lords have 'given their reaſons why they firſt altered the word 'abdicated, becauſe it was a word not known in the 'Common-Law, and of doubtful ſignification: therefore it would be well, if the Commons would pleaſe 'to expreſs their own meaning by it. I believe my 'Lords would be induced to agree, that the King hath 'abdicated, that is, renounced the government for 'himſelf, if you mean no farther than that; and if 'you do ſo, why ſhould you not be pleaſed to explain 'yourſelves, that every one may know how the matter 'ſtands; and to preſerve a good correſpondence between the two Houſes in ſuch a juncture and conjunction as this. But if you don't mean any thing 'more by it, than abdicated for himſelf only, though 'their Lordſhips ſhould agree to the uſing of the word 'abdicated; yet this would prove a greater argument 'againſt their agreeing in the other point about *the* 'vacancy of the throne. Therefore we ſhould be glad 'to have you explain yourſelves, what you mean by 'it. Here there was a pauſe——And the Commons 'afterwards proceeding to the ſecond amendment, the 'Lords in the whole courſe of the debate ſhewed the 'great concern they had for the ſucceſſion of the 'Crown: and my Lord Rocheſter made it appear 'that he had that matter at heart as much as any

(15) The other ſide of the queſtion, &c. p. 47, 48. Lond. 1742, 8vo.

(16) See her Conduct, particularly § 1.

(17) The other ſide of the queſtion, &c. p. 95—98.

claring the vacancy of the throne being carried, he acquieſced in the new ſettlement (*w*). But the part he had acted drew on him a coldneſs from King William, and conſequently from Queen Mary, to whom he was ſo nearly allied; who was ſo poſſeſſed againſt him, that notwithſtanding he tried all his friends and intereſt in the Court to be admitted to clear himſelf and to recover her favour, he found her ſo alienated from him, that no perſon was willing to undertake it; inſomuch, that he was apprehenſive a ſtop would be put to his penſion (*x*). In this exigence he addreſſed himſelf to Biſhop Burnet [*F*], by whoſe means his fears were not only diſperſed, but he was received into a high degree of favour and confidence

(*w*) Burnet, Vol. II.

(*x*) Ibid. p. 118, 117.

them, as is evident from what follows. 'In a free 'conference, ſays his Lordſhip, the points in queſtion 'are fully to be debated; and the Lords in order to 'their agreement with the Commons, are to be ſatiſ-'fied what is meant, and how far it may extend.

'You gentlemen that are the managers for the 'Houſe of Commons, it ſeems come with a limited 'commiſſion, and *will not enter into that conſideration*, 'which (as our reaſons expreſs) hath a great weight 'with my Lords, whether this vote of the Commons 'will not make the monarchy of England, which 'has always heretofore been *hereditary*, to become 'elective.

'That the vacancy of the throne will infer ſuch a 'conſequence, to me appears very plain; and I take 'it from the argument that the laſt gentleman [mean-'ing Mr, afterward Lord, Somers] uſed for the word '*vacant*, out of the record of Richard the Second's 'time, that is cited for a precedent for that word. 'Since, as that is the only precedent, ſo it is attended 'with this very conſequence: For it being there de-'clared, that the royal ſeat was *vacant*, immediately 'did follow an election of Henry IV, who was not 'next in the right line. Did not then this hereditary 'monarchy in this inſtance become elective? when 'King Charles II. died, I would fain know, whether 'in our law the throne was vacant: no ſure, the 'next heir was immediately in the throne, and ſo it is 'in all hereditary ſucceſſive governments. Indeed in 'Poland, when the King dies there is a vacancy; 'becauſe there the laws know no certain ſucceſſor. 'So that the difference is plain, that wherever the 'monarchy is hereditary, upon the ceaſing of him in 'poſſeſſion the throne is not vacant; where 'tis elec-'tive, it is vacant.'

[*F*] *He addreſſed himſelf to Biſhop Burnet.*] This fact is produced in favour of the Biſhop by his ſon, who gives the following account of it. 'Some of the 'hardeſt treatment, ſays that author, he [the Biſhop] 'had met with in the two former reigns, had paſſed 'through the hands of the Earl of Rocheſter. No two 'men ever differed more widely in their principles 'both in Church and State, yet the firſt good office 'done that Earl with the King and Queen, after all 'other applications for introduction had failed, effec-'ted their intire reconciliation to him, and the firſt ad-'vantages he reaped from that reconciliation, were 'owing to the ſaid prelate.' In order to confirm and illuſtrate what is thus advanced, the ſame author has given us the copies of two letters, the originals of which he aſſerts to be in his hands. The firſt letter is from Lady Ranelagh to the Biſhop, in theſe terms.

'My Lord,

'Your Lordſhip knows, that by my Lord Roche-'ſter's deſiring me to help him to thank you, for your 'forwardneſs to do him favours with their Majeſties '(out of the ſenſe he had, that he ought to be more 'grateful for them, becauſe he had not at all deſerved 'them from your Lordſhip) he had informed me, that 'you had done him ſuch favours. And when, pur-'ſuant to his deſires, I began to give you humble 'thanks for him (who is a perſon in whom I can be 'very ſenſibly obliged), I told your Lordſhip, I was 'pleaſed in paying this duty, as much upon your ac-'count, as upon his Lordſhip's, as having endeavoured 'to conquer him by weapons fit to be uſed by one of 'your profeſſion and character, and I hoped he 'might be advantaged, as well by being gained by 'you, as by reaping good fruits of your mediations 'with their Majeſties. And now I preſent your Lord-'ſhip, in the incloſed, with what appears to me an evi-'dence, that my hopes of his making ingenuous re-'turns for your generous advances towards a friendſhip 'with him were not groundleſs; ſince he would ſure 'never have pitched upon you to manage an applica-'tion of his about an intereſt, wherein the viſible ſub-'ſiſtence of his family is ſo deeply concerned, if he did 'not firmly believe the reality of your intentions 'towards him, though he have no merits of his to-'wards you, or any thing elſe but your chriſtian be-'ginnings towards him to build that faith upon. Nor 'can he in my poor opinion give a clearer proof of his 'being already overcome by you, than in chuſing you 'to be the perſon, to whom he would in ſuch an inte-'reſt be obliged; ſince he thereby puts himſelf upon 'the peril of being faithfully your's, or a very unthank-'ful man; which I do ſo much aſſure myſelf, he will 'not be, that I humbly beg your Lordſhip to put this 'obligation upon him, to perfect what you have al-'ready begun to do for him of a like nature, and to 'the ſame royal perſon *; who would not, I think, 'act unbecoming herſelf, nor the eminent ſtation God 'hath placed her in, in aſſiſting five innocent children, 'who have the honour to be related to her royal mo-'ther, who did ſtill with great tenderneſs conſider her 'own family, when ſhe was moſt raiſed above it: eſ-'pecially when in aſſiſting them, her Majeſty will need 'only to concern herſelf to preſerve a property made 'theirs by the law of England, which as being a Queen 'of this kingdom, ſhe is obliged to maintain, &c.

* This paſſage ſeems to allude to the Earl's acting in the Eccleſiaſtical Commiſſion, for which his pardon had probably been obtained by the Biſhop. See his Hiſtory of his own Times, Vol. I.

13 July, 1689.' 'K. RANELAGH.'

The incloſed letter here mentioned, was from the Earl, in the following terms.

'My Lord,

'The good offices your Lordſhip has told me you 'endeavoured to do me with the Queen of your own 'accord and generoſity, incline me to be deſirous to be 'obliged to your Lordſhip for the favour of preſenting 'the incloſed petition to her Majeſty Your Lordſhip 'will ſee, by the reading it, the occaſion and the ſub-'ject of it; and I am ſure I need not ſuggeſt any thing 'to your own kind thoughts to add at the delivery of 'it, ſave only this, which I thought not proper to 'touch in the petition, that I have certainly as 'good a title in law to it, as any man has to any thing 'he poſſeſſes; as likewiſe that the penſion is appoint-'ed to be paid out of a part of the revenue, which 'never was deſtined by any act of parliament for any 'public uſe of the government, which I think has 'ſomething of weight and reaſon to diſtinguiſh it from 'thoſe penſions, that are placed on the more public 'branches of the revenue.

'I know not whether the Queen can do me any good 'in this affair, but I will believe her Majeſty cannot 'but wiſh ſhe could. However, I think I ſhould 'have been very wanting to my children, if I had not 'laid this caſe moſt humbly before her Majeſty; leaſt 'at one time or other ſhe herſelf might ſay, I had 'been too negligent in not making application to her; 'which having now done, I leave the reſt with all poſ-'ſible ſubmiſſion to her own judgment, and to the re-'flections that ſome good natured moments may incline 'her to make towards my family. I would ſay a great 'deal to your Lordſhip for my own confidence in ad-'dreſſing this to your Lordſhip, ſome paſſages of my 'life having been ſuch as may very properly give it 'that name; but I think, whatever you would be con-'tent to hear on that ſubject, will be better expreſſed 'by the perſon, who does me the honour to deliver 'this to your Lordſhip, from,

'My Lord,

'Your Lordſhip's moſt obedient,

July 13, 1689. 'humble ſervant,

'ROCHESTER (18).'

(18) Life of Biſhop Burnet, ſubjoined to the 2d volume of the Hiſtory of his own Times, p. 700, 701, 702.

[*G*] *He*

confidence with her Majeſty; and making uſe of the ſame mediation [G] in the behalf of his brother the Earl of Clarendon, in 1690 he obtained his pardon, and on the firſt of March 1691-2 he was taken into the Privy-Council (y). Some time after, the Queen greatly reſenting the Princeſs of Denmark's conduct, in continuing Lady Marlborough in her ſervice, notwithſtanding her Lord's diſgrace, the Earl of Rocheſter, their uncle, heartily intereſted himſelf in endeavouring to procure a reconciliation between the two ſiſters [H]. But the King was never brought thoroughly to confide in him, 'till the

(y) Wood, ubi ſupra.

[G] *He made uſe of the ſame mediation.*] We are obliged to the author quoted in the preceding remark for the following letters, who introduces them with this prefatory account: That 'when the Earl of Clarendon was unhappily engaged in the conſpiracy againſt the government in 1690, and ſome hotter whigs were for the ſevereſt methods, the Biſhop [Burnet] became a hearty and ſucceſsful advocate in his favour, as appears from the two enſuing letters of Lord Rocheſter to the Biſhop.'

'My Lord,

Upon what account ſoever it is, that your Lordſhip is pleaſed to let me hear from you, I take it to be ſome thing of good fortune, whatever ill cauſe there may be in it too. Therefore I humbly thank your Lordſhip for the honour of your's of the 18th from Saliſbury, which was ſent me to this pretty place where I love to be, as much as you do at your palace. And though I cannot do ſo much good to others as your Lordſhip does to all that are near you, yet I do more to myſelf, than I can do any where elſe.

Quid ſentire putas, quid credis amice precari.
Sit mihi quod nunc eſt, etiam minus, ut mihi vivam
Quod ſupereſt ævi.

Forgive this tranſgreſſional rapture, and accept my thanks, which I pay your Lordſhip for your kind letter: for indeed I do take it very kindly, that you were ſo much concerned, as to give me a kind hint of that unſeaſonable diſcourſe, you came to be acquainted with, when you were laſt in London. I will make the beſt uſe of it I can to prevent the like for the future, if I have any credit; and in the mean time, I muſt make uſe of this opportunity to calm and ſoften your reſentments toward this friend of mine, as you call him in the beginning of your letter. I will allow *you*, as a ſervant to the King and Queen, and a ſubject to their crown, to have as great a deteſtation of the contrivance, as you can wiſh; and upon my word I can accompany you in it. But when I conſider you as once you were a concerned friend of this Lord, to have a reſpect for his family, and particularly my father, who loſt not only all the honours and preferments in this world, but even the comforts of it too, for the integrity and uprightneſs of his heart, you muſt forgive me, if I conjure you by all that's ſacred in this generation, in which we live together, by the character that you bear, and by the religion you profeſs, that you don't (as much as in you lies) ſuffer this next heir of my good father's name and honour, to go down with ſorrow to the grave. I would not flatter myſelf, that your Lordſhip could be moved with any fondneſs of mine, to endeavour to bring to paſs what is not fit for a wife and good man to propoſe, that would be to make a very ill uſe of your friendſhip to me; and I had rather be corrected myſelf in my own deſires, than expoſe your Lordſhip on ſuch an account; but I hope that thoſe who are the ſupreme directors in this matter under God, may in their great wiſdom judge, that it may prove as much to their honour and ſafety too, to paſs over this particular, as if they ſhould purſue the ſtricteſt meaſures of juſtice in it. Though I am a brother, if I did not upon the greateſt reflection I can make, think I ſhould be of the ſame opinion, if I were none, I would not preſs this matter upon you; for I cannot but think, that the Queen would do ſomewhat, and would be very glad to avow it too, for the memory of that gentleman ſo long in his grave. It is upon this account I am begging of your Lordſhip to do all that is poſſible to preſerve every part and branch and member of his family, from the leaſt tranſient ſtain of infamy and reproach. And if God was prevailed with by Abraham to ſave a whole city for the ſake of ten righteous men; I hope there may be as charitable an inclination to ſpare the *debris* of our broken family, for the ſake of him who was the raiſer of it.

I aſk your Lordſhip's pardon for being thus importunate, for I have great need of your help, and I hope I ſhall have it from you. Loſſes of many and good friends I have borne, and ſubmitted with patience to the pleaſure of Almighty God, but a calamity of this nature that I now deprecate, has in it ſomething ſo frightful, and on ſome accounts ſo unnatural, that I beg you for God's ſake, from any angry man yourſelf, grow an advocate for me, and for the family on this account.

I am ever, my Lord,

Your Lordſhip's moſt faithful,

New Park, March 21, 1690-91. humble ſervant,

ROCHESTER.'

His Lordſhip having received a very obliging anſwer to this letter, wrote a ſecond time to the Biſhop, as follows:

'My Lord,

I was warm, I confeſs, in the laſt letter I gave your Lordſhip the trouble of, and I thank you for reproving the vehemency of my ſtile in your laſt of the 28th. I am grown cooler, and acknowledge my fault; neither did I commit it with any apprehenſion that your Lordſhip was inexorable, or that it would be ſo much as needful to deſire your aſſiſtance. You may remember, you had ſaid a word to me when you were here, an *attainder*, that I acknowledge ſounded very harſh to me; and when I had reflected a little more upon it, as likewiſe that your Lordſhip did not uſe to ſpeak by chance, and conſequently that you had good grounds for what you ſaid; I own it heated me all over, which made me expreſs my thoughts to you with more tranſport than was fit; and I will ſay no more of them, for fear of running into new exceſſes. What your Lordſhip propoſes for my Lord Clarendon to deſire, is perfectly agreeable to my mind; but I know not, whether it be not a little too early, and that ſuch a petition would be preſented with a better grace, if he were once out of the Tower upon bail, than it would be, while he is under this cloſe confinement. ——— But, as your Lordſhip ſays, the affair of *Mons* muſt for the preſent put a ſtop to every man's private thoughts, for that is a matter of ſuch vaſt importance to the public, that it is but very fit that all particular conſiderations ſhould give way to it, and wait the determination of that great point. ——[In proceeding, he takes notice of Lady Ranelagh's kindneſs to him, and concludes thus] I owe her many obligations. I am ſorry to ſee how little I can return, when there is moſt need of ſerving her *. Among all her favours, one that I ſhall never forget, was her deſire and endeavours not only to renew for me the acquaintance I formerly had with your Lordſhip, but to knit it cloſer into a friendſhip, in which I am always to own your Lordſhip's ready concurrence; and I hope I ſhall not fail as faithfully to perform all the part that belongs to,

* She lay then very dangerouſly ill of a fever.

My Lord,

Your Lordſhip's moſt faithful,

April 2, 1691. and humble ſervant,

ROCHESTER (19)

(19) Ibid. p. 702—705.

[H] *He endeavoured to reconcile the two ſiſters.*] A ſpecimen has been already given of Lady Marlborough's diſpoſition toward his Lordſhip (20). The original cauſe of it is diſcovered by herſelf. H[illegible] Lordſh[illegible]

(20) In remark [D].

the jealouſies he entertained of his principles were removed by Mr Robert Harley afterwards Earl of Oxford (z), through whoſe means he was made Lord-Lieutenant of Ireland in

(z) Boyer's Life of Queen Anne, in the appendix. p. 57. and Burnet, Vol. II. p. 280.

Lordſhip had warmly oppoſed her coming into the Princeſs of Denmark's family. His Lordſhip likewiſe upon her huſband's diſgrace, ſhewed himſelf very deſirous to have her removed thence (21), a behaviour which muſt needs be extremely reſented by her Ladyſhip; and took an opportunity of ſhewing it many years afterwards by an abuſive miſrepreſentation of his Lordſhip's conduct in regard to the ſubject of the preſent remark, his endeavours to reconcile the two royal ſiſters. However, his Lordſhip's memory quickly found an advocate who has done him plenary juſtice in this point. But as the expreſs deſign of that author was to erect an exact counter-battery to that of her Grace, perhaps in the opinion that it was neceſſary to bend the tree as much the contrary way, in order to reduce it to a due rectitude (22), we ſhall endeavour here, to give the true out-line of his Lordſhip's conduct on this occaſion. In this view it will be neceſſary to obſerve, that there had been ſome heart-burnings between theſe royal perſonages, from the time of Queen Mary's acceſſion to the throne, which were much inflamed by the incident of the Princeſs's allowance of 50,000 l. a year ſettled by Parliament in 1690. After the vote had paſſed in the Commons, the Ducheſs tells us ſhe conſulted Lord Rocheſter whether her highneſs ſhould try for more, to which his anſwer was, That he *thought not only that the Princeſs ought to be ſatisfied with* 50,000 *l. but that ſhe ought to have taken it in any way the King and Queen pleaſed.* Her Grace imputes this anſwer to his Lordſhip's making his court at this time to the Queen (23). That he was at that time deſirous to teſtify a particular reſpect to the Queen, has been already ſhewn, as well as his motives thereto, in the two preceding remarks. However, conſidering the intire regard he had for the Princeſs and all her intereſts, it ſeems more probable that this anſwer was the immediate effect of a lively reſentment at the imprudence and unreaſonableneſs of the queſtion, which no doubt was ſharpned too, both by the natural warmth of his temper, and an extreme concern to ſee the minion's preſumption. But the event which ſeparated the two ſiſters, ſo as never to be cloſed, was the viſit made to her Majeſty by the Princeſs, with Lady Marlborough in her retinue, during the time of that Lord's diſgrace at Court. Upon which the Queen the next day wrote to her ſiſter the following letter.

(22) The piece is intituled, The other Side of the Queſtion, &c. printed the ſame year with the Ducheſs's conduct.

(23) Conduct of the Ducheſs of Marlborough, &c. p. 37.

Kenſington, Friday the 5th of February.

'Having ſomething to ſay to you, which I know will not be very pleaſing I chuſe rather to write it firſt, being unwilling to ſurprize you, though I think what I am going to tell you, if you give yourſelf the time to think, that never any body was ſuffered to live at Court in my Lord Marlborough's circumſtances; I need not repeat the cauſe he has given the King to do what he has done, nor his unwillingneſs at all times to come to ſuch extremities, though people do deſerve it.

I hope you do me the juſtice to believe it is as much againſt my will, that I now tell you, that after this, it is very unfit that Lady Marlborough ſhould ſtay with you, ſince that gives her huſband ſo juſt a pretence of being where he ought not.

I think I might have expected you ſhould have ſpoke to me of it, and the King and I both believing it, made us ſtay thus long. But ſeeing you was ſo far from it, that you brought Lady Marlborough hither laſt night, makes us reſolve to put it off no longer, but tell you, ſhe muſt not ſtay; and that I have all the reaſon imaginable to look upon your bringing her, as the ſtrangeſt thing that ever was done. Nor could all my kindneſs for you, (which is ever ready to turn all you do the beſt way) at any other time have hindred me ſhewing it you that moment; but I conſidered your condition, and that made me maſter it ſo far as not to [illegible] it then.

[illegible] I muſt tell you, it was very unkind in a [illegible] would have been very uncivil in an equal, and I [illegible] ſay I have more to claim. Which though [illegible] would make me never exact, yet when I [illegible] you would make of it, I muſt tell you, I [illegible] what is due to me, and expect to have it from [illegible] upon that account I tell you plainly, Lady Marlborough muſt not continue with you in the circumſtances her Lord is.

I know this will be uneaſy to you, and I am ſorry for it, and it is very much ſo to me to ſay all this to you, for I have all the real kindneſs imaginable for you, and as I ever have, ſo I will always do my part to live with you as ſiſters ought. That is, not only like ſo near relations, but like friends. And as ſuch I did think to write to you, for I would have made myſelf believe your kindneſs for her made you at firſt forget *that* you ſhould have for the King and me, and reſolved to put you in mind of it myſelf, neither of us being willing to come to harſher ways.

But the ſight of Lady Marlborough having changed my thoughts, does naturally alter my ſtile. And ſince by that I ſee how little you ſeem to conſider what in common civility you owe us, I have told it you plainly; but withal aſſure you, that let me have never ſo much reaſon to take any thing ill of you, my kindneſs is ſo great, that I can paſs over moſt things, and live with you, as becomes me. And I deſire to do ſo, merely from that motive. For I do love you as my ſiſter, and nothing but yourſelf can make me do otherwiſe, and that is the reaſon I chuſe to write this rather than tell it you, that you may overcome your firſt thoughts; and when you have well conſidered, you will find, that though the thing be hard (which I again aſſure you I am ſorry for), yet it is not unreaſonable, but what has ever been practiſed, and what you yourſelf would do, were you in my place.

I will end this with once more deſiring you to conſider the matter impartially, and take time for it. I do not deſire an anſwer preſently, becauſe I would not have you give a raſh one. I ſhall come to your drawing-room to-morrow before you play, becauſe you know why I cannot make one: at ſome other time we ſhall reaſon the buſineſs calmly; which I will willingly do, or any thing elſe that may ſhew, it ſhall never be my fault, if we do not live kindly together: nor will I ever be other by choice, but,

Your truly loving,

and affectionate ſiſter,

M. B. (24).' (24) Ibid. p. 44, & ſeq.

To this letter the Princeſs returned the following anſwer.

'Your Majeſty was in the right to think your letter would be very ſurprizing to me. For you muſt needs be ſenſible enough of the kindneſs I have for Lady Marlborough, to know that a command from you to part with her, muſt be the greateſt mortification in the world to me, and indeed of ſuch a nature, as I might well have hoped your kindneſs to me would have always prevented. I am ſatisfied ſhe cannot have been guilty of any fault to you. And it would be extreamly to her advantage, if I could here repeat every word ſhe had ſaid to me of you in her whole life. I confeſs it is no ſmall addition to my trouble, to find the want of your Majeſty's kindneſs to me upon this occaſion; ſince I am ſure I have always endeavoured to preſerve it by all the actions of my life.

Your care of my preſent condition is extremely obliging, and if you would be pleaſed to add to it ſo far, as upon my account to re-call your ſevere command (as I muſt beg leave to call it in a matter ſo tender to me, and ſo little reaſonable as I think, to be impoſed upon me, that you would ſcarce require it from the meaneſt of your ſubjects) I ſhould ever acknowledge it as a very agreeable mark of your kindneſs to me; and I muſt as freely own, that as I think this proceeding can be for no other intent than to give me a very ſenſible mortification; ſo there is no miſery that I cannot readily reſolve to ſuffer, rather than the thoughts of parting with her. If after all this that I have ſaid, I muſt ſtill find myſelf ſo unhappy as to be farther preſſed in this matter; yet your Majeſty may be aſſured, that as my paſt actions have given the greateſt teſtimony of my reſpect both for the King and you, ſo it ſhall always be my endeavour, wherever I am,

in 1700*. He was poſſeſſed of that important poſt † and of the favour of Queen Anne on her acceſſion to the throne; but being ordered to his government of Ireland, he declined it,

* He went over to Ireland that year, but made a ſhort ſtay. Burnet, p. 291.

† King William, ſome weeks before his death, had ſent to diſmiſs him, but it was not executed. Ibid. p. 343.

am, to preſerve it carefully for the time to come, as becomes,

Your Majeſty's

very affectionate ſiſter,

From the Cockpit, Feb. 6, 1692 (25). and ſervant,

ANNE.

(25) This letter is alſo given by the Ducheſs, who likewiſe obſerves that the viſit was made about three weeks after her Lord's removal; whence that diſgrace muſt have happened about the middle of January, 1692, a circumſtance which the reader is deſired to ſupply in the Duke's article, in Vol. II. p. 1339.

Lord Rocheſter was pitched upon as the propereſt perſon to carry this inflaming letter to the Queen, but he declined the office, and therein gave a moſt conſpicuous proof of his affectionate regard to both his nieces, and of his ſincere deſire to ſee them reconciled, nothing being more notorious than that this addreſs was dictated by no healing ſpirit. Accordingly it was ſoon followed by another, declaring the Princeſs's reſolution to remove herſelf from the Cockpit, in order to avoid complying with the Queen's command. The letter was as follows.

'I am very ſorry to find that all I have ſaid myſelf, 'and my Lord Rocheſter for me, has not had effect 'enough to keep your Majeſty from perſiſting in a re'ſolution, which you are ſatisfied muſt be ſo great a 'mortification to me, as to avoid it, I ſhall be obliged 'to retire; and deprive myſelf of the ſatisfaction of 'living, where I might have frequent opportunities of 'aſſuring you of that duty and reſpect, which I always 'have been, and ſhall be deſirous to pay you upon all 'occaſions.

'My only conſolation in this extremity is, that 'not having done any thing in all my life to deſerve 'your unkindneſs, I hope I ſhall not be long under 'the neceſſity of abſenting myſelf from you: the 'thought of which is ſo uneaſy to me, that I find my'ſelf too much indiſpoſed to give your Majeſty any 'further trouble at this time.'

We ſee here the Princeſs expreſsly acknowledging the good offices of her uncle in her behalf to the Queen; and what follows, will ſhew that he perſevered in thoſe good offices. The Princeſs being delivered, at Sion-houſe, of a child which died ſoon after the birth; and ſignifying the ſame in a reſpectful manner to the Queen, her Majeſty was prevailed with by his Lordſhip in return, to ſend word that ſhe would go that afternoon and ſee the Princeſs at Sion, and ſhe was there very ſoon after the notice arrived. And though no good effect followed from this viſit, wherein her Majeſty again inſiſted on her firſt demand; yet ſurely it was an advance on the Queen's ſide, and conſequently a proof of the uncle's good intentions to her ſiſter. But the ſincerity of theſe intentions ſeem to have been ſuſpected, for upon the Princeſs's recovery, when this viſit was to be returned, ſhe employed Biſhop Stillingfleet inſtead of Lord Rocheſter to carry the letter.

Her letter of annunciation.

To the Queen.

Sion, the 20th of May.

I have now, God be thanked, recovered my ſtrength well enough to go abroad, and though my duty and inclination would both lead me to wait upon your Majeſty, as ſoon as I am able to do it, yet I have of late had the misfortune of being ſo much under your Majeſty's diſpleaſure, as to apprehend there may be hard conſtructions made, upon any thing I either do or not do with the moſt reſpectful intentions; and I am in doubt, whether the ſame arguments that have prevailed with your Majeſty to forbid people from ſhewing their uſual reſpects to me (26), may not be carried ſo much further, as not to permit me to pay my duty to you. That I acknowledge would be a great increaſe of affliction to me; and nothing but your Majeſty's own command ſhall ever willingly make me ſubmit to it. For whatever reaſon I may think in my own mind I have to complain of being hardly uſed, yet I will ſtrive to hide it as much as poſſible; and though I will not pretend to live at the *Cockpit*, unleſs you would be ſo kind as to make it eaſy to me, yet wherever I am, I will endeavour always to give the conſtant marks of duty and reſpect, which I have in my heart for your Majeſty, as becomes,

(26) All company had been forbid waiting on the Princeſs, and her Guards had been alſo taken away. Ducheſs of Marlborough's Conduct, p. 75.

Your Majeſty's

very affectionate ſiſter

and ſervant,

ANNE.

The anſwer returned by the Queen, manifeſts the higheſt reſentment in theſe terms.

To the Princeſs.

'I have received your's by the Biſhop of Worceſter, 'and have very little to ſay to it, ſince you cannot but 'know, that as I never uſed compliments, ſo now they 'will not ſerve.

''Tis none of my fault, we live at this diſtance, and 'I have endeavoured to ſhew my willingneſs to do 'otherwiſe, and I will do no more. Don't give your'ſelf any unneceſſary trouble: for be aſſured it is not 'words can make us live together as we ought. You 'know what I required of you, and I now tell you, if 'you doubted it before, that I cannot change my mind, 'but expect to be complied with, or you muſt not 'wonder if I doubt of your kindneſs. You can give 'me no other marks that will ſatisfy me. Nor can I 'put any other conſtruction upon your actions, than 'what all the world muſt do, that ſees them. Theſe 'things don't hinder me being very glad to hear you 'are ſo well, and wiſhing you may continue ſo; 'and that you may yet, while 'tis in your power, 'oblige me to be,

'Your affectionate ſiſter,

'MARIE R.'

This was indeed rigid and arbitrary (27), and the effect which it produced was natural, a fixed reſolution in the Princeſs not to ſubmit to it. No doubt there was faults on both ſides as is uſual in ſuch differences; and if the Queen was governed therein by her conſort, the Princeſs was not leſs ſpirited up by her favourite, who, as we have ſeen, having got the ſole poſſeſſion, had prevailed upon her to exclude her uncle from her councils, a fact which is far from being denied by the Ducheſs, and was much reſented by the Earl, who did not ſpare to expreſs it (if indeed he did write (28)) to the Princeſs in the following terms.

(27) That 'tis ſaid was the Princeſs's expreſſion concerning it. Ibid. § 1. where both the preceding letters may be ſeen, as alſo the following.

(28) How came her Grace by this letter? is a query put into *The other Side of the Queſtion*, p. 114.

'Madam,

'I am afraid I may be guilty of too great preſumption in giving your Royal Highneſs the trouble of a 'letter; but I do it with ſo good intentions, that I 'hope you can't be angry with me for it. And now 'that one is unhappily reſtrained from the honour of 'waiting upon your Royal Highneſs, there is no other 'way but this to make an offer of my humble duty to 'you. It is a very uncomfortable reflection for me to 'make, that being ſo really concerned as I am ſure I 'am for your Royal Highneſs's happineſs, I ſhould 'be ſo unfortunate as to be wholly uſeleſs to you at a 'time, when your Royal Highneſs cannot but think 'yourſelf, that you have uſe of every body, that are 'truly and faithfully your ſervants. And however, I 'have been ſo miſtaken in my judgment, as to have 'never offered any thing to your Highneſs worth 'your approbation; I do, with all humility, ſubmit 'my poor opinion to that of your Royal Highneſs, but 'beg you to believe it is not flattery to any body elſe, 'nor any other conſideration that has made me be of 'the mind I was, but only the want of a better under'ſtanding, to be able to think of ſomething more for 'your ſervice; and being thus incapable of m[illegible] to 'propoſe any thing that is agreeable to you, I ta[illegible] all 'occaſion humbly to offer to your Royal High[illegible] all 'the little ſervice, you may judge me fit to [illegible]em 'ployed in, and moſt earneſtly to beſeech you t[illegible] be'lieve, that if I can be of any uſe in the world t[illegible] your 'Royal Highneſs, there is nothing that I wou[illegible] en-

(*a a*) Burnet, Vol. II. p. 340, 341. who tells us, he was uneasy at the preference the Duke of Marlborough had in the Queen's confidence.

* He likewise made a speech in Parliament that year, to shew [illegible] the Church was in [illegible] Boyer, p. 2[illegible].

it, and thereupon was difmiffed from all his employments (*a a*) [*I*]. From that time he put himfelf at the head of thofe who were called the High-Church party, and, among other inftances of his zeal for that caufe, ftrenuoufly fupported the occafional conformity-bill; he alfo propofed to bring over the Princefs Sophia in 1705*, and oppofed the Regency-bill that year, and the Union-bill in 1707; which gave his oppofers a fair opportunity to keep him from Court, 'till the fame perfon who reconciled him to King William, did him the like good office with the Queen, upon the change of the miniftry in 1710, when he was made Lord-Prefident of the Council; and it was faid that her Majefty defigned him again for the poft of Lord-Treafurer, if his death had not prevented it (*b b*). He died fuddenly May 2, 1711, and was interred in Weftminfter-abbey (*c c*). His character, as is drawn by Bifhop Burnet, may be feen below [*K*]. His Lordfhip married Henrietta, the fifth daughter of Richard

(*b b*) Boyer, in the appendix, p. 57.

(*c c*) Collins's Peerage, edit. 1741, under Hyde.

'deavour with greater fatisfaction to myfelf, than at 'this time to exprefs the great concern I prefume to fay 'I have for your Royal Highnefs, by any thing that 'I can do for your fervice. And if any thing I have 'taken the confidence to fay be worth your taking 'notice of, the leaft fignification of your pleafure will 'bring me at all times to receive the honour of your 'commands, and the duty and zeal and paffion I have 'for your true intereft and profperity, will, I hope, 'make fome amends for the want of a better judgment 'and capacity, which I acknowledge every body has 'a greater fhare of than,

'Madam,

'Your Royal Highnefs's

'moft obedient, and moft

'dutiful fervant,

'ROCHESTER.'

To this his Lordfhip received the following anfwer from the Princefs.

To the Earl of Rochefter.

'I give you many thanks for the compliments and 'expreffions of fervice, which you make me in 'your letter; which I fhould be much better pleafed 'with than I am, if I had any reafon to think them 'fincere.

'It is a great mortification to me, to find that I 'fhall continue under the misfortune of the Queen's 'difpleafure. I had hopes, in time, the occafion of it 'would have appeared as little reafonable to the 'Queen, as it has always done to me. And if you 'would have perfuaded me of the fincerity of your in-'tentions, as you feem to defire, you muft give me 'leave to fay, I cannot think it very hard for you to 'convice me of it by the effects. And 'till then I 'muft beg leave to be excufed, if I am apt to think 'this great mortification which has been given me, 'cannot have proceeded from the Queen's own tem-'per; who I am perfuaded, is both more juft in her-'felf than that comes to, as well as more kind to

'Your very affectionate friend,

'ANNE.'

The Earl had the point of a reconciliation too much at heart, to fuffer himfelf to be moved from it by the fevere reflections thrown upon him in this letter. He was very fenfible from what quiver all thofe fhafts were taken, and therefore without laying them to the charge of his niece, who he knew was endued with as much native goodnefs as ever fell to the fhare of a woman, proceeded to make yet another attempt, in order if poffible to heal a breach, in which the reputation of the family was fo deeply concerned. In this view, laying hold of the laft words in his niece's letter, he intimated to fome of her family, that *if her Highnefs would difcharge Lady Marlborough, he was perfuaded the Queen would in fome time be prevailed upon to let her take that favourite again.* The Princefs in compliance herewith, fent her uncle's propofal to the Queen, affuring her, that *from what his Lordfhip had faid, fhe had been flattering herfelf, fhe had miftaken her Majefty's laft words; and that if fhe might hope his Lordfhip had any ground for his opinion, fhe fhould be very ready to give her Majefty any fatisfaction of that fort.* But we are told, that upon the delivery of this meffage, the Queen fell into a great paffion and faid, *her fifter had not miftaken her, for fhe never would fee her upon any other terms, than parting with Lady Marlborough, not for a time, but for ever*; adding, *that fhe was a Queen, and would be obeyed* (29). So peremptory an anfwer put an end to all further thoughts of a mediation; wherein however, notwithftanding his Lordfhip's ill fuccefs, yet his fincerity and real affection for both the royal fifters, after what has been faid, will I fuppofe be hardly called in queftion.

(29) Ibid.

[*I*] *He was removed from all his employments.*] The laft remark, difcovered his Lordfhip's quarrel with the Marlborough family, and likewife the original caufe thereof, viz. a rivalfhip in the affections of his niece. This difgrace was the effect of that rivalfhip, the weight of which his Lordfhip was made to feel on all occafions as long as it prevailed. Another remarkable inftance of it, befides that mentioned above, was the refufing to make the Lady Dalkeith, his daughter, a lady of the bed-chamber, on the death of Lady Charlotte Beverwaert. Thofe places were in the difpofal of Lady Marlborough, who had been made groom of the ftole to the Queen upon her acceffion to the Throne. His Lordfhip therefore, out of that tender regard which he always fhewed for his children, applied on this occafion to that Lady; who having obferved, that the letter was (as fhe archly expreffes it) a *very fine piece*, proceeds to exprefs the greatnefs of her furprize; thanks God for her own pronenefs to forgive her enemies; renews her charge againft his Lordfhip of having perfecuted her without a caufe; declares that want of bread could not have induced her to afk a favour of one fhe had injured; and having flid in by way of reflection— *But furely his Lordfhip had fomething very uncommon in his temper*, concludes thus: 'As to my Lord Rochefter's requeft in behalf of my Lady Dalkeith it 'could not be granted; becaufe in reality there was 'no vacancy. The Queen had refolved to have no 'more than ten Ladies, and the number was complete. 'There had indeed been eleven for fome fhort time, 'but this had been occafioned by the Duchefs of Somer-'fet's declining to accept one of thefe places, when 'it was offered her at the fettling of the Queen's fa-'mily, and foon after defiring to have it, when they 'were all filled. As fhe was the firft Proteftant Duchefs 'of England, I perfuaded the Queen to be pleafed in 'compliment to her Grace, to have eleven ladies for 'the little time Lady Charlotte Beverwaert had to 'live, who was then irrecoverably ill; fo that when 'her Majefty complied, it was, with full purpofe, 'that the number of her Ladies fhould be only 'ten after Lady Charlotte's death (30).' To this account it is replied on his Lordfhip's behalf in thefe terms. 'Thus it appears, the Queen could recede 'from her fyftem at your Grace's perfuafion in favour 'of the firft Duchefs, but not in favour of her firft 'coufin without it. But this, Madam, is only your 'way of telling your ftory. According to others, 'Lady Dalkeith was rejected for fear the Marlborough 'family fhould be oppofed in the bed-chamber, as well 'as in the cabinet, by that of the Queen (31). 'The only general ufe that can be made of this detail, is to remind the reader of thefe two things, viz. That the Duchefs of Somerfet's hufband had given his vote in Council, agreeable to the projects of Lord Marlborough, and Lady Dalkeith's father had oppofed them (32). We fhall conclude this remark with obferving that the oppofition continued as long as Lord Rochefter lived, and thereby he acquired the title, as his father had done, of being The Guardian of the Church (33).

(31) The other Side, &c. p. 180.

(32) His Lordfhip propofed to profecute the war not by land but by fea, as our proper element. See the fubftance of his fpeech in the laft cited piece, from p. 171 to p. 174.

(33) See a letter of the Duke's, dated Grametz, Octob. 1706, and another of the Duchefs, in her Account, ubi fupra, as alfo in the other Side of The Queftion, p. 273, & feq. and p. 279, & feq.

[*K*] *His character by Bifhop Burnet.*] This is as follows, that he was a man of great parts, and of a good head, but fpoke not gracefully. He was thought the fmootheft man in the Court, and during all the difpute concerning

Richard Boyle Earl of Burlington and Cork, who dying April 12, 1687, was interred also in Westminster-abbey, having brought one son, Henry, who succeeded to the honour and estate, and four daughters (*dd*), of whom we shall give an account in remark [*L*].

(*dd*) Ibid.

cerning his father, made his court so dextrously, that no resentment ever appeared on that head. When he came to business and rose to high posts he grew violent, but was thought an incorrupt man. He had high notions of government, and thought it must be maintained with great severity, he delivered up his own sentiments to his party that he might lead them: he passed for a sincere man, and seemed to have too much heat to be false (34). Another author observes, that he was not only of the most refined judgment and capacity as a statesman, but otherways of great abilities and exemplary morals, which rendered him acceptable even to those of a contrary interest (35) [as for instance, to Bishop Burnet].

(34) History of *his* own Times, Vol. I. p. 258.

(35) Collins, in the Peerage, under his article. edit. 1741.

[*L*] *An account of his children.*] The names of his daughters were *Anne*, Henrietta, Mary, and Katharine. Anne the eldest, born in 1665, was married at seventeen years of age to James Earl of Offory, grandson and heir to the Duke of Ormond. Her marriage being proposed by the Duke of York, was readily consented to. The young lady's fortune was 15000 l. she was very pretty and agreeable in her person, had abundance of vivacity, a great deal of ready wit, and an excellent temper, and the marriage was solemnized on Thursday July 15, 1682, in Burlington-house chapel (36). The young couple were taken by the Duke of Ormond soon after to Ireland, where in the beginning of November 1684, the Countess began to be troubled with vapours and fainting fits, however she was not thought to be with child, but it proved so, and she died of a miscarriage, in January 1684, at Dublin, and was buried Jan. 27, at Christ-Church in that city. Some fancies might probably contribute to her miscarriage, for she was very superstitious, as to thirteen people sitting at table. A little before her death, Dr Hough [afterwards Bishop of Worcester] was going to sit down, when observing that he made the thirteenth, he stopt short, and declined taking his place †. She immediately guessed the reason, and said, *Sit down, Doctor, 'tis now too late, 'tis the same thing if you stay or go away.* The Doctor believed it affected her; as likewise another passage, which being related in a different manner, it may'nt be improper here to correct the mistake of that relation. About the time of the death of Mary Countess of Kildare, who was daughter to Katharine Baroness of Clifton, married first to Donald Lord O-Brian, and afterwards to Sir Joseph Williamson; the Countess of Offory, then not above seventeen, dreamt, that this lady came and knocked at the door; and that calling to her servants to see who was there, and no-body answering, she went to the door herself, and opening it, saw a lady with her face muffled up in a hood, who drawing it aside, she perceived it was the Lady Kildare——Upon this she cried, *Sister, is it you? What makes you come in this manner?* don't be frighted, replied she, for I come on a very serious affair, and it is to tell you, that you will die very soon, such was her dream; and this is all the story, as the young lady related it herself to the Bishop of Worcester. What is added in the history of apparitions is all a fiction (37). In that history, the story is told from Aubrey's Miscellanies in the following terms: 'Two persons, ladies of quality, both not long since deceased, were intimate acquaintance, and loved each other intirely. It happened that one of them falling sick of the small-pox, desired mightily to see the other, who refused to come for fear of catching the distemper. The afflicted lady at last dies, and had not been buried very long before she appeared at the other's house in the dress of a widow, and asks for her friend, who being then at cards, sends down her woman to know her business, but was told by the other, she must impart it to none but her Lady. She hearing this answer, bid her woman have her into a room, and desire her to stay 'till the game was over, when she would wait on her. The game being done, down stairs she came to the apparition to know her business, *Madam*, says the ghost, turning upon her, with her face full of the small-pox, *You know very well that you and I loved intirely, and your not coming to see me, I took so ill at your hands, that I could not rest, 'till I had seen you; and now I am come to tell you, that you have not long to live, therefore prepare to die; and when you are at a visit, and make the thirteenth person, then remember my words;* and so the apparition vanished. To conclude, she was at a visit, where she made the thirteenth, and being afterwards asked by the deceased's brother, whether his sister did not appear to her, she made him no answer, but fell ill, and died in a little time after. The gentleman that told this story says, that there is scarcely a lady of quality but who knows it to be true (38).' His Lordship's second daughter married James Earl of Dalkeith, eldest son of James Duke of Monmouth. This lady has been already mentioned (39), The third daughter Mary, was married Feb. 17, 1703, to Francis Seymour Conway, afterwards Lord Conway. Katharine, the fourth, was Lady of the Bed-chamber to Queen Anne, and died unmarried in 1737. The Earl's son and heir, on the death of his cousin Edward Earl of Clarendon in 1723, became Earl of Clarendon and Rochester; he married in the life-time of his father, Jane, daughter of Sir William Levison Gower, and aunt to the present Earl Gower. Her Ladyship was appointed of the Bed-chamber to Queen Anne, soon after her Majesty's accession to the throne; the Duchess of Marlborough, who misses no opportunity of shewing her wit upon the Rochester *family*, tells us, 'that she thought it reasonable to grant this favour, for in my life says her Grace, I never saw any mortal have such a passion for any thing, as she had to be in this post. While the thing was depending, she had so much concern upon her, that she never spoke to me without blushing; and after it was granted, she made me more expressions than ever I had from any body on any occasion ‖. In what manner this lady treated me afterwards, is not worth while to mention (40).' Hereupon, the author of The other side of the Question, makes the following remark. An excellent picture of artless innocent feminine ambition, the effect of which, the simply grateful letter you expose from her Ladyship, cannot lessen, nor the reflection so haughtily insinuated at the end of it efface (41). She died May 24, 1725. His Lordship had issue by her one son Henry; and five daughters, Anne, Henrietta, Jane, Charlotte, and Katharine, of whom the two first were deceased in 1741. The 3d, Jane, married William Capel Earl of Essex, being his Lordship's first wife, she died January 3, 1723-4, having brought her husband four daughters. The Earl of Clarendon's fourth daughter, Charlotte, died at her father's house in St James's square unmarried, March 17, 1739-40. Katharine, married to the Duke of Queensberry, is still living *; and, 'tis said, has in her possession a manuscript of her great grand father the Chancellor, containing an account of his seven years administration, from the King's return to his own banishment. The Earl of Clarendon and Rochester's only son, Henry Viscount Cornbury, was born November 26, 1710, was some time a Member of Parliament for the University of Oxford (42), and was called by writ to the House of Peers, on Jan. 22, 1750, by the title of Baron Hyde of Hindon in Wiltshire; but going soon after to reside in France, was killed there by a fall from his horse, May 2, 1753, and his father dying November 10 the same year (43), the titles became extinct, and the son bequeathed the family estate, which had been settled upon him by his father, to Lady Charlotte, daughter to the abovesaid Earl of Essex ‡.

(43) Ibid. for November.

‡ This lady being married to the Hon. Thomas Villiers of the Grove in Hertfordshire, that gentleman, June 3, 1756, was created a peer, by the stile and title of Baron Hyde of Hindon in Wiltshire, to descend to the heirs male begotten by him of the body of his wife the s[illegible] Lady Charlotte, and, in default of such issue, to go to her Ladyship and the heirs male of her body.

Lady Hyde's letter just mentioned was as follows.

Madam, Monday morning.

I have been three times in the drawing-room in hopes to meet your Ladyship there, that I might myself tell you, how extreme sensible I am of your Ladyship's favour to me. You will add another, if you will forgive my impatience that cannot stay longer, without thanking you myself, though Mr Lowther hath undertaken for me; I am very happy in my request's being granted, and your Ladyship may depend any command of your's shall be obeyed. For I will not, without your leave, brag even to my Lady Harriot, who did me the favour to speak to your Ladyship. I am not good at saying much, but am sure it will be a pleasure to me, to shew you in every thing I can, how faithfully and sincerely,

I am,

Your most humble servant,

J. Hyde (44).

(44) Duchess of Marlborough's Conduct, p. 13[illegible] 134.

J.

JACKSON [THOMAS], a very learned Engliſh Divine in the XVIIth century, was born December 21, 1579, at Witton upon the river Were in the biſhopric of Durham; being deſcended from a very worthy family in thoſe parts (*a*). His parents deſigned him at firſt to be a merchant at Newcaſtle, where many of his near friends and relations lived in great wealth and proſperity; but that temptation could not divert him from his natural inclination to learning. Therefore, at the inſtance of Ralph Lord Evre, he was ſent to the univerſity of Oxford [*A*], and admitted, in Midſummer term 1595, into Queen's-college; from whence, March 24, 1596, he was elected Scholar of Corpus-Chriſti-college: and though he had no notice of the vacancy of the place, 'till the day before the election, yet he anſwered with ſo much readineſs and applauſe, that he gained the admiration as well as the ſuffrages of the electors, and was choſen with full conſent, notwithſtanding great intereſt was made for another perſon (*b*). The 23d of July, 1599, he took the degree of Bachelor of Arts; and that of Maſter July 9, 1603 (*c*). And on the 10th of May 1606, was choſen Probationer-Fellow of his college (*d*), having then laid an extraordinary foundation of learning [*B*]. But he made all his knowledge ſubſervient to the ſtudy of Divinity; which he applied himſelf to with great vigour and ſucceſs. As an inſtance of which, he read a Divinity lecture in his college every Sunday morning, and another on a week day at Pembroke-college (then new founded), at the inſtance of the Maſter and Fellows there. Being alſo choſen Vice-Preſident of his Houſe for many years together; by virtue of that office, he moderated at the Divinity-diſputations, not only with great depth of learning, but alſo with agreeable courteſy, gentleneſs, and humility (*e*). June 25, 1610, he took the degree of Bachelor in Divinity, and June 26, 1622, that of Doctor (*f*). In 1624 he quitted the college, being preferred to a living in his own native country [*C*]. From whence, ſhortly after, he was removed to the vicarage of St Nicolas in Newcaſtle, a very populous town, furniſhed with multitudes of men, and no ſmall variety of opinions (*g*). In that large cure, he behaved in a very ſtudious, humble, courteous, and charitable manner (*h*) [*D*]; and was much followed and admired for his excellent way of preaching. He was then a rigid Calviniſt; but Dr Richard Neile, Biſhop of Durham, taking him for his Chaplain, convinced him of the errors of Abſolute Predeſtination. And through that Biſhop's, jointly with Dr Laud's, intereſt, he was elected Preſident of Corpus-Chriſti-college (*i*); which office he was ſworn into February 17, 1630 (*k*). In that ſtation he acted with the utmoſt wiſdom, modeſty, candour, integrity, and faithfulneſs (*l*). Upon accepting of it, having reſigned his living in Newcaſtle, he was made Chaplain in Ordinary to his Majeſty, and collated to the Vicarage of Witney [*E*], and to a Prebend of Wincheſter (*m*), which

[*A*] *At the inſtance of Ralph Lord Evre, he was ſent to the Univerſity of Oxford.*] This he thankfully acknowledges, in the dedication of his two firſt books of Commentaries on the Creed to that noble Lord, in the following words. 'That being ingaged unto a 'more gainfull, but not ſo good a courſe of life, and 'well-nigh rooted in another ſoil; I was by your 'Lordſhip's favourable *advice* and *countenance* tranſplanted to this famous nurſery of good learning.'

[*B*] *Having then laid an extraordinary foundation of learning.*] For, he had carefully grounded himſelf in Arithmetic, Grammar, Philology, Geometry, Rhetoric, Logic, Philoſophy, the Oriental languages, Hiſtory, &c. with an inſight into Heraldry, and Hieroglyphics (1).

(1) Wood, Athen. as above.

[*C*] *Being preferred to a living in his own native country.*] Edmund Vaughan, the author of his life, ſays, That the living was in the donation of the college (2); and Ant. Wood, that 'he left his college 'for a benefice in his own country, which the Preſi-'dent and Society thereof had then lately conferred on 'him (3).' But it doth not appear that Corpus-Chriſti-college have any livings in that dioceſe.

(2) P. 6.

(3) Athen. ut ſupra.

[*D*] *And charitable manner.*] When he went out, he uſually gave what money he had about him to the poor; who at length flocked ſo about him, that his ſervant took care he ſhould not have too much in his pocket (4).

(4) Life, &c. p. 6.

[*E*] *And collated to the vicarage of Witney.*] The author of his life, juſt now mentioned, informs us, 'That he *gave* his vicarage in Newcaſtle to Mr Alvye 'of Trinity-college, upon no other relation, but out 'of the good opinion which he conceived of his merits. 'The vicarage of Witney, after he had been at much 'pains, and expence, to clear the title of the rectory 'to all ſucceeding miniſters, when he had made it a 'portion fitting either to give or keep, he freely *beſtowed* it upon Mr Thomas White, then Proctor of 'the

which laſt he was inſtalled into June 18, 1635 (n). He was alſo promoted January 17, 1638, to the Deanery of Peterburgh, in the room of Dr Towers, advanced to the epiſcopal ſee (o). But he did not enjoy this dignity above a year and three quarters: for he died September 21, 1640, and was buried in the inner chapel of Corpus-Chriſti-college (p). His works are very numerous, and entirely theological [F]. With regard to his character, he was a man of a blameleſs life, ſtudious, humble, courteous, and very charitable; pious, and exemplary both in his private and public converſation: ſo that he was reſpected and beloved by the moſt conſiderable perſons in the nation. And tho' he was reviled as an Arminian, by the Puritans or rigid Calviniſts [G], the plagues of his time, yet the greateſt eſteem was no more than his due, even on account of his learning. For he was well furniſhed with all the learned languages, arts, and ſciences; eſpecially metaphyſics, which he conſidered as a neceſſary hand-maid to Divinity; profoundly read in the Fathers, and of a wonderful and deep judgment (q).

' the Univerſity, late chaplain of his college.' But by thoſe inaccurate expreſſions, he *gave*, and *beſtowed*, the life-writer muſt mean, that he procured thoſe two livings for them through his intereſt; for neither of them were in his own gift.

[F] *His works are very numerous, and entirely Theological.*] The chief of them are a *Commentary on the Apoſtles Creed*, in twelve books; printed in the following order. The firſt book was publiſhed at London in 1613, 4to. The ſecond in 1614, 4to. The third in 1614, 4to. The fourth in 1615, 4to. The fifth in 1625, 4to. The ſixth (which is a Treatiſe of the Divine Eſſence and Attributes, in two parts) in 1628, and 1629, 4to. The ſeventh in 1624, 4to. The eighth in 1626, 4to. The ninth in 1628, 4to. The tenth in 1654, fol. The eleventh in 1657, fol. The twelfth in 1627, 4to.——The three firſt books were collected together, and publiſhed in folio, (with a preface, and the author's life written by Edmund Vaughan) in 1653, by the pious Barnabas Oley (5). Who alſo firſt publiſhed, in folio, the tenth book, in the year 1654. And in 1657, the eleventh book, alſo in folio.——The reſt of his compoſitions are chiefly ſermons.——A compleat collection of all his works was printed again at London, in 1672, and 1673, in three volumes folio. And, though they are ſo voluminous, they have kept up their reputation, and their price, much better than thoſe of moſt of his contemporaries; a ſure mark of their intrinſick value. They are frequently cited, with due commendation, by the learned Biſhop Patrick, in his Commentaries on the Old Teſtament; and by other perſons of the beſt judgment.——He appears, through every part of them, to have been a zealous champion againſt the Church of Rome.

(5) Concerning whom ſee Wood's Athenæ, Vol. I. col. 635.

[G] *However reviled as an Arminian, by the Puritans or rigid Calviniſts.*] Eſpecially by the troubleſom and voluminous ſcribler William Prynne, who mentions him in ſeveral of his works. Thus, he ſaith of him, in one place (6), that ' he was convented in ' the laſt Parliament (1628) yea openly accuſed in the ' laſt Convocation for his heretical *Arminian* books.' He ſaith elſewhere (7), That ' Dr Jackſon, of Oxon. ' is a man of great abilities, and of a plauſible, affable, courteous deportment, 'till of late he hath been ' tranſported beyond himſelf, with metaphyſical contemplations, to his own infamy, and his renowned ' mother's ſhame, I mean the Univerſity of Oxon, ' who grieves for his defection.'——And again, ' he [Dr Jackſon] is of civil converſation and learning, ' which made his errors and preferments more dange- ' rous and pernicious;—it was his Arminian errors, ' not his *learning* or *honeſty*, that were the ground of ' his advancement to his dignity (8);——Yea, he ' was by him [Laud] deſigned to be Doctor of the ' Chair (though he miſſed that preferment,) to poyſon ' the Univerſity of Oxford, with his Arminian druggs ' (9).'——But, as the pious Mr B. Oley well obſerves (10), ſuch trifling objections and ill-grounded calumnies are ' meer noiſe; the phanſie of a prejudicate ' mind.'——Dr Jackſon, adds he, ' knew he might ' not ſtrive, nor multiply queſtions to gender ſtrife: ' therefore he demands but two *poſtulata* of the diſ- ' ſenting man. 1. That God hath a true freedom of ' doing good. 2. That man hath a true freedom in ' doing evil. From him that agrees with him in theſe ' two, he will not diſſent in other points (11). But ' from ſuch as teach, That all events are ſo irreſiſtibly ' decreed by God, that none can fall out otherwiſe ' than they do; or, that nothing can be amended that ' is amiſſe; he plainly differs. For, beſides that the ' tenets be Turkiſh (12), being preſſed, they yield a ' morbid bitter juice, and put out a forked ſting. ' Their conſequent being, That, either, there is no ' morall evil under the ſun; or, That the fountain of ' goodneſſe (who is *ultor & intentator malorum*) his ' will is the cauſe of ſuch evil.'——So that every judicious perſon may eaſily diſcern, whoſe *learning*, as well as undeſtanding and *honeſty*, is moſt juſtly to be called in queſtion; Mr Prynne's, or Dr Jackſon's. JENKINS [Sir LEOLINE, or LIONEL], a very learned Civilian as well as able Stateſman in the laſt century, was born in the pariſh of Llantriſaint in the county of Glamorgan, in the year 1623 [A]; and was the ſon of Leoline Jenkins, or Jenkins Lluellin, of the ſame place (a) [B]. He laid the foundation of his future learning, and particularly of his great knowledge and accuracy in the Latin and Greek tongues, at Cowbridge-ſchool, very near the place of his nativity; which ſchool he afterwards liberally endowed. In 1641, he was admitted into Jeſus-college in Oxford; where his regularity, condeſcenſion, modeſty, and ſerious deportment, procured him the eſteem of his fellow-collegians, and eſpecially of Dr Manſell, then Principal of the college. The national troubles coming on ſoon after, Mr Jenkins took arms for King Charles I. but his military exerciſes did not

(a) The Life of Sir Leoline Jenkins, by W. Wynne, Eſq; Lond. 1724. fol. p. 1.

[A] *In the year* 1623.] William Wynne, Eſq; ſays, that it was in the year 1625; which ſeems to be confirmed by Ant. Wood's obſervation (1), that Mr Jenkins was ſixteen years of age in 1641. But the ſame Mr Wood, and Sir Leoline's epitaph, informing us, that he was aged ſixty-two at the time of his death, in 1685; conſequently he muſt have been born in the year 1623.

(1) Faſti, Vol. II. col. 132. edit. 1721.

[B] *And was the ſon of Leoline Jenkins, or Jenkins Lluellin, of the ſame place.*] Mr Wynne, aſſures us, that the father was ' a man of about 40 l. a year, who ' left behind him in that neighbourhood the cha- ' racter of a very honeſt, prudent, and induſtrious ' man. There have been thoſe, (adds Mr Wynne) ' who have inſinuated a much meaner extraction, but ' without any other reaſon, than as one of the uſual artifices ſome men take, to render a great man deſpicable, when nothing more likely can be invented. ' But his father really was a perſon, that by his frugal ' and prudential method of living, was not only capable of beſtowing, but alſo well underſtood the value ' of that liberal education, which he beſtowed on his ' ſon; and whom Mr David Jenkins, one of the Judges ' of North-Wales, and the famous champion of the ' Royal cauſe, treated, if not as a relation of his antient and honourable family, yet as a perſon worthy ' of his care; and, under that character, very early ' recommended him to the protection of Dr Wilkins, ' at that time Warden of Wadham-college, and afterwards Biſhop of Cheſter (2).'

(2) Wynne, as above, p. 1.

[C] *Served*

not ſo wholly take him up, as to occaſion the utter neglect or interruption of his ſtudies; for he continued them with all poſſible vigour (*b*). Upon the King's barbarous and tragical death in 1648, he left the univerſity, and retired into his own country; where he proſecuted his ſtudies with his wonted diligence, though he ſeemed now to be thrown out of the road of all advancement and ſucceſs. But this ſeeming misfortune was abundantly made up to him, and proved as happy as poſſible in its effects. For it happened, that his place of reſidence was near Llantrythyd, the ſeat of Sir John Aubrey; which, having been left void by ſequeſtration, ſerved as a refuge to ſeveral eminent Loyaliſts [*C*]; ſo that he was ſoon taken notice of by one of them, his former Principal, Dr Manſell: who, from the experience he had of his behaviour in college, could well judge of his merit and growing capacity. Therefore, he not only invited Mr Jenkins to paſs his time with him and the reſt of his fellow-ſufferers at Sir John Aubrey's houſe, but introduced him into the friendſhip of thoſe eminent men his companions: which indeed proved the cauſe of his riſe and of all his future preferments. The firſt employment they found Mr Jenkins for the exerciſe of his virtue aud induſtry, was the tuition of Sir John's eldeſt ſon. Wherein he gave ſo much ſatisfaction, that he was ſoon after recommended, in the like capacity, to many other young gentlemen of the beſt rank and quality in thoſe parts; whom, under the influence and example of thoſe great men, he educated in the doctrine of the Church of England, and improved in juſt and virtuous principles, as well as learning. In this neighbourhood and employment he continued for ſome time, 'till at laſt the ſoldiers quartered in thoſe parts took him priſoner, as the moſt effectual means of diſperſing his ſcholars. Soon after, being indicted at the quarter-ſeſſions for keeping a ſeminary of rebellion and ſedition, he removed, in May 1651, with his pupils to Oxford [*D*]; where he ſettled in a houſe in the High-ſtreet, which from him was then commonly known by the name of little Welſh-Hall. And ſuch great confidence had many eminent Royaliſts in him, that he was employed on ſeveral meſſages and correſpondencies between Mr David Jenkins, Dr Sheldon, Dr Manſell, Dr Fell, and others. But, after Mr Jenkins had continued about four years at Oxford, he began to be publickly talked of as a dangerous and obnoxious man; and his new patron, Dr Wilkins, to whoſe protection he had been recommended, being about this time removed to the Maſterſhip of Trinity-college in Cambridge, he was forced, in the year 1655, to withdraw beyond-ſea with his pupils, for fear of ſome ill treatment. They continued three years abroad, during which time they travelled over a great part of France, Holland, and Germany; and ſometimes reſided at their famous ſeats of learning, that the young gentlemen might ſee, as much as they could by ſo weak a repreſentation, the methods of a univerſity life, which they were not permitted to enjoy at home. After their return from beyond ſea in 1658, Mr Jenkins having delivered up his pupils to their reſpective parents and relations, and being now in a manner out of all employment, he was invited by Sir William Whitmore, a generous patron of the diſtreſſed Cavaliers, to live with him at Appley in Shropſhire. Here Mr Jenkins continued 'till the year 1660, enjoying the opportunities of a well-furniſhed library, and of improving himſelf in his ſtudies; which he followed with his wonted indefatigable diligence and application, for in this only he obſerved no moderation (*c*). Upon the Reſtoration, being now in the 37th year of his age, he returned to Jeſus-college; and ſo conſiderable was his fame among his countrymen, that on the ſettlement of that Society he was choſen one of the Fellows (*d*). On the 16th of February 1660-61, he was created Doctor of Laws (*e*): and, March the firſt following, was unanimouſly choſen Principal of his college, upon Dr Manſell's reſignation, which place he kept 'till the beginning of the year 1673 (*f*). He promoted the honour and advantage of the college to the utmoſt [*E*], and became a conſiderable benefactor thereto at his death, as will be ſeen in the ſequel. His next preferment was the Commiſſaryſhip of the peculiar and exempt juriſdiction of the Deanery of Bridgnorth in Shropſhire, given him by his friend Sir William Whitmore (*g*). In 1662, he was appointed Aſſeſſor of the Chancellor's court in Oxford;

[*C*] *Served as a refuge to ſeveral eminent Loyaliſts.*] Particularly to Dr Francis Manſell, Principal of Jeſus-college, Dr Accepted Frewin, Archbiſhop of York, and Dr Gilbert Sheldon, afterwards Archbiſhop of Canterbury (3).

(3) Idem, p. 3.

[*D*] *He removed, in May* 1651, *with his pupils to Oxford.*] They were, Sir Francis Manſell, the heir of the family; Sir Edward, and Arthur his brother, Sir Antony Manſell's two ſons; Sir John Aubrey's ſon and heir; Stepney, and Vaughan, two other of Dr Manſell's nephews; Sir Sackvil Crow's ſon and heir; Sir Robert Moyle of Blackwell in Kent; Mr Walter Thomas of Swanzey, &c.—As to Mr Jenkins's method of education; his principal way was, to gain the good will of his pupils, to create a mutual confidence, and to convey his inſtructions without the ſeverity of a maſter, and in ſuch gentle and agreeable leſſons as would become even an intimate friend. He was very ſenſible, that it was the early inſtilling of conſcientious principles, and the ſeeds of virtue and religion, that muſt knit and conſolidate all the reſt; and therefore he endeavoured on all opportunities to ſet out to them the excellency of virtue in its moſt lively colours, and the true delight which flowed from virtuous courſes; and gave them to underſtand, that, as corrupt and degenerate as the practice of thoſe times was, yet ſolid virtue, and true religion, would one time or other recover its proper place and eſteem (4).

(4) Wynne, as above, p. 6, 7.

[*E*] *He promoted the honour and advantage of the college to the utmoſt.*] That college had very much ſuffered, during the univerſal confuſions in the nation, by the unſkilfulneſs and diſhoneſty of Dr Michael Roberts, Principal of the ſame. But Dr Jenkins, at his coming into that ſtation, reſtored the exerciſes, diſputations, and habits, and reformed all abuſes and irregular practices, which the general liberty and licentiouſneſs of the late times had introduced. Then he reviſed, explained, and inforced the college-ſtatutes: and reviewed the leaſes and eſtates of the college; ſet aſide ſeveral illegal debts; recovered many of the revenues; and reſtored ſeveral benefactions that had been miſapplied, to their proper and original uſes. He alſo contributed largely to the building in the new quadrangle, on the weſt ſide of the college-hall (5).

(5) Wynne, as above, p. 7, 8, 9, 70.

[*F*] *The*

Oxford; the proceedings of which are chiefly according to the practice of the Civil Law, and the Statutes and Uſages of the univerſity. The ſame year Dr Sweit made him his Deputy-Profeſſor of the Civil Law there, not being able to officiate, by reaſon of his great age and infirmities, and his attendance on the Court of Arches, whereof he was alſo Dean [*F*]. Preferments continuing to pour upon Dr Jenkins, he was, in 1663, made Regiſter of the Conſiſtory-court belonging to the collegiate church of St Peter Weſtminſter; and, ſoon after, appointed by his friend Dr Sheldon (newly tranſlated to the Archbiſhopric of Canterbury) his Commiſſary and Official for that his peculiar dioceſe; and alſo his Vicar or Official general; at leaſt his dioceſan Commiſſary. He was very helpful to that prelate in the ſettlement of his Theatre and Printing-houſe; of which magnificent deſign, when finiſhed, he was appointed one of the Curators; and was uſeful to that generous Archbiſhop upon many other occaſions, relating both to Church and State (*b*) [*G*]. The univerſity beginning to grow too narrow a field for the exerciſe of his abilities, he removed, through the Archbiſhop's encouragement, to London, in order to apply himſelf to the public practice of the Civil Law at Doctors-Commons; and was admitted, about the latter end of the year 1663, an Advocate in the Court of Arches. Here he was immediately made Deputy or Aſſiſtant to Dr Sweit Dean of this court, as he had been to him before in the office of Profeſſor. And the firſt Dutch war breaking out, the Lords-Commiſſioners for prizes, by their order bearing date February 4, 1664, appointed Dr Jenkins, with ſome other the moſt eminent Civilians, to review the maritime laws, and compile a body of rules and ordinances, by which the Judge of the Admiralty for the time being ſhould proceed in the adjudication of prizes: which being accordingly done, and approved by his Majeſty in Council, became the ſtandard of thoſe proceedings. The vaſt increaſe of buſineſs in the Court of Admiralty during this war, and the great age and infirmities of Dr Exton, Judge of that court, ſoon obliged his Majeſty to look out for a more able and active perſon. Whereupon, Dr Jenkins being recommended by Archbiſhop Sheldon, was made Judge-Aſſiſtant to Dr Exton, by patent bearing date March 21, 1664-5. And ſo well did he behave in that ſtation, that, upon the death of Dr Exton, he was made ſole Judge of the Admiralty of England and Ireland in his own right, and likewiſe Judge of the Admiralty of the Cinque-Ports (*i*). This eminent office he diſcharged with unwearied application, and with great abilities, reputation, and integrity [*H*]. But after three years ſervice, finding the ſalary of 300 pounds a year allowed him by the King not to be a competent maintenance, nor any way proportionable to his expences and trouble, he petitioned his Majeſty for an additional allowance of 200 pounds per annum, which was granted him on the 29th of January 1667-8. In 1668, he was appointed Judge of the Prerogative Court of Canterbury [*I*], at the King's own recommendation to the Archbiſhop (*k*). His next employment was of a more public nature.

(*b*) Idem, p. 10, 11.

(*i*) Wynne, as above, p. 12, 13.

(*k*) Idem, p. 16, 17.

For

[*F*] *The ſame year Dr Sweit made him his Deputy-Profeſſor of the Civil-Law there, &c.*] That is in Oxford: which deputation he filled with great applauſe. As long as Dr Jenkins continued in Oxford, he ſeems to have been a ſort of oracle in all queſtions and matters of Law: and was alſo of ſingular uſe to the Univerſity, in maintaining their foreign correſpondencies, by his ſkill in the French and other languages; and, by his own generous and hoſpitable temper, which drew many foreigners of note to viſit him. And when he was called away by his higher and more weighty imployments, ſtill the intereſt of the Univerſity, and their juſt and legal privileges, had a great ſhare in his concern (6).

(6) Wynne, p. 11.

[*G*] *And was uſeful to that generous Archbiſhop upon many other occaſions.*] Indeed it was no more than a grateful and ſuitable return for the higheſt favours: ſince the Doctor's riſe and good fortune was owing to the firm and happy friendſhip contracted with that reverend prelate, during the national troubles. Therefore, he always ſpoke of his Grace in the higheſt terms and accents of reſpect; and gave in his will 20 ſhillings a year, for an anniverſary commemoration ſpeech on the 9th of November, the day of that Archbiſhop's death (7).

(7) Idem, p. 12, 69.

[*H*] *This eminent office he diſcharged with unwearied application, &c.*] During the continuance of the war, he was obliged to a conſtant *attendance* in that Court, which ſat twice every week, or oftner, as occaſion required, in vacation as well as in term time, for the diſpatch of ſhips and goods brought up as prizes; and the increaſe of buſineſs was ſo great, that in leſs than two years time he gave 436 final ſentences, according to the ſtrict rule of proceedings, and the ordinary courſe of the Court. Beſides which, the Lords Commiſſioners had from time to time a previous account in writing, by way of report, in moſt caſes: ſo that by his diſpatch, and induſtry, as well as by his exactneſs, and the *impartiality* of his proceedings, he advanced the honour and reputation of that court to a high degree. He had ſo much *integrity*, as to withſtand the importunity of the greateſt men, though he was highly obliged to them; and could not be prevailed on, to ſtretch a law in complaiſance to any one, or to give the leaſt regard to private addreſſes and recommendations in matters of juſtice. And, withal, he was of a *tender and compaſſionate nature*; not only in the trying of criminals, but alſo in generouſly remitting his juſt and moſt legal fees. For, beſides the ſtrict regard he had to juſtice and the laws, he always expreſſed an unfeigned tenderneſs for a *poor ſeaman*; ſaying, there are no ſort of people that gain a miſerable ſmall livelihood with more hardſhip and danger than they do; and none that venture their lives more freely for the honour and ſecurity of the Crown and nation (8).

(8) See Wynne, as above, p. 13, 14, 15.

[*I*] *He was appointed Judge of the Prerogative-court of Canterbury,*] In this ſtation, 'It was always an 'eſtabliſhed rule with him (as he declares himſelf) '*Nulli negare nec deferre juſtitiam*; and ever ſince he 'had the honour to preſide in that Court, he endea'voured by proper rules, as far as in him lay, and as 'he found neceſſary, to reſtrain all pretences and 'cauſes of unjuſt delays (9).' He alſo made it his conſtant endeavour to prevent all immethodical and frivolous pleadings, all clamorous and indecent practice, and to check the tedious ſallies and excurſions of the Counſel, but in the moſt mild and gentle manner, and always in terms of exact reſpect, unleſs where the matter juſtly deſerved a more ſevere remark (10).——'His ſentences, both in this and the Admi'ralty-court, were eſteemed ſo juſt and equitable, that 'all parties, more than could be expected, were ſa'tisfied with them; and there were but few, con'ſidering the number of cauſes, or the length of time 'he ſat in both courts, appealed from; and of thoſe, 'hardly any reverſed. For his opinion, whether in 'the civil or canon laws, or that of nations, generally 'paſſed as an uncontroulable authority, being always 'thoroughly conſidered, and judiciouſly founded (11).'

[*K*] *A*

For the Queen-mother, Henrietta-Maria, widow of King Charles I. dying in France Auguſt 1, 1669, a diſpute had like to have riſen about the ſucceſſion to her real and perſonal eſtate [K]. Whereupon Dr Jenkins being commanded to give his opinion of the matter, and it being approved in Council, he was ordered to prepare a commiſſion for himſelf to go to France; in which commiſſion were joined Ralph Montague, Eſq; then Ambaſſador at that court, and the Earl of St Albans, and Lord Arundel. Their buſineſs was, to demand and recover the Queen-mother's effects; to pay her ſervants and officers their arrears; and provide for her interment [L]. All which having performed to our Court's ſatisfaction, Dr Jenkins, at his return, received the honour of knighthood from his Majeſty, on the 7th of January 1669-70 (l), together with a moſt gracious approbation of his ſervices (m). Immediately after, Sir Lionel Jenkins (for ſo we muſt now call him) in conſideration of his great abilities and experience, was nominated one of the Commiſſioners of the realm of England [M], to treat with thoſe authorized from Scotland, touching an union between both kingdoms. He endeavoured to make himſelf maſter of the ſubject, as appears by a curious paper printed among his letters (n); but that project came to nothing (o). In 1671, he was choſen one of the repreſentatives in Parliament for Hyth in Kent, one of the cinque-ports (p). Upon occaſion of the freſh rupture between England and the States of the United Provinces, in 1672, he came again to be involved in great buſineſs by virtue of his office of Judge of the Admiralty; though he plainly appears not to have liked the manner of that rupture [N] But the Engliſh nation being ſoon weary of the war [O], and the Parliament apprehenſive of the power and intrigues of France, by which it had been fomented and encouraged, and ſeveral encounters having paſſed at ſea without a deciſive action, both parties began to entertain thoughts of peace. So a treaty was propoſed at Cologn, under the mediation of Sweden, between the Emperor, Spain, and Holland, and ſome Princes of the Empire, on the one part; and England and France on the other. And, in May 1673, Sir Leoline was appointed Ambaſſador and Plenipotentiary for this treaty, together with the Lord Sunderland and Sir Joſeph Williamſon. Accordingly, Sir Leoline and Sir Joſeph Williamſon ſet out for the place of treaty, and arrived there the 13th of June following: the Lord Sunderland

(p) Wynne, p. 20.

[K] *A diſpute had like to have riſen about the ſucceſſion to her real and perſonal eſtate.*] The ground of the controverſy was this: Henrietta-Maria, widow of King Charles I, was youngeſt daughter of Henry IV. King of France, and ſiſter to Lewis XIII. and had reſided at Colombe in France, thirty leagues from Paris, ever ſince her departure from England in July 1644, being entertained there at the charge of the French King Lewis XIV. her nephew. Upon the Reſtoration, ſhe came to London, and having ſettled her revenues here, went back into France, to beſtow her daughter, the Lady Henrietta, in marriage to the Duke of Anjou. In July 1662, coming again into England, ſhe ſettled her court at Somerſet-houſe, where ſhe reſided 'till May 1665. But falling into a bad ſtate of health, ſhe returned to her native country, where ſhe died. Under theſe circumſtances it was pretended, that the ſaid Queen-mother was not only a *native*, but an *inhabitant* of France; conſequently that whatſoever eſtate ſhe was poſſeſſed of there, ought to be ſubject to the laws and uſages of that country: and that Madame Royale of France, the aforeſaid Ducheſs of Anjou, was by thoſe laws the only perſon capable of ſucceeding: King Charles II, and the Duke of York, as well as the Princeſs of Orange, her other children, being expreſsly excluded and diſabled by the *droit d'aubaine*, becauſe they were not born, nor inhabitants within the allegiance of the French King. But our Court's claim was admitted at length (12).

(12) Wynne, as above, p. 19. and Vol. II. p. 665, 667. See alſo Sandford and Stebbing's Geneal. Hiſt. of the Kings, &c. edit. 1707, p. 595.

[L] *And provide for her interment.*] She was interred at St Denis, November the 25th. At which time Father Senault made a funeral oration, wherein enquiring into the cauſes which could move the divine Providence ſo grievouſly to afflict a Prince of King Charles's excellent moral endowments, he could aſſign no other but his *Infidelity*; i. e. becauſe he was not a Roman Catholick. This paſſage Dr Jenkins took ſo heinouſly ill, that he would not let the Father reſt, 'till he had made him promiſe, that thoſe words ſhould be expunged in the printed copy (13).

(13) Wynne, p. 19.

[M] *One of the commiſſioners of the realm of England.*] The reſt of the Engliſh commiſſioners were, Arthur Anneſley Earl of Angleſey, and Sir William Jones, the Attorney-general (14).

(14) Ibid. p. 20.

[N] *He plainly appears not to have liked the manner of that rupture.*] For, he repreſented in a letter to Sir Joſeph Williamſon (15), 'That the Dutch (though 'enemies) were enabled by the declaration, to make 'their retreat even after the war begun, and had four 'or five months ſtill to withdraw their effects from 'hence;'——offering to lay down his charge at his 'Majeſty's feet, rather than give a ſentence he thought 'unjuſt upon that occaſion.' And, when a commiſſion was directed to him, as Judge of the Admiralty, by the Duke of York, to proceed to the adjudication of prizes taken from the Dutch in the encounter at Bergen, he prayed 'his Royal Highneſs ſtill to continue all humanities to the perſons of the Dutch, without putting them to hardſhips or ranſom; that he would forbid hoſtilities, confiſcation, imbezzlement, or ill treatment of all that ſhould demean themſelves reſpectfully, and not refuſe to be brought up. He deſired his Highneſs to conſider, beſides the fatal conſequences ſuch a precedent might one day or other produce to ourſelves, that the moſt juſt war was the laſt neceſſity of good men, and that mercy and forbearance were worth a thouſand victories. And therefore hoped his Majeſty and his Royal Highneſs would be pleaſed to put their ſhips only *in depoſito*, 'till juſtice were done them, or a more ſatisfactory anſwer given by the Dutch Embaſſador; but if the detainment of their ſhips would not do, and ſuch mild inſtances and applications proved ineffectual, then to make war in earneſt — (16).'

(15) See his Letters, Vol. II. p. 702.

(16) Wynne, as above, p. 21.

[O] *But the Engliſh nation being ſoon weary of the war.*] Sir William Temple is not accurate, when he ſays, that it was 'after two ſummers ſpent in a war 'between England and Holland, that both parties be'gan to enter upon thoughts of a peace.' For, in reality war had laſted not above twelve or fourteen months, before our Embaſſadors were impowered to treat of a peace: ſince the attack upon the Dutch Smyrna fleet was on the 13th of March 1671-2, and the Pleinpouvoir of the Engliſh Embaſſadors bears date May 5, 1673. However, Sir William's words are, ——'After *two* ſummers ſpent in a war between Eng'land and Holland, with ſeveral encounters at ſea, 'but no deciſive action; both parties began to enter 'upon thoughts, and indeed neceſſities, of a peace. 'The nations had been at war without being angry; 'and the quarrel had been thought on both ſides, ra'ther of the Miniſters than the people's. The Dutch 'believed it at firſt intended only againſt De Witt's 'faction; in favour of the Prince of Orange; and in 'England, ſome laid it to the corruption of Miniſters 'by the money of France; and ſome that pretended 'to think deeper, laid it to deeper deſigns. The 'Lord Clifford's violence in beginning it, gave it an 'ill air in general; and the diſuſe of Parliaments, a 'cruel maim in the chief ſinews of war (17).'

(17) Memoirs of what paſſed in Chriſtendom, edit. 1692, 8vo, p. 1, 2.

Sunderland never acting in that commiſſion (g). What their inſtructions were will be ſeen in the note below [P]. But, after ſeveral fruitleſs endeavours to bring about a general peace [Q] between the Emperor, Spain, Holland, and ſome Princes of the Empire on the one part, and England and France on the other, Sir Leoline and his colleague returned to England in May 1674. As he was upon his return, near the Briel, on the 17th of May, he took an opportunity to aſſert the prerogative of the Engliſh Crown to the Flag, by making three Dutch men of war, with four Dutch Ambaſſadors on board, ſtrike their ſail to his ſingle yatcht. And the year following, in the very ſame place, he forced the like reſpect from two other men of war belonging to the States-General (r). At his return, he gave the Privy-Council an account of his negotiation, ſome extracts whereof are given in the note [R]. England continuing deſirous of a peace, King Charles II. offered his mediation to the ſeveral parties at war in September 1674; which being accepted by them, Nimeguen in Gelderland was fixed for the place of treaty, about the month of February 1674-5. The Engliſh mediators, appointed under the Great-Seal the 13th of December following, were, John Lord Berkeley then Ambaſſador at Paris, Sir William Temple Ambaſſador-Extraordinary at the Hague, and Sir Lionel Jenkins (s). The latter ſet out for that honourable employment the 20th of December, in all the extremities of a hard winter; and arrived at Nimeguen the 6th of January (t). He was not only the firſt of our Ambaſſadors upon the place by ſeveral months [S], but reſident there throughout the whole courſe of that long and laborious negotiation; and the chief part of the buſineſs, at leaſt the drudgery of it, lay upon him [T]. We ſhall not ſwell this article

(r) Wynne, p. 23. and Letters, Vol. I. p. 353.

(s) See Sir Lionel's Letters, Vol. I. p. 349, &c.

(t) Wynne, as above, p. 24.

[P] *What their inſtructions were, &c.*] The ſubſtance of their inſtructions and of their demands, was thus. 1. 'To have the honour for the future paid to 'the Flagg of England, which had been practiſed and 'acknowledged by the Dutch in all former times. 2. 'A million of pounds ſterling, to reimburſe the En'gliſh in ſome part the expences they had been at in 'making the war, &c. 3. Ten thouſand pounds *per ann.* 'as an honorary acknowledgment for their fiſhing on 'our coaſts, and 2000l. more for the like liberty 'they enjoy upon the coaſt of Scotland. 4. To ſuffer 'the Engliſh ſubjects to depart without delay out of 'the Colony of Surinam, where they were unjuſtly 'detained contrary to the peace at Breda. 5. A re'gulation of the trade in India, &c. wherein great 'violence and vexatious grievances were exerciſed by 'the Dutch upon the Engliſh. 6. The calling in and 'ſuppreſſing all libels, prints, &c. vended and diſper'ſed in Holland, &c. reflecting on the honour of King 'Charles II. 7. The eſtabliſhment of the Prince of 'Orange, as hereditary Stadtholder, General and Ad'miral of their State, to deſcend upon the heirs male 'of his body. 8. For the performance thereof, Fluſh'ing and Ramekins, or Helvoet Sluis and Goree, or 'the Brill and Goree, to be delivered into the King of 'England's hands, as cautionary——*If* the peace could 'not otherwiſe be made, 400,000l. to be abated upon 'the million firſt demanded, &c (18).'

(18) See Sir Lionel's Letters, Vol. I. p. 4, &c.

[Q] *But after ſeveral fruitleſs endeavours to bring about a general peace.*] Sir William Temple rightly obſerves, that 'there were two many parties engaged 'in this quarrel to think of a *general* peace.——For 'though all the confederates had a mind to the peace 'between England and Holland, yet none of them 'deſired it with France: this made both the Dutch 'and the Spaniards ſet on foot all the engines they 'could, to engage King Charles II. in ſome treaty of 'a ſeparate peace, to which the neceſſity of his affairs, 'the humour of his people, and the inſtances of his 'Parliament at laſt determined him towards the end of 'the year 1673 (19).' Accordingly, under the mediation of Spain, a ſeparate peace, between England and Holland, was concluded and ſigned at Weſtminſter the 9th of February 1673-4, though the King of France made large offers to King Charles to prevent it (20). And the Biſhop of Munſter, and Elector of Cologne, returning to their duty, renounced their alliance with France, and concluded a peace with the States; the former on the 22d of April, and the latter on the 11th of May 1674.

(19) Memoirs, as above, p. 3, 4.

(20) See Collection of Treaties, edit. 1732, 8vo. Vol. III. p. 275. The offers made to King Charles by the King of France, were five millions and a half, and forty men of war. Baſnage Hiſt. Tom. II. p. 496.

[R] *He gave the Privy-Council an account of his negotiation, &c.*] In this account he obſerves, that 'The Dutch in the whole courſe of that negotiation, 'were never real or in earneſt for making a peace with 'England.' For which he aſſigns the ſeveral reaſons. ——Then he goes on to obſerve, that 'The Allies 'are the ſole arbiters of the peace. The Emperor 'hath a proſpect of eſtabliſhing his authority at home, 'and ſo will be glad to continue an army on foot, 'which he is not to pay. The Dutch, whoſe intereſt 'is commerce, will go no further in this war, than the 'Prince of Orange will carry them. So that his High'neſs ſeems to be the only perſon to be taken off: but 'his inclinations are to be at the head of an army.—— 'He hath ſome reſentments that are perſonal againſt 'the French King, as well as ſome emulation for him.' ——He concludes in theſe words——'If it be con'ſidered, whether it be the intereſt of England to en'ter into a ſtricter amity with Holland and Spain, 'though to the diſſatisfaction of France. It ſeems to 'my humble apprehenſion to be ſafeſt; 1. For ſo we 'ſhall make a ſufficient counterpoize againſt France, 'whoſe puiſſance does every day threaten to turn the 'ballance, and who will be always embroiling us at 'ſea with the Dutch, in order to weaken us. 2. 'France will not offer to invade us at any time, if we 'are ſtrictly united with Spain and Holland, and ſo 'we ſhall have the leſs oppoſition in our trade. 3. 'The leſs danger of diſturbance at home; for then 'it will not be the Prince's intereſt, or any of that 'countries, that we be embroiled. Whereas, if we 'continue in the intereſt of France, our reward can 'only be, either part of its conqueſts abroad, or main'tenance of our peace and quiet at home. But as to 'the firſt, the ſhare of the weaker ally is never ſo good 'in the dividend, as in the deſignation: and we have 'no reaſon to affect new acquiſitions, unleſs we had 'the good fortune to make a better uſe of our preſent 'poſſeſſions. As for the maintenance of our peace at 'home, after the preſent diſreliſhes and jealouſies, it is 'a thing that the Parliament will never fancy or ex'pect from a friendſhip with France (21).'

(21) Letters, Vol. I. p. 345, &c.

[S] *He was not only the firſt of our Embaſſadors upon the place by ſeveral months.*] For, no other Embaſſadors arrived at Nimeguen 'till the November following (22). The chaplains that attended him in his foreign employments, were Dr Henry Maurice, and Dr Richard Lucas; men of great learning, and of an excellent character (23).

(22) Temple's Memoirs, as above, p. 188.

(23) Wynne, p. 63.

[T] *The chief part of the buſineſs, at leaſt the drudgery of it, lay upon him.*] This is in effect acknowledged by his colleague Sir William Temple, though otherwiſe extremely aſſuming and conceited. Sir William's words are,—'where there were any Ladies 'in the Ambaſſadors houſes,—the evenings were ſpent 'in dancing or play, or careleſs and eaſy ſuppers or 'collations. In theſe entertainments, as I ſeldom 'failed of making a part, and *my colleague* (24) never 'had any; ſo it gave occaſion for a good word that 'paſſed upon it, *Que la Mediation eſtoit toujours en 'pied pour faire ſa fonction*; i. e. That the Mediation 'was always on foot to go on with its buſineſs; for I 'uſed to go to bed and riſe late, while *my colleague was 'a bed by eight, and up by four*; and to ſay truth, two 'more different men were never joined in one commiſ'ſion, nor agreed better in it (25).' Sir William probably had the talking part; as Sir Lionel had the active; that is much the greateſt ſhare in managing the papers and the correſpondence. So that, what he wanted of Sir William's vivacity and courtlineſs, he amply

(24) Sir Lionel.

(25) Memoirs, as above, p. 183.

cle with a particular detail of that treaty, as ſo many accounts of it are already in print; eſpecially a moſt authentic one, in Sir Leoline's Letters, and Sir William Temple's Works. Therefore, we ſhall only obſerve, that the mediation of England was rendered ineffectual, and indeed unneceſſary, by the ſeparate articles concluded between France and the United Provinces [*U*], on the firſt of Auguſt 1678, O. S (*u*). The French Ambaſſadors deſired Sir Leoline, as mediator, to hand thoſe articles to the reſt of the confederates: but he utterly refuſed ſo to do, or to have the leaſt part in a treaty of peace, ſo hard

(*u*) Coll. of Treaties, as above, Vol. I. p. 293.

amply made up in the ſolidity of his judgment, and his indefatigable application and induſtry. This ſufficiently appears from the *two folio volumes of Sir Lionel's letters*, publiſhed by William Wynne, Eſq;——What figure each of them made in thoſe important negotiations will be more particularly evident from their reſpective characters, as given by Monſ. de St Diſdier (26). *M.* Temple *à beaucoup de belles lettres, il eſt ſingulier en ſes manieres & en ſes ſentimens. Il a paſſé pour partial dans la fonction de la mediation. Beaucoup de perſonnes ont cru reconnoitre de la vanité & de l'inegalité dans ſon humeur. D'ailleurs il eſt trés habile & tout a fait Republicain, comme l'on peut voir, par les remarques qu'il a ecrites ſur l'Eſtat des Provinces Unies des Païs-Bas. M. Jenkins ſon collegue eſt honeſte, civil, equitable, droit dans ſes ſentimens, attaché a ſa religion; il a beaucoup de belles connoiſſances, & il a toujours paru bon Mediateur*, i. e. 'Sir W. Temple is 'a man of great learning, but ſingular in his manner 'and notions. He was looked upon as partial in the 'buſineſs of the mediation. Many perſons thought 'they diſcovered both vanity and unevenneſs in his temper. Beſides he is a man of great capacity, and a 'thorough republican, as may be ſeen by his obſervations upon the united Provinces of the Netherlands. 'Sir L. Jenkins, his colleague, is ſincere, civil, juſt, 'upright in his ſentiments, attached to his religion; 'he has abundance of uſeful knowledge, and all along 'diſcharged the part of a good mediator.' Mr Baillet's character of them (27) is much to the ſame purpoſe. His concluſion of Sir William's, and that which he gives of Sir Lionel, is in theſe words.——*Il étoit d'ailleurs grand politique, & trés habile dans la connoiſſance des affaires, & avoit beaucoup de belles lettres. Jenkins n'en avoit pas moins. Il étoit outre cela honnête homme, & fort civil: il paroiſſoit droit dans ſes ſentimens, & bon Mediateur.* i. e. 'He (Sir William 'Temple) was however a great politician, and very 'ſkilful as well as knowing in the management of af'fairs, and a man of conſiderable learning. *Jenkins* 'was no leſs learned. He was beſides a very honeſt 'and civil man: appeared upright in his ſentiments, 'and a good mediator.'

(27) In his Hiſt. de Hollande, under the title of M. De la Neuville, edit. Paris, 1703, Tom. IV. p. 231.

[*U*] *By the ſeparate articles concluded between France and the United Provinces.*] Various reaſons are aſſigned by hiſtorians, for this haſty and indeed diſhonorable concluſion of peace between the Dutch and French; the principal of which are theſe. 1. The Dutch began to be weary of the large ſubſidies they paid to ſo many Princes, their allies, for carrying on a war, which the allies purſued for their own ſeparate intereſts or ambition; though entered into perhaps, at firſt for the defence of Holland, with whoſe ſafety theirs were complicated (28). 2. They had continued the war three years, only for the intereſts of Spain; and had engaged in it for one year longer, without the ſuitable help and concurrence of that nation (29). 3. The Dutch, ſo impatient as they were for a peace, found, they could have no dependance upon King Charles II. nor any effectual aſſiſtance from England. For King Charles was all the while a penſioner of France; and ſo violent were parties and jealouſies grown in the kingdom, that he had no proſpect of being effectually ſupported, if he had openly declared againſt France. The Parliament had indeed, in January 1677-8, granted him 1,200,000 l. for carrying on a war againſt the French, in conjuction with the Dutch and their allies: and, in ſix weeks time, he had raiſed an army of about 20,000 men, the compleateſt, and in all appearance the braveſt troops that could be any where ſeen. Some of which were already tranſported into Holland (30). But our Councils at Court were ſo in balance, between the deſires of living at leaſt fair with France, and the fears of too much diſpleaſing the Parliaments upon their frequent Seſſions, that our paces upon this whole affair looked all like croſs purpoſes, which no man at home or abroad could well underſtand, and were often miſtaken by both parties engaged in the war, as well as by both parties in the Houſe of Commons, 'till the thing was wreſted out of our hands. This is Sir William Temple's obſervation (31); who further relates, that Mr Van Lewen told him freely, 'That it was the moſt againſt their hearts in Holland 'that could be, to make a peace upon terms ſo low 'and unſafe for Flanders; and that if King Charles 'had gone into the war, as was promiſed upon France 'delaying or refuſing to accept his ſcheme, they 'would certainly have continued it: but his Majeſty's 'proceedings looked ever ſince ſo uncertain or unreſolved, that it had raiſed jealouſies in Holland of our 'meaſures being at bottom fixed and cloſe with France; 'which made moſt of the towns in Holland think, 'they had nothing elſe left to do but to go in with 'them too, as faſt as they could; and the approach of 'the French army to Antwerp left them now no time 'to deliberate: yet he profeſſed to me in private, that 'if the King would immediately declare war, he 'believed the States would ſtill go on with it, in purſuit of their alliance, and the terms therein contained. I made this report to the King, who ſeemed 'poſitive to declare the war, in caſe the Parliament 'adviſed him, and promiſed to ſupport it; when an 'unluckly peeviſh vote, moved by Sir T C 'in ſpight to my Lord-Treaſurer [Oſborne] paſſed the 'Houſe of Commons, *That no money ſhould be given*, '*'till ſatisfaction was received in matters of religion.* 'This left all ſo looſe and ſo lame, that the King was 'in a rage,—and aſked me, when or how I thought 'he could truſt the Houſe of Commons to carry him 'through the war, if he ſhould engage in it? and I 'had not much indeed to ſay, conſidering the temper 'and factions of the Houſe; nor could I well clear it 'to myſelf by my obſervation, whether the King was 'firmly reſolved to enter into the war; or if he did, 'whether the Houſe of Commons would have ſupported him in it, or turned it only to ruin the Miniſters 'by the King's neceſſities.——In ſhort, there was 'ſuch a fatal and mutual diſtruſt both in the Court 'and Parliament, as it was very hard to fall into any 'ſound meaſures between them:——But the turn that 'the King gave all this, was, That ſince the Dutch 'would have a peace upon the French terms, and 'France offered money for his conſent (32) to what he 'could not help, he did not know why he ſhould not 'get the money; and thereupon ordered me to treat 'upon it with the French Embaſſador, who had 'orders to that purpoſe.' But Sir William excuſed himſelf (33). 4. Another reaſon aſſigned for this peace, is, That it 'was brought about by the Louveſtein faction, which began to reſume ſtrength again. This is confirmed by Biſhop Burnet (34). 'The States, ſays 'he, were reſolved to have a peace. The Prince of 'Orange did all he could to hinder it (35). But 'Dewit's party began to gather ſtrength again. And 'they infuſed a jealouſy in all people, that the Prince 'intended to keep up the war for his own ends.' His marriage with the Princeſs Mary was alſo made uſe of by that faction, through the artifices of the Court of France; as Sir William Temple witneſſes.—'While, 'ſays he, this game was playing in England, they [the 'French] had another on foot in Holland, eſpecially 'at Amſterdam, by raiſing jealouſies of the meaſures 'taken between the King [Charles II.] and Prince [of Orange] upon the marriage, as dangerous to the liberties of Holland, and making it there believed, 'That by the match, the King, and Duke [of York] 'had drawn over the Prince wholly into their intereſts 'or ſentiments.——They propoſed to the Dutch other 'terms of the peace, far ſhort of the King's, and leſs 'ſafe for Flanders;——which would not have gone 'down in Holland, but for the ſuſpicions raiſed by the 'Prince's marriage, among the people there, who had 'an incurable jealouſie of our Court, and thereupon 'not that confidence of the Prince that he deſerved '(36).'

[*W*] *Whereupon*

hard and injurious to the reſt of the parties in war, ſo derogatory to the mediatorial right which had been generally accepted, and ſo different from what the King his maſter had propoſed to obtain (*w*). He continued however at Nimeguen, in the form and quality, though not in the employment, of a Mediator. But a few weeks after, the conferences being renewed between the Empire and France, Sir Leoline received orders from our Court to reſume his function of general mediator (*x*). Great part of the winter was taken up in theſe conferences between the Imperial and French Ambaſſadors, and they were ſolely managed by Sir Leoline, who went from the apartment of the one to that of the other, in the Stadt-houſe, with the alterations and amendments projected by the parties; addreſſing himſelf to, and debating with, the Imperialiſts in Latin, and with the French in their own language. After many months ſpent in this new and laborious method of treaty, which frequently engroſſed the whole day, and held 'till midnight, and withal was attended with incredible fatigue and application; Sir Leoline gave notice both to the Engliſh Court, and to Sir William Temple at the Hague, that he looked upon the Treaty between the Emperor and France as good as concluded (*y*). Whereupon Sir William, according to his orders from England, returns to Nimeguen [*W*]: but when the reſpective parties came to ſign, the French Ambaſſadors offering to yield the precedence in ſigning to Sir William and Sir Leoline as *Mediators* (which they had done very frankly in the whole courſe of the negotiation); and the Imperialiſts abſolutely refuſing it, or any other expedients propoſed, our two mediators reſolved to leave Nimeguen, in purſuance of King Charles's letters of revocation. Sir Leoline receiving his the 10th of February 1678-9 (*z*), quitted Nimeguen the 16th of that month publickly [*X*], and retired to Neerbos; where, three days after, he received a warrant from his royal maſter, dated February 14, appointing him Ambaſſador-Extraordinary at the Hague, in the room of Sir William Temple who had been recalled. Accordingly Sir Lionel arrived there March 1, but continued in that ſtation no longer than the 25th of the ſame month. For, by a new commiſſion dated February 20, and which came to his hands ſix days after, being authorized to reſume his mediatorial function (*a*), he returned to Nimeguen, March 26, at the deſire of the Prince of Orange and the States, and the earneſt intreaty of the northern princes. His inſtructions left him in a great meaſure to himſelf, without other directions than to act as he ſhould think moſt conſiſtent with his Majeſty's honour, and for the good of the general peace; which, as he was a modeſt man, and diffident of himſelf, put him into great anxiety (*b*) [*Y*]. However, he laboured to the utmoſt of his power to accommodate all remaining differences between the Imperialiſts and French, the Kings of Sweden and Denmark, the Elector of Brandenburgh, and other parties intereſted. Which being at length effected about the beginning of July 1679, his Majeſty ſent him letters of revocation, dated the 11th of that month, determining his commiſſion as Embaſſador-

(*b*) From his Letters, Vol. II. p. 564, 565.

[*W*] *Whereupon Sir William, according to his orders from England, returns to Nimeguen.*] He declares, that he never did any thing ſo unwillingly in his life; for 'I knew, ſays he, it was neither at all material 'that the mediators ſhould ſign this branch of the general peace, having ſigned none of the other; nor 'that two ſhould ſign it, when one alone had aſſiſted 'in the courſe of this negotiation, ſince it was renewed 'between the Empire and France; beſides, I was 'very confident it would not at laſt be ſigned by either 'of us; for I could not believe, when it came to the 'point, the Emperor's Ambaſſadors ſhould yield *that* 'of precedence to the mediators at the concluſion of 'the treaty, which they never conſented to do in the 'whole courſe of it. So that I looked upon the favour of this journey as afforded me from the particular good-will of ſome of my good friends in the foreign committee, taking a riſe from ſome inſtances of 'Sir Lionel Jenkins, who was in one of his uſual agonies, for fear of being left in the way of ſigning alone 'a treaty which he neither was pleaſed with himſelf, 'nor believed many people in England like to be ſo '[37].'

(37) Memoirs, as above, p. 379.

[*X*] *Quitted Nimeguen the 16th of that month publickly.*] Of his behaviour upon that occaſion, he gave the following account to the Earl of Sunderland, the next day, in a letter from Neerbos in the Maes-Waal, an hour from Nimeguen.— 'Upon the receipt of 'your Lordſhip's letter, which came to my hand yeſterday at ten, I left the town between three and 'four, going through the heart of it (with my people 'about me) at the time the ſtreets were full of people 'coming from church; it being, as I take it, the uſual 'courſe, in caſe of ſuch diſſatisfactions his Majeſty hath 'with a great part of this aſſembly, abruptly to go 'out, yet very openly, and about the middle of the 'day. I took leave of no Ambaſſador, nor publick 'Miniſter; only I deſired Mr Chudleigh (as Secretary 'of his Majeſty's embaſſy) to acquaint the Northern 'Miniſters with what your Lordſhip was pleaſed to direct, notwithſtanding ſome of them may be further 'advanced in their peace, than to deſerve any compleſment for their regard to his Majeſty's mediation '(38).'

(38) Sir Leoline's Lett. Vol. II. p. 550.

[*Y*] *Which, as he was a modeſt man, and diffident of himſelf, put him into great anxiety.*] His colleague, Sir William Temple, obſerves of him.—'He had ever 'ſo much diſtruſt of his own judgment, that though he 'had the moſt great deſire that could be to do well, 'yet he many times could not reſolve how to go about 'it; and was often as much perplexed about the little 'punctilio's of viſit and ceremony that were left to 'buſie that ambaſſy, as if greater affairs had ſtill attended it (39).'—In another place, he takes notice of Sir Leoline's *great modeſty* (40), — and that he was bound by 'ſuch ſtrict orders in point of forms, that he 'did not ſee how he could poſſibly with them perform 'the part of a mediator (41).' Upon which Mr Wynne makes this juſt reflexion. 'If Sir W. Temple 'means by this, a due deliberation, or a prudent precaution and behaviour in theſe matters, in expecting 'thoſe regards which were juſtly due and incident to 'his character, he is not miſtaken; or if he means an 'humble and modeſt way of expreſſing his ſentiments 'of things, and that great deference which Sir Leoline 'always paid to his experience and abilities in theſe 'ſorts of employments, he is certainly in the right of 'what he ſays. For in truth Sir Leoline was punctual 'in keeping to his inſtructions, where he was limited; 'wary and cautious, where he was left free. He was 'afraid of affecting novelties, or making any experiments where his orders were poſitive and expreſs; 'which ſhould they in the leaſt have failed of ſucceſs, 'muſt have forfeited his *reputation and ſafety*. And 'every one almoſt knows, how ſtrict an account is exacted even in matters of ceremony (42).'—Sir William himſelf gives, immediately after, an inſtance of the danger of failing even in thoſe ſeemingly trifling points; when for an undeſigned failure in them, Sir Leoline himſelf was forced to have a pardon (43).

[*Z*] *Sir*

Embaſſador-Extraordinary, Mediator, and Plenipotentiary at Nimeguen. 'In which, ſays 'his Majeſty, as you have ſerved us to our entire ſatisfaction; ſo we cannot but give you 'this teſtimony of our gracious acceptance, and approbation of your ſervices during your 'ſaid miniſtry (c).' Sir Leoline returned to England towards the middle of Auguſt 1679 [Z], after having been employed about four years and a half in the negotiations at Nimeguen, and was very graciouſly received by his Majeſty (d). Soon after his arrival, he was choſen one of the Burgeſſes for the univerſity of Oxford, in the Parliament which met October 17 following. In which Parliament, a bill being brought in for the excluſion of the Duke of York, he oppoſed it to the utmoſt of his power [AA]. The 11th of February 1679-80, he was ſworn a Privy-Counſellor, having been nominated to ſucceed Henry Coventry, Eſq; in the place of Secretary of State (e). He received the Seals the 26th of April 1680, being at firſt Secretary for the northern province, and for the ſouthern from the year 1681 to 1684. He entered upon this important office in critical and dangerous times, which continued ſo all the while he enjoyed it: and yet he eſcaped the then common fate of being addreſſed againſt, and of commitments, and impeachments; which he could hardly have avoided, if he had given the leaſt ground for them, either in the courſe of his embaſſies, or in his other employments (f). Being choſen a ſecond time one of the Burgeſſes for the foreſaid univerſity, in the Parliament which met at Oxford the 21ſt of March 1680-81; he oppoſed again earneſtly the excluſion of the Duke of York [BB], and the printing of the Votes [CC]. And being commanded by the Houſe of

(f) Wynne, as above, p. 43.

[Z] *Sir Leoline returned to England about the middle of Auguſt* 1679.] At his departure, through a moſt uncommon inſtance of generoſity and ſelf-denial, he abſolutely refuſed to accept the preſents offered him by the Emperor, the King of France, and other Princes and Potentates; though he was extremely importuned; and even had the King his maſter's orders, to receive them. The preſent from the King of France, was a very rich jewel of diamonds, roſe and crown-wiſe; and from the Emperor, a rich jewel (44). For his refuſal he gave the following reaſons, in a letter to the Earl of Sunderland.——'I hope his Majeſty will diſ'penſe with me, and not enjoin me to take any pre'ſent from the French Embaſſadors, or any other in 'this place; for it is my humble opinion, that there 'hath not been right done to his Majeſty in his figure 'of Mediator; and that I cannot receive any preſent, 'but my ſo doing will imply, that his Majeſty is ſa'tisfied with the regard had to his mediation here; 'but that his Majeſty is not ſo ſatisfied, appears by 'ſeveral occaſions he hath taken to declare, that he 'hath had ſeveral cauſes of juſt reſentment given him, 'but that he had ſacrificed them all to his zeal for the 'peace of Chriſtendom. So that I moſt humbly be'ſeech your Lordſhip to intercede for me, that I may 'not be obliged, by any order or command from his 'Majeſty, to receive this preſent, but that I be left to 'my own liberty; yet ſo, that what I do, may not 'in the leaſt reſtrain my collegues in their liberty to do 'otherwiſe: I have ſerved here much longer than 'they have done, and therefore have greater obliga'tions upon me to this ſtrictneſs; nor ſhould I deſire 'this, but that I think it moſt ſuitable to the dignity 'of the character I have the honour to ſerve in (45).' —Before Sir Lionel ſet out for England, he received a handſome letter of thanks from the Emperor Leopold, wherein are theſe compliments ——*Omittere ſane nolumus, pro eo ac diuturnus ille aſſiduuſque in re omnium gravisſimâ ac ſummè arduâ toti Reipublicæ Chriſtianæ præclara cum veſtrâ quâ fidei, quâ prudentiæ, ac dexteritatis laude*, a Vobis impenſus *labor & ſollicitudo meretur, quin vobis benevoli & grati animi noſtri teſſeram hiſce impertiremur; non felix modo iter in patriam comprecantes, ſed benignas quoque gratias pro operâ tam ſollicitâ in cauſâ omnium longè gravisſimâ ac difficillimâ adeo indefeſſe ad gratam ſatisfactionem navatâ agentes* (46).

(45) Letters, Vol. II. p. 640. See alſo his Life, p. 36, 37, 38. Sir William Temple accepted of the preſents made him. Ibid.

(46) Letters, Vol. II. p. 682.

[AA] *A Bill being brought in for the excluſion of the Duke of York, he oppoſed it to the utmoſt of his power.*] Biſhop Burnet tells us, that Sir Leoline 'was the chief manager for the Court.' And proceeds to give this character of him; 'He was a man 'of an exemplary life, and conſiderably learned: but 'he was dull and ſlow: he was ſuſpected of leaning to 'Popery, though very unjuſtly: but he was ſet on 'every punctilio of the Church of England to ſuper'ſtition, and was a great aſſertor of the divine right of 'monarchy, and was for carrying the prerogative high: 'He neither ſpoke nor writ well: but being ſo eminent 'for the moſt courtly qualifications, other matters 'were the more eaſily diſpenſed with. All his ſpeeches 'and arguments againſt the excluſion were heard with 'indignation: ſo the bill was brought into the Houſe '(47).' Two of his ſpeeches, ſpoken upon that occaſion, are printed at the end of his life (48). And five upon the ſame ſubject are printed in the 'Collection 'of the Debates of the Houſe of Commons, Oct. 21, '1680 (49).' But theſe laſt appear only to be ſnaps of diſcourſes maliciouſly patched together: not that they are entirely falſe, without any mixture of truth, but that truth in them is for the moſt part corrupted, tranſformed, and ſpitefully diſguiſed, and appear quite another thing to the world, than what was delivered upon the place (50). Roger North, Eſq; has an anecdote relating to Sir Leoline in this ſeſſion, which we ſhall inſert here. 'In the Weſtminſter Parliament— 'this good Secretary was found fault with for ſome'thing relevant he had uttered on the Court ſide. 'Divers members, from the humility of his manner in 'ſpeaking, ſuppoſed him to be a mild yielding man, 'and, to expoſe him, conſulted about cenſuring his 'words, and ordering him to the bar, and to aſk par'don upon his knees.—But for fear this, in the execu'tion, might have an unlucky return upon them, they 'reſolved firſt to ſound him.—Thereupon, ſome half'faced friends told him that he would be accuſed, and 'muſt kneel. He anſwered them in his formal way, "that he was a poor creature, not worth the reſent"ment of the houſe: he ſhould be always ſubmiſſive "to ſuch great men as they were, in every thing that "concerned himſelf. But, as he had the honour to be "his Majeſty's Secretary of State, the caſe was not "his, but his Maſter's, and, by the grace of the living "God, he would kneel to, and aſk pardon of, no "mortal upon earth, but the King he ſerved, and to "him only would he give an account of any thing "done with intent to ſerve him." This ſhewed that 'the buſineſs was like to be too hot for that time, and 'the deſign of it like to fail; and ſo it was let drop '(51).'

[BB] *He oppoſed again earneſtly the excluſion of the Duke of York.*] Two of his ſpeeches upon that occaſion are printed in the 'Collection of the Debates of 'the Houſe of Commons,' abovementioned (52).

(51) Life of the Lord Keeper Guilford, edit. 1742, p. 232, 233.

[CC] *And the printing of the Votes.*] On the 24th of March 1680-1, the following motion was made. 'Mr Speaker, What I am about to move concerns us 'all. The laſt Parliament when you was moved to 'print your Votes (53), it was for the ſecurity of the 'nation, and you found it ſo. It prevented ill repre'ſentations of us to the world, by falſe copies of our 'votes.—And I am confident that this Houſe will be 'no more aſhamed of their actions than the laſt was. 'Printing our Votes will be for the honour of the King, 'and the ſafety of the nation I am confident if it 'had been neceſſary, you would have petitions from 'the parts I come from, that your actions might be 'made publick.—I move therefore, that your Votes 'may be ordered forthwith to be printed, with the 'reſt of your proceedings; and I ſhall only add, that 'yourſelf (54) has done ſo well in taking that care 'upon you the laſt Parliament, that the Houſe will de'ſire you to continue them in the ſame method.' But Secretary Jenkins oppoſed it in the following words. 'I beg

(53) The Votes of the Commons began firſt to be printed 21 Octob. 1680, as is undeniably evident from ſome now before me.

(54) Wi. Williams, then Speaker.

of Commons, on the 25th of March, to carry up to the Lords the impeachment of Edward Fitz-Harris, he refuſed; which had like to have brought him into trouble [*D D*]. When the corporations came to be new-modelled by the Court, and a Quo-warranto was brought againſt the city of London in particular [*E E*], Sir Leoline ſhewed himſelf averſe to thoſe violent proceedings; and was only for puniſhing the moſt obnoxious Members in their private capacities, and not for proceeding to the entire forfeiture of the city's privileges (*g*) [*F F*]. In many other inſtances did Sir Leoline differ from the general bent and humour of the Court: for, he was a certain enemy to all chimerical projects that came before the Privy-Council; and had reſolution to diſſent, and experience enough to diſtinguiſh between what was practicable and really uſeful from what was merely chimerical. He alſo conſtantly and timely declared againſt every irregular or illegal proceeding; and where it was not in his power to hinder or mitigate the violence of ſome proſecutions, yet it was contrary to his inclination and temper to heighten them. At length, after four years ſervice in his high and laborious ſtation, being oppreſſed with buſineſs, his conſtitution was ſo waſted by his zeal and application for the public ſervice, that he became unable any longer to bear the fatigues of his office: ſo that he obtained leave of the King, on the 14th of April 1684, to reſign his place (*h*) for a valuable conſideration (*i*) [*G G*]. Thereupon

' I beg pardon if I conſent not to the motion of print-
' ing the Votes, &c. conſider the gravity of this aſſem-
' bly. There is no great aſſembly in Chriſtendom
' does it. 'Tis againſt the gravity of this aſſembly,
' and 'tis a ſort of appeal to the people. 'Tis againſt
' your gravity, and I am againſt it (55).'

(55) Collection of Debates, as above, p. 297, 298.

[*D D*] *And being commanded by the Houſe of Commons to carry up to the Lords the impeachment of Edward Fitz-Harris.*] The caſe of this Fitz-Harris is well known, and may be learned at large from our hiſtorians. And in two words, it was this: He was accuſed of writing a libel, greatly reflecting on the King and Royal Family for being Papiſts; and affirming a Popiſh poſſeſſor might be depoſed, as well as a Popiſh ſucceſſor. Which libel was induſtriouſly reported to be written with the King's and Duke's privity and conſent, in order to be fixed upon the Diſſenters, and the moſt noiſy and diſcontented Members of Parliament, to render them odious. The Commons looking upon this affair as a ſequel of the Popiſh plot, took it into their hands; and one moved, with a kind of ſneer and ridicule, that the impeachment ſhould be ſent up to the Lords by Secretary Jenkins. Sir Leoline thereupon ſaid, ' The ſending me upon this meſſage, &c. reflects
' upon the King my maſter; and do what you will
' with me, I will not go.' Thereupon many called, *To the Bar*; and moved, That his words ſhould be written down, before he explained them. J. Trenchard in particular ſpoke thus. ' The Houſe will be
' contemptible to the extreameſt degree if this be
' ſuffered. Such a thing was never heard in Parlia-
' liament before, That the whole Houſe ſhould reflect
' on the King; and for him to ſay, Do what you will,
' I will not go.' Sir Leoline replied, ' I ſaid no ſuch
' thing, that the Houſe reflected on the King, but that
' I take it as a reflection upon the King my maſter.'
J. Trenchard added, ' His words were, This had not
' been put upon me, but for the character I bear.'
At laſt the Secretary's words were thus ſtated, " This
" meſſage is put upon me for the character I bear. I
" value not my life nor liberty, do what you will, I
" will not go." And Sir Leoline explained himſelf in theſe words, ' I ſay this is put upon me, to my appre-
' henſion, for the character I bear, and do what you
' will with me, I will not go.' Thereupon Sir William Jones ſaid, among other things,—' Let a man be
' of what quality he will, if he be too big to be your
' member, he is not to be choſen.—Secretaries are ſent
' of meſſages every day, and is he too big a meſſenger
' to accuſe a perſon of the Popiſh plot.'—Sir Leoline then replied, ' I am as ready, and think myſelf as
' much obliged to obey the commands of the Houſe,
' as any man here. The office I have excludes me not
' from it; but the thing I ſtand upon is, that the mo-
' tion was carried on in ridicule. I have an honour
' for this, and ever had for all Houſes of Commons;
' but in this meſſage I muſt and will be excuſed.' After two or three ſoftning ſpeeches, Sir Leoline went on thus, ' Since the Houſe is ſo favourable as to hear me,
' I ſhall only ſay, that I did apprehend ſending me
' with the meſſage to the Lords, was a reflection upon
' the King; if I did apprehend it a reflection upon
' my maſter, I could not but reſent it. I am heartily
' ſorry I have incurred the diſpleaſure of the Houſe,
' and I hope they will pardon the freedom of the ex-
' preſſion. I apprehended it a reflection upon the King,
' and no other conſideration whatſoever induced me to
' ſay the words.'—A little after, he added, ' I am
' ready to obey the order of the Houſe, and I am ſorry
' my words gave offence.' So he went on the meſſage (56).

(56) Collection of Debates, &c. p. 312—316.

[*E E*] *And a* Quo-warranto *was brought againſt the City of London in particular.*] Biſhop Burnet tells us, that ' Jenkins managed the whole buſineſs of the city
' with ſo many indirect practices, that the reputation
' he had for probity was much blemiſhed by it: he
' ſeemed to think it was neceſſary to bring the city to a
' dependence on the Court in the faireſt methods he
' could fall on; and, if theſe did not ſucceed, that
' then he was to take the moſt effectual ones, hoping
' that a good intention would excuſe bad practices
' (57).' But what thoſe *indirect practices* were, ' the
' Biſhop's own fruitful invention has not been able to
' inform us: nor, ſays Mr Wynne (58), am I able to
' diſcover. And therefore ſuch general and ground-
' leſs aſperſions, without one degree of real evidence
' to ſupport them, deſerve no other anſwer but con-
' tempt.—Some of the city had that grateful ſenſe of
' the part which Sir Leoline had acted in that affair [of
' the *Quo Warranto*,] that they conferred the greateſt
' teſtimony of it in their power, by preſenting him
' with his freedom, and afterwards chooſing him Ma-
' ſter of the Salters company.'

(57) Hiſt. of his own Time, p. 531.

(58) Life, as above, p. 47.

[*F F*] *And was only for puniſhing the moſt obnoxious Members in their private capacities, &c.*] That is in effect the moſt juſt and equitable method; though the contrary practice has generally prevailed: namely, to declare the privileges of a corporation forfeited, on account of ſome particular members offences, inſtead of puniſhing only the real offenders. Which is Cuſtom againſt Equity.——However; as it is ſaid above, when the bringing in of a Quo Warranto againſt the City of London was debated at Court, Sir Leoline, in order to ſoften matters; and, if poſſible, divert the blow; wrote a letter to the Duke of York, which concludes thus,—' Your Highneſs, I doubt not, will alſo
' conſider the many miſchiefs and inconveniencies that
' muſt neceſſarily follow, if this great body ſhould be
' diſſolved, for ever ſo ſmall a time, even though his
' Majeſty in his goodneſs ſhould deſign it only *in terrorem*, and to awaken them into a due ſenſe of their
' obedience; and when that gracious end is obtained,
' ſhould be pleaſed to reſtore them to their former
' franchiſes. In a word, if ſuch a rigorous courſe
' ſhould be taken, I fear it may give room to malici-
' ous ſuggeſtions, and foment the preſent heats and di-
' ſtempers of the nation, and may (though without juſt
' reaſon,) alarm all other corporations. I cannot
' therefore conceive it adviſeable, or fit for his Maje-
' ſty's preſent ſervice, (all things conſidered) to pro-
' ceed to ſuch extremities againſt *the whole body*; but
' rather to direct proceedings againſt *the moſt obnoxious*
' *members* in their private capacities (59).'

(59) Letters, as above, Vol. II. p. 685.

[*G G*] *For a valuable conſideration.*] This laſt particular we learn from Roger North, Eſq (60); but Biſhop Burnet, according to his partial cuſtom, of giving invidious and bad characters to thoſe that were called High-church-men in his time, tells us, that Sir Leoline was turned out, becauſe he was no longer neceſſary. His words are, ' Jenkins had now done all
' the

(60) Ubi ſupra, p. 232.

Thereupon he retired to an houſe in Hammerſmith, where learning and learned men continued to be his care and delight. In the middle of March 1684-5, King James II. being on the throne, Sir Leoline was ſworn again of the Privy-Council, and at the ſame time elected Burgeſs for the univerſity of Oxford. And, upon ſome little return of health and ſtrength, freſh application was made to him to appear in buſineſs; but his indiſpoſitions of body ſoon returning upon him, he was never able to ſit in that Parliament, but died the firſt of September 1685, in the 62d or 63d year of his age (*k*). His body being conveyed to Oxford, was ſolemnly buried the 17th of the ſaid month, in the area of Jeſus-college-chapel (*l*); and a marble ſtone was laid over his grave, with an epitaph [*HH*], ſuppoſed to have been made by his old friend Dr John Fell Biſhop of Oxford. As to his character; beſides what it hath already appeared from his actions, we are aſſured, that he was mild, courteous, benevolent, humble, and modeſt; ſober, and temperate; of unwearied and moſt uncommon induſtry; juſt; grateful; charitable; a true member of the Church of England; conſcientiouſly pious, and exemplary in all the duties of religion. But for a fuller view of him, ſee the account below in the note [*II*]. Having never been married,

(*k*) Wynne, as above, p. 49. See Wood, Faſti, ubi ſupra, col. 133. and Sir Leoline's Epitaph.

(*l*) Wood, ibid.

' the drudgery that the Court had occaſion for from ' him: and being capable to ſerve them in nothing ' elſe, he was diſmiſt from being Secretary of State: ' and Godolphin, one of the Commiſſioners of the ' Treaſury, ſucceeded him.' ——— But ſoon after, ' Godolphin was weary of the *drudgery* that lay on ' a Secretary of State; and choſe rather to be the Firſt ' Commiſſioner of the Treaſury (61).' Different from this is the character of Sir Leoline given by Mr North (62), ' Sir Leoline Jenkins, ſaith he, was the moſt ' faithful *drudge* of a Secretary, that ever the Court ' had.—His learning and dexterity in buſineſs, was ' great; but his fidelity ſurmounted all.——After he ' retired, the King's affairs went backward; wheels ' within wheels took place; the Miniſters turned for- ' maliſers, and the Court myſterious.' Before we diſmiſs Sir Leoline in his quality of Secretary, let us hear what Biſhop Burnet ſays further of him when conſidered in that capacity. ' The King, ſays he, was the ' more deſirous to have Lord Sunderland again near ' him, [i. e. as Secretary] that he might have ſome- ' body about him who underſtood foreign affairs. *Jen- ' kins underſtood nothing:* but he had ſo much credit ' with the High Church party, that he was of great ' uſe to the Court (63).' Now, is it really credible, That a man of good ſenſe, ſuch as Sir Leoline unqueſtionably was, who had ſpent near five years abroad in the moſt important negotiations, and converſed the greateſt part of that time with Marſhal D'Eſtrades, Monſieur Colbert, and other of the ableſt politicians in Europe, ſhould learn or know nothing of foreign affairs? therefore the accuſation of *ignorance*, together with a very great plenty of malice, muſt return back upon the right Reverend Hiſtorian. And we cannot but bewail the unhappineſs of this nation; in that, ſince parties have run ſo high amongſt us, little or no regard is had to truth, but we are perpetually miſled by falſe characters, and falſe accounts of men and things, in our Engliſh Hiſtory.

(64) J. Le Neve Mnum. Angl. from 1650 to 1718, p. 159.

[*II*] *But for a fuller view of him, ſee the account below in the note.*] We ſhall give it chiefly in the words of Mr Wynne, the ingenious writer of his life. ' He was by nature mild, affable, courteous; of unaf- ' fected goodneſs and benevolence; friendly and inof- ' fenſive to inferiors as well as ſuperiors; and ſo hum- ' ble in his carriage, that he was almoſt beyond exam- ' ple. His great modeſty in his language and conver- ' ſation, ſometimes made a diſadvantageous impreſſion ' of him on thoſe who judged altogether by outward ' appearances. For he was not one of thoſe flaſhy men, ' who at firſt ſight or at a diſtance appear beſt, and can ' exhibit the whole experience of their narrow lives at ' a ſingle interview: but the longer he was known, ' the better he appeared; being like a piece of true ' architecture, which does not ſhew it perfectly at once; ' but will bear an agreeable view and review on all ' ſides, and the more accurately it is conſidered by a ' ſkilful artiſt, the more perfect and ſatisfactory it ap- ' pears. Though his deportment had much of a gen- ' tleman, it had more of a ſcholar, and moſt of a ' Chriſtian. His civility did not conſiſt only in words ' or courtly expreſſions, but he was ſtrictly juſt in ' in his words, as well as faithful in his promiſes; and ' had a real regard wherever he profeſſed it. He was ' an enemy to flattery of any kind, and uneaſy even at ' its firſt approaches. Of ſo grateful a temper to every ' one, that he never failed to expreſs, in the moſt pro- ' per and becoming manner, the favours he had re- ' ceived. In his moſt ſcanty circumſtances of life, he ' had an eaſy, patient, and contented mind; and in ' his greateſt affluence nothing of pride and arrogance. ' As his firſt purpoſes were to be humble and juſt, the ' poſſeſſion or acquiſition of power did not in the leaſt ' alter his manners: but, after his advancement, he ' behaved with the ſame decency, temper, and mode- ' ration, as in his loweſt parts of life. He was frugal ' and temperate in the common management of his for- ' tune, and an enemy to all ſort of luxury and extra- ' vagance. His uſual dreſs was of the beſt; but the ' emblem of his mind, grave, plain, and unaffected; ' and commonly black, which made ſome think, that ' he was in holy orders, though he was not: and in ' conſequence of that, a report ſtrongly prevailed, that ' he was to be advanced to the Archbiſhopric of Can- ' terbury, upon the death of Archbiſhop Sheldon in ' 1677, though the report was without foundation (65). His life was, as it were, one continued courſe ' of labour and induſtry for the public good. His na- ' tural capacities for buſineſs were great, much im- ' proved by conſtant ſtudy, and indefatigable diligence ' and application. All the time he could ſafely bor- ' row from the public ſervice, was ſpent in ſtudy and ' reading, which he often profeſſed to be his moſt a- ' greeable entertainment; and which was the more ſo ' to him, by reaſon of a ſtrong happy memory, and a ' regular method in reading. He was verſed in many ' modern languages, which he ſpoke fluently; and had ' ſome gleanings in moſt parts of learning, even in ' thoſe which gratify the curioſity more than the un- ' derſtanding of a man; but he had chiefly addicted ' himſelf to thoſe of real and immediate benefit. He ' was not only eminent in his particular profeſſion of ' the civil and canon laws, but had alſo a very great ' knowledge of the common and ſtatute laws of the ' realm. He was a man of little leiſure, and of no ' ſort of pleaſure, even to a voluntary abſtinence from ' innocent and agreeable diverſions; and in many ' things

(65) See Wood Faſti, ut ſupra, col. 133.

married, he bequeathed his eſtates, both real and perſonal, to charitable uſes; and, in particular, he was ſo great a benefactor to Jeſus college in Oxford, that he is generally looked upon as a ſecond founder [*K K*].

'things of life exceeded the moſt rigid Stoick. To 'this he probably owed his great ſtrength of body, 'and a conſtitution not only healthful, but alſo capa- 'ble of the cloſeſt application; and always lived in a 'ſparing, abſtemious way, that he might be the fitter 'for buſineſs, and the duties of his employments. As 'he conſtantly went to reſt early, ſo he roſe early, and 'often before the ſun, even in the midſt of ſummer; 'nature exacting very little ſleep of him. Finally, he 'was a man of excellent piety, and unaffected devo- 'tion; and, through the whole courſe and tenor of 'his life, was a ſerious, ſincere Chriſtian, of a ſtrong 'and maſculine piety, without any mixture of enthu- 'ſiaſm or ſuperſtition, and a hearty Proteſtant of the (66) Wynne, as above, p. 53—59. 'Church of England (66).' See alſo notes [*A A*] and [*G G*].

[*K K*] *So great a benefactor to Jeſus college in Oxford.*] By his will he gave to that college. 1. The manor of Molton, in the pariſhes of Llancarvan and Wenvo. 2. Lands and tenements, in Llantriſſent. 3. Lands, &c. in the pariſhes of Eglwys, Ilan, and Caerphilli. 4. Cowbridge-ſchool, which he purchaſed of Sir Edward Stradling. All in the county of Glamorgan.——5. Three acres of ground in the Archbiſhop of Canterbury's marſh in Lambeth; and ſeven acres near the ſame. 6. Lands, tenements, &c. in the pariſhes of Blakeſley, Plumpton, Weſton, and Weedon, in Northamptonſhire. 7. Lands, tenements, &c. in the pariſhes of Dambleton, and Wormington, in the county of Glouceſter.—And alſo his perſonal eſtate, which after his deceaſe, produced 4857 l. 15 s. 10 d. ¾. —The amount of the whole being upwards of 700 l. a year.

By his ſaid will, he appropriated the following yearly payments out of his eſtates.—To the ſchool-maſter of Cowbridge, ſo long as he doth not undertake any cure of ſouls, but keeps himſelf wholly to the buſineſs of his ſchool, 10 l. a year: and, without ſuch a limitation, 10 l. a year more.—To five penſioners in that ſchool, (which the maſter is to teach gratis, as well as ten hopeful youths more) 6 l. a piece, for four years.—To three Exhibitioners in Jeſus college, out of that ſchool, 10 l. a year, for four years.—For binding poor children apprentices, or clothing old poor people in the pariſhes of Llantriſſent, Llanblethian, the town of Cowbridge, and Yſtrad Owen, 20 l. per ann.—To the Principal of Jeſus college, for an augmentation of his maintenance, 50 l. a year, and the rectory of Rotherfield Peppard.—To make up the ſixteen fellowſhips there, 20 l. per ann. a piece; and the ſixteen ſcholarſhips, 10 l. per ann. a piece.—To two new fellows, 20 l. per ann. each; and, while they are either chaplains at ſea, or miſſionaries abroad, which he intended they ſhould, 20 l. a year more to each.—To two lecturers in the college. 15 l. a year each.—To the ſenior burſar, 8 l. per ann.—To four or five additional fellows, 8 l. or 10 l. a piece.—For the endowment of the Chapel Tal y garn, near the place of his nativity, which he had purchaſed and repaired, 10 l. per ann.—And to the rector of St. Bennet's Paul's-wharf, London, for his better incouragement in reading daily the ſervice of the Church, 10 l. a year, &c (67). (67) From a copy of his Will.

C

JEWEL [JOHN], Biſhop of Saliſbury, in the XVIth century, one of the greateſt ornaments and pillars of the Church of England ſince the Reformation, was born May 24, 1522 [*A*], at Buden in the pariſh of Berinerber in Devonſhire (*a*), and deſcended from an honeſt and very ancient family [*B*]. At the age of ſeven, he received the firſt rudiments of learning from his uncle John Bellamy Rector of Hamton; and afterwards was at ſchool, at Branton under Tho. Stotes; at South-Molton under Antony Simons; and at Barnſtaple under Walter Bowin (*b*). When juſt turned of thirteen, being thought fit for the univerſity, he was ſent to Oxford, and admitted a Portioniſt, or Poſt-maſter, in Merton-college: where he was put under the tuition of Mr John Parkhurſt, afterwards Biſhop of Norwich. About four years after, namely Auguſt 19, 1539, he was elected Scholar of Corpus-Chriſti college in the foreſaid univerſity. October 20, 1540, he took the degree of Bachelor of Arts. His uſual method was, to riſe at four o'clock in the morning, and to ſtudy 'till ten at night; by which indefatigable induſtry he rendered himſelf a compleat maſter of moſt branches of learning, but withal he impaired his health (*c*) [*C*]. After taking his degree, he became a noted tutor (*d*), and privately inſtructed his pupils in Proteſtant principles (*e*). Shortly after, he was choſen Rhetoric profeſſor, or reader, in his college, which office he diſcharged for ſeven years with great applauſe [*D*]: and behaved in his whole conduct in a moſt amiable and exemplary manner (*f*). On the 9th of February 1544, he took the degree of Maſter of Arts (*g*). During King Henry the VIIIth's reign he was privately a Proteſtant, but he publickly declared himſelf ſuch, after that Prince's deceaſe in 1546, And, upon Peter Martyr's coming to be Divinity-Profeſſor at Oxford, he became ſtrongly attached to him; frequented his Lectures and Sermons; and, being very expert at ſhort-hand (*h*), was Notary on that Profeſſor's behalf, when he diſputed (May 28, 1549) in the Divinity-ſchool, with Dr Treſham, Dr Cheadſey, and Morgan Phillips, about the real preſence (*i*). He took the degree of Bachelor of Divinity in 1550, and frequently improved the univerſity by his excellent ſermons. Being alſo preſented to the Rectory of Sunningwell in Berkſhire; though he was lame

[*C*] *But withal he impaired his health.*] *Hunc ad modum in umbra, domi & privatim in muſæo ſe geſſit, legendo, ſtudendo, ſcribendo, vigilando, ut valetudinem ſuam non ſatis curarit. Etenim victus nimis ſcholaſticus & ſimplex fuit, corpus macilentum & perimbecillum, ut mireris tot laboribus exhauriendis potuiſſe ſufficere.* He retiring once to Witney, (on account of an epidemical ſickneſs at Oxford) and purſuing there his ſtudies with his uſual avidity; and, without having proper accommodations, or due care taken, by himſelf or others; contracted ſuch a cold, as fixed a lameneſs in one of his legs, which accompanied him to his grave (5).

(5) Ibid. p. 26.

[*D*] *Which office he diſcharged for ſeven years with great applauſe.*] His lectures were ſo much admired, that they drew many auditors to him from other colleges; and alſo engaged his former tutor, Mr John Parkhurſt, to come out of the country, and hear him with great pleaſure: upon which occaſion he highly complimented him (6).

(6) Ibid. p. 29. See alſo our author's Life, prefixed to his Works.

[*E*] *The*

Jame, he went thither every other Sunday, and regularly diſcharged the paſtoral office, both by preaching and catechiſing (*k*). During the whole reign of King Edward VI. he was a zealous promoter of the Reformation; in conſequence whereof, he fell one of the firſt victims to Popiſh ſuperſtition and reſentment, after Queen Mary's acceſſion. For, before any law made, or order given by the Court, the reſt of the Fellows expelled him from the college, by their own private authority (*l*) [*E*], Whereupon he withdrew to Broad-gate hall (now Pembroke college) where many of his pupils, and other gentlemen, privately reſorted to him for inſtruction (*m*). But he was ſoon extremely miſſed in his college; and ſo little could the univerſity do without his aſſiſtance, that they choſe him their Orator, and were forced to make uſe of his elegant pen to draw up their addreſs to the new Queen (*n*). He ſeems to have been wavering about this time, and even was drawn in to ſubſcribe to the errors of Popery [*F*]. But his compliance not being thought ſincere, or deep and thorough enough, Dr Martial Dean of Chriſt-Church [*G*], was plotting how to deliver him up into Biſhop Bonner's bloody hands; from whence, in all probability, he could not have got off without a great injury to his conſcience and reputation, or perhaps the loſs of his life. Theſe ſnares he happily avoided; and eſcaped, on foot, and through by-ways, to London [*H*]: where concealing himſelf, firſt in Thames-ſtreet, and then in another place, for fear of being diſcovered; Sir Nicolas Throgmorton, a man of great diſtinction at that time, furniſhed him with money for his journey, and procured a ſhip to convey him beyond ſea (*o*) [*I*]. He arrived at Francfort in the year 1554, the 2d of Queen Mary, where he had Dr Edwin Sandys, afterwards Archbiſhop of York, for his board- and bed-fellow. By his perſwaſion, and the joint-advice of his two intimate friends, Richard Chambers, and Thomas Sampſon, he made, ſoon after his arrival, a public confeſſion of his ſorrow for his late ſubſcription. For, on a Sunday morning, after having preached a Sermon to the Engliſh exiles there, he bitterly bewailed his fall, and heartily begged pardon of God, and of the Church, which he had offended (*p*). After a ſhort ſtay at Francfort, he was invited to Straſburg by his intimate friend Peter Martyr; who kept a kind of college for learned men in his own houſe, and whereof he made Mr Jewel vice-maſter (*q*). The latter aſſiſted him in the publication of his Lectures on the book of Judges; and attending him afterwards to Zurich, was very helpful to that great man, in the Lectures he read for Profeſſor Conrad Pellican, who was grown extremely old and infirm (*r*). In 1558, upon the death of Queen Mary, and happy acceſſion of Queen Elizabeth, the Engliſh exiles returned to England, and Mr Jewel among the reſt. At his firſt coming over, he was entertained ſix months in the houſe of N. Culverwell, a citizen of London: and then the Lord Williams of Tame, being ill, ſent for him, with whom he continued ſome time (*s*). The 31ſt of March following, he was one of the ſixteen Divines that held a public Diſputation in Weſtminſter-Abbey, upon the chief controverted points between the Papiſts and Proteſtants (*t*). The ſubſtance and iſſue of this diſputation may be ſeen in the authors referred to in the margin. Jewel wiſhed that it had gone on, and that ſome ſuch publick conference might have been appointed for the full ſatisfaction of people in thoſe controverſies, and making the truth more evident to all (*u*). But to proceed. July 19, 1559, he was appointed one of the Commiſſioners, by virtue of the Queen's letters patent, to viſit the dioceſes of Sarum, Briſtol, Exeter, Bath and Wells, and Glouceſter; and to purge them, as much as poſſible, from Popery (*w*). As a reward for his great merit and learning, he was conſecrated Biſhop of Saliſbury January 21, 1559-60 [*K*]; in which eminent ſtation, he behaved

[*E*] *The reſt of the fellows expelled him the college.*] He was expelled by the ſeven ſeniors, and officers (7): and the reaſons alledged for it, were: his having attended P. Martyr's lectures: preaching doctrines contrary to Popery: not being ordained by the ritual, but by the new form: And his refuſal to be preſent at maſs (8).

(7) Life prefixed to his Works, by D. Featly.

(8) Humfr. p. 74. and Fuller's Church Hiſt. book viii. p. 8.

[*F*] *He ſeems to have been wavering about this time, and even was drawn in to ſubſcribe to the errors of Popery.*] Dr Humfrey, the author of his life, imputes his wavering, to the ſpecious promiſes made by Queen Mary, that ſhe would force no man's conſcience, and intended to make no change in religion (9). He adds, that if he could have conſulted his old tutor Dr Parkhurſt, he would not have been guilty of ſo great a weakneſs. He took a journey on foot to Cleve, of which he was Rector, for that purpoſe: but the Doctor, upon the re-eſtabliſhment of Popery, was fled to London. Mr Jewel being thus diſappointed, returns to Oxford, where he lingered, and waited, 'till he was ſuddenly laid hold on by certain Inquiſitors; who preſſing him, with threats, to ſubſcribe, he took a pen in his hand, and, ſmiling ſaid, 'Muſt I ſet down my 'name too: and, have you a mind to ſee how well I 'can write.' But he ſoon became ſenſible of his apoſtaſy; and took the firſt opportunity to eſcape (10).

(9) P. 80. See Burnet's Hiſt. of the Reform. Part ii. p. 245, 246.

(10) Humfr. p. 83, 84. and Wood, Hiſt. & Antiq. Univ. Oxon. L. i. p. 276.

[*G*] *Dr Martial, Dean of Chriſt-church.*] He was a very bad man, and a thorough complier with all changes in religion. For he renounced Popery under King Edward; embraced it again with great zeal under Queen Mary; quitted it again under Queen Elizabeth; and turned again two or three times afterwards (11).

(11) Humfr. p. 81.

[*H*] *And eſcaped on foot, and through by-ways, to London.*] He walked 'till he was forced to lie on the ground, quite ſpent, and almoſt breathleſs: in which condition he was found by one Auguſtin Bernher, a Swiſs, firſt a ſervant to Biſhop Latimer, and afterwards a miniſter; who ſetting him up on a horſe, conducted him to the Lady Anne Warcop's, a widow, by whom he was entertained for ſome time, and then ſafely ſent to London (12),

(12) Ibid. p. 82.

[*I*] *And procured a ſhip to convey him beyond ſea.*] His eſcape was managed by Giles Laurence, tutor to Sir Arthur Darci's children, living near the Tower of London (13). This Laurence was Mr Jewel's fellow-collegian; afterwards of All-Souls college; Greek Profeſſor of the Univerſity; and made in 1564, Archdeacon of Wilts by Biſhop Jewel, whoſe life he had ſaved, as is here related (14).

[*L*] *In*

behaved in a moſt diligent and exemplary manner (*x*) [*L*]. He diſtinguiſhed himſelf, at the ſame time, by preaching and writing in defence of the Church of England, and againſt the Errors of Popery. For, in 1560, on the ſecond Sunday before Eaſter, he made a public challenge (in the Sermon he then preached at St Paul's croſs) to all the Roman-Catholics in the world, to produce but one clear and evident teſtimony, out of any Father, or famous writer, who flouriſhed within ſix hundred years after Chriſt, for any one of the many articles which the Romaniſts at this day maintain againſt the Church of England [*M*]. Two years after, he publiſhed his learned and excellent Apology for the Church

(*x*) Humfr. p. 108. See alſo his Life, prefixed to his Works, edit. 1609, fol.

[*L*] *In which eminent ſtation he behaved in a moſt diligent and exemplary manner*] *In hac Sariſburienſis Eccleſiæ ſpecula conſtitutus, jam non obdormiſcit, ſed in excubiis eſt, & ſuſceptam perſonam graviſſime repræſentat.* as Dr Humfrey expreſſes it (16). He became moſt remarkable for his apoſtolic doctrine, holy life, prudent government, incorrupt integrity, unſpotted chaſtity, and bountiful liberality. In his firſt viſitation he began, and in his laſt he perfected, ſuch a reformation, not only in the cathedral and parochial churches, but in all courts of his juriſdiction, as procured him, and the whole order of Biſhops, due reverence and eſteem. For he was a careful overlooker and ſtrict obſerver, not only of all the flocks, but alſo of the paſtors in his dioceſe: and he watched ſo narrowly upon the proceedings of his Chancellor and Archdeacons, and of his ſtewards and receivers, that they had no opportunities of being guilty of oppreſſion, injuſtice, and extortion, nor of being a burden to the people, and a ſcandal to himſelf. To prevent theſe and the like abuſes, for which the Epiſcopal courts are often too juſtly cenſured, he ſat often in his Conſiſtory-court, and ſaw that all things were carried rightly there: neither did he only ſit as Judge in the Conſiſtory, but alſo oftentimes as aſſiſtant on the bench of juſtice, [he being himſelf a Juſtice of the peace (17),] informing the Judges in ſuch cauſes where the law of God and the law of the land ſeemed to claſh, and exhorting the priſoners willingly and patiently to ſubmit to the ſtroke of juſtice.—With regard to his more private conduct: he roſe at four o'clock in the morning; and, after prayers with his family at five, and in the Cathedral about ſix, he was ſo fixed to his ſtudies all the morning, that he could not without great violence be drawn from them. After dinner, his doors and ears were open to all ſuitors; and it was obſerved of him, as of Titus, that he never ſent any ſad from him. Suitors being thus diſmiſſed, he heard, with great indifferency and patience, ſuch cauſes debated before him, as either were devolved to him as a judge, or referred to him as an arbitrator; and if he could ſpare any time from theſe troubleſome affairs, he reckoned as clear gain to his ſtudy. About nine o'clock at night, he called all his ſervants to an account how they had ſpent the day, and then went to prayers with them: from the chapel he withdrew again to his ſtudy 'till near midnight, and from thence to his bed; in which after he was laid, the gentleman of his bed-chamber read to him 'till he fell aſleep. This watchful and laborious kind of life, without any recreation at all, except what his neceſſary refreſhment at his meals, and a very few hours of reſt in the night afforded him, waſted his precious life too faſt, and undoubtedly haſtened his end (18).

[*M*] *He made a public challenge (in the ſermon he then preached at St Paul's-croſs) to all the Roman catholics in the world, &c*] His text was 1 Cor. xi. 23. and the challenge he made, in theſe words.—'If any 'learned man of our adverſaries, or if al the learned 'men that be alive, be hable to bryng any one ſuffi'cient ſentence out of any olde catholike Doctour, or 'Father, or out of any old general Councel, or out of 'the holy Scriptures of God, or any one example of 'the Primitive Churche, whereby it may clearely, and 'plainely be proved, that there was any private Maſſe 'in the whole worlde at that time for the ſpace of ſixe 'hundred yeres after Chriſte: or, that there was then any 'Communion miniſtred unto the people under one kynde: 'or, that the people had theire common praier then in a 'ſtrange tongue that they underſtoode not: or, that the 'Biſhop of Rome was then called an univerſal Biſhop, 'or the head of the univerſal Churche: or, that the 'people was then taught to beleve that Chriſtes bodie 'is really, ſubſtantiallie, corporallie, carnallie, or na'turallie in the Sacrament: or, that his bodie is, or 'may be, in a thouſand places or mo at one time: or 'that the Prieſt did then holde up the Sacrament over 'his head: or, that the people did then falle downe, 'and woorſhip it with godly honour: or, that the Sa'crament was then or now oughte to be hanged up 'under a canopie: or, that in the Sacrament after the 'woordes of conſecration, there remaine onely the ac'cidentes and ſhewes, without the ſubſtance of breadde 'and wyne: or that the Prieſte then divided the Sa'crament in three partes, and afterward received him'ſelf al alone: or, that whoſoever had ſaide, the Sa'crament is a figure, a pledge, a token or a remem'braunce of Chriſtes bodie, had therefore beene judged 'for an heretike: or, that it was laufull then to have '30, 20, 15, 10, or 5 maſſes ſaid in one churche, 'in one daie: or, that images then were ſet up in the 'churches, to th intent the people might woorſhip 'them: or, that the lai people was then forbidden to 'reade the woorde of God in their owne tongue: or, 'that it was then lawful for the Prieſt to pronounce the 'woordes of conſecration cloſely, and in ſilence to 'himſelfe: or, that the Prieſt had the authoritie to of'fer up Chriſt unto his Father: or, to communicate 'and receive the Sacrament for another, as they doo: 'or, to applie the vertue of Chriſtes death and paſſion 'to any manne by the meane of the Maſſe: or, that 'it was then thought a ſound doctrine, to teache the 'people, that maſſe *ex opere operato*, that is, even for 'that it is ſaide and done, is hable to remove any part 'of our ſinne: or, that then any chriſtian man called 'the Sacrament his Lord and God: or, that the peo'ple was then taught to beleve that the bodie of Chriſt 'remaineth in the Sacrament, as longe as the acciden'tes of the bread remaine there without corruption: 'or, that a mouſe, or anye other woorme, or beaſte, 'may eate the body of Chriſt (for ſo ſome of our ad'verſaries have ſaide and taught): or, that when Chriſt 'ſaide, *Hoc eſt corpus meum*, This woord *Hoc*, pointed 'not the bread, but *individuum vagum*, as ſome of 'them ſaie: or, that the accidentes, or fourmes, 'or ſhewes of bread and wine, bee the Sacramentes of 'Chriſtes bodie and bloudde, and not rather the very 'bread and wine itſelfe: or that the Sacrament is a 'ſigne or token of the bodie of Chriſte that lieth hid'den underneath it: or, that ignorance is the mother 'and cauſe of true devotion, and obedience.—I pro'miſe to yield unto him, and to ſubſcribe.'—I. This ſermon was printed at London in 1560, 8vo. And the Catholics being thus vigorouſly attacked in it, muſtered up all their forces to ſupport their ſinking cauſe. The foremoſt in the quarrel, was Dr *Henry Cole*, between whom and our learned Biſhop, ſeveral *letters* paſſed upon that occaſion, from March 18, 1559, 'till May 18, 1560 (19).—John Raſtell a Jeſuit, publiſhed likewiſe, *A Confutation of a Sermon pronounced by Mr* Jewel, *at Paul's-croſs*. Antw. 1564. As did Tho. Dorman, *A proof of certain Articles in Religion denied by Mr* Jewel, Antw. 1564. The former of which was anſwered by W. Fulke, and the latter by Dean Nowell. —Some time after, Thomas Heſkyns, D. D. came out with a large book, intitled, *The Parliament of Chriſte avouching and declaring the enacted and receaved trueth of the preſence of his bodie and bloode in the bleſſed Sacrament, and of other articles concerning the ſame, impugned in a wicked ſermon, by M. Juell*, Antw. 1566, fol.—But our Biſhop's moſt conſiderable antagoniſt, was Thomas Harding, who put out, *An Anſwere to Maiſter Juelles Chalenge*, Louvain 1564, 4to. reprinted in 1565, 8vo. with a preface by John Martiall. To which our learned author publiſhed a full anſwer, intitled, II. "A Replie unto *M. Hardinges* Anſweare: "By perufinge whereof the diſcrete, and diligent Rea"der may eaſily ſee, the weake and unſtable groundes "of the Romaine Religion, whiche of late hath beene "accompted Catholique." Lond. 1566, fol. It was tranſlated into Latin by William Whitaker, Fellow of Trinity-college in Cambridge, and publiſhed at Geneva, in 1578, 4to. with our author's Apology for the Church

(19) Humfr. p. 123, 138.

Church of England [N]. On the 26th of May 1565, the univerſity of Oxford conferred upon him the degree of Doctor in Divinity, though he was abſent (y); and the year following, he attended Queen Elizabeth, in the viſit ſhe made to that noble ſeminary of learning, and moderated at the Divinity-diſputations then held before her Majeſty (z). He continued to defend and adorn the Church of England, during the remainder of his valuable life; which was but ſhort: for he died, September 23, 1571, in the fiftieth year of his age, at Monkton Farley in Wiltſhire, and was buried about the middle of the choir of Salisbury-cathedral (a). Two years after, Dr Laurence Humfrey, the author of his life, laid a marble-ſtone on his grave, with an inſcription in his praiſe, which may be ſeen at the beginning of that life. Beſides the books already mentioned, Biſhop Jewel was author of ſeveral pieces, of which an account is given in the note [O]. His character is ſet out to great advantage, in the numerous copies of verſes that are printed at the end of the forementioned life. By which, and all that hath been ſaid of him, it appears, that he was pious, charitable, of a pleaſant, and affable temper; modeſt, meek, temperate, and a perfect maſter of his paſſions (b). He was indefatigable in his ſtudies; and by that means not only attained a thorough knowledge of moſt of the ſciences, but alſo acquired a great ſkill in the Latin, Greek, and Italian languages (c). Though he was a conſtant preacher, yet he never attempted to do it extempore, and without due preparation (d). His memory was wonderful [P]. With reſpect to his perſon, he was of a thin habit of body;

Church of England. To this *Replie*, Mr Harding put out two *Rejoinders*, Antw. 1566, 4to. and Louvain, 1567, 4to

[N] III. *Apology for the Church of England.*] This moſt excellent Vindication of our Reformed Church, was written by the truly learned author in elegant Latin, and printed at London in 1562, 8vo. An Engliſh tranſlation of it was printed the ſame year: another tranſlation, made by Anne, (one of the ſix learned daughters of Sir Antony Cooke, and) wife of Sir Nicolas Bacon, Lord Keeper of the Great Seal, was publiſhed in 1564, for common uſe, with the Queen's approbation, and the conſent of the Biſhops (20). It was alſo tranſlated in ſeveral other languages, particularly in Greek; which laſt was printed at Oxford in 1614, 8vo. As it ſtruck at the great Diana of the Papiſts, numbers of them undertook to confute it; viz. in *Latin* Alanus Copus, als Nicolas Harpsfield: and in *Engliſh*, Nicolas Sanders, Thomas Stapleton, John Raſtall, Tho. Dorman, Tho. Heſkyns, and Tho. Harding. This laſt being the moſt conſiderable, Biſhop Jewel profeſſedly writ a long and particular anſwer to him, laſhing the reſt only by the by. Harding had intitled his book, *A Confutation of the Apologie of the Churche of Englande*, Antw 1563, 4to. And the Biſhop's anſwer was intitled, IV. "A Defenſe of the "Apologie of the Churche of Englande. Conteinge an Anſweare to a certaine Booke lately ſet "foorthe by M. Hardinge, and entituled, *A Confutation of, &c.*" Lond. 1564, 1567. This defence was tranſlated into Latin, by Thomas Bradoc, B. D. and Fellow of Chriſt's college, Cambridge: printed at Geneva, 1600, fol. And in ſo great eſteem was it both abroad, and at home, that it was ordered by Queen Elizabeth, King James, and King Charles I. and by four ſucceſſive Archbiſhops, to be read and chained up in all pariſh churches throughout England and Wales (21).—Harding replying to it, in a book, which he named, *A Detection of ſundrie foule Errours, Lyes, Sclaunders, Corruptions, &c. uttered and practiſed by* Mr Jewel, *in a Book lately by him ſet forth, intitled*, A Defence of the Apologie, &c. Lovain, 1568, 4to. The Biſhop thereupon publiſhed, V. "An Anſweare "unto a Book written by Mr Hardinge, entituled, *A "Detection of ſundrie foule Errours*, &c." Lond. 1568, and 1570, fol.

[O] *Beſides the books already mentioned, Biſhop Jewel was author of ſeveral pieces.*] Namely theſe; VI. *Exhortatio ad Oxonienſes.* A Speech before the Univerſity. Of which the ſubſtance is printed in Dr Humfrey's life of our author (22). VII A ſermon preached 23 Dec. 1552, in the chapel of his college, being the commemoration-day of their founder, Biſhop R. Fox. From Pſ. cxii. 6. The ſubſtance of it is printed in the ſaid life (23). VIII. *Concio in Templo D. Mariæ, Oxon. A D.* 1550, *ex* 1 *Pet.* iv. 11. A Latin ſermon, preached in St Mary's Church Oxon. the Sunday after Aſcenſion-day, for his Bachelor of Divinity's degree. Inſerted in the ſame life (24): and tranſlated into Engliſh by R. V. printed at London, 1586, 8vo. IX. *Oratio in Aulâ Collegii Corporis Chriſti.* His farewel ſpeech to his fellow collegians, when they expelled him. The ſubſtance of it is printed in the aforeſaid life (25). X. *Epiſtola ad Scipionem patritium Venetum, de Cauſis cur Epiſcopi Angliæ ad Concilium Tridentinum non convenirent*, Ann. 1559. A Latin letter to Signor Scipio, a noble Venetian, with whom he had contracted an acquaintance at the time he went to ſtudy at Padua during his exile; wherein he aſſigns the cauſes, why none of the Engliſh Biſhops went to the Council of Trent. Printed at the end of Father Paul's Hiſtory of the Council of Trent, tranſlated into Engliſh by Sir Nath. Brent, ſecond edit. Lond. 1629, fol. The ſubſtance of it is alſo in Mr Strype's Annals (26). XI. A Letter to Henry Bullinger at Zurick; concerning the State of Religion in England, dated May 22, 1559 (27). XII. Another letter to the ſame, dated 8 Feb. 1566, concerning his controverſy with Harding, &c (28).—The following were publiſhed by John Garbrand. XIII. "A View "of a ſeditious Bull ſent into England from Pius V. "Biſhop of Rome, An. 1569." Lond. 1582, 8vo. XIV. "A Treatiſe of the Holy Scriptures, Ibid. 8vo. Both gathered out of the Biſhop's ſermons, preached in the cathedral church of Sarum, in 1570. XV. "A "Treatiſe of the Sacraments; gathered alſo out of "his ſermons." Lond. 1583, 8vo. XVI. "Cer-"tain Sermons preached before the Queen's Majeſty "at Paul's croſs, and elſewhere" Six in number. Lond. 1583, 8vo. XVII "An Expoſition on the "two Epiſtles of the Apoſtle St Paul to the Theſſalo-"nians." Lond 8vo. All theſe his Engliſh works were printed together at London in 1609, fol. As was in 1641, under his name, "An Anſwer to certain "frivolous Objections againſt the Government of the "Church of England," in one ſheet, 4to.—Beſides which Mr Wood informs us, that the following pieces of his remain in manuſcript. *A paraphraſtical Expoſition of the Epiſtles and Goſpels throughout the whole Year. A Continuate Expoſition of the Creed, Lord's-Prayer, and Ten Commandments. Commentary upon the Epiſtle to the Galatians; and upon that of St Peter* (29). Many of his letters are in the Collection of Records, in Part III. of Biſhop Burnet's Hiſtory of the Reformation.

[P] *His memory was wonderful.*] It was naturally ſtrong, but he very much improved it by art: ſo that he ſeldom forgot any thing he heard, that was remarkable, and entered it in his common-place-book. He could exactly repeat whatever he had written, after once reading. During the ringing of the bell, he committed to his memory a repetition ſermon, and pronounced it without heſitation. His cuſtom was, to write the heads of his diſcourſes, and imprint them ſo firmly upon his mind, that he uſed to ſay, "If ten "thouſand people were quarrelling or fighting all the "while he was preaching, yet they could not put him "out." In order to try him, Dr Parkhurſt having propoſed to him, ſome of the moſt difficult and barbarous words out of a Calendar; and John Hooper, Biſhop of Glouceſter, forty Welſh, Iriſh, and foreign words; He, after once or twice reading, and a little recollection, repeated them all by heart, backward and forward. And, in the year 1563, Sir Nicolas Bacon, Lord Keeper of the Great-Seal, having read to him, out of Eraſmus's Paraphraſe, the laſt clauſes of ten lines, confuſed,

body; which thinneſs was increaſed by his abſtemious way of living, his want of exerciſe (e), and his hard ſtudying; ſo that in his laſt days, he was quite emaciated (f). He built a Library at Saliſbury, which he furniſhed with valuable books (g). Some have repreſented him as a favourer of the Puritans (h); and, indeed, he was a man of due moderation, and 'wiſhed that All the remnants of former errors were taken away (i).' But he ſoon found, that the oppoſers of the Church were in general perſons of ſqueamiſh ſtomachs (k), who ſtrained at a gnat and ſwallowed a camel. He therefore made it a rule to himſelf, to yield abſolute obedience to his Sovereign, in all things of an indifferent nature (l). And, as for his refuſing to admit Dr Humfrey to a living in his dioceſe, becauſe he would not comply with the habits (m); it does not appear, that it was in the Biſhop's power to diſpenſe upon that point.

C

JOHNSON [SAMUEL], a Divine remarkable both for his writings and ſufferings, was born in the county of Stafford (a) in the year 1649. Being at a proper age put to St Paul's ſchool in London, he made an extraordinary proficiency in claſſical learning, and was removed thence to Trinity-college in Cambridge (b); where proſecuting his ſtudies with diſtinguiſhed application and ſucceſs [A], he turned his thoughts after ſome time to Divinity; and entering into Holy Orders, was preſented by Mr Robert Biddulph (c) to the rectory of Corringham in the hundreds of Eſſex, on the firſt of March 1669-70 (d). But he did not reſide long upon his living; for the air of the place being found not to agree with his conſtitution, he provided a curate with a handſome ſalary (e), and ſettled himſelf in London, going occaſionally thence to his pariſh as often as his health would permit *. This ſituation proved the more agreeable, as the bent of his inclination led him ſtrongly to political ſubjects [B]. The turn he took in this ſtudy, whereon his enquiries were principally directed to the hiſtory and conſtitution of his country, ſoon brought him into the acquaintance of thoſe who oppoſed the meaſures of the Court; and in a few years, being recommended to the Earl of Eſſex [C] and the Lord Ruſſel, the latter

(a) Life of Dean Colet, by Dr Knight, p. 411. Lond. 1724, 8vo. In the Memorial of our author's Life, prefixed to his Works, edit. 1710, fol. p. iii. his birth is placed in Warwickſh ire.

(b) Iidem ibid.

(c) Probably deſcended from an ancient family of his name in Staffordſhire. Dugdale's Warwickſhire, Vol. I. 2d edit. p. 34.

(d) Newcourt's Repertorium, Vol. II. p. 193. If the date of his birth be not a miſtake, he was now no more than 20 years of age, and therefore could not by the Canons be ſafely in Prieſt's orders. He ſeems alſo to have taken no degree in the univerſity, his name being printed without any addition in the title-page of his Works.

(e) Viz. 40 l. a year, half the income of the living. Memorials, &c.

* Id. ibid.

[A] *He proſecuted his ſtudies with diſtinguiſhed application and ſucceſs.*] As ſoon as he was fit for the univerſity, he was made Library-keeper of St Paul's ſchool, in which ſtation he ſtudied the oriental languages with uncommon diligence, and made ſuch a progreſs therein, as was afterwards of great uſe to him in the ſtudy of Divinity (1).

(1) Memorials of Mr S. Johnſon, prefixed to his Works, p. iii.

[B] *His inclination led him to politics.*] He had even made ſome progreſs in this ſtudy when he was preſented to his living. This is more than probable from ſome words in his *Eſſay concerning Parliaments at a certainty* (2); where having quoted a paſſage out of Dr Heylin's *Obſervations upon Hammond L'Eſtrange's Hiſtory of the Reign of King Charles I.* he expreſſes himſelf thus: 'I have not the book now by me, but 'I will be anſwerable for the ſubſtance of this quota'tion, having retained this paſſage in my head above 'theſe five and twenty years.' This eſſay being evidently levelled againſt the continuation of the ſame Parliament above three years, muſt be written not later than 1695, when the ſecond Parliament of King William, which had continued five years, was diſſolved, and a new one called (3). Theſe words of our author are alſo a conſpicuous proof of the ſtrong bent of his inclination to the ſtudy of politics, a willing memory being always a good one. But there is a ſtill clearer evidence of this early bent to that ſtudy. In another piece, printed in 1689, ſpeaking of Biſhop Burnet's famous paſtoral letter, publiſhed a little before, he writes thus. 'I will preſently join iſſue with this conquering Biſhop, for I have not been afraid of a conqueror theſe eighteen years. For ſo long ſince I uſed to walk by the New-Exchange gate, where ſtood an overgrown porter with his gown and ſtaff, which gave him a ſemblance of authority; whoſe buſineſs it was to regulate the coachmen before the entrance; and would make nothing of lifting a coachman off his box, and beating him, and throwing him into his box again. I have ſeveral times, continues he, looked up at this tall maſtering fellow, and put the caſe: Suppoſe this conqueror ſhould take me up under his arm like a gizzard, and run away with me, am I his ſubject; no, thought I, I am my own man and not his: and having thus invaded me, if I could not otherwiſe reſcue myſelf from him, I would ſmite him under the fifth rib. From that time I have had a clear idea of conqueſt, and no conqueror in the world can have any more right to me than that fellow (4).' This turn of his genius was obſerved likewiſe by his patron, when he preſented him to the living; at which time he warned him againſt the danger of it to one of his profeſſion, and adviſed him to read Bracton, and Forteſcue *de Laudibus Legum Angliæ*, &c. that he might be acquainted with the old Engliſh conſtitution, but by no means to make politics the ſubject of his ſermons; becauſe he had taken notice, that many clergymen had given their hearers bad impreſſions, and filled their heads with falſe notions of thoſe things which they had a very imperfect knowledge of themſelves, and that matters of faith and practice were more ſuitable entertainment from the Pulpit. Mr Johnſon religiouſly obſerved this advice, as we are aſſured by one of his intimate acquaintance; who obſerves further, that tho' by applying himſelf to the ſtudy of the books abovementioned, he became as well verſed in the Engliſh conſtitution as any man, he never meddled with politics in the pulpit, but made a more proper uſe of them: for no man (continues this friend) wrote with more boldneſs and zeal for the legal polity of his country, or ſuited his writings better to the circumſtances of times and ſeaſons (5).

(5) Memorials, &c. p. iv.

[C] *He was recommended to the Earl of Eſſex.*] Mr Johnſon was very ſenſible of this honour, and mentions a converſation, wherein that learned Nobleman (ſo he ſtiles his Lordſhip) gave him a particular account of the arguments he made uſe of in the Houſe of Lords for the bill of Excluſion. Our author having repeated theſe, concludes in the following terms. 'Thus that great man argued, but care was 'taken that he ſhould argue for the good of his coun'try no more; and therefore we that are left behind, 'partly to bewail the loſs of ſuch great men, and 'partly to imitate them, ought to uphold their cauſe.' In proceeding, Mr Johnſon relates the account given him by his Lordſhip, of the arguments urged at the ſame time againſt the ſaid bill, and cloſes the whole

With

latter of those noblemen took him into his family in the character of his domestic chaplain [*D*]. This appointment, which must needs be of great advantage to his reputation, furnished him some time after with an opportunity of increasing it by displaying his political talents: for while the bill of exclusion against the Duke of York was carried on by that Lord at the head of his party in the House of Commons, his Chaplain, to promote the same design, engaged the ecclesiastical champion of passive-obedience, Dr Hickes, in a book intituled *Julian the Apostate* [*E*]. An attack against the established doctrine of the time, executed with so much spirit as this was, did not fail to raise the attention of the world (*f*). It was published in 1682, and several answers to it appearing in that and the following year, the chief of them were taken to task the same year, in a reply to Dr Hickes and another gentleman, by our author, in a piece printed with this title, *Julian's Arts to undermine and extirpate Christianity, together with Answers to Constantius the Apostate and Jovian* (*g*). This treatise was printed and entered at Stationers-Hall, in 1683, in order to be published; but on the seizure of his patron * in June, he yielded to the advice of his friends, in suppressing and concealing it (*b*); a caution which saved him for a while, and broke the force of a blow aimed against him by the Court about two months after the death of Lord Russel. For though, upon an examination before the Privy-Council, he was committed on the third of August to the Gate-house [*F*], yet he was presently

(*f*) Ath. Ox. Vol. II. col. 1002, where Mr Wood tells us, it was called by our author's party the impregnable bulwark of their cause.

(*g*) Id. ibid. col. 1003.

* Lord Russel. See his article.

(*b*) It was probably by the same advice that he suppressed his Remarks on Dr Sherlock's Case of Resistance, which was wrote this year, though not published 'till after the Revolution. Preface to that piece, in his Works, p. 237. first edit. 1710, folio.

with this remark. 'If I have broke any rules in repeating that great man's private discourse, now it is done I cannot help it: But I say, let his integrity be known, and speak as loud as his blood cries. And I am sure they that would stifle that man's honour would stifle his death (6).'

[*D*] *He was made domestic chaplain to Lord Russel.*] The exact time of this appointment, which we are told by our author's friend proved to the mutual satisfaction of both parties, is not mentioned by that friend. Perhaps it might be about the time of Mr Johnson's preaching his sermon against Popery before the Lord-Mayor and Aldermen at Guildhall-chapel, on Palm-Sunday 1679. This discourse was printed the same year, and appears again at the head of his Second five years Struggle against Popery, published in 1689, presently after the Revolution; whereby he plainly intimates, that his first five years struggle had it's æra in that discourse (7). Accordingly, he tells us in another place (8), that he threw away his liberty with both hands and with his eyes open for his country's service, some years before it was taken away from him [in 1683].

[*E*] *Julian the Apostate.*] The design of this piece * in general was to expose the doctrines of Passive-Obedience and Non Resistance, which were carried at this time to an extravagant height, and to shew the great difference between the case of the primitive Christians, who had the laws against them, and ours, who have the laws on our side. Dr Hickes, in a sermon preached before the Lord-Mayor in 1681, which was published this year, had inculcated the Court-doctrine in the strongest terms; and being reputed one of the most learned divines of the time, Mr Johnson thought proper to single out this champion in particular, and the last chapter in his treatise is employed in answering the Doctor's sermon. Besides the two persons mentioned in the text, our author's book was attacked, (1.) By Mr Tho. Long B. D. Prebendary of Exeter, in his *Vindication of Primitive Christianity in point of Obedience to their Princes, against the calumnies of a book intituled*, The Life of Julian the Apostate, *written by* Ecobolius *the Sophist*. Lond. 1683, 8vo. (2.) By an anonymous author, in *Some Remarks upon a late popular piece of nonsense, called Julian the* Apostate, &c. *Together with a Vindication of his Royal Highness the Duke of York, against many impudent Calumnies, foolish Arguments, false Reasonings, imposed upon the Public from several scandalous and seditious pamphlets, especially from one more notorious and generally virulent than the rest, intituled*, A Tory Plot, Lond. 1682, in a thin folio (9). (3.) By the author of *The Triumph of Christianity: or*, The Life of F. Julian the Apostate: *With Remarks contained in the Resolution of several Queries. To which are added, Reflections upon a pamphlet called*, Seasonable Remarks on the Fall of the Emperor Julian: *And on part of a late pernicious book, intituled*, A short Account of the Life of Julian, &c. Lond. 1683, 8vo (10). The first of these answerers (11), as well as Dr Hickes (12), charged our author with receiving large contributions in the compiling of his book, from Mr Tho. Hunt, who published *An Argument for the Bishops Right in judging in capital Causes in Parliament* †: *With a Postscript for rectifying some Mistakes in some of the inferior Clergy, mischievous to our Government and Religion*. Lond. 1682, 8vo. This charge, which is no where denied by Mr Johnson, receives some countenance from a passage in one of his treatises, where he writes thus. 'Armorum quædam sunt tuitionis parcis, &c. says Bracton. The people of England have weapons for keeping the peace, but our peaceful clergy knew a better way, and beat all our weapons into ploughshares and pruning hooks: and when Mr Hunt and I endeavoured to restore them to their former lawful shape and use, they said we had been down at the forges of the Philistines, and dealt with Jesuits; and Dr Pelling (13) could shew some pages, which Mr Hunt had plundered out of Doleman (14), though I verily believe what he told me, that he had never seen the book (15).

[*F*] *He was committed close prisoner to the Gate-house.*] He was examined by the Lord-Keeper North upon these two points, (1.) Whether he was the author of a book called *Julian's Arts and method to undermine and extirpate Christianity?* To which having answered in the affirmative, he was interrogated, Why, after that book had been so long entered at Stationers-Hall, it was not published? To which he replied, That the nation was in too great a ferment to have the matter further debated at that time. Upon this he was commanded to produce one of these books to the Council, and if they approved it it should be published. But he answered, he had suppressed them himself, so that they were now his own private thoughts, for which he was not accountable to any power on earth. The Council dismissed him at that time, but sent for him twice afterwards, pressed the same thing upon him, and received the same answers; for which they sent him presently to the Gate-house by the following commitment.

'*Sir Leoline Jenkins, Knight, one of His Majesty's most honourable Privy-Council, and Principal Secretary of State.*

'*Whereas Samuel Johnson, Clerk, hath (as appeareth by information upon oath) caused three thousand copies of a certain book, called* Julian's Arts to extirpate and undermine Christianity, &c. *to be printed, in order to the publishing thereof: and the said Samuel Johnson confesseth, that he was the author thereof, and had the said three thousand copies or thereabouts in his custody, and hath delivered the same to a friend to be kept, until he shall see it fit time for the publishing thereof; and refuseth upon his examination to produce any of the said printed copies, or to discover where and in whose custody the same are. And whereas it is justly suspected that the said book is a treasonable book, and intended to be published at such time or times as it shall be of dangerous consequence to the public peace to do it: These are therefore, in His Majesty's name, to will and require you to take the body of the said Samuel Johnson into your custody in His Majesty's prison of the Gate-house, and him safely to keep there, until he discover the said copies; to the end that if they be treasonable, they may effectually be proceeded upon and suppressed, or he the said Samuel Johnson be otherwise delivered by due course of law.*

'*And*

ſently bailed thence by two of his friends (*i*), and all poſſible endeavours to diſcover and ſeize the copies of his book being fruſtrated, the Court was obliged to drop that proſecution [*G*]. But the matter did not reſt here; every attempt upon the Duke of York's ſucceſſion gave the King great uneaſineſs; a more effectual method was therefore taken with our author, and being brought to a trial in the King's-Bench for writing his book [*H*], he was there ſentenced February 11, 1683-4, to pay 500 marks for a fine to the King; to find ſureties for his good behaviour for a year; and to be committed to the priſon of the King's-Bench, 'till this be paid and done; his book was alſo ordered to be burnt by the hands of the common hangman (*k*). Not being able to diſcharge his fine, he continued a priſoner. However, he ſoon obtained the Rules by the aſſiſtance of his friends (*l*), who likewiſe both relieved his neceſſities [*I*], and enabled him to print ſome pieces which he wrote againſt Popery in 1685, and to diſperſe ſeveral of them about the country at his own expence (*m*). Theſe were anſwered in three Obſervators by Sir Roger L'Eſtrange, who alſo diſcovering the Printer, ſeized all the copies that were found in his hands [*K*]. He perſevered

[*G*] *After the ſtricteſt ſearch to no purpoſe, &c.*] To this end a meſſenger was ſent to ſearch the houſe, where, by the information, the copies lay, but miſſed them; which was the more extraordinary, becauſe, after the firſt ſearch, his friends apprehending a further enquiry, and not thinking them ſecure enough, removed them; and when the meſſenger ſearched again, he found the firſt place but miſſed the ſecond; after which they were removed to a third place in the ſame houſe, and upon a freſh ſearch the meſſenger found the ſecond place but miſſed the third. Thus diſappointed, recourſe was had to promiſes, and a conſiderable ſum, beſides the favour of the Court, was offered for one of the copies, to the perſon in whoſe hands they were ſuppoſed to be; which was refuſed (17).

(17) Ibid. p. 8.

[*H*] *Brought to a tryal for his firſt book.*] The general propoſition of this treatiſe, which has been already given, was certainly both defenſible in itſelf, and might have been defended without any danger, by carefully keeping within the bounds there mentioned. But ſuch a cautious proceeding neither ſuited Mr Johnſon's temper in general, nor his particular deſign in this attack. On the contrary, he took care, at the entrance in the preface, to inform his readers, that the book was written purpoſely to promote the bill of Excluſion, and does not ſcruple to charge all the oppoſers of that bill with a deſign of introducing Popery through the door of Paſſive-Obedience. It may be obſerved, that the Life of Julian was the ſecond attempt with his pen in his firſt five years ſtruggle, as he terms it, againſt Popery and Tyranny, wherein we have already ſeen him declaring, that he even courted danger, and run after it with both hands and with his eyes open (18). No wonder then that he met with it at length, however righteous his cauſe may now be thought, and that the proſecution was begun and carried on, as we are told it was (19), by the intereſt of the Duke of York. Upon the tryal, our author's Counſel, Mr Wallop (20), urged in his behalf, that he had offended againſt no law of the land; that the book taken together was innocent, but any treatiſe might be made criminal, if dealt with as thoſe who drew up the information had dealt with this. However, the ordinary courſe of the law was obſerved, and the information grounded, as uſual in ſuch caſes, upon ſome obnoxious paſſages extracted from the book. On the other hand, the Lord Chief-Juſtice Jefferies upbraided Mr Johnſon for meddling with what did not belong to him, and told him ſcoffingly, that he would give him a text, which was, *Let every man ſtudy to be quiet, and mind his own buſineſs.* To which Mr Johnſon replied, that he did mind his buſineſs as an Engliſhman when he wrote that book (21).

(18) In remark [*D*].

(19) Memorials, p. 8.

(20) Our author always retained a grateful ſenſe of this gentleman's kindneſs to him, and after the Revolution reproached the government for not making him a Judge. See preface to his Laſt Five Years Struggle, &c.

(21) Memorials, p. 9.

[*I*] *His friends relieved him.*] The Duke of Monmouth's rebellion proved of great ſervice to Mr Johnſon in this reſpect; ſeveral ſuſpected perſons being taken up and ſent to priſon on that occaſion, brought him good company. This was a lucky incident; for it was reckoned criminal at that time to viſit or ſhew him any kindneſs, ſo that few had courage to come near him or give him any relief, by which means he was reduced very low. About this time his mother, whom he had maintained for many years, ſent to him for ſubſiſtence; and ſuch was his filial affection, that though he knew not how to ſupply his own wants, and thoſe of his wife and children, and was told on this occaſion, that charity begins at home, he ſent her forty ſhillings, though he had but fifty in the world, ſaying, that he would do his duty and truſt Providence for his own ſupply (22). The event ſhewed, that his hopes were not in vain; for the next morning he had ten pounds ſent him by an unknown hand, which he afterwards knew to have come from Dr Edward Fowler, afterwards Biſhop of Glouceſter. And we ſhall ſee preſently (23), that, during this impriſonment, he received a much larger ſum from Dr Tillotſon. But the greateſt relief was ſupplied by Mr Hampden, who was in the ſame priſon the whole time of his confinement (24).

(22) Ibid. p. 10.

(23) In remark [*U*], note *.

(24) See the article HAMPDEN [JOHN].

[*K*] *Sir Roger L'Eſtrange ſeized all the copies, &c.*] The firſt piece in this collection was written in the beginning of the year 1685, when there was a project on foot for reconciling of the two Churches [of Rome and England]; but by this ſtandard of the true Proteſtant doctrine of the latter, any ſuch accommodation was ſhewn to be impoſſible. So far the advertiſement prefixed informs us. The title is, *The Church of England as by Law eſtabliſhed: Being the very Doctrine and expreſs Words of the Homilies againſt Popery.* This was preſently followed by *Godly and wholſome Doctrine, and neceſſary for theſe Times: being the ſecond part of the Homily concerning the Holy Ghoſt, diſſolving this doubt, whether all Men may rightly challenge to themſelves the Holy Ghoſt or no?* The occaſion of writing this paper is likewiſe given in an advertiſement in theſe terms. 'I found it neceſſary to add this whole ſermon 'out of the Homilies to the former collection, leſt any 'Papiſt ſhould ſay that the former was weeded out of 'the Homilies, and that the tenor of them is not ſo 'oppoſite to Popery as the former collection would 'perſwade us.' The third piece, intituled *A Short Diſſuaſive from Popery, and from countenancing and encouraging of Papiſts*, was publiſhed immediately after the overthrow of the Duke of Monmouth, when the Proteſtant intereſt was at a very low ebb, and the Papiſts ſo inſolent with that ſucceſs, that there was great reaſon to uſe the utmoſt endeavours to hinder all unſteady and wavering Proteſtants from joining and complying with the then prevailing intereſt (25). Here, ſays Mr Johnſon, the Obſervator gave me a caſt of all his offices at once; for after (as ſuperintendant of the preſs) he had made a diſcovery where theſe three laſt papers were printed; in the ſecond place, as Juſtice of Peace, he forced James Aſtwood the Printer to take the oath *ex officio*, and to accuſe both himſelf as the Printer of them, and me as the author, who paid for printing of five thouſand of each, which he did by menacing him with going [being ſent] to Newgate; and by a horrid oath that he was the King's ſubject, and therefore he would make him to ſwear (26): and laſtly, as the mercenary ſcribbler of the Popiſh faction, who, under the countenance of a Church of England champion, was hired to prepare the way twice a week for Popery and ſlavery, he ſpent three virulent Obſervators upon them. 'The papers, continues our author (27), are able to ſpeak for themſelves; and as for his awkward way of wreſting and perverting them, it was ſufficiently expoſed by the following paper, which for that reaſon I took care to have every where poſted up. This laſt paper carried the following title, *A Parcel of wry Reaſons and wrong Inferences, but right Obſervator.*'

(25) This account, as well as the two former, is given in an Advertiſement prefixed by our author to the edition of them in his Second Five Years Struggle, &c.

(26) The oath *ex officio* was aboliſhed by a ſtatute in the preceding reign. See the General Hiſtories of England.

(27) See his Works, p. 143.

[*L*] *Several*

perſevered in printing occaſional pieces againſt the deſigns of King James II. to introduce Popery the following year [*L*]; and, upon the encampment of the army upon Hounſlow-heath, he drew up *An humble and hearty Addreſs to all the Engliſh Proteſtants in the preſent Army* [*M*]. He had diſperſed about 1000 copies of this paper, when the reſt of the impreſſion was ſeized, and himſelf put into cloſe cuſtody in order to his ſecond tryal at the King's-Bench [*N*]; where he was condemned to ſtand in the pillory in Palace-

[*L*] *Several pieces againſt the meaſures taken to introduce Popery the next year.*] Theſe were, (I.) *An Oration of* John Hales * *to the Queen's Majeſty* [Queen Elizabeth], *and delivered to her by a certain Nobleman at her firſt entrance into her reign.* This paper was publiſhed when the ſecond ſeſſion of the Packed-Parliament approached, which ſays Mr Johnſon) was ſo unduly elected and returned, and had done and omitted ſuch things in the former ſeſſion, when the Popiſh party was not as yet ſo victorious and triumphant as now, that all manner of miſchief might reaſonably be expected from this ſeſſion. But in order to ſhew them the invalidity of their proceedings, in caſe they ſhould be to the prejudice of their country; and withal to give them a looking-glaſs of our own times, as well as to revive the memory of a Popiſh reign, to which miſery and calamity is always inſeparably united; I thought it much better to reprint this oration of Mr Hales, which anſwers all theſe purpoſes, than venture to write any thing of my own (28). At the opening of this ſeſſion it was imperiouſly demanded, that the ſtanding army ſhould be eſtabliſhed, and the militia diſſolved; the immediate conſequence whereof was the diſarming the nation, and expoſing it naked and defenceleſs to this army, which had then been our maſters by law. The Parliament, to their honour, continues Mr Johnſon, refuſed their concurrence to ſo deſtructive a deſign, though I had ſent very many members the beſt reaſons I could think of for their compliance with that demand; which are theſe that follow (29). (II.) *Several Reaſons for the Eſtabliſhment of a Standing Army, and diſſolving the Militia.* As this paper is ſhort, and undoubtedly paved the way for Mr Johnſon's third proſecution, we ſhall lay it before the reader as follows. (1.) 'Becauſe the lords lieutenants, deputy lieutenants, and the whole militia, 'that is to ſay, the lords, gentlemen, and freeholders, 'of England, are not fit to be truſted with their own 'laws, lives, liberties, and eſtates; and therefore 'ought to have guardians and keepers aſſigned them. '(2.) Becauſe mercenary ſoldiers, who fight for twelve 'pence a day, will fight better, a having more to 'loſe than either the nobility or gentry. (3.) Becauſe there are no Iriſh Papiſts in the militia, who 'are certainly the beſt ſoldiers in the world; for they 'have ſlain men, women, and children, by hundreds 'of thouſands at once. (4.) Becauſe the dragooners 'have made more converts than all the biſhops and 'clergy of France. (5.) The Parliament ought to 'eſtabliſh one ſtanding army at the leaſt, becauſe indeed there will be need of two, that one of them 'may defend the people from the other. (6.) Becauſe 'it is a thouſand pities that a brave Popiſh army 'ſhould be a riot. (7.) Unleſs it be eſtabliſhed by 'Act of Parliament, the Juſtices of Peace will be forced to ſuppreſs it in their own defence; for they will 'be loth to forfeit a hundred pounds every day they 'riſe, out of compliment to a Popiſh rout. 13 Hen. 'IV. c. 7. 2 Hen. V. c. 8. (8.) Becauſe a Popiſh 'army is a nullity. For all Papiſts are diſabled (and 'puniſhable beſides) from bearing any office in camp, 'troop, band, or company of ſoldiers; and are ſo 'far diſarmed by law, that they cannot wear a ſword, 'ſo much as in their own defence, without the allowance of four Juſtices of Peace of the county: and 'then upon a march they will be perfectly inchanted; 'for they are not able to ſtir above five miles from 'their own dwelling-houſe. 3 Jac. c. 5. Sect. 8, 27, '28, 29. 35 Eliz. c 2. 3 Jac. c. 5. Sect. 7. (9.) 'Becauſe perſons utterly diſabled by law are utterly 'unauthorized; and therefore the void commiſſions of 'killing and ſlaying in the hands of Papiſts, can only 'enable them to maſſacre and murder.' After the Parliament was prorogued for their addreſs of the 17th of November, leaſt all Engliſh principles ſhould be forgotten in the intervals of Parliament, our author publiſhed a paper upon the following ſubjects. (III.) *Of Magiſtracy. Of Prerogative by Divine right. Of Obedience. Of Laws* †. About this time, Mr Johnſon not approving the method, taken by his brethren, in entering into the Popiſh controverſy, which he thought an ill judged ſubmiſſion, ſeeing Popery was proſcribed by the laws of the land upon the juſteſt reaſons, he therefore publiſhed thoſe reaſons in a paper, intituled, (IV.) *The Grounds and Reaſons of the Laws againſt Popery.*

[*M*] *An humble and hearty Addreſs to all the Engliſh Proteſtants, &c.*] This addreſs, which had ſo remarkable an effect upon that army, as well as upon the author of it, runs thus.

'Gentlemen,

'Next to the duty which you owe to God, which 'ought to be the principal care of men of your profeſſion (becauſe you carry your lives in your hands, 'and often look death in the face). The ſecond thing 'which deſerves your conſideration is the ſervice of 'your native country, wherein you drew your firſt 'breath, and breathed a free Engliſh air. Now I 'would deſire you to conſider how well you comply 'with theſe two main points, by engaging in this 'preſent ſervice.

'Is it in the name of God and for his ſervice that 'you have joined yourſelves with Papiſts, who will 'indeed fight for the Maſs-book, but burn the Bible, 'and who ſeek to extirpate the Proteſtant religion 'with your ſwords, becauſe they cannot do it with 'their own? And will you be aiding and aſſiſting to 'ſet up Maſs houſes, to erect that Popiſh kingdom of 'darkneſs and deſolation amongſt us, and to train up 'all our children in Popery? How can you do theſe 'things, and yet call yourſelves Proteſtants?

'And then what ſervice can be done your country, 'by being under the command of French and Iriſh 'Papiſts, and by bringing the nation under a foreign 'yoke? Will you help them to make forcible entry 'into the houſes of your countrymen, under the name 'of quartering, directly contrary to *Magna Charta* 'and the *Petition of Right*? Will you be aiding and 'aſſiſting to all the murders and outrages which they 'ſhall commit by their void commiſſions? Which 'were declared illegal, and ſufficiently blaſted by both 'Houſes of Parliament (if there had been any need of 'it); for it was very well known before, that a Papiſt cannot have a commiſſion, but by the law is utterly diſabled and diſarmed. Will you exchange 'your birthright of Engliſh laws and liberties for martial or club-law, and help to deſtroy all others, only 'to be eaten laſt yourſelves? If I know you well, as 'you are Engliſhmen, you hate and ſcorn theſe things. 'And therefore be not unequally yoked with *idolatrous 'and bloody Papiſts. Be valiant for the truth, and 'ſhew yourſelves men.*

'The ſame conſiderations are likewiſe humbly offered to all the Engliſh ſeamen, who have been the 'bulwark of this nation againſt Popery and Slavery 'ever ſince eighty-eight (30).*

[*N*] *He was put into cloſe cuſtody in order to a tryal.*] About three or four days after Whitſunday, there came an order, which our author read, and ſaw was ſigned, to make him a cloſe priſoner, though he was in *arcta cuſtodia* before, wrongfully as he ſays, having purchaſed the rules, and given two thouſand pounds ſecurity. The Marſhal purſued this order, in removing him from one cloſe hole to another 'till he had almoſt ſtifled him, and perhaps, continues he, they intended to murder me by a ſide wind. 'I ſent him word by his Steward, who is ſtill living (31), that I had rather be ſhot than be ſo uſed. It coſt me two or three fees in motions at the King's-Bench-bar to have the liberty of the priſon, and that Counſel might come to me, becauſe I had likewiſe notice of a tryal. But my friends above and the Court of King's-Bench were at that time of a mind, for the oppreſſion they laid on, the other would not take off (32).' At his tryal, he made ſome exceptions againſt the information, and, among other things, that there was no averment of an army in it, and ſaid there could be no ſuch thing, becauſe it was contrary to the law of England. Whereupon,

(*o*) Memorials, p. 11. and Tillotſon's Life by Birch.

Whereupon, both the Attorney-General Sawyer and the Court of King's-Bench ſaid, that the camp at Hounſlow-heath was not an army, but only the King's guards. I replied, ſays he, that I thought they were too far off for guards, and in too great a number. To which the Lord Chief-Juſtice Herbert anſwered, that the King wanted a greater number to defend him from my papers. Our author obſerves alſo, that the Five diſpenſing Powers were firſt publiſhed at this tryal (33).

(33) Id. ibid. and p. 312.

[*O*] *After he had been degraded by the Eccleſiaſtical Court.*] The Biſhop of London, Dr Compton, who was Mr Johnſon's dioceſan, being himſelf then under a ſuſpenſion (34), Dr Crew Biſhop of Durham, Dr Sprat Biſhop of Rocheſter, and Dr White Biſhop of Peterborough, Commiſſioners for the dioceſe of London, performed this ceremony on the 2d of November, in the Chapter houſe of St Paul's church, where Dr Sherlock and other clergymen attended. But Dr Stillingfleet, then Dean of St Paul's, refuſed to have any hand in it. Mr Johnſon's friend already mentioned tells us, that his behaviour on this occaſion was ſo becoming that very character his enemies would have deprived him of, that it melted ſome of their hearts, and forced them to acknowledge there was ſomething very valuable in him. Among other things which he ſaid to the divines then preſent, he told them in the moſt pathetic manner, *It could not but grieve him to think, that ſince all he had wrote was deſigned to keep their gowns on their backs, they ſhould be made the unhappy inſtruments to pull off his; and begged them to conſider, whether they were not making rods for themſelves.* When they came to the formality of putting a Bible in his hand and taking it from him again, he was much affected, and parted from it with difficulty, kiſſing it, and ſaying with tears, that *they could not however deprive him of the uſe and benefit of that ſacred depoſitum* (35).

(34) For diſobeying the King's orders to ſuſpend Dr Sharp, afterwards Archbiſhop of York, for a ſermon preached by him at his pariſh church of St Giles's in the Fields. General hiſtories of England under the year 1686.

(35) Memorials, p. 12.

[*P*] *He bore the whipping with firmneſs and alacrity.*] He obſerved afterwards to one of his moſt intimate friends, that this text of ſcripture, which came ſuddenly into his mind, *He endured the croſs and deſpiſed the ſhame*, ſo much animated and ſupported him in his bitter journey, that had he not thought it would have looked like vain-glory, he could have ſung a pſalm while the executioner was doing his office, with as much compoſure and chearfulneſs as ever he had done in the church, though at the ſame time he had a quick ſenſe of every ſtripe, which was given him with a whip of nine cords, knotted to the number of 317. This was the more remarkable in him, becauſe he had not the leaſt tincture of enthuſiaſm. There is no good reaſon to call in queſtion the teſtimony here given of Mr Johnſon's fortitude on this occaſion by his intimate acquaintance; and the obſervation is very conſiſtent therewith, that he was endued with a natural hardineſs of temper to a great degree, which being inſpirited by an eager deſire (as appears from his own account) to ſuffer for the cauſe he had eſpouſed, ſeems to be the ground-work of that Chriſtian-like behaviour; neither does this truth furniſh any excuſe for the ſcoffs which were thrown upon him by his enemies, and even by the King himſelf, at this juncture. Of which we have the following ſtory. A Popiſh Prieſt, 'tis ſaid, made an offer, for two hundred pounds, to get the whipping part of the ſentence remitted: the money was lodged by one of Mr Johnſon's friends for the Prieſt, if he performed what he undertook. The man uſed his endeavours, but to no purpoſe, for the King was deaf to all intreaties; the anſwer was, *That ſince Mr Johnſon had the ſpirit of martyrdom, 'twas fit he ſhould ſuffer* (36).

(36) Id. ibid.

[*Q*] *His degradation not being duly performed, he ſtill kept his living.*] The defect lay in omitting to ſtrip him of his caſſock. So that when Mr Berrow, who was preſented February 4, 1686-7, by his Majeſty to the living, applied to the forementioned Biſhops for inſtitution; they being ſenſible of the omiſſion, told him he ſhould have it, if he could get two Common Lawyers and two Civilians to give it under their hands that Mr Johnſon was legally degraded, and thereby deprived. The Clerk brought them the hand of one inconſiderable Common-Lawyer, that the degradation and deprivation were both good. But the Civilian to whom he applied was more modeſt, and only ſigned a paper with his opinion, that if Mr Johnſon was legally degraded, he was *ipſo facto* deprived. But this not proving ſatisfactory to the three Biſhops, Mr Berrow was obliged to give them a bond of 500l. to indemnify them, before they would grant him inſtitution. Having received it, he went to Corringham for induction; but Mr Johnſon's pariſhioners oppoſed him, ſo that he could never get entrance, and was obliged to return *re infecta*. This was very extraordinary in his pariſhioners, conſidering the violence of the times. But it proceeded from their great reſpect to him, and experience of his goodneſs; for no miniſter was ever more obliging to his people than he, who was ſo far from exacting upon them, that he would rather quit his own right, than be any ways grievous to them: of which there is one remarkable inſtance among many others. One of his neighbours owing him 20l. upon bond, and falling afterwards into low circumſtances, Mr Johnſon was adviſed to put the bond in execution, while ſomething was to be had; but he abſolutely refuſed it, and choſe rather to loſe the money, ſaying, *That no man's ruin ſhould lye at his door* (37). In confirmation of what is thus alledged by his friend, we ſhall inſert the following paſſage from his notes on Biſhop Burnet's Paſtoral Letter. When our author's proſecution lay before the Parliament after the Revolution, that prelate, it ſeems, ſent to him not to name perſons. 'I know, ſays Mr Johnſon, the language 'of that day was don't ſmut, that is, let the oppreſſors 'of your country and of you eſcape ſcot-free. I gave 'an Engliſh reply to that meſſage, *Let him mind his 'buſineſs, I will mind mine.* His Bookſeller, Mr 'Chiſwell, by whom I had the meſſage, ſeemed loth 'to carry him that blunt anſwer. Oh, ſaid I, he has 'got the title of a Lord lately, I muſt qualify my an-'ſwer; *Let him pleaſe to mind his own buſineſs, I will 'mind mine.* But, continues he, the Biſhop was mi-'ſtaken in his man all over, for it was always in my 'nature, even to a fault, to ſpare every body; Sir 'Roger L'Eſtrange knows it, and many a man beſides, 'notwithſtanding very great provocations. And I 'have been ſo far from rigour all my life, that I never 'ſued any man, though I have loſt ſcores of pounds 'by it, which I have ſince known the want of (38).'

(37) Ibid. p. 13.

(38) Notes to the Paſtoral Letter, ubi ſupra, p. 318.

[*R*] *He continued to write 'till the Revolution put an end to thoſe meaſures.*] Before he was out of the Surgeon's hands for the wounds in his back, he reprinted three thouſand copies of his compariſon of Popery and Paganiſm (39); however, theſe were not then publiſhed (40). But not long after, the ſmart of his whipping being over, about the time of the general Toleration, he publiſhed, *The Trial and Examination of a late Libel, entituled,* A New Teſt of the Church of England's Loyalty; *with ſome Reflections upon the additional Libel, entituled,* An Inſtance of the Church of England's Loyalty. This was followed by *The Abſolute Impoſſibility of Tranſubſtantiation demonſtrated*; and in April 1688 came out a third piece, entituled, *The Way to Peace amongſt all Proteſtants. Being a Letter of Reconciliation ſent by Biſhop Ridley to Biſhop Hooper* †; *with ſome Obſervations upon it.* This paper was licenſed in July following, but the impreſſion ſeized ſoon after, by an order from Lord Sunderland Secretary of State. However, he went on; and upon iſſuing out writs in September for a new Parliament, he wrote a paper, which was publiſhed and diſperſed by the care and at the charge of his good friend (ſo he calls) Mr Gee *, under the following title: *A Letter from a Freeholder to the reſt of the Freeholders of England, and all others who have Votes in the choice of Parliament-*

(39) They had been printed before at the end of Julian the Apoſtate.

(40) His Works, p. 169.

† This letter is tranſcribed from the Book of Martyrs, Vol. III. in Hooper's Life. In the Obſervations, Mr Johnſon's opinion coincides with that of Archbiſhop Sancroft in the expediency of making ſome conceſſions to the Nonconformiſts. See Sancroft's article.

* Ibid. p. 210.

preſently afterwards, he collected all the papers he had publiſhed during his laſt impriſonment of five years and ten days, and republiſhed them under the title of *A ſecond five years Struggle againſt Popery and Tyranny*. This was followed by two pieces in vindication of the reſiſtance uſed in bringing about the Revolution [S]; and the proceedings againſt him in the preceding reign being reverſed by Parliament, June 11, 1689 [T], the Houſe of Lords preſented two addreſſes to King William the ſame year, recommending our author to preferment (p). Accordingly the rich deanery of Durham was offered him not long after, but he refuſed it, as an unequal reward for his ſervices; and finding himſelf unable to obtain his expectations of an Engliſh biſhopric, he changed his ſollicitations that way into one for a penſion [U]. Whereupon the King granted him 300 l. a year out of the Poſt-

(p) The votes paſſed unanimouſly, and in their addreſs it was ſaid, that his paper to King James's army was a public ſervice, which the nation enjoyed the benefit of to that day. Notes on the Phœnix edition of the Paſtoral Letter, ubi ſupra.

Parliament-Men. This year he likewiſe wrote the two following practical diſcourſes, of which the latter was then publiſhed, under the title of *Religion founded upon a Rock, or the eternal Obligation of being religious. In a Diſcourſe on 1 Tim. i. 17.* The other intituled, *The True Mother-Church, or a ſhort Practical Diſcourſe upon Acts ii. concerning the firſt Church at Jeruſalem.* To theſe he afterwards added a paper, ſhewing that *Reſiſtance may be uſed, in caſe our Religion and Right ſhould be invaded* (41), the whole impreſſion of which had been ſeized, together with that of his *Humble and Hearty Addreſs* &c. And, ſoon after the Revolution, collecting all that he had written from the time of his impriſonment in 1683, he publiſhed the whole under the title mentioned in the text, and dedicated it to King William.

(41) This was wrote in defence of Lord Ruſſel's opinion againſt Dr Tillotſon's paper, delivered to that Lord after his condemnation. See Tillotſon's article.

[S] *Two pieces in vindication of the Reſiſtance, &c.*] Theſe were, (1.) *Remarks upon Dr Sherlock's book, intitled*, The Caſe of Reſiſtance of the Supreme Power ſtated and reſolved, according to the Doctrine of the Holy Scripture. This piece was written in the year 1683, ſoon after Dr Sherlock's book came out. But Mr Johnſon now prefixed a preface †, wherein, among other things, he maintains that King William was not only a *rightful* King, but the *rightfulleſt* King that ever ſat upon the Engliſh throne; and in the concluſion he animadverts upon a piece intitled, *The Magiſtracy and Government of England vindicated*, then lately publiſhed, in defence of the proceedings againſt Lord Ruſſel; wherein he obſerves, from the inſtance of Lord Delamere ‖, that a conſult to levy war is not an overt-act of compaſſing the King's death, as that author had aſſerted. (2.) *Reflections upon the Hiſtory of Paſſive Obedience*. Some Remarks having been publiſhed upon the preface to his former piece, he takes notice of them in the concluſion of this, but treats them with contempt, declaring they were not worthy of an anſwer.

† And a dedication to his late patron's ſon, Wriothesly Lord Ruſſel.

‖ Who, when by levying war he had the late King [James] in his power at Whitehall, was ſo far from compaſſing his death, that he only delivered him a meſſage to remove in peace.

[T] *The proceedings againſt him in the preceding reign were reverſed.*] The Parliament taking Mr Johnſon's caſe into conſideration, reſolved, June 11, 1689, 'That the judgment againſt him in the King's-Bench, upon an information for a miſdemeanor, was cruel and illegal.' A committee was at the ſame time appointed to bring in a bill for reverſing that judgment; and being alſo directed to enquire how Mr Johnſon came to be degraded, and by what authority it was done, Mr Chriſty the Chairman, ſome days after, reported his caſe to this purpoſe. 'That in Trinity-term 1686, an information was exhibited againſt Mr Johnſon, in the name of Sir Robert Sawyer Attorney-General, for writing a ſcandalous and ſeditious libel, intituled, *An humble and hearty Addreſs*, &c. That the ſame term they forced him to plead, got a jury to find him guilty, and Sir Francis Withens pronounced the following ſentence upon him: *To pay five hundred marks to the King, and to lye in priſon 'till it was paid; to ſtand thrice in the pillory, in the Palace-yard, at Charing-croſs, and at the Old Exchange; and to be whipped by the common hangman from Newgate to Tyburn*. That the Judges then in Court were the Lord Chief-Juſtice Herbert, Sir Francis Withens, Sir Robert Wright, and Sir Richard Holloway. That apprehending it would be a ſcandal to have ſo infamous a puniſhment inflicted on a miniſter, they deſired Mr Johnſon might be firſt degraded: in order to which, being a priſoner in the King's-Bench in the dioceſe of the Biſhop of Wincheſter, he was ſummoned to appear the 20th of November in the Convocation-houſe of St Paul's, in the dioceſe of London, his living being within that dioceſe, and brought thither by *habeas corpus*, where he found the Biſhops of Durham, Rocheſter, and Peterborough, Commiſſioners to exerciſe the juriſdiction of the Biſhop of London during his ſuſpenſion, with ſome clergymen and many ſpectators: a libel was exhibited againſt him, charging him with great miſbehaviours, though none were ſpecified or proved. That Mr Johnſon demanded a copy of the libel and an advocate, both which the Biſhops denied him, and immediately proceeded to ſentence; *That he ſhould be declared an infamous perſon; that he ſhould be deprived of his Rectory; that he ſhould be a meer layman and no clerk; and be deprived of all right and privilege of prieſthood; that he ſhould be degraded thereof, and of all veſtments and habits of prieſthood.* Againſt which proceedings Mr Johnſon proteſted, as contrary to law and the 132d canon, not being done by his own dioceſan; but his proteſtation was refuſed, as was alſo his appeal to the King in Chancery. After which they proceeded to degrade him, by putting a ſquare cap on his head, and then taking it off; by pulling off his gown and girdle, which he demanded as his proper goods bought with his money; and they promiſed to ſend them to him, but he could not get them 'till he paid twenty ſhillings. Then they put a Bible into his hands, which he not parting with readily, they took it from him by force. That on the 22d of November, the judgment in the King's-Bench began to be executed with great rigour and cruelty. That Mr Rouſe the Under-Sheriff tore off his caſſock (42) on the pillory, and put a frize coat upon him. That he was whipped with a whip of nine cords knotted, which was ſhewn to the Committee. That Mrs Johnſon had alſo an information exhibited againſt her for the like matter as that againſt her huſband. On all which the committee came to the following reſolutions, which, on the report, were all agreed to by the Houſe. *That the judgment againſt Mr Johnſon was illegal and cruel: that the Eccleſiaſtical Commiſſion was illegal, and conſequently the ſuſpenſion of the Biſhop of London, and the authority committed to the three Biſhops null and illegal: that Mr Johnſon not being degraded by his own dioceſan, if he had deſerved it, was illegal: and that an addreſs be made to his Majeſty to recommend Mr Johnſon to ſome Eccleſiaſtical preferment ſuitable to his ſervices and ſufferings.* The Houſe likewiſe ordered, that in the ſaid bill the proceedings upon the Eccleſiaſtical Commiſſion ſhould be declared void (43).

(42) He had ſtill a right to wear this. See remark [R].

(43) Memorials, p. 15, 16.

[U] *He turned his ſollicitations into one for a penſion.*] He found a friend on this occaſion in Lady Ruſſel, who made uſe of the influence ſhe had with Dr Tillotſon; whereupon, the Dean having ſpoken to the King about it in the beginning of September this year, acquainted her Ladyſhip therewith, informing her at the ſame time how it was received by his Majeſty, 'who, ſays he, ſeemed well inclined to what I moved 'for Mr Johnſon, but did not poſitively determine to 'take that courſe (44).' Not ſatisfied with this attempt, the reſult of which was not indeed very hopeful, he reſolved to make a ſecond puſh; to which purpoſe he writes again to her Ladyſhip in a few days, as follows (45). 'I was not at Hampton-Court laſt 'Sunday, being almoſt tired out with ten weeks attendance, ſo that I have had no opportunity to try further in the buſineſs I wrote of in my laſt, but hope 'to bring it to ſome iſſue the next opportunity I can 'get to ſpeak with the King.' The Dean proceeds in theſe terms. 'I am ſorry to ſee in Mr Johnſon ſo 'broad a mixture of human frailty with ſo conſiderable 'virtues. But when I look into myſelf, I muſt think 'it pretty well, when any man's infirmities are in any 'meaſure overballanced by his better qualities. This 'good man I am ſpeaking of has at ſome times not 'uſed me very well *, for which I don't only forgive 'him, when I conſider for whoſe ſake he did it, but 'do heartily love him.' According to his promiſe, the Dean applied again to his Majeſty the Sunday following, the ſucceſs of which he acquainted Lady Ruſſel with in a letter dated September 24, 1689 (46). 'I mentioned Mr Johnſon again, ſays he, but his Ma'jeſty put on other diſcourſe; and my Lord Privy-'Seal

(44) This letter of the Dean to Lady Ruſſel is dated at Edmonton September 10, 1689.

(45) In a letter dated London September 19, 1689.

* The Dean ſent him 30 l. while he was a priſoner, and tho' his neceſſities forced him to accept the money, yet he did it with an air of the utmoſt contempt. Life of Tillotſon, p. 201.

(46) This, as well as the two preceding letters, were in the poſſeſſion of Dr Gibſon late Biſhop of London, and communicated to Dr Birch. See his Life of Dr Tillotſon, p. 198, 203, and 209. 2d edit. 1753.

Poſt-office, for his own and his ſon's life, with 1000 l. in money, and a place of 100 l. a year for his ſon (q). Thus gratified, he continued to employ his pen in defence of his Majeſty's title to the Crown, and in 1692 publiſhed his famous tract, intituled, *An Argument proving that the Abrogation of King James by the People of England from the Royal Throne, and the Promotion of the Prince of Orange, one of the Royal Family, to the Throne of the Kingdom in his ſtead, was according to the Conſtitution of the Engliſh Government, and preſcribed by it. In oppoſition to all the falſe and treacherous Hypotheſes, of Uſurpation, Conqueſt, Deſertion, and of taking the Powers that are upon content* [*W*]. His enemies were ſo much enraged at this piece, that preſently after the publication of it, an attempt was made

(q) Memorials, p. 17.

'Seal told me yeſterday morning, that the King 'thought it a little hard to give penſions out of his 'purſe inſtead of Church preferments; and tells me 'Mr Johnſon is very ſharp upon me; his Lordſhip 'called it railing; but it ſhall not move me in the 'leaſt. His Lordſhip aſked me, whether it would 'not be well to move the King to give him a good bi'ſhopric in Ireland, there being ſeveral void? I 'thought it very well, if it would be acceptable. 'His Lordſhip ſaid, that was all one, the offer would 'ſtop many mouths as well as his, which I think was 'well conſidered.' In the poſtſcript to this letter he writes thus. 'If Mr Johnſon refuſe this offer, and it 'ſhould be my hard fortune not to be able to get out 'of this difficulty (47)—I know one that will do more 'for Mr Johnſon than was deſired of the King, but ſtill 'as from the King for any thing that he ſhall know. 'But I hope ſome much better way will be found, 'and that there will be neither occaſion nor oppor'tunity for this.' We have obſerved above, that he had raiſed his expectations to a biſhopric in England, and this laſt letter of Dr Tillotſon's confirms it; and all the three letters ſhew, that his ambition therein was neither favoured by Lady Ruſſel nor the Dean. With regard to the Dean's ill uſage by Mr Johnſon mentioned in theſe letters, it muſt be obſerved, that our author at this very time had publiſhed his Five Years Struggle, &c. wherein having inſerted a piece in anſwer to Dr Tillotſon's paper delivered to Lord Ruſſel a little before his death, prefixed to it an advertiſement, which begins thus. '*At the ſame time* (48) '*almoſt the whole impreſſion of the following paper fell* '*into their hands, which was not intended to be pub*'*liſhed at that time, but was laid up againſt a time of* '*need. It was written long before, in vindication of* 'Lord Ruſſel, *of ever bleſſed memory, whoſe opinion it* 'was, *and from whom it could not be wreſted at his* 'death. The wretched author of all our miſeries, and 'the everlaſting enemy of his country, knows very 'well at what diſadvantage that great lord was taken, 'when he was practiſed upon to retract that opinion, 'and to bequeath a legacy of ſlavery to his country. 'But *they* made their aſſaults againſt a rock, and there 'were no earnings made of that ſtate-trick to uphold 'their bloody tyranny (49).' In theſe laſt words Dr Burnet is coupled with Tillotſon, both being employed on that occaſion *; and the former ſeems to have been the chief inſtrument of our author's diſappointment in his views of a biſhopric. At leaſt Mr Johnſon lays it at that Biſhop's door, in his notes on the Phœnix edition of the Paſtoral Letter (50); where, after having handled him very ſeverely in the coarſeſt language, he proceeds thus. 'I have taken this freedom with the 'Biſhop of S——, becauſe he has taken a great lati'tude with me, and has given me out for a madman 'above theſe four years.—It is an ugly imputation if 'it be but laid upon a dog, becauſe of the ill conſe'quence of it, for it amounts to the knocking out of 'his brains; but it is ſtill worſe to place it upon a 'man, becauſe it makes a fool of all his wiſeſt diſ'courſe; for if they diſlike any thing he ſays, they 'have authority to call it raving; and if they like it, 'it ſhall only have the allowance of lucid intervals. 'Beſides, it effectually ruins all a man's preferment, 'becauſe it unqualifies him, whereby his poſterity ſuf'fers for it to the end of the world. So that the mad 'man fares worſe in that caſe than the mad dog, be'cauſe the imputation never affects his breed.' After all, our author's chief enemy was himſelf; to give him a caſt of his own language, 'he ſtood in his own light with his eyes open.' Accordingly, his diſappointment is obſerved to be the effect of his own temper and conduct. For with very good abilities, conſiderable learning, and great clearneſs, ſtrength, and vivacity of ſentiment and expreſſion, of which his writings are a ſufficient evidence, whereof his few ſermons are equal in their kind to his other performances; and with a firmneſs of mind capable of ſupporting the ſevereſt trials for any cauſe, the truth or importance of which he was convinced of; he was paſſionate, impatient of contradiction, ſelf-opinionated, haughty, and apt to over-rate his own ſervices and undervalue thoſe of others, whoſe advancement above himſelf was an inſupportable mortification to him. The roughneſs of his temper and turbulency of his genius rendered him alſo unfit for the higher ſtations of the Church, of which he was immoderately ambitious? as well as his freedom in delivering his ſentiments with relation to all ſubjects and perſons without management or decorum, a liberty which he often exerciſed even in the Court itſelf; where he publickly ſaid, that upon the principle of Kings being accountable only to God, the Rump-Parliament had done right to ſend King Charles I. to him. Thus writes Dr Birch (51). But the remark bottoms upon a better authority. We have Mr Johnſon's own word for it. Speaking of the times immediately after the Revolution, 'I was ſo in'tent ſays he, upon the public welfare, and ever in'clined to give that the precedence, that I could not 'ſnatch and catch at the advantages of a Revolution, as 'others did, to whom they were not due; but when my 'friends urged me to mind my own buſineſs, my con'ſtant anſwer was, that it would keep cold: I have 'reaſon to remember it, continues he, becauſe an ho'neſt yonker in my own houſe has ſince upbraided 'me, that my buſineſs has catched cold (52).'

[*W*] *An argument proving that the abrogation of King James, &c.*] Mr Hampden's account of this piece has been already taken notice of in another place (53). That gentleman highly extols the learning and ſtrength of reaſoning therein; and after him, Mr Johnſon's other friend, ſo often mentioned in this memoir, aſſerts the ſame thing (54), both deſervedly enough. But neither of them thought fit to take notice, that their common friend charges all thoſe who differed from him with being influenced by ſelf-intereſt againſt the dictates of their conſcience, in taking the oaths to the new government, which he even inſinuates, was done with a treacherous deſign to undermine it, and reinſtate King James. So ſevere a reflection muſt unavoidably create him numerous enemies; and as the opinions, which he ſets himſelf ſo rudely to expoſe, were maintained by ſeveral divines of the firſt claſs, it is the leſs wonder that he never got any preferment in the Church. His laſt mentioned friend indeed, willing to throw a veil over his other foibles, puts this as the only block that lay in his road thereto, and tells us withal, that theſe enemies repreſented him as a republican, for maintaining that King James was dethroned for male-adminiſtration, and that King William and Queen Mary were ſet up in his ſtead by authority of Parliament (55). If ſo, he was evidently miſrepreſented; for the argument, which ſtands at the head of the reſt in this treatiſe, is built upon a declaration of the Lords and Commons, 10 Rich. II. in their meſſage to that King then at Eltham; wherein having put the caſe of the ſovereign's arbitrary government in violation of the laws and ſtatutes, they conclude in the following terms, that *Ex tunc licitum eſt eis, communi aſſenſu & conſenſu populi regni, ipſum Regem de regali ſolio abrogare, & propinquiorem aliquem de ſtirpe regia loco ejus in regni ſolio ſublimare.* From thenceforward it is lawful for them, with the common aſſent and conſent of the people of this realm, to depoſe the King from the regal throne, and to promote ſome kinſman of his of the royal family to the throne of the kingdom in his ſtead. Accordingly, we find our author both here and elſewhere careful not to omit King William's claim by propinquity of blood, in conjunction with his parliamentary right.

made to murder him [*X*]. But he escaped, though narrowly, with his life, and continued writing in the same cause as long as his health would suffer him [*Y*]. However, he grew uneasy at some measures taken by the administration, became a grumbler toward the latter end of his life [*Z*], and concurred with the Tories. His last things were published in 1697

[*X*] *An attempt to murder him.*] To this end seven assassins broke into his house in Bond-street very early in the morning, and five of them, with a lanthorn, got into his chamber, where he, with his wife and young son, were in bed. Mr Johnson was fast asleep, but his wife being awaked by their opening the door, cried out thieves, and endeavoured to awake her husband. The villains in the mean time threw open the curtains; three of them placed themselves on that side of the bed where he lay with drawn swords and clubs, and two stood at the bed's feet with pistols. Mr Johnson started up, and endeavouring to defend himself from their assaults, received a blow on the head, which made him fall backward. His wife cried out with great earnestness, and begged them not to treat a sick man with such barbarity; upon which they paused a little, and one of the miscreants called to Mr Johnson to hold up his face; which his wife begged him to do, thinking they only designed to gag him, and that they would rifle the house and be gone. Upon this he sat upright, when one of the rogues cried, Pistol him for the book he wrote, which discovered their design; for it was just after the publishing of the book concerning the abrogation of King James. Whilst he sat upright in his bed, one of them cut him with a sword over the eye-brow, and those at the bed's feet presented their pistols at him; but upon Mrs Johnson's passionate intreaties they went off, without doing him further mischief, or rifling the house. A Surgeon was immediately sent for, who found two wounds in his head, and his body much bruised. However, with due care he recovered (56).

(56) Ibid. p. 18.

[*Y*] *He continued writing as long as his health permitted.*] These are, (1.) *An Essay concerning Parliaments at a certainty; or the Kalends of May.* This tract is addressed to the Parliament; which having been then continued above three years, our author puts them in mind, was not agreeable to the old constitution of the realm, and that intermissions by prorogation were inconsistent therewith. A new Parliament was anciently called every year upon the kalends of May. In the conclusion, he makes the following pathetic complaint of the ill state of his health. And thus, says he, I have finished what I at first propounded; but under such difficulties and disadvantages of a broken health, as I do verily believe never book was written. Upon which account he recommends the further prosecution of this subject to the learned and curious in antiquities. (2.) *Notes upon the Phœnix edition of the Pastoral Letter.* The book signified by this description was published about a week after the Pastoral Letter was burnt by order of Parliament (57), January 24, 1692. Mr Johnson, in his preface, gives the following account of it, and of his motive for answering it. 'When I understood, says he, that by the author's direction the Pastoral Letter was to be reprinted in the self same session of Parliament which censured it, partly out of a just disdain that an English Parliament should be treated with such contempt by an inmate, and partly out of an indignation that *that* phial of mischief should be again poured forth upon the nation, I promised that if it were reprinted, I would bestow notes upon it, hoping thereby to put a stop to that intended insolence. But a week after, out comes the fly counterfeit, as like the other as they could make it, with a false date and a dead man's name to it; and I have in part been as good as my word.' (3.) *A Confutation of a late pamphlet, intituled,* A Letter, ballancing the Necessity of keeping a Land-force in time of Peace, with the dangers that may follow it. The argument urged for keeping a standing army being grounded upon the danger of an invasion, our author observes, that this argument is fitted only to arbitrary government, where the people have no liberties to defend. And, says he, though the English have now squabbles and differences among themselves, yet a common cause and a common enemy always reconciles and unites them, and as loose as the stones may seem to be, let but an invasion come, and that will find mortar. This was first printed in 1697; and several answers to it presently appearing, our author replied in a piece, intituled, *A Second Part of the Confutation of the Ballancing Letter, being an occasional Discourse in vindication of* Magna Charta. To this treatise the editor has added in an appendix, the Capitula, or articles on which the Magna Charta of King John was formed, the original of which, with King John's seal to it (58), was found in the study of Dr Warner Bishop of Rochester, and afterwards came into the hands of Dr Burnet, Bishop of Salisbury, at the time of this publication. A copy in French, or old Norman, of the Magna Charta of King John compleat, which agrees with the Latin one, printed in Matth. Paris. Both the Capitula and Charter at large are likewise translated into English.

57) See Bishop Burnet's article.

(58) It is cited by our author in his first Confutation, p. 333. in his Works.

[*Z*] *He was a grumbler to the latter end of his days.*] Mr Johnson began to express his private resentments so early as the first year of the Revolution, when he thought himself injured by not being the first prisoner that felt the fruits of it, as he was the eldest of all those that lay upon a public account in England; and I thought, says he, a thanksgiving deliverance from Popery and Slavery would have reached me in the first place by seniority (59). We find him afterwards upon the same topic expressing himself thus. '*Perhaps it may be thought, that in these papers I have mingled very much of my own private resentments together with public matters; to which I have only this to say,* Is there not a cause (60)?' And what that cause was appears in the body of the piece, where, having made very free with his antagonists, especially Burnet and Sherlock, he proceeds to defend that freedom as follows. 'Perhaps, says he, some of our fools think that great men ought not to be so treated, but let them and their great men know, that I am in the way of writing; and there, he is the greatest man that has the best arguments; and besides, that greatness does not lie in actual preferments (for that is still but like usurpation), but in having most right to them; and in doing (for I will not mention my sufferings by their barbarous hands) more for my country than they were able to do against it. But I will recount no more of their merits, least I should make them still greater men, which is no part of my intention.' He concludes with applying the story of the contest between Moses and the Magicians of Egypt to his own case, as follows. 'In short, says he, the Magicians of Egypt were in Pharaoh's project for the perpetual slavery of the Israelites, and used all their skill for that purpose; but Moses's serpent was the mastering serpent, and destroyed theirs; and therein, though not in places, he was greater than all the Magicians of Egypt; and again he was the greater in this, that what he did tended to the deliverance of an injured and oppressed people, which likewise ensued; whereas, their business was to lock them fast in the house of bondage (61).' But these clamorous railings, on account of his personal disappointments, are not intended by the character of a grumbler, so much as his murmurings against the administration with regard to the public, which had as early an epocha as the former. The truth is, they seem to be joint twins born together, and nourishing each other. Thus, for instance, we find him complaining of the long continuance of King William's second Parliament in these terms. 'I was afraid, says he, that this government 'would float and move upon the face of the waters, 'till we were at a certainty about our Parliaments; and therefore, when I waited upon my Lord 'Devonshire before the coronation, I said that we 'were never the better for this revolution 'till we had 'a settlement of Parliaments; and our ancient right 'was anniversary Parliaments, and that nothing else 'could set the government to rights.' He afterwards observes, that when Mr Johnston, the then present Secretary of State for Scotland, told him in the Court of Requests, that the bill of Rights was going up to the House of Lords, he wished at that time that all our rights were reduced to one line, which was our right to have a Parliament every kalends of May. 'I tell 'these old stories, continues he, to shew that I was 'always of the same mind, and that no Court neglects 'nor disappointments have altered me. For I am 'sure

' ſure I laid the bridge that brought them over, and ' am pretty certain they did not come hither in virtue ' of Paſſive Obedience (62).' Notwithſtanding what is here inſinuated, we have already ſhewn in this remark, that one of theſe Court neglects was actually put upon him as early as his firſt conference here mentioned with my Lord Devonſhire, and that he then reſented it. Accordingly, we find him a few years after complaining, that men of no principles at all, and ſuch alſo as had voted againſt the Convention-bill for placing King William in the throne, were preferred and employed in the adminiſtration (63). Preſently after this, we find him in the ſame ſtrain, murmuring againſt the continuation of the war, eſpecially by land, and taking the Dutch to our aſſiſtance againſt the French, and particularly againſt a ſtanding army; whereupon he obſerves, that the fourth part of the Petition of Right was ſpent againſt billeting of ſoldiers (64). In the ſame ſpirit we ſee him pouring forth all his artillery in 1697 againſt a ſtanding army, and the great favours ſhewn to the Dutch. Upon which ſubject, ſpeaking of the ſcheme for a general naturalization of that people, in anſwer to the ſeveral arguments produced for it, he takes notice of that drawn from gratitude to the Dutch in two expreſs treatiſes, who, it was urged, ought to ſhare in the advantages of England, ſince they bore ſo great a ſhare in preſerving them for us, and in giving us, ſays he, our preſent King. That is a debt I confeſs, continues he. which will be always paying and never paid, though the people have requited him with three kingdoms, the greateſt recompence upon earth! He maintains alſo, that the grant of this privilege to any foreigners was againſt *Magna Charta*, the great charter of our rights and liberties, which every man ought to know, and which, upon that account he ſuggeſts, ought (as by ſeveral ſtatutes it was firſt ordered) to be publickly read in all Cathedrals twice a year, and then the breakers of it to be excommunicated, and their excommunication denounced in all pariſh churches (65).

P

JONES [INIGO (a)], the celebrated Architect, was born about the year 1572, in the neighbourhood of St Paul's in London, of which city his father, Mr Ignatius Jones, was a Citizen and Clothworker. Nothing certain being delivered concerning his education, ſome very different conjectures have been advanced upon that ſubject [A]. But in whatever way he was bred, his natural inclination leading him to the ſtudy of the arts of drawing and deſigning, he diſtinguiſhed himſelf early by the extraordinary progreſs he made in thoſe polite and uſeful arts, and was particularly taken notice of for his ſkill in the practice of Landſkip painting. Theſe admirable talents introduced him to the knowledge of William Earl of Pembroke (b), who, admiring his genius, took him into his patronage, and ſent him abroad with a handſome allowance, in order to perfect himſelf, by viewing and ſtudying the works of the beſt maſters ancient and modern, in Italy and the politer parts of Europe. Thus ſupported, he ſpent many years in compleating his education; to which end, chuſing the city of Venice for the chief place of his reſidence, he ſuffered nothing of real value or merit any where to eſcape his induſtry; and the improvements he made thereby gave ſuch an eclat to his reputation all over Europe, that Chriſtian IV. King of Denmark ſent for him thence, and appointed him his Architect-General (c). He had enjoyed this poſt ſome years, when that prince, whoſe ſiſter Anne had married King James I, made a viſit to England in 1606 (d). Mr Jones took this opportunity of returning home; and expreſſing a deſire to continue in his native country, the Queen appointed him her Architect; and being not long after taken in the ſame character into the ſervice of Prince Henry, he diſcharged his truſt with ſo much fidelity and judgment, that the King gave him the reverſion of the place of Surveyor-General of his Works (e). After the death of Prince Henry in 1612, our architect made a ſecond tour to Italy, and continued ſome years there, improving himſelf ſtill further in his favourite art (f), 'till the Surveyor's place fell to him. He then returned to England to enrich his country with the fruits of his ſtudies (g). Soon after his arrival, the office of Works being found ſeveral thouſand pounds in debt, he voluntarily gave up his own dues, and prevailed with the Comptroller and Paymaſter to do the like, whereby the whole arrears were abſolutely cleared (b). In 1620, by the King's command, he took an accurate ſurvey of the ſurpriſing group of ſtones upon Saliſbury-Plain, commonly called Stone-Henge, and drew up an account with his opinion of that famous monument of antiquity, which he preſented to his royal maſter [B]. And on the 16th of November the ſame year, he was appointed, among

(a) This name being in Spaniſh the ſame with Ignatius in Latin, has occaſioned a conjecture, that, as his father was a conſiderable dealer in the woollen manufacture, ſome Spaniſh merchant might probably be his godfather. (g) Ibid. p. 119.

(b) Ibid. The debt was contracted through extraordinary occaſions in his predeceſſor's time, and the Privy-Council acquainted him that the Exchequer was empty and the workmen clamorous.

[A] *Different conjectures about his education.*] The author of his life ſays, it had been ſuggeſted, that his education was liberal, and that he laid the firſt foundations of his future knowledge in the univerſity of Cambridge; but, continues he, there ſeems to be no other ground for this ſuppoſition, than a bare conjecture (1). On the other hand, Sir Chriſtopher Wren uſed to ſay, he was bound apprentice to a Joiner; which is the more probable, as his vindicator Mr Webb had thought proper to throw a veil of abſolute ſilence over this part of his life.

(1) Life of Inigo Jones, prefixed to his Stone-Henge reſtored, fol. 1.

[B] *He preſented his opinion of Stone-Henge to his Majeſty.*] The King, in his progreſs this year, called at Wilton, the ſeat of the Earl of Pembroke; which being near Stone-Henge (2), the diſcourſe, among other things, turned upon that famous relique of antiquity. Hereupon, our architect, who was well known to have ſearched into antique buildings and ruins abroad, being ſent for, received his Majeſty's commands, to produce, out of his own practice in architecture and experience in antiquities, what poſſibly he could diſcover concerning this of Stone-Henge. In obedience to this command, he preſently ſet about the work; and having, with no little pains and expence, taken an exact meaſurement of the whole, and diligently ſearched the foundations, in order to find out the original form and aſpect, he proceeded to compare it with other antique buildings which he had any where ſeen abroad; and after much reaſoning and a long ſeries of authorities, he concludes at laſt, that this

(2) This ſeat is four miles both from Saliſbury and Stone-Henge.

among others, a Commiſſioner for repairing the cathedral of St Paul in London (*i*). Upon the demiſe of King James, he was continued in his poſts by King Charles I. whoſe

(*i*) Dugdale's Hiſtory of St Paul's Cathedral, p. 135, 136, firſt edit. in 1658. folio.

thir ancient and ſtupendous pile muſt have been originally a Roman temple, inſcribed to *Cœlus* the ſenior of the heathen gods, and built after the Tuſcan order. That it was built when the Romans flouriſhed here in peace and proſperity in Britain, and probably betwixt the time of Agricola's government and the reign of Conſtantine the Great, about 1650 years ago. The reaſons upon which he endeavours to ſupport this opinion are theſe:

Firſt, That the Romans were, and no other nation could be, founders of Stone-Henge, he argues from, 1. The magnificence. 2 The order. 3. The architectonical ſcheme. 4. The double portico in the greater circle of ſtones, and another portico in the cell or hexagon. 5. The manner and poſition of the columns of the building. And 6. From the Roman reliques frequently found near the place.

Secondly, that it was a temple, he infers from, 1. The interval or ſpacious court round about. 2. The cell and it's porticoes. 3. The altar, and it's poſition eaſtward. 4. The intermixture of orders. 5. The aſpect of the whole fabric. And 6. From the ſkulls of beaſts, as bulls, &c. digged up in the circumjacent ground.

Thirdly, That this temple was inſcribed to the God Cœlus, he concludeth from, 1. The ſituation, in an open plain country. 2. The aſpect *Hypæthros*, i. e. roofleſs. 3. The manner or form, viz. a circle ſurrounding a hexagon. 4. The order. 5. The decorum or ſtructure. 6. The pyramidal figure of the ſtones. 7. From the kinds of beaſts cuſtomarily offered in ſacrifice to that deity.

However, upon the whole, he pretends not to any abſolute deciſive evidence, but leaves the matter as a ſubject worthy of further enquiries. This opinion of our author lay by him in rude notes, imperfectly methodized, 'till his death; when, coming into the hands of his relation Mr John Webb, of Butleigh in Somerſetſhire, that gentleman, at the deſire of Dr William Harvey the celebrated Phyſician, Mr Selden, and other learned Antiquaries, perfected and publiſhed them a few years afterwards in folio, under the following title, *The moſt notable Antiquity of Great-Britain, vulgarly called Stone-Heng on Saliſbury-Plain, reſtored. Lond.* 1655. This book, of which only a few copies were printed (3), was generally approved by the Antiquaries. But Dr Walter Charlton, Phyſician to King Charles II. being diſſatisfied with it, ſent it to the famous Olaus Wormius in Denmark, who returned his ſentiments in ſeveral letters to his correſpondent. The doctor, being perſwaded that the antiquity was of Daniſh extraction, attempted a refutation of Mr Jones's opinion, which he printed in 1663 in 4to. intitled, *Chorea Gigantum, or the moſt famous Antiquity of Great-Britain, vulgarly called Stone-Heng, ſtanding on Saliſbury-Plain, reſtored to the Danes.* This diſcourſe was generally exploded by the learned in theſe things, and Mr Webb publiſhed, in anſwer to it, *A Vindication of Stone-Heng reſtored; in which the Orders and Rules of Architecture obſerved by the ancient Romans are diſcuſſed: together with the Cuſtoms and Manners of ſeveral Nations of the World in matters of building of the greateſt Antiquity; as alſo an Hiſtorical Narration of the moſt memorable Actions of the Danes in England. Lond.* 1655, *in folio.* Theſe three diſcourſes of Mr Jones, Dr Charlton, and Mr Webb, being grown very ſcarce, were reprinted together at London, 1725, folio. The two laſt pieces are both addreſſed to King Charles II. who, as Dr Charlton there obſerves, after his defeat at Worceſter, while he lay concealed at Heale near Saliſbury, made a viſit to this monument, and ſpent many hours together in viewing it. His Majeſty, however, was not ſatisfied, it ſeems, with any of theſe accounts; and in his return from Bath in 1665, happening to meet Mr Aubrey at Stone-Henge, and converſing with him upon it, was better pleaſed with his opinion in aſcribing it to the Druids. In confirmation whereof, that gentleman receiving, 'tis ſaid, the royal commands for the purpoſe, wrote his *Monumenta Britannica: or, A Diſcourſe concerning Stone Henge*, &c. and this ſentiment has been ſince embraced and further confirmed by Dr William Stukely, who, having very diligently examined this and other works of the like nature in the iſland for many years together, publiſhed a treatiſe, entitled, *Stone Henge, a Temple, reſtored to the Britiſh Druids.* Lond. 1740, in folio. That learned author obſerves, that the utmoſt account we have in writing of theſe temples, of which Stone Henge is the lateſt, comes from the ancient Britons, the remains of the people who lived here at the times of the Roman invaſion; that the oldeſt Britons ſpeak of it only by tradition, far above all memorial; and wondering at the ſtupendous work, were as far to ſeek about the founders and intent of it then as we are now; and therefore (as was uſual with them) had recourſe to magic for it's original. After the Reformation, the curious began to conſider it more intimately, though not ſucceſsfully. Mr Camden expreſsly declares he was able to give no good account of it. After him Mr Jones gave, in 1620, his opinion of it as a Roman work, and left, 'I ſuppoſe, continues this author, ſome few 'indigeſted notes in writing thereupon. From which 'his ſon-in-law (4), John Webb, compoſed an entire 'treatiſe, endeavouring to prove it. But they that 'are acquainted with Roman architecture, or have 'conſidered Stone Henge, muſt needs be of a different 'opinion. And as my Lord Bp of London *well obſerves* (5), It cannot be ſafe to cloſe with Mr Jones, "tho' *his book otherwiſe* be a learned and *ingenious* "piece." Inigo Jones lived 30 years after this, and 'yet Mr Webb makes an apology for his work, that 'if he had ſurvived to have done it with his own 'hand, it would have been better. But 'tis very reaſonably believed, that though Inigo Jones was an 'extraordinary genius in architecture, yet he wanted 'many qualifications for an author, eſpecially in ſuch 'a work as Stone-Henge. 'Tis my opinion, that had 'his architectonic ſkill been united to Mr Camden's 'learning, he could never have demonſtrated Stone-'Henge to be a Roman work. Afterwards, Dr 'Charlton publiſhed a piece againſt Webb's performance, and certainly has ſaid enough to overthrow it, 'though he could not with equal ſucceſs eſtabliſh his 'own opinion, that it was the work of the Danes. 'Whereas, Olaus Wormius finds no ſuch monuments 'among the Gothic nations, which, as Mr Toland (6) 'obſerves, is anſwer ſufficient to his allegation. Webb 'anſwered the doctor's book, and by turns effectually 'demoliſhed his opinion, but could not ſtill vindicate 'his own. Yet from all their diſputations, no ſpark 'was ſtruck towards a diſcovery of the real truth. 'What is the worſt part in both performances of Mr 'Webb, his repreſentation of the real monument in 'his drawings is fictitious; and, as Mr Aubrey rightly 'obſerves, in endeavouring to retrieve a piece of architecture in Vitruvius, he abuſes the reader with a falſe 'repreſentation of the whole. It requires no great pains 'to prove this, nor need we take much time to be ſatisfied in it: the work is ſtill extant. As ſoon as a judicious eye comes upon the ſpot, it ſees that Webb's 'equilateral triangles forming the cell are imaginary; 'that his three entrances a croſs the ditch are ſo too, 'and that he has turned the cell a ſixth part from it's true 'ſituation, to favour his imaginary hypotheſis. That 'the cell or adytum, inſtead of a hexagon, forms a 'beautiful oval, and conſiſts of 40 ſtones, and not 30, 'as Mr Webb has given them, whoſe calling it a Roman work, compoſed from a mixture of the plainneſs and ſolidneſs of the Tuſcan order with the delicacy of the Corinthian; that in aſpect they are *dipteros hypæthros*; and that in manner 'tis *pychoſtoles*; 'when applied to our antiquity, is no better than 'playing with words (7).' The doctor proceeds to ſupport his own opinion by the following arguments. (1.) From the prodigious number of theſe kind of buildings, from the Land's end in Cornwall to the utmoſt northern promontory in Scotland, where the Roman power never reached. That they are to be found in all the iſlands between Scotland and Ireland, Iſle of Man, all the Orkney iſlands, &c. and numerous in Ireland itſelf (8). (2.) Whatever is dug up in or near theſe works, are manifeſtly remains of the Druid times, urns, bones, ornaments of amber, glaſs beads, ſnake-ſtones, amulets, celts, flint-hatchets, arrow heads, and ſuch like. (3.) That there are many barrows or graves about them, over one of which runs the *Via Iceniana* (9), and conſequently was raiſed before that

(8) Toland, p. 23. relates, that in Geaſcopa's mount in Inſoen in the county of Donnegal, a Druideſs of that name lived; it ſignifies white-legged; on that hill is her grave and her temple, a ſort of diminutive Stone-Henge, which the old Iriſh at this day dare not any way profane.

(9) A ſimilar proof to this is fetched by him from the Roman road from Marlborough in Wiltſhire to Bath. See his Abury, &c. Lond. 1723, folio.

whose consort also entertained him in the like station *. And he soon after formed that most stately and elegant pavilion, the Banquetting-house at Whitehall, which was at first designed for the reception of foreign Ambassadors [C]. Several other designs of his, executed in this reign, are taken notice of below [D]. In 1633, he began the reparations of St Paul's cathedral (k); and, in carrying them on, he added a magnificent portico at the west end, which excited the envy of all Christendom on his country, for a piece of architecture not to be parallelled in modern times (l) [E]. While he was raising these

(l) Webb, ubi supra, p. 2.

* Webb, where last cited.

(k) The order for it was sent to him June 26, 1633, and it was begun soon after at the east end, the first stone being laid by Dr Laud then Bishop of London, and the fourth by Mr Jones. Dugdale's History of St Paul's, &c. p. 142. ad edit. 1716, folio.

Roman road. (4.) That Stone-Henge was built before the boundary called Wansdyke was made by the Belgæ, and probably before the Belgæ set footing in Britain; as appears from the barrows, which no doubt were the burial places of Kings and great men. (5). That the proportions of Stone-Henge falling into fractions, when measured by the English, French, Roman, or Grecian foot, shew, that the architects were neither English, French, Romans, or Greeks; and that the same proportions, when measured by the Phœnician cubit, producing always whole numbers, is an undeniable proof that it was built by that cubit (10). Upon the whole, he concludes, from the elegant and magnificent structure of Stone-Henge, that it was the temple of the Arch-Druid, as the metropolitical church of the chief Druid of Britain; the *Locus Consecratus* (11), where they met at some great festivals in the year, as well to perform the extraordinary sacrifices and religious rites, as to determine causes and civil matters. That it was built by the descendants of those Phœnicians, who probably came hither under the conduct of the Tyrian Hercules, in or about the time of the Patriarch Abraham, and built this temple about the year of Rome 280, that is, about 460 years before Christ, and 420 years before Cæsar invaded Britain. Whence he observes, that as the Wansdyke north of Stone-Henge was made about 100 years before Christ by Divitiacus, who drove the possessors of this fine country of the Wiltshire-Downs northwards; so the Druids enjoyed their magnificent work of Stone-Henge but about 360 years (12). To conclude, it is remarkable, that almost all the different inhabitants of our island have had their advocates in claiming the honour of this antiquity. Mr Samms, in his Britannia, will have the structure to be Phœnician; Mr Jones and Mr Webb believe it to be Roman; Mr Aubrey thinks it to be British; Dr Charleton derives it from the Danes. And yet, if the true old writing of the name be S T A N - H E N - G E S T, as the Monasticon seems to tell us, I cannot see, says Bishop Nicholson, why the Saxons may not have as just a title as any. At last, Dr Stukely begins the round again, and maintains with Mr Samms that it is of Phœnician original.

(10) This cubit was the same with the Hebrew and Egyptian, containing 20 $\frac{4}{5}$ inches English measure. See Greaves's Roman Foot, &c. and Arbuthnot of Coins, &c.

(11) It is so called by Cæsar in his Commentaries, B. G. VI. 13.

(12) Our author raises this opinion upon the rule of the variation of the compass, laid down by Dr Halley, who visited Stone-Henge in 1720, and brought a piece of the stone to the R. S. which was examined by our author; to whom the doctor gave it as his opinion, that Stone-Henge might be 2 or 3000 years old. Stone-Henge, a Temple, p. 5 and 65.

[C] *The Banquetting house at Whitehall.*] The cieling was painted some years after with the felicities of King James's reign by Sir Peter-Paul Rubens, and prints from these by Simon Gribelin were published in 1724. The late Lord Burlington, about the year 1740, published *A North-west View of the Palace designed for Whitehall by Inigo Jones* (13) where this pavilion appears in it's proper place as part of that palace. In which, among other most beautiful drawings, there is seen a noble circular portico, the first hint whereof might perhaps be suggested by the circular portico in Stone Henge. But to understand this, it must be observed, that Stone Henge consists of an outward circle, 60 cubits in diameter, wherein are set 30 stones, each 9 cubits high and 4 cubits broad, with an interval of two cubits between; and over each upright stone lies another of 1 $\frac{1}{2}$ cubit thick. At 5 cubits distance from this exterior circle within, there is another, whose radius from the common center of the work is 24 cubits, wherein are placed 40 stones at equal distances, each a cubit thick, and 4 $\frac{1}{2}$ in height; so that between these two circles there is a circular walk 300 foot in circumference. Whence it appears, that the circular portico in the design for Whitehall bears a resemblance to this. But to finish the description of Stone-Henge. Within the portico, i. e. within the inner circle, at 10 cubits distance, stand 5 *trilithons*, i. e. a compages of 3 stones, two uprights, with a third upon the top as an impost. These are set with suitable intervals between them, nearly in the form of a semi-oval, and by Dr Stukely called the *cancelli*, because within them, at a lesser distance, stand 19 lesser upright stones, nearly in the same oval form, but lesser; within which, near the upper end, lies a large single stone, flat, supposed to be the altar; the whole being called by Webb the *cell*, by Stukely the *adytum*, or the *sanctum sanctorum*; and from this adytum the Doctor imagines, that Inigo Jones projected the plan of the Surgeons theatre in London, a fabric for seeing and hearing, continues he, much admired by all good judges, and which my Lord Burlington, out of a spirit truly noble, and a great love for the architect's memory, has lately repaired at his own charges and with excellent skill. I find the Surgeons theatre, or rather amphitheatre, is formed from the same proportions as our adytum, the transverse and conjugate diameters being as 4 to 3, viz. 40 foot and 30 foot. And this appears to me a strong presumption that Inigo Jones did not make the ground-plot of Stone-Henge published under his name (15).

(13) This view is what is called a bird's eye prospect, or as it is seen by a bird in flying over it; by which artifice all the parts are brought distinctly into view.

(14) At the other end the oval is not enclosed with stones.

(15) Stone-Henge, a Temple, &c. p 25.

[D] *Several other designs are taken notice of below.*] Besides Surgeons-Hall already mentioned, we owe to Mr Jones the Queen's Chapel at St James's palace, and her Majesty's new buildings fronting the gardens at Somerset house in the Strand (16). The church, and piazza of Covent-Garden; the first of which is universally allowed to be a master piece of the Tuscan order, the portico at the west end, majestic in it's plainness, and the roof so happily contrived, by extending itself beyond the wall, as both to cast a shade, which adds to the solemnity of the sacred edifice, and at the same time serves to strengthen the wall, by resting thereon in it's center of gravity. In the last performance he had in view the piazza of Leghorn, but has vastly surpassed the original in the beauty and largeness of his pillars. Our architect also laid out the ground-plot of Lincoln's inn fields (17), and designed the Duke of Ancaster's house, which stands on the west side of that noble square, and which is no inconsiderable instance of the *softness* and *sweetness* of his touches. The royal chapel at Denmark-house, and the King's house at Newmarket, and the Queen's buildings at Greenwich, were also of his design (18). But it is not in our power to describe the number, or form a judgment upon the excellence of all his buildings; views of several of them may be seen in Campbell's *Vitruvius Britannicus*, to which we must be content to refer the reader.

(16) See a description of them in Mr Waller's poem to the Queen on that subject.

(17) Dr Stukely says this was laid out by the Egyptian cubit. Stone-Henge, a Temple, &c. p. 6, 7.

(18) Webb's Vindication, &c. p. 119.

[E] *Portico at the west end of St Paul's.*] This portico consisted of solid walls on each side, with rows of Corinthian pillars set at distance from the walls within to support the roof (19). The whole was built at the expence of King Charles I (20), who adorned it also with the statues of his royal father and himself. The intention of it was to be an ambulatory for such as usually, by walking in the body of the church, disturbed the solemn service in the choir (21). Mr Jones was not a little proud of this portico, at least if those are indeed his words which we read in his *Stone Henge restored*; where, in answer to Mr Camden's wonder by what means such huge stones as those of Stone-Henge were set up, having mentioned much larger stones raised by the Ancients, he closes the paragraph as follows: 'Had I not been thought worthy (by 'him who then commanded) to have been sole Architect thereof, I would have made some mention of 'the great stones used in the work and portico at the 'west end of St Paul's church London, but I forbear; 'though in greatness they were equal to most in this 'antiquity [Stone-Henge], and raised to a far greater 'height than any there (22).' To this we shall add a remark of Mr Webb's, which may help to form some idea of the extraordinary expence and magnificence of this portico. He is handling the objection of his antagonist, that Stone-Henge could not be a Roman work, because the diminishing of the stones was not equal in all as in Roman columns. Mr Webb admitting that inequality, answers thus, 'Do not we find that the Ro-'mans upon occasion, in one and the same temple, some-'times diminished the pillars, sometimes the pylasters, 'not in regard of the thrust at the angles? and might 'not these then in our antiquity be diminished more 'or less in regard of some pressing necessity, some vent

'or

these noble monuments of his extraordinary genius as an Architect, he employed his leisure hours in designing decorations for dramatic entertainments; and there appeared a happy intermixture of fancy and judgment in his pompous machinery of masques and interludes, which were the vogue in his time [F]. By these means he acquired a handsome fortune

'... in an architrave, or the like? Stones, I will tell you, for such use, which in all columnations is the principal bearing, and of such mighty scantlings, are not easily to be come by; a crack in an upright stone may be of no imminent danger, when a vent in an architrave may ruin the whole pile, and bring down all on a sudden. *Had he known what search was made in the royal quarries of Portland, for to find out an architrave for the middle inter-column of the portico at the cathedral of St Paul, which is in length not fully twelve foot, he would never have made this objection* (23). And (continues this author) I wish it may not be found, that by the thrusting up of those sacrilegious buildings, to obscure purposely that kingly work (24), that architrave is prejudiced; *which if it be, such a sound and solid stone, for that use, will scarcely, without much sweat and treasure, be procured again in all the quarries of this kingdom and the next* (25).

(23) Those in the outward circle of Stone-Henge are 16 foot, according to Dr Charlton. See Stone-Henge restored to the Danes.

(24) These were raised during the usurpation.

(25) Stone-Henge, a Roman Work, &c. p. 44, 45.

[F] *He shewed fancy and judgment in the machinery of masques and interludes.*] Several of these representations are still extant in the Works of Chapman, D'Avenant, Daniel, and particularly Ben. Jonson. The subject was chosen by the poet, and the speeches and songs were also of his composing; but the invention of the scenes, ornaments, and dresses of the figures, were the contrivance of Mr Jones. An instance will make the distinct province of each clearly understood. Jonson's masque of Queens begins thus. 'His Ma-'jesty being set, and the whole company in full ex-'pectation, the part of the scene which first repre-'sented itself was an ugly hell, which, flaming be-'neath, smoaked unto the top of the roof (26). And, 'in respect, all evils are morally said to come from 'hell; as also from that observation of Torrentius 'upon Horace's Canidia, *Quæ tot instructa venenis, ex Orci faucibus profecta videri possit. Who being fraught with so many kinds of poison, might seem to come from the jaws of hell.* These witches, with a 'kind of hollow and infernal music, came forth from 'thence; first one, then two and three, and more, 'till their number increased to eleven, all differently 'attired, some with rats on their heads, some on their 'shoulders; others with ointment-pots at their gir-'dles; all with spindles, timbrels, rattles, or other 'venefical instruments, making a confused noise with 'strange gestures. The device of their attire was Ma-'ster Jones's, with the invention and architecture of the 'whole scene and machine; only I [Jonson] prescribed 'them their properties of vipers, snakes, bones, herbs, 'roots, and other ensigns of their magic.'—These eleven witches beginning to dance, on a sudden one of them missed their chief, and interrupted the rest with this speech.—Here follow the several speeches made by Jonson; and, after the last speech, they fell into a magical dance.—In the heat of their dance, on a sudden was heard a sound of loud music, as if many instruments had made one blast; with this, not only the hags themselves, but the hell into which they ran, quite vanished, and the whole face of the scene altered, scarce suffering the memory of such a thing. But in the place of it appeared a glorious and magnificent building, figuring the house of Fame. In the top of which were discovered the twelve masquers (27), sitting upon a throne triumphal, erected in form of a pyramid, and circled with all store of light. From whence a person by this time descended in the furniture of Perseus, and expressing heroic and manly virtue, began to speak. The speech ended, the throne whereon the masquers sat, being *machina versatilis*, suddenly changed; and in the place of it appeared *Fama bona*, good Fame (as she is described in *Iconolog. di Cæsare Ripa*), attired in white, with white wings, having a collar of gold about her neck, and a heart hanging at it, which Orus Apollo, in his *Hierogl.* interprets the note of a good Fame. In her right hand she bore a trumpet, *in her* left an olive branch; and for her state, it was as Virgil describes her at the full, her feet on the ground, and her head in the clouds. She, after the music had done, which waited on the turning of the machine, called from thence to Virtue, and spake this following speech.—At the end the loud music sounded as before, to give the masquers time of descending. Next follows the poet's description of the several personages represented by them, which is closed by these words. 'There rests only, 'that we give the description we promised of the 'scene, which was the house of Fame. The struc-'ture and ornament of which (as is profest before) was 'intirely Master Jones's invention and design. First, 'for the lower columns, he chose the statues of the 'most excellent poets, as Homer, Virgil, Lucan, &c. 'as being the substantial supporters of Fame. For the 'upper, Achilles, Æneas, Cæsar, and those great 'heroes whom these poets had celebrated. All which 'stood as in massy gold. Between the pillars, under-'neath, were figured land-battles, sea-fights, triumphs, 'loves, sacrifices, and all magnificent subjects of Ho-'nour, in brass, and heightened with silver. In 'which he professed to follow that noble description 'made by Chaucer of the place. Above were sited 'the masquers, over whose heads he devized two e-'minent figures of Honour and Virtue for the arch. 'The friezes, both below and above, were filled with 'several-coloured lights, like emeralds, rubies, sap-'phires, carbuncles, &c. the reflex of which, with 'our lights placed in the concave, upon the masquers 'habits, was full of glory. These habits had in them 'the excellency of all devise and riches, and were 'worthily varied, by his invention, to the nations 'whereof they were queens. Nor are these alone his 'due; but divers other accessions to the strangeness 'and beauty of the spectacle: as the hell, the going 'about of the chariots *, and binding the witches, 'the turning machine, with the presentation of 'Fame. All which, continues Jonson, I willingly 'acknowledge for him; since it is a virtue planted in 'good natures, that what respects they wish to obtain 'fruitfully from others, they will give ingenuously 'themselves.' From these last words especially it appears, that, at the time of celebrating this masque [Feb. 2, 1609 †], there subsisted a good harmony between our architect and Father Ben. But it did not continue long uninterrupted. We find the poet ridiculing his associate under the character of *Lanthern Leatherhead*, a hobby-horse-seller, in his comedy of Bartholomew fair, acted in 1614. And the rupture seems not to have ended but with Jonson's death. A very few years before that happened, he wrote a most virulent coarse satire, which he called *An Expostulation with Inigo Jones*. The time when this was written is ascertained by Howell's Letters, among which there is one, dated May 3, 1635, addressed to his friend and father Ben. Jonson, concluding in these terms:

(26) It was, perhaps, this scene, that furnished Milton with the first hint of his Hell, drawn in his *Paradise Lost*; as there is a tradition that he conceived the first idea of that hell from some theatrical representations, invented by Inigo Jones. And this, by the bye, will possibly be recollected by the reader of the new *Compleat History of England*, &c. in perusing § xv. p. 162. Vol. III. of that work. edit. 1757, 4to.

(27) These were, the Queen, the Countesses of Arundel, Derby, Huntingdon, Bedford, Essex, and Montgomery; the Viscountess Cranbourne; the Ladies, Elizabeth Guilford, Anne Winter, Windsore, and Anne Clifford.

* The masquers, on their descent from the temple of Fame, mounted into three triumphant chariots, respectively drawn by eagles, griffons, and lions, attended with torch-bearers, and four hags bound before each. After which, a full triumphant music singing a song, while they rode in state about the stage.

'I heard you censured lately at Court, that you 'have lighted too foul upon Sir Inigo, and that you 'write with a porcupine's quill dipped in too much 'gall. Excuse me that I am so free with you; it is, 'because I am in no common way of friendship.

'Your's,

'J. H. †'

† Jonson's Works, Vol. V. p. 316, edit. 1756.

† Howell's Letters, Vol. I. §. 6. No. xx. edit 1650.

But the poet, it seems, was too much incensed, and too vain withal to listen to the first advice of his friend. Whereupon Mr Howell addressed the following letter to him entirely upon this subject, assuring him that the King was much offended, especially with the coarseness of his abuse.

'Father Ben,

'The fangs of a bear, and the tusks of a wild boar, 'don't bite worse, and make deeper gashes, than a 'goose-quill sometimes; no, not the badger himself, 'who is said to be so tenacious of his bite, that he 'will not give over his hold, 'till he feels his teeth 'meet and bone crack. Your quill hath proved so to 'Mr Inigo; but the pen, wherewith you so gashed 'him, was made rather of a porcupine than a goose 'quill, it is so keen and firm.

'*Anser*,

(m) Ibid. p. 119.

fortune (*m*). But his loyalty, the effect both of his integrity and gratitude, expoſed him to conſiderable loſſes; and he bore a part in the ruins of his royal maſter. Upon the opening of the Long-Parliament in November 1640, he was called before the Houſe of Lords, upon a complaint of the pariſhioners of St Gregory's in London againſt him, for damages done to that church [G]; and afterwards, during the uſurpation, he was conſtrained

Anſer, apes, vitulus, populos & regna gubernant.

'The gooſe, the bee, and the calf (meaning wax, 'parchment, and the pen), rule the world; but 'of the three, the pen is moſt predominant. I 'know you have a commanding one; but you muſt 'not let it tyrannize in that manner, as you have 'done lately. Some give out there was a hair in your 'pen, and that your ink was too thick with gall; 'elſe it would not have beſpattered and ſhaken the re'putation of a Royal Architect; for reputation, you 'know, is like a fair ſtructure, long time a raiſing, 'but quickly ruined. —— If your ſpirit will 'not let you retract, yet you ſhall do well to re'preſs any more copies of the ſatire; for, to deal 'plainly with you, you have loſt ſome ground at 'Court by it; and as I hear from a good hand, the 'King, who hath ſo great judgment in Poetry as in 'other things elſe, is not well pleaſed therewith. 'Diſpenſe with this freedom of your reſpectful ſon 'and ſervant,

Weſtminſter, 3 July, 1635. ‖ 'J. H.'

‖ Ibid. Vol. 2. No. 11. p. 2, 3.

After the Expoſtulation juſt mentioned, Jonſon added another piece, intitled, *To a Friend. An Epigram of him.* And alſo a third, inſcribed *To Inigo Marquis Would be. A Corollary.* Howell, in his firſt letter, plainly points to the epigram, which runs thus:

Sir Inigo doth fear it, as I hear,
And labours to ſeem worthy of this fear;
That I ſhould write upon him ſome ſharp verſe,
Able to eat into his bones, and pierce
The marrow. Wretch! I quit thee of thy pain,
Thou 'rt too ambitious, and doſt fear in vain:
The Lybian lion haunts no butterflies;
He makes the camel and dull aſs his prize.
If thou be ſo deſirous to be read,
Seek out ſome hungry Painter, that for bread,
With rotten chalk or coal upon the wall,
Will well deſign thee to be view'd of all
That ſit upon the common draught or ſtrand;
Thy forehead is too narrow for my brand.

Father Ben. ſeems at length to have followed his ſon's advice, finding it neceſſary, perhaps, to comply thereto, and accordingly ſuppreſſed the whole. Whence it happened, that the contents were little known; and this occaſioned the confuſion in a ſtory which we ſee in print, '*That Jonſon wrote a ſevere ſatire againſt* '*Inigo Jones, in which he ſtiled him Sir Lanthern* '*Leatherhead* §, *but that it was forbid by the King to* '*be printed at that time, and is ſtill extant in manu*'*ſcript* ‡. The reader will be beforehand with me in obſerving, that the ninth line in this epigram alludes to ſome attempts of our architect in the poetical way, either in the buſineſs of maſques † or otherwiſe, or perhaps both. There is a copy of verſes by him, publiſhed in the *Odcombian Banquet*, prefixed to *Tom. Coryat's Crudities.* London, 1611, 4to. And to that the line here mentioned ſeems moſt directly to point. This intruſion into the poet's province had raiſed Ben's ſpleen; and, in the beginning of the quarrel, one principal ſtroke of the ridicule beſtowed upon Lanthern in *Bartholomew Fair*, conſiſts in the title there given him of *Parcel Poet* *.

§ This abuſive title does no where occur in any of the three pieces of which the ſatire conſiſts.

‡ It has been printed ſince, from a MS. of the late Mr Vertue the Engraver, and inſerted among the epigrams, in the 6th volume of Jonſon's Works, edit. 1756, in 7 vols 8vo.

† See Sir Will. Davenant's article, remark [D], No. x.

* Act II. ſcene ii.

[G] *A complaint of the pariſhioners of St Gregory's, &c.*] The quarrel which occaſioned this complaint, ſeems to have commenced at leaſt ſoon after the order mentioned in note (*k*) above. The firſt part of Jonſon's ſatire, which has been ſaid was written in 1635, concludes with theſe lines:

Live long the feaſting room, and e'er thou burn
Again, thy Architect to aſhes turn;
Whom not ten fires, nor a Parliament, can,
With all remonſtrance, make an honeſt man.

If theſe laſt words refer to this quarrel, the point is clear. But it cannot be denied, there is ſome difficulty in that ſuppoſition; for, though we ſhould allow that the quarrel commenced in 1635; yet 'tis notorious, no remonſtrance could then have been made to Parliament, none being called in the interval between the order for repairing St Paul's, and the writing of this ſatire; nor, indeed, at any time afterwards, during Jonſon's life. This paſſage therefore of the ſatire, if underſtood to refer to a remonſtrance of the pariſhioners of St Gregory's upon this occaſion, muſt mean an intended or threatened remonſtrance only; which, indeed, might not improbably be the caſe, ſince the quarrel had certainly begun ſome time before the order was made out for pulling the church down, as may be unqueſtionably inferred from the tenor of the remonſtrance or complaint of the pariſhioners to the Houſe of Commons in 1640; the ſubſtance of which was contained in the paper ſent up by them to the Lords, in theſe terms:

The Declaration of the Commons upon the complaint and in the behalf of the pariſhioners of St Gregory's London, againſt Inigo Jones, Eſq;

'The pariſh church of St Gregory's, adjoining to 'the cathedral church of St Paul's in London aforeſaid, 'is, and from the time whereof the memory of man is 'not to the contrary, hath been the pariſh-church for 'the inhabitants of that pariſh, lately computed to be '3000 perſons, for the adminiſtration of divine ſervice 'and ſacraments. The ſaid Inigo Jones, Eſq; being Sur'veyor of his Majeſty's works, and particularly thoſe 'deſigned for the re-edifying the ſaid church of St 'Paul's, would not undertake the work, unleſs he 'might be, as he termed it, the *ſole Monarch*, or 'might have the principality thereof, and conceiving 'the ſaid work would not well be done without pulling 'down the ſaid church of St Gregory's, preſented a 'plot to his Majeſty accordingly. The ſaid Inigo 'Jones having preſented the ſaid plot, his Majeſty 'thereupon ſignified his pleaſure, and in purſuance 'thereof, ſeveral orders were alſo made at the Coun'cil-board, that the ſaid church ſhould be taken down 'by the pariſhioners, for the more convenient repair'ing of the cathedral church of St Paul's; which the 'pariſhioners refuſing to obey, as was lawful for them 'to do, the ſaid Inigo Jones, in execution of the plot 'and deſign by him preſented as aforeſaid, and of his 'Majeſty's ſignification, and the orders at the Council'board thereupon had, in or about March 1639, did 'pull down, and cauſe to be pulled down, part of the 'ſaid church; and did alſo threaten, *That if the ſaid* '*pariſhioners would not take down the reſt of it, then* '*the galleries ſhould be ſawed down, and with ſcrews* '*the materials of the ſaid church ſhould be thrown down* '*into the ſtreet.* And the ſaid Inigo Jones did further 'threaten the ſaid pariſhioners, *That if they did not* '*take down the ſaid church, they ſhould be laid by the* '*heels.* Whereby the pariſhioners being thus affright'ed, and to ſave the materials, which not long before 'had coſt them 1500 l. were inforced to take down 'ſome part of the ſaid church, inſomuch, as thereby 'it was made altogether uſeleſs, and the ſaid pariſhio'ners, to that great number, have been wholly deſti'tute of any place within their own pariſh for the 'public exerciſing of religion. The damages the pa'riſhioners have hereby ſuſtained are very great, and 'the charge of re edifying the ſaid church, and reſto'ring it to as good plight as it was in before it was ſo 'wrongfully taken down, will amount at leaſt to '3000 l. All which the ſaid pariſhioners are ready to 'prove and maintain. For remedy therefore and re'dreſs herein, and chiefly to the end that the ſaid 'church of St Gregory's may be fully repaired and 'reſtored to the plight and condition wherein it for'merly was, by and at the charge of him and them,

'by

ſtrained to pay 400 l. by way of compoſition for his eſtate as a Malignant (*n*). After the death of King Charles I. he was continued in his poſt by King Charles II. But grief in one of his years for the fatal calamity of the former, prevented him from doing the latter any actual ſervice, by cutting him off many years before the Reſtoration (*o*). He died moſt probably about Midſummer 1652, and was interred June 26, in the chancel of St Benet's church near St Paul's wharf London, where there was a monument erected to his memory upon the north wall, at ſome diſtance from his grave; but it ſuffered greatly in the Fire of London, September 1666 (*p*). Our author left ſeveral manuſcripts, which have been publiſhed ſince his death, and there is ſome account of them below [*H*]. With reſpect to his character, we are told by Mr Webb, that his abilities in all human ſciences ſurpaſſed moſt of his age (*q*). However that be, 'tis certain he was perfectly well ſkilled in the Mathematics, and had ſome inſight into the two learned languages, Greek and Latin, eſpecially the latter (*r*); and we have already taken notice of his taſte for Poetry (*s*). However, theſe accompliſhments were no more than the decorations and counterparts of his proper character, which was, indeed, that of an Architect the moſt eminent in his time. Accordingly, he was then, and is ſtill, generally ſtiled the *Britiſh Vitruvius*; and it is obſervable, that the art of deſign, little known in England before, was brought into uſe and eſteem by him, under the patronage of King Charles I. and Thomas Earl of Arundel (*t*). In ſhort, Mr Jones was generally learned, eminent for Architecture, a great Geometrician, and, in deſigning with his pen (as Sir Anthony Vandyke uſed to ſay), not to be equalled, by whatever great maſters in his time, for the *boldneſs*, *ſoftneſs*, *ſweetneſs*, and *fureneſs* of his touches (*u*).

'by whoſe undue means it was in part taken down, 'or cauſed to be taken down as aforeſaid, it is deſired, 'that ſuch proceedings may be uſed and had againſt 'the ſaid offenders herein, as to right and juſtice doth 'appertain (28).'

This being read, the ſaid Inigo Jones, Eſq; deſired he might have ſome time to anſwer by his Counſel; whereupon it was ordered, that he have a copy of the declaration againſt him, and ſhall put in his anſwer thereto on Tueſday come ſe'ennight (29). Accordingly he did put in his anſwer, and appearing the ſame day before the Lords in Parliament, and being demanded what he could ſay in anſwer to the Declaration, &c. he the ſaid Inigo Jones, for anſwer thereunto ſaith, that he is not guilty of the offence charged in the ſaid Declaration, in ſuch manner and form as therein is expreſſed. Whereupon, Friday fortnight was ordered for hearing the cauſe (30). How this matter ended does not appear in Nalſon, but we have it in the Continuation of Sir William Dugdale's Hiſtory of St Paul's, where we are aſſured, that when the repairing of that cathedral ceaſed in 1642, ſome part of the materials remaining, were, by order of the Houſe of Lords, delivered to the pariſhioners of St Gregory's, towards the rebuilding of that church, which being old had been pulled down, in regard it was thought to be a blemiſh to this ſtately cathedral, whereunto it ſo nearly adjoined (31).

[*H*] *Some account of his manuſcripts.*] The author of Mr Jones's Life, wrote in 1725, intimates, that ſome noble perſons had then been at the labour and expence of procuring the plans of his deſigns. 'And, 'continues he, as the public is now to be obliged with 'a view of them in ſculpture, the reader may expect a 'finiſhed diſcourſe upon their nature and value. And 'thus there will be raiſed a monument to Mr Jones's 'memory, even more laſting than his own great per'formances (32).' Accordingly, the principal of theſe deſigns were publiſhed two years afterwards (33) by Mr Kent; and the ſame gentleman publiſhed ſome of our author's leſſer deſigns in 1744, folio. Others of theſe have been publiſhed alſo by Mr Iſaac Ware *. Our author left in manuſcript likewiſe ſome very curious notes upon Palladio's Architecture, inſerted in a copy of that book; which coming to the hands of George Clerke, Eſq; Fellow of All-Souls college in Oxford, and Member of Parliament ſeveral years for the univerſity, that gentleman gave it to the library of Worceſter-college there; and a few years ago, Mr Leoni, an Italian, went to Oxford, and took a copy of the ſaid notes, which he inſerted in an edition of Palladio, publiſhed by him in 1744, and which he obſerves, raiſes the value of his edition greatly above all that had been publiſhed before. Our author was a great admirer of antiquities, and we are aſſured by Mr Webb, that he had in his poſſeſſion the chieſeſt of all Chriſtendom, deſigned by his relation (34). That gentleman alſo obſerves, that Mr Jones was not only the Vitruvius of England, but of all Chriſtendom; and that it was *vox Europæ* that named him ſo; being much more than at home, famous in remote parts; where he lived many years, deſigned many works, and diſcovered many antiquities, before unknown, with general applauſe (35). To conclude, Mr Webb, who appears to have been our architect's heir, was born in London, bred at Merchant-Taylors ſchool, afterwards reſided in Mr Jones's family, married his kinſwoman [the daughter of his couſin-german], was inſtructed by him in Mathematics and Architecture, and deſigned by him for his ſucceſſor in the office of Surveyor-General, but was prevented by Sir John Denham (36). That he publiſhed an *Hiſtorical Eſſay, endeavouring to prove, that the Language of China is the primitive Language* (37). He alſo tranſlated, from the Italian into Engliſh, *The Hiſtory of the World*, written by George Tarſagnota; which came to the hands of his ſon James. And laſtly, dying at Butleigh, his ſeat in Somerſetſhire, October 24, 1672, was buried in that church (38). P

JONSON [*A*] [BENJAMIN], the renowned father of the poets in the beginning of the laſt century, was the fruit of a poſthumous birth, and came into the world about a month after the death of his father (*a*) in 1574 (*b*). Being born in Weſtminſter, he was put firſt to a private ſchool in the church of St Martin's in the Fields (*c*); but removed thence, at a proper age, to that of the royal foundation, where Camden became his maſter (*d*) [*B*].

(*a*) Drummond of Hawthornden's Works. Edinb. 1711. fol. p. 222.

(*b*) See the text at note (*w*).

(*c*) Sir Thomas Pope Blunt's Cenſura Authorum, &c. p. 105. edit. 1694. 4to.

[*A*] *Jonſon.*] It was thus Father Ben conſtantly ſpelt his name (1). upon all occaſions, at leaſt after he began to have a name in the learned world. Yet we find it uſually wrote Johnſon by all others, not excepting even his beſt friends and fondeſt ſons; nay, what is ſtill more, it is ſo wrote in the inſtrument for raiſing his ſalary as Poet Laureat (2). The late editor of his works plainly agrees with the general opinion, that this was one inſtance, among innumerable others, of that affectation, which ſo ſtrongly marks the character of our poet; and it is obſervable, that tho' his deſcent was far from being a diſcredit to him (3), yet we never find him (as I remember) once mentioning his family upon any occaſion: an enquiry, which that might produce would perhaps have diſcovered his ſingularity in this reſpect. So much at leaſt is certain, that Drummond of Hawthornden, himſelf a Scotchman, writes the name *Johnſon*, in the uſual way. However, as we have not ſeen proof ſufficient abſolutely to decide the queſtion againſt his own practice, it would not be doing him juſtice to reject his authority; and, for that reaſon, we have accordingly complied thereto.

(1) Several inſtances of this may be ſeen in the preface, p. xxvii and xxviii. to his Works, edit. 1756. to which we ſhall add another or two in remark [*KK*].

(2) See remark [*T*].

(3) See remark [*C*].

(d) Ath. Oxon. Vol. I. col. 608.

(d) [B]. As his father was a gentleman and a clergyman [C], this ſtep ſeems to have been taken in the view of breeding him to the Church. But the widow being left in narrow circumſtances, thought fit not to refuſe an offer of marriage, which was made to her by a Bricklayer; and, after her ſon had continued ſome years at Weſtminſter-ſchool, and made an extraordinary progreſs in claſſical learning, ſhe took him away, and obliged him to work under his ſtep-father [D]. This was nipping the firſt ſprig of his dawning hopes in the bud; his ſpirit was not of a temper to take the bent to ſo mortifying a change. In the depth of his reſentment, he left his mother; and inliſting himſelf a ſoldier, was carried to the Engliſh army, then engaged againſt the Spaniards in the Netherlands. Here he acquired a degree of military glory, which rarely falls to the lot of a common man in that profeſſion. In an encounter with a ſingle man of the enemy, he ſlew his opponent; and ſtripping him, carried off the ſpoils in the view of both armies (e) [E]. Upon his return home, he followed the bent of his inclination; and reſuming his ſtudies (f),

(e) Drummond's Works, ubi ſupra.

[B] *Camden was his maſter.*] As this method of breeding was ſuitable to his birth, ſo it was very agreeable to his genius and inclination, and he retained the higheſt eſteem and value for his maſter ever after, which he took the firſt opportunity he had of ſhowing in the dedication of *Every Man in his Humour*; where having declared, that he had always deſtined to preſent his maſter with the firſt effects of his education as ſhould bear any worth proportionable to that benefit, he begs his acceptance of this; 'Such, 'ſays he, wherein neither the confeſſion of my manners ſhall make you bluſh; nor of my ſtudies repent 'you to have been the inſtructor: And for the profeſſion of my thankfulneſs, I am ſure it will, with good 'men, find either praiſe or excuſe.

'Your true lover,

'*BEN. JONSON.*'

We likewiſe find the ſame maſter among thoſe good and great names, which this ſcholar reſolved to conſecrate to poſterity in his epigrams; and which therefore may well claim a place in theſe memoirs, as follows:

'Camden, moſt reverend head, to whom I owe
'All that I am *in arts*, all that I know;
'(How nothing's that?) to whom my country owes
'The great renown and name wherewith ſhe goes.
'Than thee the age ſees not that thing more grave,
'More high, more holy, that ſhe more would crave.
'What name, what ſkill, what faith haſt thou in things!
'What fight in ſearching the moſt antique ſprings!
'What weight, and what authority in thy ſpeech!
'Man ſcarce can make that doubt but thou canſt teach.
'Pardon free truth, and let thy modeſty,
'Which conquers all, be once o'ercome by thee.
'Many of thine, this better could, than I;
'But for their powers, accept my piety (4).'

(4) Epigram xiv. at p. 228, 229. in Vol. VI. of Jonſon's Works, edit. 1756.

[C] *His father being a gentleman*, &c.] The family was originally of Annandale in Scotland, whence our author's grand-father removed to Carliſle, in the time of Henry VIII. under whom he held ſome poſt or office. But his ſon being deprived both of his eſtate and liberty in the reign of Queen Mary, perhaps on account of his religion, afterwards went into holy orders, and leaving Carliſle, ſettled in Weſtminſter, where he died (5).

(5) Drummond of Hawthornden's Works, ubi ſupra, in note (e) in the text.

[D] *Obliged to work under his ſtep-father.*] It is not certain how long he continued in this ſituation. We are told by one writer, that he ſoon left his father, and went to Cambridge; but that the want of a maintenance there forced him back to his father in a few weeks; and that he worked in the New Building, at Lincoln's Inn, with a trowel in his hand, and a book in his pocket (6). This may paſs well enough. But not ſo the account given by Mr Wood, who having told us firſt, that when Ben worked with his father, he was pitied by ſome generous gentlemen, aſſerts farther, that he was recommended by Camden to Sir Walter Ralegh, whoſe ſon he attended in his travels abroad; that on his return to England he and his pupil parted, not in cold blood; that Johnſon then went to Cambridge, &c (7). This ſtory is inconſiſtent both with the age of Sir Walter's ſons, and the incidents of Johnſon's life; and indeed to do *Mr* Wood juſtice, the manner of his narrative plainly implies ſome diſtruſt of his vouches for it.

(6) Fuller's Worthies, &c. under London.

(7) Ath. Oxon. Vol. I. col. 608.

[E] *He carried off the ſpoils in the view of both armies.*] He was not a little elated with this incident of his life. He took occaſion early to touch, by the way, upon it in the apologetical dialogue, which was once ſpoken by way of epilogue to, and is now printed at the end of his *Poetaſter* (8); and he afterwards gave it a place in his collection of epigrams (9). It is addreſſed in theſe terms,

(8) The Poetaſter was firſt acted in 1601.

(9) 'Tis the cviiith epigram in his Works, Vol. VI. p. 268.

To true Soldiers.

'Strength of my country, whilſt I bring to view,
'Such as are miſcalled captains, and wrong you;
'And your high names: I do deſire that thence
'Be not put on you, nor you take offence.
'I ſwear by your true friend, my muſe, I love
'Your great profeſſion, which I once did prove:
'And did not ſhame it with my actions then,
'No more than I dare now do with my pen.
'He that not truſts me having vow'd thus much,
'But's angry for the captain ſtill, is ſuch (10).'

(10) This and the two firſt lines ſhew, that the epigram was wrote as a kind of compenſation for the character of Captain Tucca in the Poetaſter.

We find him again alluding to it with the ſame elation of heart ſeveral years afterwards, when King Charles, then Prince of Wales, was in Spain on the buſineſs of the Spaniſh match. He writes thus to a friend:

'Whether the diſpenſation yet be ſent,
'Or that the match was never meant?
'I wiſh all well, and pray high heaven conſpire,
'My prince's ſafety, and my king's deſire:
'But if for honour we muſt draw the ſword,
'And force back that which will not be reſtor'd,
'I have a body yet that ſpirit draws
'To live or fall a carcaſe in the cauſe (11).'

(11) In his Works, Vol. VI. p. 418, 419.

The glory of this action receives a particular heightning from the reflection, that he thereby ſtands ſingularly diſtinguiſhed above the reſt of his brethren of the poetical race, very few of whom have ever acquired any reputation in arms. On the contrary, it may be obſerved that Jonſon's favourite author Horace in particular, thought the eſſential part of his character ſo little concerned therein, that he has not ſpared to introduce a moſt ſhameful inſtance of his own cowardice, as a heightening incident into one of his Odes, addreſſed to Pompeius Varus, upon the ſafe return of that general from an unſucceſsful expedition againſt Cæſar (12). The ſecond ſtanza of which is thus tranſlated by Mr Francis:

(12) Horatii Opera, Lib. ii. ode vii. N. B. It is no ſmall aggravation of his ſhame, that he was then *Tribunus Militum*, a poſt in the Roman army, equal at leaſt to a modern Colonel.

'With thee I ſaw Philippi's plain,
'It's fatal rout, a fearful ſcene,
'And dropp'd, alas! th' inglorious ſhield,
'Where valour's ſelf was forc'd to yield,
'Where ſoil'd in duſt the vanquiſh'd lay,
'And breath'd th' indignant ſoul away.
'But me when dying with my fear,
'Through warring hoſts enwrapp'd in air,
'Swift did the God of wit convey.'

[F] *He*

(*f*), went to St John's college in Cambridge [*F*]. But here he had ſoon the misfortune to undergo a ſecond mortification. The ſhortneſs of his purſe not ſupplying him with the decent conveniencies of a learned eaſe, he found himſelf under a neceſſity of quitting that ſeat of the Muſes after a ſhort ſtay there. In this exigence he took a courſe, not uncommon to perſons of genius under the like diſtreſs. He applied to the play-houſes, and was admitted into an obſcure one, called the Green-Curtain, in the neighbourhood of Shoreditch or Clerkenwell (*g*). He had not been long in this ſtation, when, not contenting himſelf with the buſineſs of an actor only, he took up his pen, and wrote ſome pieces for the ſtage. But his performances either way did no credit to his genius [*G*]. During his continuance in this humble ſtation, he had a quarrel with one of the players; who ſending him a challenge, there enſued a duel, wherein Jonſon killed his adverſary. For this offence being thrown into priſon, under that misfortune his ſpirit, tough as it was, ſunk into ſome degree of melancholy, ſo that he became a fit object to be ſubdued by the crafty attacks of a Popiſh Prieſt; who, officiouſly viſiting him in his confinement, prevailed upon him to renounce his religion and embrace the Roman-Catholic Faith; and he remained twelve years within the pale of that Church (*h*). Not long after this change in his religious condition, he alſo made a change in his civil one, and took to himſelf a wife [*H*], having firſt obtained his releaſement from priſon. His ſpirit revived with his liberty; and maugre all the diſcouragements he met with, he went on digging in the poetic mine, and, by dint of unappalled induſtry, improved his genius ſo much, that at length he produced a play; which having the good fortune to fall into the hands of Shakeſpeare, that humane good-natured bard reſolving to do full juſtice to it's merit, brought it upon the ſtage, where he was a manager, and acted a part in it himſelf (*i*) [*I*]. Thus encouraged, his genius

(*f*) Ibid.

(*g*) Ath. Oxon. ubi ſupra.

(*h*) Heads of a converſation with Drummond, in that author's Works, where laſt cited.

(*i*) Shakeſpeare's good-nature was the more conſpicuous, as the play was undoubtedly condemned by Jonſon himſelf in the riper age of his genius; otherwiſe we ſhould have ſeen it at the head of his Works in 1616, inſtead of *Every Man in his Humour*.

[*F*] *He went to St John's college in Cambridge.*] This fact is not indeed abſolutely certain. It ſtands chiefly upon the ſtrength of a conſtant tradition in that college, confirmed by his gift of ſeveral books, now in the library, with his name in them. The ſame tradition delivers him down as a ſizar, who made a ſhort ſtay; which accounts for his name's not being found among the admiſſions, where no notice was taken for a long time of any that had not ſcholarſhips. Neither was the regiſter of the univerſity kept for ten or twelve years, about the time of his ſuppoſed matriculation; ſo that his name cannot be expected to appear there.

[*G*] *His performances either way did no credit to his genius.*] In the character of a player his awkwardneſs furniſhed a topic of ſatire to his antagoniſt Decker, who in his Satyromaſtix (13), reproaches him with having left the occupation of a mortar-trader to turn actor, and with having put up a ſupplication to be a poor journeyman player, in which he would have continued, but that he could not ſet a good face upon it, and ſo was caſhiered. That he performed the part of Zuliman at the Paris-garden (14) in Southwark, and ambled by a play-waggon in the highway, and took mad Jeronymo's part to get ſervice among the mimicks. This play called *The Spaniſh Tragedy, or Jeronymo is made again*, was no leſs admired by the populace than derided by our old comedians; Shakeſpear and Fletcher particularly, and after them by Jonſon himſelf (15.) As a poet, Ben's genius partook of his temper, it was hardy and ſullen, and was not beat out without much ſweat and hammering; beſides, it was certainly overtopt by his learning, which at firſt, conſequently, rather damp'd and held it in awe as a maſter, than waited upon it in its proper office as a ſervant.

[*H*] *He took to himſelf a wife.*] Neither the day nor year of his marriage is any where taken notice of. But there is a circumſtance related by Mr Drummond, which was thought ſufficient to fix it about the time mentioned in the text. Ben, ſays that gentleman, told me, that about the time the plague raged in London, being in the country, at Sir Robert Cotton's houſe with old Cambden, he ſaw in a viſion his eldeſt ſon, then a young child, and at London, appear unto him, with the mark of a bloody croſs on his forehead, as if it had been cut with a ſword; at which amazed, he prayed unto God, and in the morning he came to Mr. Cambden's chamber to tell him; who perſuaded him it was but an apprehenſion, at which he ſhould not be dejected. In the mean time there came letters from his wife of the death of that boy in the plague. He appeared to him, he ſaid, of a manly ſhape, and of that growth he thinks he ſhall be at the Reſurrection (16.) The plague here mentioned muſt be that which raged with ſo much fury in the ſummer of 1603, when the court retired to Wilton (17); and thence it follows that this boy was born in 1596, ſince he died upon his birth-day, on the completion of his ſeventh year, as appears from a copy of verſes wrote on that occaſion by his fond father, which under this title, *On my firſt ſon*, begins thus:

'Farewel thou child of my right hand and joy;
'My ſin was too much hope of thee, lov'd boy:
'Seven years thou wert lent to me, and I thee pay
'Exacted by thy fate on the juſt day (18).'

However, this was not all the fruits of his wife's womb, ſhe had before brought him a girl, which did not ſurvive her birth many months. The father's muſe was not wanting to pay a tribute to her memory in the following epitaph:

On my firſt daughter.

'Here lies to each her parents ruth,
'Mary the daughter of their youth,
'Yet all heav'n's gifts being heaven's due,
'It makes the father leſs to rue.
'At ſix months ſhe parted hence,
'With ſafety of her innocence,
'Whoſe ſoul heav'n's queen (19) (whoſe name ſhe bears)
'In comfort of her mother's tears,
'Hath plac'd among her virgin-train,
'Where, while that ſever'd doth remain,
'This grave partakes the fleſhy birth;
'Which cover lightly, gentle earth (20).'

The ſeventh line ſhews our poet to have been then a Papiſt; and that he continued ſuch at the death of his boy is evident from Drummond's ſtory concerning it. Upon the whole, by comparing dates and facts, the reader will eaſily collect the grounds we had for fixing our poet's marriage about the time already mentioned.

[*I*] *That humane good-natured bard brought it upon the ſtage.*] Our author had wrote a play or two which had been abſolutely condemned, and was now offering another to the ſtage, and had put it into the hands of a perſon who having run it over in a careleſs way, was juſt upon returning it to him, with anſwer, that it would be of no ſervice to their company, when Shakeſpeare happened luckily to caſt his eye upon it, and found ſomething ſo well in it, as to engage him firſt to read it through, and then bring it upon his own ſtage. He afterwards continued to recommend our poet and his productions to the publick, and even occaſionally did not diſdain to lend his hand in the finiſhing of ſome of them *. Nor was Jonſon wanting to acknowledge it after his manner. In the cloſe of his preface to the tragedy of Sejanus (21), we read theſe words: 'Laſtly, I would inform you, that this book in all 'numbers is not the ſame with that which was acted 'on the publick ſtage, wherein a ſecond pen had ſo ſha-

* This goodneſs was the more remarkable, as Jonſon was in his perſonal character the very reverſe of Shakeſpeare; as ſurly, ill-natured, proud, and diſagreeable, as Shakeſpeare, with ten times his merit, was gentle, good-natured, eaſy, and amiable. Drummond's Works, Edinb. 1711. fol. p. 222.

(21) Printed in 1605. 4to. The play was firſt acted in [illegible]

genius ripened apace, and his comedy, intitled, *Every Man in his Humour*, made it's appearance on the ſame ſtage in 1598 [*K*]. This was followed the next year by *Every Man out of his Humour* [*L*]. And he continued in like manner to furniſh a new play every year [*M*].

' ſhare'. In place of which I have rather choſen to put ' weaker, and no doubt leſs pleaſing of mine own, than ' defraud ſo happy a genius of his right by my lothed ' uſurpation.' No body can doubt that this genius was Shakeſpeare; but I believe the remark is juſt, That poſterity wiſhes thoſe numbers had been ſuffered to keep their ſtanding, with ſome note of diſtinction by Jonſon, whatever was his true motive for putting the change upon us. After Shakeſpeare's death, Jonſon inſcribed a copy of verſes to his memory, ſo artfully penned, that two great poets have been divided in their opinions about it; Mr Dryden calling it invidious and aſperſing, while Mr Pope thinks it an ample and honourable panegyric to the memory of his friend.

[*K*] *Every man in his humour.*] This play ſtands at the head of the reſt, in the firſt edition of our author's works publiſhed by himſelf in 1616, Fol. and in his Induction to *the Magnetic Lady* (22), he calls it the beginning of his ſtudies of this kind. It ſeems he did not chuſe to own thoſe abortive brats which his unripe brain had produced before. The late editor of Jonſon's works, has inſerted in his edition (23) a comedy called *The caſe is altered*, which he thinks has plain marks of being one of theſe earlier compoſitions of our author; and it is certain that piece, tho' acted ſeveral times by the children of Black-friars, was never fathered by him. It was printed indeed, according to the title page, in 1609, 4to, but moſt probably from the play-houſe copy(24) without his knowledge. Whence it was become in a manner loſt and forgotten by the reſt of the world, 'till the juſt mentioned late revival (25) by Mr Whalley, who grounds his opinion chiefly upon this remark, that the ſcene of the action is placed abroad, and the characters foreign, which being the general practice when Jonſon firſt applied himſelf to write for the ſtage, he conformed to it. Thus the ſcene of *The caſe is altered*, is Milan, the principal perſonages are of the ſame place, and the ſentiments they have occaſion to uſe, are what nature in any climate would expreſs her thoughts in upon a ſimilar occaſion. The droll and comic part of the drama ſhews itſelf in the manners of the ſervants, the mechanics, and lower characters of the comedy; and altho' theſe are exhibited to us, under the ſounding names of Sebaſtian, Balthaſar, and Vicentio, their whole dialogue and humour are a lively copy from the home-ſpun wit of the clowns and artiſans of the poet's native country. But he ſoon obſerved the inconſiſtency, and reformed it. *Every man in his humour* made it's firſt appearance in this abſurd form. The ſcene was at Florence, the perſons repreſented were Italians, and the manners in great meaſure conformable to the genius of the place: But here too the humours of the under-characters are local, expreſſing, not the manners of a Florentine, but the gulls and bullies of the times and country in which the poet lived; and in the ſame manner it was printed in 1601, 4to. But when it appeared again in the collection of his works, it had a more becoming and conſiſtent aſpect. The ſcene was transferred to London, the perſons had Engliſh names given to them, and the dialogue, incidents, and manners, were ſuited to the place of action. Thus, for inſtance, the names of the perſons prefixed to the 4to edition in 1601, are, Lorenzo de Pazzi, ſen. Lorenzo, jun. Muſeo, Stephano, Guilliano, Proſpero, Doctor Clement, Peto, Thorello, Heſperida, Biancha, Mattheo, Pizo, Cob, Tib, Bobadilla; ſcene Florence. In fol. edit. 1616, Old Know'ell, Edward Know'ell his ſon, Brainworm, Mr Stephen, Downright, Wellbred, Juſtice Clement, Roger Formal, Kitely, Dame Kitely, Mrs Budget, Mr Matthew, Caſh, Cob, Tib, Capt. Bobadill; ſcene London. It was no ſmall merit in our author to proceed thus far in his reform, by the choice of a domeſtic fable; but ſtill it muſt be confeſſed, the work is not fully compleated; there remains one remarkable inſtance of Italian manners, I mean, an alluſion to the cuſtom of poiſoning, ſo common in the revenges of Italian jealouſy (26). But notwithſtanding this fault, if it be one, yet it cannot be denied, that the character of Kitely is well imagined and ſupported; his jealouſy is conſtantly returning, and creates him freſh ſcruples in every thing he ſets about. This ſhews itſelf no where in ſo ſtriking a light, as in the incident which makes the third ſcene of act the third; and it is no diſparagement to the author of *The Suſpicious Huſband*, that in this particular, at leaſt, I ſet Jonſon before him.

[*L*] *Every man out of his humour.*] A late excellent critic ſends his reader to this play, for a ſight of the extravagance of building dramatic manners on *abſtract ideas* in it's full light. ' *Every man out of his humour*, ' ſays he, under the name of a play of character, is ' in fact an unnatural, and, as the painters call it, *hard* ' delineation of a group of ſimply exiſting paſſions, ' wholly chimerical, and unlike to any thing we ob' ſerve in the commerce of real life. Yet, continues ' he, this comedy has always had it's admirers, and ' Randolph in particular was ſo taken with the deſign, ' that he ſeems to have formed his *Muſes looking-glaſs* ' in expreſs imitation of it (27).' To this cenſure it hath been obſerved on the part of Jonſon, that the characters are indeed very ſtrongly marked, yet ſome of them have been thought to glance at particular perſons of the author's acquaintance; and that his enemies did not ſcruple to tax him with quarrelling with his friends, and afterwards repreſenting them on the ſtage; and particularly in the characters of this very play (28). So that far from being thought at that time to build his characters upon abſtract ideas, he was really accuſed of repreſenting particular perſons then exiſting; and that even thoſe characters which appear to be the moſt exaggerated, are ſaid to have had their reſpective archetypes in nature and life (29). But this ſolution does not go to the bottom; nay, indeed rather eludes than diſſolves the force of the objection, which does not mean to aſſert the exaggeration of the leading or predominant quality above nature or the life, in any of the characters; but that every other quality, as it really exiſts in nature, is dropped, ſo that the man is turned all into a ſingle paſſion, of which nature affords no ſpecimen. Thus the Ancients obſerved of the famous ſtatue of Apollodorus, by Silarius, that *it expreſſed not the angry Apollodorus, but his paſſion of anger* (30).

[*M*] *He furniſhed a new play every year.*] The firſt of theſe, *Cynthia's Reveh*, he called a comical ſatire, as being not properly a comedy, ſince there is little or no plot, and the perſons of the play are rather vices or paſſions perſonalized, than characters copied from real life. His deſign was a compliment to Queen Elizabeth, under the allegorical perſonage of the goddeſs Cynthia. It was acted in 1600 by the children of her Majeſty's chapel. Upon the death of one of theſe children, Jonſon wrote his epitaph as follows:

An Epitaph on S. P. (31) *a child of Queen Elizabeth's chapel.*

' Weep with me all you that read,
' This little ſtory:
' And know for whom a tear you ſhed,
' Death's ſelf is ſorry.
' 'Twas a child that ſo did thrive,
' In grace and feature,
' As heav'n and nature ſeem'd to ſtrive,
' Which own'd the creature.
' Years he numbred ſcarce thirteen,
' When fate turn'd cruel,
' Yet three fill'd zodiacks he had been
' The ſtage's jewel;
' And did act (what now we moan)
' Old men ſo duly,
' As ſooth the *Parcæ* thought him one,
' He play'd ſo truly.
' So by error to his fate
' They all conſented;
' But viewing him ſince, (alas! too late,)
' They have repented.
' And have ſought (to give new birth)
' In baths to ſteep him;
' But being ſo much too good for earth,
' Heav'n vows to keep him (32).'

(22) Vol. IV. p. 372.

(23) At the end of Vol. VII.

(24) This is more than probable, from the numerous errors in it, as uſual in thoſe copies.

(25) Though the title had been inſerted in the liſt of his productions, yet the play itſelf was become very ſcarce, and hardly to be met with.

We

[illegible] 'till he was called off by the maſques and entertainments made for the reception of King James the Firſt on his acceſſion to the throne of England [N]. He was continually employed in this employ on all occaſions during his whole life afterward. But theſe ſlighter efforts of his muſe did not wholly occupy his genius. Both inclination and ambition concurred in prompting him to the graver and weightier works of the drama. Accordingly, in 1605, came out his comedy of *Volpone, or the Fox*; which being wholly finiſhed in the ſpace of five weeks (*k*), did not hinder him from indulging the ſourneſs of his temper, in a ſatirical comedy called *Eaſtward-Hoe*, written about this time againſt the Scottiſh nation. In this piece of intemperance, Chapman and Marſton were his coadjutors; and they were all three committed to priſon, and brought in danger of loſing their ears and noſes in the pillory (*l*); but, however, had the good fortune to obtain a pardon [O]. To repair this fault, Jonſon ſacrificed both his time and his muſe almoſt entirely to gratify the taſte of the Court in maſques (*m*) for ſome years; ſo that his next play did not make its appearance 'till 1609. But he made ſome amends for the length of this interval by the perfection of the piece, which he intitled *Epicene, or the Silent Woman*; this being generally eſteemed the moſt exact and finiſhed comedy that our nation hath produced [P]. And

(*k*) See his prologue to that comedy, in anſwer to a reproach, that he was not leſs than a year about every play.

(*l*) Drummond's Works, ubi ſupra.

(*m*) See his Works, Vol. V. and VI. edit. 1754. where ſeveral of them are printed.

we here that theſe children or choriſters vyed with the moſt celebrated players of that time. Accordingly the next piece of our author, the *Poetaſter*, had the ſame performers in 1601. The conteſt between Jonſon and Decker has been already mentioned; and this ſatire was the genuine offſpring of it, wherein that competitor is ridiculed under the character of Criſpinus. Our author was alſo taxed with reflecting in it on ſome profeſſors of the Law and military men, both well known at that time. As the popular clamours againſt him ran very high, he thought proper to make a reply in an epilogue, which however was ſpoken only once (33). Decker reſolved to attack the aggreſſor at his own weapons, and wrote a play intitled *Satiromaſtix; or, The untruſſing the humorous poet*; where, under the character of Horace junior, he laſhes Jonſon, who in the Poetaſter had ſtiled himſelf Horace, and given many long and direct verſions from that favourite author, in contempt, as it ſhould ſeem, of the vulgar clamour, which had before cenſured him for his imitations. To compleat the oppoſition, as Jonſon's piece was acted by the children of the chapel, ſo Decker's revenge was performed by thoſe of St Paul's, who were the only rivals to the former.

(33) This is the Apologetical Dialogue referred to in remark [E].

After this our author tried his ſkill in tragedy writing, and produced his Sejanus, which was acted in 1603, and we ſhall ſpeak of it preſently.

[N] *'Till interrupted by the maſques and entertainments, &c.*] In theſe performances Jonſon was the chief factor for the Court, the writer's ſhare in moſt of them was furniſhed by him, and there ſeldom paſſed a year wherein he did not provide one or two poetical pieces of this kind. The firſt piece of this ſort which he had a hand in, was an entertainment compoſed for King James as he paſſed thro' the city from the Tower, to his coronation in Weſtminſter-Abbey, on Thurſday March 15, 1603. Our poet applied the firſt and laſt pageants, only the other three were deviſed by Decker, that antagoniſt being aſſociate with Johnſon on this occaſion, and he publiſhed his own part under this title, *The magnificent entertainment given to King James and Henry Frederic the Prince, upon the day of his Majeſty's paſſage from the Tower, thro' his honourable city and chamber of London, being the 15th of March* 1603. *Lond. 4to.* 1604. This rival of our author projected a device too, at the King's firſt arrival in the city, but it was never executed. In that he had introduced the genius of London; and Jonſon afterwards having done the like in this, and printed his part of the work, with explanatory notes of the ancient rites and paſſages alluded to therein, Decker attempted to ridicule his taſte in theſe words: 'To make a falſe flouriſh 'here with the borrowed weapons of all the old 'maſters of the noble ſcience of poeſy; and to 'keep a tyrannical wit in anatomizing genius from 'head to foot, only to ſhew how nimbly we can carve 'up the whole maſs of the poets, were to play the 'executioner, and to lay our city's houſhold-god on 'the rack, to make him confeſs how many pair of 'Latin ſheets we have ſhaken, and cut into ſhreds, to 'make him a garment. Such feats of activity are ſtale 'and common among ſcholars, before whom it is pro-'teſted we come not now (in a pageant) to play a 'maſter's prize.' This cenſure is ſuppoſed to be the legitimate offſpring of envy or malice in Decker, who had no genius or learning himſelf, and thought to be even with his betters, by endeavouring to rail or laugh them out of countenance; however that be, it is evident the preſent attack is not defective either in point of wit or ſpirit. But the truth is, Jonſon's taſte was the taſte of their common maſter, who, as is well known, was no leſs pedant than pageant-wiſe (34). No wonder then that he became the court-factor in general for theſe ſhews, which he took care to perfume with another eſſence ſtill more grateful than the former. I mean the incenſe of the moſt ſervile and abject adulation. He ſaw how very acceptable this tribute was, and provided it with no unſparing hand. For this all the ſtores of his learning were ranſacked and rifled; and in that ſearch he has been lucky enough to find out the foundation of a handſome compliment to prince Henry (that darling of the people as long as he lived), which has eſcaped the diligence of our beſt hiſtorians, I mean his reſemblance in the face to Henry the Vth. It is introduced in a piece called *The ſpeeches at Prince Henry's barriers*, where Merlin addreſſing himſelf to that prince, recounts the heroical deeds of his anceſtors, Kings and Princes of England; and in that detail, after the Black Prince, he deſcends to Henry V. in theſe lines:

Yet reſts the other thunderbolt of war,
Harry the fifth, to whom in face you are
So like as fate would have you ſo in worth (35).

(34) Jonſon's addreſs is ſhewn particularly in introducing ſeveral copies of Latin verſes into his firſt entertainment; and he obſerved the ſame courtlineſs in ſeveral of the ſubſequent productions of that caſt, and it is remarkable, that this talent was ſparingly exerted upon any other occaſion.

(35) Jonſon's Works, Vol. V. p. 362, 363.

[O] *In danger of the pillory, but obtained a pardon.*] Sir James Murray repreſented the affront to his Majeſty, who ordered the puniſhment above mentioned. Upon his releaſement our poet gave an entertainment to his friends, among whom were Camden and Selden, who not improbably had been very inſtrumental in procuring his pardon (36). In the midſt of the entertainment his mother, more an antique Roman than a Briton, drank to him, and ſhewed him a paper of poiſon, which ſhe intended to have given him in his liquor, after having taken a potion of it herſelf, if the ſentence upon him had been carried into execution (37). It is not improbable that the motive for making a ridicule upon the Scots the ſubject of a play, was the almoſt certain proſpect of it's welcome reception. It muſt have been a popular topic at this time with the Engliſh. We have before had occaſion to obſerve, that ſome of the beſt ſpirits among theſe, were irreconcilably diſguſted (38) at the crowd of blue caps which then filled every corner of the Court. However that be, ſo much will not be denied, that the undertaking is a proper contraſt to the extreme courtlineſs of our poet's muſe, mentioned in the preceding remark, ſets it in a clear light, and demonſtrates, her goddeſſſhip to be a mere occaſional conformiſt.

(36) If ſo, he had an opportunity of returning the favour which was acknowledged by Selden, when he had incurred the royal diſpleaſure by his Hiſtory of Tithes. See the preface to his Titles of Honour.

(37) Life of Drummond, ubi ſupra.

(38) In the Life of Holles Earl of Clare.

[P] *The Silent Woman is the moſt exact play that our nation hath produced.*] Mr Dryden was ſo much ſtruck with the perfection of this performance, that he ſets it down for a pattern of a perfect play, wherein all the unities inſiſted on by the niceſt and moſt ſcrupulous critics are moſt ſtrictly obſerved. For inſtance, the length of the action, ſo far from exceeding the compaſs of a natural day, does not make up an artificial one, but is all included in the limits of three hours and an half, which is no more than is required for the preſentment on the ſtage. The ſcene is laid in London. The latitude of the place is almoſt as little

And the next year brought forth *The Alchemiſt* [Q], one of the beſt of his comedies; but that was followed the enſuing year, 1611, by the worſt of his tragedies, intitled *Cataline* [R]. In 1613 our author took a tour to Paris, where he was admitted to an interview

as you can imagine; for it lies all within the compaſs of two houſes, and after the firſt act in one. The continuity of ſcenes is obſerved more than in any of ours, except his own Fox and Alchemiſt (39). The action of the play is entirely one; the end or aim of which is the ſettling of Moroſe's eſtate upon Dauphine. The intrigue is the greateſt and moſt noble of any pure unmixed comedy in any language. The converſation of gentlemen in the perſons of Truewit and his friends is deſcribed with more gaiety, air, and freedom, than in the reſt of Jonſon's comedies. The contrivance of the whole is ſtill the more to be admired, becauſe it is a comedy where the perſons are only of a common rank, and their buſineſs private, not elevated by paſſions or high concernments as in ſerious plays. Laſtly, the unravelling of the plot is ſo admirable, that when it is done, no one of the audience would think the poet could have miſſed it; and yet it was concealed ſo much before the laſt ſcene, that any other way would ſooner have entered into your thoughts (40). Thus that excellent poet, who may be ſaid to have governed the opinion of the public ſo far, which muſt needs be pleaſed, as he was, to view the Engliſh theatre rivalling that of France in it's moſt boaſted quality, viz. a ſtrict obſervation of the unities. But when his fondneſs carried him farther to juſtify the character of Moroſe as quite in nature, and not overcharged, it is no wonder, that ſome criticks appeared, who being of a ſourer diſpoſition, judged with leſs partiality to the author in this point §. It has been obſerved that Jonſon might probably borrow the character and marriage of Moroſe from the declamation of the Greek ſophiſt Libanius upon a moroſe perſon; who having married a talkative wife, is ſuppoſed to plead his own accuſation before the judges, in order to obtain a ſentence of death againſt himſelf. The remark is Mr Theobald's (41), and whoever reads that harangue will be apt to concur with him. For tho' he gave no proofs of any imitations from it, yet that omiſſion only ſhews he had not actually compared the two pieces together with this view, otherwiſe the following inſtance is ſo plain and direct, that it could not have eſcaped his eye. In the declamation, Moroſe mentioning the device of ſtopping his wife's mouth, declares, that having tried the experiment, it was ſo far from curing her, that afterwards ſhe grew much worſe for it, which he enforces by the following ſimile: ὥσπερ οἱ τὰς κρουνὰς ἐπισχοντες, εἶτ' ἀφιεντες, τὸ κωλυόν σφοδρότερον εἰργάσαντο τὴν φοράν, ὕτως ἐγὼ μικρὸν ἀνασείλας τὴν φωνὴν μεῖζον ἐπασπασάμην τὸ ῥεῖθρον *, of which Greek the following ſpeech of Moroſe in the play is a plain and direct imitation, in anſwer to Truewit's officiouſneſs, who offers to entreat Epicene to hold her peace, he cries out, O no, labour not to ſtop her. *She is like a conduit-pipe, that will guſh out with more force when ſhe opens again* †. It may be obſerved alſo, that the extravagant exaggeration of the original throughout, which in the declamatory ſtile is leſs inexcuſable, ſeems to have drawn our imitator to follow it in general (as has been obſerved he did the Roman hiſtorian in his Cataline) beyond the juſt bounds of the province of comedy. Mr Dryden tells us ‖ from tradition, that Jonſon was really acquainted with a perſon of this whimſical turn of mind; which indeed is very poſſible in nature; and then the deſign being to expoſe the foible of a real perſon, it was very convenient to exaggerate the peculiarities and enlarge the features of the character; notwithſtanding he may be cenſured therein ſinking beneath the true dignity of the comic ſcene, and degenerating into farce ‡.

[Q] *The Alchemiſt.*] Mr Dryden intimates, that the character of the Alchemiſt was copied from the Aſtrologer in the comedy of Albumazar, a play which was revived in his time, and a prologue wrote by him, wherein are theſe lines:

Subtle was got by our Albumazar,
That Alchemiſt by this Aſtrologer,
Here he was faſhioned, and we may ſuppoſe,
He liked the faſhion well who wore the clothes.

The author of this play is unknown, but the earlieſt edition of it is ſeveral years later than the Alchemiſt; and the ſilence of Jonſon's enemies on this head, is a preſumption in his favour, wherein it has been ſuggeſted, that Mr Dryden might poſſibly be miſinformed or miſtaken (42).

The very judicious critic mentioned in a preceding remark, having ſhewn the incongruity there is between farce and comedy; and in conſequence thereof the abſurdity of the modern practice in perpetually mixing them together, proceeds thus: 'Of our own comedies, ſuch of them, I mean, as are worthy of criticiſm, Ben Jonſon's Alchemiſt and Volpone, bid the faireſt for being written in the genuine unmixed manner. Yet, tho' their merits are very great, the impartial critic will hardly allow them this perfection. The Alchemiſt is, I think, throughout exaggerated; and at beſt belongs to that ſpecies of comedy, which we have before called particular and partial. The extravagant purſuit ſo ſtrongly expoſed in that play, hath been now of a long time forgotten; and we therefore find it difficult to enter fully into the humour of this highly wrought character. We may remark in general of ſuch ſubjects, that they are a ſtrong temptation to the writer to exceed the bounds of truth and mediocrity in his draught of them at firſt, and are farther liable to an imperfect, and even unfair ſentence from the reader afterwards. For the welcome reception, which theſe pictures of prevailing local folly meet with on the ſtage, cannot but induce the poet, almoſt without deſign, to inflame the repreſentation, and the want of archetypes in a little time makes it paſs for immoderate, were it originally given with ever ſo much diſcretion and juſtice. The plan of the Alchemiſt is then eſſentially ſuch as ſubjects this comedy to the imputations of farce.

'The Volpone, on the other hand, is a ſubject fitted for the entertainment of all times, and is therefore of the ſort a great writer would chuſe, when he wanted to tranſmit a monument of his art and genius to poſterity. Such appears to have been the generous purpoſe of the poet in this admirable comedy, and the fate of it has been anſwerable to his intentions; yet neither, I am afraid, is this a complete model. There are even ſome incidents of a farcical invention; particularly, the mountebank's ſcene, and Sir Politique's tortoiſe, are in the taſte of the old comedy. Beſides, the humour of the dialogue is ſometimes on the point of becoming inordinate, as may be ſeen in the pleaſantry of Corbaccio's miſtakes through deafneſs; and in other inſtances. The caſt of his plays indeed could hardly be any other, if we attend to the character of the writer. For his nature was ſevere and rigid; and this in giving a ſtrength and manlineſs, gave at times too an intemperance to his ſatire. His taſte for ridicule was ſtrong but indelicate, which made him not over curious in the choice of his topics. And laſtly, his ſtile in picturing characters, tho' maſterly, was without that elegance of hand, which is required to correct and allay the force of ſo bold a colouring. Thus the biaſs of his nature leading him to Plautus rather than Terence, for his model, it is not to be wondered that his wit is too frequently cauſtic, his raillery coarſe, and his humour exceſſive.' This impartial pen concludes the remark in the following terms: 'Some late writers for the ſtage have, no doubt, avoided theſe defects in the exacteſt of our oldeſt dramatiſts. But do they rival his excellencies? Poſterity, I am afraid, will judge otherwiſe, whatever may be now thought of ſome more faſhionable comedies. And if they do not, neither the ſtate of general manners, nor the turn of the public taſte appears to be ſuch, as countenances the expectation of greater improvements. To thoſe who are not over ſanguine in their hopes, our forefathers will perhaps be thought to have furniſhed (what in nature ſeem linked together) the faireſt example of *dramatic* as of *real* manners (43).

[R] *The worſt of his tragedies Cataline.*] This and the Sejanus are the only trials of his ſkill and taſte in tragedy, and they have both been condemned by the general ſentence, from their firſt appearance down to this day. Nevertheleſs our poet himſelf appears to have

(39) They are not broken above twice or thrice at moſt, and in Corneille's Cid and Cinna we find them interrupted once.

[illegible] new and converſation with Cardinal Perron, whom he treated with all that frankneſs and bluntneſs which was ſo much his nature (*n*). It was about this time that he commenced a [illegible] with Inigo Jones, whom he therefore made the ſubject of his ridicule in his next comedy, called *Bartholomew-Fair*, acted in 1614 (*o*). That was ſucceeded by the *Devil is an Aſs*, in 1616. This year he publiſhed his Works in one folio volume; and [illegible] Laureat's ſalary, of a hundred marks per annum, was ſettled upon him for life by King James I. the ſame year (*p*). Crowned with theſe honours by his Prince, he [illegible] the moſt diſtinguiſhed wits of his time crowding his train and courting his acquaintance. And, in that ſpirit, he was invited to Chriſt-Church in Oxford by Dr Corbet [*S*], then

(*n*) See an account of this quarrel in the preceding article, remark [*F*].

(*o*) See remark [*T*].

(*p*) See remark [*T*].

[illegible] ſome ſmall value on each of them (44), a conſtant proof of the common remark how ill a judge [illegible] of the merit of his own productions. The following extract will juſtify this cenſure; Horace [illegible] his art of poetry has theſe lines:

> *Publica materies privati juris erit,*
> *Si non circa vilem patulumque moraberis orbem;*
> *Nec verbum verbo curabis reddere fidus*
> *Interpres, nec deſilies imitator in arctum,*
> *Unde pudor proferre pudor vetet, aut operis lex.*'

Here are three rules laid down to be obſerved by every dramatic writer in the management of his fable. (1.) Not to follow the trite obvious round of the original work, i. e. Not ſervilely and ſcrupulouſly to adhere to its plan or method. (2.) Not to be tranſlators inſtead of imitators, i. e. If it ſhall be thought fit to imitate more expreſsly any part of the original, to do it with freedom and ſpirit, and without a ſlaviſh attachment to the mode of expreſſion. (3.) Not to adopt any particular incident, that may occur in the propoſed model, which either decency or the nature of the work would reject. A late ingenious commentator upon this paſſage having obſerved, 'That tho' 'the poet refers to the Iliad of Homer for an illuſtration of theſe rules, probably without an eye to particular inſtances of the errors here condemned, in 'the Latin tragedies, proceeds thus: For want of 'theſe, ſays he, it may be of uſe to fetch an illuſtration from ſome examples in our own; and we need 'not look far for them. Almoſt every modern play 'affords an inſtance of one or other of theſe faults. 'The ſingle one of Cataline by B. Jonſon is, itſelf, a 'ſpecimen of them all. This tragedy, which hath 'otherwiſe great merit, and on which it's author 'appears to have ſet no ſmall value, is, in fact, the 'Catalinarian war of Salluſt put into poetical dialogue, 'and ſo offends againſt the firſt *rule* of the poet, in '*following too ſervilely the plain beaten road of the chronicle*. Next the ſpeeches of Cicero and Cataline, of Cato and Cæſar, are, all of them, direct 'and literal tranſlations of the hiſtorian and orator, in 'violation of the ſecond rule, which forbids *a too cloſe attachment to the mode or form of expreſſion*. 3. There are ſeveral tranſgreſſions of that rule which 'enjoins a *ſtrict regard to the nature and genius of the work*: One is obvious and ſtriking. In the hiſtory, 'which had for it's ſubject the whole Catalinarian 'war, the fates of the conſpirators were diſtinctly to 'be recorded, and the preceding debates concerning 'the manner of their puniſhment afforded an occaſion 'too inviting to be overlooked by an hiſtorian (and 'above all a republican hiſtorian) of embelliſhing his 'narration by ſet harangues. Hence the long ſpeeches 'of Cæſar and Cato in the ſenate have great propriety, 'and are juſtly eſteemed amongſt the leading beauties 'of that work. But the caſe was totally different in 'the drama; which, taking for it's ſubject the ſingle 'fate of Cataline, had no concern with the other conſpirators, whoſe fates, at moſt, ſhould only have 'been hinted at, not debated with all the circumſtances of pomp and rhetoric on the ſtage. Nothing 'can be more flat and diſguſtful than this calm impertinent pleading; eſpecially in the very heat and 'winding up of the plot. But the poet was miſled 'by the beauty it appeared to have in the original 'compoſition, without attending to the peculiar laws 'of the drama, and the indecorum it muſt needs have 'in ſo very different a work (45).' Thus that judicious critic. And in aggravation of Jonſon's fault it hath been farther obſerved, that tho' he was conſcious of what might poſſibly be objected to him upon thoſe heads, yet he was ſo far from regarding them as errors or imperfections in his poem, that he, in truth, conſidered them as beauties, and prided himſelf upon his tranſlations as ſo many real excellencies, and the chief ornaments of his play. However, in juſtice to him it muſt be acknowledged, that he hath diſcovered great art and ſpirit in deſigning and ſupporting his characters; and has occaſionally deviated from the leading thread of the ſtory, and varied the arrangement of circumſtances in the manner that was moſt conducive to draw out his characters, and diſplay the ruling paſſion inherent in the breaſt of each (46). Theſe remarks upon the Cataline, continues the ſame editor, are, in ſome degree, applicable to the Sejanus of Johnſon *. In this indeed the narration from which he copied was leſs obvious and direct; and hence it demanded a greater ſhare of judgment to combine and connect the diſtinct periods and members, to form a regular and conſiſtent whole; but as the ſtory lay before him, from which he drew his incidents, he copied with too cloſe an attachment to hiſtoric compoſition; and in breach of the ſecond rule, what he hath tranſlated in the Latin, is expreſſed with too exact a conformity to the mode and letter of the original expreſſion. And laſtly, he hath adopted incidents which the law and nature of his work would reject. The play ſhould naturally have ended with the fall and tragical death of Sejanus. For this reaſon the ſubſequent deſcriptions taken from Juvenal, of the indignities and inſults offered by the multitude, both to himſelf and his ſtatues, are wholly out of place. Nor was it leſs improper to deſcribe with the attendant circumſtances, the unfortunate end of the ſon and daughter of Sejanus; who with brutal violence were dragged from home, and inhumanly put to death by the public executioner. But the poet intended to recount a tale of horror, and excite pity in the breaſts of the ſpectators, by relating the untimely fate of the innocent and tender ſufferers; and this farther contributed, in concurrence with the moral, that to inſinuate divine vengeance would not fail to puniſh and exterminate the whole race of thoſe, who contemned the providence and power of heaven (47). He might alſo have ſtill another deſign in his view in not concluding his play without theſe ſtories, as they ſerved to take off the force of the objection made to the choice of his ſubject, that Sejanus and Cataline were hiſtorical characters ſo well known, that no diſtreſs which befals them, can poſſibly raiſe any kind of pity, the chiefeſt and nobleſt paſſion belonging to tragedy, in the breaſt of the beholder. However, after all, it muſt be acknowledged, that pity is not the only paſſion, which the tragic poet is concerned with. To excite dread and terror in the mind of the ſpectator, is equally the deſign of tragedy with raiſing the ſofter and more tender emotions of the heart. Wickedneſs and guilt, when they are repreſented to an audience, ſhould naturally create no other ſenſations but thoſe of fear and horror; and the cataſtrophe ſhould be deſigned as a monitory leſſon to deter others from perpetrating the like crimes. Our poet is not ſingular in the choice of his ſubjects. One of them has lately been exhibited on a ſtage that is no way remarkable for preſenting ſcenes of cruelty to the beholder. The rival wits of France, Mr Crebillon in his *Catalina*, and Mr Voltaire in his *Rome ſauvé*, have actually pitched on the ſame event with Jonſon, in their conteſt for the dramatic laurel.

(50) In Jonſon's Works, Vol. VI. p. 358. There is an epitaph upon him, wherein Ben. expreſſes a great regard for his memory.

[*S*] *He was invited to Chriſt-Church by Dr Corbet.*] We have had occaſion to mention this gentleman before in the courſe of this work (48), and therefore ſome account ſhall be given of him here. He was deſcended of a genteel family at Ewel in Surrey (49), tho' his father Vincent Corbet followed the buſineſs of a gardiner at Twickenham in Middleſex (50). He was born in 1582, and being bred firſt at Weſtminſter-ſchool was removed thence to Broadgate-hall, (now Pembroke-

(45) Epiſtolæ ad Piſones, &c. with an Engliſh Commentary and notes, ſecond edit. 1753. Vol. I. p. 84, 85.

then Senior-Student of that college. Our Poet gladly accepted the invitation; and, having paſſed ſome time in cultivating his muſe in that delightful ſeat, he received an additional atteſtation of his merit from the univerſity, who preſented him with the honorary degree of Maſter of Arts, at the Act in 1619 (*q*). On the death of the Laureat, Samuel Daniel, in October following, Jonſon ſucceeded to that poſt, the duty of which had been chiefly performed by him a long time before [*T*]. The year had not expired, when our new-

(9) He was created *A. M.* July 10, that year. Wood's Faſti Oxon. Vol. I. col. 215.

Pembroke-college) in Oxford in 1597-8, and choſen ſtudent of Chriſt-Church the following year. In 1605 he proceeded *A. M.* being then eſteemed one of the moſt celebrated wits of the univerſity, and particularly diſtinguiſhed himſelf by making extempore verſes, jeſts, and high flights in the romance taſte, which was the wit then in vogue. Afterwards entering into holy orders he became a moſt quaint preacher in the faſhion of that age; and was therefore admired, and eſpecially taken notice of by King James I, who made him one of his chaplains, and promoted him to the deanery of of Chriſt-Church (51), in 1620. By the recommendation of the Earl of Dorſet he was made biſhop of Oxford in 1629, whence he was tranſlated to Norwich in 1632, where he died in 1635, and was buried in that cathedral, having a flat ſtone upon his grave, with a ſhort Latin inſcription, and the arms of the Corbets of Shropſhire, viz. *Or, a raven paſſant ſable.* Mr Wood tells us, that he was of a very hoſpitable temper, and generous in promoting public deſigns; particularly in 1634, upon the repair of St Paul's, London, he exerted himſelf both in ſpeech (52), and exemplary gifts to advance that pious work, not only contributing largely himſelf, but alſo giving money to ſome poor miniſters for them to give, in order to excite others to contribute who were better able. After his death was publiſhed a piece, intituled, *Poetica Stromata*, or a collection of ſundry pieces of poetry, London, 1647, 48, &c. 8vo*. Theſe were made in his younger years, and never intended for the preſs by him. There is alſo extant *Richardi Corbet oratio in funus Henrici principis.* MS. in Muſeo Aſhmoliano, at Oxford (53).

(51) He was then Senior-Student of the college, Vicar of Caſſington in Oxfordſhire, and Prebendary of Bedmington-Secunda in the church of Sarum.

(52) The MS. of this ſpeech is in the Aſhmolean Muſæum at Oxford.

* See a copy of verſes cited from it upon Arabella Stuart, in the article of STUART [ARABELLA].

[*T*] *He was made Poet Laureat, &c.*] It is ſomething ſtrange, ſays Mr Whalley, that when Daniel was Laureat, his province for many years ſhould have been diſcharged by Jonſon, altho' Daniel wanted not for genius, and was honoured with the good opinion of the Queen. He might alſo have obſerved that Jonſon had the ſalary of the Laureat ſettled upon him for life, ſome years before Daniel's deceaſe, or elſe one of the ſame value, unleſs there be a miſtake in the date of the inſtrument, as it is referred to in the ſubſequent one for augmenting that ſalary of a hundred marks to ſo many pounds, with the addition of a tierce of Canary wine in 1630, by King Charles I. To ſupport this remark, it will be neceſſary to lay before the reader a copy of that warrant, as follows:

'CHARLES R.

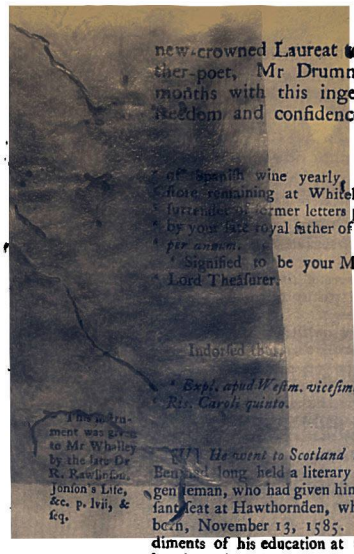
'Charles by the Grace of God, Kinge of England, 'Scotland, Fraunce and Ireland, defender of the faith, '&c. to the Theaſurer, Chancellor, Under Theaſurer, 'Chamberlains, and Barons of the Exchequer of us, 'our heirs and ſucceſſours, now beinge, and that hereafter ſhall be, and to all other the officers and miniſters of the ſaid court, and of the receipt there now 'beinge, and that hereafter ſhall be, and to all others, 'to whom theſe preſents ſhall come, or to whom it 'ſhall or may apperteyn, greeting. Whereas our late 'moſt deare father King James of happy memorie, 'by his letters pattents under the great ſeale of Eng'land bearing date at Weſtminſter the firſt day of Fe'bruary in the thirteenth year of his reign of England '(for the conſiderations therein expreſſed) did give and 'graunt unto our well-beloved ſervaunt Benjamin John'ſon, an annuitie or yearly penſion of one hundred marks 'of lawful money of Englande, duringe his life, to be 'paid out of the ſaid Exchequer, at the feaſt of the 'annunciation of the bleſſed Virgin Mary, the nativity 'of St John Baptiſt, St Michael the Archangel, and 'the birth of our Lord God, quarterly, as by the ſaid 'letters patents more at large may appear; which an'nuity or penſion, together with the ſaid letters pa'tents, the ſaid Benjamin Johnſon hath lately ſurren'dered unto us. Know yee now, that wee, for di'verſe good conſiderations us at this preſent eſpecially 'movinge, and in conſideration of the good and accept'table ſervice done unto us, and to our ſaid father by 'the ſaid Benjamin Johnſon, and eſpecially to encou'rage him to proceed in thoſe ſervices of wit and penn, 'which wee have enjoyned unto him, and which we 'expect from him, are graciouſly pleaſed to augment 'and encreaſe the ſaid annuitie or penſion of one 'hundred marks, unto an annuitie of one hundred 'pounds of lawful money of England, for his life. 'And for the better effecting thereof, of our eſpecial 'grace, certain knowledge, and meer motion, we have 'given and graunted, and by theſe preſents for us, 'our heirs, and ſucceſſors, upon the ſurrender afore'ſaid, do give and graunt unto the ſaid Benjamin 'Johnſon, one annuitie or yearly penſion of one hun'dred pounds of lawful money of England, by the 'year, to have, hold, and yearly to receive the ſaid 'annuitie or yearly penſion of one hundred pounds 'of lawful money of England, by the year, unto the 'ſaid Benjamin Johnſon, or his aſſignes, from the laſt 'of our Lord God laſt paſt before the date hereof, for 'and during the natural life of him the ſaid Benjamin 'Johnſon, at the receipt of the exchequer of us, our 'heirs and ſucceſſours, out of the treaſure of us, our heirs 'and ſucceſſours, from time to time there remayning, by 'the Theaſurer and Chamberlens of us, our heirs and 'ſucceſſours there, for the time beinge, at the afore'ſaid four uſual terms of the year, (that is to ſay) at 'the feaſt of the annuntiation of the bleſſed Virgin 'Mary, the nativity of St John the Baptiſt, St Michael 'the Archangel, and the birth of our Lord God, by 'even and equal potions, quarterly to be paid. The 'firſt payment thereof to begin at the feaſt of the an'nuntiation of the bleſſed Virgin Mary next before the 'date of theſe preſents. Wherefore our will and plea'ſure is, and we do by theſe preſents for us, our heirs 'and ſucceſſors require, command and authoriſe 'the ſaid Theaſurer, Chancellor, Under-Theaſurer, 'Chamberlens, and Barons, and other Officers and Mi'niſters of the ſaid Exchequer, now and for the time be'ing, not only to paie, or cauſe to be paid unto the ſaid 'Benjamin Johnſon, or his aſſignes, the ſaid annuitie 'or yearly penſion of one hundred pounds, of lawful 'money of England, according to our pleaſure before 'expreſſed: And alſo from time to time to give full al'lowance of the ſame, according to the true meaning 'of theſe preſents: And theſe preſents, and the in'rollment thereof ſhall be unto all men whom it ſhall 'concern, ſufficient warrant and diſcharge for the 'payinge and allowinge of the ſame accordingly, without 'any farther or other warrant to be in that behalf pro'cured or obtained. And further know yee, that wee 'of our more eſpecial grace, certain knowledge, and 'mere motion, have given and graunted, and by theſe 'preſents, for us, our heirs and ſucceſſors, do give 'and graunt unto the ſaid Benjamin Johnſon and his 'aſſignes, one terſe of Canary Spaniſh wine yearly: 'To have, hold, perceive, receive and take the ſaid 'terſe of Canary Spaniſh wine unto the ſaid Benjamin 'Johnſon and his aſſignes, during the term of his natu'ral life, out of our ſtore of wines yearly, and from 'time to time remayninge at or in our cellars, within, 'or belonging to our palace of Whitehall. And for 'the better effecting of our will and pleaſure here'in, we do hereby require and command all and ſin'gular officers whom it ſhall or may concerne, or who 'ſhall have the care or charge of our ſaid wines, that 'they or ſome one of them do deliver, or cauſe to 'be delivered the ſaid terſe of wine yearly, and once 'in every year unto the ſaid Benjamin Johnſon or his 'aſſignes, during the term of his natural life, at ſuch 'time and times, as he or they ſhall demand or deſire 'the ſame. And theſe preſents or the inrollment 'thereof ſhall be unto all men whom it ſhall concerne, 'a ſufficient warrant and diſcharge in that behalf, al'tho' expreſs mention, &c. In witneſs, &c.

Ex. per Ro. HEATH.

'Maie it pleaſe your moſt excellent Majeſty,

'This conteyneth your Majeſtie's graunte unto Ben'jamin Johnſon, your Majeſtie's ſervaunte, during his 'life, of a penſion of 100 l. *per annum*, and of a terſe

'of



This instrument was given to Mr Whalley by the late Dr R. Rawlinson. Jonſon's Life, &c. p. lvii, & ſeq.

new-crowned Laureat took a tour into Scotland (*r*), on purpoſe to viſit a favourite brother-poet, Mr Drummond of Hawthornden [*U*] in that country. He paſſed ſome months with this ingenious friend, to whom he opened his heart with a moſt unreſerved freedom and confidence, the ſweeteſt gift of friendſhip [*W*]. Our author was much pleaſed

(r) Mr Drummond dates the minutes of his converſation, January 1619.

of Spaniſh wine yearly, out of your Majeſtie's ſtore remaining at Whitehall. And is done upon ſurrender of former letters patents granted unto him by your late royal father of a penſion of 100 marks *per annum*.

'Signified to be your Majeſtie's pleaſure by the Lord Theaſurer.

RO. HEATH.

Indorſed thus:

March 1630.

'*Exhi. apud Weſtm. viceſimo ſexto die Martii anno R. Rs. Caroli quinto.*

Per WINDEBANK *.'

[*U*] *He went to Scotland to viſit Drummond, &c.*] Ben had long held a literary correſpondence with this gentleman, who had given him an invitation to his pleaſant ſeat at Hawthornden, where this brother-poet was born, November 13, 1585. He received the firſt rudiments of his education at the high-ſchool in Edinburgh, and thence removed to that univerſity, where he was made A. M. In 1606, he was ſent to Bourges in France, to ſtudy the Civil-Law under his countryman, the Preſident Lockhart; and he made himſelf ſo much a maſter of it, that if he had followed the practice, he might have made the beſt figure of any Lawyer in his time. But he ſaw more charms in the claſſics than in that dry ſtudy, and relinquiſhed all thoughts of the Bar. After the death of his father, he retired to Hawthornden; and, continuing his application to the Greek and Latin Poets and Hiſtorians, he there enriched the world with the product of his leiſure hours. In this retirement he fell in love with a beautiful young lady, daughter to Mr Cunningham of Barnes, of an ancient and honourable family. He made his addreſſes to this lady, and was happy enough to raiſe a mutual paſſion in her. The day of marriage was fixed, and all things ready for completing his felicity, when ſhe was ſnatched from him by a fever. To divert the melancholy occaſioned by this ſhock (54), he made the tour of Italy; and paſſing through Germany and France, he viſited all the famous univerſities, and converſed with the Literati of each country. He continued abroad eight years, and reſiding chiefly at Rome and Paris, he made an excellent collection of the beſt ancient Greek and Latin, and of the modern French, Italian, and Spaniſh books. Upon his return to Scotland, he went to the ſeat of his brother-in-law Sir John Scott, of Scots-Tarvant, a gentleman of good ſenſe and learning, with whom he lived 'till about 1630; when he entered into a marriage with Elizabeth, grand-daughter of Sir Robert Logan (55). He had ſeveral children by this lady. Two ſons, William, who was knighted by Charles II; Robert; and a daughter, Elizabeth, who was married to one Dr Henderſon a Phyſician at Edinburgh. After the breaking out of the civil war, he retired to his brother, with whom he continued during the times of the confuſion. In this interval it is ſuppoſed, that he drew up his Hiſtory of the Five James's, ſucceſſively Kings of Scotland. He likewiſe wrote ſeveral tracts againſt the meaſures of the Covenanters, and thoſe engaged in the oppoſition of Charles I. one of theſe, called *Icæne*, he was deſired to print, as the beſt means to quiet the minds of the diſtracted people, by the Marquis of Montroſe, who likewiſe ſent him a protection, dated Auguſt 1645, immediately after the battle of Kylſyth, with another letter, wherein he highly commends Mr Drummond's learning and loyalty (56). When a tax was laid by the reformers for raiſing the army which fought againſt the King, as his eſtate lay in three different counties, it happened, that the money levied upon him as his ſhare upon any one of the eſtates, did not amount to the maintaining of one man, but a half, or perhaps a quarter only. Whereupon he addreſſed the following lines to the King.

(54) His grief for this loſs is the ſubject of ſeveral of his letters and poems; wherein he obſerves, that he was the firſt in the iſland that ever celebrated a dead miſtreſs.

(55) Mr Hall calls her Margaret Logane of the Houſe of Reſterrig. See preface to his Hiſtory. in the concluſion. 'Tis ſaid he was ſmitten by the reſemblance ſhe bore to his firſt love.

(56) At this time he wrote alſo the *London Star*, and *an Addreſs* to thoſe *who were called the Leaguers*; the purport of which is the ſame with that of the *Icæne*.

'Of all theſe forces rais'd againſt the King,
'Tis my ſtrange hap not one whole man to bring.
'From diverſe pariſhes, yet diverſe men;
'But all in halves and quarters: Great King, then,
'In halves and quarters if they come 'gainſt thee,
'In halves and quarters ſend them back to me.'

Under the appellation of a Malignant he was extremely harraſſed by the prevailing party, and for his verſes and diſcourſes frequently ſummoned before their circular tables. The news of his Sovereign's death upon a ſcaffold ſo overwhelmed him with grief, that, worn down by ſtudy as he was, he did not long ſurvive the ſhock. He died the ſame year, 1649; and though he never was in arms for the King, yet he may be ſaid in ſome ſenſe to have fallen a ſacrifice to his loyalty. A little before his death, he gave a conſiderable part of his books to the univerſity of Edinburgh (57). His general character is thus ſummed up by the writer of his Life. He was a man of fine natural endowments, cultivated by reading and travelling; he was poſſeſſed of all the perſonal accompliſhments of muſic, dancing, fencing, &c. and ſpoke the Spaniſh, Italian, and French languages, as well as his mother-tongue. He was a judicious and great Hiſtorian, a delicate Poet, a maſter of polite erudition, a loyal ſubject, a friend to his country, and, to ſum up all, a pious Chriſtian. After his death, his Hiſtory was publiſhed at London, 1655, in fol. with a preface or introduction by Mr Hall of Gray's-Inn. In this Hiſtory, Mr Drummond has chiefly followed Biſhop Elphinſton, and has given a different turn to things from Buchanan, whom a party of the Scotch accuſe of being a penſioner of Queen Elizabeth; and as he joined intereſt with the Earl of Murray, who wanted to diſturb the reign of his ſiſter Mary Queen of Scots; he is ſtrongly ſuſpected of being a party-writer, and of having miſrepreſented the Scotch tranſactions of old, in order to ſerve ſome ſcheme of policy. His Works were printed at Edinburgh, 1711, in fol. to which there is prefixed an account of his life (58); as alſo a preface by Milton's nephew, Mr Edward Philips, who ranks him with Taſſo and Guarini among the Poets, and places him next to Thuanus among the Hiſtorians. Among his poems, there is one called by him *Polemio Middiana*; 'tis a kind of Macronic poetry, in which the Scots words are put into Latin terminations; it was reprinted in Queen Anne's time, with a preface concerning Macronic poetry; and it has been often reprinted in Scotland as a very humerous performance.

(57) Hall, where laſt mentioned.

(58) 'Tis from that account that moſt of the particulars of this remark are taken.

[*W*] *The ſweeteſt gift of friendſhip.*] His ſentiments of the authors and poets of thoſe times will no doubt be an agreeable entertainment to the reader; and we ſhall lay it before him, from the minutes which were taken of it by Drummond himſelf, as follows. With regard to the Poets, he ſaid, that Sydney did not keep a decorum, in making every one ſpeak as well as himſelf. That Spenſer's ſtanza pleaſed him not, nor his matter; the meaning of the allegory of the fairy-queen he delivered in writing to Sir Walter Ralegh, which was, that, by the bleating beaſt he underſtood the Puritans; and by the falſe Dueſſa the Queen of Scots. Spenſer's goods, he ſaid, were robbed by the Iriſh, and his houſe with a little child burnt, he and his wife eſcaped, and after died for want of bread in King-ſtreet; he refuſed 20 pieces ſent him by Lord Eſſex, and ſaid he had no time to ſpend. That Samuel Daniel was a good honeſt man, had no children, and was no poet; he had wrote the Civil Wars, and had not yet one battle in all his book. That Drayton's Poly-Olbion, if he had performed what he promiſed to write, the Deeds of all the Worthies, had been excellent; that he was challenged for writing one book, *Mortimeriades*. That Sir John Davis played on Drayton in an epigram, who in a ſonnet concluded his miſtreſs might have been the ninth worthy, and ſaid, he uſed a phraſe like Dametas in Arcadia, who ſaid, his miſtreſs for her wit might be a giant. That Sylveſter's tranſlation of Du Bartas was not well done, and that he wrote his verſes before he underſtood to conſer, and thoſe of Fairfax were not good (59). That the tranſlation of Homer and Virgil into long Alexandrines was but proſe.

(59) His cenſure of Fairfax moſt probably aroſe from the ſame principle as that of Spenſer, which was his diſlike of the ſtanza form in epic poetry.

pleaſed with the adventures of this journey, and celebrated them in a particular poem; which, together with ſeveral more of his productions, being accidentally burnt, about two or three years afterwards, that loſs drew from him a poem, which he called *An Execration upon Vulcan* [*X*]. He ſeems to have let no year paſs without the amuſement of writing

proſe. That Sir John Harrington's *Arioſto*, of all tranſlations, was the worſt. He ſaid Donne was originally a poet, his grandfather on the mother's ſide was Heywood the epigrammatiſt; that Donne, for not being underſtood, would periſh. He eſteemed him the firſt poet in the world for ſome things (60); his verſes of the *loſt Ochadine* he had by heart, and that paſſage of the calm, that duſt and feathers did not ſtir, all was ſo quiet. He affirmed, that Donne wrote all his beſt pieces before he was 25 years of age. The conceit of Donne's transformation or metempſychoſis was, that he ſought the ſoul of that apple which Eve pulled, and hereafter made it the ſoul of a bitch, then of a ſhe-wolf, and ſo of a woman: his general purpoſe was to have brought it into all the bodies of the heretics from the ſoul of Cain, and at laſt left it in the body of Calvin. He only wrote one ſheet of this, and ſince he was made doctor repented hugely, and reſolved to deſtroy all his poems (61). He told Donne, that his anniverſary was prophane and full of blaſphemies; that if it had been written on the Virgin Mary it had been tolerable; to which Donne anſwered, that he deſcribed the idea of a woman, and not as ſhe was (62). He ſaid farther to Drummond, that Shakeſpeare wanted art, and ſometimes ſenſe; for in one of his plays he brought in a number of men, ſaying they had ſuffered ſhipwreck in Bohemia, where is no ſea near by 100 miles (63). That Sir Walter Raleigh eſteemed fame more than conſcience; that the beſt wits in England were employed in making his hiſtory, and he himſelf had written a piece to him on the Punic war, which he altered and ſet in his book*. He ſaid there was no ſuch ground for an heroic poem as King Arthur's fiction; and that Sir Philip Sidney had an intention to have transferred all his Arcadia to the ſtories of King Arthur. That Owen was a poor pedantic Schoolmaſter, ſweeping his living from the poſteriors of little children, and had nothing good in him, his epigrams being meer narrations. That Francis Beaumont died before he was 30 years of age, who he ſaid was a good poet, as were Fletcher and Chapman, whom he loved. That Sir W. Alexander (64) was not half kind to him and neglected him, becauſe a friend to Drayton. That Sir R. Ayton loved him dearly. That he fought ſeveral times with Marſton, and ſaid Marſton wrote his father-in-law's preachings, and his father-in-law his comedies. This was his judgment of the poets of his own country. With regard to foreigners, he thought Bartas no poet, but a verſer, becauſe he wrote no fiction. He curſed Petrarch for reducing verſes into ſonnets, which he ſaid was like that tyrant's bed, where ſome who were too ſhort were racked, others too long cut ſhort. That Guarini, in his *Paſtor Fido*, kept no decorum in making ſhepherds ſpeak as well as himſelf. That the beſt pieces of Ronſard were his odes (65). That of the ancient Latin poets, Petronius, Plinius Secundus, and Plautus, ſpoke beſt Latin; and Tacitus wrote the ſecrets of the Council and Senate, as Suetonius did thoſe of the Cabinet and Court. That Lucan taken in parts was excellent, but all together nought. That Quintilian's 6th, 7th, and 8th books, were not only to be read, but altogether digeſted. That Juvenal, Horace, and Martial, were to be read for delight, and ſo was Pindar, but Hippocrates for health. Of the Engliſh he ſaid, Hooker's Eccleſiaſtical Polity was beſt for Church matters, and Selden's Titles of Honour for Antiquities (66).

[*X*] *An Execration upon Vulcan.*] This poem was printed ſoon after his death (67), in a collection, intitled, *Ben Johnſon's Execration againſt Vulcan: with divers Epigrams by the ſame Author, to ſeverall Noble Perſonages in this Kingdome. Never publiſhed before.* It begins with theſe lines:

'And why to me this, thou lame lord of fire?
'What had I done, that might call on thine ire,
'Or urge thy greedy flames thus to devour
'So many my years labour in an hour.
'I ne'er attempted, Vulcan, 'gainſt thy life.—
'Had I wrote treaſon there, or hereſy,
'Impoſture, witchcraft-charms, or blaſphemy,
'I had deſerv'd then thy conſuming looks.'

In proceeding, he enumerates the ſeveral kinds of looſe or low writing, and particularly the unnatural romances, ſpawned in the age of Chivalry, together with the factious pamphlets, written eſpecially by the Puritans in this and the preceding age; all which being condemned to the flames, he goes on thus:

'Theſe had'ſt thou pleaſed either to dine or ſup.
'Had made a meal for Vulcan to lick up.'

Then he paſſes to his own loſs in the following lines:

'But in my deſk what was there to excite
'So ravenous and vaſt an appetite:
'I dare not ſay a body, but ſome parts
'There were of ſearch and maſt'ry in their arts.
'All the old Venuſine in poetry,
'And lighted by the Stagyrite could ſpy (68),
'Was there made *Engliſh* with the Grammar too,
'To teach ſome, *that* their nurſes could not do,
'The purity of language (69); and, among the reſt,
'*My journey into Scotland ſung, with all th'adven-*
'tures;
'Three books not afraid
'To ſpeak the fate of the Sicilian maid
'To our own ladies; and in ſtory there
'Of our fifth Henry*, eight of his nine year,
'Wherein was oil, beſide the ſuccour ſpent,
'Which noble Carew, Cotton, Selden, lent:
'And *twice twelve years*, ſtor'd up humanity,
'With humble gleanings in Divinity,
'After the Fathers, and thoſe wiſer guides,
'Whom faction had not drawn to ſtudy ſides.

Upon theſe laſt lines it is that the conjecture in the text is built concerning the date of this preſident, the probability of which is left to the reader's judgment.

We muſt not forget to obſerve, that there are two poems ſtill extant, wrote upon the ſame number of love adventures. One of theſe is intitled, *The Hour-Glaſs*, and the other, *Upon my Picture left in Scotland.* They are both inſerted in the laſt edition of his Works, Vol VI (70). The ingenious editor of which, in a note to the latter poem, has theſe words. 'This and 'the preceding copy were both wrote in Scotland, 'when Jonſon paid a viſit to Drummond of Haw-'thornden in the year 1619.' But in this there is ſome difficulty, as will appear from peruſing the verſes, which run thus:

'I now think Love is rather deaf than blind;
'For elſe it could not be, that ſhe,
'Whom I adore ſo much, ſhould ſo ſlight me,
'And caſt my love behind:
'I 'm ſure my language to her was as ſweet,
'And every cloſe did meet,
'In ſentence of as ſubtil feet,
'As hath the youngeſt he,
'That ſits in ſhadow of Apollo's tree.
'Oh! but my conſcious fears,
'That fly my thoughts between,
'Tell me that ſhe hath ſeen
'My hundreds of grey hairs,
'Told ſeven and forty years.
'Read ſo much waſte, as ſhe cannot embrace
'My mountain belly and my rocky face,
'And all theſe thro' her eyes have ſtopt her ears.'

Now if he was forty-ſeven years of age in 1619, his birth could not have happened later than 1572, two years

(60) See Jonſon's epigram to John Donne, Vol. VI. p. 260.

(61) Jonſon had a literary correſpondence with Donne, and ſeveral of the letters may be ſeen in *A Collection of Letters made by Sir Tobie Matthews, Knt.* 2ond. 1660, 8vo.

(62) It appears from his letters, that he never ſaw the lady whom he made the ſubject of this poem.

(63) See the Winter's Tale, Act III. ſcene vi. and vii. However, the magic of that tale is ſuch as makes this abſurdity undiſcerned.

* In his Diſcoveries Jonſon ſays, that Sir Walter was not to be contemned either for judgment or ſtile.

(64) Afterwards Earl of Stirling and a Poet.

(65) But all this Drummond ſays was to no purpoſe; for he never underſtood the French or Italian languages, that is, not ſo perfectly as Drummond. He was, indeed, entirely ignorant of the French; yet there are proofs of his having a tolerable ſkill in the Italian. Perhaps he might borrow what he ſaid of Ronſard from Cardinal Perron, whoſe favourite Poet he was, and who preferred an uncommon admiration of his odes.

(66) In the preface to that book, publiſhed in 1614, he calls Jonſon his beloved friend and ſingular Poet, whoſe ſpecial worth in literature, accurate judgment and performance, known only to the few who are only able to know him, hath had from me, ever ſince I began to learn, an increaſing admiration. See alſo in the body of the book, part ii. p. 466. in Vol. III. of his Works, edit. 1726. fol.

(67) In 1640, 4to. The imprimatur bears date December 1639. It was printed alſo the ſame year in 12mo.

(68) Meaning his tranſlation of Horace's Art of Poetry, with notes from Ariſtotle. The tranſlation is in his Works, but the notes were moſt of them inſerted in his Diſcoveries.

(69) Of this alſo he either had another copy, or ſupplied the loſs by a new one; for we find it among his Works, Vol. VII. edit. 1756.

(70) P. 355, 356.

years

writing ſome of theſe ſmaller pieces. And thoſe, with the maſques, which the office of Poet-Laureat then particularly called for every Chriſtmas, filled up the interval to the year 1625 (s); when his comedy, intitled *The Staple of News*, appeared upon the ſtage. Not long afterwards he fell into an ill ſtate of health, which, however, did not hinder the diſcharge of his duty at Court. And he found time alſo to gratify the more agreeable exerciſe of play-writing; for, in 1629, he brought another comedy, called *The New Inn, or the light Heart*, to the theatre. But here his adverſaries prevailed over him; the play was hiſſed out of the houſe on it's firſt appearance there; and our Laureat had recourſe to his pride for a revenge, which dictated an *Ode to himſelf*, threatening to leave the ſtage [*Y*]. This diſappointment added to the continuance of his illneſs; and the Poet's ordinary foible, bad œconomy, having reduced his finances to a low ebb, the king graciouſly ſent him a purſe of a hundred pounds. That goodneſs was properly and in character repaid by an epigram, addreſſed to his royal benefactor, which, for ſome ſpecial reaſons, is inſerted below [*Z*]. But

(s) Theſe are printed in the 6th volume of his Works, edit. 1756.

years before the date of it, as fixed by this editor himſelf, viz. 1574. And as this latter date is confirmed by ſo many concurring teſtimonies, it remains, that we fix the date of his poem in 1621, two years after the journey to Scotland; to which time the contents of it are plainly conſonant enough.

[*Y*] *An Ode to himſelf.*] It conſiſts of ſix ſtanzas. The two firſt are as follow:

'Come leave the loathed ſtage,
'And more the loathſome age,
'Where pride and impudence in faſhion knit,
'Uſurp the chair of wit;
'Indicting and arraigning every day
'Something they call a play.
'Let their faſtidious, vain,
'Commiſſion of the brain
'Run on and rage, ſweat cenſure, and condemn;
'They were not made for thee, leſs thou for them.

'Say that thou pour'ſt them wheat,
'And they will acorns eat:
'Twere ſimple fury ſtill thy ſelf to waſte
'On ſuch as have no taſte.
'To offer them a ſurfeit of pure bread,
'Whoſe appetites are dead;
'No, give them grains their fill,
'Huſks, draft to drink and ſwill.
'If they love lees, and leave the luſty wine,
'Envy them not their palates with the ſwine.

The preſumption and vanity of this ode was ſuch, as provoked even Jonſon's friends to animadvert upon it. Mr Owen Feltham (71) anſwered it in another ode of the ſame meaſure, the ſecond ſtanza of which runs thus:

'Tis known you can do well,
'And that you do excel
'As a tranſlator. But when things require
'A genius and a fire
'Not kindled heretofore by others pains,
'As oft you've wanted brains
'And art to ſtrike the white.
'As you have levell'd right,
'Yet if men vouch not things apocryphal,
'You bellow, rave, and ſpatter round your gall.'

(71) A writer of note in that age, and author of a book, which had it's day of fame, intituled, *Reſolves*. That he was a friend to Jonſon's real merit appears by his verſes in Jonſonus Virbius. See remark [*D D*].

This is ſevere and coarſe. But he is touched more ſenſibly, becauſe much more delicately, by Sir John Suckling, in the concluſion of the lines following in *The Seſſions of the Poets*.

'The firſt that broke ſilence was good old Ben,
'Prepared before with Canary wine,
'And he told them plainly he deſerved the bays,
'For his were call'd Works, where others were
'but plays (72).
And
'Bid them remember how he had purged the ſtage
'Of errors that had laſted many an age;
'And he hop'd they did not think the Silent
'Woman,
'The Fox and the Alchemiſt out-done by no man.
'Apollo ſtopt him there, and bade him not go on,
'Twas merit he ſaid, and not preſumption,
'Muſt carry 't. At which Ben turned about,
'And in great choler offer'd to go out.
'But
'Thoſe that were there thought it not fit
'To diſcontent ſo ancient a wit;
'And therefore Apollo call'd him back again,
'And made mine Hoſt of his own *New Inn* (73).

(72) Pieces, &c. as in the text.

(73) Fragmenta Aurea, &c. p. 7. edit. 1748, 8vo.

However, Ben, on the other hand, had his adherents, who even did not ſcruple to maintain, that the pride and preſumption of this poem was no more than his juſt right, and what he had a fair claim to from the undoubted ſuperiority of his merit. *Sume ſuperbiam quæſitam meritis*, was the advice of Horace, the father of the Latin ode. In this ſpirit his fond and faithful ſon, Thomas Randolph, incenſed at the too ſevere attack of Feltham, addreſſed an ode to our poet, of which we ſhall give a ſtanza or two from Langbaine.

'Ben, do not leave the ſtage,
'Cauſe 'tis a loathſome age;
'For pride and impudence will grow too bold,
'When they ſhall hear it told
'They frighted thee. Stand high as in thy cauſe;
'Their hiſs is thy applauſe.
'Moſt juſt were this diſdain,
'Had they approv'd thy vein.
'So thou for them and they for thee were born;
'They to incenſe, and thou too much to ſcorn.

'Wilt thou engroſs thy ſtore
'Of wheat, and pour no more;
'Becauſe their bacon-brains have ſuch a taſte,
'As more delights in maſt?
'No; ſet them forth a board of dainties, full
'As thy beſt muſe can cull;
'Whilſt they the while do pine,
'And thirſt 'midſt all their wine.
'What greater plague can hell itſelf deviſe,
'Than to be willing thus to tantalize.

[*Z*] *An Epigram which is inſerted below.*] The title is an Epigram to King Charles for an hundred pounds he ſent me in my ſickneſs, 1629.

'Great Charles, among the holy gifts of grace,
'Annexed to thy perſon and thy place,
'Tis not enough (thy piety is ſuch)
'To cure the call'd King's evil with a touch,
'But thou wilt yet a kinglier maſt'ry try,
'To cure the poet's evil, Poverty:
'And in theſe cures doſt to thyſelf enlarge,
'As thou doſt cure our evil at thy charge.
'Nay, and in this thou ſheweſt to value more,
'One poet, than of other folks ten ſcore.
'O piety! ſo to weigh the poor's eſtates.
'O bounty! ſo to difference the rates.
'What can the poet wiſh his King may do,
'But that he cure the people's evil too (74).

(74) Jonſon's Works, &c. Vol. VI. p. 434. The two laſt lines allude to the murmurs of that time upon the diſſolution of the Parliament, &c. See the General Hiſtory of England under this year.

This poem is inſerted at length, not ſo much to confute as to ſhame a printed ſtory (75), which tells us, that

(75) Cibber's Lives of the Poets under Jonſon's article, and Smollet's Hiſtory of England, Vol. III. p. 316.

But his Majeſty's munificence did not ſtop there; he augmented the Laureat's ſalary of a hundred marks to a hundred pounds a year, together with the addition of a tierce of Canary wine; which penſion has been continued to his ſucceſſors in that office ever ſince. [*AA*] King

that the King hearing of our poet's ſickneſs, ſent him a benevolence of ten pounds; and that Ben taking the money into his hand, ſaid to the meſſenger, *His Majeſty hath ſent me ten pounds, becauſe I am old and poor, and live in an alley, go and tell him that* his ſoul lives in an alley (76). This diſorder of Jonſon's, whatever it was, ſeems to have been of the chronical ſpecies. We find him in 1631 pouring forth his complaints in the following triplet:

(76) There is an expreſſion like this laſt in our author's Works, that furniſhed the words, which, with the bluntneſs of his temper, was ground more than enough for the coinage and ready reception of a calumny.

'Diſeaſe the enemy, and his engineers,
'Want, with the reſt of his conceal'd compeers,
'Have caſt a trench about me theſe five years.'

This ſtanza is the ſecond of five which make up an epiſtle mendicant to the then Lord Treaſurer (77). The whole tenour whereof diſcovers a greater affliction for the emptineſs of his purſe, than for the diſorder of his perſon; and the ſucceſs he had met with in that article encouraged him to make uſe of his muſe afterwards, in ſeveral leſs direct, but not leſs underſtood, nor leſs effectual applications of the adulatory kind, with the ſame view. We are told particularly, that he received forty pounds for one of theſe, which he intituled an *Epigram*, and begins thus:

(77) In his Works, Vol. VI. p. 446.

'If to my mind, great Lord, I had a 'ſtate,
'I would preſent you now with curious plate,
'Of Norimberg or Turkey, &c (78).'

(78) Ibid. Vol. VII. p. 9.

[*AA*] *Which penſion is ſtill continued.*] Our poet drew up a petition for this favour in the following form:

'The humble petition of poor Ben,
'To th' beſt of monarchs, maſters, men,
'King Charles.
Doth moſt humbly ſhow it,
'To your majeſty, your poet:
'That whereas your Royal Father
'James the bleſſed, pleas'd the rather,
'Of his ſpecial grace to letters,
'To make all the muſes debtors
'To his bounty: By extenſion
'Of a free poetic penſion,
'A large hundred marks annuity,
'To be given me in gratuity,
'For done ſervice, and to come:
'And that this ſo accepted ſum;
'Or diſpenſed in books or bread,
'(For on both the muſe was fed)
'Hath drawn on me from the times
'All the envy of the rhimes,
'And the rattling pit-pat noiſe
'Of the leſs poetic boys,
'When their pot-guns aim to hit,
'With their pellets of ſmall wit,
'Parts of me (they judg'd) decay'd,
'But we laſt out ſtill unlay'd.
'Pleaſe your majeſty to make,
'Of your grace, for goodneſs ſake,
'Thoſe your father's marks your pounds:
'Let their ſpite (which now abounds)
'Then go on, and do it's worſt,
'This would all their envy burſt:
'And ſo warm the poet's tongue,
'You'll read a ſnake in his next ſong (79).

(79) Ibid. p. 8.

We have the rather been induced to infert this epiſtle to his majeſty, in order to contraſt the latter part of it with the Ode addreſſed to himſelf in *Rem.* [*Y*]. The raillery here upon his poetic foes, tho' poignant, is perfectly genteel and eaſy, and at a great diſtance from the foul-mouthed coarſe virulence of the Ode. The occaſion indeed required it; and this ſhews him to be a compleat maſter in the œconomy of ſatirical wit; and that he knew when to take the ſwitch, and when the bludgeon or the flail, and could manage both with a ſkill to be envied, but not equalled by his antagoniſts. But there is another part of his conduct wherein his want of œconomy is both notorious and contemptible, I mean in the article of his finance, which notwithſtanding the handſome addition made to it as here mentioned, were continually in diſorder and deficient; and and that defect made him a beggar. Some inſtances of this have been mentioned in the preceding remark, and many more might be produced. There is good reaſon to believe, that he had alſo expenſion from the City, from ſeveral of the nobility [illegible] and particularly from Mr Sutton the founder of Charter-houſe hoſpital in London (80). Mr Wood indeed inſinuates, what is ſtill more contemptible, that theſe penſions were paid him to prevent [illegible] the laſh of his ſatire; as if Jonſon, like another Aretine, was the ſcourge of the Great, who refuſed to become tributaries to his muſe. But this ſeems to have no better a foundation than the known ſeverity of that muſe when provoked. It is certain the applications which we have of his in this way, are of a very different ſtrain; and the following addreſs is ſufficient to ſhew, that Ben's foibles were the uſual ones generally incident to a head poetically turned, heedleſſneſs and extravagance (81).

(80) Mr Wood had [illegible] both of Biſhop Corn. Vol. I. col. 9.

(81) To this purpoſe Cowley comforts himſelf, that ſuch
Were all th' inſpired tuneful men,
Such all his great grandfathers were, from Homer down to Ben.

To Mr John Burges.

'Father John Burges,
'Neceſſity urges
'My woeful cry
'To Sir Robert Pye,
'And that he will venture
'To ſend my debenture.
'Tell him his Ben
'Knew the time when
'He lov'd the Muſes,
'Tho' now he refuſes
'To take apprehenſion
'Of a year's penſion,
'And more is behind:
'Put him in mind,
'Chriſtmas is near;
'And neither good cheer,
'Mirth, fooling, nor wit,
'Nor any leaſt fit
'Of gambol or ſport
'Will come at the Court;
'If there be no money,
'No plover or coney
'Will come to the table,
'Or wine to enable
'The muſe or the poet,
'The pariſh will know it.
'Nor any quick warming pan help him to bed;
'If th'Chequer be empty, ſo will be his head (82).

(82) Ibid. Vol. VI. p. 431, 432. His ſhift too for ſqueezing five pounds of Arthur Squib was perfectly mean and contemptible. See his epiſtle to that friend, p. 428, 429.

It is true we find him threatning to ſatirize the King's houſhold, if he were not reſtrained by the fear of offending his Majeſty. It ſeems he had met with ſome difficulty and delay in procuring his butt of ſack from the board of Green Cloth, whereupon he ſent the following verſes, which he intituled, *An Epigram to the Houſhold*, 1630.

'What can the cauſe be, when the King hath given
'His poet ſack, the houſhold will not pay?
'Are they ſo ſcanted in their ſtore, or driven
'For want of knowing the poet to ſay him nay?
'Well, they ſhould know him, would the King but grant
'His poet leave to ſing his houſhold true;
'He'd frame ſuch ditties of their ſtore and want,
'Wou'd make the very green cloth to look blue:
'And

(t) That Prince is observed to have up against the torrent of his own afflictions with a princely resolution, but always to melt and mix his tears, on receiving or hearing of those sorrows which his friends suffered on his account.

King Charles the First's personal character makes it no improbable supposition, that these acts of favour might be in some measure the effects of his compassion for this servant (*t*), who began now to sink into a visible decay both of body and mind. 'Tis true, we have two comedies wrote by him afterwards; but they are such, as have not unfitly been called his dotage (*u*) [*BB*]; and he found himself under a necessity of absolutely laying down his pen soon after the year 1634 [*CC*]. His disorder was the palsey, which put a period to his life Aug. 6, 1637, in the 63d year of his age (*w*). He was interred three days afterwards in Westminster-abbey, at the north-west end near the belfrey. Over his grave was laid a common pavement-stone, with this Laconic inscription, O Rare Ben Jonson. It was done

(*u*) So they are called by Dryden, but yet they are the dotages of Jonson, as Mr Whalley observes in his Life, p. 51.

(*w*) See his monument in Westminster-abbey.

'And rather wish in their expence of sack,
'So the allowance of the King to use,
'As the old bard should no Canary lack,
'Twere better spare a butt than spill his praise:
'For in the genius of the poet's verse (83)
'The King's fame lives. Go now deny his tierce.'

(83) Ibid. p. 438, 439.

[*BB*] *Have not unfitly been called his dotages.*] It is the character given by Mr Dryden of our author's last performances, which are his *Tale of a Tub*; and *the Magnetic Lady, or Humours reconciled*. This last piece was smartly and virulently attacked by Dr Alexander Gill, who succeeded his father as master of St Paul's school (84), of which we shall give the reader the following specimen:

(84) There is some account of both Father and Son in Athen. Oxon. Vol. I. col. 602. and Vol. II. col. 22, 23.

'But to advise thee, Ben, in this strict age,
'A brick-kill's better for thee than the stage;
'Thou better knows a groundsill for to lay,
'Than lay a plot or ground-work for a play.
'And better canst direct to cap a chimney,
'Than to converse with Clio or Polyhymay.
'Fall then to work in thy old age agen,
'Take up thy trug and trowel, gentle Ben,
'Let plays alone, or if thou needst will write,
'And thrust thy feeble muse into the light;
'Let Lowen cease, and Taylor scorn to teach
'The loathed stage; for thou hast made it such.'

These lines have neither much wit nor poetry. The reflection upon Ben's original employment is very mean, it shews no good heart; and Gill was really a man of bad morals. But he was paid in kind, and Ben answered him with equal virulence; and, in truth, it cannot be said either with more wit or poetry, as follows:

'Shall the prosperity of a pardon still,
'Secure thy railing rhimes, infamous Gill,
'At libelling? Shall no Star-chamber peers,
'Pillory nor whip, nor want of ears,
'All which thou hast incurred deservedly,
'Nor degradation from the ministry,
'To be the Dennis of thy father's school,
'Keep in thy bawling wit, thou bawling fool.
'Thinking to stir me, thou hast lost thy end,
'I'll laugh at thee, poor wretched tyke, go send
'Thy boltant muse abroad, and teach it rather
'A tune to drown the ballads of thy father.
'For thou hast nought to cure his fame,
'But tune and noise, and echo of his shame.
'A rogue by statute, censured to be whipt,
'Cropt, branded, slit, neck-stockt: go, you are
'stript.'

[*CC*] *He laid down his pen after* 1634.] His last masque, called *Love's Welcome*, &c. was personated July 30, 1634 (85). The only piece we have with a date after that is his new-year's Ode for 1635 (86). There are indeed two dramatic pieces left unfinished; the time of writing them is uncertain. These are intituled, *The sad Shepherd, a Pastoral Tragedy*, and *the Fall of Mortimer*. Of this last there is only the plan of the Drama, and one or two scenes. It is said he died and left it unfinished. His Editor is of opinion that had he compleated his design with the same spirit in which he began it, we should have been able to boast of one perfect tragedy at least, formed upon the ancient model, and giving us the happiest imitation of the ancient drama (87). The Sad Shepherd is carried on almost to the conclusion of the third act. Upon which Mr Whalley makes the following remark, 'I cannot but lament, says he (88), with the reader, the loss of the remaining parts of this play, which we could have borne with the greater patience had even this act been fortunately compleated. We have no account how it came down to us in this mutilated condition, and conjectures can be at best but precarious. Possibly it might have been in the number of those pieces, which were accidentally burnt; tho' indeed there is no particular mention of it in the execration upon Vulcan. Or, Jonson might have undertaken it in the decline of his days, and did not live to finish it; and to this conjecture we are induced *by the* first line of the prologue:

(85) Jonson's Works, Vol. VII. p. 62.

(86) Ibid. p. 12.

(87) Ibid. Vol. V. p. 160.

(88) Ibid. p. 151, 152.

'He that hath feasted you these forty years (89).'

(89) This round number must not be taken precisely; for it, as *Every Man in his Humour*, which he declares himself to be his first feast of this kind, did not appear 'till 1598, the addition of 40 years extends a full year after his decease. But if the time of his first feast is to be dated from his first writing for the stage, that indeed will bring us probably as far back as 1594, and then the two years will end in 1634, which will confirm the assertion in the text.

'There is indeed, continues this editor, one reason which might induce us to believe, that the poet left it unfinished by design. He beheld with great indignation the ungenerous treatment which Fletcher's *Faithful Shepherdess* met with from the people at it's first appearance; and he was witness also to the small encouragement that was given to it's revival under the patronage of King Charles I. Possibly these circumstances deterred him from going thro' with the performance. As his composition was of a kindred nature to that of Fletcher, he might presage the same unfortunate event, should he ever introduce it on the stage; so that posterity can only bewail the perversity of taste in their injudicious ancestors, whose discouragement of the first, contributed to deprive us of the second pastoral drama, that would do honour to the nation. What we now have serveth only to increase our regret; like the remains of some ancient master which beget in us the most inexpressible desire of a perfect statue by the same hand. When a work is not compleated by it's author or maimed by the hand of time, one would either wish the remains to be inconsiderable, or the beauties less exquisite and charming. In the former case, the deficiency is not so much deplored from our inability to judge of the perfection of the whole; and in the latter we are very little anxious for what appears to be hardly worth preserving: But when a piece is so far advanced as to convince us of the excellence of the artist, and of it's own superior delicacy, we are naturally touched with concern for what is lost, and set a proper value on the parts which still subsist.'

The remaining pieces of our author to be taken notice of here, are his translation of Horace's *Epistola ad Pisones*; *An English Grammar*; and his observations on men and things, called *Discoveries*. The first of these was translated in his youth. In the preface to *Sejanus* he says, he intended shortly to publish it with notes; but it did not appear in print 'till after his death, and then without notes, the fate of which has been already mentioned (90); and also that much of what was intended for them, is inserted in the *Discoveries*. These make a very excellent piece, the fruits of mature and judicious age, valuable not only for the sentiments and observations, but as a pattern of a nervous and concise stile. His Grammar was also written by him when advanced in years; and Mr Wotton speaking of it observes, that it was the first considerable attempt with regard to the subject. But we must agree with that author, that herein Jonson made Lilly's Grammar his pattern; and for want of reflecting upon the grounds of a language which he understood as well as any man of his age, he drew it by violence to a dead language that was of a quite different make, and so left his book imperfect.

(90) In note (68).

(91) Reflections on ancient and modern Learning,

done at the expence of Mr (afterwards Sir) John Young of Great-Milton in Oxfordſhire (*x*). But a much better monument was raiſed to his memory ſix months afterwards, when there came out a collection of elegies and poems, intitled, *Jonſonius Virbius: or, the Memory of Ben. Jonſon revived by the Friends of the Muſes* [*D D*]. And preſently after, there was a deſign ſet on foot to erect a marble monument with his ſtatue, and a conſiderable ſum of money was collected for the purpoſe; but the breaking out of the Rebellion prevented the carrying of it into execution, and the money was returned (*y*). The buſt, in bas-relieve, with the former inſcription under it, that is now fixed to the wall in Poets Corner, near the ſouth-eaſt entrance into the abbey, was ſet up by that great patron of learning, the ſecond Earl of Oxford of the Harley family. As to our Poet's own family, it became extinct with him, for he ſurvived all his children (*z*). It remains that we exhibit a kind of portrait of his perſon and character. As to the firſt, then, if we may depend upon his own deſcription, his body was large, corpulent, and bulky (*a a*), and his countenance hard and rocky (*b b*); ſo that his figure greatly reſembled that of Sir John Falſtaff, and conſequently could not be much leſs apt to raiſe a laughter. Nor was the caſt of his temper and natural diſpoſition at all more reſpectable, as repreſented by his friend Mr Drummond, who obſerves him to be 'A great lover and praiſer of himſelf; 'a contemner and ſcorner of others; chuſing rather to loſe his friend than his jeſt; 'jealous of every word and action of thoſe about him, eſpecially after drink, which was 'one of the elements in which he lived [*E E*]; a diſſembler of the parts which he reigned

(*x*) Ath. Oxon. Vol. I. col. 609. where Mr Wood calls him Jack Young.

(*a a*) He weighed 20 ſtone wanting two pounds. See his Epiſtle to Arthur Squib. Works, Vol. VI. p. 428.

(*b b*) In the poem, intitled, *My Picture left in Scotland*. Works, Vol. VI. p. 355. However, his friends ſaid to have reſembled Menander's, as we ſee it in antique gems and medals. So Vida (ſay theſe admirers of Jonſon) reſembled Virgil.

[*DD*] *Jonſonius Virbius, &c.*] This collection was publiſhed by Dr Brian Duppa, Biſhop of Chicheſter, and tutor to King Charles *II.* then Prince of Wales (92). Beſides Howell's Decaſtic, it contains poems by the following perſons; Lords Falkland and Buckhurſt, Sir John Beaumont, and Sir Francis Wortley, Barts. Sir Thomas Hawkins, Mr Henry King, Henry Coventry, Tho. May, Dudley Diggs, George Forteſcue, Will. Habington, Edmund Waller, J. Vernon, J. Cl. (probably Cleveland) Jaſper Mayne, Will. Cartwright, John Rutter, Owen Feltham, George Donne, Shakerley Marmion, A. M. John Ford, R. Brideoak, A. M. Rich. Weſt, R. Meade, H. Ramſay, T. Terrent, Rob. Waſing, Will. Bew, and Sam. Evans, L.L.B. Lord Falkland, who was himſelf one of the beſt ſcholars of this time, has the following encomium upon that of Jonſon:

(92) He did not ſet his name to it, and for that diſcovery we are obliged to Mr Howell, who contributed a Decaſtic to it. Howell's Familiar Letters, Vol. I. §. vi. No. 31.

'His learning ſuch, no author old or new,
'Eſcaped his reading, that deſerved his view;
'And ſuch his judgment, ſo exact his teſt,
'Of what was beſt in books, or what was beſt,
'That had he joined thoſe notes his labours took,
'From each moſt praiſed, and praiſe deſerving book;
'And could the world of that choice treaſure boaſt,
'It need not care if all the reſt were loſt;
'And ſuch his wit, he wrote paſt what he quotes,
'And his productions far exceed his notes.
'So in his works where ought inſerted grows,
'The nobleſt of the plants engrafted ſhews,
'That his adopted children equal not,
'The generous iſſue his own brain begot.
'So great his art, that much which he did write,
'Gave the wiſe wonder, and the crowd delight.'

His Lordſhip afterwards celebrates Jonſon's merit in reforming the ſtate of the drama, and the great reverence that was univerſally paid to him in theſe lines:

'How in an ignorant and learned age he ſway'd,
'(Of which the firſt he found, the ſecond made)
'How he, when he could know it, reap'd his fame,
'And long out-lived the envy of his name:
'To him how daily flock'd, what reverence gave
'All that had wit, or would be thought to have,
'Or hope to gain, and in ſo large a ſtore,
'That to his aſhes they can pay no more,
'Except thoſe few, who cenſuring thought not ſo,
'But aim'd at glory from ſo great foe.'

[*EE*] *Drink was one of the elements in which he lived.*] This is ſo notoriouſly true, that it was made a ſtanding jeſt among his greateſt admirers; and this jovial diſpoſition he had power enough to tranſmit to late poſterity, and to render immortal the room in the Devil Tavern near Temple-bar, by the name of the Apollo, where he preſided in a club, for whoſe uſe he drew up in Latin his *Leges Convivales*, in number 24, which were engraven on a ſtone, and are ſtill to be ſeen in that room over the chimney. We ſhall give the tranſlation of them into Engliſh as follows:

Rules for the Tavern Academy: Or, Laws for the Beaux Eſprits.

I.

'1. As the fund of our pleaſure let each pay his ſhot,
'Except ſome chance friend whom a member brings in.
'2. Far hence be the ſad, the lewd fop, and the ſot;
'For ſuch have the plagues of good company been.

II.

'3. Let the learned and witty, the jovial and gay,
'The generous and honeſt compoſe our free ſtate,
'4. *And the more to exalt our delight while we ſtay,*
'Let none be debarr'd *from his choice female mate.*

III.

'5. Let no ſcent offenſive the chamber infeſt,
'6. Let fancy not coſt prepare all our diſhes.
'7. Let the caterer mind the taſte of each gueſt,
'And the cook in his dreſſing comply with their wiſhes.

IV.

'8. Let's have no diſturbance about taking places,
'*To ſhew your nice breeding, or out of vain pride.*
'9. Let the drawers be ready with wine and freſh glaſſes.
'Let the waiters have eyes, tho' their tongues muſt be tied.

V.

'10. Let our wines without mixture or ſtum, be all fine,
'Or call in the maſter, and break his dull noddle.
'11. Let no ſober bigot here think it a ſin,
'To puſh on the chirping and moderate bottle.

VI.

'12. Let the conteſt be rather of books than of wine.
'13. Let the company be neither noiſy nor mute.
'14. Let none of things ſerious, much leſs of divine,
'When belly and head's full, profanely diſpute.

VII.

'reigned in him; a bragger of ſome good that he wanted; he thought nothing right, 'but what either himſelf or ſome of his friends had ſaid or done. He was paſſionately 'kind and angry; careleſs either to gain or keep; vindictive; but if he was well an- 'ſwered, greatly chagrined; interpreting the beſt ſayings and deeds often to the worſt. 'He was for any religion, being verſed in both; oppreſſed with fancy, which over-ma- 'ſtered his reaſon (*cc*), a general diſeaſe among the Poets.' He had a very ſtrong memory; for he tells us himſelf in his Diſcoveries, that in his youth he could have repeated whole books that he had read, and poems of ſome ſelect friends, which he thought worth charging his memory with (*dd*). Laſtly, as to his genius, the character of it, in reſpect of dramatic poetry, has been already touched upon (*ee*). To which muſt be added Mr Pope's remark, that 'When our author got poſſeſſion of the ſtage, he brought critical 'learning into vogue; and that this was not done without difficulty, which appears from 'thoſe frequent leſſons (and indeed almoſt declamations) which he was forced to prefix to 'his firſt plays, and put into the mouths of his actors, the grex, chorus, &c. to remove 'the prejudices and inform the judgment of his hearers. 'Till then, the Engliſh authors 'had no thoughts of writing upon the model of the Ancients: their tragedies were only 'hiſtories in dialogue, and their comedies followed the thread of any novel as they found 'it, no leſs implicitly than if it had been true hiſtory.' Thus that much admired Poet (*ff*), who followed Jonſon in borrowing from the Ancients, as much as he ſurpaſſed him in harmonious verſification, for which Jonſon ſeems to have had no nice ear. However, Mr Drummond declares (*gg*) that his inventions were ſmooth and eaſy [*FF*]. He does not

(*cc*) As an inſtance of this, he told this friend, that he had ſpent many a night in looking at his great toe, about which he had ſeen Turks and Tartars, Romans and Carthaginians, fight in his imagination.

(*dd*) Diſcoveries, in his Works, Vol. VII. p. 85, 86.

(*ee*) In remark [*B*].

(*ff*) In the preface to his own Works.

(*gg*) In his Works, ubi ſupra.

VII.

'15. Let no ſaucy fidler preſume to intrude,
'Unleſs he is ſent for to vary our bliſs,
'16. With mirth, wit, and dancing, and ſinging, conclude,
'To regale every ſenſe with delight in exceſs.

VIII.

'17. Let raillery be without malice or heat.
'18. Dull poems to read, let none privilege take.
'19. Let no poetaſter command or entreat
'Another extempore verſes to make.

IX.

'20. Let argument bear no unmuſical ſound,
'Nor jars interpoſe ſacred friendſhip to grieve.
'21. For generous lovers let a corner be found,
'Where they in ſoft ſighs may their paſſions relieve.

X.

'22 Like the old Lapithites, with the goblets to fight
'Our own 'mongſt offences unpardon'd will rank;
'Or breaking of windows or glaſſes for ſpite,
'And ſpoiling the goods for a rakhelly prank.

XI.

'23. Whoever ſhall publiſh what's ſaid or what's done,
'Be he baniſh'd for ever our aſſembly divine.
'24. Let the freedom we take be perverted by none,
'To make any guilty by drinking good wine.

Over the Door at the Entrance into the Apollo.

'Welcome all that lead or follow,
'To th' oracle of Apollo.
'Here he ſpeaks out of his pottle,
'Or the tripos his tower bottle:
'All his anſwers are divine,
'Truth itſelf doth flow in wine,
'Hang up all the poor hop-drinkers,
'Cries old Sim, the king of ſkinkers (93).
'He the half of life abuſes,
'That ſits watering with the Muſes.
'Thoſe dull girls no good can mean us,
'*Wine it is the milk of Venus* (94).
'And the poet's horſe accounted.
'Ply it, and you all are mounted.
'Tis the true Phœbeian liquor,
'Chears the brains, makes wit the quicker.
'Pays all debs, cures all diſeaſes,
'And at once three ſenſes pleaſes.
'Welcome all that lead or follow
'To th' oracle of Apollo.

(93) Old Sim. means Simon Wadloe, who then kept the Devil-tavern; and of him probably is the old catch, beginning, *Old Sir Simon the King*.

(94) From the Greek Anacreontic, Ουδεν γαλα Αφροδιτης.

[*FF*] *He had no ear for harmony in verſe, tho' his inventions were ſmooth and eaſy.*] Tho' the general run of Ben's verſes be a ſufficient vindication of this cenſure, wherein he is uſually much more attentive to the matter than to the muſic of his poetry; yet in many places they are ſmooth and eaſy as his invention; we are even ſurprized with the moſt beautiful harmony. The following hymn will juſtify our remark; it is taken from the piece called Cynthia's Revels (95), and addreſſed to that goddeſs, under which character he means to compliment Queen Elizabeth.

(95) Act V. ſcene vi.

'Queen and Huntreſs chaſte and fair,
'Now the ſun is laid to ſleep,
'*Seated in thy ſilver chair,*
'*State in wonted manner keep;*
'Heſperus intreats thy light,
'Goddeſs excellently bright.

'Earth, let not thy envious ſhade
'Dare itſelf to interpoſe;
'Cynthia's ſhining orb was made
'Heav'n to clear when day did cloſe.
'Bleſs us then with wiſhed ſight,
'Goddeſs excellently bright.

'Lay this bow of pearl apart,
'And thy cryſtal ſhining quiver;
'Give unto the flying hart,
'Space to breathe how ſhort ſoever.
'Thou that mak'ſt a day of night,
'Goddeſs excellently bright.

This little hymn is delicate both in ſentiment and expreſſion; the images are picturesque, the verſe eaſy and flowing. Such is the juſt remark of Mr Whalley, who goes farther; and having obſerved a thought in Milton's poem upon Melancholy, not unlike that of the two lines here printed in *Italics*, ventures from the ſimilitude of the expreſſion, to declare himſelf of opinion that they were taken from hence. Milton's lines are:

'*Come, but keep thy wonted ſtate,*
'*With even ſtep, and muſing gate.*
Il Penſeroſo.

Whatever may be thought of this conjecture, which indeed is advanced by the author of it with a ſuitable modeſt diffidence, no doubt can ariſe in reſpect to ſeveral other inſtances produced by him, where ſome of our beſt poets have not diſdained to copy from this original. Among theſe he has pointed out Dryden

(96)

not appear to have had much conception of thoſe breaks and reſts, or of adapting the ſound of his verſe to the ſenſe, which are the chief beauty of our beſt modern poets [*G G*]. 'Tis univerſally agreed with his laſt mentioned friend, that tranſlation or imitation was his moſt diſtinguiſhed talent [*H H*], wherein he excelled all his contemporaries (*b b*); and beſides his

(*b b*) Id. ibid.

(96) In Every Man out of his Humour, Act V. ſcene iv.

(97) His character of Bluff in the Old Bachelor is formed upon Bobadil in the ſame comedy.

(98) His Works, Vol. VII. p. 17.

(96) and Congreve (97) in their plays; and what is more ſtill to Jonſon's honour, that moſt ſtriking ſentiment, which, in the famous verſes *To the Memory of an unfortunate Lady*, ſeems to burſt out originally from Mr Pope as the pure effect of his grief, was firſt conceived by Jonſon, who begins his Elegy on the Lady Jane Pawlet, Marchioneſs of Winton with theſe lines:

'What gentle ghoſt, beſprent with April dew,
'Hails me ſo ſolemnly to yonder yew (98).'
'And beckoning wooes me————

Thus imitated in that moſt tender poem of Mr Pope.

'What beck'ning ghoſt along the moon-light ſhade,
'Invites my ſteps, and points to yonder glade.'

This has been generally, I think, the moſt admired of Pope's leſſer poems; and to this we ſhall venture to add another no leſs admired piece, and wrote alſo by an author not much leſs diſtinguiſhed than Pope by the ſweet harmony of his verſification; I mean Mr Waller, who begins his moſt beautiful Anacreontic to Phyllis perfectly as Jonſon does his ſong to Celia in Volpone (99), as will appear by the contraſt:

(99) Act II. ſcene vii. 'Tis printed in the Collection called the Foreſt.

JONSON.

'Come, my Celia, let us prove,
'While we can the ſports of Love;
'Time will not be our's for ever,
'He at length our good will ſever;
'Spend not then his gifts in vain;
'Suns that ſet may riſe again;
'But if once we loſe this light,
'Tis with us perpetual night.
'Why ſhould we defer our joys.——

WALLER.

'Phyllis, why ſhould we delay,
'Pleaſures ſhorter than the day;
'Could we, which we never can,
'Stretch our lives beyond their ſpan,
'Beauty like a ſhadow flies,
'And our youth before us dies,
'Or would youth and beauty ſtay,
'Love has wings and will away (100).'——

(100) Waller's Poems, p.

It is true they are both imitations from Catullus, but I cannot help thinking that in penning the addreſs to Phyllis, the latter Engliſh poet had the former Engliſh copy, as well as the original Latin before him.

[*GG*] *Which are the chief beauty of our beſt modern poets.*] This, like the foregoing, holds true in general; yet he was not without his brighter moments, when a ray of enthuſiaſm darting into his genius, raiſes it unexpectedly to the height of this excellence. Read the following lines from his Sad Shepherd (101):

(101) Act I. ſcene v.

'No ſun or moon, or other chearful ſtar,
'Look'd out of heaven! but all the cope was dark
'As it were hung ſo for her exequies!
'And not a voice or ſound to ring her knell,
'But of that diſmal pair, the ſcreeching owl,
'And buzzing hornet! Hark! hark! hark!
'The foul bird! how ſhe flutters with her wicker wings.
'Peace! you ſhall hear her ſcritch.'

Thus we ſee him once, at leaſt, tranſported above himſelf. This was plainly the work of a true poetical inſpiration. The three long ſyllables preceding the Iambic foot at the cloſe of the one verſe, which is immediately connected with the beginning of the other, and the pauſe placed upon the firſt ſyllable, are as fully expreſſive of the ſentiment as can poſſibly be imagined.

'Hark! hark! hark! the foul
'Bird.——

There is nothing finer in all Shakeſpeare or Milton (102). Now we are upon the ſubject of our author's beauties, it will not be improper to mention his epitaphs, in which he was excellent. Several of them have been inſerted in the former editions of his works, beſides theſe, Mr Whalley has enriched his edition with that moſt celebrated one upon the Counteſs of Pembroke, Siſter to Sir Philip Sidney:

(102) See the notes at p. 112. Vol. V. of Jonſon's Works, edit. 1756.

'Underneath this marble herſe,
'Lies the ſubject of all verſe,
'Sidney's ſiſter, Pembroke's mother;
'Death, ere thou haſt ſlain another
'Learn'd and fair, and good as ſhe,
'Time ſhall throw a dart at thee'. (103)

(103) Vol. VI. p. 297.

This has no rival, unleſs the following lines in another of Jonſon's, on Elizabeth L. H. may be deemed ſuch.

'Underneath this ſtone doth lie,
'As much beauty as could die,
'Which in life did harbour give,
'To more virtue than doth live (104)'.

(104) Ibid. p. 277.

[*HH*] *Imitation was his moſt diſtinguiſhed talent*] It is ſo difficult to keep any ſtrong talent within it's proper bounds, that if we find him ſometimes carrying this to exceſs, even ſo far as juſtly to incur the cenſure of plagiariſm (105), yet it would be carrying the cenſure to the like exceſs to charge pardonable eſcapes to the diſcredit of his genius. It is true his learning ſhews itſelf foremoſt in almoſt every thing he wrote; and ſometimes it may appear where we could wiſh it might not be ſeen; but he ſeldom tranſgreſſeth in this point, for a juſt decorum and preſervation of character, with propriety of circumſtance and of language, are his ſtriking excellencies, and evidently diſtinguiſh his correctneſs and art. What he borrows from the Ancients is generally improved by the uſe and application; and by this means he improved himſelf in contending to think and expreſs his thoughts like them. However, it is acknowledged that his creative powers, whatever were the degree of them, undoubtedly received ſome check from thence; and that we ſhould have ſeen them exerting themſelves with greater force and vigour, had he been leſs acquainted with the ancient models. Jonſon was naturally turned to induſtry and reading; and as to treaſure up knowledge muſt be the exerciſe and work of memory, by the aſſiduous employment of that faculty he would neceſſarily be leſs diſpoſed to exert the native inborn ſpirit of genius and invention; and as his memory was thus fraught with the ſtores of the ancient poetry, the ſentiments impreſſed upon his mind could eaſily intermix and aſſimilate with his own; and when tranſfixed into the language of his country, would appear to have all the graces and the air of novelty; and hence he might be inſenſibly led to imagine that equal honours were due to ſucceſsful imitation, as to original and unborrowed thinking. However that be, it is certain that he was at a great diſtance from that anxious dread of imitation, which when it ſeizes the polite and cultivated writers in any country, has been aſſigned for the principal cauſe of a thorough degeneracy of taſte; and hence the ſame ingenious writer (106) has not ſcrupled to give it as a ſeaſonable admonition to the poets of our time, to relinquiſh their vain hopes of originality, and turn themſelves to a ſtricter imitation of the beſt models; and to inforce this advice he mentions 'the deſigns of two excellent perſons, who are already 'well known to the public by ſome ſlighter eſſays; 'but are preparing much greater things, and in the 'pure and ſimple ſtile of claſſical antiquity. The 'genuine merit, continues he, of theſe performances, 'when they ſhall appear, will be the beſt apology for 'their authors. One of whom profeſſes to form him'ſelf on the model, and would give an exact image 'of the Greek drama (107); while the Other adven'tures to project a ſtill nobler deſign on the plan of the 'ancient and legitimate epic (108)'.

(107) This has appeared ſince under the following title. *Elfrida; a Dramatic Poem, written on the model of the ancient Greek tragedy. By Mr Maſon.* Lond. 1752.

(108) The author of the Obſervations upon Lord Shaftſbury's Characteriſtics is the perſon meant.

[*I I*] *The*

his new forming our drama after the ancient models, he gave us the firſt Pindaric ode in the Engliſh language that has a juſt claim to that title [*II*]. After the edition of his Works already mentioned, they were reprinted in 1716, in 6 volumes 8vo. and another edition has been lately printed in 1756, in ſeven volumes 8vo. with ſome notes and additions by P. Whalley, late Fellow of St John's college in Oxford; who hath alſo inſerted Jonſon's comedy, intitled, *The Caſe is altered*, not in any former edition. And ſince this laſt editor declares, he ſhould not have omitted our author's verſes, prefixed to *May's tranſlation of Lucan*, had they come to his hands in time, we have thought proper not to conclude this memoir, without inſerting a copy of thoſe verſes in remark [*KK*]. There is reaſon to believe

[*Ll*] *The firſt Pindaric ode in our language that has a juſt claim to that title.*] 'Tis among his *Underwoods*, under the title of ODE PINDARIC, *To the immortal memory and friendſhip of that noble pair, Sir Lucius Cary and Sir H. Morifon*. The manner of Pindar is followed with great exactneſs in the ſtructure of this poem. But to do juſtice to our poet's merit in this article, it will be neceſſary to explain the true nature of the Pindaric, and to that end we ſhall cite the following paſſage from the Scholia on *Hephæſtion*. The Ancients, ſays the Scholiaſt, in their odes framed two larger ſtanzas, and one leſs: The firſt of the large ſtanzas they called *Strophe*, ſinging it on their feſtivals at the altars of their gods, and dancing at the ſame time: The ſecond they called *Antiſtrophe*, in which they inverted the dance: The leſſer ſtanza was named the *Epode*, which they ſung ſtanding ſtill. Hence it is evident that theſe odes were accompanied with dancing, and that they danced one way while the *Strophe* was ſinging, and then danced back again while the *Antiſtrophe* was ſung; which ſhews, ſays a late ingenious writer, why theſe two parts conſiſted of the ſame length and meaſure: Then when the dancers were returned to the place whence they ſet out, before they renewed the dance, they ſtood ſtill while the *Epode* was ſung. Such was the ſtructure of the Greek ode, in which the *Strophe* and *Antiſtrophe*, i. e. the firſt and ſecond ſtanzas, contained always the ſame number and the ſame kind of verſes. The *Epode* was of a different length and meaſure; and if the ode run out into any length, it was always divided into triplets of ſtanzas, the two firſt being conſtantly of the ſame length and meaſure; and all the epodes, in like manner, correſponding exactly with each other (109). To apply theſe obſervations to Jonſon's ode now under conſideration; the whole running into twelve ſtanzas, it is accordingly diſtinguiſhed into four triplets of ſtanzas; the two firſt of which conſiſt each of ten lines, and the third of twelve, which are marked in order thus, *the firſt turn of ten, the firſt counter-turn of ten, the firſt ſtand of twelve; the ſecond turn of ten, the ſecond counter-turn of ten, the ſecond ſtand of twelve*, and ſo on; but that there may be no room left for the leaſt heſitation in underſtanding it, we ſhall inſert the third triplet. Thus then,

(109) Preface to an Engliſh tranſlation of Pindar, by Gilbert Weſt, Eſq;

The third turn of ten.

' It is not growing like a tree
' In bulk, doth make men better be;
' Or ſtanding long an oak, three hundred year,
' To fall a log at laſt, dry, bald, and ſear.
' A lilly of a day
' Is fairer far in May.
' Altho' it fall and die that night,
' It was the plant and flower of light.
' In ſmall proportions we juſt beauties ſee,
' And in ſhort meaſures life may perfect be.'

The third counterturn of ten.

' Call, noble Lucius, then for wine,
' And let thy looks with gladneſs ſhine;
' Accept this garland, plant it on thy head,
' And think, nay know, thy Moriſon's not dead.
' He leapt the preſent age,
' Poſſeſt with holy rage,
' To ſee that bright, eternal day,
' Of which we prieſts and poets ſay
' Such truths as we expect for happy men,
' And there he lives with memory, and Ben.'

The third ſtand of twelve.

' Jonſon, who ſung thus of him e'er he went
' Himſelf to reſt,
' Or taſte a part of that full joy he meant
' To have expreſt,
' In this bright aſteriſm!
' Where it were friendſhip's ſchiſm
' (Were not his Lucius long with us to tarry)
' To ſeparate theſe twi-
' lights, the Dioſcuri;
' And keep the one half from his Harry.
' But Fate did ſo alternate the deſign,
' Whilſt that in heav'n, this light on earth muſt ſhine.'

The reader will be before-hand with me in obſerving, that the ſtructure of this ode is a little different from that of the Ancients, as laid down by the Scholiaſt above cited, who ſuppoſes the *Epode* to be always the leſſer ſtanza, or to contain fewer verſes than either the *Strophe*, or *Antiſtrophe*; but this is a miſtake of the Scholiaſt; for the epodes of Pindar are various, ſome falling ſhort, ſome being equal, and others exceeding the *Strophe* in the number of verſes. Jonſon therefore has not deviated from the original, in making his ſtand longer than the *turn* and *counter-turn* by the addition of a couplet. To conclude from what has been ſaid, the ancient regularity of theſe kind of compoſitions is ſufficiently evident, as well as our poet's learning and knowledge in ancient criticiſm; and hence we are taught what to think of thoſe heaps of lines of all lengths and ſizes, which have been paſſed upon the world for tranſlations, or imitations of Pindar, that they are no better than ſo many caricaturas, or diſtorted likeneſſes, of the great original.

[*KK*] *Not to cloſe this memoir without a copy of them*] As we have ſucceeded in our enquiry for theſe verſes, they are inſerted here by way of ſupplement to Mr Whalley's edition of our author's works. The addreſs is as follows:

TO MY CHOSEN FRIEND,

The learned Tranſlator of LUCAN,

THOMAS MAY, *Eſq;*

' When Rome I read thee in thy mighty paire,
' And ſee both climbing up the ſlippery ſtaire
' Of fortune's wheel, by Lucan driv'n about,
' And the world in it, I begin to doubt,
' At every line ſome pin thereof ſhould ſlacke
' At leaſt, if not the general engine cracke.
' But when again I view the parts ſo peiz'd,
' And thoſe in number ſo, and meaſure rais'd;
' As neither Pompey's popularity,
' Cæſar's ambition, Cato's liberty,
' Calme Brutus tenor ſtart, but all along
' Keep due proportion in the ample ſong.
' It makes me, raviſh'd with juſt wonder, cry,
' What muſe, or rather god of harmony,
' Taught Lucan theſe true moods? Replyes my ſenſe,
' What gods but thoſe of arts and eloquence?
' Phœbus and Hermes? they whoſe tongue or pen,
' Are ſtill th' interpreters betwixt gods and men.
' But who hath them interpreted, and brought
' Lucan's whole frame unto us, and ſo wrought,
' As not the ſmalleſt joint, or gentleſt word,
' In the great maſs, or machine, there is ſtirr'd.

believe that he had a deſign to write an epic poem, and was to call it *Chrologia*; *or the Worthies of his Country*, all in couplets, as he deteſted all other rhime *(i i)*. 'Tis likewiſe ſaid, that he actually wrote a diſcourſe on poetry, both againſt Campion and Daniel, eſpecially the laſt, where he proved couplets to be the beſt ſort of verſes *(k k)*. (k k) Ibid.

(i i) Heads of a converſation taken by Drummond, ubi ſupra. He ſeems alſo to have formed the plan of a Geographical Account, or Preſent State of Scotland; by which he was ſupplied by this friend with ſeveral materials, whereof ſome curious ones were ſent in a letter to Jonſon, dated July 1, 1619, printed, p. 365, & ſeq. among *The Familiar Epiſtles*, at the end of *Drumm. of's Hiſtory of Scotland*, ſecond edit. Lond. 1682. N. B. This was probably the occaſion of Jonſon's journey to Scotland mentioned in the text.

' The ſelf-ſame genius, ſo the work will ſay,
' The ſunne tranſlated, or the ſonne of MAY.

' Your true friend to Judgment,

BEN JONSON *.

* So his name is ſpelt in the title-page of his *Execration upon Vulcan*; yet in the print of his head prefixed it is wrote Johnſon.

We are informed by Wood, that after Ben's death this May put in for the Laureat's place, but was ſet aſide for D'avenant, and afterwards became a great enemy to the King's cauſe (110), and wrote a hiſtory of the Long Parliament, in defence of their proceedings againſt his Majeſty, before which is his picture, with the head laureated, (111) P

(111) Ibid. col. 415.

JUXON or JUXTON [WILLIAM], ſucceſſively Biſhop of Hereford and London, and Archbiſhop of Canterbury, in the laſt century; was the ſon of Richard Juxon of Chicheſter in Suſſex [*A*], and born within that city in the year 1582 *(a)*. He received his education at Merchant-Taylors ſchool in London, and from thence was elected Fellow of St John's college at Oxford in 1598, where, applying himſelf to the ſtudy of the Civil-Law, he took the degree of Bachelor in that faculty July 5, 1603 *(b)*, being about that time a ſtudent in Gray's-Inn. But Law did not ſo wholly engroſs his thoughts, as to make him neglect other branches of learning, particularly Divinity. For, entering ſoon after into Orders, he became in 1609 Vicar of St Giles's near his college; where he officiated about ſix years, and was much admired for his plain and improving way of preaching *(c)*. He was alſo for ſome time Rector of Somerton in Oxfordſhire *(d)*. On the 29th of November 1621, he was elected Preſident of St John's college, upon the reſignation of Dr William Laud, newly promoted to the biſhopric of St David's *(e)*. And, on the 12th of December following, took the degree of Doctor of Laws *(f)*. He executed the office of Vice-chancellor of the univerſity of Oxford in the years 1626 and 1627 *(g)*. About the ſame time he was appointed one of the Chaplains in Ordinary to King Charles I. who conferred on him, January 7, 1627-8, the Deanery of Worceſter, he being then alſo Prebendary of Chicheſter *(b)*. Through the intereſt of Biſhop Laud, who had been the chief inſtrument of his former promotions, he was ſworn Clerk of the Cloſet to his Majeſty [*B*], on the 10th of July, 1632 *(i)*. And, through the ſame intereſt, he was nominated and elected to the Biſhopric of Hereford in 1633; but, before conſecration, tranſlated to the See of London [*C*], vacant by the advancement of Biſhop Laud to the Archbiſhopric of Canterbury. He was alſo made Dean of the Royal Chapels, and ſworn one of the Privy-Council *(k)*. Thus far his preferments were very ſuitable, and ſeemed to have given umbrage to no one: but his exaltation to the office of Lord High-Treaſurer procured him much envy [*D*], as it did implacable rage and malice againſt his

[*A*] *Was the ſon of Richard Juxon of Chicheſter.*] Which Richard was ſon of John Juxon of London (1).

(1) Wood, Ath. ut ſupra.

[*B*] *Through the intereſt of biſhop Laud—he was ſworn clerk of the cloſet to his Majeſty.*] This appears from the following entry in biſhop's Laud's diary, under the year 1632. 'July 10. Dr Juxon, the Dean of 'Worceſter, at my ſuit, ſworn Clerk of his Majeſty's 'cloſet; that I might have one that I might truſt near 'his Majeſty, if I grew weak or infirm, as I muſt have 'a time.'

[*C*] *Tranſlated to the See of London.*] His election was confirmed October 23, 1633. He was conſecrated the 27th of the ſame month, and inthronized the 5th of November following (2). In this ſtation, as D. Lloyd expreſſes it (3), the Biſhop, 'being to have St 'Paul's combat with beaſts, he uſed St Paul's art, *be-'came all things to all*; and, (as thoſe that were of 'old expoſed to beaſts,) overcame by yielding; being 'moſt mild, and moſt vigilant; a lamb, and a ſhep-'herd: The delight of the Engliſh nation, whoſe 'reverence was the only thing all factions agreed *in*, 'all allowing that honor to the ſweetneſs of his man-'ners, that ſome denied to the ſacredneſs of his func-'tion; being by love, what another is in pretence, an 'univerſal Biſhop.'

(3) Memoirs of thoſe that ſuffered, &c. Lond. 1668, fol. p. 596.

[*D*] *But his exaltation to the office of Lord High-Treaſurer, procured him much envy, &c.*] This high office was alſo obtained for him by Archbiſhop Laud's intereſt, as appears by this entry in the Archbiſhop's Diary. '1635, March 6, Sunday, William Juxon, 'Lord Biſhop of London, made Lord High-Treaſurer 'of England, no church-man had it ſince Henry the '7th's time (4): I pray God bleſs him to carry it ſo, 'that the Church may have honour, and the King 'and the State ſervice and contentment by it: And 'now if the Church will not hold up themſelves, *under 'God I can do no more.*' (5) —— But 'though Biſhop Juxon had Abilities for that place, and an Integrity that his enemies could never queſtion, yet his education and order made it a moſt invidious honour to him: The nobility thought themſelves injured; and moſt of the courtiers had their peculiar indignation;' as Biſhop Kennett obſerves. (6) This promotion, therefore, was but a wrong and unadviſed ſtep, even in the judgment of King Charles's friends. Let us hear what Lord Clarendon ſays upon that occaſion. 'The Treaſurer's 'is the greateſt office of benefit in the kingdom, and 'the chief in precedence next *the* Archbiſhop's, and 'the Great Seal; ſo that the eyes of all men were at 'gaze who ſhould have this great office; and the 'greateſt of the nobility, who were in the chiefeſt 'employments, looked upon it as the prize of one of 'them; ſuch offices commonly making way for more 'removes, and preferments; when on a ſudden the 'ſtaff was put into the hands of the Biſhop of Lon-'don, a man ſo unknown, that his name was ſcarce 'heard of in the kingdom, who had been, within two 'years before, but a private chaplain to the king, and 'the preſident of a poor college in Oxford. This in-'flamed more men than were angry before, and no 'doubt did not only ſharpen the edge of envy and 'malice againſt the Archbiſhop, (who was the known 'architect of this new fabrick) but moſt unjuſtly indiſ-'poſed many towards the Church itſelf; which they 'looked upon as the gulph ready to ſwallow all the 'great offices, there being others in view, of that 'robe, who were ambitious enough to expect the reſt. 'In the mean time the Archbiſhop himſelf was infi-'nitely pleaſed with what was done, and unhappily 'believed he had provided a ſtronger ſupport for the 'Church.' (7) — To the ſame purpoſe ſpeaks Dr P. Heylin. Upon the death of Jerom Weſton Earl of Portland, Lord Treaſurer, Archbiſhop Laud being appointed one of the commiſſioners of the Treaſury, 'carries on the commiſſion the whole year about, ac-'quaints himſelf with the myſteries and ſecrets of it, 'viz. the honeſt advantages which the Lord Treaſu-'rers had for inriching themſelves (to the value of ſe-'ven

his promoter Archbiſhop Laud. However, laying paſſion and prejudice aſide, Biſhop Juxon is univerſally allowed to have been one of the beſt and moſt unexceptionable perſons that ever filled the place of High-Treaſurer in England. He enjoyed that office 'till the beginning of the troubles; namely, 'till May 1641, when he reſigned the Treaſurer's ſtaff (*l*): finding it unſafe to ſtand in ſo high and ſlippery a poſt any longer. Then he ſhared the common fate of the epiſcopal clergy; but, by reaſon of his meekneſs, and genteel as well as inoffenſive behaviour, was ſpared longer than any of his brethren, not being deprived 'till 1649 (*m*). And ſo well had he behaved in his employments, that neither as Biſhop or Treaſurer came there any one accuſation againſt him in the Long-Parliament, whoſe ears were open, nay itching, after ſuch complaints (*n*). As he wiſely and timely withdrew from the ſtorm, he enjoyed the greateſt tranquillity of any man in the three kingdoms, throughout the calamities of the civil wars. For he continued moſtly undiſturbed, 'till the period juſt now mentioned, at his houſe in Fulham; where he was ſometimes viſited by the greateſt perſons, and found reſpect from all, though he walked ſteadily in his old paths. And he retained ſo much of his maſter's favour, that his Majeſty conſulted him upon many occaſions (*o*) [*E*]. His advice was always plain and ſincere; and, if followed, might have kept the King from thoſe moſt dangerous precipices in which he fell. Thus, for inſtance, when the bills for the continuance of the Parliament, and the attainder of the Earl of Strafford, had paſſed both Houſes, and King Charles was in the utmoſt perplexity and doubt about giving the royal aſſent thereto; Biſhop Juxon reſolutely told his Majeſty, that if he were not ſatisfied in his conſcience, he ought not to do it (*p*) [*F*]. In 1648, he was one of thoſe divines who attended upon the King, at the

'ven thouſand pound a year and upwards, as I have 'heard from his own mouth) without defrauding the 'king, or abuſing the ſubject. He had obſerved, that 'divers Treaſurers of late years had raiſed themſelves 'from very mean and private fortunes to the titles and 'eſtates of earls, which he conceived could not be done 'without wrong to both; and therefore he reſolves to 'commend ſuch a man to his Majeſty for the next 'Lord Treaſurer, who having no family to raiſe, no 'wife and children to provide for, might better manage the incomes of the Treaſury to the King's advantage than they had been formerly. And who 'more likely to come into his eye for that preferment 'than Juxon, his old and truſty friend, then Biſhop of 'London; a man of ſuch a well tempered diſpoſition 'as gave exceeding great content both to Prince and 'People, and one whom he knew capable of as much 'inſtruction as by a whole year's experience in the 'commiſſion for the Treaſury he was able to give him. 'It was much wondered at, when firſt the ſtaff was 'put into this man's hand; in doing whereof the 'Archbiſhop was generally conceived neither to have 'conſulted his own preſent peace nor his future ſafety. 'Had he ſtudied his own preſent peace, he ſhould have 'given Cottington leave to put in for it, who being 'Chancellor of the Exchequer pretended himſelf to be 'the next in that aſcendant, the Lord Treaſurer's aſſociate while he lived, and the preſumptive heir to 'that office after his deceaſe. And had he ſtudied his 'own ſafety and preſervation for the times to come, 'he might have made uſe of the power by recommending the ſtaff to the Earls of Bedford, Hertford, 'Eſſex, the Lord Say, or ſome ſuch man of popular 'Nobility; by whom he might have been reciprocated by their ſtrength and intereſs with the people in 'the change of times. But he preferred his Majeſtie's advantages before his particular concernments, 'the ſafety of the publick before his own. Nor did 'he want ſome ſeaſonable conſiderations in it for the 'good of the Church. The peace and quiet of the 'Church depended much on the conformity of the 'city of London, and London did as much depend in 'their trade and payments upon the love and juſtice of the Lord Treaſurer of England. This therefore was the more likely way to conform the citizens 'to the directions of their Biſhop, and the whole kingdom unto them; no ſmall encouragement being thereby given to the London Clergy for the improving of 'their Tythes. For with what confidence could any 'of the old cheats adventure on a publick examination in the Court of Exchequer (the proper court for 'ſuits and grievances of that nature) when a Lord 'Biſhop of London ſate therein as the principal judge? 'Upon theſe counſels he proceeds, and obtains the 'ſtaff, which was delivered to the Biſhop of London 'on Sunday March 6, ſworn on the ſame day Privy-'Counſellor, and on the firſt of the next term con-'ducted in great ſtate from London-houſe to Weſtmin-'ſter-hall, the Archbiſhop of Canterbury riding by 'him, and moſt of the Lords and Biſhops about the 'town, with many gentlemen of chief note and quality, following by two and two to make up the pomp. 'It was much feared by ſome, and hoped by others, 'that the new Treaſurer would have ſunk under the 'burden of that place, as Williams did under the cuſtody of the Seal: but he deceived them both in that 'expectation, carrying himſelf with ſuch an even and 'ſteady hand, that every one applauded, but none envied his preferment to it; inſomuch as the then 'Lord Faulkland, in a bitter ſpeech againſt the Biſhops, 'about the beginning of the Long Parliament, could 'not chuſe but give him this fair teſtimony, viz. '*That in an unexpected place and power he expreſſed 'an equal moderation and humility, being neither ambitious before, nor proud after, either of the crozier 'or white ſtaff.*' (8) How great his Honeſty and Abilities were, appears from this undeniable inſtance; that by his prudent management, in leſs than five years, he lodged nine hundred thouſand pounds in the Exchequer (9)

[*E*] *That his Majeſty conſulted him upon many occaſions.*] 'I remember, ſays Sir Ph. Warwick, (10) 'that the King, being buſy in diſpatching ſome letters with his own pen, commanded me to wait on 'the Biſhop, and to bring him back his opinion in a 'certaine affaire: I humbly pray'd his Majeſtie, that I 'might rather bring him with me, leaſt I ſhould not 'expreſſe his Majeſtie's ſenſe fully, nor bring back his 'ſo ſignificantly, as he meant it; and becauſe there 'might be need for him further to explain himſelfe, 'and leaſt he ſhould not ſpeake freely to me: To 'which the King replied, *Go, as I bid you, if he will 'ſpeak freely to any body, he will ſpeak freely to you: 'This* (the King ſaid) *I will ſay of him, I never gott 'his opinion freely in my life, but when I had it, I was 'ever the better for it.*'

(10) Memoirs, p. 95, 96.

[*F*] *Biſhop Juxon reſolutely told his Majeſty, that if he were not ſatisfied in his conſcience, he ought not to do it.*] The King being much perplexed, upon the Parliament's tendring to him the two bills, *For the attainder of the Earl of Strafford*; and *the Continuance of that Parliament*; between the clamours of a diſcontented people, and an unſatisfied conſcience, he took advice of the Judges, and of ſeveral of the Biſhops, (11) what to do in this intricate affair. Biſhop Juxon, as is ſaid above, adviſed his Majeſty not to do any thing againſt his conſcience, upon any conſideration in the world: But J. Williams Biſhop of Lincoln, made a diſtinction between a private and a public conſcience. (12) And the major part of the Biſhops, and of the King's intimate counſellors, urged on by the Queen's fears, preſſed his Majeſty to comply with the opinions of the Judges and the Votes of the Parliament; alledging, that no other expedient could be found out to appeaſe the enraged people; and that the conſequences of a furious multitude would be very terrible. Upon all which he was perſuaded to paſs the Bills. (13) —— But, as the King afterwards well obſerved, — 'It is 'a bad

the treaty in the Isle of Wight (*q*): and, by his Majesty's particular desire, waited upon him at Westminster, January 21, 1648-9, which (as the King said) was 'no small re-'freshing to his spirit, especially in that his uncomfortable condition.' The most part of that day was spent by the good Bishop in prayer and preaching to the King (*r*). From that time he frequently waited upon his Majesty [*G*], 'till the 30th day of the same month. On that fatal day, he attended his royal master upon the scaffold, having prayed with and preached before him, and also administred to him the Sacrament. After that King's barbarous murther, the pious and sorrowful Bishop retired to his own manor of Little-Compton in Gloucestershire; where he spent several years in a retired and devout condition, and now and then, for health's sake, rode a hunting with some of the neighbouring and loyal gentry (*s*) [*H*]. At the Restoration, he was deservedly set at the head of the Church of England [*I*], being translated to the Archbishopric of Canterbury in September 1660 [*K*]. He repaired very much his palace at Lambeth, and built the great hall

(*s*) Wood Ath. as above; and Whitelock's Memorials, p. 24.

'a bad *exchange* to wound a man's own conscience, 'thereby to salve State-sores; to calm the storms of 'popular discontents, by stirring up a tempest in a 'man's own bosom. Nor hath God's justice failed in 'the event and sad consequences, to shew the world 'the fallacie of that maxim, *Better one man perish '(though unjustly) than the people bee displeased, or 'destroied*. In all likelihood, adds he, I could never 'have suffered, with my people, greater calamities, '(yet with greater comfort) had I vindicated *Strafford*'s 'innocencie, at least by denying to sign that destruc-'tive Bill, according to that justice, which my con-'science suggested to mee, then I have don since I gra-'tified som mens unthankful importunities with so cruel 'a favor. And I have observed, that those, who coun-'selled mee to sign that bill (14), have been so far 'from receiving the rewards of such ingratiateings 'with the people, that no men have been harrassed 'and crushed more than they. Hee only hath been 'least vexed by them (15), who counselled mee not to 'consent against the vote of my own conscience.'— (16) Irresolution, and want of steddiness, at first, was the ruin of K. Charles's affairs. For, had he stood unmoveable upon some occasions, especially against the Bill for perpetuating the Parliament, he would never have been plunged into those miseries, which He and these Kingdoms fell into: But all differences might have been amicably adjusted between him and his people, before they came to those dangerous extremes. In some cases a Prince ought not to yield, unless it is plainly right. This our late King William of glorious and immortal memory was well apprized of. For, when the Bill *touching free and impartial proceedings in Parliament*, was offered to him for the royal assent, he rejected it one year after another, though the Clerk of Parliament read the title of it two or three times times successively. (17)

(14) The Judges and Bishops abovenamed.

(15) Viz. Bishop Juxon.

(16) Εἰκὼν Βασιλικὴ, chap. ii.

(17) See Kennet's Hist. of England, edit. 1719. Vol. III. p. 699.

[*G*] *From that time he frequently waited upon his Majesty.*] We shall here lay together before the Reader, what passed between Majesty and the Bishop, 'till his Majesty's death. On the 27th of January, the last day of the King's trial, and before he was carried into Westminster-hall, he and the Bishop were private near an hour, at Cotton-house. The same night, after sentence, Col Hacker, who commanded the guards at St James's about the King, would have placed two musqueteers in the King's bed-chamber; but Bishop Juxon and Mr Herbert apprehending the disturbance it would give the King in his meditations, never left the Colonel 'till he had reversed his order by withdrawing those men. The King now bidding farewel to the world, spent the remainder of his time in prayer and other exercises of devotion, and in conference with that meek and learned Bishop, who, under God, was a great support and comfort to him in his afflicted condition. That evening the Bishop prayed with him, and read some select chapters out of the holy Scripture. The next morning, being Sunday Jan. 28, Bishop Juxon was early with the King, prayed with him, and preached on Rom. ii. 16. Monday Jan. 29, his Lordship spent also most part of the day with his Majesty, and prayed with him, not taking leave of him 'till some hours after night; and, at parting, the King desired him to come early the next morning. He came accordingly at the appointed hour; and, after having continued a considerable time in prayer and meditation, attended his Majesty from St James's to Whitehall, walking through the Park on the King's right hand. When they came to Whitehall, he prayed there again with his Majesty in his cabinet-chamber, and administered the sacrament to him. (18) To conclude this melancholy scene, he attended the King upon the scaffold, where these words passed between them.

(18) Sir Tho. Herbert's Memoirs, printed in 1702, 8vo. See also Wood's Athen. edit. 1721. Vol. II. col. 693, &c.

Dr Juxon. 'Will your Majesty (though it may be 'very well known your Majestie's affections to religion, 'yet it may be expected that you should) say somewhat 'for the world's satisfaction.'

King. 'I thank you very heartily (my Lord), for 'that, I had almost forgotten it. In troth, Sirs, my 'conscience in Religion, I think, is very well known 'to all the world; and, therefore, I declare before 'you all, that I die a Christian, according to the pro-'fession of the Church of England, as I found it left 'me by my father; and this honest man,* I think, 'will witness it.'

* Pointing to Dr Juxon. He had called him before, in this last speech, *a good man*.

His Majesty then called to Dr Juxon for his night-cap, and having put it on, he said to the executioner, Does my hair trouble you? — And then turning to Dr Juxon, the King said, 'I have a good cause, and a 'gracious God on my side.'

Dr Juxon. 'There is but one stage more. This 'stage is turbulent and troublesome; it is a short one: 'But you may consider it will soon carry you a very 'great way: it will carry you from earth to heaven; 'and there you shall find a great deal of cordiall joy 'and comfort.'

King. 'I go from a corruptible to an incorruptible 'crown; where no disturbance can be, no disturbance 'in the world.'

Dr Juxon. 'You are exchanged from a temporal 'to an eternal crown, a good exchange.'

Then the King took off his cloke and his George, giving his George to Dr Juxon, saying, Remember — (19) After the execution, the pious Bishop took care of the King's body, and accompanied it to the royal chapel at Windsor; standing ready, with the Common-prayer-book in his hands, to have performed his last duty to his kind master: but was not permitted by Col. Whitchcott, governor of the castle. (20)

(19) From the Account published by authority, 1649, 4to.

(20) Herbert, as above.

[*H*] *Rode a hunting with some of the neighbouring and loyal gentry.*] Mr Whitelock tells us, that Dr Juxon 'was much delighted with hunting, and kept 'a pack of good hounds, and had them so well or-'dered, and hunted, and chiefly by his own skill and 'direction, that they exceeded all other hounds in 'England, for the pleasure and orderly hunting of 'them. He was a person of great parts and temper, 'and had as much command of himself, as of his 'hounds. (21)

(21) Memorials, p. 24.

[*I*] *He was deservedly set at the head of the Church of England.*] Such was the general voice and opinion of the nation. But the late Bishop Burnet, who gives in general a bad or a mean character of the Royalists, especially if they are of the clergy, thinks that Bishop Juxon did not *deserve* that advancement. His words are these. 'At the Restoration, Juxon, the ancientest 'and most eminent of the former Bishops, who had 'assisted the late King in his last hours, was promoted 'to Canterbury, more out of decency, than that he 'was then capable to fill that post; for as he was never 'a great divine; so he was now superannuated.' (22) The most bookish man, or the most loaden with learning, though it be divinity, is far from being always the fittest to fill that high post. And if Bishop Juxon's age was great, he being then 78, it does not appear by any action of his that he had lost his understanding. So that the Bishop's reflection is unjust, at least undecent.

(22) Hist. of his own Time, edit. 1724. Vol. I. p. 176.

[*K*] *Being translated to the Archbishoprick of Canterbury in* 1660.] The *Conge d'elire* was granted September 3. He was elected Sept. 13, and confirmed in King

hall [*L*]. Alſo he augmented the vicarages, of which the great tithes were appropriated to his ſee (*t*) [*M*]. But being broken with age and infirmities, and eſpecially with the moſt racking torture of the ſtone, he died June 4, 1663, aged 81, and was buried the 9th of the ſame month, in St John's-college chapel, Oxon. by the ſide of Archbiſhop Laud. He bequeathed 7000 pounds to that college, which were afterwards laid out in the purchaſe of an eſtate of 350 pounds per annum. He left alſo 100 pounds to the poor of St Giles's pariſh in Oxford, the like to four other pariſhes; and ſums for the repair of St Paul's and Canterbury cathedrals, and other charitable uſes, in all to the amount of near 5000 pounds (*u*). His contemporaries give him the following character; That he was a comely perſon; of an active and lively diſpoſition; of great parts and temper; full of ingenuity and meekneſs, not apt to give offence to any, and willing to do good to all (*w*): of great moderation, ſincerity, and integrity; inſomuch, that he was the delight of his time, and extorted a reverence and reſpect from thoſe very perſons who had deſtroyed and ruined his Order (*x*). In a word, he was a man of primitive ſanctity, wiſdom, piety, learning, patience, charity, and all apoſtolical virtues (*y*). He publiſhed but a very few things [*N*].

C

K.

KAYE, KEYE, CAY, or CAIUS [*A*] [JOHN], a very learned Engliſh Phyſician in the XVI. century, and co-founder of Gonevile and Caius-College in Cambridge, was the ſon of Robert Keye [*B*], and born at Norwich, Octob. 6, 1510. After having received his ſchool-education in that city, he was admitted very young into Gonevile-hall in Cambridge, of which he became Fellow (*a*); and at the age of 21, commenced author [*C*]. For his further improvement he went, according to the cuſtom of that age, into Italy, and ſtudied Phyſick in the univerſity of Padua under the learned Johannes Baptiſta Montanus, the moſt eminent Phyſician of his time (*b*). He ſoon became ſo eminent in his faculty, that he was Reader of Phyſick at Padua for ſeveral years, and a ſingular ornament to that univerſity (*c*). He took his degree of Doctor firſt at Bononia [*D*], and read public Greek Lectures at Padua, eſpecially about the year 1542, being the 32d of his age *. In 1543 he travelled through the greateſt part of Italy, Germany, and France (*d*). Upon his return to England, he commenced Doctor of Phyſick at Cambridge, and practiſed with ſuch induſtry and ſucceſs, at Shrewſbury (*e*), and at Norwich (*f*), that he came to be reputed one of the beſt Phyſicians in the nation. And, on that account, was ſucceſſively made Phyſician to K. Edward VI. Q. Mary I. and for many years to Q. Elizabeth. In 1547, he was admitted Fellow of the College of Phyſicians in London; and, afterwards, paſſed with applauſe through all the offices of that learned body, having for ſeveral years been choſen Cenſor, often Regiſter and Treaſurer, and for ſeven years or more, Preſident of that royal foundation. He was the firſt inventor of thoſe enſigns of honour, by which the Preſident of the College is diſtinguiſhed from the reſt of the Fellows [*E*]. Upon all occaſions, he proved an earneſt and zealous defender of the College Rights and Privileges [*F*]. And ſo religious was he in obſerving its ſtatutes; that,

(*a*) F. Blomefield's Eſſay towards a Hiſtory of Norfolk, Vol. II. p. 210, 212. T. Fuller's Hiſt. of Cambridge, p. 133. and Worthies, in Norwich, p. 275.

(*b*) J. Pits de Illuſtribus Angliæ Scriptoribus, edit. Paris, 1619, p. 755, vel ætas xvi. No. 1007. & Caius de Libris propriis, p. 133, 138. edit. Lond. 1729, 8vo.

(*d*) De Libris propriis, p. 194, 201.

(*e*) See his book De Ephemeris, &c. and Freind's Hiſtory of Phyſick, as below, note [*Q*].

(*f*) Blomefield, as above, p. 211.

[*A*] *KAYE, KEYE, CAY, or CAIUS.*] Dr Freind writes his name *Kaye*; (1) others *Key*, or *Keye*, and Mr Blomefield tells us, (2) that the latter was his true name. The Doctor himſelf, according to the faſhion of his age, latinized it into *Caius*, which others have engliſhed into *Cay*.

(1) Hiſtory of Phyſick, Part ii. p. 408. edit. 1726.

(2) Eſſay towards a Hiſtory of Norfolk, Vol. II. p. 210.

[*B*] *Was the Son of Robert Keye.*] R. Parker, (3) and T. Fuller, (4) ſay, that this Robert Keye, alias Caius, was of Yorkſhire, or a Yorkſhire man. But Mr Blomefield informs us, that, 'as far as ever he 'could learn, it is without foundation. For, as he 'goes on, it is evident he was not of the ſame family 'with Thomas Key or Cay of Oxford, who was deſcended from the Yorkſhire family of Woodſome: '(5) whoſe book, intituled *Aſſertio Antiquitatis Oxonienſis Academiæ*, our Caius anſwered in his book intituled, *De Antiquitate Cantabrigienſis Academiæ*, 'under the name of *Londinenſis*, in 1568, reprinted 'under his own name in 1574; to which Thomas 'wrote a Reply, [publiſhed by T. Hearne, in 1730.] '(6) So that there being no relation between them, 'I am apt to believe he was of the Norfolk family of 'that name, who had been ſettled in Norwich, and 'different places in this county, a long time, though 'in truth of no great fortunes; which appears to me 'the more likely, our Caius not ſo much as pretending (that I can find) to bear any arms from his family; 'for which reaſon, he procured a coat for his own 'bearing, with licence for his college to bear it impaled with that of Gonvile, as they do at this day; 'being, Or, ſemé of ſlips of amarant or flower-gentle, 'purple; on a pedeſtal, two ſerpents erect, with their 'tails knotted together, azure; between them, a book, 'ſable; boſſed, or; the leaves edged, gules. On it, 'a root and ſpringing branch of ſemper-vive, or houſe-'leek, proper.' (7)

(3) Hiſt. of Cambridge, as above, p. 74.

(4) Hiſt of the Univ. of Cambr. p. 133.

(5) Wood, Ath. Vol. I. edit. 1721. col. 136.

(6) Mr Blomefield by miſtake ſays, 'it was 'never printed.'

(7) Blomefield, as above, p. 210.

[*C*] *And at the age of twenty-one commenced author.*] He informs us himſelf, that, at that age, he tranſlated out of Greek into Latin *Nicephorus Calliſtus*'s Treatiſe of Confeſſion in Prayer, and another of *Chryſoſtom, de modo orandi Deum:* And out of Latin into Engliſh *Eraſmus*'s paraphraſe on Jude, and epitomized his book *de Vera Theologia*. (8)

(8) J. Cai de Libris propriis, edit. ut ſupra, p. 127, 128.

[*D*] *He took his degree of Doctor firſt at Bononia.*] For this we have the ſole authority of Dr Goodall; who adds, that our author was alſo for ſome years Greek Lecturer there. (9) But it is more probable that he was Lecturer at Padua, for which a ſalary was paid by the Republic of Venice. (10) However Dr Goodall's authority is not to be ſlighted; he having collected materials for writing Dr Caius's Life. (11)

(9) Epiſtle Dedicatory, &c. as above.

(10) Vide Caium de Libris propriis, p. 163.

[*E*] *He was the firſt inventor of thoſe enſigns of honor by which the Preſident of the college is diſtinguiſhed from the reſt of the Fellows.*] Thoſe are, a Cuſhion before him, a ſilver verge, a book, and a ſeal. And that Dr Cay was the inventor of them, appears by the following memorandum entered by him in the College regiſter. *Ante hunc annum nulla a Collegio condito reddita ratio fuit acceptorum & expenſorum; nullave ſolennis ratio inſtituendi aut honorandi Præſidentem Pulvinari, Caduceo, Libro & Sigillo, aut excogitata aut uſitata; ullave deponendi munus & officium; primuſque hos honores & excogitavit Caius & uſus eſt.* (12)

(12) Goodall, ubi ſup a.

[*F*] *Upon all occaſions, he proved an earneſt and zealous defender of the College Rights and Privileges.*] For inſtance, there happening, in the reign of Queen Elizabeth, a difference to ariſe betwixt the Phyſicians and Surgeons; whether the Surgeons might give inward

that, though old, he durſt not abſent himſelf from the College's *comitia*, or aſſemblies, without a diſpenſation. He did another eminent ſervice to that learned body, in compiling the Annals of the College, from the year 1555 to 1572 (*g*). This book was the firſt that ever was written of their affairs, and is managed with that excellent method, clearneſs of ſtile, and fulneſs of matter, that all the memorable tranſactions of the College are there to be found entered in their due time and order (*b*). In 1557, being Phyſician to Queen Mary I. and in great favour, nay, as one expreſſes it (*i*), a moſt acceptable oracle, with her, he obtained a licence to advance the Hall, in which he had been educated, to a College [*G*]. This he accordingly performed in 1558, endowing his foundation with conſiderable eſtates [*H*], for the maintenance of three Fellows, twenty Scholars, and a Porter; and giving them a new body of ſtatutes. Moreover, he added, at his own expence, to Gonvile-hall a new ſquare, called Caius's-Court [*I*] all of durable free-ſtone, and uniform in every reſpect; the charge of which amounted to above 1834 *l.* And that this Society might the better flouriſh under his immediate care and inſpection, he accepted, on the 24th of January 1559, of the Maſterſhip of it; which he kept almoſt as long as he lived. Some little time before his deceaſe, having cauſed Dr Thomas Legge of Norwich to be placed in his room, he remained as a Fellow-commoner in his own College, aſſiſting daily at divine ſervice in a private ſeat in the chapel, which he had built for himſelf (*k*). He is ſaid by ſome authors to have been a Papiſt, or Popiſhly inclined [*K*]; and is taxed by others with being unſettled in his religion [*L*]. Beſides what hath been already ſaid of him,

(*g*) He ſeems to ſay himſelf, that he began at the year 1520, and ended at 1565. Cujus nos Annales a collegio condito ſcripſimus, & ad annum Domini 1565. ultimum Præſidentiæ noſtræ annum produximus. *De Libris propriis*, p. 142.

(*b*) Epiſtle Dedicatory to Hiſtorical Account of the College's Proceedings againſt Empiricks, &c. by C. Goodall. Lond. 1684. It is not paged.

(*i*) R. Parker, as above, p. 75.

ward remedies in the ſciatica, French-pox, or any kind of ulcer or wound, &c. Dr Caius was ſummoned (as President of the College) to appear before the Lord-Mayor and others of the Queen's Delegates; before whom he ſo learnedly defended the college-rights, and the illegality of the Surgeons practice in the foremention'd caſes, againſt the Biſhop of London, Maſter of the Rolls, &c. (who brought many arguments in behalf of the Surgeons) that it was unanimouſly agreed by the Queen's Commiſſioners, that it was unlawful for them to practiſe in the aforementioned caſes. (13)

(13) Goodall, ibid.

[*G*] *He obtained a licence to advance the Hall, in which he had been educated, to a College.*] 'Till that time Gonvile's hall was not incorporated, but had only ſeveral licences of mortmain, to receive or purchaſe lands, tenements, &c. The Maſter and Fellows did indeed ſuppoſe themſelves a corporation, though they were only incorporated by Biſhop Bateman's authority, and letters confirmed by the Chancellor of the Univerſity, and the Biſhop of Ely; which, without letters patent under the great ſeal of England, gave them no legal power to be a corporation or body politic, but were what they thought they had been, rather by the piety, goodneſs, and ſimplicity of thoſe ages, than by any right of law. Wherefore the Maſter and Fellows, by the advice of Caius, petitioned the King and Queen for a Charter of Foundation, and Confirmation of all their Rights, Eſtates, and Privileges; which was obtained by Caius, who thereby was made a Founder, and added to Gonvile and Bateman, with full power aſſigned him, to appoint Rules and Statutes, for the Maſter, Fellows, and Scholars, to obſerve and keep, provided they were not repugnant to Bateman's ſtatutes, or any way incroaching on the prerogative of the Queen, or her ſucceſſors. The ſame charter alſo impowered him to ſettle 70*l. per ann.* more, and to found two Fellows or more, and twelve Scholars or more, the College being hereafter to be called, *The College of Gonvile and Caius*; and to be incorporated by the name of, The Maſter and Fellows of Gonvile and Caius College, founded in honor of the Annunciation of the bleſſed Virgin Mary. The year following, on the feaſt of the Annunciation, Dr Caius re-dedicated and conſecrated the college to the honor of the Annunciation aforeſaid, to which it was formerly dedicated by Gonvile and Bateman, and endowed it with plate, money, books, &c. (14)

(14) Blomefield, as above, p. 211.

[*H*] *Endowing his Foundation with conſiderable eſtates.*] Namely, the manor of Croſſeley in Rickmanſworth, in Hertfordſhire, formerly parcel of the Abbey of St Alban's; the manor of Runcton in Norfolk, formerly belonging to the monaſtery of St Edmund's-bury in Suffolk; together with the patronages of Holme, and Wallington, and the manor of Burnhamthorp in Norfolk, formerly belonging to the monaſtery of Wimondham: All which eſtates, being veſted in the Crown upon the diſſolution of the Monaſteries, Dr Caius purchaſed of King Philip and Queen Mary, February 12, 1557-8, for the ſum of 1030*l.* 12*s.* 6*d.* (15)—He gave, beſides, to the college, the manor of Bincombe with the Advowſon; and Woobourn in the county of Dorſet; and the manor of Crokeſley at Caxton in Cambridgeſhire.—In his will he appropriated his Fellowſhips and Scholarſhips to his own countrymen of the dioceſe and city of Norwich.

(15) Blomefield, ibid. and R. Parker, p. 75.

[*I*] *He added, at his own expence, to Gonvile-hall a new ſquare, called Caius's-Court.*] And that the gates of his new edifice might read a lecture of morality to the perſons that go through them, as one expreſſes it, (16) he cauſed that which leads into the college by St Michael's church, being low and little, to be inſcribed, *Humilitatis*, or the Gate of Humility; the next is inſcribed, *Virtutis*, the Gate of Virtue: On the other ſide of this portico, which is a piece of very good architecture, are theſe words, *Jo. Caius poſuit Sapientiæ*, 1567, i. e. 'John Caius placed this in honor of Wiſdom.' The gate on the ſouth ſide of his court, leading to the publick ſchools, is inſcribed, *Honoris*, or the Gate of Honor; which all that paſs through it for their degrees, are ſuppoſed to have attained.

(16) Blomefield, p. 212.

[*K*] *He is ſaid by ſome authors to have been a Papiſt, or Popiſhly inclined.*] T. Fuller informs us, (17) that 'ſome have fought to blaſt his memory, by reporting 'him a Papiſt,' without mentioning his authorities. But it is certain, that in 1565, three of his Fellows, whom he had expelled, drew up articles againſt him, wherein they charged him, not only with 'ſhew of a 'perverſe ſtomach to the profeſſors of the Goſpel, but 'alſo with Atheiſm.' Upon which Mr Strype obſerves, (18) that 'probably Caius thought the better to cover 'his former inſtability in religion, by throwing out 'expreſſions occaſionally, whereby he would pretend 'to have had little zeal for any religion: Or his aim 'might be, to obſcure his ſecret kindneſs for the old 'Popiſh Religion. For, that he had a kindneſs for it, 'appeared in his private reſervation of abundance of 'Popiſh trumpery — ſuch as Veſtments, Albes, Tunicles, with the Pix, Sindon, Canopy, &c.' which upon ſearch were found in his college, and burnt and defaced on the 13th of December 1572.——But it is to be remembered, that ſuch things might be kept only as matters of curioſity, without any veneration for them. — And the perſons by whom the accuſations were laid againſt him, appear to have been highly prejudiced, as well as violently exaſperated; and thought themſelves greatly injured: In ſuch a caſe, what would moſt men not ſay to blacken an enemy? Let us hear what apology T. Fuller makes for Dr Caius upon this ſubject. His being reported a Papiſt, was 'no great 'crime to ſuch who conſider the time when he was 'born, and foreign places wherein he was bred. However this I dare ſay in his juſt defence, he never mentioneth Proteſtants but with due reſpect, and ſometimes occaſionally doth condemn the ſuperſtitious credulity of *Popiſh miracles*. (19) Beſides, after he had reſigned his maſterſhip to Dr Legge,—he was conſtantly preſent at *Proteſtant* prayers. If any ſay, all 'this amounts but to a lukewarm religion, we leave 'the heat of his faith to God's ſole judgment, and 'the light of his good works to mens imitation.' (20)

[*L*] *And is taxed by others with being unſettled in his religion.*] So he is taxed particularly by J. Pits, in the following words. *Unicum illud in eo vehementer*

ſane

him, it must be remembered, that in 1557 he erected a monument in St Paul's church in London, to the memory of the great Linacer (*l*). And in 1563 or 1564, he obtained a grant, that the College of Physicians might for ever yearly take two dead malefactors bodies at their discretion, and dissect them, without the prohibition or control of any person whatever, or without paying any thing for them, and settled *1l. 6s. 8d.* a year for the expences of dissecting such bodies (*m*). Dr Caius was undeniably one of the most learned men in his time; particularly famous for his exquisite knowledge in the Greek and Latin languages; and a person of a happy wit (*n*). He revised and corrected Galen's books in numberless places, and translated some of them into Latin [*M*]. He also greatly corrected Corn. Celsus, and Scribonius Largus [*N*]. And published Hippocrates his treatise of Medicines [*O*]: A Practice of Physick [*P*]: An Account of the Sweating Sickness in England [*Q*]: The History of the University of Cambridge [*R*]: An Account

(*l*) Weever's Funeral Monuments, fol. 370.

(*m*) Blomefield, as above, p. 213. note.

(*n*) Goodall, as above.

sane dolendum, quod qui aliorum corpora tam peritè sanare profitebatur, suam animam neglexisse feratur, dum ipse non sanus in fide, pro occasionibus in omnem partem fluctuabat dubius, imo se flectebat inconstans, & non solum nutabat, verum etiam pro principum arbitrio religionem sæpe mutabat. Itaque scripta ejus nonnulla sunt prohibita. Sed forsan hoc omne, quicquid fuit vitii, potius hominis levitati quam perversitati tribuendum est.(21) i. e. One thing he is greatly to be pitied for, that he who professed to be so skilful in the cure of other people's bodies, is said to have neglected his own soul; for, being unsound in faith, he proved upon all occasions doubtful and wavering, nay flexible and inconstant, and not only tottering, but also changing his religion often at the pleasure of princes. Therefore some of his writings are forbidden. But perhaps this fault, whatever it be, is rather to be attributed to the man's levity than to his perverseness.

(21) De Illustribus Angliæ Scriptoribus, ut supra, p. 755, 756.

[*M*] *He revised and corrected Galen's books in numberless places, and translated some of them into Latin.*] According to his own list,(22) he revised and corrected thirty-one Treatises of Galen, and wrote Notes, or Commentaries, upon nine of them. The chief of which were, Galen's Anatomical Exercises, in nine books: Of the motion of the Muscles, in two books: Of the composition, or making up of Medicines, 17 books: Of the powers of Simple Medicines, 11 books: Of the opinions of Hippocrates and Plato, nine books: A body, or method, of Physic, 14 books: How to preserve health, six books: Of the use of the parts of the human Body, 17 books: Of the causes of Symptoms, three books: Of the Bones, one book, &c. Besides twenty other Treatises, comprised in one single book, each ——— And he intended a further correction of them if he had lived. (23)

(22) De Libris propriis, &c. p. 138, &c. 206—210.

(23) Ibid. p. 194, 210. Most of his corrections are now lost. Jebb, præfat. p. x.

Such of them as he translated into Latin, were, *De placitis Hippocratis, primum. De libris Galeni suis, unum, De ordine Librorum suorum, unum. De Dicæta in morbis acutis, unum.*

And such as he published, were, 1. Galen's two books of the Anatomy of the Muscles and Nerves. Basil 1544. Froben. and 1551, by Rouille. 2. Of *Succedaneums*, or substituted remedies. 3. Part of the 7th book of the use of the Parts; which he first found out. 4. Of a Coma, or Lethargy; reprinted in 1556. 5. Of the means of preserving Health, Gr. 1549. Basil, by Oporinus; and with commentaries, in 1563. 6. Galen's book to Thrasybulus. 7. Of the small Sphere. 8. Galen's account of his own books. 9. And the order of them. Lovan. 1556. 8vo. Basil 1563. 10. Of Ptysan. Basil 1557. 11. Galen's first book of the Opinions of Hippocrates and Plato. Περὶ τῶν Ἱπποκράτους καὶ Πλάτωνος δογμάτων. *De Decretis Hippocratis & Platonis, lib.* 1. (24)

(24) De Libris propriis, p. 138, &c. 169, 172, 173.

[*N*] *He also greatly corrected Corn. Celsus, & Scribonius Largus.*] We do not find that he ever published them, though he made them quite ready for the Press; adding at the end, An Account of the Weights and Measures therein mentioned. (25)

(25) Vide de Libris propriis, p. 163—169.

[*O*] *And published Hippocrates his Treatise of Medicines.*] Περὶ Φαρμάκων, or *De Medicamentis.* This he was the first who discovered.—He published, moreover, Hippocrates his Regimen, or method of Diet, in acute diseases. *De ratione Victus [vel dicæta] secundum Hippocratem in morbis acutis. Lov.* 1556. 8vo.

[*P*] *A Practice of Physic.*] Written in Latin, and intituled, Joannis Caii *Britanni* de *Medendi Methodo, libri duo, ex Cl.* Galeni Pergameni, & Jo. Baptistæ Montani Veronensis, *principum Medicorum Sententia. Opus utile & jam natum.* Basileae, apud Froben. 1544. *item* Lovan. 1556. 8vo.

[*Q*] *An Account of the Sweating Sickness in England.*] This is intituled, *De Ephemera Britannica*; because it lasted but a natural day of 24 hours. The learned Dr Freind justly calls it 'something very remarkable and wonderful, a distemper, which was 'never heard of before in any age or nation; and 'which, after returning now and then for the space 'of some years, has ever since entirely disappeared.' He proceeds to give the following curious account of it from Dr Cay's book. — 'It originally was a native 'of our own island; and upon this account it is the 'less strange, that it should be the most accurately described by one of our own countrymen, the great 'and learned *Caius*. It began at first in 1483, in 'Henry the Seventh's army, upon his landing at Milford-haven, and spread itself in London, from the '21st of September to the end of October. It returned here *five* times, and always in Summer: first 'in 1485; then in 1506; afterwards in 1517; when 'it was so violent, that it killed in the space of three 'hours: So that many of the nobility died, and of 'the vulgar sort, in several towns, half often perished. 'It appeared the fourth time in 1528, and proved 'mortal then in the space of six hours: Many of the 'courtiers died of it, and Henry the Eighth himself 'was in danger. In 1529, and only then, it infested 'the Netherlands and Germany; in which last country it did much mischief, and destroyed many, and 'particularly was the occasion of interrupting a conference at Marpurgh between Luther and Zuinglius 'about the Eucharist. The last return of it with us, 'was in 1551: In Westminster it carried off 120 in a 'day, and the two Sons of Charles Brandon, both 'Dukes of Suffolk, died of it. At Shrewsbury particularly, where our Author, Caius, resided, it broke 'out in a very furious manner. The description he 'gives of it is terrible, like the plague of Athens. He 'very properly calls it a pestilent contagious Feaver, 'of one natural day: The Sweat itself he reckons 'only as a symptom or crisis of this Feaver. The 'manner of its seizure was thus; first it affected some 'particular part, attended with inward heat and burning, unquenchable thirst, restlessness, sickness at stomach and heart, (though seldom vomiting) head ach, 'delirium, then faintness, and excessive drowsiness. 'The pulse quick and vehement, and the breath short 'and labouring. Children, poor, and old people, less 'subject to it. Of others, scarce any escaped the attack, and most died: *In* that town, where it lasted '*seven* months, perished near a thousand. Even by 'travelling into France, or Flanders, they did not escape: And what is stranger, even the Scotch were 'free, and abroad the English only affected, and foreigners not affected in England. None recovered 'under 24 Hours. At first the Physicians were much 'puzzled how to treat it; the only cure was to carry 'on the sweat, which was necessary, for a long time; 'for if stopt, it was dangerous, or fatal. The way, 'therefore, was to be patient, and lie still, and not to 'take cold. If Nature was not strong enough to do 'it, Art should assist her in promoting the sweat, by 'cloaths, medicines, wine, &c. The violence of it 'over, in 15 hours; but no security 'till 24 were passed. In some there was a necessity to repeat the 'sweating; in strong constitutions, *twelve* times. Great 'danger to remove out of bed; some who had not 'sweated enough fell into very ill Feavers. No flesh 'in all the time, nor drink for the *first* five hours. For 'in the *seventh*, the distemper increases; about the '*ninth*, delirium; sleep to be avoided by all means. 'It appeared by experience, as the Lord Bacon ob-

'serves

count of the Baths in Britain [S]; of some rare Animals and Plants [T]; and of British Dogs [U]: Of the right pronunciation of the Greek and Latin languages [W]; and some other pieces mentioned below [X]. He dyed at Cambridge July 29, 1573, in his grand climacteric, having foretold his own death (o), and was buried in a grave which he had made before his deceaſe, in the chapel of his own college. His epitaph is ſhort, but expreſſive and ſublime [Y]. He was a man of very great learning; particularly, maſter of a fine Latin ſtile. And he ſhewed his zeal, love, and true regard for learning, by endeavouring to promote and perpetuate it; in his generous benefactions to the place of his education, of which he muſt be allowed to be the chief and moſt munificent Founder.

(o) Goodall, as above.

'ſerves, that this diſeaſe was rather a ſurprize of na-
'ture, than obſtinate to remedies, if it were in time
'well treated. For when proper care was taken, the
'patient generally recovered.' (26) Dr Keye's ac-
count of this ſickneſs was publiſhed in 1556; and very neatly reprinted at London in 1721, 8vo. The Dedi-
cation to Antony Perrenot, Biſhop of Arras, is dated
Cand. Janu 11. 1555. To the firſt edition the author
ſubjoined Galen's two books, *De Libris propriis, Ga-
leno* and *ordine librorum ſuorum*; and Hippocrates
his book, *De ratione victus in morbis acutis.* (27)

[Z] *The History of the University of Cambridge.*] [illegible] the occaſion of [illegible] a Vindication of the Anti-
quity of that University. And the occaſion of his
writing of them was this; Queen Elizabeth coming to
Cambridge in Aug. 1564, the Orator made a ſpeech
before her, wherein he extolled the Antiquity of that
Univerſity, and affirmed that it was much ancienter
than Oxford. The Oxonians being offended at this,
Thomas Key Fellow of All-Souls college wrote in ſeven
days a little book, (28) wherein he ſtrenuouſly aſſerted
the antiquity of his own Univerſity; ſaying, that it
was founded by ſome Greek Philoſophers, companions
of Brutus, and reſtored by K. Alfred about the year
of Chriſt 870; conſequently was ancienter than Cam-
bridge; and this book he preſented to Q. Elizabeth,
at her coming to Oxford. Upon that, Dr Caius, at
the motion of Archbiſhop Parker, (29) enters the liſts,
like a true champion, and in the ſtile of one; and
makes out undeniably (as he thinks) that Cambridge
Univerſity had for its founder Cantaber, 394 years be-
fore Chriſt, and in the year of the world, *four thouſand
three hundred* and odd; and therefore was 1267 years
ancienter than Oxford. The Doctor's book is intituled,
*De Antiquitate Cantabrigienſis Academiæ Libri duo. In
quorum ſecundo de Oxonienſis quoque Gymnaſii Antiqui-
tate diſſeritur, & Cantabrigienſe longe eo antiquius eſſe
definitur.* Londinenſi Authore. For the Doctor con-
cealed himſelf under the name of *Londinenſis*. At the
end of it is ſubjoined, Thomas Key's book, or *Aſſer-
tio Antiquitatis Oxonienſis Academiæ, incerto Authore
ejuſdem Gymnaſii:* (30) *Ad illuſtriſſ. Reginam Anno*
1566. *Cum fragmento Oxonienſis Hiſtoriolæ, ex libro
Procuratorum.* Theſe were very neatly printed by
Henry Bynneman, in 1568, 8vo.—They were reprint-
ed by John Day in 1574, 4to, *auctiori ab ipſo Authore
plurimum*, with two other books, intituled *Hiſtoriæ
Cantebrigienſis Academiæ ab Urbe condita, Lib.* 2. which
are properly the Hiſtory of the Univerſity. The firſt
contains the *ancient* ſtate of the place, a deſcription of
the town, an hiſtory of the Univerſity, and the foun-
dation of the ſeveral colleges. The ſecond is a de-
ſcription of the town *as it was in his time*; officers of
the Univerſity, Exerciſes, &c. Schools, Library, &c.

[S] *An Account of the Baths in Britain.*] *De Ther-
mis Britannicis, liber.* In which he treats of the na-
ture, uſe, effects, and diſcovery of the baths in Britain.
We do not find that it was ever printed. (31)

[T] *Of ſome rare Animals, and Plants.*] He drew
up that account for the uſe of the very learned Conrad
Geſner, and it was inſerted in his Hiſtories of Animals
and Plants. Our author had it printed afterwards more
complete, by W. Seres, at London 1570, 4to.

[U] *And of Britiſh Dogs.*] *De Canibus Britannicis
libellus.* This was drawn up at firſt in haſte, for the
uſe alſo of his learned friend C. Geſner. But he being
carried off by the plague in 1565, our author reviſed
and enlarged it; cauſing it to be printed by W. Seres
in 1570. It hath been reprinted, with the former, by
Dr Jebb. Lond. 1729, 8vo.

[W] *Of the right pronunciation of the Greek and
Latin Languages.*] *De Pronunciatione Græcæ & La-
tinæ Linguæ, cum Scriptione nova libellus.* Printed by
J. Day, Lond. 1574, reprinted by Dr Jebb, with the
two former. In this he oppoſes the pronunciation in-
troduced by J. Cheke, (32) and confirmed by a decree
of the Univerſity of Cambridge, 14 June 1542. (33)
With regard to the Latin, he was for retaining the
manner of pronunciation uſed in foreign parts, viz.
ſibi, tibi, vita, ita,—not, *ſaibai, taibai, vaitai, aitai,*
as the Engliſh ſound thoſe words. And as to the Greek,
he was abſolutely againſt the manner of pronouncing
it, introduced by Cheke and Smith: Alledging, that
the Ancients, as appeared by their own books and
commentators, pronounced *Achilles, Tydes, Theſes,* not
Achillews, Tudeus, Theſeus, &c. *Certe Antiqui Achilles,
Tydes, Theſes, & Uliſſes dicebant, non Achillews, Tudeus,
Theſews, & Uluſſews, quemadmodum recentes: uti ex
eorum & interpretum libris ea adhuc referentibus ſcire
licet.* (34) That exploded manner of pronouncing
Greek is ſtill eſpouſed by ſome perſons; witneſs *D.
Gregorii Placentini de recta Græci ſermonis Pronuncia-
tione Diſſertatio,* Romæ 1735, 4to. and *Commentar. in
Veteres Inſcriptiones,* Romæ 1751. 4to.

[X] *And ſome other pieces.*] Namely, 1. *De Libris
propriis liber unus; ad Thomam Hatcherum.* An ac-
count of the Books written by himſelf. Printed by W.
Seres, Lond. 1570, and reprinted by Dr Jebb with the
forementioned ones. It were to be wiſhed, every learn-
ed man, who hath written many things, would leave
ſuch an account of them behind him. 2. *De Sympho-
nia vocum Britannicarum, lib.* 1. 'Of the agreement
of many Britiſh words with the like in the Greek and
Latin languages.' Never printed. 3. *De antiquis Bri-
tanniæ Urbibus, lib.* 1. 'Of the ancient cities and
towns in Britain.' Containing an account of their for-
mer and modern names; which of them are extinct,
&c. Not printed. 4. *De Libris Galeni qui non extant,
lib.* 1. 'Of the books of Galen which are loſt.' Not
printed. 5. *Annales Collegii Medicinæ, Lond. lib.* 1.
'The Annals of the College of Phyſicians London.'
6. *De Annalibus Collegii Gonevilli & Caii, lib.* 1.
'The Annals of Goneville and Caius College.' Theſe
two he never intended for the preſs. (35) — He had
alſo an intention of writing the Hiſtory of his native
place, the city of Norwich. (36)

[Y] *His epitaph is ſhort.*] It is compriſed in theſe
few words.

Fui Caius.
Vivit poſt Funera Virtus.
Obiit xxix Julii Ætatis ſuæ
Anno Dni 1573. LXIII.

i. e.

I was Caius. Virtue outlives Death.
He died 29 July, A. D. 1573, aged 63.

His monument, when the chapel was rebuilt ſome time ſince, was raiſed from the floor, and placed in the wall as it now ſtands, and then his body was found whole and perfect. (37)

KEBLE [JOSEPH], the laborious compiler of Law-Reports, was youngeſt ſon of Richard Keble of Ipſwich in the county of Suffolk, Eſq; a lawyer of ſufficient note during the Uſurpation (*a*) [*A*], and deſcended from a very ancient family in Wales (*b*). His ſon Joſeph, the ſubject of the preſent article, had his birth in the pariſh of St Giles's in the Fields in the year 1632, and having laid a proper foundation of grammar learning at the pariſh ſchool of St Andrew's, Holbourn (*c*), was ſent thence to Jeſus college in Oxford; but after a ſhort ſtay there, he removed to that of All-Souls, of which Society he was appointed a Fellow by the Parliament Viſitors in 1648 (*d*). In this ſituation he proſecuted his ſtudies with diligence, and being of the Law line, he proceeded to take his bachelor's degree in that profeſſion, March 15, 1654 (*e*). Not long afterwards, leaving the univerſity, he ſettled at Gray's-Inn, where he had been admitted a ſtudent, and became a Barriſter about the year 1658 (*f*). The following year he made the tour of Paris, and ſaw the Court there. After the Reſtoration, he attended the King's-Bench bar with very extraordinary aſſiduity, continuing there daily as long as the court ſat, in all the terms from 1661 to the year 1710, which was the more remarkable, as he was very rarely, if ever, known to be retained in any cauſe, or ſo much as to make a motion there. Agreeable to this courſe, his whole life was very regular and orderly: Riſing before ſix in the morning, he employed himſelf in his ſtudy, with unwearied writing, 'till eleven; then met company in the walks; from thence to dinner: thence back to his ſtudy; and at ſix to the walks again. This was in a manner the conſtant method of his labours and diverſions (*g*). In the vacation time he uſually walked to Hampſtead, having purchaſed an North-end (*h*) in that pariſh, a ſmall copyhold eſtate for the ſake of the air. In this retirement he remained Mondays. Tueſdays, and Wedneſdays, but employed his time there moſtly in writing, as he did at London [*B*]. Towards the latter end of his life, growing too feeble to perform the walk, he ſometimes rode thither; and as he was going to take coach for that purpoſe on Monday Auguſt 28, 1710, his legs failed him on the ſudden, and he fell back into a perſon's arms in Holborn-Gate at Gray's-Inn, and expired immediately, without a groan, in the 78th year of his age (*i*) [*C*]. His corps was ſoon afterwards conveyed in a hearſe out of town, and buried at Tuddenham near Ipſwich in Suffolk, where he had a real eſtate of about a hundred pounds a year, which, as he was never married, deſcended after his deceaſe to Walter Keble Eaves, Eſq; his heir at law (*k*). He publiſhed ſeveral Books in his Life-time; beſides which, he left above a hundred large folios, and more than fifty thick quartos, in manuſcript, of his own hand-writing: We ſhall give an account of the whole below [*D*]. He had alſo a very good ſtudy of printed books,

(*a*) Poſt-Boy, No. 4704. from Thurſday Sept. 17 to Saturday Sept. 19, 1719.

(*b*) His pedigree is now in the hands of Mr Sam. Keble, Bookſeller in Fleet-ſtreet, where the family is traced as far back as before the time of Will. the Conqueror.

(*c*) Poſt-Boy.

(*d*) Ath. Oxon. ubi ſupra.

(*e*) Ibid. Faſti, col. 105.

(*f*) Poſt-Boy. Mr Wood obſerves, that he afterwards became a Bencher of that ſociety. Ath. Ox. where laſt cited.

(*g*) Poſt-Boy.

(*h*) The value of it was about 10*l.* a year, as we are informed by Mr. Sam. Keble, Bookſeller in Fleetſtreet; who ſays, his relation generally performed the walk in the ſame number of ſteps, which were often counted by him.

(*i*) Poſt-Boy.

(*k*) Mr Keble's information.

[*A*] *A Lawyer of ſufficient note during the Uſurpation, and of an ancient family in Wales.*] He was Serjeant at Law when he was appointed a joint Commiſſioner of the Great Seal with Bulſtrode Whitlocke and John Liſle, Eſq; in February 1648 (1); and while he was in this ſtation he was appointed preſident of the extraordinary commiſſion of Oyer and Terminer for the trial of the famous John Lilburne, in Oct. 1649(2).

(1) Ath. Oxon. Vol. II. col. 1007.

(2) See the tryal of Lieutenant-Colonel John Lilburne, printed that year in 4to.

[*B*] *He employed time in writing at London.*] This faculty was ſo habitual to him, that he continually laboured with his pen, not only to report the Law at the King's-Bench Weſtminſter, but all the Sermons at Gray's-Inn Chapel, both forenoon and afternoon, amounting to above 4000. This was the mode in thoſe times when he was young; and being once got into the faſhion of writing ſermon-notes, he continued it to his laſt, as will appear in remark [*D*].

[*C*] *He expired without a groan.*] The perſon in whoſe arms he expired, was the late Mr Williamſon, bookſeller, who then kept a ſhop under the gate, and obſerving him to faulter in his walking, ſtept up to his aſſiſtance; to whom his laſt words were, *My legs are too weak to ſupport my body.* He had frequently in his life-time expreſſed a deſire to die in this manner; and often declared with ſome warmth, his diſlike of the petition in the Litany againſt ſudden death (3).

(3) From the information of Mr S. Keble, Bookſeller in Fleet-ſtreet.

[*D*] *We ſhall give an account of the whole below.*] The firſt work he undertook for the public, was making a new Table with many new References, &c. to the Statute Book in the year 1674. He was engaged in it by two of the King's Printers (4), who agreed to give him three hundred pounds; and had it licenſed by Lord Chancellor Finch, with all the Judges. He finiſhed it in two years. II. The next book he publiſhed was in the year 1681, intituled, *An Explanation of the Laws againſt Recuſants, &c. abridged,* in 8vo. Licenſed May 7, 1681, with the following approbation: 'Knowing the learning and induſtry of the author of this work, who hath therein very ſeaſonably beſtowed his pains upon explaining the ancient laws made againſt Recuſants, I do recommend the ſame to the public. Fr. North. III. His next work for the public was intituled, *An aſſiſtance to Juſtices of Peace for the eaſier performance of their duty; licenſed by all the Judges,* viz Fr. Pemberton, Fr. North, W. Montague, Hugh Wyndham, Tho. Jones, Will. Dolben, Tho. Raymond, Ed. Atkins, W. Gregory, J. Charlton, Creſwel Levinz, T. Street. Publiſhed in 1683, Fol. The bookſellers paid him two hundred pounds for the copy. IV. He publiſhed *Reports taken at the King's-Bench at Weſtminſter, from the 12th to the 30th Year of the reign of our late Sovereign Lord King* Charles II. in 3 volumes folio. Licenſed by the Judges, and publiſhed in 1685. He received of the bookſeller three hundred pounds for the copy. But the whole not being digeſted in the ordinary method of ſuch collections, and coming out without any table of references, the book was not ſo well received as was expected; and the credit of it being once ſunk could not be retrieved, tho' the table was added in 1696. V. *Two Eſſays; one on human nature, or, the creation of mankind; the other on human actions.* Pamphlets in 8vo.

(4) H. Hills and T. Newcomb.

Our author's manuſcripts in folio bound, are, I. Thirteen volumes (as large and thick as the Statutes) in Demy-paper, being an abridgment of the law under ſeveral heads. II. One volume of the ſame ſize on the Excom. of the 5th of Eliz. cap. 23. III. Ten volumes as thick as Poulton's Statutes, being a Digeſt of the Statutes at large under ſeveral proper heads. IV. Three volumes of the ſame ſize concerning Taxes. V. Three volumes of Abridgments throughout the Alphabet. VI. Two volumes being a Table to Lord Coke's Reports. VII. Four volumes, being an Alphabetical Table to all the Books of the Common Law. VIII. One volume, being an Abridgment of Eccleſiaſtical Law. IX. Twenty-five volumes of Abridgments of Law. X. Thirty-five volumes being an Explanation of all the Statutes, which the Lord Chancellor Finch put him upon doing. XI. Six volumes of Tables to the Abridgments. XII. One volume of Miſcellanies under fifteen Heads: 1. Religion. 2 Exerciſe of the Spirit. 3. Happineſs 4. Chriſtian Patience. 5. Faith. 6. Villenage. 7. Original Sin. 8. Life. 9. Charity. 10. Senſuality 11. Death. 12. Myſtery of Faith. 13. Direct of taking Sermon-notes. 14. Myſtery of Godlineſs. 15. Chriſtian Philoſophy. *His Manuſcripts in Quarto bound are:* 1. Two volumes of Pleadings at Gray's-Inn, beginning 1663, and ending 1677.

books, in Divinity, Hiſtory, Common and Civil Law; in which there was ſcarcely a ſingle one but where he had written very large marginal notes, particularly in all the books that relate to Convocations, and many obſervations upon Mr Locke's Human Underſtanding [*E*]. He was of a friendly and affable behaviour, and his good nature eminently appeared in the frequent aſſiſtance he gave to his relations [*F*], and in his charity to the poor.

1677. 2. Twenty-two volumes of Reports taken at the King's-Bench from King Charles II. to the 8th Year of her late Majeſty. 3. Thirty-three volumes of Sermons preached at Gray's-Inn in the Morning and Afternoon, from 1660 to 1709, which are above four thouſand. (5).

(5) The Poſt-Boy, cited in the text.

[*E*] *He had a very good ſtock of books, &c.*] All his books and manuſcripts (except twenty volumes given to Gray's-Inn) were left by his will to his couſin Sam. Keble, bookſeller in Fleet Street, London, by his will, wherein he alſo bequeathed his eſtate at Tudington to Mr Keble's ſon, the preſent bookſeller, as well as his copy-hold at North End: But tho' the will was all written by himſelf, and regularly ſigned; and ſo was ſufficient in Law for the copy-hold; yet being left without any witneſſes names, it proved ineffectual for conveying the real eſtate in Suffolk, which by that defect fell to the ſhare of the heir at law, as mentioned in the text.

[*F*] *He frequently aſſiſted his relations.*] The following inſtance of this was truly worthy of him. In building Coney-court, at Gray's-Inn, one ſide of the chambers in the ſtair-caſe, No. 3. was done at the expence of Mr Keble, who ſold thoſe on the ground and ſecond floor, but reſerving thoſe on the firſt for his own uſe, he placed in the third floor ſuch of his poor relations, eſpecially of the female ſex, as were rendered by age and infirmities the fitteſt object of his beneficence (6). P

(6) Communicated by Mr S. Keble, Bookſeller in Fleetſtreet, to whom we are obliged for ſo many other particulars in this memoir.

KEILL (John), an eminent Mathematician and Philoſopher was born December 1, [illegible] at Edinburgh (*a*) where he received the firſt rudiments of learning; after which, being ſent to that univerſity, he continued there till he took the degree of Maſter of Arts. His genius leading him to the Mathematicks, he made a great progreſs in thoſe ſtudies under Dr David Gregory, the mathematical Profeſſor, who having embraced the Newtonian philoſophy ſoon after it was publiſhed, read a courſe of lectures to explain it (*b*). By this means our author became early acquainted with Sir Iſaac's Principia, and making himſelf maſter of a good ſhare of the immenſe treaſure of mathematical and philoſophical learning contained therein, he formed his future ſtudies upon that plan. In 1694 he followed his tutor to Oxford, and was incorporated Maſter of Arts there February the 2d that year (*c*); and being admitted of Baliol college, obtained one of the Scotch Exhibitions in that Society. It was not long after this, that he procured ſuch an apparatus of inſtruments as his fortune could command, and began to read lectures upon Natural Philoſophy according to the Newtonian Syſtem, which he explained by proper experiments in his private chamber at the college (*d*). This happy method of teaching Sir Iſaac Newton's principles by the experiments on which they were grounded, how natural ſoever, yet had not 'till then been attempted in either univerſity: Mr Keill was the firſt [*A*], and he diſtinguiſhed himſelf to great advantage it it. In 1698 he brought his character this way into the knowledge of the public, by his *Examination of Dr Thomas Burnet's Theory of the Earth* [*B*], which though his firſt eſſay in print, yet was generally received as a maſterpiece P

(*a*) Communicated by his ſon.

(*b*) Mr Whiſton's Life by himſelf, Vol. I. p. 32. 2d edit. 1753.

(*c*) Dr Rawlinſon's Catalogue of Degrees, &c. at Oxford, p. 121.

(*d*) The memory of this was freſh at Oxford in 1715, and was often mentioned by Mr John Whiteſides, who then read the ſame lectures there.

[*A*] *The firſt who read lectures in Experimental Philoſophy.*] As Sir Iſaac Newton, who was bred at Cambridge, read in the public ſchools there thoſe lectures which contained the ſubſtance of his Principia, it may ſeem a little ſurprizing, that the only proper lectures for explaining his philoſophy, which was built upon experiments, ſhould have been firſt introduced at the ſiſter univerſity (1). This was owing in a great meaſure to Dr Aldrich, Dean of Chriſt Church; who to an exquiſite taſte in all polite literature, having joined a conſiderable ſkill in the Mathematics, did not only give encouragement, but reputation alſo to thoſe ſtudies at Oxford. In the mean time, the Carteſian philoſophy ſtill held the vogue at Cambridge, even in the year 1693. (2) Notwithſtanding that ſoon after the year 1687, when Sir Iſaac's book was publiſhed, thoſe Principles had been taught at Edinburgh by Dr David Gregory, then Mathematical Profeſſor there, who had alſo cauſed his ſcholars to keep exerciſe for their degrees upon ſome branches of this new doctrine; whence it is no wonder if Mr Keill had imbibed a kind of veneration for it before he came to Oxford. He was ſucceeded in reading lectures there by Dr Deſaguliers, who ſome time after removing to London, firſt brought theſe lectures into general vogue in the metropolis.

(1) The Plumian profeſſorſhip was founded at Cambridge in 1705, and Mr Roger Cotes, the firſt Profeſſor, was likewiſe the firſt who read lectures of this kind there.

(2) Whiſton's Life by himſelf, ubi ſupra.

[*B*] *An examination of Dr Burnet's Theory.*] Notwithſtanding ſeveral things by way of anſwer to this Theory had been publiſhed before, yet they were all very defective; the authors thereof having not only left the greateſt faults unchaſtized, but run into as great abſurdities as any of thoſe they pretended to correct in the Theory itſelf. Mr Keill, therefore, undertook to give a full and ſolid refutation of that hypotheſis. As it was his ſuperior ſkill in the Newtonian philoſophy which rendered him equal to this province, ſo he made it an opportunity of recommending that philoſophy, both with regard to its method of applying geometrical calculations to diſcover the exact degree of thoſe forces that are found by obſervation actually to exiſt in nature, and likewiſe on account of its modeſty and ſobriety, in keeping the great author of Nature conſtantly in view, in confining philoſophy within its proper ſphere, and not preſuming to extend the force of ſecond intermediate cauſes to the production of ſuch effects as are wrought by the immediate hand of the Firſt. A method contrary to this, he obſerves, had been always the diſgrace of philoſophy. Thus, for inſtance, he imputes the wild notions of Anaxagoras, and ſeveral of the old Greeks, mentioned by Diogenes Laërtius, and Plutarch (3), concerning the nature and phænomena of the ſun and ſtars to the neglect of this method, and eſpecially marks thoſe of Anaximenes, Heraclitus, and another, concerning the cauſe of an eclipſe of the Sun, as tho' ſtrange enough in themſelves, yet appearing much ſtranger '*when*, ſays he, *we conſider that theſe men lived after Thales, who had foretold an eclipſe of the Sun by his knowledge, that the moon was to be at ſuch a time in a direct line between him and it. Such an averſion had theſe men to build upon other mens obſervations that had gone before them, though both older and wiſer than themſelves.*' From the Ancients he deſcends to the Moderns, 'who pretend, ſays he, to have found out the intimate eſſence of all things; to have diſcovered nature in all her works, and can tell you the true cauſe of every effect from the ſole principles of matter and motion; can inform you (for inſtance) how God made the world, and declare the whole œconomy of living bodies. Nay, they underſtand alſo very exactly the theory of the ſoul, how it thinks, and by what methods it operates on the body, and the body on it.' In confirmation of this laſt remark, he mentions the aſſertion of Spinoſa concerning an unity of ſubſtance; that of Mr Hobbes, of the abſolute impoſſibility of any incorporeal ſubſtance;

(3) The firſt In *Vitis Philoſophorum*, and the ſecond *De Philoſoph. Placitis.*

piece by thoſe who were beſt acquainted with the ſubject. In this work he had ſubjoined ſome *Remarks upon Mr Whiſton's New Theory of the Earth*, which occaſioned that gentleman

ſubſtance; Dr Henry More's fourth dimenſion, or eſſential Spiſſitude of the ſoul; Mr Malbranch's doctrine about ſeeing all things in God, and occaſional cauſes; together with ſome others then lately publiſhed, of leſs note, though not leſs extravagant (4), and then lays all theſe fooleries to the charge of Des Cartes, who encouraged this preſumptuous pride in the philoſophers of accounting for all the works of nature; 'and was alſo, continues he, the firſt world-maker this '[the ſeventeenth] century has produced. For he ſup-'poſes that God at the beginning created only a certain 'quantity of matter and motion, and from thence en-'deavours to ſhew how by the neceſſary laws of me-'chaniſm, without any extraordinary concurrence of 'the divine power, how the world, and all that there-'in is, might have been produced; nay, he pretend-'ed, that having a quantity of matter and motion, he 'could produce an animal; though he was ſo extreme-'ly ignorant in the laws of motion, that of the ſeven 'rules he has given about it, there is but one of them 'true.' He proceeds to overthrow the whole ſyſtem of Des Cartes's philoſophy, by ſhewing the falſeneſs of his Theory of the Vortices, upon which that ſyſtem is founded, and in concluſion obſerves, that Dr Burnet's Theory is formed in the ſame ſpirit with that of Des Cartes, from the cobweb threads of a fine imagination, without a due regard to obſervations and calculations. However intimating withal, that the philoſophy of his antagoniſts was made of no better ſtuff; among thoſe he expreſsly takes notice of Mr Warren, and makes very free with that gentleman's little gift of reaſoning (5).

(4) Viz. Dr Burthogge and Dr Connor, the firſt in a treatiſe upon Reaſon, had, revived the doctrine of the *Anima Mundi*, or one univerſal ſoul; and the latter had denied all miraculous facts in general, in a book entitled *Evangelium*.

(5) Mr Warren's book is intitled, *Geologia, or a Diſcourſe concerning the Earth before the Deluge, &c.* edit. 1690, 4to.

In the body of the book, our author conſiders ſeven of the Theoriſt's poſitions, upon which, as the main pillars, he ſuppoſes the whole fabrick to ſtand. Theſe are made the ſubjects of ſo many chapters. In the firſt of which he examines the general argument brought for its truth, as furniſhing the only poſſible method to explicate Noah's flood; all other ways requiring more water than can be found, and more, if found, than can be diſpoſed of. Mr Keill, for anſwer, obſerves, that he has ſelected this argument, becauſe he thinks it an evident demonſtration of the impoſſibility of all natural and mechanical explications whatſoever of the Deluge, even this of the Theoriſt not excepted, as we ſhall ſhew in the ſequel, whence he concludes it to be wrought in a miraculous way, which he thinks is evidently declared in Scripture, particularly in thoſe remarkable words, *Behold I, even I, do bring a flood of waters upon the earth**. The ſecond chapter ſhews that the Theoriſt's method of forming the world from a chaos, is not agreeable to the laws of nature and gravitation. The third chapter proves the poſſibility of mountains in the antediluvian earth, even upon the Theoriſt's principles, though contrary to his poſition; herein explaining the uſe of mountains to ſupply ſprings and rivers, our author borrows Dr Halley's account of the original of ſprings. (6) The fourth chapter examines the effects ariſing from the perpendicular poſition of the earth's axis to the plane of the ecliptic, aſſerted by the Theoriſt, which is proved to be ſo far from being excellent, and fitted for a paradiſiacal world, that it would make the greateſt part of the earth not habitable. Here likewiſe, in demonſtrating the advantages of the preſent oblique poſition of the earth's axis above that of a right one, or even any other, our author is again obliged to Dr Halley (7). The fifth chapter expoſes the abſurdity of the Theoriſt's method in forming the antediluvian rivers without any ſea. The ſixth chapter contains an eaſy and clear demonſtration of the true figure of the earth, viz. that of an oblate ſpheroid, and not an oblong, as the Theoriſt maintained (8). This chapter is twice as long as any of the reſt. The Theoriſt's aſſertion of the earth's oval form was not only the moſt commonly received opinion at that time, wherein he had been particularly defended, (9) but was granted too by his former antagoniſts(10). And the contrary doctrine of an oblate ſpheroidical form was one of the moſt remarkable diſcoveries in Sir Iſaac Newton's Principia. Mr Keill therefore thought proper eſpecially to exert himſelf upon this point, in order to make it clear and intelligible, even to readers of an ordinary attainment in geometrical learning, and the rather becauſe it had been truſted to the publick with the ſole force of a ſtrict and ſevere demonſtration by the diſcoverer. In handling it, our author makes uſe of Mr Huygens's Theorems of the centrifugal force; whereupon being afterwards aſperſed by Dr Burnet, in his *Reflections upon the theory of the earth*, as a plagiary, he returned the following anſwer. 'It is well known, 'ſays he, that Mr Newton was the firſt that made the 'diſcovery, and ſhewed the method of calculating the 'gravity of bodies at different latitudes, whom there-'fore I mentioned as the ſole inventor. Mr Huygens, 'indeed, I did not name, ſeeing he had the notion in-'tirely from Mr Newton, as that learned gentleman 'does freely acknowledge. But after all this, I have 'not ſo much tranſcribed from theſe two learned au-'thors, as I have endeavoured to explain their notions, 'and make them intelligible to men of lower capaci-'ties. Thoſe two excellent and learned men had 'ſomething elſe to do, and matters of greater concern 'to mind, than to publiſh their diſcoveries at large, 'ſo that every reader might underſtand them. I thought 'therefore, that it would not be altogether diſpleaſing 'to the world, if I endeavoured to explain their theo-'rems about the figure of the earth, and the effects 'of gravity joined with a centrifugal force; ſo that 'they might become intelligible to thoſe who under-'ſtand the elements of Geometry, and the common 'principles of Staticks, *and I doubted not but it would 'be more acceptable, becauſe there has not (at leaſt to 'my knowledge) been any diſcourſe publiſhed of this na-'ture in Engliſh.*' (11) In the ſeventh chapter, our author examines the manner of the Theoriſt's accounting for the Deluge by the great heat of the ſun's breaking the outward cruſt (12), and thereby occaſioning its fall into the water beneath; and having ſhewn this pretended heat of the ſun to be inſufficient for that purpoſe, he proves that even granting that to be ſufficient, there could follow no univerſal deluge from the Theoriſt's own principles, there being not ſo much water, according to theſe, in the abyſs, as was ſufficient to cover the face of the whole earth: And as he has here ſhewn, that this Theoriſt has not provided water enough to make ſuch a deluge, ſo with regard to the other Theoriſt, Mr Whiſton, whom he allows to have furniſhed water enough for his purpoſe from the atmoſphere of a comet; yet he proves that gentleman to be very ſhort in providing a ſufficient means of the earth's recovering from ſuch a deluge, ſince of twenty-three oceans neceſſary to be brought upon its ſurface in order to make it, he had only contrived a receſs for one, the other twenty-two being left without any proviſion to carry them off (13). We muſt not diſmiſs this remark without obſerving, that as on one hand Mr Keill, by his method of explaining the figure of the earth from Mr Huygens's theorems, muſt needs have recommended himſelf to the good opinion of Sir Iſaac Newton, who always profeſt the higheſt regard for that author, and his manner of demonſtration (14); ſo on the other hand, the animadverſions in this treatiſe upon ſome glaring miſtakes of Mr Wotton, and particularly of Dr Bentley, muſt undoubtedly have rivetted him in the favour of Dean Aldrich, the diſpute about Phalaris's epiſtles being then at the height (15). The paſſage relating to Mr Wotton is in the Introduction (16), and runs thus. 'I wonder, therefore, why Mr Wot-'ton, in his Reflections on ancient and modern learn-'ing (17), ſhould ſay, that Des Cartes joined to his 'great genius an exquiſite ſkill in Geometry, ſo that he 'wrought upon intelligible principles, in an intelligible 'manner, though he very often failed of one part of 'his end, namely, a right explication of the phæno-'mena of nature; yet by marrying Geometry and Phy-'ſics together, he put the world in hopes of a maſcu-'line offspring. *This*, ſays Mr Keill, *I think, is a clea-'rer demonſtration than any in Des Cartes's principles of 'philoſophy, that Mr Wotton either underſtood no Geome-'try, or* elſe that he never read Des Cartes's principles, 'for from the beginning to the end of them, there is not 'one demonſtration drawn from Geometry, or indeed 'any demonſtration at all, except Mr Wotton will ſay, 'that every thing that is illuſtrated by a figure is a de-'monſtration, and then indeed he may produce enough 'of ſuch demonſtrations in his philoſophical works. 'So far was Des Cartes from marrying Phyſics with 'Geometry, that it was his great fault that he made 'no

gentleman to publiſh a vindication of his new Theory; and *Reflections upon the Theory of the Earth* being printed by Dr Burnet about the ſame time, theſe pieces drew another performance from our author, which he publiſhed with the title of *An Examination of the Reflections on the Theory of the Earth, together with a Defence of the Remarks on Mr Whiſton's new Theory* (e), in 1699, 8vo. The following year Dr Thomas Millington, Sedleian Profeſſor of Natural Philoſophy at Oxford, who had been appointed Phyſician in Ordinary to King William (f), ſubſtituted Mr Keill to read lectures, as his deputy, in the public ſchools (g). Our author diſcharged this office with uncommon reputation; and the term for enjoying the Scotch exhibition at Baliol college expiring, he accepted an invitation given him by Dr Henry Aldrich, Dean of Chriſt-Church, to reſide there (h). In 1701 he publiſhed his celebrated treatiſe intitled, *Introductio ad Veram Phyſicam* [C]. This contained the ſubſtance of ſeveral lectures upon the new Philoſophy, and he continued to read in the ſame way for ſome years after his removal to Chriſt-Church. About this time he was elected Fellow of the Royal Society, and in 1708 he publiſhed, in the Philoſophical Tranſactions (i), a paper *of the laws of attraction, and its phyſical principles* [D]. At the

(e) In anſwer to this Mr Whiſton publiſhed a ſecond defence of his new theory againſt Mr Keill and others; but of this our author took no notice.

no uſe at all of Geometry in Philoſophy. It may, perhaps, be thought that he underſtood Geometry as well as moſt of his contemporaries, and therefore Mr Wotton might have reaſoned that he ought to have ſome Geometry in his Philoſophy; but ſince he aſſerts that he actually did ſo, I think it a convincing argument that he makes himſelf a judge of things he does not underſtand.' The ſtroke at Dr Bentley falls in theſe terms: 'I know Dr Bentley in his laſt lecture for the conſutation of Atheiſm aſſerts, that though the axis [of the earth] had been perpendicular, yet, take the whole year about, we ſhould have had the ſame meaſure of heat we have now. But I am not ſurprized to find an error of this nature aſſerted by one, who as it appears is not very well ſkilled in Aſtronomy; for in the ſame lecture he confidently ſays, that *'tis matter of fact and experience, that the moon always ſhews the ſame face to us, not once wheeling about her own center*; whereas 'tis evident to any one who thinks, that the moon ſhews the ſame face to us for this very reaſon, becauſe ſhe does turn once in the time of her period about her own center.* But it were to be wiſhed that great critics would confine their labours to their lexicons, and not venture to gueſs in thoſe parts of learning which are capable of demonſtration.' (18) This bluntly ſevere diſcipline, ſo much in the Doctor's own manner, was highly reliſhing to his antagoniſts, and the whole body of Mr Wotton's defence (19) was weak enough to be taken, and the particulars led as ſo many captives to grace the triumph.† After all, Mr Keill's pen did not move in this piece without making ſome ſlips, though indeed they are ſuch as affect not his main argument: For inſtance, in meaſuring the degrees of an ellipſis, in aſſigning fifteen Paris feet for the ſpace a body falls through in a ſecond of time, (20) and in giving a number of feet a little leſs than true for the diameter of the earth, which was not ſo well known at that time. Theſe miſtakes in the 8th chapter were taken notice of by Dr Deſaguliers, (21) and our author himſelf has remarked another in that very chapter, the fourth, where his laſh falls ſo heavy upon Dr Bentley; in which he aſſerts Jupiter's axis to be inclined to the plane of his orbit. This aſſertion, he tells us, proceeded from too haſtily truſting to his memory; and experience has ſince ſhewn, that a like uncautious ardour (not to be found in his maſter Sir Iſaac Newton) led him into a belief, that no menſuration of a degree of the meridian in different latitudes could be made exact enough for determining the true figure of the earth. (22) Throughout the whole work, our author vindicates the literal ſenſe of the Moſaic account of the Creation and Deluge, and in his Examination of the Reflections has given ſome no contemptible rules concerning literal and allegorical interpretations of Scripture. To conclude, the whole tenour of the treatiſe now under conſideration, ſhews our author's belief in the inſpiration of the Pentateuch, whence it may be known what credit is to be given to a ſtory told of him, that in a diſpute with a Jew, who perſiſted in denying the divine authority of the New Teſtament, he ſaid, Then I deny the divine authority of your Old Teſtament.

[C] *Introductio ad Veram Phyſicam.*] This is univerſally eſteemed the beſt and moſt uſeful performance of our author. In the preface [illegible] little progreſs that Sir Iſaac Newton's Principia had then made in the learned World, obſerving that though the mechanical philoſophy was then in repute, yet in moſt of the writings on this ſubject ſcarce any thing of it was to be found beſides the name; and that inſtead of it, the philoſophers had introduced the figures, pores, and interſtices of corpuſcles which they never ſaw, and talked of the inteſtine motion of the parts, of the ſtruggles and conflicts between the acid and alkali, with a variety of ſuch other miraculous effects of the *Materia Subtilis*; all which were abſurdities of the Carteſian philoſophy, which ſtill held a place in the eſteem of the generality, notwithſtanding the invincible foundation that had been laid for the mechanic philoſophy, and the noble diſcoveries made therein by Mr Newton (23). In the firſt lecture he treats of the method of philoſophizing, which he intends to take in the reſt. This he divides into four branches, viz. (1.) The Pythagorean and Platonic, which explain the nature of things by numbers and geometrical figures. (2.) The Ariſtotelian, which does the ſame thing by matter and forms, privations, elementary virtues, occult qualities, ſympathies, and antipathies, &c. (3.) Experimental; and (4.) Mechanical, proceeding by the laws and rules of Mechaniſm, as matter and motion, the various figures and contextures of the parts, ſubtile particles, and the like. From each of theſe our author takes what beſt ſuits his purpoſe, and to avoid error, preſcribes to himſelf theſe three rules: firſt, to lay down requiſite definitions; then to conſider the qualities of things only as thus defined, abſtracted from all others; and thirdly, beginning with the moſt ſimple caſes, thence to proceed to the more compounded. Upon this plan, after he has treated of the ſolidity and extenſion of body, the diviſibility of magnitude, (24) the ſubtility of matter, and thoſe minute particles into which it may be actually divided, of time, and of place, he proceeds to conſider motion (25) in general. The firſt edition of this book contained only fourteen lectures, but to the ſecond edition in 1705 he added two more upon the motions ariſing from given forces. About twenty years ago, when the Newtonian philoſophy began to be cultivated in France, this piece was in great eſteem there, being looked on as the beſt introduction to Sir Iſaac's Principia, and a new edition in Engliſh was printed at London in 1736, at the inſtance of Monſieur Maupertuis (26), who was then in England; and after our author's much admired demonſtrations of Mr Huygens's theorems of centrifugal force, printed at the end of it, ſubjoined a new hypotheſis of his own concerning the ring of the planet Saturn.

[D] *The laws of attraction, and its phyſical Principles.*] This piece is built upon ſome propoſitions in Sir Iſaac Newton's Principia, and our author gives the following account of the origin of it. 'After frequently revolving, ſays he, in my mind the divine diſcoveries of this moſt ſagacious man, I fell at laſt upon this thought, that a certain principle might be applied, not unlike to thoſe of Newton, to the explication of the terreſtrial phænomena; and after experiments often repeated, I perceived there was a certain attractive force in terreſtrial matter, from whence the reaſon of many terreſtrial phænomena is to be derived: And this thought of mine about five years ago I opened to Mr Newton, and I underſtood from him, that he had long ago obſerved the ſame thing; and I found that he had propoſed ſome queries relating to this attractive force at the end of his Optics, publiſhed in Latin about two years ago. Now as it can't be expected, that this great man ſhould

(23) He gives the following liſt of Sir Iſaac's predeceſſors in this philoſophy, viz. Archimedes, Roger Bacon, Cardan, Galilæo, Boyle, and Wallis, with others.

(24) Here, from the limited nature of body, he proves, that geometrical ſuperficies, as lines and points, are not meer ideas, but have an actual exiſtence in nature, ſince every natural body is actually bounded by ſuch a ſuperficies, the actual limits of which are lines, and the limits of thoſe lines actually geometrical points.

(25) Our author maintains both the reality of ſpace and of abſolute motion.

(26) An eminent Mathematician, and one of thoſe who were ſent by the King of France to meaſure a degree of the meridian near the north-pole.

the ſame time being offended at a paſſage in the *Acta Eruditorum Lipſiæ*, wherein Sir Iſaac Newton's right to the firſt invention of the method of Fluxions was called in queſtion, he communicated to the Royal Society (*k*) another paper, in which he aſſerted the juſtice of that claim [*E*]. In 1709 he was appointed Treaſurer to the Palatines, and in that ſtation attended them in their paſſage to New-England. Soon after his return in 1710, he was choſen Savilian Profeſſor of Aſtronomy at Oxford. In 1711, being attacked by Mr Leibnitz, he entered the liſts againſt that illuſtrious Mathematician in the diſpute about the invention of Fluxions, which he maintained with great ſpirit and equal penetration for ſeveral years [*F*], with the approbation of the inventor (*l*). Nor did he content himſelf

(*k*) Publiſhed in Phil. Tranſ. No. 317.

(*l*) See a letter of Sir Iſaac, in Recueil de divers Pieces, &c. Meſſieurs Leibnitz, Clarke, Newton, & autres auteurs celebres, publie par Des Maizeaux, Tom. II. p. 121. Amſterd. 1720.

'proceed ſtill to improve theſe ſtudies, both by reaſon 'of his age and other buſineſs, I thought it not amiſs 'if I ſhould purſue his ſteps herein, though at a great 'diſtance from him.'

[*E*] *A paper, wherein he aſſerted the juſtice of that claim.*] The title of it is, De Legibus virium Centripetarum. In this piece Mr Keill not only aſſerted that Sir Iſaac firſt invented the method of fluxions, as appeared by his letters publiſhed by Dr Wallis, but that Mr Leibnitz had taken this method from him, only changing the name and notation, *Hæc omniaque ſequuntur, inquit, ex celebratiſſima nunc dierum fluxionem Arithmetica, quam ſine dubio primus invenit Dominus Newtonus, ut cuilibet ejus epiſtolas a Walliſio editas facile conſtabit. Eadem tamen Arithmetica poſtea mutatis nomine & notationis modo a D. Leibnitio in actis Eruditorum edita eſt.*

[*F*] *Being attacked by Mr. Leibnitz, &c.*] That gentleman wrote a letter to Dr Hans Sloane, then Secretary to the Royal Society, dated March 4, 1711, where he required in effect that Mr Keill ſhould make him ſatisfaction for the injury which he ſaid had been done to him. 'He proteſted that he was ſo far from aſſuming to 'himſelf the method of Sir Iſaac Newton, after having only changed the name and notation, that he 'was abſolutely ignorant of the name of the *method of* 'fluxions, and of the notation uſed by Sir Iſaac, 'till 'they appeared in the mathematical works of Dr 'Wallis.' He deſired, therefore, the Royal Society to oblige Mr Keill to diſown publickly the bad ſenſe which his words might bear. This letter was communicated to the Royal Society, and Mr Keill to juſtify himſelf to Sir Iſaac Newton, ſhewed him the extract of his book of the *Quadrature of curves* in the *Acta Eruditorum*. (28) He deſired the Society at the ſame time, not to condemn him without hearing him, and to give him leave to explain and defend what he had advanced. This was the more readily granted to him, as Sir Iſaac, and ſeveral other members of the Society, found the ſame ſenſe as he had done in the compariſon (29) of the *Acta Eruditorum*. Upon this, Mr Keill wrote to Dr Sloane a letter, (30) in which he obſerved, 'That when he aſſerted that Mr Leibnitz had publiſh-'ed as his own Sir Iſaac Newton's method, after hav-'ing changed the name and notation, he did not mean, 'that the name which Sir Iſaac had given to his me-'thod, or the notation which he made uſe of, were 'then known to Mr Leibnitz; but only that Sir Iſaac 'was the firſt inventor of the method of fluxions, or 'differential method; and that the letters which he 'had written to Mr Oldenburgh, and which had been 'ſent to Mr Leibnitz, furniſhed light enough to a man 'of Mr Leibnitz's penetration, to diſcover the prin-'ciples of that method. But that not having found 'the name which Sir Iſaac Newton gave his method, 'and the notation uſed by him, it was natural for him 'to invent a new name, and a new manner of nota-'tion. Mr Keill added, that the authors of the *Acta* 'Eruditorum had obliged him to publiſh what he had 'aſſerted, by their having affirmed in their extract of the 'book of *Quadratures*, that Mr Leibnitz had invented 'the differential method, in the room of which, Sir 'Iſaac Newton had ſubſtituted his fluxions. That he ac-'knowledged with pleaſure the great obligations which 'the learned world had to Mr Leibnitz, and his pro-'found ſkill in the mathematics; but that as he had 'ſo great a fund of his own, there was no occaſion to 'adorn him with the ſpoils of others. And that hav-'ing obſerved, that Mr Leibnitz's countrymen gave 'him commendations which did not belong to him, he 'thought that it would not be an inſtance of miſtaken 'zeal for the Engliſh nation, if he endeavoured to 'maintain Sir Iſaac Newton's right.' He then entered upon the ſubject, and ſhews firſt, from a letter of Sir Iſaac's to Mr Collins, dated December 10, 1672, that he had this method before 1670, when Dr Barrow's lectures were publiſhed, and then from his *Analyſis per Equationes infinitas*, which was ſent to Mr Collins in 1699, that he uſed it before that time; and laſtly, from his two letters (and particularly the latter) to Mr Leibnitz in 1676, that he had invented it before the plague which happened in 1665 and 1666. Having thus clearly proved that Sir Iſaac was the firſt and true inventor of the method of fluxions, or the differential method, in the next place he proceeds to evince in what particular manner the two letters of Sir Iſaac to Mr Leibnitz in 1676, which he received from Mr Oldenburgh, contained hints of that method clear enough to enable him to diſcover it. He concludes with declaring, 'that among the great ſervices which Mr Leibnitz had 'done in regard to mathematicks, his having firſt pub-'liſhed this method was one, and that all lovers of 'that ſcience were obliged to him, becauſe he had not 'been willing that ſo uſeful an invention ſhould be 'longer concealed. And he did not doubt but that 'what he had written would juſtify his zeal for his 'country, and furniſh a convincing proof, that he had 'not aſſerted raſhly, or out of a ſpirit of calumny, in 'the Philoſophical Tranſactions, what he had now de-'monſtrated with ſo much clearneſs and evidence.' This letter having been read to the Royal Society May 24, 1711, they ordered a copy of it to be ſent to Mr Leibnitz, who found new matter of complaint in it; and in a ſecond letter which he wrote to Dr Sloane, dated at Hanover December 29, 1711, he repreſented that Mr Keill had attacked his candor and ſincerity more openly than before; adding, that it was not ſuitable for a man of his age and experience to engage in a conteſt with an *Upſtart, who was unacquainted with what had paſſed ſo long before*, and acted without any authority from Sir Iſaac Newton, who was the party concerned. That it was in vain for Mr Keill to pretend to juſtify his proceeding by the example of the *Acta Eruditorum*, ſince in that Journal no injuſtice had been done to any man, but every one had received what was his due. He concluded with deſiring that the Royal Society would enjoin Mr Keill ſilence. Our author ſeeing himſelf treated as an *Upſtart*, who was not informed of what had paſſed formerly, appealed to the Regiſters of the Royal Society, and affirmed that they would find there convincing proofs of what he had advanced. Upon this a ſpecial committee was appointed for the purpoſe, who made the following report. 'We have conſulted the letters, and letter-books, in 'the cuſtody of the Royal Society, and thoſe found 'among the papers of Mr John Collins, dated between 'the years 1699 and 1677 inclusive; and ſhewed them 'to ſuch as knew and avouched the hands of Mr Bar-'row, Mr Collins, Mr Oldenburgh, and Mr Leibnitz, 'and compared thoſe of Mr Gregory with one another, 'and with copies of ſome of them taken in the hand 'of Mr Collins; and have extracted from them what 'relates to the matter referred to us; all which ex-'tracts herewith delivered to you, we believe to be 'genuine and authentic, and by theſe letters and pa-'pers we find,

'I. That Mr Leibnitz was in London in the begin-'ning of the year 1673, and went thence, in or about 'March, to Paris, where he kept a conſtant correſpon-'dence with Mr Collins, by means of Mr Oldenburgh, 'till 'about September 1676, and then returned by Lon-'don and Amſterdam to Hanover. And that Mr Col-'lins was very free in communicating to ſible mathe-'maticians what he received from Mr Newton and Mr 'Gregory.

'II. That when Mr Leibnitz was the firſt time in 'London he pretended for the invention of another 'differential method, properly ſo called; and notwith-'ſtanding that he was ſhewn by Dr Pell that it was 'Mouton's method (31), perſiſted in maintaining it to be 'his

(28) In the Journal of January 1705, p. 30, & ſeqq.

(29) They put him in the ſame relation to Leibnitz, as Honoratos Faber ſtood in with regard to Cavallerius.

(30) Commercium Epiſtolicum D. Johan. Collins, &c. No. LXXXI.

(31) See the book intitled, Obſervationes Diametrorum Solis & Lunæ apparentium, &c. Auctore Gabriele Mouton, Lugdunenſi Sacerdote in eccleſia col'egiata S. Paulli Lyons, 1670, in 4to.

himſelf with laying open to the root the ingratitude of his antagoniſt, as well as injuſtice of his pretenſions, but much indirect art and induſtry under the conduct of the greateſt ſkill and capacity being employed to gain credit to thoſe pretenſions, by diſparaging the true inventor's mathematical abilities, our author extended the ſame ſpirit to the expoſing of Mr John Bernoulli, whom he proved notoriouſly guilty of a like baſe attempt upon Sir Iſaac Newton's character, in another point of that ſcience [G]. About this time ſeveral

written in defence of Sir Iſaac's right, which had been inſerted in the *firſt tome of the ſaid Journal*. The author of theſe remarks, a friend of Mr Leibnitz, charged the London letter-writer with ignorance in the diſpute, and among other things aſſerted, that when Sir Iſaac publiſhed his Principia, he did not underſtand the true differential method. To all theſe pieces Dr Keill publiſhed an anſwer at London in French, entitled, *Reponſe de M. Keill, M. D. Profeſſeur d'Aſtronomie Savilien, aux Auteurs des Remarques ſur le different entre* M. de Leibnitz & M. Newton, *publiées dans le Journal Literaire de la Haye de Novembre & Decembre* 1713. A few copies only were printed of this piece, but it was inſerted in *Journal Literaire, Tom. IV.* The diſpute being ſtill carried on, particularly in the Acta Eruditorum Leipſiæ, our author publiſhed the following piece in 1720 at London, in 4to. *Johannis Keill, M. D. & R. S. S. in Academia Oxonienſi Aſtronomiæ Profeſſoris Epiſtola ad virum clariſſimum Johannem Bernoulli in Academia Baſilienſi Mathematum Profeſſorem; in qua Dominum Newtonum & ſeipſum defendit contra criminationes a Cruſio quodam objectas, & in Actis Lipſienſibus publicatas: Ubi etiam quæritur de nova calumniandi methodo ab authoribus Actorum Lipſienſium inventa & uſurpata, qua in indicibus ſuis probra & convitia in alios fundunt.* ‡

‡ In the title-page, our author put the arms of Scotland, viz. a thiſtle, with this motto, *Nemo me impune laceſſit.* See an account of the contents in Sir Is. Newton's article.

[G] *Whom he proved guilty of a like baſe attempt upon Sir Iſaac Newton's character in another ſubject.*] This is printed in the Phil. Tranſ. Numb 340. with this title, *The inverſe problem of centripetal forces, with remarks on Mr John Bernoulli, by* John Keill. In which our author obſerves, that to find a curve deſcribed by a body which is urged by a given law of centripetal force, when projected with a given velocity from a given place, according to a given right line, is a problem of the greateſt dignity. Sir Iſaac Newton has given us long ſince (ſays he) a compleat ſolution of it in his Principia, granting the quadrature of curvelinear figures, ſince which the celebrated John Bernoulli has again undertaken the ſame problem. I have compared his ſolution with that of Sir Iſaac Newton's, and made the following remarks upon them. 1. Mr Bernoulli premiſes the ſame propoſition which Mr Newton makes uſe of for demonſtrating his problem, which is the 40th in the Principia, and is no leſs elegant than eaſy to be underſtood. Mr Bernoulli ſays, the demonſtration of this propoſition is delivered by Mr Newton in too perplexed a manner; and therefore he ſubſtitutes his own in it's room, which he calls a more ſimple one. But Mr Newton's is more eaſy and leſs perplex. ——He afterwards ſhews, that in reality Mr Bernoulli's formula for the ſolution of this problem does not differ from that of Mr Newton, any otherwiſe than as any thing written in Latin characters differs from the ſame thing, if written in Greek characters. 3. Mr Bernoulli complains that Mr Newton ſuppoſes, without any demonſtration, that curves deſcribed with a force reciprocally as the ſquare of the diſtance will be conic ſections. But Mr Bernoulli muſt know, that Mr Newton was acquainted with the demonſtration. For he knew very well that Mr Newton was the firſt and only one, that had treated of this doctrine about centripetal forces in a geometrical manner, and had brought it to ſuch perfection. Mr Bernoulli alſo knows, that beſides giving the general ſolution of the inverſe problem, Mr Newton had ſhewn how curves might be conſtructed, which are deſcribed by a centripetal force decreaſing in a triplicate proportion of the diſtance, and therefore he could not be ignorant of that caſe. Nor indeed can I ſee for what reaſon he objects to Mr Newton, that he had omitted the demonſtration of this caſe, ſince he himſelf has even premiſed theorems, whoſe demonſtration he has no where given; and why might not Mr Newton do the ſame, when in haſte to proceed to other matters. But now in this new edition of the Principia, he has a demonſtration of this very thing; which tho' very ſhort, is yet much eaſier and clearer than that of Mr Bernoulli.

[H] *Singular*

' his own invention, by reaſon that he had found it
' by himſelf, without knowing what Mouton had done
' before, and had much improved it. And we find
' no mention of his having any other differential me-
' thod than Mouton's, before his letter of the 21ſt of
' June, 1677, which was a year after a copy of Mr
' Newton's letter of the 10th of December 1672 had
' been ſent to Paris to be communicated to him, and
' about four years after Mr Collins began to commu-
' nicate that letter to his correſpondents; in which
' letter the method of Fluxions was ſufficiently deſcribed
' to any intelligent perſon.
' III. That by Mr Newton's letter of the 13th of
' June, 1676, it appears that he had the method of
' Fluxions above five years before the writing of that
' letter. And [illegible] *per Equationes numero*
' *terminorum infinitas*, communicated by Dr Barrow
' to Mr Collins in 1669, we find that he had invented
' the method before that time.
' IV. That the differential method is one and the
' ſame with the method of Fluxions, excepting the
' name and mode of notation; Mr Leibnitz calling
' thoſe quantities differences which Mr Newton calls
' moments, or fluxions, and marking them with the
' letter *d*, a mark not uſed by Mr Newton. And there-
' fore we take the proper queſtion to be not, who in-
' vented this or that method, but who was the firſt
' inventor of the method. And we believe that thoſe
' who have reputed Mr Leibnitz the firſt inventor,
' knew little or nothing of his correſpondence with Mr
' Collins and Mr Oldenburgh long before; nor of Mr
' Newton's having that method above 15 years before
' Mr Leibnitz began to publiſh it in the *Acta Erudito-*
' *rum of Leipſic*.'
' For which reaſons, we reckon Mr Newton the firſt
' inventor, and are of opinion, that Mr Keill, in aſ-
' ſerting the ſame, has been no ways injurious to Mr
' Leibnitz.'

After the publication of the *Commercium Epiſtolicum* in 1712, an extract of it being tranſlated into French, and printed at London *, was inſerted afterwards in the 7th tome of the Journal Literaire: Upon this occaſion Mr Leibnitz, in the poſtſcript of a letter to Count Bothmar, writes, that being at Vienna when the news of the publication of the *Com. Epiſt.* reached his ears, he did not think proper to ſend for it by the poſt, in an aſſurance that it muſt contain malicious falſities. That he wrote, therefore, to Mr Bernoulli, (a gentleman, he ſays, who perhaps in all Europe has ſucceeded beſt in the knowledge and uſe of this calculus, and who was abſolutely neuter) to give him his ſentiments. That Mr Bernoulli wrote him a letter, dated at Baſil June 7, 1713, wherein, he ſaid, it appeared probable, that Sir Iſaac Newton had formed his calculus after he had ſeen that of Mr Leibnitz, having frequent occaſion in his work to make uſe of this calculus, though there appears no trace of it; and that he had even committed ſome errors which ſeemed incompatible with a true knowledge of that calculus. ' One of my friends, continues Mr Leibnitz, publiſh-
' ed this letter, with reflections; and as I had enough
' of other affairs to employ me, I was unwilling to en-
' ter farther into this, eſpecially ſince Sir Iſaac New-
' ton had not ſaid any thing himſelf. I thought it
' ſufficient to have oppoſed to the clamours of his ad-
' herents, the judgment of a perſon of Mr Bernoulli's
' learning and impartiality †: Theſe two Latin pieces
were publiſhed in Germany in a looſe ſheet, dated
[illegible] 29, 1713, where in the letter aſcribed above
to Mr Leibnitz to Bernoulli, this gentleman was cited in
the third perſon with a compliment [*quemadmodum*
ab eminente quodam mathematico dudum notatum eſt,]
which gave room to ſuſpect it was not written by Ber-
noulli, and that ſuſpicion was heightened by the ſame
letter's being printed afterwards in the [illegible] Mr Leib-
nitz, without the compliment, in the Journal Litte-
raire of December 28, 1715. Thus caſtrated, theſe
two pieces were inſerted in the 2d *tome of the Journal*
Literaire, with remarks upon a letter from London,

* With this title, *Extrait de Livre intitulé*, Commercium Epiſtolicum Collinii & aliorum, de Analyſi promotu, *publié par ordre de la Societe Royale, a l'occaſion de la diſpute elevée entre* M. Leibnitz *&* D. Keill *ſur le droit d'Invention, a la methode des Fluxions, par quelq'uns appellée Methode differentiale*, 8vo. p. 38.

† Des Maizeaux's Recueil, ubi ſupra, tom. ii. p. 44, 45.

ſeveral objections were alſo warmly urged againſt ſome parts of that great inventor's philoſophy, in ſupport of Des Cartes's notions of a Plenum. Hereupon Mr Keill drew up a paper, which he publiſhed in the Philoſophical Tranſactions (*m*), containing ſome *Theorems on the rarity of matter, and the tenuity of its compoſition*; wherein he ſhews, that a quantity of air, not bigger than the ſmalleſt grain of ſand, may be diffuſed through the whole orb of Saturn, in ſuch a manner, as to leave therein no vacuity whoſe diameter ſhall exceed a given right line how ſmall ſoever,; hence it is manifeſt, that air may be ſo rarified as to be void of all ſenſible reſiſtance. He obſerves likewiſe, that the quantity of matter in glaſs, for inſtance, is to its bulk, in a leſs proportion than a grain of ſand is to the whole terreſtrial globe; and that gold is not eight times denſer than glaſs; whence it appears very poſſible for effluvia to pervade the denſeſt gold; and hence it is that the rays of light paſſing through a ſmall hole do not mutually hinder each other, but continue their motion in a ſtreight line; a phænomenon, which can hardly be explained by the motion of impulſe in the ſuppoſition of a Plenum. Whilſt our author was engaged in this intricate controverſy, wherein the honour of his country was ſo much concerned, her Majeſty Queen Anne was pleaſed to appoint him her Decypherer, a poſt of great truſt, and which requires ſingular ſagacity [*H*]. The Univerſity likewiſe conferred upon him the degree of Doctor of Phyſick, at the Public Act in 1713 (*n*). Two years after, he publiſhed an edition of Commandinus's Euclid [*I*], to which he added two tracts of his own; the firſt containing the elements of plain and ſpherical Trigonometry, and the other ſhewing the nature and arithmetic of Logarithms. In 1717 he intermarried with a perſon who recommended herſelf to his choice purely by her perſonal accompliſhments [*K*]. And as our author, when weary with his ſtudies, had uſually ſought his refreſhment in the ſociety of the fair ſex, Mr Anthony Alſop, who had been a member of the ſame college, and an intimate acquaintance, addreſſed him on this occaſion in a very ſingular Epithalamium, which we ſhall give in the note [*L*]. The following year the Doctor publiſhed

(*m*) No. 339.

(*n*) The two degrees of B. and M. D. were accumulated July 9 this year. A Catalogue of Degrees, ubi ſupra.

[*H*] *Singular ſagacity.*] We have ſuch an inſtance of the Doctor's talent this way, as ſufficiently juſtifies her appointment. The ingenious author quoted in the margin *, who after Dr Wallis, hath wrote more rationally than any body I know upon the art of decyphering, among other precognita neceſſary for thoſe analytical operations obſerves, that it is requiſite the decypherer ſhould know or have probable reaſon to believe, in what language the letter (or paper) given him to decypher is written; and that he alſo be at leaſt moderately ſkilled in that language. 'I can no 'otherwiſe, continues he, account for Dr Wallis's ſi'lence on this head, than by ſuppoſing that he took the 'thing for granted. Indeed it is ſo obvious, that I 'ſhould hardly have mentioned it myſelf, had not a 'perſon of unqueſtionable credit aſſured me from the 'mouth of Dr John Keill, that he once decyphered a 'paper written in Swediſh, without knowing a word 'of the Swediſh tongue.' The account, as here given, contains ſuch an aſtoniſhing unparallelled inſtance of ſagacity in the decyphering art, that the relator could not let it paſs without the following remark: 'This, 'ſays he, as it is reported in groſs, and commonly un'derſtood, is, in my opinion, impoſſible to be done. But 'as I would not hereby be thought to charge Dr Keil 'with an untruth, I will ſtate a caſe, which I think 'to be poſſible, and conſiſtent with his affirmation in 'a favourable ſenſe. If then the cypher conſiſted of a 'ſingle alphabet of letters, without nulls †, and the 'words were ſeparated: If he were told before-hand, 'that the writing was in Swediſh; and if he had with 'him an interpreter of that nation with whom he might 'conſult upon all emergencies, I ſee no reaſon to diſ'pute his performance. Yet with all theſe allowances 'I believe it muſt have been an aukward piece of 'work, and have taken up ſome time; but at length 'he might be able to compaſs it, notwithſtanding his 'being unacquainted with the language, ſince that de'fect would in great meaſure be ſupplied by the aſſi'ſtance of his interpreter.'

* An Eſſay on the Art of Decyphering, by J. Davies, M. A. Rector of Caſtle-Aſhby in Northamptonſhire. Lond. 1737, 4to. p. 40, 41.

† Theſe are marks without any meaning, inſerted purely to render the cypher more intricate.

[*I*] *He publiſhed Commandinus's Euclid.*] The title of this book runs thus: Euclidis Elementorum Libri priores ſex, item undecimus & duodecimus; ex verſione Latina Frederici Commandini, in uſum juventutis Academicæ. Our author prefixed a preface, in which he gives us his motive for publiſhing this piece; which was, that the youth in the univerſity might be taught Euclid in his own method, and thereby be trained up to have a juſt taſte of the elegance and perſpicuity of the ancient manner of demonſtrating. This was the more neceſſary, as a cuſtom had prevailed for ſome time with a few at Oxford (and almoſt univerſally at Cambridge) of teaching the Elements of Geometry from *Pardie* or *Tacquet*; the ill conſequences of which Mr Keill here labours to ſhew. At the end of this piece he added two ſmall tracts, viz. *Trigonometriæ planæ et ſphericæ Elementa.* Item, *Tractatus de Natura & Arithmetica Logarithmorum.* Theſe were more eſteemed by himſelf than any of his performances; and it muſt be owned they are drawn up with a peculiar elegance and perſpicuity. There was another edition of this book printed at Oxford in 1723, with corrections and ſome ſlight additions.

[*K*] *Who recommended herſelf to his choice purely by her perſonal accompliſhments.*] His brother Dr James Keill, upon the firſt hearing of this match was greatly diſguſted; but ſoon after this change in her condition, his ſpouſe being carried by her huſband to make a viſit to his brother, who then lay ill at Northampton, ſhe behaved to him on this occaſion with ſo much prudence and aſſiduity to pleaſe, as in a few months ſoftened him into a perfect reconciliation; and at his death (which happened in a little time) he left the new married couple in poſſeſſion of a conſiderable fortune.

[*L*] *A ſingular Epithalamium,* &c.] It is written in Sapphic verſe, as follows:

'Keile ni mendax mihi falſa mittit
'Freindus, de mœcho fieri maritus
'Cogeris, parteſque agit uſtatas
'Pellicis uxor.

'Quid ni ego lætor tibi grátulari
'Conjugi conjux? Ego qui reliqui
'Connubii cauſa patriamque domumque uxorius exul.

'Dum ſales ſpargunt lepidi ſodales
'Te ſuper vel me, cuperem intereſſe
'Magna pars riſus: ſed ab his acerba
'Lege remotus,

'Perfruor dulci alloquio pudicæ
'Oſculis ſponſæ placidoque vultu,
'Nec videt ſponſum magis amantem amatumve
'Ætherius ſol.

'Mille mi præſtet Paphiâ in paleſtrâ
'[illegible] quod tu ingrediare caſtra,
'Quæ ſert cauſa ante Helenam duelli,
'Unica cauſa eſt.

'Eſtne

liſhed at Oxford in 8vo. his *Introductio ad Veram Aſtronomiam* [M]. This treatiſe was afterwards,

‘ Sed pari nullum, niſi te, procorum
‘ Dote beabo.

[M] *Introductio ad Veram Aſtronomiam.*] This was tranſlated into Engliſh by Dr Keill himſelf, and publiſhed with many emendations at London, 1721, 8vo. under the following title, *An Introduction to the true Aſtronomy: or, Aſtronomical Lectures read in the Aſtronomical Schools of the Univerſity of Oxford.* The hiſtory of Phyſical Aſtronomy having been given by Dr *David Gregory*, our author's predeceſſor in the Savilian Chair, Dr Keill in his preface gives us the hiſtory of the other branch called Technical Aſtronomy; and obſerves, that ‘as the art of ſailing does in a great meaſure depend on the knowledge of the ſtars, ſo the impetuous and ambitious deſires of kings and princes to diſcover unknown and foreign countries inclined them to cultivate Aſtronomy. The firſt of theſe ſailors was Neptune, who upon the account of his ſkill in this art was celebrated as God of the Ocean. His ſon, Belus, being an Aſtronomer, by his knowledge therein carried the inhabitants of Lybia into Aſia, where he inſtituted colleges of Aſtronomers (32). Before his time there was *Atlas* King of Mauritania, a great Aſtronomer, who firſt ſhewed the doctrine of the ſphere; and therefore Virgil introduces Jopas ſinging what Atlas had taught mankind:

‘ ——— doctus cui maximus Atlas,
‘ Hic canit errantem lunam ſolisque labores (33).

So *Uranus* king of the country ſituated on the ſhore of the Atlantic ocean, for his ſkill in Aſtronomy, is ſaid to have been deſcended from the [illegible] the Perſian philoſopher is celebrated by all antiquity as a ſkilful Aſtronomer; and the dignity of this ſcience was eſteemed ſo great, as to be called the Royal Science,

(32) See Diod. Siculus, Lib. i.

(33) Æneid. lib. i.

because kings were moſt delighted with it above all others; for the kings of Africa and Syria firſt invented and improved it, and that long before it was known in Greece. Thus Plato in his dialogue called *Epinomis*. *The firſt*, ſays he, *who obſerved theſe things was a Barbarian, who lived in an ancient country, where, upon the account of the clearneſs of the ſummer ſeaſon, they could firſt diſcover them, ſuch as Egypt and Syria, where the ſtars are clearly ſeen, there being neither rain nor clouds to hinder their proſpect. And becauſe we are more remote from this ſummer clearneſs of weather than the Barbarians, we came later to the knowledge of theſe ſtars.* So Lucian tells us, ‘ that the Ethiopians ‘ firſt took notice of the heavenly motions; and by ‘ finding the cauſes of the lunations, they knew that ‘ the Moon had no proper light of it's own, but bor‘ rowed it from the Sun.’ After this our author proceeds to the ſtory of Porphyry concerning the obſervations of Caliſthenes for 1903 years (34), which, ſays he, bring us to 115 years after the Flood, and 15 years after the building of Babel. Pliny likewiſe in his *Natural Hiſtory* relates from *Epigenes*, ‘ That the Babylonians ‘ had obſervations of 720 years all engraven upon ‘ bricks. And Achilles Tatius in the beginning of his ‘ Introduction to *Aratus's Phænomena* informs us, that ‘ the Egyptians were the firſt who meaſured the hea‘ vens and the earth; and their ſcience in this matter ‘ was engraven on columns, and by that means deli‘ vered to poſterity; yet the Chaldeans take the ho‘ nour of the invention to themſelves, and aſcribe it ‘ to Belus.’ In the next place he brings us into Greece, whither all the aſtronomical learning came from Egypt. For Diogenes Laërtius owns, that Thales, Pythagoras, Eudoxus, and many others went to that country to be inſtructed in the ſidereal ſcience. Theſe men were not only the firſt but the greateſt philoſophers whom Greece produced; and from the ſame writer we know, that they who ſtaid longeſt in that country, were moſt famous for their ſkill in Geometry and Aſtronomy after they returned home. So Pythagoras, who lived in ſociety with the Egyptian prieſts ſeven years, and was initiated into their religion, carried home from thence beſides ſeveral geometrical inventions, the true extent of the univerſe; and was the firſt who taught in Greece, that the earth and planets turned round the ſun, which was immoveable in the center; and that the diurnal motion of the ſun and fixed ſtars was not real, but apparent, ariſing from the motion of the earth round its axis. At that time no one was eſteemed a philoſopher, but who was well acquainted with the mathematical ſciences. But theſe ſciences were ſoon neglected by the philoſophers who came after them; and who, much degenerating from their predeceſſors, had ſo little care and concern for the mathematical ſciences, eſpecially Aſtronomy, that almoſt all the obſervations ſent from Babylon by Caliſthenes were loſt: ſo that Ptolmey was able to recover but a very few of them. For, ſays he, theſe pretenders to philoſophy ſpent their time about trifles of no value; and in endeavouring to find out ſophiſms, whereby they might impoſe upon their own, and the common ſenſe of mankind; ſuch were Zeno's arguments againſt motion, and moſt of the philoſopher's diſputations againſt the diviſibility of matter *in infinitum*; whereas a little knowledge of Geometry would eaſily have ſolved all the difficulties they could raiſe. But tho' Aſtronomy was thus baniſhed out of the ſchools of the common philoſophers, yet it was received and cultivated by ſome, tho' but a few, eſpecially by the Pythagorean ſect, which flouriſhed in Italy many years; among whom was Philolaus and Ariſtarchus Samius. The Ptolemys, kings of Egypt were alſo great patrons of learning; they founded an academy for Aſtronomy at Alexandria, which furniſhed ſeveral great men, the chief of whom was Hypparchus, who firſt made a kind of catalogue of *the ſtars* (35), *and left the heavens for an heritage to all that come after*. This man foretold the eclipſes of both ſun and moon for 600 years; and upon his obſervations is founded that valuable work of Ptolemy, which he calls Μεγάλη Σύνταξις, or his *Great Conſtruction*; for from them he gathered the præceſſion of the equinoxes, and the theory of the planets. When Egypt was conquered by the Saracens, and Alexandria reduced under their juriſdiction, the conquerors received Aſtronomy (36), with the reſt of the liberal arts, under

(34) This ſtory of Caliſthenes is rendered at leaſt very doubtful by Sir Iſaac Newton in his Chronology.

(35) Pliny, in Nat. Hiſt. where he ſays, Hypparchus undertook to number the ſtars, a buſineſs which would have been a work for a God to perform.

(36) Upon their conqueſt of that city, they deſtroyed the aſtronomical as well as other books of learning, and neither cultivated that or any other ſcience, nor tranſlated any of the Grecian books therein, 'till above 100 years after. *Freind's Hiſtory of Phyſic*, Vol. II. non longe ab initio.

terwards, at the requeſt of the Ducheſs of Chandois (o), tranſlated by him into Engliſh [N], which, with ſeveral emendations, he likewiſe publiſhed in 1721 [O], under the following title, *An Introduction to the true Aſtronomy, or Aſtronomical Lectures read in the Aſtronomical ſchools of the Univerſity of Oxford.* This was his laſt gift to the learned world, and he did not long ſurvive the donation. Though his conſtitution was of the robuſt kind, yet it was ſomewhat heavy, and from the time of changing his condition, but eſpecially after the increaſe of his fortune, he indulged in a fuller diet, and uſed leſs exerciſe than he had done before. He was ſeized this ſummer with a violent fever, which put a period to his life on the firſt of September (p), being not then aged quite fifty years. He was buried at Oxford (q), where he died. He left a ſon, who is ſtill living, a linen-draper of good repute near the Manſion-houſe in London. He was ſucceeded in the Savilian Profeſſorſhip of Aſtronomy by the preſent Profeſſor Dr James Bradley, who was choſen in his room on the 23d of October the ſame year (r).

(o) See the dedication to that Ducheſs.

(p) Communicated by his ſon.

(q) In St Mary's church, where there is a monument with an inſcription erected to his memory.

(r) Hiſtorical Regiſter for the year 1721, where Dr Keill's death is ſaid to have happened on the 29th of Auguſt.

der their protection, and took care that moſt part of the books concerning the liberal arts and ſciences ſhould be tranſlated from the Greek into their own Arabian language. The Saracens paſſing from Africa into Spain, and having a commerce with the weſtern European nations, imparted to them the ſcience of Aſtronomy, which before was almoſt loſt in Europe. So that about the year 1230, at the command of the *Emperor Frederic*, Ptolemy's *Almageſt*, or his *great Syntaxis*, was tranſlated from the Arabic into Latin. After that time Aſtronomy received many improvements from the patronage of the greateſt princes, and the labours of the moſt celebrated philoſophers; among whom in the firſt place is to be mentioned *Alphonſus King of Caſtile*; who is never to be forgotten on account of the *aſtronomical tables* called after his name. *Nicolas Copernicus* was not only a diligent obſerver, but alſo a reſtorer of the ancient Pythagorean ſyſtem. *Prince William Landgrave of Heſſe*, who procured quadrants and ſextants much larger than what were formerly uſed to obſerve the true places of the ſtars, and whoſe obſervations were publiſhed by *Snellius*. *Sir Henry Saville*, ſkilful both in Aſtronomy and Geometry, who founded two profeſſorſhips for thoſe ſciences at Oxford. *Tycho Brahe*, ſuperior in ſkill to all that went before him, who publiſhed a catalogue of 700 fixed ſtars, which he had diligently obſerved. *John Kepler*, who by the help of Tycho's labours found out the true ſyſtem of the world, and the laws obſerved by the celeſtial bodies in their motions. *Galileo*, who firſt applied a teleſcope to the heavens, and by means of it diſcovered the Satellites of Jupiter, and their motions; the various phaſes of Saturn; the increaſe and decreaſe of the light of Venus; the mountainous and uneven ſurface of the moon; the ſpots of the ſun; and the revolution of the ſun about its own axis. *John Hevelius*, who has given us a catalogue of the fixed ſtars much larger than Tycho's compoſed from his own obſervations. *Huygens* and *Caſſini*, who firſt ſaw the Satellites of Saturn, and diſcovered his ring. *Gaſſendi, Horrox, Bullialdus, Ward, Ricciolus, Flamſteed*, and many other eminent Aſtronomers. But we have one here, adds Dr Keill, who, on account of his great merits in Aſtronomy does excel them all, that is, the moſt learned Dr *Edmund Halley* Savilian Profeſſor of Geometry in this univerſity, my moſt friendly collegue, to whoſe labours Aſtronomy owes many great improvements. In him there ſhines out together (which I know not if they are to be found in any other perſon to ſuch a degree) the greateſt dexterity in Practical Aſtronomy, and a moſt profound and exquiſite ſkill in Geometry, which will appear by his Aſtronomical Tables which he is ſhortly to publiſh; for they will far exceed all others that ever were, or perhaps ever will be, publiſhed. The doctor cloſes the whole with the illuſtrious name of Sir Iſaac Newton, whom he extols infinitely above all his predeceſſors, and does not even ſcruple to ſtile him *a genius of a divine nature.*

[N] *Tranſlated into Engliſh.*] This tranſlation is dedicated to the Ducheſs at whoſe requeſt it was undertaken. The Duke her conſort, in the preceding reign, had been called upon by the Houſe of Commons to give an account of the public money which he had received during the time of his being Paymaſter to the army; upon this occaſion, it has been ſaid, he employed our author to prepare theſe accounts for the reviſal: Upon the day appointed, the papers containing them were brought in a cart, which appeared to be well filled with them. The Houſe being informed of this, came to a reſolution to drop the affair, rather than be at the trouble of examining a cart-load of accounts. However that be, ſo much is certain, that Dr Keill conſtantly found Mr Bridges his friend and patron.

[O] *He publiſhed it in* 1721.] In this treatiſe he inſerted the ſolution of Kepler's celebrated problem to divide the area of a ſemicircle in a given proportion, by a line drawn from a given point of the diameter, in order to find an univerſal rule for the motion of a body in an elliptic orbit. Our author had printed it before in Philoſoph. Tranſact. No. 317, with this title, *Problematis Kepleriani de inveniendo vero motu Planetarum areas tempori proportionales in orbibus ellipticis circa focorum alterum deſcribentium ſolutio Newtoniana* (37) *a Dre Johanne Keill, Aſtron. Prof. Savil. Oxon. & R. S. S. demonſtrata & exemplis illuſtrata.* This problem had been demonſtrated geometrically by ſeveral others, by which means the charge of ἀγεωμετρησια, brought at firſt againſt Kepler's hypotheſis, was indeed taken off: But ſtill the ſame difficulty remained in the the calculation; to facilitate which, theſe geometrical ſolutions and demonſtrations brought no aſſiſtance. An approximating ſeries was the only method adapted for practice *; and therefore many years after this we find Mr Machin, Profeſſor of Aſtronomy at Greſham, obſerving (38) that tho' ſeveral attempts had been made at different times, yet, if he miſtakes not, never any at that time with tolerable ſucceſs, in order to the ſolution of this problem, and therefore he gave the ſolution in a different manner from all that went before him in this attempt. In ſupport of this cenſure, which is made uſe of by way of apology for his own attempt, he obſerves, that among the ſeveral methods offered, ſome were only true in ſpeculation, but really of no ſervice; that others were not different from Kepler's own, which he judged improper; and as to the reſt, they were all ſome way or other ſo limited and confined to particular conditions and circumſtances, as ſtill to leave the problem in general untouched. 'To be 'more particular, continues he, it is evident, that all 'conſtructions by mechanical curves are ſeeming ſolu'tions only, but in reality unapplicable; that the roots 'of infinite ſeries are, on account of their unknown 'limitations, in all reſpects ſo far from affording an 'appearance of being ſufficient rules, that they cannot 'well be ſuppoſed as offered for any thing more than 'exerciſes in a method of calculation. And then as 'to the univerſal method, which proceeds by a conti'nued correction of the errors of a falſe poſition, it 'is, when duly conſidered, no method of ſolution at 'all in itſelf, becauſe unleſs there be ſome antecedent 'rule, or hypotheſis, directing where to begin the ope'ration, as ſuppoſe that of an uniform motion about 'the upper focus for the orbit of a planet, or that of 'a motion in a parabola for the perihelion part of the 'orbit of a comet, or ſome ſuch other, it would be 'impoſſible to proceed one ſtep in it. But as no ge'neral rule has ever hitherto been laid down to aſſiſt 'this method, ſo as to make it always operate, it is 'the ſame in effect as if there were no method at all. 'And accordingly in experience it is found, that there 'is no rule now ſubſiſting, but what is abſolutely uſe'leſs in the elliptic orbit of comets. For in ſuch caſes 'there is no other way to proceed, but that which 'was made uſe of by Kepler, namely, to compute a 'table for ſome part of the orbit, and therein exa'mine if the time to which the place is required will 'fall out any where in that part: So that upon the 'whole, Mr Machin thinks it evident, that this pro'blem, contrary to the received opinion, had then ne'ver advanced a ſtep toward its true ſolution. A 'conſideration, concludes he, which will furniſh a plea 'for meddling with a ſubject ſo frequently handled, eſ'pecially if what is offered ſhall appear to contribute 'towards ſupplying the main defect.'

P.

KEILL

KEILL [JAMES], an eminent Phyſician, and younger brother of the preceding, was likewiſe born in Scotland, March 27, 1673 (a), and received ſome part of his education in that country, which having completed by travelling into foreign parts, he applied himſelf early to diſſections and the ſtudy of Anatomy (b). By which method great improvements had not long before been made in the art of Phyſic (c). He laid the firſt foundation of his character by reading Anatomical Lectures, with great applauſe, in both the univerſities, and had the degree of Doctor of Phyſick conferred upon him at Cambridge, having ſome time before publiſhed his *Anatomy of the human Body* (d) for the uſe of his pupils. In 1703 he ſettled at Northampton as a Phyſician, in which town and neighbourhood he practiſed with great reputation all his life afterwards (e). In 1706 he publiſhed a paper in the Philoſophical Tranſactions, No. 306, containing an *An account of the death and diſſection of John Bayles of Northampton, reputed to have been 130 years old* [A]. Our author was well ſkilled alſo in mathematical learning; and in 1708 he gave the world a good ſpecimen of it in his book entitled, *An account of Animal Secretion, the quantity of blood in the Human Body, and muſcular Motion* (f) [B]. He afterwards publiſhed the ſame treatiſe

(a) Communicated by Mr John Murray of Northampton, our author's nephew.

(b) See his epitaph, an account of which is mentioned below.

(c) Dr Freind's Hiſtory of Phyſic, Vol. II.

(d) The 7th edition was publiſhed in 1726.

(e) Mr Murray's Letter.

(f) It is printed in 8vo. and makes only a thin volume.

[A] *An account of the death and diſſection of John Bayles.*] In opening this ſubject, Dr Keill found the bottom of the ſtomach worn as thin as fine writing-paper, and the *aorta* quite cartilagenous; whence the greateſt part of his blood was contained in the arteries (contrary to what is obſerved in recently dead bodies), for the aorta having loſt the power of contracting itſelf, contained the blood it received by the laſt *ſyſtole* of the heart. Theſe the Doctor judged to be the immediate cauſes of his death. He obſerved that the viſcera in general were very ſound and good, as the liver, kidneys (with the urinary paſſages), the inteſtines, with their meſentery, (which was even covered with fat, in a body quite emaciated) the lungs white and ſpongy, but, above all, the heart large, thick, and fat, and in a large cheſt: Theſe he aſſigns for the cauſes of Bayles's longævity. He takes notice, that this account agrees with Dr Harvey's concerning old Parre (1), in every thing but his death. Here we cannot but obſerve, that no truth obtrudes itſelf more upon our notice, or is more vulgarly remarked, than that after a certain period the human frame naturally decays, and tends to a diſſolution; yet notwithſtanding this, 'tis as certain, that without ſuch diſſections as theſe of Bayles and Parre, we ſhould never have known in what vital part nature begins to work this decay. From *other* diſſections we learn, that the bones which are meer cartilages in a fœtus, become perfectly oſſified in an adult; and *theſe* teach us, that the coats of the arteries, which in a perfect adult are greatly elaſtic, grow from that ſtate by the ſame fixed laws of the animal œconomy, to be abſolutely cartilaginous in extreme old age, and thereby incapable of carrying on the circulation of the blood, that neceſſary condition of life: This we ſee is brought about by the natural frame of our conſtitution. Whence it appears, that life can never be extended to any very long duration by any art or contrivance of man. Upon the whole, it would be ſcarcely credible, were we not aſſured of it in fact, that the greateſt genii have employed a good ſhare of their thoughts and ſtudies in that view; and we know the *Methuſalem Water* was invented by Lord Bacon (2). Upon this plan are the vain pretences of Des Cartes's ſecret (3), who told Sir Kenelm Digby, *that though to render a man immortal was what he would not venture to promiſe; yet he was very ſure it was poſſible to lengthen out his life to the period of the Patriarchs.* 'Tis true he had the ill luck to be ſeized by death, that great confounder of human devices, before he was fifty-four years old, while he was compoſing a ſhort ſyſtem of medicines, containing a diſcovery of this grand arcanum (4).

(1) In Phil. Tranſ. No. 44. where it is obſerved, that Parre was brought up to London out of Shropſhire by the Earl of Arundel; and that all his inwards appeared ſo ſound at his death, that if he had not changed his diet, he muſt have lived a great while longer.

(3) See Des Maizeaux's Life of Monſ. St Evremond, prefixed to the firſt vol. of that author's Works, p. 41. printed at London, 1728, in three volumes.

(4) Ibid. p. 42.

(5) Preface, towards the end.

[B] *An account of animal ſecretion, the quantity of blood in the human body, and muſcular motion.*] This piece took its birth from the theorems concerning the attraction of the ſmall particles of matter, which were communicated to him about ſeven years before by his brother at Oxford (5). It was the conſideration of the uſe of the *vena porta*, which gave him the firſt hint to think that the ſeveral humours of the body were formed by this attraction in the particles of the blood. My brother, ſays he, no ſooner diſcovered this principle of attraction, than he deduced from it the coheſion of matter, and many of the operations of chemiſtry; and ſince it will appear that the principles of animal œconomy does likewiſe depend upon the ſame principle, who can doubt the truth of a principle ſo ſimple, and yet which, like a maſter-key, opens works of different contrivances, and diſcloſes an uniformity in all the operations of nature, ſo that every one may ſee and read the ſame thought and hand in the contrivance and formation of every part of the univerſe. He concludes his preface with remarking, that the *vis attractrix* was aſſerted by the moſt famous ancient Phyſicians, as Hippocrates and Galen, as well as the gravitation of the heavenly bodies one towards another was known by the beſt ancient philoſophers, as well as to Kepler and Sir Iſaac Newton (6). Upon the ſubject of animal ſecretion, and in explaining the manner how the fluids of the animal body are ſeparated from the blood, Dr Keill undertakes to ſhew, 1. How they are formed in the blood before they come to the place appointed for ſecretion. 2. In what manner they are ſeparated from the blood by the glands. Upon the former head he ſhews, that the blood conſiſts of a ſimple fluid, in which ſwim corpuſcles of various figures and magnitudes, and indued with different degrees of attractive force. Hence he concludes, that of ſuch particles as the blood conſiſts, muſt the fluids be compoſed which are drawn from it; and as in the blood the particles attract one another, and cohere together, ſo likewiſe may the particles of the fluids which are ſeparated from it. This he proceeds farther to ſhew to be not only poſſible, but actually ſo in ſeveral ſecretions, as milk, wine, &c. And if it is not evident in all, he looks upon it to be, becauſe their conſtituent principles are more powerfully attracted by the particles of the fluids in which they ſwim than by one another, which hinders their ſeparation from that fluid. From this principle, that the blood conſiſts of corpuſcles of various figures and magnitudes, and indued with various degrees of an attractive power, and that of ſuch particles the fluids ſecerned by the glands are compoſed, the Doctor proceeds to ſhew how the corpuſcles, which compoſe the ſecretions, are formed in the blood, before they arrive at their ſecerning glands. In order to this, he premiſes eleven propoſitions taken from his brother's theorems concerning the laws of attraction, as being fundamental to what he is about to advance. The demonſtration of the third was communicated to him by his brother, and is as follows. *If particles of matter attract each other with a force that is in a reciprocal-triplicate, or greater proportion of their diſtances, the force by which a corpuſcle is drawn to a body made up of ſuch attractive particles, is infinitely greater at the contact, or extremely near it, than at any determined diſtance from it.* After this he firſt determines the force of the air upon the blood in breathing, in which he follows Dr Pitcairne *, in order to ſhew, that by the preſſure of the air the coheſion of the globules of the blood is diſſolved. He then ſhews, how the union of the attractive particles of the blood is hindered near the heart; and that the particles which unite firſt, after the blood is thrown out of the great artery, muſt be ſuch as have the ſtrongeſt attractive force; and that ſuch as have the leaſt, muſt unite laſt; and all the intermediate ones, according to their reſpective attractive powers. He proceeds to deduce the reaſon of the ſituation of the kidneys; and obſerves, that though the *gall*, which is ſecerned by the liver, and the *ſemen* by the teſticuli, ſeem to be two conſiderable objections againſt his hypotheſis, yet they are ſo far from proving any thing againſt his doctrine of ſecretion, as to be the greateſt arguments that could poſſibly be urged for the truth of it. This he demonſtrates upon his hypotheſis at large, and then ſhews likewiſe how, according to it,

(6) The ancient Philoſophers underſtood juſt as much of this mutual gravitation, as the ancient Phyſicians did of the *vis attractrix*; that is, juſt nothing at all.

* In Diſſertatione de Cauſis diverſæ Molis, qua fluit Sanguis per Pulmonem in Natis & non Natis. Inter *Pitcairnii Opera*, Lugduni Batav. 1737, 4to. p. 224, & ſeqq.

treatiſe in Latin, with the addition of a *Medicina Statica*; in which the calculations being reduced into tables, theſe were the firſt that had been ſeen in that branch of Phyſick. In 1717, our author printed a ſecond edition of this work in Engliſh, having added an Eſſay concerning the force of the heart in driving the blood through the whole body. This drew him into a controverſy with Dr Jurin upon that ſubject [C], which was carried on in ſeveral

it, ſome fluids may be ſecerned any where, and why the lympha is ſecerned in ſeveral places; he concludes what he had offered upon the firſt general propoſition relating to ſecretions, with remarking that the knowledge of ſecretions is neceſſary for the underſtanding of the nature of diſeaſes, inſtances of which he gives in the Diabetes, the Rheumatiſm, the Gout, and the Stone. Under the ſecond general propoſition he ſhews the manner in which the ſeveral fluids after they are formed in the blood are ſeparated from it by the glands, and as this depends intirely upon the figure and ſtructure of the glands, he determines them again, after Dr Pitcairne (7), to be nothing elſe but convolutions of ſmall arteries, and conſequently either concave cones, or cylinders, or at leaſt a figure whoſe tranſverſe ſection is a circle. Hence he concludes too with Dr Pitcairne, that the circular orifices of the glands can only differ in magnitude, and that all ſorts of particles of leſs diameters than that of the orifice of a gland may enter it. The next ſubject he treats of is the quantity of the blood, or circulating fluids of what kind ſoever in the human body; in order to determine which, he ſuppoſes the whole body to be nothing but tubes or veſſels full of blood, or liquors ſeparated from it; and concludes with obſerving, that in a body weighing 160 pounds, there muſt needs be 127 pounds of blood; from which quantity, however, that he may put the matter out of all manner of diſpute, he deducts the weight both of the fat and bones, (though he thinks that ſome arguments might be alledged to prove that even the fat circulates, and he had before ſhewn that there is a fluid in the bones) and after allowances made for both, concludes, that the fluids in the human body have the ſame proportion to the ſolids as 100 to 60, or 5 to 3. He finiſhes the whole of what he has to ſay about the blood with a pretty large diſcourſe about its velocity, and obſerves, that when the whole maſs of blood is to be altered, the courſe of phyſic ought to be continued for a long time, ſince the blood moves ſlower and ſlower, the farther it moves from the great artery (8); and conſequently it muſt be a great while before the whole maſs of blood can be mixed with the alterative medicine: And that ſince the circulation of the blood thro' the glands, which receive arteries immediately from a great veſſel, is very quick, they may carry off a great proportion of the medicine in a very little time; and that, therefore, it is not the taking of great quantities, but the conſtant taking, which can alter the maſs of blood. From this doctrine of attraction he infers the propriety of the elective purges of the Ancients. In his treatiſe of muſcular motion he obſerves, that the veſicular ſtructure of the fibres of the muſcles is excellently contrived for contraction. This he aſcribes (with others) to the operation of the animal ſpirits, which he ſuppoſes to conſiſt of the ſimpleſt particles, and therefore to have the moſt attractive force, as he infers from what Sir Iſaac Newton (9) has collected concerning the rays of light. Theſe ſpirits dropping upon the blood attract it, and thence the air contained in the blood expanding by its elaſtic virtue, increaſes the breadth, and ſhortens the length of the veſicles of the muſcular fibres. After this manner he conceives the veſicles to be diſtended without any ebullition or effervescence, as had been imagined without good foundation, by former writers upon this ſubject. The determination of the *Vis Elaſtica* he acknowledges was the thought of the learned Mr John Bernoulli, but the way of demonſtrating it uſed by our author, he tells us, was communicated to him by his brother. Upon the whole, he is of opinion, that his Theory of muſcular motion does follow ſo naturally and eaſily from the principle of attraction, that upon that account one would be almoſt tempted to believe it the genuine method of nature.

(7) Ibid. De Circulatione Sanguinis per Vaſa Minima, p. 207.

(8) He determines the velocity to be 5000 times leſſer at the 40th branch from the great artery, than it is in this artery, before any ramification is made from it.

(9) See his Optics, p. 347. edit. Lond. 8vo. 1721.

[C] *This drew him into a controverſy with Dr Jurin.*] The force of the heart in the human ſpecies was firſt reduced to a mathematical calculation by Borelli, who aſſuming it for a poſtulatum that the quantity of blood does not exceed 201. weight, determined its reſiſtance to be equal to the preſſure of 180000 lb.* To overcome which, finding by his method the power of the heart to be equal only to that of 3000 lb. he imputes the reſt to the auxiliary force of percuſſion. This calculus was afterwards eſpouſed here, with ſome inconſiderable variations, by Dr Dan. Morland, and ſhewing itſelf in a mathematical garb, was generally ſubmitted to without any farther inquiry. But Dr Keill diſdaining the mean ſubjection of implicit faith, reſolved to re-examine the matter; and the reſult of it was, that he not only ventured to reject the former doctrine, but alſo to aſcribe a force to the heart almoſt infinitely leſs than that had done. This new opinion is likewiſe founded upon a mathematical principle, which terminates in diſcovering the ſaid force to be equal to no more than ſuch as a weight of five ounces † acquires by the force of gravity in $\frac{1}{77}$ of a ſecond of time, i. e. during one ſyſtole of the heart; and this too, notwithſtanding the quantity of blood is ſuppoſed to be equal to 100 lb. The Doctor, however, agrees with Borelli in comparing the force of the heart to a weight at reſt, and further aſſumes its action throughout the whole ſyſtole to be equable. Both theſe aſſumptions being diſapproved by Dr Jurin, that gentleman publiſhed in the Philoſoph. Tranſact. No. 358, 359, ſome remarks upon the three forementioned methods, and advanced a fourth, wherein conſidering the heart in its ſyſtole as a body in motion, and maintaining its action therein to be inequable, and chiefly exerted at the beginning, he eſtimates it as a ſtroke or percuſſion, the force whereof he determines to be equal to that of fifteen pounds four ounces, flowing with a velocity of an inch in a ſecond of time, differing herein not greatly from one of twelve pounds moving with the ſame velocity, which he obſerves is the reſult of our author's *Calculus*, when rightly performed. Dr Keill then lying upon his death bed, under the moſt excruciating torments, printed a defence, or rather an apology for his *Poſtulata*; recommending at the ſame time his antagoniſt's method of inſtituting the *Calculus*, and encouraging him to purſue it, and expired ſhortly after. This paper was inſerted in the Philoſoph. Tranſact. No. 361; and the next Number, No. 362, conveyed Dr Jurin's reply in vindication of his remarks, wherein he takes occaſion to make the following eulogium upon our author. *Apologiam præſtantiſſimi viri Jacobi Keilii, qui acerba nuper & immatura morte præreptus magnum ſui deſiderium eruditis reliquit, ſtudioſe perlegimus. Quum inter legendum ſingularem ſimul eruditiſſimi ingenii humanitatem, qui noſmet utut a placitis ſuis diſſentientes excipere dignatus eſt, ſimul animi magnitudinem & ſtudium in rempublicam literariam tanto viro dignum magna admiratione proſequebamur. Huic enim illi non ſolum per omnem vitæ curſum diligenter & ſtrenue operam navavit, ſed etiam pulcherrimo exemplo confectus jam atroci morbo, & ſe perire ſentiens, eruditam illam epiſtolam tanquam ſupremi amoris pignus idem legavit.* We muſt not omit, in juſtice to Dr Jurin, to obſerve, that being ſenſible how deficient the knowledge of the true ſtate of this ſubject then was, he thought proper to draw up his *Calculus* indefinitely in algebraical expreſſions, leaving theſe to be expounded by particular numbers when thoſe ſhould be aſcertained by further and more accurate reſearches. But this ſtill remains among the *Deſiderata* of the animal œconomy. In viewing the diſagreement there is in the concluſions of theſe ſeveral calculators upon the force of the heart, eſpecially when it is found that the moſt ſagacious enquirers agree no better in eſtimating that of the lungs, one cannot help ſuſpecting, that the infinite ſkill of the divine artiſt in framing the mechaniſm of the human body, as it has hitherto mocked ſo will it for ever continue to mock the utmoſt efforts of human wit to diſcover it. When Dr Keill wrote theſe eſſays, the mechanical way of treating phyſical ſubjects was in full vogue; beſides, we have ſeen, he was particularly led to it by a natural eſteem for his brother, and by the authority of Dr Pitcairn; no wonder then if we find that we find him aſſerting the great advancement that had been then made in the knowledge of the animal machine 'The manner of viſion, ſays he, is ſhewn in Optics. Borelli has given us

* Dr Jurin obſerves, that this preſſure will be found, upon the principles of Borelli's reaſoning, to be equal to 1,076,000 lb. weight. Phil. Tranſ. No. 358.

† Or rather 7½ as it comes out upon a right calculation. See ibid. No. 362.

several papers printed in the Philosophical Transactions. It cannot be denied, that in his account of Animal Secretion, Dr Keill carried the Vis Attractrix farther than could then at least be warranted by the principles of the true mechanick philosophy [D]. He had now for some time laboured under a most painful disorder, viz. a Cancer in the roof of his mouth; the excruciating torments of which he underwent with a very remarkable firmness of mind; and in order, if possible, to procure some relief, he applied the Actual Cautery (a red hot iron) with his own hands, more than once, to that exquisitely sensible part (g). After this cruel operation had been tried several times without success, he was at length relieved by death July the 16th, 1719 (b), in the vigour of his age. He lies buried in St Giles's church at Northampton, near the Communion Table on the North side, and against the wall over it a handsome marble monument, with an inscription in Latin, too long to be inserted here, was erected by his brother Dr John Keill (i), to whom he left the bulk of his estate, having himself never been married.

(g) See an account of the case of Dr James Keill of Northampton, by Mr Rushworth the Surgeon, who attended him, printed shortly after the doctor's death, 8vo. The learned Rushworth was the first discoverer of the specific virtue of the Jesuit's bark in mortifications.

(b) See his epitaph.

(i) Ibid.

as the mechanism of the bones and muscles for the motion of the joints, and since the discovery of the circulation of the blood by Dr Harvey (a), many useful propositions concerning its motion and velocity have been determined by Bellini. Dr Pitcairne has explained the mechanical structure of the lungs, and shewn us the reason of the different passages of the blood through the heart of the fœtus; the necessity of breathing after birth, and how the antenatalitial ducts are stopped by breathing. He has likewise demonstrably explained the symptoms of the diseases of the eyes, and demonstrated the circular figure of the orifices of the glands. Dr Freind has wrote in a mechanical way upon the menses, Dr Cheyne upon fevers, and Dr Mead upon poisons; and all of them have handled these subjects more rationally than ever any did before them; and the use of the *Spleen and Vena Porta* is now no longer a mystery.' But notwithstanding what is here so confidently asserted, it is no secret at this time of day, that all these accounts have been shewn by later enquirers to be very deficient and unsatisfactory. 'Tis far from being true what our author observes in the preface to this treatise, that diseases being purely disorders of the animal œconomy, whatsoever can add any new light to our knowledge of this, must necessarily clear the nature of those, establish the practice of Physic upon a surer foundation, and enable Physicians to make truer and more certain judgments in most cases. For notwithstanding some inconsiderable improvements in our knowledge this way, which are rather ostentatious than useful with regard to Physic, 'tis evident that the nature of any particular disease depends upon so many other circumstances still unknown, that their true state is yet generally hid from our eyes, and involved in thick darkness. No doubt can be made, that if the animal œconomy were *perfectly* understood, and the history of diseases *precisely* known, the right method of curing each disease might evidently and certainly be deduced; but this remark amounts to no more for the use of repairing the disorders in the little system of man by medicine, than the vaunt which is attributed to Archimedes did towards disturbing the grand system of the world (10). Since it is not given to man to understand the animal œconomy to perfection, and any imperfect knowledge therein can at best only lead to an uncertain, and is too often seen to prompt an unsafe practice. In a word, though it may easily be granted, that the study of nature and the knowledge of the body is not altogether as superfluous to a Physician as it would be to a sailor to know the reason of the tides, or how to explain the phænomena of the loadstone; yet the empirical method of Dr Sydenham, founded upon experience, observation, and analogical reasoning, joined to a natural sagacity, and assisted by such an accurate history of diseases, as can be had from a due attendance on the sick bed, is observed to produce both the safest and most successful practice, which that imperfect knowledge we have of the animal œconomy serves better to illustrate in some cases, than to direct in any.

(10) Give me a place to stand upon, and I will move the earth out of it's place.

[D] *Farther than can be warranted by the principles of the true mechanical philosophy.*] As the authority of Sir Isaac Newton is constantly produced to give a kind of sanction to this doctrine concerning the extent of the *Vis Attractrix*, it may not be amiss to give his opinion of this matter in his own words, as we find them in the general Scholium, at the end of his Principia. 'And now, says that great man, we might add something concerning a certain most subtle spirit, which pervades and lies hid in all gross bodies, by the force and action of which spirit, the particles of bodies mutually attract one another at near distances, and cohere, if contiguous, and electric bodies operate at greater distances, as well repelling as attracting the neighbouring corpuscles; and light is emitted, reflected, refracted, and inflected, and heats bodies; and all sensation is excited, and the members of animal bodies moved at the command of the will, namely by the vibrations of this spirit mutually propagated along the solid filaments of the nerves from the outward organs of the senses to the brain, and from the brain into the muscles; but these are things that cannot be explained in a few words, *nor are we furnished with that sufficiency of experiments, which is required to an accurate determination and demonstration of the laws, by which this electric and elastic spirit operates.*' Thus wrote that cautious philosopher (11) several years after the death of Dr Keill, who, 'tis very remarkable, has not produced so much as a single experiment to ascertain the action of this Vis Attractrix in the subject of animal secretion. But he is not the only person, who instead of reflecting honour has thrown a blemish upon this part of the Newtonian philosophy, by overhastily and injudiciously assuming that for an undoubted principle, which is proposed by the author as a subject for further enquiry. P

(11) The third edition of the *Principia*, to which this scholium is subjoined, was printed in 1726.

(a) We must not slip the opportunity here given, of explaining a note * in Dr Harvey's article, the sense of which, as there expressed, is apprehended to lie too open to misconstruction. It is there said, that the position of the simultaneous action of the auricles of the heart, as also that of the ventricles, by requiring the blood to pass from the ventricles through the whole length of the arteries and veins into the auricles, as suddenly as it passes from the auricles into the ventricles, is the main difficulty that attends the doctor's thesis concerning the manner of the circulation: intending thereby to suggest no more, than that this is all the difficulty, and not that it is an insuperable one. Far otherwise. We are very sensible, that the possibility thereof is easily conceived, by supposing the trunks of the two veins to be always kept full of blood; which, indeed, seems to be really their true state during the circulation. P

* Viz. note ‡, at the end of remark [I].

KEN [THOMAS], the deprived Bishop of Bath and Wells, whose true simplicity of manners, and unaffected piety, justly intitles him to a place in these memoirs, was descended of a very antient family of his name seated at Ken-place in Somersetshire (a), which estate came into the possession of John Lord Powlet of Hinton St George, by marriage with the heiress of the Ken family (b). Our author was youngest son of Thomas Ken of Furnival's Inn, by Martha his wife, and was born at Berkhamstead in Hertfordshire July 1637 (c). At thirteen years of age he was sent to Winchester school,* and being chosen the following year a scholar upon that foundation (d), he was elected thence, in the ordinary way of rotation (e), to New-College in Oxford (f), and became a Probationer

(f) Short Account, &c. p. 3. Mr Wood, ubi supra, says, he was first admitted of Hart-hall the preceding year.

tioner Fellow there in 1657 (g). In this ſituation, while he proſecuted his academical ſtudies with a commendable diligence, and made ſuitable advances therein, the ſtrict probity and religious turn of his temper was particularly taken notice of, and procured him the general love and eſteem of his Society (b) [A]. Proceeding regularly to take both the degrees in Arts (i), he entered into holy orders, and became Chaplain to William Lord Maynard, Comptroller of the Houſhold to King Charles II. (k) In 1666 he removed to Wincheſter College, being choſen Fellow of that Society December 8 the ſame year [B]. Not long after this he was appointed domeſtic chaplain to Dr George Morley, Biſhop of that See, who preſented him firſt to the Rectory of Brixton in the iſle of Wight and afterwards to a Prebend in the church of Wincheſter, in which he was inſtalled April 12, 1669 (l). The ſame Patron gave him alſo the Rectory of Woodhey in Hampſhire (m); but he did not hold it long, and chuſing to reſign (n), he was ſucceeded therein by his brother-chaplain, Dr George Hooper. This was about the year 1673 (o); and in the latter end of the enſuing year, which began that of the Jubilee in 1675 (p), he took a tour to Rome, in company of his nephew Mr Iſaac Walton (q), then Bachelor of Arts of Chriſt-Church in Oxford. Two years after his return, he took his firſt degree in Divinity (r), and commenced Doctor in that faculty June 30, 1679 (s). Not long afterwards, being appointed chaplain to the Princeſs of Orange (t), he went to Holland. Here his prudent behaviour, and ſtrict piety, gained him the eſteem and intire confidence of his miſtreſs (u). But in the courſe of his office, he happened to incur the diſpleaſure of her conſort, by obliging one of his favourites to perform his promiſe of marriage with a young lady of the princeſs's train, whom he had ſeduced by that contract. This ſingular zeal, however worthy of his religion and of his country, gave ſo much offence to the Prince, (afterwards King William) that he very warmly threatened to turn him from the ſervice, which the Doctor as warmly reſenting, begged leave of his miſtreſs, and warned himſelf from it; nor would he yield to return, 'till intreated by the Prince in perſon; who courting him to his former poſt and reſpect, he conſented to continue there for one year longer; during which he was taken into a ſhew of great familiarity: But at the expiration of the term he returned to England, where the King, who was no ſtranger to what had happened at his nephew's court, appeared to be well ſatisfied with the Chaplain's conduct, and appointed him in the like poſt to attend Lord Dartmouth, with the royal commiſſion, to demoliſh the fortifications at Tangier (w) [C]. The Doctor returned with his Lordſhip in the beginning of April 1684 (x), and was immediately advanced to be chaplain to the King, by an order from his Majeſty himſelf. Not only the nature of this poſt, but the particular moſt gracious manner of conferring it, clearly evinced, that it was intended as a ſtep for future favours. This was ſo well underſtood, that upon the removal of the Court to paſs the ſummer at Wincheſter, the Doctor's houſe, which he held in the right of his Prebend, was marked by the harbinger for the uſe of Mrs Eleanor Gwyn. But no worldly conſiderations whatever could move the chaplain to give up his concern for the intereſts of true religon and virtue; far from complying with an order which gave countenance to vice even in his royal benefactor, he poſitively refuſed to grant the miſtreſs admittance, and ſhe was forced to ſeek for lodgings in another place (y). This was a degree of religious intrepidity not unlike that which he had before

[A] *He gained the love and eſteem of that Society.*] Nor was Mr Ken wanting on his ſide in any degree of affectionate regard to the Society. Of which they had a ſufficient proof as ſoon as his circumſtances would permit; when he gave them upwards of one hundred pounds, as a ſmall acknowledgment for his education, and towards the erecting of their new buildings (1).

(1) Short Account, &c. p. 3. This building was an addition of two attached wings to the old college; which opening by degrees to the garden, gives an extraordinary grace and beauty to the whole.

[B] *He was choſen Fellow of Wincheſter College.*] This remove too was agreeable to the rule of rotation eſtabliſhed by the munificent founder, who deſigned this college alſo chiefly for a retired and ſtudious life, yet ſo as not to exclude, but rather to qualify the members better for the duties of the clerical function: And to this purpoſe Mr Ken kept a conſtant courſe of preaching at St John's church in the *Soak* near Wincheſter, (where there was no preaching miniſter, and which therefore he called his Cure) and brought many Anabaptiſts to the Church of England, whom he baptized himſelf. And that neither his ſtudy might be the aggreſſor on his hours of inſtruction; or what he judged his duty, prevent his improvement; or both, his cloſet addreſſes to God; he ſtrictly accuſtomed himſelf to but one ſleep, which often obliged him to riſe at one or two o'clock in the morning, and ſometimes ſooner, and grew ſo habitual, that it continued with him almoſt to his laſt illneſs. Yet his temper was ſo lively and chearful, that he would be very facetious and entertaining to his friends in the evening, even when it was perceived, that with difficulty he kept his eyes open; and then ſeemed to go to reſt with no other purpoſe, than the refreſhing and enabling him with more vigour and chearfulneſs to ſing his morning hymn, as he then uſed to do to his lute before he put on his cloaths (2). As he had been a benefactor by his purſe in temporalities to New-College in Oxford, ſo he was no leſs a benefactor to this of Wincheſter, in regard to it's ſpiritual ſtate, by drawing a ſet of prayers and devotions for the ſcholars of that ſchool, which were publiſhed under the following title, *A Manual of prayers for the uſe of the ſcholars of Wincheſter College, and all other devout Chriſtians. Lond.* 1681, 12mo.

(2) Ibid. p. 4, 5.

[C] *He attended Lord Dartmouth to Tangier.*] About this time he wrote an epic poem called *Edmund*. It is digeſted into thirteen books: In the firſt book Satan is repreſented at the head of an aſſembly of devils, conſulting how to defeat St Edmund's deſign of paſſing to England, which terminates in a reſolution to overſet the ſhip, that was to bring him, by a ſtorm, and ſo drown the ſaint and all his adherents. The diſappointment in his firſt project is ſuppoſed to quicken the edge of the arch-fiend's malice, who thereupon ſets all his engines agoing, in order to counterwork Providence, which had decreed to raiſe the ſaint to the throne. The ſeveral events of St Edmund's life after this, diverſified and enlivened with proper epiſodes, make the ſubject of the reſt of the poem, which ends with the martyrdom and canonization of the ſaint and hero, together with his aſcent in a winged chariot to heaven (4). The reader will be before-hand with me in obſerving, that the conſtitution of devils in the firſt book ſeems to be borrowed from Milton's *Paradiſe-Loſt*, which was publiſhed a few years before. Upon the whole, both the imagery and machinery throughout are perfectly poetical, and the verſification eaſy: but neither this nor the ſentiments are enough ſpirited to raiſe them above the cenſure of flatneſs.

(3) See his article.

(4) It was publiſhed in a collection of our author's poems after his death. See remark [T].

[D] *As*

fore ſhewn in Holland, and as it proceeded from the ſame ſpirit in the ſervant, ſo it had a ſimilar effect upon the maſter; for his Majeſty, agreeable to that good ſenſe which was a diſtinguiſhing part of his character, was ſo far from ſhewing any diſpleaſure thereat, that the Biſhoprick of Bath and Wells becoming vacant ſoon after, he ſtopped all attempts of the Doctor's friends, who of their own inclinations would have applied in his behalf, with this remarkable ſaying, that *Dr Ken ſhould ſucceed, but that he deſigned it ſhould be from his own peculiar appointment.* And accordingly the King himſelf gave order for a *Congé d'elire* to paſs the Seals for that purpoſe, and he was conſecrated Biſhop of Bath and Wells Jan. 25, on St Paul's day, 1684 (z). A few days after this his Majeſty being ſeized with that diſorder which ſoon put a period to his life; the Doctor was pitched upon to manage his ſpiritual concerns, and during his illneſs gave a cloſe attendance to the royal bed, without any intermiſſion, at leaſt for three whole days and nights, ſuggeſting ſuch pious and proper thoughts and ejaculations, as were moſt fit on ſo ſolemn an occaſion, as long as there was any appearance of the King's attention to any thing [D]. This duty the Biſhop thought ſo abſolutely neceſſary, that he thereupon delayed his admiſſion to the temporalities of the See of Wells; ſo that when King James came to the Crown, new inſtruments were paſſed for that purpoſe (a a). He had not been long in full poſſeſſion when he wrote his Expoſition of the Church Catechiſm, which was publiſhed twice in the year 1685, 8vo. [E] The ſame year he alſo publiſhed *Prayers for the uſe of the Bath.* In

(z) Ibid. p. 9.

(a a) Ibid. p. 12.

[D] *As long as there was any appearance of the King's attention to any thing.*] Biſhop Burnet ſpeaking of this part of Dr Ken's conduct, gives ſuch an account of it as terminates (according to his uſual manner) with a moſt injurious cenſure, as follows. He begins with obſerving, that our Biſhop 'applied himſelf 'much to the awaking the King's conſcience, and ſpoke 'with an elevation both of thought and expreſſion, 'like a man inſpired; that he reſumed the matter often, and pronounced many ſhort ejaculations and 'prayers, which affected all that were preſent except 'him that was moſt concerned, who ſeemed to take no 'notice of him, and made no anſwer. That he preſſed 'the King ſix or ſeven times to receive the ſacrament, 'but the King always declined it, ſaying he was very 'weak. A table, with the elements upon it ready to 'be conſecrated, was brought into the room, which 'occaſioned a report to be then ſpread about that he 'had received it. That Ken preſſed the King to declare, that he deſired the ſacrament, and that he died 'in the communion of the Church of England, to 'which the King anſwered nothing.' Thus far the royal patient is made the victim of this hiſtorian's pen. He proceeds next to make the ſpiritual Doctor a victim to his malevolence, in theſe terms. 'The Biſhop, 'ſays he, aſked him [the King] if he deſired abſolution of his ſins, which he pronounced over his Majeſty, for which he was blamed, ſince the King expreſſed no ſenſe of ſorrow for his paſt life, nor any 'purpoſe of amendment. It was thought, continues 'he, to be a proſtitution of the peace of the Church, 'to give it to one, who after a life led, as the King's 'had been, ſeemed to harden himſelf againſt every 'thing that could be ſaid to him.' Not ſatisfied with this ſingle ſtroke, he proceeds to ſecond it: 'Ken, 'concludes he, was alſo cenſured for another piece of 'indecency. He preſented the duke of Richmond, 'lady Portſmouth's ſon, to be bleſſed by the King. 'Upon this ſome that were in the room cried out, 'that the King was their common father; and upon 'that all kneeled down for his bleſſing, which he gave 'them (5).' The malice of theſe aſperſions, extracted from a very partial miſrepreſentation of the whole, is ſo groſs, that, like many others in the ſame hiſtory, they can only hurt the author of them. We have the particulars of Biſhop Ken's behaviour on this trying occaſion, from a much more impartial, though more candid writer, who, though a relation to the Biſhop, promiſes not to render the whole account he gives of his life ſuſpicious, by inſerting ſurmiſe, where he intends to advance nothing but what may evidently be made appear, and he has clearly kept his promiſe. His words are, 'The King's diſtemper ſeizing his 'head, and our Biſhop well knowing how much had 'been put off to that laſt point, and fearing the 'ſtrength of his diſtemper would give him but little 'time, as indeed it proved: his duty urging him, he 'gave a cloſe attendance at the royal bed, without 'any intermiſſion, at leaſt for three whole days and 'nights; watching at proper intervals to ſuggeſt pious 'and proper thoughts and ejaculations on ſo ſerious an 'occaſion; in which time the ducheſs of Portſmouth 'coming into the room, the Biſhop prevailed with his 'Majeſty to have her removed, and took that occaſion 'of repreſenting the injury and injuſtice done to his 'Queen ſo effectually, that his Majeſty was induced to 'ſend for the Queen, and aſking pardon, had the ſatisfaction of her forgiveneſs before he died.' The 'Biſhop, continues this writer, having homely urged 'the neceſſity of a full, and prevailed, as is hoped, 'for a ſincere repentance, ſeveral times propoſed the 'adminiſtration of the holy ſacrament. But although 'it was not abſolutely rejected, it was yet delayed 'from time to time, 'till (I know not by what authority) the Biſhop and all others preſent were put out 'from the Preſence for about the ſpace of half an hour, 'during which time it has been ſuggeſted, that Father 'Huddleſton was admitted to give extreme unction; 'and the interval between this and death was ſo ſhort, 'that nothing concerning the Biſhop's behaviour happened worthy of notice in this account (6). We ſee here, contrary to what Burnet aſſerts, that the King gave a remarkable proof of his repentance, in reſpect to the greateſt irregularities of his life, and that he was brought thereto by Dr Ken's miniſtration, who thereupon, according to the goodneſs of his nature, no doubt thought himſelf obliged by that charity, *which hopeth all things, believeth all things*, not to withhold the benefit of the Church's peace in pronouncing her form of abſolution over him; and after the Biſhop had prevailed to have the mother put out of the room, his preſenting the ſon, though a baſtard, to the father's bleſſing, is another lively effect of that ſame charity, which is the ſum and perfection of the Chriſtian life, and was a moſt amiable part of Biſhop Ken's character.

(6) Short Account of Biſhop Ken's Life, p. 10, 11, 12.

[E] *His Expoſition of the Church Catechiſm was publiſhed twice in* 1685.] This was occaſioned by an expreſſion in the firſt edition, which the Papiſts at that time laid hold of as if it favoured their doctrine of Tranſubſtantiation, whereupon having altered the expreſſion, he immediately republiſhed it, with this advertiſement prefixed. 'The author of the following 'work thinks himſelf obliged to declare, that he willingly ſubmits it to the cenſure of the Church of England, to whoſe articles he deſires every thing of his 'may be exactly conformable. Wherefore having 'obſerved that his meaning in ſome leſs material 'things has been miſunderſtood, he hath varied the 'expreſſion in thoſe places, but not his meaning in 'them, as was fitting in a work not intended for diſputes, but devotion.' The whole title runs thus; *An Expoſition of the Church Catechiſm; or practice of divine love, compoſed for the dioceſe of Bath and Wells*; and he afterwards added, *Directions for prayer, taken out of the Church Catechiſm*, which were printed with the Expoſition. When he firſt came to his dioceſe, it was frequently ſaid by many of eminence who knew him well, that they never knew any perſon ſo able and earneſt to do good in ſuch a ſtation as he was. He had a very happy way of mixing his ſpiritual with his corporal alms. When any poor perſon begged of him, he would examine whether the party could ſay the Lord's Prayer or the Creed by heart; and he found ſo much deplorable ignorance among the grown poor people, that he feared little good was to be done upon them: But ſaid he would try, whether he could not lay

In theſe, and ſuch like duties of paſtoral care, he ſpent his time as a private Dioceſan. Nor was he leſs zealous as a guardian of the national Church in general, in oppoſing the attempts which were made in this reign to introduce Popery [*F*]. Yet he held in a manner the ſame place in the favour of King James II. as he had in the former reign, and ſome attempts were made to gain him over to the intereſt of the Popiſh party at Court; but he was inacceſſible on that ſide, however abſolutely unreſerved in his Loyalty: And of that, his conduct at the time of the Rebellion under the Duke of Monmouth ſufficiently confirmed the King; inſomuch that although he daily relieved ſome hundreds of the Rebel priſoners then in Wells, daily praying with them in perſon, his Majeſty judging that it was only out of a principle of duty to diſtreſſed brethren, to ſave them from periſhing both in body and ſoul, never ſo much as harboured any jealous thought of him [*G*]. But altho' that Prince did not miſtake his integrity, yet certainly he was miſtaken in

lay a foundation to make the next generation better. And this put him upon ſetting up many ſchools in all the great towns of his dioceſe for poor children to be taught to read and ſay their catechiſm; and about this time, and for this purpoſe, it was that he wrote and publiſhed his *Expoſition on the Church Catechiſm*. By this method and management he engaged the miniſters to be more careful in catechizing the children of their reſpective pariſhes, and they were furniſhed by him with a ſtock of neceſſary books for the uſe of children (7); and the great and good ends he at that time propoſed were ſeen and felt by the great and good ſucceſs of the charity ſchools, which became afterwards very numerous. In the ſummer time he went often to ſome great pariſh, where he would preach twice, confirm and catechize: And when he was at home on Sundays, he would have twelve poor men or women to dine with him in his hall: Always endeavouring while he fed their bodies, to comfort their ſpirits by ſome chearful diſcourſe, generally mixed with ſome uſeful inſtruction. And when they had dined, the remainder was divided among them to carry home to their families. He often deplored the condition of the poor at Wells, who were very numerous. And as he was charitably diſpoſed, ſo he was very earneſt in contriving proper expedients of relief: Among others, he thought no deſign could better anſwer all the ends of charity, than the ſetting up a work-houſe in that city; but judging it not practicable without the advice, or at leaſt the aſſiſtance, of the gentlemen, he therefore often met and conſulted with them; but not finding any ſuitable encouragement, he was forced to deſiſt. In this he had a double view, to reſcue the idle from vicious practice and converſation, and the induſtrious from the oppreſſion of the tradeſman; who to uſe his own expreſſion, *did grind the face of the poor, growing rich by their labour, and making them a very ſcanty allowance for their work* (8). Thus the good Biſhop, from the fulneſs of his concern for the diſtreſſed poor. But his aiming at this laſt deſign, if we may have leave at this diſtance to make a conjecture, was not improbably the cauſe of his miſcarrying in both: For though he, who both by his function and naturally tender and charitable diſpoſition, was the poor's advocate, had a particular eye to the inſtances of oppreſſing them, yet there can be no doubt but then as well as now the fault lay as often on the ſide of the poor. Whence it has been univerſally judged beſt to leave theſe latter ſort to the conſcience of the tradeſmen, as the moſt able to manage them. But as to the former ſort, his lordſhip's judgment has been ſince abundantly approved, as we ſee by the prodigious number of work-houſes erected upon his model. There was indeed another thing which might be the principal cauſe of his failing in this attempt, viz. the little aſſiſtance he was for ſome time able to contribute towards it. It is certain his own purſe was very ſhort, inſomuch that he could but ſcantily ſupply handſome neceſſaries for himſelf; and we are aſſured, that at the time of his being made Biſhop, Mr Francis Morley, nephew to the Biſhop of that name, knowing how little he had provided for ſuch an expence, as attends the entry and continuance in ſuch a chair, moſt generouſly offered and lent him a conſiderable ſum to defray his expences, and furniſh him with an equipage as this ſtation required; which he would often mention with a grateful acknowledgment, expreſſing a particular ſatisfaction when he found himſelf in a condition to diſcharge the debt; and he was often obſerved by one of his chaplains * to complain, that for this very reaſon no great matter was to be expected from him, as thinking himſelf obliged to be juſt, before he could be charitable (9).

(7) He gave likewiſe at ſeveral times, both before and after his deprivation, ſeveral large catalogues to places that were populous, and had parochial libraries within his own dioceſe. Ibid. p. 13, 14. and 23, 24.

(8) Ibid. p. 15, 16.

* Dr Thomas Cheyney, who communicated ſeveral particulars of the Biſhop's Life.

(9) Ibid. p. 20, 21.

[*F*] *He oppoſed the attempts to introduce Popery.*] As the Biſhop took no part in the famous Popiſh controverſy, the expreſſion in the text, at firſt reading, may perhaps incur the cenſure of partiality; but that reflection will vaniſh upon a clearer inſight into his conduct. His temper was not turned to diſpute; which alſo with how much ſuperior learning and ſkill ſoever it was carried on by the Proteſtants, yet he could not but ſee tended more to inflame and widen, than to heal and unite the breach with the Papiſts; he therefore choſe a method which was more agreeable to his nature, and more immediately ſuited to the genius and ſpirit of Chriſtianity; the firſt principle of which is univerſal philanthropy, and this he made the ruling principle of his conduct out of the pulpit, and in the pulpit to impreſs and enforce the practice of it was the main buſineſs of his ſermons, wherein having by a truly religious oratory got poſſeſſion of the affections of his audience, he frequently took occaſion, as the ſubject led him, to mark and confute ſome of the errors of Popery (10); nor did he ſpare, when his duty to the Church of England more eſpecially called for it, to take the opportunity of the royal pulpit to ſet before the Court their injurious and unmanly politicks, in projecting a coalition and combination with the ſectaries againſt it. Yet theſe things, though neceſſary not to be left undone, he eſteemed only as the leſſer duties of the goſpel: Accordingly the King having not given his preſence at divine ſervice when this laſt ſermon was preached, it was miſrepreſented by ſome of the Court to him, and he ſent for the Biſhop, and cloſeted him on the occaſion, but received nothing in anſwer except this fatherly reprimand, *That if his Majeſty had not neglected his own duty of being preſent, his enemies had miſſed this opportunity of accuſing him*; whereupon he was diſmiſſed. Thus he happily at this time reaped the fruits of his own behaviour, and as he dealt dutifully, reſpectfully, and affectionately to the King, ſo the King dealt gently with him, which he was no doubt the more inclined to, as he muſt have been informed that the ſubject of this diſcourſe was the doctrine of Paſſive Obedience, which was very warmly inculcated throughout the whole; patience and penitence being repreſented as the only juſtifiable weapons to be made uſe of by the Church under perſecution (11). This, and ſome other ſuch like reaſons, ſeems to have drawn that ill-natured remark from Biſhop Burnet, who having told us that the Biſhop was a man of an aſcetic courſe of life, and yet of a very lively temper, but too hot and ſudden, proceeds in theſe terms. 'He had a very edifying way of preaching, but it was more apt to move the paſſions than to inſtruct, ſo that his ſermons were rather beautiful than ſolid; yet his way in them was very taking (12).

(10) See his ſermon preached at the King's chapel at Whitehall, in Lent 1685. on Dan. x. 11. *Daniel, a man greatly beloved.* At the end of the Account of his Life, p. 57, & ſeqq.

(11) Ibid. p. 17, 18. where this ſermon is alſo printed, p. 99, & ſeqq. under the title of a ſermon preached on Paſſion-Sunday.

[*G*] *With regard to the Duke of Monmouth, his Majeſty harboured no jealous thought of him.*] On the contrary, he was ordered to attend the duke before his execution, concerning which Biſhop Burnet gives the following account. 'Turner and Ken, the Biſhops of 'Ely and Bath and Wells, were ordered to wait on 'him [Duke of Monmouth]; but he called for Tenniſon. The Biſhops tried to convince him of the ſin 'of Rebellion; he anſwered that he was ſorry for the 'blood that was ſhed in it, but he did not ſeem to repent of the deſign; yet he confeſſed that his father 'had often told him, that there was no truth in the 'report of his having married his mother.' The Hiſtorian then relates a converſation that paſſed between the Duke and his wife; after which he proceeds in theſe terms,

(12) Burnet's Hiſtory of his own Times, Vol. I. B. iii. fol. edit.

in him on a much more fatal occaſion, for when the declaration of Indulgence was ſtrictly commanded to be read, by virtue of a power claimed by the King of diſpenſing with the penal laws, then this Biſhop was one of the ſeven who openly oppoſed the reading it, ſuppreſſed thoſe which were ſent to him to be read in his dioceſe, and petitioned his Majeſty not to purſue what was likely to prove ſo prejudicial both to Church and State. This being called a treaſonable petition, he was committed to the Tower, in order to a tryal; upon which he was cleared by the Jury (*b b*). But though he dared to diſobey his Sovereign, in order to preſerve the purity of his religion, and the care of his flock was always neareſt his heart; yet rather than violate his conſcience by transferring his allegiance, he choſe to leave both himſelf and them to the protection of the Almighty. And when the Prince of Orange came over, and the Revolution was grounded on the abdication of King James, the Biſhop retired, and as ſoon as King William was ſeated on the throne, and the new oath of allegiance was required, he for his refuſal being deprived by the ſtate, did relinquiſh his revenue, though not his cure, with as clear a conſcience, and as generous a mind as that by which it was once beſtowed on him (*c c*) [*H*]. After his deprivation he reſided at Long-leat, a ſeat of the Lord Viſcount Weymouth in Wiltſhire

(*b b*) See the trial of the Seven Biſhops.

(*c c*) Short Account, &c. p. 20.

terms. 'The Biſhops continued ſtill to preſs on him a 'deep ſenſe of the ſin of rebellion, at which he grew 'ſo uneaſy, that he deſired them to ſpeak to him of 'other matters. They next charged him with the 'ſin of living as he had done with Lady Wentworth. 'In regard to that he juſtified himſelf, he had married 'his Ducheſs too young to give a true conſent. He 'ſaid that lady was a pious worthy woman, and that 'he had never lived ſo well in all reſpects, as ſince 'his engagements with her. All the pains they took 'to convince him of the unlawfulneſs of that courſe 'of life had no effect.' He concludes the ſtory with the following reflection. 'They [the Biſhops] did 'certainly very well in diſcharging their conſciences, 'and ſpeaking ſo plainly to him; but they did very 'ill to talk ſo much of the matter, and to make it ſo 'public as they did: For divines ought not to repeat 'what they ſay to dying penitents, no more than what 'the penitents ſay to them. By this means the Duke 'of Monmouth had little ſatisfaction in them, and 'they had as little in him. He was much better pleaſed 'with Dr Teniſon, who did very plainly ſpeak to him 'with relation to his public actings, and to his courſe 'of life, but he did it in a ſofter and leſs peremptory 'manner, and having ſaid all that he thought proper, 'he left thoſe points in which he ſaw he could not 'convince him to his own conſcience, and turned to 'other points fit to be laid before a dying man (13).' Thus that Reverend Hiſtorian. And in the ſame ſpirit of defamation we are told by another, that *Dr Ken teazed the Duke of Monmouth in vain on the ſcaffold to profeſs the doctrine of Paſſive Obedience* (14). This cenſure being in print at the time of writing the Doctor's life, that author having repeated the words makes the following declaration: 'I think it proper in this place 'boldly to affirm, that our Biſhop (for ſuch he was at 'that time, and did attend on the ſcaffold) never acted 'or aſſiſted there, but in the devotional part only. 'And this, though a negative, may be proved to ſatiſ'faction (15).' The truth is, it was the Biſhop of Ely, Dr Turner, and not Dr Ken, that talked on the ſcaffold to the Duke on that ſubject (16). This then was an eaſy miſtake: But the ſame excuſe cannot be made for Biſhop Burnet, who was ſo ſtrictly blinded by malice, as not to ſee the palpable contradiction which he was betrayed into in order to gratify it; otherwiſe he had too good an underſtanding to repreſent the Duke of Monmouth as a dying penitent, and as dying impenitent in the ſame paragraph. But the ſolemn charge of the Biſhops failing in their regard to the ſacredneſs of their function muſt have been dropped, without the ſuppoſition of a dying penitent, which it was therefore neceſſary to advance, notwithſtanding the whole ſubject of the public talk which conſtituted that charge, conſiſted in bewailing the Duke, on account of his dying impenitent.

(13) Ibid. Vol. I. p. 645.

(14) Secret Hiſtory of Europe, Part ii. p. 27.

(15) Short Account, &c. p. 38.

(16) See below in remark [*Q*].

[*H*] *Upon his deprivation he reſigned his revenue, but not his cure, with a clear conſcience.*] No ſteps in our author's life have been more miſrepreſented than thoſe he took at the Revolution; wherefore the preſent remark will be properly employed in ſetting his whole conduct at this critical juncture in its true light. We ſhall begin with the author of the Secret Hiſtory of Europe, already cited upon another occaſion, who relates very confidently, that our Biſhop's name was among thoſe which were ſubſcribed to the invitation of the Prince of Orange (17). Had this author produced any ſuch ſubſcription, the fact could not have been denied, but no ſuch ſubſcription being ever any where produced, we ought to ſubſcribe to what the writer of his life aſſerts on this occaſion, that there were very ſtrong arguments to be urged, that he never had any the leaſt hand in that matter (18). Yet this, if he had done it, in the view of redreſſing grievances, was conſiſtent enough with his allegiance to King James. But Biſhop Burnet, who never does theſe things by halves, goes roundly to work, in the following terms. 'Ken, ſays 'he, was a man of a warm imagination, and at the 'time of the King's firſt landing, he declared heartily 'for him, and adviſed all the gentlemen that he ſaw 'to go and join with him: But during the debate of 'the Convention, he went with great heat into the 'notion of a Prince Regent; and now upon the call 'of the houſe [to take the oaths to King William] he 'withdrew into his dioceſe. He changed his mind 'again, and wrote a paper, perſuading the clergy to 'take the oaths, which he ſhewed to Dr Whitby, '[author of the Annotation on the New Teſtament, 'and Precentor of Saliſbury] who read it, as the 'Doctor has told me often. His chaplain Dr Eyre, 'continues the Right Reverend Hiſtorian, did alſo 'tell me, that he came with him to London, where 'at firſt, he ſaid, he was reſolved to take the oaths; 'but the firſt day after he came to town, he was pre'vailed on to change his mind; and he has continued 'ever ſince in a very warm oppoſition to the govern'ment (19).' The reader will perhaps be ſurprized to find this paſſage ſtanding uncorrected in that hiſtory, after he has peruſed the following letters which paſſed between the author of it and Biſhop Ken, juſt before his ſuſpenſion (20). The firſt was wrote by Dr Burnet, then Biſhop of Saliſbury, as follows.

(17) Secret Hiſtory of Europe, p. 46 to p. 51.

(18) Short Account, &c. p. 39.

(19) Burnet's Hiſtory of his own Times, Vol. I. p. 617. folio edit.

(20) Which was on the 13th of that month. Salmon's Chron. Hiſt. p. 198. firſt edit.

'My Lord,

'This gentleman who is preſented to a living in 'your lordſhip's dioceſe, came to me to receive inſti'tution, but I have declined the doing of it, and ſo 'have ſent him over to your lordſhip, that you being 'ſatisfied with relation to him, may order your chan'cellor to do it. I was willing to lay hold on this oc'caſion to let your lordſhip know, that I intend to 'make no other uſe of the commiſſion that was ſent 'me, than to obey any orders that you may ſend me, 'in ſuch things as my hand and ſeal may be neceſſary. 'I am extremely concerned to ſee your lordſhip ſo un'happily poſſeſſed with that, which is likely to prove 'ſo fatal to the Church, if we are deprived of one 'that has ſerved in it with ſo much honour as you have 'done; eſpecially at ſuch a time, when there are fair 'hopes of reforming of ſeveral abuſes. I am the 'more amazed to find your lordſhip ſo poſitive, be'cauſe ſome have told myſelf, that you had adviſed 'them to take that which you refuſe yourſelf: And 'others have told me, that they read a paſtoral letter 'which you had prepared for your dioceſe, and were 'reſolved to print it when you went to London. Your 'lordſhip it ſeems changed your mind there, which 'gave great advantages to thoſe who were ſo ſevere as 'to ſay, that there was ſomewhat elſe than conſcience 'at the bottom. I take the liberty to write this free'ly to your lordſhip, for I don't deny that I am in 'ſome pain, 'till I know whether it is true or not. I

Wiltſhire [*I*], whence he ſometimes made a viſit to his nephew Mr Iſaac Walton at Saliſbury

' pray God to prevent a new breach in a Church, which ' *has ſuffered ſo ſeverely under the old one.*

' *My Lord,*

' *Your Lordſhip's moſt faithful*

' Servant and Brother,

Sarum, Oct. 1.

' GI. SARUM.'

To this Biſhop Ken returned the following anſwer.

All glory be to God (21).

' *My Lord,*

' *I am obliged to your lordſhip for the continued* ' *concern you expreſs for me, and for the kind free-*' dom you are pleaſed to take with me; and though I ' have already in publick fully declared my mind to ' my dioceſe concerning the oath, to prevent my be-' ing miſunderſtood; yet ſince you ſeem to expect it ' of me, I will give ſuch an account, which if it does ' not ſatisfy your lordſhip, will at leaſt ſatisfy myſelf. ' I dare aſſure you, I never adviſed any one to take ' the oath; though ſome who came to talk inſidiouſly ' with me, may have raiſed ſuch a report: So far have ' I been from it, that I never would adminiſter it to ' any one perſon whom I was to collate. And there-' fore before the act took place, I gave a particular ' commiſſion to my chancellor, who himſelf did not ' ſcruple it; ſo that he was authorized, not only to ' inſtitute, but alſo to collate in my ſtead*. If any ' came to diſcourſe with me about the oath, I uſually ' told them I durſt not take it myſelf. I told them ' my reaſons, if they urged me to it, and were of my ' dioceſe: And then remitted them to their ſtudy and ' prayers for farther directions. 'Tis true, having ' been ſcandalized at many perſons of our own coat, ' who for ſeveral years together preached up paſſive o-' bedience to a much greater height than ever I did, ' it being a ſubject with which I very rarely meddled, ' and on a ſudden, without the leaſt acknowledgment ' of their paſt error, preached and acted the quite ' contrary; I did prepare a paſtoral letter, which if ' I had ſeen reaſon to alter my judgment, I thought ' to have publiſhed; at leaſt that part of it on which ' I laid the greateſt ſtreſs, to juſtify my conduct to my ' flock; and before I went to London, I told ſome of ' my friends, that if THAT (22) proved true, which ' was affirmed to us with all imaginable aſſurances, and ' which I think more proper for diſcourſe than a let-' ter, it would be an inducement to me to comply; ' but when I came to town I found it was falſe, and ' without being influenced by any one, or making any ' words of it, I burnt my paper, and adhered to my ' former opinion. If this is to be called change of ' mind, and a change ſo criminal, that people who are ' very diſcerning, and know my own heart better than ' myſelf, have pronounced ſentence upon me, That ' there is ſomething elſe than conſcience at the bottom, ' I am much afraid that ſome of theſe who cenſure ' me, may be chargeable with more notorious changes ' than that; whether more conſcientious or no, God ' only is the judge. If your lordſhip gives credit to ' the many miſrepreſentations which are made of me, ' and which I being ſo uſed to can eaſily diſregard, ' you may naturally enough be in pain for me: For ' to ſee one of your brethren throwing himſelf head-' long into a wilful deprivation, not only of honour and ' of income, but of a good conſcience alſo, are par-' ticulars, out of which may be framed an idea very ' deplorable. But though I do daily in many things ' betray great infirmity, I thank God, I cannot accuſe ' myſelf of any inſincerity; ſo that deprivation will ' not reach my conſcience, and I am in no pain at all ' for myſelf. I perceive, that after we have been ' ſufficiently ridiculed, the laſt mortal ſtab deſigned to ' be given us, is to expoſe us to the world for men of ' no conſcience. And if God is pleaſed to permit it, ' his moſt holy will be done, though what that parti-' cular paſſion of corrupt nature it is, which lies at the ' bottom, and which we gratify in loſing all we have, ' will be hard to determine. God grant ſuch reproaches ' as theſe may not revert on the authors. I heartily ' join with your lordſhip in your deſires for the peace ' *of this Church*; and *I* ſhall conceive great hopes, ' *that God will have compaſſion of her*, if *I* ſee that ' ſhe compaſſionates and ſupports her ſiſter of Scotland. ' I beſeech God to make you an inſtrument to promote ' that peace and that charity (23). I myſelf can only ' contribute to both by my prayers and by my depre-' cations againſt ſchiſm and againſt ſacrilege.

' My Lord,

' Your Lordſhip's very faithful

Oct. 5, 1689.

' Servant and Brother,

' Tho. Bath & Wells.'

We need not obſerve, that theſe two letters are a proper contraſt to each other; the crafty malice that lurks in the firſt could never have been dragged out into a fuller light, than that which reflects upon it from the inimitable fortitude and undiſguiſed ſimplicity of the latter, which in its turn too is ſeen to advantage, by comparing it with the former. The date of Biſhop Ken's letter ſhews that it was wrote after he had retired to his dioceſe from the Houſe of Peers, to avoid taking the oaths upon the call of that houſe. While he ſtaid in town, he lodged with his old friend Dr Hooper, then rector of Lambeth, who had daily and earneſtly diſcourſed him on the ſubject of compliance with the oaths; to whom he at laſt expreſſed himſelf thus: ' *I queſtion not but you, and ſeveral others, have* ' *taken the oaths with as good a conſcience as myſelf* ' *ſhall refuſe them, and ſometimes you have almoſt per-*' *ſuaded me to comply by the arguments you have uſed*; ' *but I beg you to urge them no further*; *for ſhould I* ' *be perſuaded to comply, and after ſee reaſon to repent,* ' *you would make me the moſt miſerable man in the world.*

(24) About this time he was alſo remarked for ſhewing himſelf openly, thoughtleſs of any danger that might attend his perſon. This was particularly taken notice of by Archbiſhop Sancroft, who, ſoon after his leaving Lambeth, in a letter to a friend, wrote thus, ' It ' grieves me to have miſſed (when I was ſo nigh it) the ' ſeeing of my Reverend Brother of Bath and Wells. ' I am not ſurprized to hear that his innocency and ' courage was ſo bold, as to appear openly, but am, I ' confeſs, that he did it ſafely (25).'

[*I*] *He reſided at Lord Weymouth's ſeat in Wiltſhire.*] Notwithſtanding our Biſhop cannot be ſuppoſed not to have foreſeen for ſome time the probability of the change which happened at the Revolution, and muſt have been ſenſible what would be his own fate, as well as many others therein; yet had he none of that wiſdom of this world which governs thoſe who never fail to provide againſt a rainy day; ſo far from it, that on the other hand, if there can be an extravagant in good works, he was ſuch in that moſt excellent gift of charity. His whole fortune lying in his preferments, thoſe of his relations who were neceſſitous, but whom he would never regard the leſs for their being ſo, were a continual drain upon his revenue; and he ſeemed to joy with thoſe who lived in more plenty, not more for their own well-being, than that thereby he was at liberty to diſperſe the remainder of his income to neceſſitous ſtrangers; which he always did with ſo open a bounty, that he became a common father to all the ſons and daughters of affliction. His charity was ſo extenſive, that not long before the Revolution, having received from his biſhopric a fine of 4000 *l.* great part of it was given to the French Proteſtants; and ſo little regard had he to future contingencies, th on his deprivation, which was not long after, all his ef ts, after the ſale of every thing, excepting his l ks (which he never ſold), would raiſe no more than ſeven hundred pounds. And this, with the generoſity of his noble friend and eminent benefactor mentioned above, procured him a clear annuity of fourſcore pounds, which he received in quarterly payments of twenty pounds from that noble peer, wh made it a rent charge on part of his own eſtate: Which, among ma y other and greater favours, is thus thankfully acknowledged in the laſt will and teſtament of our grateful Biſhop, viz. ' *I leave and bequeath to the Right Hon. Thomas* ' *Lord Viſcount Weymouth, in caſe he outlives me, all* ' *my*

(21) This was *his conſtant preſcript to all his letters and papers. Short Account, &c. p. 4.*

* Bp Burnet has paſſed his cenſure too upon this proceeding in *Vol. I.* of his Hiſtory.

(22) The Biſhop was about this time conſtantly aſſured, that King James had by ſome ſpecial inſtrument made over the kingdom of Ireland to the French King.

(23) Epiſcopacy had been abo iſhed by an act of the Scots Parliament July 22 before; but ſeveral methods of accommodating matters between the Epiſcopalians and the Preſbyterians, were at this time in deliberat on at the Engliſh Court. See the Hiſtory of the Church of Scotland.

(24) Short Account, &c. p. 39, 40.

lisbury (*d d*). In which church that kinſman was then poſſeſſed of a Prebend [*K*]. The Biſhop had always a great reliſh for divine poeſy, and in this retirement he compoſed many excellent, uſeful, and pious pieces; eſpecially after his cholic pains rendered him incapable of more ſerious ſtudy, this favourite entertainment ſerved in ſome meaſure to palliate the acuteneſs of his pain [*L*]. So cloſe was his application to theſe ſtudies, and ſo much was his mind bent upon quietneſs, that as he meddled not with any of the diſputes or attempts of his party [*M*], ſo he was never once diſturbed in that quiet enjoyment of himſelf, and never ſuſpected of any ill deſign [*N*]. Though he did not concur in opinion with thoſe Nonjurors,

(*dd*) Preface to The Complaints of the Church, &c. edit. 1711, 8vo.

* *my books of ſtudy, but the biſhop has not the duplicates, as a memorial of my gratitude for his ſignal and continued favours.* He likewiſe dedicated his poems to his lordſhip, as the fruits of his favours. The dedication-poem conſiſting of ſeveral ſtanzas; the two firſt of which run thus.

I.

'I, if the muſe may with the greateſt (26) dare,
'In griefs, not gifts or graces, will compare;
'Forc'd from my flock by uncanonic heat,
'In ſinging hymns thus ſolace my retreat:
'Retreat, in which when by the world depriv'd,
'I was chiefly you, my lord, who me reviv'd.

(26) Viz. Gregory Nazianzen; the plan of this poem being formed upon the affinity of his caſe to that of Gregory, when perſecuted by Julian the Apoſtate.

II.

'When I, my lord, cruſh'd by powerful might,
'No cottage had where to direct my flight;
'Kind Heav'n me with a friend illuſtrious bleſt,
'Who gives me ſhelter, affluence, and reſt,
'In this alone, I Gregory outdo,
'That I much happier refuge have in you;
'Where to my cloſet I to hymn retire,
'On this ſide Heav'n have nothing to deſire (27).'

(27) His Works, &c. Vol. I. publiſhed in 1721, 8vo.

[*K*] *He ſometimes viſited Mr Walton at Saliſbury.*] He was with this relation at Saliſbury when the great ſtorm happened in November 1703, whereby, it is ſaid, a ſtack of chimnies was blown down, and broke into his bedchamber, but without doing him any hurt; which is mentioned, becauſe his ſucceſſor at Wells, Dr Kidder, was killed by the fall of a ſtack of chimnies into his bed-chamber, blown down by the ſame ſtorm (28).

(28) Preface to Complaints of the Church, &c. ubi ſupra.

[*L*] *He diverted his pain with making verſes.*] We have this fact from his own pen, in the dedication already mentioned, of which the third ſtanza conſiſts of the following lines.

'Tis now two annual weeks and more ſince pain
'Within my tender nerves began to reign.
'Between my couch and chair my days I waſte,
'And of a book have but evanid taſte,
'As thirſty deer at Nile's refreſhing brink,
'E'er he forſakes his bed, by ſnatches drink;
'Still rolling to and fro their timorous eyes,
'Leaſt the Leviathan ſhould them ſurprize;
'Thus I on authors ſup, can make no ſtay,
'Pain from attention forces me away.
'Pain haunting me, I court the ſacred muſe,
'Verſe is the only laudanum I uſe:
'Verſe, in which harmony and picture join'd,
'My dolours damp, and recreate my mind.'

[*M*] *He meddled not in any of the diſputes of his party.*] 'Tis not improbable that he had been often ſolicited to engage in theſe, eſpecially ſince we find his particular friend, Dr Turner, the deprived Biſhop of Ely, ſo deeply involved therein. But our author, it ſeems, cared for none of thoſe things, and he never ſpoke more ſincerely the truth from his heart, than we ſee it expreſſed in the following lines.

'I gladly wars eccleſiaſtic fly,
'Where'er contentious ſpirits I deſcry;
'Eas'd of my ſacred load, I live content;
'In hymns, not in diſputes, my paſſion vent. (29)

(29) Dedication, &c. ſtanza 8.

[*N*] *He never was diſturbed in that quiet, &c.*] He was indeed once ſent for to appear before the Privy-Council in the year 1696, an account of which we have from himſelf as follows. 'All glory be to God. After the favourable hearing which this day the Lords 'of the moſt honourable Privy-Council gave me, Mr 'Bridgman came out to me to tell me, that their 'Lordſhips expected a copy of my anſwers, which 'as far as I can recollect, I here offer to their Lord-'ſhips.

'The printed paper, ſubſcribed by the deprived 'Biſhops, to beg the alms of charitable people, being 'ſhewed me, I was aſked,

'*Did you ſubſcribe this paper?*

Anſ. 'My Lords, I thank God I did, and it had a 'very happy effect; for the will of my bleſſed Re-'deemer was fulfilled by it, and what we were not 'able to do ourſelves, was done by others; the hun-'gry were fed, and the naked were cloathed; and to 'feed the hungry, to cloath the naked, and to viſit 'thoſe who are ſick, or in priſon, is that plea, which 'all your lordſhips, as well as I, as far as you have 'had opportunities, muſt make for yourſelves at the 'great day; and that which you muſt all plead at 'God's tribunal for your eternal abſolution, ſhall not 'I hope, be made my condemnation here.

'It was then ſaid to this purpoſe; *No one here 'condemns charity, but the way you have taken to pro-'cure it, your paper is illegal.*

Anſ. 'My Lords, I can plead to the evangelical 'part: I am no lawyer, but ſhall went lawyers to 'plead to that; and I have been very well aſſured, that 'it is legal. My Lords, I will ſincerely give your 'Lordſhips an account of the part I had in it. The 'firſt perſon who propoſed it to me was Mr Kettlewell, 'that holy man, who is now with God: And after 'ſome time it was brought to this form, and I ſub-'ſcribed it, and then went into the country, to my re-'tirement in an obſcure village, where I live above 'the ſuſpicion of giving any the leaſt umbrage to the 'government.

'My Lords, I was not active in making collections 'in the country, where there are but few ſuch objects 'of charity; but good people, of their own accord, 'ſent me towards fourſcore pounds, of which about 'one half is ſtill in my hands.

'I beg your Lordſhips to obſerve this clauſe in our 'paper, *As far as in law we may*; and to receive 'ſuch charity is I preſume, *which in law I may*; and 'to diſtribute it is a thing alſo, *which in law I may.*

'It was objected to this purpoſe: *This money has 'been abuſed, and given to very ill and immoral men; 'and particularly to one, who goes in a gown one day, 'and in a blue ſilk waiſtcoat another.*

Anſ. 'My Lords, to give to an ill man may be a 'miſtake and no crime, unleſs what was given him, 'was given to an ill purpoſe; nay, to give to an ill 'man and knowingly is our duty, if that ill man wants 'neceſſaries of life, for as long as God's patience and 'forbearance indulges that ill man life to lead him to 'repentance, we ought to ſupport that life God in-'dulges him, hoping for the happy effect of it.

'My Lords, in King James's time there were about 'a thouſand, or more, impriſoned in my dioceſe, who 'were engaged in the rebellion of the Duke of Mon-'mouth; and many of them were ſuch which I had 'reaſon to believe to be ill men, and void of all reli-'gion; and yet for all that I thought it my duty to 'relieve them. 'Tis well known to the dioceſe, that 'I viſited them night and day, and, I thank God, I 'ſupplied them with neceſſaries myſelf as far as I 'could, and encouraged others to do the ſame; and 'yet King James never found the leaſt fault with me. 'And if I am now charged with miſapplying what 'was given, I beg of your Lordſhips, that St Paul's 'apoſtolical rule may be obſerved, *Againſt an elder 'receive not an accuſation, but before two or three wit-*

'*neſſes;*

Nonjurors, who were for continuing a ſeparation from the eſtabliſhed Church by private conſecrations among themſelves [O], yet he looked on the ſpiritual relation to his dioceſe to be ſtill in full force during the life of his firſt ſucceſſor Dr Kidder [P]; but after his deceaſe in 1703, upon the nomination of Dr Hooper to the dioceſe by Q. Anne, he requeſted that gentleman to accept it, and afterwards ſubſcribed himſelf late Biſhop of Bath and Wells [Q], and the Queen ſettled upon him a penſion of two hundred pounds a year, which

'*neſſes*; for I am ſure none can teſtify that againſt me.
'What I gave, I gave in the country, and I gave to
'none but thoſe who did both want and deſerve it:
'The laſt that I gave, was to two poor widows of de-
'ceaſed clergymen, one whereof was left with ſix,
'the other with ſeven ſmall children.

'It was ſaid to this purpoſe: *You are not charged*
'*yourſelf with giving to ill men, though it has been*
'*done by others; but the paper comes out with a pre-*
'*tence of authority, and it is illegal, and in the na-*
'*ture of a Brief; and if ſuch practices are permitted,*
'*private men may ſuperſede all the briefs granted by the*
'*King.*

'My Lords, I muſt beg your pardon, if I cannot
'give a full anſwer to this; I am no lawyer, and am
'not prepared to argue it in law.

'It was further objected to this purpoſe: *By ſend-*
'*ing forth this paper, you have uſurped eccleſiaſtical*
'*juriſdiction.*

Anſ. 'My Lords, I never heard, that begging
'was a part of eccleſiaſtical juriſdiction; and in this
'paper we are only beggars, which privilege I hope
'may be allowed us.

'I make no doubt but your Lordſhips may have had
'ſtrange miſinformations concerning this paper; but
'having ſincerely told you what part I had in it, I
'humbly ſubmit myſelf to your Lordſhips juſtice.

'I preſume your Lordſhips will come to no imme-
'diate reſolution concerning me; and having volun-
'tarily ſurrendered myſelf, and the warrant never hav-
'ing been ſerved on me, 'till I had twice attended
'here, this being the third time, and my health being
'infirm, I beg this favour of your Lordſhips, that I
'may return to my ſiſter's houſe, where I have hither-
'to lodged, which is a place the meſſenger knows
'well, and that I may be no otherwiſe confined, 'till
'I have received your Lordſhips final reſolution.

'This favour your Lordſhips were pleaſed very rea-
'dily to grant me; for which I return my humble ac-
'knowledgments, beſeeching God to be gracious to
'your Lordſhips.

'Tho. Bath and Wells,
'deprived (30).

'April 28, 1696.

(30) Short Account, p. 48 to 56 inclusive.

[O] *He was againſt continuing the ſeparation, &c.*] This appears from ſeveral letters of his upon that ſubject, written in anſwer to the applications that were frequently made to him, as to a perſon who was held in the higheſt eſteem among his party. One of theſe was ſent to Mr Robert Nelſon, who having applied to him on the occaſion, received an anſwer, which we ſhall preſent to the reader, becauſe it ſhews how greatly his opinion was revered by the very beſt of his nonjuring brethren, and becauſe it diſcovers his opinion and practice in another point, which had bred a diviſion among theſe ſectaries. It begins thus,

'Sir,

'In order to ſatisfy your enquiry, I can acquaint
'you, that I have received a letter from Biſhop Ken,
'who aſſures me, *That he was always againſt that*
'*practice, which he foreſaw would perpetuate the*
'*ſchiſm, and declared againſt it, and that he had act-*
'*ed accordingly, and would not have laid it at his door,*
'*having made a receſs, as he ſays, for a much more*
'*worthy perſon: And he apprehends, it was always*
'*the judgment of his brethren, that the death of the*
'*canonical Biſhops would render the invaders canonical,*
'*in regard the ſchiſm is not to laſt always.*'

Afterwards his lordſhip adds this; '*I preſume Mr*
'*Dodwell, and others with him, go to church, though*
'*I myſelf do not, being a public perſon; but to commu-*
'*nicate with my ſucceſſor in that part of the office,*
'*which is unexceptionable, I ſhould make no difficulty.*

'This letter I communicated to Mr Dodwell, as
'ſoon as he came to town, which he thought clear
'enough for diſcontinuing the ſchiſm, and I ſuppoſe
'in a ſhort time he may have one to the ſame pur-
'poſe (31).'

[P] *He deemed himſelf biſhop of his dioceſe during the life of Dr Kidder.*] We have already ſeen Dr Burnet remarking that our biſhop ever after his reſolution not to take the oaths to King William, continued in a very warm oppoſition to the government; but this can only be underſtood with regard to the uſe of all ſuch ſpiritual means as were not illegal; for it has been fully ſhewn, that as to any other oppoſition he meddled not. In the firſt ſenſe he thought himſelf obliged to the ſame paſtoral care over his dioceſe as before his deprivation, and the more ſo as he had no good opinion of the principles of the invader, as he called his ſucceſſor Dr Kidder. To this purpoſe, we find him expreſſing himſelf with great warmth, in the dedication already cited of his poems; the fifth ſtanza whereof run thus.

(31) This letter is dated Feb. 21, 1703-10, and printed in Dr Marſhall's Defence of our Conſtitution, &c. Lond. 1717, 8vo. in the appendix.

'Bleſs'd Gregory, from his flock when forc'd a-
way,
'Reſolv'd, in verſe, truths heav'nly to diſplay.
'I, by a ſtranger, from my fold exil'd,
'While my flock ſtrays on the unhurdled wild,
'Still for my charge a tender care retain,
'Expos'd to Latitudinarian bane.
'Like Gregory, of bleſſed Paul I learn to teach,
'And warn in hymns all ſouls within my reach.'

This is temperate enough, but he grew warmer by thinking and writing on the ſubject; and in ſtanza the tenth, againſt thoſe who complied with the Revolution, after they had preached up Paſſive Obedience in higher terms, as he obſerves on another occaſion (22), than ever he did, he breaks out into the following exceſs of heat,

(32) Viz. in his Anſwer to Bp Burnet in remark [K].

'To his dear flock, when Gregory had adieu,
'He warn'd them ſeal baptiſmal to renew,
'And rather die glad martyrs at the ſtake,
'Than the depoſitum he left forſake.
'With like, tho' with inferior, ſacred heat,
'The ſame requeſt I to my flock repeat.
'Verſatile prieſts may flatter laick might,
'For lucre may invade canonic right.
'For rule of faith Leviathan inſtil,
'And proſtitute God's truth to human will.
'Wolves on the vitals of their faith will pray;
'Their ſafety is, their ſhepherd to obey.'

[Q] *He deſired Dr Hooper to accept the biſhoprick, &c.*] We have had occaſion more than once to mention this worthy friend of Dr Ken, and as he was likewiſe one of the brighteſt ſtars in the Engliſh hierarchy, this memoir may be thought deficient if he be let paſs without ſome more particular notice, which is therefore given as follows. Dr George Hooper had his birth at Grimley in Worceſterſhire, whence his father removed for the ſake of his better education to Weſtminſter, and ſending him to that ſchool, he became King's ſcholar, and from that ſtudent of Chriſt-Church in Oxford in 1656, where he took both his degrees in arts at the regular times (33), and diſtinguiſhed himſelf above his contemporaries by his ſuperior knowledge in philoſophy, mathematics, Greek and Roman antiquities, and the oriental languages. In 1672 he became fellow-chaplain with Dr Ken to Biſhop Morley, who gave him the rectory of Havant, but that being an unhealthy ſituation, he changed it for Woodhey, which was reſigned probably with that view by Dr Ken. In 1673 he proceeded Bachelor of Divinity (34), and not long after removed to Lambeth, being made chaplain to Archbiſhop Sheldon (35), who had begged this favour of the Biſhop of Wincheſter, and who in

1675

which was punctually paid out of the Treasury as long as he lived (*e e*). He had been afflicted many years with severe cholic pains (*f f*), and at length was observed to make bloody

(*e e*) The Queen often complained that it was too little for his thanks, which he dutifully sent her every year upon the receipt of it. Short Account, p. 47.

(*f f*) He was seized with them about the year 1696. See the two first lines of the dedication to his Poems, stanza 3. in remark [L].

1675 gave him the rectory of Lambeth, and afterwards the Precentorship of Exeter, an option of his Grace's. In 1677, he commenced Doctor in Divinity (36), and the same year being made almoner to the Princess of Orange, he crossed the sea to Holland, where, at the request of her Royal Highness, he regulated her chapel according to the usage of the Church of England. After one year's attendance, he repassed the sea, in order to compleat his marriage, the treaty for which had been set on foot before his departure. This done, he went back to her Highness, who had obtained a promise from him to that purpose, but after a stay of about eight months, she consented to his return home. Upon the death of Dr Allestree in 1680, he was offered the Divinity Professorship at Oxford, which he declined, but was made King's chaplain about the same time. In 1685, by the King's command, as well as his friend Dr Ken, he attended the Duke of Monmouth, and had much free conversation with him in the Tower both the evening before, and in the morning of the day of his execution (37). The following year he took a share in the popish controversy (38). In 1691 he succeeded Dr Sharp in the Deanery of Canterbury. As he never made any application for preferment, Queen Mary surprized him with this offer, for which she took the opportunity of the absence of her consort in Holland. Upon this promotion he resigned the rectory of Woodhey, notwithstanding the Queen's express order to keep both his livings: he was also made chaplain to their Majesties the same year (39). But though both the royal parents of the Duke of Glocester pressed very earnestly to have him for his Royal Highness's preceptor in 1698, and no pretence of any objection was ever made against him, yet the King appointed Bishop Burnet for that service (40). In 1701 he was chosen Prolocutor to the lower house of Convocation, and the same year was offered the Primacy of Ireland by the Earl of Rochester, then Lord Lieutenant there. Soon after the accession of Queen Anne to the throne, the following year she nominated him to the Bishoprick of St Asaph. This he accepted, though against his inclination, and in half a year afterwards receiving a like command to remove to that of Bath and Wells, he earnestly requested her Majesty to dispense with the order, not only on account of the sudden charge of such a translation, as well as a reluctance to remove, but also in regard to his friend Dr Ken, for whom he begged this Bishoprick, which the Queen readily granted; but the offer being declined by Bishop Ken, this friend, at his importunity, yielded to become his successor, but not 'till he had obtained the Queen's leave; who also commended him for making the proposal, to hold the precentorship of Exeter *in commendam*, with a dispensation for non-residence, for the sole benefit of Bishop Ken. But the then Bishop of Exeter objecting against it, the Queen to satisfy him desired Bishop Hooper to resign it, saying that she would take care of the deprived Bishop, and then ordered him a pension of 200 *l. per ann.* as has been already mentioned above. Bishop Hooper was not more acceptable to Bishop Ken than he was to his diocese, whose affections both of gentry and clergy he was fully possessed of: And in return no offers could prevail upon him to yield to a translation from them. For he several times refused a seat in the Privy-Council, and could not be persuaded to accept either the Bishoprick of London on the death of Dr Compton, or the Archbishoprick of York on the death of Dr Sharp. He sat in the see of Bath and Wells twenty-four years and six months, and died at Barkley in Somersetshire, whither he sometimes retired, on the 6th of September, 1727, and was interred, in pursuance of his own request, in the cathedral of Wells, under a marble monument erected, with an elegant Latin inscription upon it, to his memory. Besides his sermons (41), he published several books in his life-time, and left several manuscripts behind him, some of which he gave leave to be printed. The following is a catalogue of both. 1. *The Church of England free from the imputation of Popery*, printed in 1682, and bound up with the London Cases. 2. *A fair and methodical discussion of the first and great controversy between the Church of England and the Church of Rome, concerning the infallible guide. In three discourses. The two first of which were licensed by Dr Maurice in* 1687, but the last was never printed. 3. *The parson's case under the present Land-tax, recommended in a letter to a member of the House of Commons*, 1689. 4. *A discourse concerning Lent, in two parts. The first an historical account of its observation; the second an essay concerning its original. This subdivided into two repartitions, wherein the first is [illegible], and shews, that most of our Christian ordinances are derived from the Jews; and the second conjectures, that Lent is of the same original.* Lond. 1693, 8vo. 5. *A paper in the Philosophic Transactions for October* 1699, entitled, *A Calculation of the Credibility of human testimony.* 6. *New danger of Presbytery*, Lond. 1713. 7. *Marks of a defenceless cause.* 8. *The narrative of the proceeding of the lower house of Convocation vindicated**. 9. *De Valentinianorum Hæresi Conjecturæ, quibus illius origo ex Ægyptiaca Theologia deducitur*, Lond. 1711, 4to. 10. *An inquiry into the state of the ancient measures, the Attic, the Roman, and especially the Jewish. With an appendix concerning our old English money and measures of Content*, Lond 1721, 8vo. 11. *De Patriarchæ Jacobi Benedictione Gen.* 49. *Conjecturæ*, published by the Reverend Mr Hunt, of Hart-hall in Oxford, with a preface and notes, according to our author's directions a little before his death to the editor. The manuscripts before-mentioned are the two following. 1. A Latin sermon, preached in 1672, when he took his Bachelor of Divinity's degree; and, 2. A Latin tract on Divorce.

We must not conclude this remark, without reverting to the immediate cause of it, the satisfaction which Bishop Ken had in this successor. This in the fulness of his heart he frequently took occasion to declare, but no where more warmly than in the dedication of his hymns on the Attributes, addressed in verse to this friend, under the title of George Lord Bishop of Bath and Wells, where he thus expresses himself.

' But that which most of all my eye-lids drained;
' My lambs, my sheep, were by their wand'rings
' baned:
' They broke from Catholic, and hallow'd bounds,
' And for the wholesome chose th' impoison'd
grounds
' Contracting Latitudinarian taint;
' In faith, in morals, suffering no restraint.
' New heresies they form'd, or old reviv'd,
' Or, Corah-like, outragious schisms contriv'd:
' And in such dangers while his sheep abide,
' A shepherd's eye-lids never should be dry'd.

' Thus griev'd, I, like Valerius, wept and pray'd,
' For all the sheep which from my pasture stray'd;
' His prayer was ardent, violenc'd God's ear,
' Mine languid was, and too restrain'd my tear;
' He, David-like, had rivers in his head,
' I, drop by drop, tears intermitting shed.
' But I adore benignity divine,
' Who did to hear my worthless cares incline,
' And while I mourn'd for the tremendous stroke,
' Which freed my flock from uncanonic yoke,
' Heaven, my lord, superefluently kind,
' In you sent a successor to my mind;
' In you all Austin's virtues are supplied,
' Too bright for your humility to hide:
' I, on a load presum'd, I could not bear,
' Happy presumption! which enforc'd my pray'r;
' Since Heaven thence took occasion you to rear,
' You who irradiate all the sacred sphere;
' You, in whose care I feel as full repose,
' As old Valerius when he Austin chose.
' Accept,

(40) Boyer's History of Queen Anne, under that year.

(41) Of these be printed eight; the first two preached before the Lord-Mayor at Guildhall chapel in 1681, and the last on the day of thanksgiving for the peace, July 7, 1713.

* He had before published A Narrative of those Proceedings, &c. from Monday Feb. 10, 1700, to Wednesday June 25, 1701. Drawn up by the order of the House, 4to.

bloody water. This ſymptom being aſcribed to an ulcer in his kidneys, he went to Briſtol in the beginning of the year 1710 for the benefit of the hot well, where he ſpent the ſummer, and 'till November following, when he removed to Leweſton near Shirburne in Dorſetſhire, a ſeat belonging to the honourable Mrs Thynne. There he was ſeized with a dead palſey one one ſide, which confined him to his chamber 'till about the middle of March; when being, as he thought, able to take ſuch a journey, he reſolved for the Bath, in hopes to find relief from thoſe waters. Nor could the perſuaſions of that good lady, or his phyſician, divert his deſign, though he laboured under another diſtemper, viz. the Dropſy. So in his way thither, calling at Long-Leate on Saturday, he ſpent that evening in adjuſting ſome papers; all the next day he confined himſelf to his chamber, and on Monday he was confined to his bed, 'till on Monday following, March 19, 1710-11, his ſoul was ſet free by a diſſolution (*g g*). Froome Selwood being the neareſt pariſh within his own diocese to the place where he died, he was buried, conformable to his own requeſt, in the church-yard, under the Eaſt window of the chancel of that church, juſt at ſun-riſing, without any manner of pomp or ceremony, beſides that of the order for burial in the Liturgy of the Church of England, on the 21ſt of March, 1710 (*b b*), in the 73d year of his age. His Lordſhip was never married, and left behind him but few relations [*R*]; and by his laſt will, proved in the Prerogative Court of Canterbury [*S*], April 24, 1711, appointed his nephew William Hawkins, of the Middle-Temple, Eſq; his executor, who publiſhed *A ſhort account of his life, &c. to which was added, A ſmall Specimen, in order to a Publication of his works at large* (*i i*). Lond. 1719, 8vo. And accordingly theſe were publiſhed in 1721 by the ſame gentleman, under this title, *The Works of the Right Reverend, learned, and pious Thomas Ken, D. D. late Lord Biſhop of Bath and Wells*, Lond. 1721. An account of which, together with other pieces printed by himſelf beſides thoſe already mentioned, the reader will find below. [*T*].

(*g g*) As he had for many years travelled with his ſhrowd in his portmanteau; he put it on as ſoon as he came to Long-Leate, giving notice of it the day before his death by way of prevention, that his body might not be ſtripped.

(*b b*) Account, &c. p. 42.

(*i i*) This ſpecimen conſiſted of two ſermons already mentioned, and hymns and odes, 1. On the Annunciation. 2. Heaven. 3. On the Attributes of God. 4. On Good-Friday. 5. Thirſt for Jeſus. 6. Reſignation of Jeſus. Selected chiefly for the variety of meaſure which appears in them.

'Accept, my lord, the product of that eaſe
'You gave, when you accepted of my keys.
'O may the flock a grateful ſenſe retain,
'Of bleſſings, which they in your conduct gain.
'I, in my requiem hymns, God's love will ſing,
'For ſhelt'ring them in your paternal wing.'

Not content with this ſingle opportunity of declaring his full ſatisfaction and delight on the occaſion, we find the ſame repeated in the general dedication of his poems to Lord Weymouth, finiſhed, as it ſeems, not long before his death, where his heart ſwells into the higheſt tide of joy upon the ſame ſubject, in the following lines.

Stanza 8.

'Forc'd from my flock, I daily ſaw with tears,
'A ſtranger's ravage two ſabbatic years *;
'But I forbear to tell the dreadful ſtroke,
'Which freed my ſheep from their Eraſtian yoke;
'While Heav'n was ſupereffluently kind,
'In ſending them a paſtor to my mind;
'In whom my ſpirit feels the like repoſe,
'As old Valerius, when he Auſtin choſe.

* Viz. fourteen years, Dr Kidder holding the ſee from 1690 to 1703 inclusive.

Stanza 9.

'I, cruſh'd by ſtate decree, and griev'd with pain,
'The paſtoral toil unable to ſuſtain,
'More gladly off the hallow'd burthen ſhake,
'Than I at firſt the weight could undertake;
'And ſhall rejoice when ſinking to my grave,
'That my dear ſheep a worthier paſtor have;
'That, living, I had buried paſtoral care,
'And for my laſt was freer to prepare.

[*R*] *He left few relations*] Theſe were, Martha the daughter of his brother Mr John Ken by Roſe his wife, which Martha married to the honourable Chriſtopher Frederick Krienberg, Reſident of his Electoral Highneſs of Hanover in London. John Beacham in 1713 Fellow of Trinity College, and William Beacham, ſometime Fellow of New-College in Oxford, who were both the ſons of his ſiſter Martha by her huſband Mr James Beacham. Iſaac Walton, Reſidentiary of the cathedral church of Sarum, and Anne Walton, iſſue of his ſiſter Anne by her huſband Mr Iſaac Walton of London, which Anne having been married to William Hawkins, D. D. ſometime prebendary of Wincheſter, had iſſue by him William and Anne, both living in 1713, of whom William was appointed the Biſhop's executor, as above-mentioned (42).

(42) Short Account, p. 46, 47.

[*S*] *His laſt will, &c.*] Various reports having been frequently and induſtriouſly ſpread, that he was tainted with ſome Popiſh errors, and was not ſo ſtedfaſt to the doctrine of the Church of England, it was thought proper to publiſh the following paragraph, tranſcribed from his will. '*As for my religion, I die in the holy 'catholic and apoſtolic faith, profeſſed by the whole 'Church before the diſunion of Eaſt and Weſt; more 'particularly, I die in the communion of the Church of 'England, as it ſtands diſtinguiſhed from all Papal and 'Puritan innovations, and as it adheres to the doctrine 'of the Croſs.*'

[*T*] *An account of the reſt of his works below*] Thoſe printed by himſelf are, 1. *A ſermon preached at the funeral of the Right Hon. the lady Margaret Maynard, at Little Eaſton in Eſſex, June* 30, 1682, on Prov. ii. 16. Lond. 1682, 4to. 2. *A ſermon preached in the cathedral church of Bath on Aſcenſion-Day, May* 5, 1687. In this his lordſhip had dropt ſome leſs guarded expreſſions, which were made the ſubject of a piece, intitled, *Animadverſions on the biſhop of Bath's ſermon on Aſcenſion-Day, May* 5, 1687, *Lond.* 1687, 4to. 3. *A paſtoral letter to the clergy of the diocese of Bath and Wells, concerning their behaviour during Lent, dated Feb.* 18, 1687, *Lond.* 1688, 4to. 4. His works in four volumes. Vol. 1 containing, *Hymns Evangelical. Hymns on the the Feſtivals. Chriſtophil.* Vol. 2. *Edmund, an epic poem. Hymns on the Attributes.* Vol 3. *Hymnotheos, or the penitent. Anodynes, or the alleviation of pain.* Vol. 4. *Preparations for death. Pſyche, or Magdalen, and Sion or Philotheos. Urania, or the ſpacious garden. Damoret, Thyrſil, and Dorilla, or chaſte love deſcribed.* In the dedication to Lord Weymouth, ſon of that Lord to whom the biſhop addreſſed them, Mr Hawkins aſſures us, that he had the Biſhop's leave at Leweſton to publiſh theſe poems; 'whereof, ſays he, the verſe will be found not ſtrained, but generally eaſy and familiar, as being deſigned for contemplation and devotion; and when his ſubject requires it, lofty and ſublime. His frequently joining the ſyllable Co, continues the editor, to words, (as in Co-eval, Co ſpire, Co-glorious, Co-une, Co-trine, Co-harmonious, &c) beſides the great propriety thereby preſerved, may be taken, (though I dare not aver it to be ſo intended) for a deſigned characteriſtic of his genuine performances from ſuch as are ſpurious (43), he having met with ill treatment of that nature in his lifetime; and for the further prevention of which (as far as in me lies) I beg leave to aſſure your lordſhip, that nothing more of his performances are ever to be publiſhed.'

(43) Among theſe was publiſhed, under his name, *The Reſtored Chriſtian, &c.* the ſeventh edition of which came out in 1756, 12mo.

KENNET [WHITE], Biſhop of Peterborough, a learned Antiquarian, was the ſon of Mr Baſil Kennet, Rector of Dimchurch and Vicar of Poſtling near Hythe in Kent (a); and was born Auguſt 10, 1660, in the pariſh of St Mary's in Dover, his mother being the eldeſt daughter of Mr Thomas White, a wealthy magiſtrate there, from whom he had his name at the font [A]. As he grew up, he was firſt put to ſchool at Eleham, and then to Wye, both in the neighbourhood; whence, having made a great proficiency in grammar-learning, he was removed to Weſtminſter, in the view of obtaining a place upon that foundation; and he was admitted above the curtain †. But being unluckily ſeized with the ſmall pox at the time of election, rather than wait another year, his father accepted an offer made to him by Mr Tolſon, his neighbour at Beakſborne, and ſent him to be tutor to the three ſons of that gentleman. He acquitted himſelf in this poſt, much to the ſatisfaction of the family, 'till his removal to Oxford, whither he went in June 1678; and, by the recommendation of his countryman the learned Dr Wallis, was entered into Edmund-hall *, and placed under the care of Mr Andrew Allam, a celebrated tutor at that time [B]. In this ſociety he applied cloſely to his ſtudies, and with ſuch diſtinguiſhed ſucceſs, that though he wore the gown of a Battler or Semi-commoner only, the loweſt condition of ſuch as are wholly ſupported at their own expence, yet he was admitted to the converſation, and procured the friendſhip, of the higheſt, which proved of great ſervice to him. But though he made a figure in ſome other branches of polite literature, yet the bent of his inclination and genius led him particularly to the ſtudy of Antiquities and Hiſtory; and being of a lively and forward temper, he commenced author in the political way while he was undergraduate; and, in 1680 (b), publiſhed in 8vo. *A Letter from a Student at Oxford to a Friend in the Country, concerning the approaching Parliament, in Vindication of his Majeſty, the Church of England, and the Univerſity* [C]. And ſoon after, in the ſame ſpirit, he printed *A Poem to Mr E. L. on his Majeſty's diſſolving the late Parliament at Oxford* (c) 28th of March, 1681. He took his firſt degree in Arts May 2, 1682

(a) This gentleman was bred at Trinity-college in Dublin, where he took the degree of Maſter of Arts. The Life of the Right Rev. Dr White Kennet, with ſeveral original Letters, &c. Lond. 1730, 8vo. p. 1.

† That is in the upper ſchool, which is ſeparated from the lower by a curtain.

* Ibid. p. 3.

(a) In the title-page the date is 1678, but the cuſtom of the Booksellers in beginning the year at Michaelmas,

(c) This was a ballad, printed on one ſide of a ſheet of paper, and begun, *An Atheiſt now muſt a monſter be*, &c. It was reprinted in a pamphlet, intituled, *The Conduct of Dr Kennet*. Lond. 1717, 8vo.

[A] *From whom he had his Chriſtian name.*] Alderman White had been a maſter ſhipwright, and after the Reſtoration had been employed by the government in that way, and upon a petition of ſeveral merchants and tradeſmen, for arrears due to them, delivered to the Houſe of Commons in 1664, *die Sabbati* 28 *Januarii*, it was allowed by a committee, that there was due to Mr Thomas White of Dover, for refitting his Majeſty's ſhips, as unpaid on a warrant granted by the Commiſſioners for diſcharging the debts of his Majeſty's navy, 223*l.* 15*s.* 2*d.* Being both grandfather and godfather to our author, he conſented to give him his own name, probably in the view of making him his heir; but thoſe hopes were defeated by his entering afterwards into a ſecond marriage, the iſſue of which, with their mother, went away with the whole eſtate (1).

(1) Life of White Kennet, ubi ſupra, p. 2.

[B] *Mr Allam, a celebrated tutor at that time.*] No doubt Mr Kennet was greatly influenced by the example of his tutor, in turning his ſtudies to the ſubject of Hiſtory and Antiquities, for which Mr Allam had a peculiar taſte. There is indeed ſo great an affinity between the tenor of his life, and the firſt ſtep in that of the pupil, that the following ſhort account of it will not, 'tis preſumed, be thought altogether foreign to the buſineſs of the preſent memoir. Mr Allam then being born in 1655 at Garſington near Oxford, was educated in the neighbourhood, in a private ſchool at Denton in the pariſh of Cuddeſden, where he went to St Edmund's-hall, and was entered a Battler there in Eaſter term 1671. After he had taken the degrees in arts, he became a tutor, moderator, lecturer in the chapel, and at length Vice Principal of his houſe; in all which offices he behaved himſelf much to the honour and flouriſhing thereof; being a perſon of eminent virtues, ſober, temperate, and modeſt, even to example. He underſtood the controverſial writings between Conformiſts and Nonconformiſts, Proteſtants and Papiſts, far beyond his years, which were advanced by a great and happy memory. He underſtood the world of men well, authors better, and nothing but years and experience were wanting to make him a compleat walking library (2). There are extant of his works, 1. A preface, with an epiſtle dedicatory in the printer's name, prefixed to *the Epiſtle congratulatory of Lyſimachus Nicanor, &c. to the Covenanters of Scotland, &c.* Oxon. 1684. 2. The epiſtle, with the account therein, of Dr Richard Coſin's life prefixed to that author's piece, entitled, *Eccleſiæ Anglicanæ Politeia in Tabulas digeſta*, Oxon. 1684, in fol. 3. The epiſtle prefixed, with a review and correction of the book intitled, *Some plain diſcourſes on the Lord's Supper*, by Dr George Griffith, Biſhop of St Aſaph. Oxon. 1684. 8vo. 4. Five or ſix ſheets of corrections and additions to a piece intitled, *Angliæ Notitiæ*, or the Preſent ſtate of England. 5. He began and made ſeveral additions to Helvicus's Hiſtorical and Chronological Theatre, as occaſion required, and would have finiſhed the Supplement at the end from 1660 to 1685, had he not been prevented by death. 6. He had laid the foundation of Notitia Eccleſiæ Anglicanæ, giving an account of all cathedrals, with their ſtatutes and cuſtoms, and a liſt of the names of the preſent biſhop, dean, archdeacon, canons, and officers of each cathedral. 7. He tranſlated into Engliſh *the life of Iphicrates*, which was printed among thoſe of Cornelius Nepos, by ſeveral hands, at Oxford 1684, 8vo. He alſo frequently aſſiſted Mr Antony Wood, in his *Athenæ Oxonienſ.* eſpecially in the *Notitia* of certain modern writers of our own nation. He died of the ſmall pox, June 17, 1685, and was buried at St Peter's in the Eaſt in Oxon (3). This excellent tutor was much pleaſed with Mr Kennet, and took a particular delight in impoſing taſks and exerciſes on him, which he would often read in the common room, before the maſters and gentlemen commoners, for an occaſion of commending his pupil. He ſet him ſeveral books to tranſlate from the Latin, which he not only approved, but recommended to the Oxford booksellers for an impreſſion of them. The tranſlation of the *Moriæ Encomium*, mentioned in the text, was one of theſe, and that of Pliny's panegyric, &c. was another, of which more hereafter. The tutor alſo became, we ſee, a fellow-writer with his pupil, among others, in the tranſlation of the *lives of Cornelius Nepos*. And to conclude, he likewiſe introduced him very early, while Undergraduate, into the acquaintance of Mr Ant Wood, who employed him in collecting ſeveral epitaphs and other notices of eminent Oxford men, and in writing to his father for intelligences of that kind, particularly of Mr John Reading *, Dr Meric Caſaubon, and others (4).

(4) Life of White Kennet, &c. p. 3, 4. and Mr Wood accordingly gives him the character of an excellent philologiſt, a good preacher, whether in Engliſh or Latin, and well verſed in the hiſtory and antiquities of our nation, and much deſerving of the Church of England, for which he hath a zealous reſpect. Athen. Oxon. Vol. II. col. 1131.

(2) Ath. Oxon. Vol. II. col. 784, 785.

[C] *A letter from a ſtudent at Oxford*, &c.] This pamphlet was printed in March, and divers copies ſent to Oxford about the 15th of that month, An. 1680-1, againſt the time that the parliament was to ſit, viz. on the 21ſt of the ſaid month Where the whig party, as it was then begun to be called in the houſe of Commons, were ſo much offended with it, that enquiries were made after the author, in order to have him puniſhed. Among other members, John Trenchard, Eſq; ſometime a fellow of New College, but then a Burgeſs for Taunton in Somerſetſhire, was very active on this occaſion, and affirming that he knew it was written by an Oxford ſcholar, the Vice-chancellor was deſired to find out the author; but the ſudden diſſolution of the parliament put an end to the whole matter; and that occaſioned the publication of Mr Kennet's ſecond piece above mentioned (5).

(5) Id. ibid.

1682 (*d*); and the following year, he publiſhed a tranſlation into Engliſh of Eraſmus's *Moriæ Encomium*; and among the lives of illuſtrious men, written by *Cornelius Nepos*, and done into Engliſh by ſeveral hands of Oxford, and printed there in 1684 [*D*], 8vo, *The Life of Chabrias* has Mr Kennet's name at the head of it. About this time he entered into Holy Orders, and became curate and aſſiſtant to Mr Samuel Blackwell, B. D. (*e*), Vicar and Schoolmaſter of Burceſter in Oxfordſhire. In 1685 he proceeded Maſter of Arts, and in the beginning of September the ſame year, he was preſented by Sir William Glynne, Bart, to the vicarage of Amerſden, or Ambroſden, in Oxfordſhire, where he made ſeveral improvements in the church, and recovered an eſtate which had been left for that uſe, and alienated from it [*E*]. He was too young a divine to engage in the famous *Popiſh controverſy*; but he preached a ſet of ſermons againſt Popery. In the ſame ſpirit he likewiſe refuſed to read the declaration for Liberty of Conſcience in 1688, and went with the body of the clergy in the dioceſe of Oxford, when they rejected an addreſs to King James, recommended by Biſhop Parker the ſame year (*f*). While he was in the country, he ſometimes uſed the exerciſe of ſhooting for his health; and he was upon that diverſion in the neighbouring pariſh of Middleton-Stoney, in January 1689, when his gun burſting in the diſcharge, he received a dangerous wound in the forehead from a ſplinter, which broke both the tables of his ſkull. He lay a conſiderable time under this unlucky accident [*F*]; and, as he conſtantly wore a black velvet to cover the part, that was made a mark to diſtinguiſh his perſon on a particular occaſion ſeveral years afterwards (*g*). In September 1691, he was choſen Lecturer of St Martin's, commonly called Carfax, in Oxford (*h*), having ſome time before been invited back to Edmund-hall, to be Tutor and Vice-principal there [*G*]. Soon after which, he was appointed a public Lecturer in the Univerſity-ſchools, and as a man of diſcipline and ſpirit, was choſen Pro-proctor two ſucceſſive years (*i*). February 15, 1692 (*k*), he addreſſed a letter from Edmund-hall, to the editor of Somner's *Treatiſe of the Roman Ports and Forts in Kent*, containing an account of the life of that famous Antiquary [*H*]. This being prefixed to that treatiſe

(*k*) That is the date of the letter.

[*D*] *A tranſlation of Eraſmus's Moriæ Encomium, &c.*] The title of it is, *Wit againſt wiſdom, or a panegyric upon folly*. It was uſhered into the favour of the public by ſeveral copies of verſes made by Matth. Morgan, A. M. of St John's college; Will. Oſborne, A. M. James Shute, A. B. both of Edmund's hall; and Tho. Wood, Fellow of New-College; at the end of theſe is a copy by the tranſlator, on the argument of the book, which has gone through ſeveral editions ſince.

[*E*] *He was preſented by Sir Will. Glynne to Ambroſden, where he made ſeveral improvements.*] This favour was procured for him by the patron's eldeſt ſon, who was his contemporary in the hall. At his entrance upon it, he immediately had the vicarage-houſe beautified, the garden walled round, and an inſcription put upon the grave-ſtone of Dr Stubbing, his predeceſſor, who built the houſe: He then ſet himſelf to repair and adorn the church; had the bells new caſt; a new pulpit and font, a fane on the ſteeple, the church-yard incloſed with a ſtrong high wall, and gates with piers. The expence of theſe, among other improvements of ſtrength and beauty, was ſupplied from the profits of an eſtate, which, though left for the repairing the church, had been afterwards granted to a private perſon as given to ſuperſtitious uſes, and when recovered was by degrees alienated from the uſes of the church to that of the pariſh, and laid out on the highways, bridges, and poor; 'till Mr Kennet, by the advice and aſſiſtance of Biſhop Fell, obtained a trial before commiſſioners for charitable uſes, and a decree to inveſt the eſtate in new truſtees (of which the patron and vicar of the pariſh were always to be two, and the reſt of their nomination), to be employed according to the firſt purpoſe of repairing the church. And the rents accordingly were applied to that purpoſe very faithfully, to the great improvement of the church, and by degrees to the great ſatisfaction, as well as credit, of the pariſh (6).

(6) Life of Dr Kennet, &c. p. 5, 6.

[*F*] *He lay ſick a conſiderable time under this accident.*] While he lay under great diſorder and pain of body and brain, juſt after he had undergone the ſevere operation of trepanning, for want of ſleep, he made a copy of Latin verſes, and dictated them to a friend at his bedſide. The copy was tranſmitted to Sir William Glynne, in whoſe ſtudy it was found after the author had forgot every thing but the ſad occaſion; and the writer of his life tells us, it was then in his poſſeſſion, and thought by good judges to be no reproach to the author (7).

(7) Ibid. p. 7.

[*G*] *Tutor and vice-principal of Edmund-Hall.*] The famous Dr John Mill was then Principal, with whom Mr Kennet lived on better terms of peace and friendſhip than any other vice-principal either before or after. That eminent divine was at this time employed in preparing for the preſs his celebrated edition of the New Teſtament; and he was greatly aſſiſted therein by one of our author's pupils, Mr Thomas Hearne, (8) the noted Antiquarian, probably recommended for that purpoſe by his tutor.

(8) See his article.

[*H*] *He wrote the life of Somner.*] This undertaking gave him an opportunity of diſplaying his knowledge in the hiſtory of the Saxon language in England. Upon which ſubject he obſerves, that when the Saxons had made the Britons ſtrangers in their own land, the language which the conquerors brought with them ſoon grew into contempt among themſelves. Even ſo early as the year 652, *many out of this iſland were ſent to the monaſteries of France for education, and to bring back the manners and language of thoſe parts* (9). That in the reign of Edward the Confeſſor, 'by the great 'reſort of Normans to his court, the whole iſland be-'gan to loſe their Engliſh rites, and to imitate the 'manners of the Franks, eſpecially it was eſteemed a 'piece of breeding for all the leſſer ſort to ſpeak the 'Gallic idiom, and to deſpiſe the language and cuſ-'toms of their own country (10). This inglorious affectation is confeſſed by an hiſtorian, who lived in that age. It looked like an omen of their approaching conqueſt by that nation, of whoſe language and faſhions they were ſo fond. The event proved ſo. Three and twenty years after came in the Norman Lords, who threatened an extirpation to that language of which the natives began to be aſhamed. *For theſe new maſters hated the Engliſh, and ſo much abhorred their idiom, that the laws were all adminiſtered in the French tongue; the very children in the ſchools were kept from learning to read their mother language, and were inſtructed only in the Norman; the Engliſh manner of writing too was omitted* (11). The ſame author, from his own experience, again laments, that *the Saxon hand, which had been uſed in all writings, grew into diſgrace, and the French hand, becauſe it was more legible and more pleaſing to the eye, did every where obtain* (12), ſo as in the very next reign, *the Saxon letters were ſo obſolete and ſo unknown, that but few of the elder people were able to read them* (13). Nay, in the year 1095 Walſtan Biſhop of Worceſter was depoſed, when ſcarce any other thing was objected againſt him, but that *he was an old Engliſh idiot, who did not underſtand the French tongue* (14). It is true the next ſucceſſor Henry I. gave a charter to Will. Archbiſhop of Canterbury, confirming to him the poſſeſſion of his ſee in Saxon characters (15). This was but a ſingle inſtance, and perhaps done to oblige the queen of this Saxon line, and to ingratiate himſelf with the Engliſh ſubjects,

treatiſe, was publiſhed along with it in the beginning of 1693; and, in Feb. (*l*) following, he was preſented by William Cherry, Eſq; to the rectory of Shottesbrook near Bray in Berkſhire (*m*). However, he ſtill continued to reſide chiefly at Oxford, where the ſtudy of Antiquities particularly flouriſhed under the influence of his example, and by the advantage of his inſtructions [*I*]. But he became moſt eminent in that way, by his celebrated work publiſhed there in 1695, 4to. under the title of, *Parochial Antiquities attempted in the Hiſtory of* Ambroſden, Burceſter, *and other adjacent Pariſhes in the Counties of Oxford and Bucks* [*K*]. This work leading him to conſider the ſtate of the Church, in reſpect of impropriations, he publiſhed in 1698, 8vo. *The Hiſtory and Fate of Sacrilege*, written by Sir Henry Spelman, Knight [*L*]. The ſame year he improved himſelf farther in theſe ſtudies, by learning the Saxon and Septentrional tongues of the learned Dr George Hickes;

(*l*) Ath. Oxon. where laſt cited.

(*m*) At the requeſt of his eldeſt ſon, who had been contemporary with our author at Edmund-hall. Life of Dr Kennet, p. 4. and Ath. Oxon. ubi ſupra.

ſubjects, who might hope for this marriage they had a better title in him. And that therefore [illegible] a mistake in Mabillon (16), and ſome other author, who aſſert that the Saxon way of writing was loſt from the very time of the Norman conqueſt. It is true the Saxon characters as with the ſigns of the croſs in public deeds, which were for the moſt part changed into the Norman way of ſeals and ſubſcriptions, yet ſome characters were with the old form of croſſes. That the Saxon dialect obtained no doubt in country villages, with ſome variation borrowed from the French; and ſome remains of it intermixed with the court language. But the barons and knights, who were moſt of them Normans, were ſo much afraid of their childrens taking the old Engliſh, that in the reign of Henry II. they ſent them into France for education, to wear off the barbarouſneſs (as they called it) of their native tongue.

(16) De Re Diplomatic. p. 52.

(17) At the beginning of the reign of Edward III. Robert Holeot, a Dominican (18), confeſſes, that there was no inſtitution of children in the old Engliſh, but they firſt learned the French, and from the French the Latin tongue, which he obſerves to have been a practice obſerved by William the Conqueror, and to have obtained ever ſince. That though from the firſt decline of the Barons, and advance of the Commons, who were more of Engliſh blood, the country language grew more into requeſt, 'till at laſt the Commons in Parliament at Weſtminſter, 30th of Edward III. ſhewed ſo much of the Engliſh ſpirit, as to repreſent to the King *the great miſchiefs which would happen to divers of the realm, if that the laws were pleaded, ſhewed, and judged in the French tongue, which is much unknown in the ſaid realm, &c.* Upon which *it was ordained and eſtabliſhed, that all pleas, &c ſhould be pleaded, ſhewed, and defended anſwered, debated, and judged, in the Engliſh tongue, &c* (19). Yet this law did by no means reſtore the Saxon either in the Alphabet, or in the prime dialect; it only redeemed the kingdom from an old token of ſubjection, and did honour to the then compound language, much vitiated by imported words and phraſes. And ſtill there ſeemed ſome remains of the Norman ſpirit, which by the ſame law provided, that *all ſuch pleas ſhould be entered and enrolled in the Latin*. If there was any conveyance of the true Saxon tongue, it was in the monaſteries; but in thoſe only which were founded before the Norman conqueſt, for in ſuch, intereſt obliged them to underſtand the language of their original charters. It was for this reaſon, that in the abbey of Croyland, 'a tutor was appointed to teach Saxon to ſome of the younger brethren, that in their old age they might be more fit to alledge the records of their monaſtery againſt their adverſaries (20). And it was no doubt for the like reaſon, that in the abbey of Taviſtoke, which had a Saxon foundation about 691, there were ſolemn lectures in the Saxon tongue, even to the time of our fathers, that the knowledge of the language might not fail, as it has ſince well nigh done (21).'

[*I*] *The ſtudy of Antiquities flouriſhed by his example and inſtructions.*] We have a conſpicuous atteſtation to this part of our author's merit from Mr Gibſon (afterwards Biſhop of London), himſelf eminently verſed in this branch of learning, who in 1703, publiſhing a tranſlation into Engliſh of Mr Somner's treatiſe, written in anſwer to Chifflet, concerning the ſituation of the *Portus Iccius* on the coaſt of France oppoſite to Kent, where Cæſar embarked for the invaſion of this iſland, &c. introduced it into the world with an elegant Latin dedication to Mr Kennet, where having obſerved, 'that the ſtudy of Antiquities is very much diſcouraged by being repreſented as dry and barren, and the bane of all delicacy and politeneſs,' he remarks, 'That by this means thoſe who applied themſelves to it would be wholly diſcouraged, but that they were kept in countenance by his example and authority. And that there cannot be a more effectual anſwer to the reproaches that are caſt on this ſort of learning, than that quickneſs of parts, that ſtrength and delicacy of [illegible] ſo remarkable in him. That from this politeneſs of mind, eaſineſs and affability of manners, and perfect maſtery in all the parts of genteel learning, joined with the exacteſt knowledge in Antiquities, the world might ſee, that this kind of ſtudy does by no means cramp the genius, or ſour the temper; and from his ſoundneſs and ſtrength of judgment, might be learned, that the more unguarded flights and ſallies of imagination were by this means beſt of all kept under and corrected. Upon theſe accounts he proceeds to declare, that he eſteems himſelf particularly happy in that the nature of his ſtudies and his private obligations do both conſpire to engage him to direct that addreſs to him. For who has a better title, ſays he, to theſe golden remains of Somner, than one who by writing his life ſo copiouſly and exactly, had at the ſame time conferred immortality upon him. To whom can I more properly pay this public acknowledgment, than to one who by his inſtruction and example I am emboldened to engage in this kind of ſtudies.' He then concludes in theſe terms, '*Go on therefore, Sir, to be the ornament of the Church by your exemplary piety, and of our univerſity by your extraordinary learning. And remember at the ſame time, that your's is the glory of ſupporting and encouraging the ſtudy of Antiquities.*'

[*K*] *His Parochial Antiquities, &c.*] This treatiſe from its firſt appearance was, and ſtill continues to be, in the higheſt eſteem among the learned in ſuch matters; in its uſe extenſive, and in its authority deciſive. Mr Tanner, afterwards biſhop of St Aſaph, in his *Notitia Monaſtica* often refers to it, and particularly ſtiles Mr Kennet the friend and foreman of his ſtudies; and under the priory of Burceſter, he gives it this character, '*Hic liber accuratiſſime, &c.*——This book gives us a moſt exact hiſtory of this priory from its foundation to its diſſolution, which the reverend author with great care and faithfulneſs collected from original manuſcripts, now in the poſſeſſion of Sir Wm Glynne of Ambroſden in Oxfordſhire, and from ſeveral other books, both printed and manuſcript.' It is true, the perſons and places are but few of which it treats, yet has it been often acknowledged to be a work of great uſe to the whole dioceſe and county, as well as to the adjoining pariſhes. And the gloſſary at the end is and will be ſo in all times and places.

[*L*] *He publiſhed the hiſtory and fate of Sacrilege.*] He had this part of the Church's revenue much at heart, and in the ſame view he publiſhed in 1704, *The caſe of impropriations, and of the augmentation of vicarages, and other inſufficient cures, ſtated by hiſtory and law, from the firſt uſurpation of the Popes and Monks, to her Majeſty's royal bounty lately extended to the poorer clergy of the Church of England, with an appendix of records and memorials relating to that ſubject.* The ſame year he alſo reprinted in one ſmall volume under this title, two tracts, intitled, *De non temerandis Eccleſiis, &c.* by Sir Henry Spelman, Knt. Tract 2. *The poor vicar's plea for tythes, &c.* by Thomas Ryves, Doctor of the Civil Laws; *with a prefatory account of the authors, and theſe works*, which he begins thus. 'Her Majeſty's late pious munificence to the clergy of the Church of England *, hath made glad the hearts of her beſt ſubjects, the beſt of Chriſtians, and has made them reflect on the alienation of tythes and offerings, as the great ſcanda of Popery, and the great defect in our Reformation To make up a compleat maintenance for the parochial miniſters, and ſo the better to pro-

* Viz. the grant of firſt-fruits and tenths, for the augmentation of poor livings, the act for which had the royal aſſent April 3, this year.

Hickes; and in this purſuit he made a large dictionary of our oldeſt Engliſh words, derived from the Gothic and other northern dialects, as he had them from that great maſter, who lived at this time with him at Ambroſden [M]; where, by his intreaty, he formed the deſign of that learned work upon the northern literature (n), which is ſo great an honour to his name [N]. About the year 1699, our author took the degree of Doctor of Divinity (o), and the following year was preſented to the living of St Botolph Aldgate in London [O]. As this was a large and populous pariſh, he immediately reſigned the vicarage of Ambroſden (p), though he might have made it legally conſiſtent therewith [P]. However, he did not obtain quiet poſſeſſion of his new preferment, without the trouble of a law-ſuit. In the midſt of which, he engaged likewiſe in the diſpute about the conſtitution of Engliſh ſynods [Q], whereof he became a member about this time, as Archdeacon of Huntingdon,

(n) It was published in 1705, in two vols, folio, under this title, *Antiquæ Literaturæ Septentrionalis, libri duo, &c.* commonly called Hickes's Theſaurus.

(o) His Life, p. 15.

(p) He reſigned the rectory of Shirleybrooke afterwards, though conſiſtent with his other preferments. He, indeed, differed from Mr Cherry took a different turn from him in politics at the Revolution, when Mr Cherry became a Nonjuror. See the article of HEARNE [THOMAS.]

ſide for the ſervice of God, and the care of ſouls, 'has been the continual ſubject of all good mens wiſhes, propoſals, and attempts.'

The Doctor omitted no opportunity of collecting authorities and inſtances of facts, which, with the due inferences he drew from them, would make a new edition of this work far more uſeful.

[M] *Dr Hickes lived at Ambroſden.*] Mr Kennet had commenced an acquaintance with the Doctor long before, on account both of the affinity of their ſtudies, and their agreement in Church principles before the Revolution; and afterwards, notwithſtanding their difference in opinions upon the latter point, yet there remained a mutual reſpect for each other as ſtill united in the former view. The Doctor, upon his deprivation from the deanery of Worceſter, had drawn up a claim of right to it, directed to all the members of that church, and affixed the paper in his own handwriting over the great entrance into the choir, May 2, 1691 (22). This was thought ſuch an inſult upon the government, that the Attorney-General was ordered to enter a proſecution againſt him, whereupon the Doctor preſently abſconded, and kept private for many years. He was in that ſituation when he came to Ambroſden, where he was kindly received by the old partner in his ſtudies. Here he continued for ſome time, wearing a lay-habit to avoid being known, 'till a fellow of a college in Oxford making a viſit there, addreſſed him by his name. Upon that he thought himſelf in ſome danger, and immediately taking leave of Mr Kennet, went firſt to ſome obſcure retreat, and thence in a little time to London (23), where he continued in the ſame privacy 'till May 18, 1699, when Lord Sommers, then Lord Chancellor, procured an act of Council, ordering, a *Noli Proſequi* to be entered to all proceedings againſt him (24).

(22) There is a copy of it in the Life of Mr Kettlewell, appendix, No. IV. under this title, *The Proteſtation of Dr George Hickes, and Claim of Right fixed up in the Cathedral Church of Worceſter.*

(23) Life of Dr Kennet, p. 14.

(24) He procured him this favour out of regard to his great learning, and particularly in the view of encouraging him to proceed in that great work, his *Theſaurus*, which his Lordſhip was very ſenſible would be (as it really proved) an honour to his country.

[N] *His work upon the ancient Northern literature was firſt projected at Ambroſden.*] Mr Kennet, to divert the diſcourſe from the diſagreeable ſubject of politicks, having prevailed with this learned gueſt to inſtruct him in the Northern languages, took the opportunity to intreat him to look farther into thoſe ſtudies, to review his Saxon and Iſlandic grammar, and to embelliſh them with notes and obſervations, that might revive and improve the knowledge of our antiquities in the riſe and conveyance of our laws, cuſtoms, tenures, and other national rights. It was upon this frequent diſcourſe and importunity of Mr Kennet, that the Doctor then and there laid the foundation of the learned work mentioned in the text. This is acknowledged in the preface to that work, which being publiſhed in 1705, the learned author has theſe words. Rev. & Doctiſſimus Vir Whiteus Kennet, &c. The Reverend and moſt learned White Kennet, &c. more than ſeven years ago intreated me to undertake this work of the ancient Northern words; which in his opinion deſerving to be more generally underſtood, I immediately ſet about it in his houſe, and having at length finiſhed it, if it ſhall be found to be of any advantage to the learned world, 'tis intirely owing to him, as the encourager and promoter of it. We are likewiſe told, that had the Doctor continued at Ambroſden, where he was well accommodated, and well pleaſed, it had probably prevented his writing or acting upon any other ſubject but that of our national antiquities: For in daily talk he had projected ſeveral ſchemes about illuſtrating the dark hiſtory of the Britons, deſcribing the manners of the Germans, tracing them in the Norman cuſtoms, and more eſpecially enquiring into the religion of the Saxons before it was adulterated by Popery, &c. (25) But this is too fond an opinion to gain entire credit, conſidering the natural warmth of the Doctor's temper, and the ſtrength of his prepoſſeſſions, which are remarked too even by this writer, who gives it for a certain truth, that Dr Kennet at his firſt coming to London, laboured to keep up a friendſhip with Dr Hickes, hoping they might agree in their common ſtudies of our Engliſh and other Northern antiquities. And to this purpoſe he ſent the Doctor ſome preſents of wine, procured him now and then ſome neceſſary books and papers to carry on his great work, and obtained for him ſeveral ſubſcriptions to it, doing all he could to be a little ſerviceable, and altogether inoffenſive to him. But he found that the Doctor was going into notions and meaſures utterly inconſiſtent with their former freedom, and ſo by degrees there grew a coldneſs, a diſtance, and mutual complaints of one another, owing only to their very different principles in church and ſtate affairs, *both being very much in earneſt in what they profeſſed* (26). This was afterwards improved into an open rupture, many inſtances whereof will be ſeen in the ſequel.

(25) Life of Dr Kennet, p. 14.

(26) Ibid. p. 15.

[O] *He was preſented to St Botolph,* &c.] This preferment was likewiſe obtained for him, without any ſollicitation of his own, by a member of Edmund-Hall, William Salkeld, Eſq; afterwards Serjeant at law, and one of his Majeſty's Judges for Wales, who, upon the ejectment of Dr Hollingworth, recommended him to the impropriator (27), Samuel Brewſter, Eſq; by whom he was recommended to the pariſhioners, in a letter, as follows.

(27) Ibid. p. 16.

I think it at all times my duty to promote the intereſt of religion, and the good of your pariſh, and have therefore, upon your late vacancy, endeavoured to make the beſt choice I could of a miniſter to inſtruct you for your ſouls health. I am verily perſuaded, that I have placed one among you, who is both able and willing to diſcharge the duty of his place; and who, I doubt not, will be careful to watch over you, as becomes a faithful paſtor (28).

(28) Mr Brewſter's Letter to the Pariſhioners of St Botolph Aldgate, &c. Lond. 1700, 4to.

[P] *He reſigned Ambroſden,* &c.] In this his moderation was the more conſpicuous, as he had reaſon to apprehend ſome difficulties in getting quiet poſſeſſion of St Botolph, which happened accordingly: For Dr Hollingworth pretended a title from the crown, and under that pretence laboured for a repoſſeſſion; and when that would not do in any courſe of law, he made a ſurrendry of that feigned title to another, the Lord Keeper Wright's chaplain, who got a ſeal, and maintained a ſuit for it, 'till he happened to be otherwiſe provided for; and yet even then he entailed the quarrel, by conſenting to another grant made to a third perſon, who upon that began a freſh ſuit in the Queen's name, and (what was extraordinary) at the Queen's expence, 'till judgment was given in the Exchequer in affirmance of the impropriator's right to nominate a curate. To this account the writer of our author's life adds, that he had heard the good iſſue of this cauſe was in great meaſure owing to the diligent ſearches and diſcoveries made by Dr Kennet himſelf, and to his ſolliciting and ſuggeſting, and having once the barons leave to argue in it (29).

(29) Life, p. 17, 18.

[Q] *He engaged in the diſpute about the rights of the Convocation.*] An hiſtorical narrative of this remarkable controverſy, which began in 1697, as well as of the ſeveral pieces written in it on each ſide, has been already given in the courſe of this work (30), where the reader may ſee an account of two of our author's pamphlets on the occaſion, 1. *Eccleſiaſtical ſynods and parliamentary Convocations hiſtorically ſtated and vindicated from the miſrepreſentations of Mr Atterbury, and an occaſional letter on the ſubject of Engliſh convocations,* both printed in 1701, 8vo Beſides which, he is ſaid to be the author of a third treatiſe, not mentioned in that account, intitled, *The hiſtory of the Convocation*

(30) See the article ATTERBURY [FRANCIS] in remark [I].

of

Huntingdon, to which dignity he was promoted May 16, 1701 *, by Dr Gardiner Biſhop of Lincoln, who had made him his chaplain ſome time before (q). He now grew into great eſteem among thoſe of his party in the Church, and particularly with the Archbiſhop of Canterbury, Dr Tenifon; by whoſe recommendation he was appointed, in 1701, a member of the ſociety for propagating the Goſpel in foreign parts (r). In the promoting of which, he gave his utmoſt aſſiſtance, and was very ſerviceable with his pen [R]. The following year he preached the annual ſermon before the corporation for the relief of poor widows and children of clergymen, and publiſhed his ſermon under this title, *The Glory of Children in their Fathers: a Sermon preached at the Cathedral Church of St Paul London, December 3, 1702*, 4to [S]. In 1705, Dr Wake being advanced to the ſee of Lincoln, our Archdeacon was appointed to preach his conſecration ſermon. This he performed and publiſhed under the following title, *The Office and good Work of a Biſhop: a Sermon preached in Lambeth-Chapel, at the Conſecration of the Right Reverend Father in God William Lord Biſhop of Lincoln, on Sunday October 21, 1705. Publiſhed at the deſire of the Archbiſhop and Biſhops.* This diſcourſe was much admired by the late Lord Chief Juſtice Holt, who declared it had more in it to the purpoſe of the legal and chriſtian conſtitution of this Church, than any volume of diſcourſes (s); and he was ordered to preach before the Houſe of Commons on the 30th of January following [T]. About the ſame time ſome Booksellers having undertaken to print a collection of the beſt writers of the Engliſh hiſtory, as far as to the reign of Charles the Firſt, in two folio volumes (t), prevailed with our author to prepare a third volume, which ſhould carry the hiſtory down to the then preſent reign of Queen Anne. This being finiſhed with a particular preface, was publiſhed with the other two, under the title of, *A Compleat Hiſtory of England*, &c. in 1706 [U]. Not long after this,

* Willis's Cathedrals, Vol. III. p. 109.

(q) Life, p. 27.

(r) His name is in the original charter of that corporation in 1701.

Character of Dr Kennet, p. 28.

(s) It is ſaid to have been compiled by Mr Hughes, who wrote all the preface, without any participation of Dr Kennet. In 1719, there was publiſhed the ſecond edition with notes, ſaid to be inſerted by Mr Strype, and ſeveral alterations and additions.

of the Prelates and Clergy of the province of Canterbury, &c. in anſwer to a narrative of the proceedings of the lower houſe of Convocation, 1702, 4to. (31)

(31) The narrative was written by Dr G. Hooper, Prolocutor of the Lower Houſe.

[R] *He was very ſerviceable with his pen.*] He drew up a full account of their proceedings to the year 1706, under this title, *An account of the Society for propagating the Goſpel in foreign parts, eſtabliſhed by the royal charter of King William III. with their proceedings and ſucceſs, and hopes of continual progreſs under the happy reign of her moſt excellent Majeſty Queen Anne, Lond.* 1706, 4to. And within four years after, he continued and improved that account by an hiſtorical deduction of what had been further tranſacted by the ſame ſociety, and eſpecially what ſteps and meaſures had been taken by the ſociety *De Propaganda Fide* at Rome, and what more Chriſtian methods by reformed ſtates and princes. This was a work of great labour and pains, and brought to ſome tolerable perfection, but reſerved in the writer's hands, becauſe the circumſtances of the corporation would not bear the expence of printing it.

[S] *His ſermon before the corporation of the ſons of the Clergy.*] In this ſermon he propoſed ſome excellent ways and means of benefaction to clergymens ſons, well worthy a review by thoſe who are able to make them effectual. And the better to promote that deſign, he intended to write an hiſtorical account of the corporation, and of the ſeveral benefactions given to it, as well as of the manifold good ſervices done by it. For which purpoſe he had gathered up a great many notices of things and perſons; picked up the ſeveral ſermons before the ſons of the clergy, from the firſt by Mr George Hall (afterward Archdeacon of Canterbury and Biſhop of Cheſter), intitled, The Tribe of Levi in 1658; ſearched the laſt wills of ſeveral donors and benefactors; and would by degrees have connected the materials into ſome order for the preſs, but that he was unkindly uſed by the ſpirit of party (32).

(32) Life, &c. p. 22.

[T] *He preached before the Houſe of Commons, Jan.* 30, 1705.] In this diſcourſe, which was printed at the requeſt of the Houſe, the Doctor made it his buſineſs to ſhew, that whatever unhappy grounds and occaſions were given for that unnatural rebellion and civil war, yet nothing could juſtify or excuſe the horrid and execrable murder of King Charles I. of which he demonſtrated the illegality and wickedneſs, by a multitude of proofs both from hiſtory and law in the body of the ſermon, corroborated by a great many other authorities in the margin. That fact was ſet in this light by him on the preſent occaſion, in the view of ſilencing ſome cenſures that had paſſed upon a former ſermon on the day, preached in his own church the the preceding year, wherein he had made the counterpart of that tranſaction his ſubject, and enquiring whence and by what means the evil of the day came, he ſet himſelf to prove, that the leading cauſes of it, improved by wicked arts and deſigns, were chiefly theſe: Firſt, a French intereſt and alliance, and from thence ariſing, ſecondly, the apprehenſions and fears of Popery, which led on, thirdly, the jealouſies of oppreſſion and illegal power, which tended more and more to, fourthly, the growth of profaneneſs and immorality, and even this helped to produce that hypocriſy and perfidiouſneſs which accompliſhed the ſin, and the infinite ſcandal of the day. This doctrine of laying the chief and primary blame upon the King, as the cauſe of his own murder, raiſed a great outcry, at a time when the ſovereign on the throne was known to revere the memory of her grandfather as ſacred, and who copied his example in a moſt ſincere regard and ardent affection to the Church, which was now ſaid to be in danger from the Preſbyterians and ſectaries, encouraged by ſome members of the Church. Hereupon the Doctor thought himſelf obliged to appeal to the world in the printing of his ſermon, as he did, under the title of, *A compaſſionate enquiry into the cauſes of the civil war, &c.* 1704, 4to. prefixing an advertiſement to this effect, 'That the ſermon was not deſigned for the 'preſs, but was challenged to appear there by the miſ-'apprehenſions of ſome few who heard it, and by the 'confident report of a far greater number who did not 'hear it, &c.'

[U] *He wrote the 3d volume of a Complete Hiſtory of England.*] Notwithſtanding the Doctor's name did not appear before this work, yet it was ſoon known that he was the author of it, and the ſame party that had ſo freely cenſured his conduct from the time of his engaging in the Convocation controverſy, continued in the ſame temper to make this work a freſh handle of complaint, and declared that the Doctor's deſign in it was to expoſe them and their cauſe. Among thoſe, Dr Hickes was the firſt, who obſerved with ſome warmth, that the author had ſhewn himſelf particularly baſe and diſingenuous in taking no notice of his *Jovian* [which was indeed the caſe], though he expreſsly gives an account of Mr S. Johnſon's *Julian*, to which the other was an anſwer (33). The Jacobites were not the only perſons who took offence at the hiſtory, even ſome perſons who had gone into the Revolution with forwardneſs enough, and yet had not found their full account in it, were diſpleaſed that too much or too little notice was taken of the parts they acted about that time. And above all, an eminent peer, very inſtrumental in that revolution, by taking up arms in the north, had made ſuch an improvement of his honours and fortunes by it, that he thought himſelf privileged and protected from any retroſpect upon his conduct in the court and treaſury of King Charles II. and therefore finding in that hiſtory a narrative of what appeared to be male-adminiſtration, though taken from the parliament journals and printed trials, and other public papers, he was much offended, and taking an opportunity upon the death of the Duke of Montagu, to give ſome account of his tranſactions with France from his own papers and letters, complained of the miſrepreſentation of his ſervices made by the late hiſtorian; who really did not ſeem to mean any thing of reflection on his noble perſon and family; but related facts

(33) See an account of both theſe books in Sam. Johnſon's article.

this, he was appointed Chaplain in Ordinary to her Majeſty, at the recommendation of the Archbiſhop of Canterbury and the Lord-Treaſurer Godolphin; and, by the application of Biſhop Burnet, he preached the funeral ſermon on the death of the firſt Duke of Devonſhire, September 5, 1707. This diſcourſe being printed the following year, at the requeſt of his ſon and heir, the ſecond Duke of Devonſhire, our author took that opportunity of addreſſing it in a dedication to his Grace; with which that nobleman was ſo well pleaſed, that he recommended the doctor to the Queen for the deanery of Peterborough (*u*), vacant ſoon after by the death of Dr Freeman, October 14, 1707 (*w*). And notwithſtanding ſome complaints were made of his ſermon, wherein he was charged with having ſacrificed a fundamental point of Religion to his ambitious views [*W*], yet this did not put a ſtop to the favour ſhewn him at Court; for, by the intereſt of the laſt mentioned Archbiſhop, upon the promotion of Dr Blackall to the ſee of Exeter, the ſame year, he ſucceeded him in the rectory of St Mary Aldermary in London, at the Queen's preſentation (*x*). By this change the Dean loſt above 100 pounds per annum [*X*]; but he conſulted his eaſe in it as a parochial miniſter, and choſe to be more at leiſure than he had been for other views, which the dignity and revenue of his deanery gave him an opportunity to purſue *. One of theſe was, the ſettling his brother, Mr Baſil Kennet, in the chaplainſhip to the Engliſh factory at Leghorn; an account of which is given in the enſuing article. While the Dean was employed in this ſervice, the famous Dr Henry Sacheverell

(*u*) Ibid. p. 38.

(*w*) Birch's Life of Archbiſhop Tillotſon, p. 212. edit. 1753. This ſeeming inconſiſtency in the years is owing to the cuſtom of the Bookſellers, in beginning the year at Michaelmas. And here it ſerves to ſhew, that this ſermon was not printed 'till after Michaelmas-day, that month in which it was preached.

(*x*) Life of Dr Kennet, p. 49.

* He was made a truſtee of the charity for building a church in the iſle of Borkum in the duchy of Berg, and to ſupport a miniſter there in 1707; and when finiſhed, drew up a Latin inſcription, placed near the great door of the church, which he tranſmitted with a Latin letter to the miniſter, both printed in the doctor's Life, p. 115, & ſeqq.

as he found them before related.——However on that occaſion of his Grace's complaint, the Doctor enquired more narrowly into thoſe matters, and ſtated them over again in a moſt authentic manner; but finding that the more full diſcovery would only create the greater offence, he would not ſuffer what he had written to be publiſhed to the world (34). Theſe attacks were made in the Doctor's life-time, and after his death there came out, Examen, or *An enquiry into the credit and veracity of a pretended complete hiſtory; ſhewing the perverſe and wicked deſign of it, and the many falſities and abuſes of truth contained in it. Together with ſome memoirs occaſionally inſerted; all tending to vindicate the honour of King Charles the Second, and his happy reign, from the intended aſperſions of that foul pen*, by the Hon. Roger North, Eſq; Lond. 1740, 4to containing 692 pages. The author informs us (35), *that upon the firſt appearance of the hiſtory, dipping a little into it, he found divers matters that gave him diſtaſte enough, but minded not much the why, or the wherefore, and ſo let the book paſs from him, 'till it was cried up, and the reverend author named: And then (being no buyer of ſuch mighty works) he borrowed of a friend all the three volumes. He found the two firſt to be a collection of all the common Engliſh chronicles ſince the Conqueſt, with advantage pretended to be given to ſome, concluding with* Wilſon's K. James I. *with* Wellwood's *notes to help out the libel. Then came on the third volume, a new work, paſſing curſorily over the reigns of* James I. *and* Charles I. *and having got into the depths of King* Charles II. *it appeared plainly, that inſtead of correſponding to the title*—by an impartial hand (36), *and what the preface declared*—with ſtrict regard to truth and juſtice(37), *the book was a continued libel, or rather Cloaca of libels; and thoſe touching the chief turns of ſtate in his Majeſty's reign, miſconſtruing to an evil ſenſe even the beſt acts of his government, full of moſt abominable falſities, ſuppreſſions, flatteries, and malicious inſinuations, in order to magnify the faction aforehinted, and to make all their wicked machinations appear heroic exploits; but the King himſelf, his loyal miniſtry, and happy reign, baſe and odious to poſterity; and all this put in a way no leſs treacherous than impudent and undutiful. In a word, ſo groſsly abuſive of truth and good manners, as not to be endured in a lettered ſtate, and where people have any value or honour for government and laws.* He had obſerved before (38), that this pretended hiſtory contains the ſum and ſubſtance of that party's project [to defame King Charles], uſing their very modes of ſpeech as well as of invention, and condeſcends to chime in with the baſeſt abuſed rabble of the time. Some, continues he, have given out that it is the work of ——; and to ſhew that filthy lucre, as well as malice, conduced, his articles with the bookſellers expreſs, were 100 *l.* to be given, and —— pages to be wrote.

(38) Viz. in p. 1. where it is called a malevolent faction, that, during King Charles II's life, continually plotted to deſtroy him, and ſince his death as buſily plotted to defame him.

[*W*] *Sacrificed a fundamental point of religion to his ambitious views.*] The point was the danger of a death bed repentance, which it was alledged the Doctor had encouraged, and taken away all the hazard of it. The charge was grounded upon the following paſſage, (39) where ſpeaking of a late repentance, he ſays, 'That this rarely happens but in men of diſtinguiſhed 'ſenſe and judgment. Ordinary abilities may be altogether ſunk by a long vicious courſe of life. The 'duller flame is eaſily extinguiſhed. The meaner ſinful wretches are commonly given up to a reprobate 'mind, and die as ſtupidly as they lived; while the 'nobler and brighter parts have an advantage of underſtanding the worth of their ſouls before they reſign it. If they are allowed the benefit of ſickneſs, 'they commonly awake out of their dream of ſin, and 'reflect and look upward. They acknowledge an infinite being; they feel their own immortal part; they 'recollect and reliſh the holy ſcriptures; they call for 'the elders of the Church; they think what to anſwer 'at a judgment-ſeat. *Not that God*, continues the 'Doctor, *is a reſpecter of perſons, but the difference is 'in men, and the more intelligent nature is the more ſuſceptible of divine grace. It was an effect of Solomon's 'wiſdom to ſee at laſt his vanity, and to leave his penitence upon record. We have had in our own age and nation, men of illuſtrious honour, and of the moſt celebrated parts, who had been carried away by the courſe 'of this world into extravagant vices and follies. 'And yet upon the proſpect of death, theſe men of underſtanding have felt the excellent ſpirit to move in 'them; they have retracted their looſe opinions, they 'have repented of their grievous ſins; they have made 'their peace with God, and have died, nay have ſometimes recovered, and lived like true unfeigned Chriſtian converts* (40); *ſo great are the powers of religion 'to work moſt upon the largeſt capacities.*' Beſides this, exceptions were taken at ſeveral other paſſages, where the preacher manifeſted the ſame courtly ſpirit. However, the author of his life undertakes to vindicate him againſt them all, and particularly with regard to this now before us, having obſerved that it had been inſinuated by ſome, 'That the preacher had built a 'bridge to Heaven for men of wit and parts; but that 'the duller ſort of mankind muſt not hope to paſs 'that way, declares (41), that he had ſaid nothing 'at all to that effect, but in this ſound truth, that the 'more underſtanding a man has, the ſooner he may 'come to a ſenſe of God and religion. He ſays nothing but what common experience and obſervation 'juſtifies, that the ignorant and unnurtured multitude 'are not, in the nature of the thing, ſo likely to be 'wrought upon by the powers of religion, as wiſe and underſtanding men, thoſe of a higher and better education.'

(40) Lee Earl of Marlborough and Sir Duncomb Colcheſter are inſtances of this. See an account of them in the article of Wilmot Earl of Rochester.

(41) Ibid. p. 50.

[*X*] *By this change he loſt above* 100 *l. a year.*] Notwithſtanding this diſadvantage in point of profit, he was a benefactor to the living of St Mary Aldermary: For finding he could not obtain the conſent of the pariſhioners to build a parſonage-houſe, though there was none, and he offered 200 *l.* towards it himſelf; he reſolved not to renew the ſeveral leaſes of ground rents for the rector's glebe; for which renewals he might afterwards have received ſeveral fines and ſums of money, but to let them run out, that the full houſe rents might fall in to him and his ſucceſſors, and ſo there might be room for ſome future rector to contrive a convenient manſe *.

* P. 40, 41.

Sacheverell preached his remarkable ſermon before the Lord-Mayor of London, on the 5th of November 1709. Upon this occaſion the Dean addreſſed a *Letter to an Alderman of the City*, which was printed under the title of *A True Anſwer to Dr Sacheverell's Sermon*, &c. [*Y*]. And the ſame year he publiſhed, *A Vindication of the Church and Clergy of England, from ſome late Reproaches rudely and unjuſtly caſt upon them. Lond.* 1709, 8vo (*y*). He preached the Latin ſermon at the opening of the Convocation in 1710, which was printed immediately; and ſoon afterwards he publiſhed an Engliſh tranſlation of it, to which he ſubjoined a poſtſcript, vindicating himſelf from ſome reproaches caſt upon him [*Z*]. He likewiſe refuſed to join in the London Clergy's addreſs to the Queen, upon the change of the Miniſtry the ſame year [*A A*]. In 1712 he was, by the appointment of Archbiſhop Teniſon, called upon again to preach the anniverſary ſermon before the ſociety for propagation of the Goſpel in foreign parts, which upon deſire he publiſhed, and added at the bottom of each page the full authorities, as references to matters of fact; and further drew up with his own hand, *An Abſtract of the Proceedings of the Society within the year laſt paſt* [*B B*]. In a few days after preaching this ſermon, there was publiſhed a letter about the proceedings in Convocation, on complaint of a ſermon publiſhed by Dr Brett, intituled, *A Sermon of Remiſſion of Sins, according to the Scriptures, and the Doctrine of the Church of England*, &c. This ſermon had many expreſſions in it, tending to advance the neceſſity of Private Confeſſion and Sacerdotal Abſolution. However, the complaint was dropped in the Houſe *, and the preacher, as well as his diſcourſe, being rather juſtified and commended, our author publiſhed *A Letter to the Reverend Thomas Brett, L. L. D. Rector of Bettesanger in Kent, about a Motion in Convocation.* Lond. 1712. And in the ſame view he alſo publiſhed *A Memorial for Proteſtants on the fifth of November, containing a more full Diſcovery of ſome Particulars relating to the happy Deliverance of King James I. &c. from the moſt traiterous and bloody intended maſſacre by gunpowder, anno* 1605. *In a Letter to a Peer of Great-Britain, dated October* 25, 1712 (*z*). In the like ſpirit he printed the following year, a ſermon of Archbiſhop Whitgift, preached before Queen Elizabeth at Greenwich, with a preface

(*y*) The ſame words in title to An Alderman of the City of the Church of England, to my Lords the Biſhops; humbly beſeeching them to beſeech her Majeſty to redreſs their grievances, &c. by a Curate near the city, then a noiſy High-Church man, and afterwards a Nonjuror.

* Dr Cannon made two motions to have it enforced; and Dr Brett afterwards gone too far in it. Hiſt. of Corpus Chriſti-College, Cambridge, by Rob. Maſters, B. D. &c. Camb. 1753, 4to. in the appendix, p. 88.

(*z*) As a ſequel of this, he afterwards printed a ſermon before the Lord-Mayor, Nov. 5, 1715, containing ſeveral hiſtorical obſervations applied to the then preſent ſeaſon.

[*Y*] *A true anſwer to Dr Sacheverell's ſermon.*] The letter begins thus,

'Hon. Sir,

'You aſked me laſt night what I thought the beſt 'way of anſwering Dr Sacheverell's ſermon on Nov. 5, 'I told you one way was to let it drop into ſilence and 'contempt, for that there was not one argument to an'ſwer, but a jumble of words and periods that made 'the crackling of thorns, noiſe, and flame, and there'fore it was better to pity the man and deſpiſe the 'ſtuff. It could do no harm, but rather great ſervice, 'to make his own party-friends aſhamed of him, and 'to convince the world, that *madneſs* is as bad as *mo'deration*. But, ſaid you, there be ſome anſwers in 'print, and will be more: Pray, what is the beſt 'courſe that a new anſwerer can take with him? 'Why, Sir, ſaid I, let him anſwer himſelf; that is, 'to produce his own words, and to let him ſtand 'or fall by them, without calling him any names, or 'raking into his life and converſation. You preſſed 'me, Sir, to give a ſpecimen of it. Here it is cool 'and calm under theſe heads; propriety, pertinence, 'good ſenſe, veracity, ſeriouſneſs, charity, and alle'giance;' *which being completed, he concludes in theſe terms*, 'I muſt ſay thus much, that ſince the 'foundation of the city of London, and the conver'ſion of this iſland, there has not been in any age, in 'any cathedral or parochial church, ſuch a ſermon, 'ſo inſolent, uncharitable, untrue, as this, delivered, '(though long before compoſed) before the Right Hon. 'the Lord Mayor and citizens of London, at the ca'thedral church of St Paul, on the 5th of November, '1709, by H. S. D. D.'

[*Z*] *A poſtſcript vindicating himſelf againſt ſome reproaches caſt upon him.*] One of theſe aſperſions was founded upon a tranſlation of Pliny's panegyric, publiſhed by our author in 1686, under the title of *An addreſs of thanks to a good prince, preſented in the panegyric of Pliny upon Trajan the beſt of Roman emperors.* Before which he had put a large preface, and the life of Pliny, as Sir Rob. Stapylton had done to his tranſlation of the ſaid panegyric, printed at Oxford in 1644. Several ſcandalous reflections having been made on the dean, ſince his change of principles, for this performance, he took occaſion in this poſtſcript to give the following account of it. 'He (that is the remarker) 'ſays, the Doctor dedicated *Pliny's panegyric* to the 'late King James; and what if he had, only it hap'pens he had not. This is an idle tale among the 'party, who perhaps have told it 'till they believe it; 'when the truth is, there was no ſuch dedication, and 'the tranſlation itſelf of Pliny was not deſigned for 'any court addreſs. The young tranſlator's tutor, Mr 'Allam, directed his pupil by way of exerciſe, to turn 'ſome Latin tracts into Engliſh: The firſt was a little 'book of Eraſmus, intitled *Moriæ Encomium*, which 'the tutor was pleaſed to give to a bookſeller in Ox'ford, who put it to the preſs, while the tranſlator was 'but an under-graduate. Another ſort of talk required 'by the tutor, was this Panegyric of Pliny upon Tra'jan, which he likewiſe gave to a bookſeller in Ox'ford, before the tranſlator was Maſter of Arts, de'ſigning to have it publiſhed in the reign of King 'Charles II. and a ſmall cut of that prince at full 'length was prepared, and afterwards put before ſe'veral of the books; though the impreſſion happened 'to be retarded 'till the death of King Charles; and 'then the ſame tutor (not long before his own death) 'adviſed a new preface, adapted to the then received 'opinion of King James, being a juſt and good prince. 'However, there was no dedication to King James, 'but to a private patron, a very worthy baronet (42), 'who came in heartily to the beginning of the late 'happy revolution. This is the whole truth of that 'ſtory, that hath been ſo often caſt at the Doctor, 'not that he thinks himſelf obliged to defend every 'thought and expreſſion of his juvenile ſtudies, when 'he had poſſibly been trained up to ſome notions, 'which he afterwards found reaſon to put away as 'childiſh things.'

(42) Sir William Glynne, who had juſt before preſented him to his firſt living of Amproſden.

[*A A*] *He refuſed to join in the addreſs to the Queen*, &c.] Advice was ſent of this by Mr Dyer, who in his [news] letter of Aug. 24, 1710, writes thus. 'The ad'dreſs of the biſhop and clergy of London was inſert'ed in this day's Gazette, by order of the Queen, as 'a diſtinguiſhing favour to them. The clergymen who 'refuſed to ſign it, were Dr Barton, and Mr Baker; 'and thoſe who did not anſwer to the Biſhop's ſum'mons, were Dr Kennet, Dr Bradford, Dr Hancock, 'and Mr Hoadley; and therefore as they have no 'ſhare in the Queen's thanks, ſo I hope they will have 'as little ſhare in her favours.'

[*B B*] *He publiſhed his ſermon before the ſociety for propagating the Goſpel in foreign parts.*] The title of it is, *The letts and impediments in planting the goſpel of Chriſt*, &c. Theſe anniverſary ſermons are diſtributed in order to excite the charity of pious perſons to promote that glorious deſign, and upon the Dean's preſenting this ſermon to a rich and religious widow, ſhe reſolved to leave a legacy of 50*l.* to the corporation, and upon her deceaſe it was paid by her executor into his hands, and by him delivered to the board at a public meeting (43).

(43) Life, &c. p. 128, 129.

preface of his own [*C C*]. This zealous conduct raiſed ſo great an odium upon him among the oppoſite party, that a very uncommon method was taken to expoſe him by Dr Welton, Rector of Whitechapel (*a a*). In an altar-piece of that church, the ſubject whereof was a repreſentation of Chriſt and the twelve Apoſtles eating the Paſſover and Laſt Supper, Judas the traitor was drawn ſitting in an elbow chair, dreſſed in a black garment, between a gown and a cloak, with a black ſcarf and a white band, a ſhort wig, and a mark in his forehead between a lock and a patch, and with ſo much of the countenance of Dr Kennet, that under it in effect, was written, *The Dean the Traytor* [*D D*]. Such an outrageous piece of inſolence ſerved to animate rather than deter him (*b b*); and the ſame year, upon the appearance in print of Mr Bedford's *Hereditary Right*, &c. the Dean publiſhed an anſwer to it, under the title of *A Letter to the Lord Biſhop of Carliſle, concerning one of his Predeceſſors, Biſhop* Merks, *on occaſion of a new volume for the Pretender, intitled, The Hereditary Right of the Crown of* England *aſſerted*. Printed in 1713 [*E E*]. In the mean

(*a a*) He was afterwards a Nonjuror, and deprived of this rectory on that account in 1716. Salmon's Chron. Hiſtorian, p. 365. edit. 1723.

(*b b*) *This ſpirit* was made a topic of ridicule by his adverſaries and competitors; and in that ſcolding Biſhop of Carliſle gives him the character of a *man of Chriſtian courage and integrity*. See Remarks, &c. printed in 1717 by that Biſhop.

[*C C*] *With a preface of his own.*] As this preface contains an account of all the points in diſpute between the Dean and his antagoniſt, with regard to the Church. We ſhall give an abſtract of it as follows. He begins with the reaſons that induced him to reprint this ſermon, which he obſerves might be ſerviceable at that time upon ſeveral accounts. 1. 'That it would bear 'ſome teſtimony of reſpect and honour to the good 'way of preaching in the age of Queen Elizabeth; 'ſober, ſerious goſpel truth, in a juſt and eaſy ſtile, 'which degenerated by the introduction of ſchool 'terms, and ſcraps of the poets under King James, 'and ran too far into the reign of King Charles I. 'whereby the pulpit became rather a place of diverſion than inſtruction and ſalvation. That at the Reſtoration the preacher ran into another extreme, *that* 'of words and periods, ſtrong and ſtiff, a falſe oratory, 'till Dr Tillotſon, and ſome other judicious divines, 'dared to reſtore good ſenſe and plain learning, which 'now, ſays he, generally obtain. 2. It will do another honour to that age, by ſhewing the probity and 'courage of our Engliſh divines, in preaching at court 'againſt the flattering of great men, as well as the inconſtancy of the common people, as likewiſe againſt 'their curioſity and love of ſtrange doctrines; *ſuch as* 'the invalidity of lay baptiſm; *a doctrine of the moſt* 'narrow and uncharitable ſpirit, *invented by ſchiſmaticks, and urged by the leader of them Mr Cartwright,* 'but confuted by Archbiſhop Whitgift, *in his admonition, &c. and condemned in this ſermon.* 3. It will 'give a further proof of the integrity of preachers 'in that reign, that they preached freely and earneſtly againſt the errors and corruptions of Popery. But 'they found, it ſeems, ſome of the common people 'growing ſick and weary of that neceſſary ſubject, and 'rather intent upon newfangled doctrines and devices 'of upſtart men. That however no Proteſtant preachers had been then ſo fond of ſtrange notions, as to 'preach up the *neceſſity of private confeſſion to a prieſt,* 'or the *inefficacy of faith and repentance to a ſinner,* 'without *ſacerdotal abſolution*; or *a real propitiatory* 'ſacrifice *in an oblation of the elements of bread and* 'wine; or *a middle ſtate of ſouls after death in neither* 'heaven nor hell; or *an independency of the Church* 'upon a Chriſtian ſtate, even where the civil magiſtrate 'is by law ſupreme head and governor; or the *unchurching of all other reformed Churches*; and the *unchriſtening of all foreign Proteſtants*; to ſay nothing of 'our brethren and fathers at home, or any ſuch unſcriptural fancies bordering on the Church of Rome, and to 'be ſupported by nothing but an infallible chair.'

[*D D*] *The Dean the traitor.*] It was generally ſaid, that the original ſketch was deſigned for a Biſhop [Biſhop Burnet] under Dr Welton's diſpleaſure, which occaſioned the elbow-chair. But the fears of a *Scandalum Magnatum* riſing before the Painter's eyes, leave was given to drop the Biſhop and make the Dean, which he did as well as he could; multitudes of people came daily to the church to admire the meaning of the ſight, but it was eſteemed ſo inſolent a contempt of all that is ſacred, that upon the complaint of others [for the Dean himſelf never ſaw it, or ſeemed to regard it) the Biſhop of London obliged thoſe that ſet the picture up to take it down (44).

(44) General Hiſtory of England, by N. Tindal, under the year 1713.

[*E E*] *A letter concerning Biſhop Merks, &c.*] When the hereditary right, &c. came out, the Dean made it his buſineſs to examine the ſtrength of the arguments, and the truth of the authorities in it, and was prepared to ſhew the unreaſonableneſs and inſincerity of that new ſcheme, and the very wrong turns of hiſtory and law, that are drawn in to ſupport it. But finding the whole examination would run into too great a length for the patience of common readers, who moſt wanted to be undeceived, he reſolved to take a ſingle inſtance only, by way of ſpecimen, that from thence might be inferred what credit was to be given to the reſt of that bulky work. This inſtance was in the caſe of Thomas Merks, Biſhop of Carliſle, whom this author had applauded as a man of conſcience and integrity, becauſe he adhered to King Richard II. after his reſignation and depoſition, and took up arms (after a ſpeech in parliament) againſt King Henry IV. in legal poſſeſſion of the Crown; for which he was tried, condemned, and pardoned. The Dean well knew that this applauded Biſhop was one of the worſt tools in the miniſtry of Richard II and helped to bring that prince to his miſerable end; and was attached to him not upon any principle of honour, but for his own intereſt and preſervation, and that he was by no means the deliverer of that ſpeech in parliament long ſince invented for him, and that his flying into arms in aſſiſtance of a French invaſion, was, in the moſt apparent manner, a baſe treaſon and rebellion, for which he was legally tried, convicted, and adjudged to die: But after an effectual deprivation by the civil power, and a mock tranſlation by the Pope, he made his ſubmiſſion, and obtained his pardon, and accordingly after that revolution lived in a peaceable allegiance to King Henry IV. who was perfectly reconciled to him as to a faithful ſubject, and was not only his friend but his royal patron, beſtowing a good benefice on him, though for the honour of the Church and nation, he would never truſt him in an Engliſh biſhopric, and he never pretended to act as a biſhop of his ſee. This character of the man, and hiſtory of his life and actions, was the very reverſe of what the author of hereditary right had given, and to ſhew that to the world, was the ſubject of the Dean's letter, who reſted the matter 'till the death of Dr Hickes (45) in 1715. Soon after which, there came out a collection of papers written by him, wherein it appeared, that he had been conſecrated to the title of Suffragan of Thetford, by ſome few of the deprived biſhops, and after their deceaſe, had made himſelf the principal of orthodox unity, and Jacobite loyalty; condemning the eſtabliſhed Church of England as ſchiſmatical, and the civil government as tyranny and uſurpation, the bench of biſhops and their whole clergy as of invalid orders; their miniſtration of the ſacraments as null and void; and their very prayers a ſin. About the ſame time, the beginning of the rebellion, there was found a printed tract of ſchiſm (46), charged on the Church of England, and the whole body of the clergy, by Mr Lawrence Howell, one of the ſame Jacobite ſeparation. And in a ſearch made for the perſon and papers of the ſaid Mr Howell, among other notable diſcoveries, there was one ſheet ſuperſcribed, A letter to Dr Kennet, that ſeemed to be an inſulting dedication, or preface of a book, called, *An [illegible] to the brief Hiſtory of the Crown of England, written at the time when the bill of excluſion was attempted againſt the Queen's father, then Duke of York.* The ſaid letter prefixed, complained grievouſly that Dr Kennet had *given a vile character of Biſhop Merks, and yet, againſt his will, had made him ſtrictly faithful to his rightful ſovereign, &c.* Whereupon the Dean drew up and publiſhed, *A ſecond letter to the Lord Biſhop of Carliſle upon the ſubject of Biſhop Merks, &c.* dated Octob. 22, 1716. Neither did he think this ſufficient. The controverſy of the new ſchiſm made a much greater noiſe, he obſerved, upon the late tumults and rebellion,

(45) He died December 15 that year. See the inſcription upon his tomb-ſtone in St Margaret's church-yard, Weſtminſter. He was conſecrated Suffragan Biſhop Feb. 24, 1693, after his return from France, with a nomination from King James, to whom he undertook a voyage for the purpoſe.

(46) The title was, *The Caſe of Schiſm truly ſtated.* For which he was tried and convicted at the Old Bailey, Feb. 28, 1716, and ſentenced to be [illegible] whipped, [illegible] of 500 l. and to be imprisoned for three years, and to find ſecurity for his good behaviour for five; and after ſentence he was ſhipped off by a [illegible] by order of the Court. Salmon's Chron. Hiſt. under the year 1716.

mean time, he employed his leiſure hours in improving the good ends of the ſociety for propagating the Goſpel, &c. To that purpoſe, having made a large collection of ſuitable books, charts, maps, papers, &c. at his own expence, in the deſign of writing *A full History of the Propagation of Chriſtianity in the Engliſh American Colonies*, he made a free preſent thereof to the corporation, and publiſhed a catalogue of all the diſtinct treatiſes and papers, in order of time as they were firſt printed or written, under this title, *Bibliothecæ Americanæ Primordia: An Attempt towards laying the Foundation of an American Library, in Several Books, Papers, and Writings humbly given to the Society for propagating the Goſpel in Foreign Parts, for the perpetual Uſe and Benefit of their Members, their Miſſionaries, Friends, Correſpondents, and others, concern'd in the good deſign of planting and promoting Chriſtianity within her Majeſty's Colonies and Plantations in the Weſt Indies*, 4to. Lond. 1713 [*FF*]. About this time he likewiſe founded *an antiquarian and hiſtorical library* at Peterborough [*GG*], and enriched the common library of that church with ſome very uſeful books, and improved their ſtock of monuments and records with an abſtract of the collections made by Dr John Coſins, one of his predeceſſors (*cc*). After the acceſſion of King George I. to the throne, as ſoon as the Dean ſaw the rebellion opening in the North, and the diſpoſition of many to countenance and cover it, he preached boldly in rebuking that ſpirit, and publiſhed, at the requeſt of ſome of his pariſhioners, *The Witchcraft of the preſent*

(*cc*) Life of Dr Kennet, p. 151.

lion, than it had ever done ſince the filling of the deprived ſees by King William, and the Jacobite conventicles were more frequented in London and Weſtminſter, and prieſts of that way were ſent down to gather the like congregations in country towns; and many of the high church, eſpecially the women, would not join in any part of the prayers for King George and his royal family, but at the mention of theſe names would riſe up, or ſit down, or at leaſt expreſs their diſſent in ſome viſible manner. Several of the Church clergy alſo, tho' offended with Dr Hickes for urging a ſeparation, yet gave in very much to the principles upon which that practice was founded, viz the independency of the Church upon the State, the more than ſpiritual powers of the Church; the legiſlature of the Biſhops and clergy; the Church above and before the King; and ſuch like notions of aſſuming authority and juriſdiction by divine right, unaccountable to the prince and people. At this critical juncture, the Dean thought it neceſſary to write a third letter to the Lord Biſhop of Carliſle upon the ſubject of Biſhop Merks, wherein the nomination, election, inveſtiture, and deprivation of Engliſh prelates, are ſhewn to be orginally conſtituted and governed by the ſovereign power of kings and their parliaments, againſt the pretenſions of our new fanaticks, who have withdrawn themſelves from the eſtabliſhed Church into a ſeparate communion, under the name of ſome deprived biſhops, and their ſuppoſed ſucceſſors, dated Jan 25, 1716. In this letter he reſumes the ſubject of the ſpeech ſaid to be ſpoken by this biſhop in parliament, and obſerves, that the firſt notice given of it to the world came from Mr Edward Hall, who died about 150 years after the ſpeaking, and yet pretends no manuſcript copy; that it was immediately caught up by Mr Grafton, who cites Mr Hall for it. That Stowe, in his Annals, publiſhed by himſelf, takes no notice of any ſpeech or oppoſition of this biſhop in this parliament, nor has Mr Edmund Howes inſerted it, but Mr Hollinſhead and his friends, who were to be general collectors, took hold of it, but refer to Mr Hall, and let it reſt again ſingly upon his teſtimony. But ſoon after comes a bolder man, Sir John Hayward, L.L.D. to give an eſſay upon Henry IV. and he not only ſuppoſes a ſpeech to have been really delivered, but gives a new and larger copy of it, i e. He made a new ſpeech, and dreſſed it up in argument and language as unlike to Biſhop Merks, as his own military ſword was to that prelate's mitre; and yet he introduces it with great ceremony. *The inheritance of the kingdom*, ſays he, *being in this ſort ſettled in King Henry and his line, it was moved in the parliament, what ſhould be done with King Richard. The Biſhop of Caerliel, who was a man learned and wiſe, and one that always uſed both liberty and conſtancy in a good cauſe, in his ſecret judgment did never give allowance to theſe proceedings, yet diſſembled his diſlike, until he might to ſome purpoſe declare it. Therefore now being in a place to be heard of all, and by order of the Houſe to be interrupted by none, he roſe up, and with a bold preſence uttered his mind as followeth, &c.* All which, ſays Dr Kennet, is an imaginary entrance into an enchanted caſtle, or a meer fiction, pleaſant enough to any who love to be deceived. The author, like other diverting writers, would not bind himſelf to relate what another ſaid, but would make an exerciſe upon what might be now ſaid upon that ſubject. This ſpeech for Biſhop Merks was not his firſt eſſay of that kind in this life and reign of Henry IV. He made a fine ſpeech for Archbiſhop Arundel to Duke Henry in France, which he calls a ſolemn oration; and a pretty ſpeech of the Duke in anſwer to it, with reply and rejoinder very agreeable. He makes a moſt bemoaning ſpeech for King Richard, when *his bitterneſs did in this manner break from him*; and another farewel ſpeech in the Tower, when he delivered up his crown and ſcepter. In ſhort, he is a profeſt ſpeech-maker through all his little hiſtory.—— The true occaſion of his making that elaborate ſpeech for Biſhop Merks ſeems to have been this: He was employed by the Earl of Eſſex to anſwer the book of titles, called Doleman, written by Father Parſons, and cautiouſly to recommend the hereditary right of the King of Scots; and upon that view he took a ſtep out of the way, and put his own thoughts into the form of a ſpeech for Biſhop Merks, in defence of hereditary right; for which he ſuffered in the jealous times of Queen Elizabeth, and was honourably rewarded by King James I. who knighted him, and made him hiſtoriographer of Chelſea college (47).

(47) Third Letter to the Lord Biſhop of Carliſle, p. 49. N. B. Some Remarks, &c. upon theſe two laſt letters, were publiſhed by Mr Jer. Collier. See his article.

[*FF*] *Bibliothecæ Americanæ Primordia, &c.*] This conſiſts of books, charts, and maps, together with a collection of voyages and travels, and other notices of thoſe parts. In the preface he gives an account of the ſeveral uſes of it, one of which he intimates in the concluſion to be, that 'Any perſon in running it over 'would pleaſe to remember, that if they have any 'books or papers of the kind, not therein mentioned, 'or better editions of thoſe books and papers that are 'inſerted, and tranſmit them to the Society to enrich 'and enlarge the common ſtock.'

[*GG*] *An hiſtorical library at Peterborough.*] To this purpoſe he had been long gathering up pieces, from the very beginning of printing in England, to the latter end of Queen Elizabeth's reign. This collection, amounting to about 1500 volumes and ſmall tracts, was placed in a private room at Peterborough, in the view of being daily ſupplied and augmented, under the care of the Rev. Mr Joſeph Sparke, a member of that church, of very good literature, and very able to aſſiſt in the deſign; and there is a large written catalogue of them thus inſcribed, *Index librorum aliquot vetuſtorum quos in commune bonum congeſſit W. K. Decan. Petriburgh, MDCCXII.* In it there are moſt of the printed legends of ſaints; the oldeſt rituals and liturgies; the firſt printed ſtatutes and laws; the moſt antient homilies and ſermons; the firſt editions of the Engliſh ſchoolmen, poſtillers, expounders, &c. with a great many fragments of our ancient language, uſage, cuſtoms, rites, tenures, and ſuch other things as tend to illuſtrate the hiſtory of Great Britain and Ireland, and the ſucceſſive ſtate of religion and learning, in them. In a letter to a friend, dated at Peterborough July 27, 1717, the Dean writes thus: *I have improved the collection I have been long making for an hiſtorical antiquarian library, conſiſting of the oldeſt books relating to Engliſh writers and affairs: I have conſiderably encreaſed my catalogue of the lives of eminent men.*

preſent Rebellion: A Sermon preached in the Pariſh-Church of St Mary Aldermary, in the City of London, *on Sunday the 25th of September*, 1715. *The Time of a publick Ordination. Publiſhed upon Requeſt of the Hearers.* Lond. 1715 [*H H*]. The ſame year, upon the motion of his great friend and patron Archbiſhop Teniſon, he printed a tract, intitled, *The Wiſdom of looking Backwards, to judge the better of one Side and the other, by the Speeches, Writings, Actions, and other Matters of Fact, on both ſides, for the four laſt years paſt.* Lond. 1715, 8vo. In the two following years, he was very zealous for the repeal of the acts againſt Occaſional Conformity and the growth of Schiſm [*I I*]; he alſo warmly oppoſed the proceedings in the Convocation againſt Dr Hoadley, then Biſhop of Bangor, and was deeply engaged on the ſide of that prelate, in what is uſually called the Bangorian controverſy [*K K*]. His reputation was particularly concerned in this laſt affair, and ſeemed to be hurt thereby ſo eſſentially, as to prove an effectal bar to his farther advancement in the Church. But, by the aſſiſtance of Dr Charles Trimnel Biſhop of Norwich (*d d*), and afterwards of Wincheſter, he was promoted, upon the death of Dr Cumberland, to the ſee of Peterborough, and was conſecrated Biſhop at Lambeth-chapel, on Sunday November 9, 1718. He continued to employ the preſs in printing ſeveral pieces after this laſt promotion [*L L*], which he lived to enjoy ſomething above ten years, and died

(*d d*) Ibid. p. 283.

[*H H*] *A ſermon, intitled, The witchcraft of the preſent rebellion*] This ſermon, which was preached in the height of the rebellion, expoſed him to the wit and malice of ſeveral. Two or three private letter-writers told him, that it was preaching *treaſon againſt the lawful king*, and the time was coming when he ſhould certainly anſwer for it; and even ſome friends of leſs ſpirit intimated, that it was not ſo wiſe and cautious—No exaſperating an enemy when he had a ſword in his hand, and the like. But he was uſed to ſay, that he was prepared to live and die in the cauſe againſt Popery and the Pretender, and he would go out to fight, when he could no longer ſtay to preach againſt them (49). After the rebellion was ſuppreſſed, he preached and publiſhed, *A thankſgiving ſermon for the bleſſing of God, in ſuppreſſing the late unnatural rebellion, delivered in the pariſh church of St Mary Aldermary, &c. on Thurſday June* 7, 1716.

(49) Life, &c. p. 152.

[*I I*] *He was very zealous for the repeal of the act againſt occaſional conformity, &c*] In a letter dated April 13, 1717, he has theſe words. ‘ *The bill* ‘ *for relieving the diſſenters in matters of civil right* ‘ *and property, conſiſtent with the ſecurity of the eſta-* ‘ *bliſhed Church, ſeems to be due to them as Engliſh Pro-* ‘ *teſtants, and faithful Proteſtants.——However, it* ‘ *muſt be oppoſed in the name of the Church Had the* ‘ *miniſtry been more early fixed, and ſteady meaſures* ‘ *taken, it had met with leſs oppoſition.* I wiſh the ‘ Biſhops had declared nothing, ‘till they had ſeen the ‘ Bill, and kept it more in their power of reconciling ‘ it to the peace and true intereſt of religion, as by ‘ law eſtabliſhed in the Church of England. I doubt, ‘ if it go on, ſome who were againſt it will find an odd ‘ expedient for it, and rather than be thought to juſtify ‘ occaſional communion, will offer more than the firſt ‘ demand, even to abrogate the Teſt-Act, when all ‘ had been content with reſtoring *Toleration* to the ‘ ſtate of the *Revolution* (50). By this extract it appears, that the Dean had incurred the jealouſy and diſpleaſure of ſome of his old friends, in not running into the meaſures taken by them upon the buſineſs of the repeal of the two bills above-mentioned, which was upon the anvil at this time. One of theſe old friends was the Biſhop of Carliſle, then Almoner to the King, as will be ſeen in the following remark.

(50) Ibid. p. 282, 283.

[*K K*] *He was deeply engaged in the Bangorian controverſy.*] His ſhare in this famous diſpute was not immediately upon the doctrine about the powers of the Church, advanced by Dr Hoadley, but only upon an incident which fell out in the courſe of it. The Biſhop's ſermon having been attacked by Dr Andrew Snape, his lordſhip wrote an anſwer; in which, upon occaſion of a report ſpread by ſome perſons about the town, that he was put upon preaching that ſermon at court to ſerve ſome political ends, he uſes theſe words, *God knows I preached what I found there* [in the New Teſtament], *without the knowledge of any man living* (51). This poſitive and ſolemn declaration was flatly inconſiſtent with a ſtory which had been told to Dr Snape, namely, that the ſermon was preached with the knowledge, and ſubmitted to the correction of a certain perſon, who adviſed the making alterations in it. Whereupon, in the concluſion of his ſecond letter to the Biſhop, having taken notice of his entertaining Pillionere, a Jeſuit, in his houſe, he addreſſes himſelf to his Lordſhip thus, ‘ I muſt needs ſay your evaſive ‘ equivocal way of writing, ſavours very ſtrongly of ‘ ſuch communication [as that of a Jeſuit], and whe- ‘ ther the ſame perſon may not have helped you ‘ to a mental reſervation to juſtify a ſolemn appeal ‘ to God, that what you preached was *without the* ‘ *knowledge of any man living*, when a living man ‘ has teſtified, that it was preached with his knowledge, ‘ and ſubmitted to his correction, your Lordſhip beſt ‘ knows.’ This was no ſooner publiſhed, then the Biſhop called upon Dr Snape for the proof of what he had aſſerted, who preſently declared, that he had received that account from Dr Hutchinſon, who had heard the Biſhop of Carliſle ſay, that he had ſpoken with the perſon that adviſed the Biſhop of Bangor to inſert ſuch words as *abſolutely, properly, &c.* And that ſome days after the ſame divine again aſſured him, that he had heard the ſame prelate a ſecond time declare that matter to be true, and that he would juſtify it to all the world. Upon this Dr Snape drew up that paſſage, waited upon the Biſhop of Carliſle, read it to him, and was allowed by him to publiſh it, with an aſſurance that he would ſtand to it. This was the ſubſtance of Dr Snape's advertiſement (52), to which the Biſhop of Carliſle ſet his hand in theſe words, *this is true.* And being called upon to name the man, he fixed upon Dr Kennet, who he declared, according to the beſt of his remembrance, was the perſon that told him, the ſermon was preached with his knowledge, and ſubmitted to his correction, and that he adviſed, and with difficulty prevailed, for the inſerting the words above-mentioned A great number of papers and letters paſſed on the occaſion between the Biſhop of Carliſle and the Dean; in all which the charge was affirmed on one ſide, and denied on the other, with equal warmth; ſo that the matter reſted upon the comparative characters of the diſputants, and the Dean had the hardeſt part to manage, that of proving a negative. This, and the great eſteem in which the Biſhop was held, even among ſeveral of the Dean's beſt friends then in favour at court, where the Biſhop was almoner, would probably have ſunk the Dean*, had not there been luckily a change of hands, upon which the Biſhop was removed from the almoner's place (53), which was given to Dr Willis, then lately made Biſhop of Glouceſter; the Occaſional Conformity and Schiſm acts were repealed in the manner chalked out by the Dean, in the letter mentioned in the foregoing remark, and he was lucky enough to have it in his power to lend a helping vote to the paſſing of it in the Houſe of Lords, where he was then a member, being Biſhop of Peterborough (54).

(51) Anſwer to the Rev. Dr Snape's Letter to the Biſhop of Bangor, p. 43. 3d edit.

(52) The following year, our author publiſhed a piece, intituled, *Dr Snape inſtructed in ſome Matters, eſpecially relating to Convocations and Converts from Popery.* Lond. 1718.

* He was ſo greatly affected with it, that he preſerved a place for it in his laſt Will, where he ſolemnly declared, that he neither ſaid nor thought any ſuch thing.

(53) Viz. on the 18th of March, 1717. Salmon's Chron. Hiſt. p. 378. firſt edit. 1723.

[*L L*] *He printed ſeveral pieces after he was made Biſhop.*] Theſe are, 1. *Charity and Reſtitution: a ſpital ſermon, preached at St Bridget's before the Lord Mayor, on Eaſter Monday March* 30, 1719, *with an application to the vain attempts of a Spaniſh invaſion in* 1588. 2. *A ſermon preached before the Lords Spiritual and Temporal in Weſtminſter-Abbey, Jan.* 30, 1719. 3. *Admonitions and advices delivered to the clergy of the dioceſe of Peterborough, at the primary viſitation held in the months of July and Auguſt* 1720; *in two parts: publiſhed at the requeſt of the clergy for their uſe and ſervice*, 4to. 4. *An introduction to the new edition of a book, intitled, A diſcourſe concerning the laws eccleſiaſtical*

(54) He was conſecrated Biſhop in November, and the act paſſed after Chriſtmas, and had the royal aſſent Feb. 13, 1718. viz. it was intitled, *An Act for ſtrengthening the Proteſtant Intereſt in this Kingdom.* Ibid. p. 384, 385.

(ee) That is in the h[illegible] street, [illegible] St James's Park. [illegible] Mayn[illegible] the [illegible] and [illegible] of the Medl[illegible] the affairs relating to [illegible] [illegible]. Life of Maynwaring, p. 190.

died in his house in St James's-street Westminster (ee), on the 19th of December, 1728. In viewing his character, the quality that shews itself foremost is his party zeal *, which the writer of his life intimates was carried to excess. But drawing that veil aside, there appears many excellent virtues in the moral part, and many rare talents and acquisitions in the intellectual part of it. He was a man of incredible diligence and application, not only in his youth, but to the very last. He was very communicative (ff), and would go through any fatigue to serve either a friend or the public. Neither was he wanting in acts of charity; especially in respect to almsgiving, he both gave largely himself, and had a singular influence in disposing others to the like [MM]; and was particularly liberal, and even bountiful, to some of his relations, whose circumstances stood in need of it (gg). As all his passions were naturally strong; so the love of his country, and regard for it's honour, glowed among them with a distinguished warmth. Nor was his affection for the Church less true and hearty, though tempered with great charity and moderation towards the Dissenters.

(ff) He had a noble library of books, collected with great pains and much expence, and took delight in it, and studied to make it useful both to himself and others.

(gg) The writer of his Life assures us, that very large sums were disposed of in this way, as he was informed by a Clergyman [illegible] whose hands it came. Life, p. 190.

stical and civil, made against Hereticks by Popes, Emperors, and Kings, provincial and general councils, approved by the Church of Rome, &c. Lond. 1723. He seems to think the said discourse was wrote by Dr Maurice, but it appears that Dr Whitby was the true author (55). 5. *A treatise of Gavelkind, both name and thing, shewing the etymology and true derivation of the one, the nature, antiquity, and original of the other; with sundry emergent observations, both pleasant and profitable to be known of Kentish men, and others, especially such as are studious either of the ancient custom or common law of this kingdom. By (a well-willer to both) William Somner. The second edition, corrected from the many errors of the former impression. To which is added, the life of the author, written, newly revised, and much enlarged, Lond.* 1726, *4to.* 6. *A register and chronicle, ecclesiastical and civil, containing matters of fact, delivered in the words of the most authentic books, papers, and records, digested in exact order of time; with proper notes and references towards discovering and connecting the true history of England, from the Restoration of King Charles II. Lond.* 1728, *2 vols. fol.* These are all that he published after he was Bishop; as to those he wrote or published before, several have been occasionally mentioned in the course of this memoir; the rest are as follow:

(55) See 12 sermons preached at the cathedral church of Sarum, p. 256. also A Short Account, of Dr Whitby, p. 5. prefixed to his Last Thoughts.

1. *A manuscript treatise about the Test, against Dr Parker.* 2. *The righteous taken away from the evil to come, applied to the death of Queen Mary, in a sermon preached at St Martyn's church in Oxford, Jan.* 20, 1694. 3. *A sermon preached at Bow church, London, before the Societies of Reformation, on Monday Sept.* 24, 1701, *published at their request, Lond.* 1702. 4. *A sermon preached in the parish church of St Botolph Aldgate in London, December* 17, 1704, *the day of solemn thanksgiving for the late glorious victory obtained over the French and Bavarians by the Forces of her Majesty and her Allies under the command of the Duke of Marlborough,* Lond. 1704. (6.) *The Charity of Schools for poor Children recommended, in a Sermon preached at the Parish Church of St Sepulchres, May* 16, 1708, Lond. 1708. (7) *The Duties of rejoicing in a Day of Prosperity recommended; in a Sermon preached before the Queen at her Royal Chapel at Windsor, on Sunday June* 23, 1706 (8.) *The Christian Scholar, in Rules and Directions for Children and Youth sent to English Schools; more especially designed for the poor boys, taught and cloathed by Charity in the parish of St Botolph Aldgate.* Lond. 1708. (9.) *The excellent Daughter. A Sermon for the Relief of the poor Girls taught and cloathed within the Parish of St Botolph Aldgate: with proper Lessons of the Duties of Daughters.* Lond 1708. (10) *Glory to God and Gratitude to Benefactors: A Sermon preached before the Queen in her Royal Chapel of St James, on Tuesday 22d of Novemb.* 1709; *the Day of Publick Thanksgiving for the signal and glorious victory at Blaregnies, near Mons in Hainault: published by her Majesty's special command.* Lond. 1709. (11.) *A Letter to Mr Barville, a Roman Priest, upon his Desire of being reconciled to the Church of England,* dated from Golden Square, Crutched Fryars, Novemb. 30, 1709, printed in a book intituled, *An Account of the late Conversion of Mr John Barville, alias Barton, from Popery to the Reformed Church of England. With the Form of his solemn Abjuration of the Romish Religion, written by himself,* Lond. 1710. 8vo. (12.) *The Works of Charity, in a sermon preached before the right honourable the Lord Mayor in the Church of St Bridget, on Tuesday in Easter Week,* 1710. Lond. 1710. (13.) *The Christian Neighbour: A Sermon preached in the Church of St Laurence Jewry, before the right honourable the Lord Mayor,* &c. *upon the Election of a Mayor for the Year ensuing, on the Feast of St Michael,* 1711. Lond. 1711. (14) *Doing Good the Way to Eternal Life; recommended in a Spital Sermon, before the right honourable the Lord Mayor, on Tuesday in Easter Week, 7th April,* 1712. Lond. 1712. (15.) *The Faithful Steward. A Spital Sermon, preached on Tuesday in Easter Week, April* 3, 1716.

[MM] *He had a particular influence in disposing others to charity*] The following remarkable instances of this shall conclude this memoir. The alderman of his ward, Sir Charles Thorold, Bart. suffered him to suggest some proper objects of charity in his life and at his death. His last will had so many noble charities bequeathed in it, that for the honour of the city, as well as of that worthy family, Dr Kennett, thought fit to give an abstract of it in his spital sermon, on Tuesday in Easter week 1710 (56). The exhibitions to be yearly given to four poor scholars in the university of Oxford (there mentioned) were to be affixed to such colleges or halls as he should appoint; who accordingly named *St Edmund Hall, Corpus Christi, University, and Merton*; the first in respect to his own education, and the second to his brother's, and the two last in regard of friendship to the governors of them. Dr Kennett had also a particular acquaintance with one of his parishioners at Aldgate, Mr John Pierrepoint, who, after a recess from business, was projecting how to do most good in his generation, and to posterity; and was encouraged by the Dean in what he afterwards accomplished; which was the founding a free school at Lucton in Herefordshire, for instructing of children in religion, grammar-learning, writing, arithmetic, and mensuration; the governors whereof were incorporated by act of parliament, and the school endowed with an estate of about 300 l. per annum, tax free. The profits to be employed in the following manner. To the school master 70 l. per annum; to the usher 40 l.; to a writing-master 40 l.; to put out six apprentices yearly 30 l.; to be laid out in books of piety to be given to each apprentice 6 l; to set up six apprentices yearly, if they appear by certificate to have served their time faithfully, and be of the Communion of the Church of England 60 l.; exhibitions to be allowed to three scholars studying either at Oxford or Cambridge, which will amount to about 60 l. more. The worthy founder in his life-time had expended 1500 l. in building the school-house, and in walling in, planting, and making a garden, and other conveniencies, allotting several acres of land for adjoining pasture, &c. And, dying, he left a token of remembrance to the Dean; who was soon after blessed with an opportunity of promoting another charity. A wealthy and well disposed merchant, Mr Arundel, returning from Leghorn, and lying long at London and the Bath in a weak condition, did, by his last will, bequeath many charitable legacies, and, among others, 500 l. to be disposed among poor widows, &c. at the discretion and by the distribution of Dr White Kennett and his brother Mr Basil Kennett, which sum was duly paid by the executor, and faithfully distributed by the said trustees. P

(56) Viz. in page 25.

KENNETT [BASIL], younger brother to the preceding, was born October 21, 1674, at Poſtling in Kent, the vicarage of his father, who bred this ſon alſo to the Church. In which view, after a ſuitable foundation of Grammar-learning, he was ſent to Oxford, and admitted Scholar or Diſciple (*a*) of Corpus Chriſti college, December 20, 1690 (*b*). In the univerſity he ſat down to his ſtudies with remarkable diligence, and the ſucceſs was anſwerable; ſo that he ſoon became diſtinguiſhed both by his genius, and the extraordinary advances he made in claſſical and polite literature. This merit brought him into the acquaintance and eſteem of Mr Addiſon his contemporary, then Demy of Magdalen college, which proved of ſome ſervice to him afterwards (*c*). Having taken his firſt degree in Arts at the regular time, he proceeded to that of Maſter April 4, 1696 (*d*), and commenced author the ſame year, by the publication of his *Romæ Antiquæ Notitia: or the Antiquities of Rome* [*A*]. To which he prefixed two Eſſays on the Roman Learning and Education, in 8vo. Theſe eſſays were the firſt attempts of the kind made in any language at that time; and the book was ſo well received by the Public, that he was thereby encouraged to proſecute his deſign of promoting and facilitating the ſtudy of claſſical learning. In that view he proceeeed to draw up *The Lives and Characters of the ancient Greek Poets*, which came out in 1697, 8vo. The ſame year, on the 14th of February, he was admitted Fellow of his college (*e*), and became a tutor there. It was probably about this time, purſuant to the college-ſtatutes, that he entered into Holy Orders: after which, directing the courſe of his ſtudies conformably thereto, in a more particular manner to Divinity, the world received the like benefits from his parts and induſtry upon that ſubject. The firſt fruits whereof came out in the year 1705, under the title of, *An Expoſition of the Apoſtles Creed, according to Biſhop* Pearſon, *in a new Method, by way of Paraphraſe and Annotations*, 8vo. This was followed by, *An Eſſay towards a Paraphraſe on the Pſalms in Verſe, with a Paraphraſe on the third Chapter of the Revelations* (*f*), printed the enſuing year, 1706, 8vo. Theſe were public monuments of his piety, as well as learning and genius; which being rendered perfectly amiable by the ſweetneſs of his temper, he was now become happy in the love and eſteem of all who knew him; ſo that it is no wonder that he yielded with ſome reluctance to the intreaties of his brother, when the Chaplain's place to the Factory at Leghorn was propoſed to him [*B*]; where he was likely alſo

(*a*) That is the appellation given them in the college ſtatutes.

(*b*) From the regiſter of the college.

(*c*) See below in note (1).

(*d*) From the college regiſter.

(*e*) Ibid.

(*f*) It is dedicated to Sir Will. Temple's widow, who had the peruſal of it in manuſcript. Our author appears to be greatly eſteemed by her Ladyſhip.

[*A*] *He publiſhed his Roman Antiquities.*] The dedication is addreſſed to his Royal Highneſs William, Duke of Glouceſter, and muſt have been wrote for his uſe particularly, if any credit may be given to a report that generally prevailed, at leaſt at Oxford, that there were ſome hopes of his being appointed Subpreceptor to that darling of the nation. No body ever doubted his qualifications for it, and his brother, as appears from the preceding article, was in great favour with biſhop Burnet, who was made Preceptor to the Duke in 1698. Whatever reception this ſtory may meet with, it will not be denied, that our author's addreſs muſt needs have been very agreeable to the noble youth: as ſoon as he came to know the claſſics enough to be ſenſible of the beautiful application therein of two paſſages in one of the moſt celebrated of them to his immediate progenitors, I mean the paragraph with which he cloſes his dedication, where he obſerves, that his highneſs could not miſs his way in the purſuit of *Virtue*, in going on as he did, like the Trojan prince:

Matre dea monſtrante viam.

Nor *that* alſo to *great achievements* when he ſaw himſelf ſo properly, as he was, the object of that hero's advice

—— Te animo repetentem exempla tuorum
Et pater Æneas & avunculus excitet Hector.

[*B*] *He was appointed chaplain to the factory at Leghorn.*] This privilege was none of the leaſt of thoſe addvantages which the nation obtained in that ſucceſsful war. The general ſtate of religion being divided into ſeveral diſtinct and ſeparate eſtabliſhments; each of theſe has it's proper faſtneſſes and ſorts, erected for the defence and ſecurity of it, againſt the encroachments and invaſions of any of its neighbours; and the eccleſiaſtical governors in every Church hold themſelves obliged to keep a watchful eye to prevent, as much as poſſible, all attempts of that kind; and are particularly alarmed whenever they obſerve any motions made towards ſuch a deſign. Theſe governors alſo look upon it as an eſpecial part of the duty of their office, to let ſlip no opportunities of enlarging the boundaries of their own community, by making acquiſitions from that of their neighbours. In this ſpirit, when the glory of Queen Anne's arms by land, and the terror of her fleets in the Mediterranean ſea, had opened a proſpect of eſtabliſhing a chaplain of the Church of England for the Engliſh factory at Leghorn, his Grace the Archbiſhop of Canterbury diſcourſing with Dr White Kennet, and ſome merchants trading thither, about the beſt way of effectuating it, obſerved, firſt, that ſuch a privilege of the exerciſe of religion by a lawful miniſter of it, was a right of Chriſtians, even by the law of nations, in *every* country where they were allowed to ſettle and traffic. In the next place, he wrote a letter upon the ſubject to Dr Henry Newton, her Majeſty's envoy at Florence, who informed him that though no expreſs leave or licence of protection could be obtained, yet a connivance might be expected from the Great Duke; eſpecially while the Queen, by her *fleets* and *armies*, made ſuch a figure in Europe, and even in Italy itſelf, that ſhe would be able to protect her own ſubjects in ſo reaſonable and juſt a cauſe. Upon this foot, the Archbiſhop directed Dr White Kennett to look out for a proper perſon to be ſent over, of integrity, abilities, and courage, ſuitable to that dangerous and difficult employment. The Doctor, after propoſing it in vain to ſome others, prevailed with his own brother to adventure in it, and obtained a petition of the merchants to the Queen in his behalf. Whereupon his Grace approving of him, the Council adviſed her Majeſty to grant the petition of the merchants; and accordingly the chaplain received a commiſſion or title in this form.

ANNE, R.

'Whereas our ſubjects trading to Leghorn, as well 'as thoſe reſiding in that port, have humbly beſought 'us to appoint a miniſter to perform divine ſervice 'there, after the uſage and manner of the Church of 'England, wherein we are graciouſly pleaſed to gratify them: and being well ſatisfied of the loyalty, 'prudence, piety, and learning of Baſil Kennet, M.A. 'and fellow of Corpus Chriſti college, in our univer'ſity of Oxford: We do by theſe preſents appoint him, 'the ſaid Baſil Kennet, to be miniſter to the Engliſh 'factory at Leghorn, hereby granting him our royal 'licence and protection to the purpoſes aforementioned. And we do hereby require our envoy, or other 'our miniſter, at the court of the Great Duke of Tuſcany, and our conſul at Leghorn, now and for the 'time being, to protect, countenance, and aſſiſt him, 'the ſaid Baſil Kennet, as occaſion ſhall require, for 'his quiet enjoyment and exerciſe of his function, as 'miniſter to the Engliſh factory at Leghorn as afore'ſaid.

alſo to meet (as it actually proved he did) with much diſturbance and danger from the oppoſition of the Roman-Catholics. However, after he had undertaken the charge, no difficulties were ſufficient to damp his reſolution to go through it with honour. Accordingly, having obtained the Queen's commiſſion, he left England in the month of September this year, 1706; and arriving without any extraordinary accidents, in the uſual time for ſuch journey by land, at Leghorn, he preſently received a diploma from Oxford, creating him Bachelor of Divinity, February 27 that year (g). With this extraordinary mark of the univerſity's eſteem, he entered immediately upon the duties of his office; wherein he behaved with ſo much integrity, piety, prudence, and modeſty, that he became the darling

(g) From the Univerſity regiſter.

[illegible] Leghorn, and to hurry him away to Piſa, and thence to ſome other religious priſon, to bury him alive, or otherwiſe diſpoſe of him, in the ſevereſt manner.—Upon notice of this deſign the Engliſh Envoy at Florence interpoſed his offices in that court, where he could obtain no other anſwer, but that '*he might ſend for the Engliſh preacher, and keep him in his own family as his domeſtic chaplain; otherwiſe if he preſumed to continue at Leghorn, he muſt take the conſequences of it, for, in thoſe matters of religion, the Court of Inquiſition was ſuperior to all civil powers;*' the Envoy communicated this anſwer of the Great Duke to the Earl of Sunderland, then ſecretary of ſtate, deſiring proper inſtructions in the affair. In the interim he was extremely embarraſſed with the difficulties of treating for the protection and ſecurity of the chaplain, and could find no expedient more proper for the preſent, than to invite him earneſtly to his houſe at Florence; and there cover him 'till the affair was adjuſted, and for that purpoſe to ſend him a qualification as his domeſtic chaplain. But the Conſul and nation at Leghorn would not readily conſent to let him go away, fearing, if that point was once gained, they would never let him return. Nor was the chaplain himſelf willing to conſult his own ſafety, by ſeeming to forſake his charge. And therefore, with his brother's advice, he continued there, though in the utmoſt danger: Being forced to confine himſelf in his chamber, and to have an armed guard at the ſtairs foot. Some evenings, indeed, he went out for the air, but then he walked between two Engliſh merchants, who, with their ſwords drawn, reſolved and declared, that no body ſhould dare ſeize him at their peril. All this caution was no more than what was abſolutely neceſſary, before the arrival of Lord Sunderland's letter, which came by the firſt conveyance, and contained the following directions:

'To Dr Henry Newton, her Majeſty's Envoy in the court of Florence.

'SIR,

'*Your's of the 6th and 24th I received; in anſwer to which I have laid the whole affair before her Majeſty, who has commanded me to order you to tell the Great Duke and his miniſters, in her Majeſty's name, that if there be any moleſtation given to her chaplain, reſiding at Leghorn, ſhe ſhall look upon it as an affront done to herſelf and the nation, a breach of peace, and a violation of the law of nations, and ſhall by her fleets and armies, which will be all the year in the Mediterranean ſeas, not only demand, but take ſatisfaction for any ſuch injury offered. And that the prieſt of the Great Duke's miniſter here, and all frequenters of his chapel, muſt expect the ſame treatment. And if they talk any more of the Pope or Court of Rome, you muſt cut that matter ſhort, by telling them, that her Majeſty hath nothing to do with that Court, but ſhall treat with the Great Duke, as with other independent princes and ſtates. And this you muſt do in the moſt forcible manner poſſible. I have no more at preſent to add; but am*

'Your Humble Servant,

'Sunderland.'

As ſoon as this letter came to the Envoy's hands, and was by him communicated to the Duke and his miniſters, the contents of it were ſoon by them imparted to the Pope and his Cardinals, who ſo well underſtood the argument of *fleets* and *armies*, that the chaplain eſcaped the intended fury; and continued for five years to officiate as a miniſter of the Church of England, in a large room, ſet apart for a chapel, in the Conſul's houſe, with public prayers and a ſermon (2).

ſtid. Given at our caſtle at Windſor the [illegible] day of September, [illegible] in the fifth year of our reign.

'By Her majeſty's command,

C. Hedges.

At the ſame time and place were dated the royal letters of paſſport, ſafeguard, and protection, as follow:

Anna R.

'*Anna dei gratia magnæ Britanniæ, Franciæ, & Hiberniæ Regina, fidei defenſor &c. omnibus & ſingulis ad quos præſentes literæ pervenerint, ſalutem. Quum pro ſalute ſubditorum noſtrorum in portu Liburni in Hetruria commorantium veleo appellentium Preſbyterum illuc mittere decreverimus, qui ſecundum ritus Eccleſiæ Anglicanæ ipſis ſacra miniſtret: dilectum noſtrum & fidelem* Baſilium Kennett, Artium Magiſtrum, *necnon collegii Corporis Chriſti in academia noſtra Oxonienſi ſocium, quem ad hoc munus aſſignavimus; literis hiſce noſtris ſalvi conductus munire Nobis viſum eſt. Rogamus itaque omnes & ſingulos Reges & Principes, cujuſcunque dignitatis atque ordinis Status, Reſpublicas, liberaſque Civitates, Amicos noſtros & Fœderatos, per quorum ditiones tranſiturus eſt, necnon Provinciarum Gubernatores, exercituum claſſiumque Duces, Præfectos limitaneos, arciumque cuſtodes, reliquoſque ipſorum officiales & miniſtros (id quod ſubditis noſtris quorum ullo modo intererit, firmiter injungimus), ut præfato* Baſilio Kennett *una cum ſarcinis ſuis quibuſcunque non ſolum ubique locorum liberam & ſecurum eundi, tranſeundi, commorandique, prout libitum erit, poteſtatem faciant, neque aliquam moram impedimentumve injiciant, aut injici patiantur, verum etiam omnibus humanitatis ac benevolentiæ officiis excipiant adjuventque, & novis inſuper ſalvi conductus literis, ſi res ita poſtulaverit, communiant. Quod quidem Nos pari data occaſione parati agnoſcemus & viciſſim repenſuri ſumus.*

'*Dabantur in arce noſtra Windeſoræ die octavo menſis Septembris, Anno Domini* 1706. *Regnique noſtri quinto.*

Ex mandato ſereniſſimæ Dom. Reginæ.

C. Hedges.

(1) Mr Addiſon being then Under-Secretary to Sir Ch. Hedges, theſe diſpatches were much forwarded in that office by him, who had a perſonal reſpect for Mr Kennett in Oxford, and had been then a late traveller in Italy, and well known to the Factory at Leghorn.

Theſe diſpatches being compleated (1), Mr Kennett received money to defray the expences of the journey, upon a bill ſent by the Conſul, Chriſtopher Crowe, Eſq; in the name of the factory, for the purpoſe; and whatever was wanting in cloaths, books, or any equipage, was advanced to him by his brother. He then ſet out with agreable company from Harwich to the Brill; and, paſſing through Holland and Germany, arrived by the way of Venice ſafe at Leghorn, where he was received by the Conſul and nation with great civility and kindneſs. But the Italians were ſo jealous of the northern hereſy, eſpecially the prieſts and regulars, that, to give as little offence as poſſible, he performed the duties of his office with the utmoſt privacy and caution. But, notwithſtanding that, great offence was taken at it, and complaints and informations were immediately ſent to Florence and to Rome. The envoy at Florence, Dr Newton, did all the matter could bear, in inſiſting on the right of the Engliſh merchants to have a miniſter among them of their own religion; and offered to undertake that he ſhould not publickly reflect on the religion of the country; nor attempt to bring over any of the Grand Duke's ſubjects to the Proteſtant perſuaſion. But the Pope, and the Court of Inquiſition at Rome, were reſolved to expel hereſy, and the public teacher of it, from the confines of the Holy See: and therefore ſecret orders were given to apprehend Mr

ling both of the Merchants there, and of the Engliſh Envoy at Florence; and even extorted the admiration and eſteem of the Papiſts, who, whilſt they uſed their utmoſt endeavours to cruſh and deſtroy him, could not forbear revering him at the ſame time (as is their cuſtom to perſons of the moſt eminent piety and Chriſtian fortitude) under the title of *Saint* (*b*). Perſevering ſteadily in this courſe, he continued among them as long as his health would allow him; and when the care of that obliged him to think of coming back to his native air, he reſolved not to quit his poſt, 'till he ſaw an approved ſucceſſor in it upon the ſpot; by which means he was very inſtrumental in procuring a confirmation and eſtabliſhment of that valuable privilege (*c*) [*C*], which the Factory there has enjoyed ever

(*b*) See below in remark [*D*].

(*c*) See the preface to his Sermons.

(*C*) *A confirmation of that privilege.*] This aſſertion may, perhaps at firſt ſight, be cenſured, as attributing a merit to our chaplain which does not properly belong to him; and which, far from giving any heightening to his character, ſeems rather to derogate from it, and even to be inconſiſtent with what is conſtantly obſerved, to his great commendation, that he diligently and conſcientiouſly diſcharged the duties of his function, without intermeddling in any other concerns. The obſervation of Mr Kennett's behaviour and temper is undoubtedly true, but the true inference from it is that truth, which is advanced in the text, nothing being more certain than that it was this prudent and amiable carriage in his office, which, at once, both obviated all the objections that could avowedly be made by the court of Rome; and, at the ſame time, endeared the office itſelf to the factory ſo much, that, when his health would not ſuffer him to continue in it, they never left ſolliciting the Court, 'till a full confirmation of the privilege was granted in the appointment of a ſucceſſor, as will appear from the following account of this whole matter. Not long after the Inquiſition had drawn in its pretenſions, mentioned in the preceding remark, Dr Newton, in a letter dated Aug. 1707, writes thus—'Religion is not a thing to be talked of 'on any ſide here; there has already been given ſome 'of them trouble enough, I mean the Inquiſition, 'by bringing an Engliſh preacher into Leghorn. I 'hope now that trouble is almoſt over, and, that for 'the future, we ſhall hear no more from them on that 'head. He is an excellent perſon, if I am any judge 'in thoſe matters, and if I have not any pretence 'either to that or any other learning, yet I am at 'leaſt capable of knowing and commending a gentle'man for his modeſty, his prudence, and his good 'nature; and at *Florence* and at *Rome* they have 'heard from me on that head, and are ſatisfied on the 'other *account* too. And if now there is any fault to 'be found, it is, that he deſerves ſo much to be com'mended. Pray let his brother know, and by him the 'archbiſhop, how much the factory are obliged to his 'Grace on that ſcore (3), &c.' When our chaplain had ſeen himſelf well eſtabliſhed in that privilege, and had ſo laid the foundation of it, he began to think, that the having a ſucceſſor in that place upon the ſame bottom, would be the beſt confirmation; and therefore he earneſtly importuned his brother, that he might have leave to return, upon the finding out a fit perſon to ſucceed him. 'Tis true, however, that he had another principal reaſon to inſiſt upon coming home, the ill ſtate of his health in that climate which did not agree with his conſtitution; however he declared he would not ſtir 'till he ſaw a ſucceſſor upon the ſpot. Upon the receipt of this letter, the dean his brother applied, at the requeſt of the merchants, in behalf of one Mr Taubman, to the archbiſhop of Canterbury, upon whoſe application the Queen gave orders for proper diſpatches accordingly in 1710; but, upon the change of the miniſtry at this time, the Duke of Tuſcany's Envoy at our court obſtructed the proceedings, and actually put in a memorial againſt the privilege. Whereupon Dean Kennett addreſſing a letter of complaint to Robert Harley [afterwards Earl of Oxford], the merchants were ſummoned to declare the grounds of their claim to the privilege; which were 1. Poſſeſſion. 2. Her Majeſty having aſſerted it. 3. There were precedents for it at Liſbon and Oporto, &c. And to that purpoſe a repreſentation was drawn, concluding with a petition, wherein they obſerve, that in the ſame port of Leghorn there was a ſynagogue allowed to the Jews, and a moſque to the Turks; to this repreſentation ſeveral objections were made in council, one whereof being, that the preſent chaplain [Baſil Kennett] had done ill offices there, by meddling in trade and commerce, and by advancing ſome odd opinions in that place: to this Mr Palmer, one of the merchants in the city, made a proper and very decent anſwer, vindicating the character of our chaplain by the accounts of his behaviour received from the Conſul: and adding, that *of all men living Mr Kennett was the leaſt meddler in any thing but the immediate duties of his own function*. It was alſo ſuggeſted, that even ſome of the merchants, continuing at Leghorn, did not inſiſt upon a chaplain, or had not expreſſed their deſire to have another, when Mr Kennett ſhould come away: upon this, one of the company produced the following copy of a letter of the merchants reſiding at Leghorn, directed to the Archbiſhop, dated Livorne 20 Octob. 1710, expreſſed in theſe terms:

(3) Ibid. p. 62, 63.

'May it pleaſe your Grace,

'The Reverend Mr Baſil Kennett having intimated 'to us his intention to return home for the recovery of 'his health; being ſenſible of our great obligation to 'your Grace, for having recommended to us ſo wor'thy and excellent a perſon; we humbly beg leave to 'recur to your favour in chooſing a proper ſucceſſor 'to reſide amongſt us: intirely confiding, that this 'teſtimony of our gratitude, as well for the pains 'taken by your Grace in eſtabliſhing a chaplain, as 'in ſending us one ſo very acceptable, will be well 'pleaſing to your Grace, and that you will grant this 'our requeſt, who are with all imaginable reſpect,

Your Grace's

Moſt Humble and Obedient Servants,'

Signed by Fifteen Merchants (4).

(4) Ibid. from p. 64 to 80.

But this, and all other applications which were made afterwards by the factors, Dean Kennett, Mr Taubman, the Biſhop of London, and the Archbiſhop of Canterbury, proving ineffectual; the beginning of September, an advertiſement was ſent to Mr Taubman, and by him inſerted in the Poſt-Boy of Saturday September 15, 1711, in theſe words. 'There is ready for the preſs, *The Caſe of a Proteſtant Chaplain attending on the Britiſh Factory at Leghorn*, repreſenting the wiſdom and glory of her Majeſty's happy adminiſtration, in aſſerting that privilege to her ſubjects, the merchants reſiding in foreign parts: with the honour and neceſſity of maintaining that law of nations, and common right of mankind; as allowed in the ſame free port of Leghorn to ſocieties of different religions, and not pretended to be denied to any people, but the Northern Heretics at this time' Soon after this there was an order of council that fully determined the affair, as follows:

'At the court at Windſor, the 1ſt of October, 1711, preſent the Queen's moſt excellent Majeſty.

'Upon reading this day, at the board, the humble 'petition of the Britiſh merchants trading to Leghorn, 'and ſeveral other papers relating to a chaplain there; 'her Majeſty in council taking the ſame into conſide'ration, was pleaſed to order, that Mr Taubman, or 'ſuch other chaplain as the Right Reverend the Lord 'Biſhop of London ſhall recommend to her Majeſty, 'be forthwith ſent thither in ſuch manner, and with 'ſuch circumſtances, as the Reverend Mr Baſil Ken'nett was ſent. And that directions be given to Mr 'Moleſworth, her Majeſty's Envoy at the court of Flo'rence accordingly. And the Right Honourable the 'Earl of D——, her Majeſty's Principal Secretary of 'State, is to prepare what is neceſſary for the ſignifica'tion of her Majeſty's pleaſure in this matter.

'Copy ſigned John Povey.'

The

ever since. He arrived at Oxford in the year 1713, and was elected President of his college, May 15, 1714 (k). He was also admitted Doctor of Divinity on the 26th of July following (l), but lived to enjoy these new honours a very short time. Having brought an infirm habit of body with him from Italy, he continued from that time to decline gradually, and was carried off, before the expiration of this year (m), by a slow fever, the consequence, as was believed, of some unfair practices by the Court of Rome [D]. A little before his death, he finished the Preface to a volume of his sermons preached at Leghorn, which came out under the title of *Sermons on several Occasions, preached before a Society of British Merchants in foreign Parts*. Lond. 1715, 8vo. Besides this collection, and the pieces already mentioned of his own composing, he gave English translations of several works of other eminent authors, the chief of which are as follow: (1.) *Puffendorf of the Law of Nature and Nations*. (2.) *Placcius's Christian Casuist*. (3.) *Godeau's Pastoral Instructions*. (4.) *Monsieur Pascal's Thoughts on Religion*. To which he prefixed an account of the manner in which those thoughts were delivered by the author. (5.) *Monf. Balfac's Ariſtippus, with an Account of his Life and Writings* (n).

(k) He likewise translated the elegant English verse, a Latin poem of Mr Camden, called *The Marriage of Thames and Iſis*.

(m) From the College Regiſter. In the preface to his Sermons, the Acceſſion of King George I. is taken notice of by him. So that it is probable he lived to ſee that book finiſhed at the preſs, and publiſhed, according to the Printer's account, in 1715; that is, ſome time between Michaelmas and Lady-day in 1714.

The copy of this order was tranſmitted to the conſul at Leghorn, with a letter of the Dean, running thus —' *By virtue of this long expected order, a commiſſion from the Queen and letters of protection are prepared for Mr Taubman, and he intends to ſet out by the firſt opportunity of any company, by way of Holland and Germany; and by his honeſty, quietneſs, and goodneſs of temper, will, I doubt not, be very acceptable to you and the nation, to whom you will pleaſe to communicate the ſucceſs of this long depending affair. It would make a long ſtory to tell of the ſeveral ſteps forward and backward in it. Whatever trouble and expence I have been at on this occaſion, had it been greater I would not have grudged it in ſo good a cauſe, for the honour and ſervice of the Church and Nation. But I hope poor Mr Taubman will be conſidered for his tedious and chargeable attendance upon this buſineſs; and the demand of above 20 l. fees at the offices, and the ſupport of a journey by land. I well know the juſtice and generoſity of the Conſul and merchants at Leghorn, and doubt not but they will find ſome way, that he may come into the eaſier circumſtances, and with a greater ſenſe of obligation to you. I ſuppoſe, by your advice, my brother will remain with you 'till the actual appearance of Mr Taubman. I ſhall think it now happy, that by your advice, and his own reſolutions, he continued on the ſpot, for 'tis poſſible his abſence might have given ſome advantage to thoſe who have ſo accountably oppoſed this privilege, which you now ſee effectually tranſmitted in ſucceſſion, and thereby we hope eſtabliſhed to you and your poſterity. I am*

Hon. SIR,
Your and the Nation's
Faithful Humble Servant,
W. Kennet (5).

(5) Ibid. from P. 95 to 99.

[D] *He died in* 1714.] The writer of the Biſhop's life, tells us, that though the factory at Leghorn was very bountiful to their chaplain, as well as very generous in their preſents to his brother in England, yet the family had been ſufferers by it. The contempt of money in Mr Kennett at Leghorn, the conſtant demands upon his charity and goodneſs, his great expence of his long travels through Italy and France; the ſupplies he had out of England to ſupport thoſe travels, and to purchaſe a good collection of books and prints; and the new expences he was put upon after his return, by the honour done him of being elected and admitted preſident of his college, had brought him to that condition of worldly eſtate, that the payment of his debts was made in favour of his memory, without ſufficient aſſets for it. ' And, continues he, ' whether his life itſelf was not ſacrificed in that ſervice among the Roman Papiſts, is perhaps a queſtion ' to be referred to the laſt judgment day: not that Mr ' Kennett would ever declare his ſuſpicion of any ill ' practiſing upon him (too common there): nor that ' his brother ever encouraged any ſuggeſtion of that ' kind: but many others have been free in, and God ' alone knows the truth of it. One would have ' thought him, concludes this writer, ſo well eſteemed ' among the Italian prieſts, that even they were not ' capable of ſuch treatment of him. Unleſs their calling him the *ſaint*, was in order to the making him a ' *martyr* (6).

(6) Ibid. p. 100, 101.

KETTLEWELL [JOHN], a pious and learned Divine in the laſt century, was born at North-Alverton in the County of York the 10th of March, 1653. His father was a merchant, as were alſo his grand-father, and great-grandfather [A], and his mother was Elizabeth Ogle, a woman of an excellent character, and of a conſiderable and antient family. He was educated, firſt at a ſmall ſchool at Brompton, the place of his nativity (and then of his father's reſidence,) within the ſaid pariſh of North-Alverton. Though his father died when he was but ſix years old, yet his education no way was neglected: For he was next ſent to the Free-ſchool of North-Alverton, where he made a great progreſs under a good maſter, and diſtinguiſhed himſelf by his valuable qualities, particularly a great modeſty, and ſweetneſs of temper (a). In the year 1670, he was admitted in St Edmund-hall in Oxford (b) [B], where he took the degree of Bachelor of Arts, June 25, 1674 (c). And, on the 28th day of July 1675, was choſen Fellow of Lincoln College, through the intereſt of his learned countryman Mr George Hickes, Fellow of the ſame. During his whole ſtay in that college, he was an eminent example of induſtry, piety, and virtue (d); and became a very conſiderable tutor (e). He took the degree of Maſter of Arts May 3, 1677 (f). As ſoon as qualified by age, he entered into holy orders;

(f) Wood, Faſti, ut ſupra, col. 206.

[A] *As were alſo his grand-father and great-grand-father.*] His grand-father, and great-grand-father, were merchant-adventurers at Headen in Yorkſhire. But the haven of that town growing uſeleſs, by being choaked up with the ſands, his grandfather removed to North-Alverton: which place his father quitting, ſoon after his marriage, went and lived in his own houſe, and upon his own eſtate, at Brompton, a village in the ſaid pariſh of North-Alverton (1).

(1) Life, &c. as above, p. 1, 2, 3.

[B] *Was admitted in St Edmund-hall.*] While he lived there, he never committed any one fault, for which he incurred the leaſt cenſure, as by neglect of publick Exerciſes, or Prayers; &c. nor was there ever the leaſt complaint made of him by his equals. This is atteſted by his contemporary the famous Dr Hickes (2).

(2) Life, &c. p. 9.

orders; and diſtinguiſhed himſelf not only by his uſeful and inſtructive way of Preaching [C], but alſo by his early, and indeed uncommon knowledge in Divinity: The firſt fruits of which were, his *Meaſures of Chriſtian Obedience* [D], a work which he entered upon when he was but twenty-ſix years of age, and that was (as we are aſſured) begun and finiſhed by him between Chriſtmas and Eaſter. This valuable work ſo recommended him to the world's eſteem, that the old Counteſs of Bedford (g) took him, upon that account, for one of her domeſtic Chaplains: But a greater favour he received, upon the ſame conſideration, from the moſt pious and truly honourable Simon Lord Digby, who preſented him in July 1682, to the Vicarage of Coles-hill in Warwickſhire (b). There he applied himſelf, with great zeal and ſucceſs, to the duties of his function; and, by proper inſtructions and example, endeavoured, to the utmoſt of his power, to make the people under his care wiſer and better. On the 4th of October 1685, he married a very pious and virtuous woman, Mrs Jane Lybb, daughter of Antony Lybb, Eſq; of Hardwick in Oxfordſhire, a gentleman of a thouſand pounds a year. He happily lived with her, as a faithful companion both in proſperity and adverſity; and ſhe ſurvived him. After he had continued upwards of ſeven years at Coleſhill, doing all the good in his power with great ſincerity and zeal, and univerſally reſpected and eſteemed, a great alteration happened in his condition and circumſtances. For, at the Revolution, being one of thoſe conſcientious men who refuſed to take the oaths of allegiance and ſupremacy to K. William and Q. Mary, he was deprived of his living in 1690 (i). However, he did not ſpend the remainder of his days in a ſullen and inglorious indolence; but, retiring to London, continued to write and publiſh ſeveral books, as he had done during his reſidence in the country [E]. And there, amongſt other great and learned men, was particularly happy

(g) And not William Lord Ruſſell, her ſon, as Wood ſays by miſtake. Athen. Vol. II. col. 923.

(i) Life, &c. p. 102.

[C] *By his uſeful and inſtructive Preaching.*] His Preaching was eaſy and free, and always upon uſeful texts; avoiding all vain contentions and controverſies, which ſerve not to improve in faith and righteouſneſs. His aim herein was not only to ſpeak to the ears, but moreover to the hearts of his auditors: which he alſo the rather did by his very affectionate way of delivery. He had indeed no good voice; yet he knew how to make the beſt uſe of it, and to give every word its due and proper weight. Hardly had he been Maſter of Arts above a year, if ſo long, but he had laid out a large fund of ſermons againſt the time he ſhould be called thence to the cure of Souls. For to one of his intimate confidents, when he was a very young Maſter, he one day ſhewed a courſe of Sermons, all fairly written with his own hand, and fitted as he ſaid for the country. There might be near a hundred of them, according to the beſt computation which this Gentleman could haſtily make.—In all his writings, whether for the pulpit or the preſs, he had ſtill an eye to the *practical* part, as well as to the inſtructive, and even to that principally: well knowing that, as without underſtanding, ſo alſo without doing his duty, a man is certainly defective. And he had ever a regard not only to the learned, but alſo, and chiefly, to the unlearned and thoſe of meaner capacities, for whom he thought nothing could be too plain. The plainneſs and perſpicuity of his Style he took care ſhould be ſuch, as to render his labours ſerviceable to the greateſt numbers. In a word, he diſtinguiſhed himſelf in his writings, rather by the Strength of his Reaſon, and the Solidity of his Judgment, than by the Brightneſs of his Fancy (3).

(3) Ibid. p. 17, 18.

[D] *His Meaſures of Chriſtian Obedience,*] The ſmall time he is ſaid to have taken in compoſing that Book, is almoſt incredible. But we give it here upon the credit of the author of his life; who adds, that "all the time he ſpent afterward about it, was only in "conſulting texts and quotations, and animadverting "a little upon it" (4). He compoſed it in the year 1678, though it was not publiſhed 'till 1681, in one volume 4to. Dr Hickes, to whom he ſubmitted it for his correction, adviſed him to dedicate it to Biſhop Compton, intending by that means to have him planted in London: and accordingly it came out at firſt with a dedication to his Lordſhip. But when that Prelate appeared in arms againſt K. James II, Mr Kettlewell gave immediate orders for razing that Dedication out of the copies unſold, and took care to have it omitted in the ſubſequent editions (5).—In his Epitaph it is ſaid, that he was but four and twenty years old when he compoſed that book—*Annum adhuc agens vigeſimum quartum.*

(4) Ibid. p. 18.

(5) Ibid. p. 19.

[E] *But retiring to London, continued to write and publiſh ſeveral Books, as he had done during his reſidence in the country.*] We ſhall ſet down, in this note, an account of all his works, according to the order of time in which they were written. I. *The Meaſures of Chriſtian Obedience,* &c already mentioned II. *The great Evil and Danger of Profuſeneſs and Prodigality; in a Letter to a Friend:* written in 1681, but not publiſhed 'till 1704. III. *An Help and Exhortation to worthy communicating: or, a Treatiſe deſcribing the Manner, worthy Reception, Duty and Benefits, of the holy Sacrament: and anſwering the Doubts of Conſcience, and other Reaſons, which moſt generally detain Men from it. Together with ſuitable Devotions added.* Lond. 1683. 8vo. This book was the ſubſtance of ſome preparation ſermons to the Sacrament; which he preached within the firſt half-year after his coming to Coleſhill, and printed chiefly for the uſe of his pariſh (6). IV. *The Nature of Edification explained. A viſitation Sermon on* 1 *Cor.* xiv. 12, *preached at Coventry May the* 7*th,* 1684. Lond. 1684. 4to. V. *A funeral Sermon preached Oct.* 5, *for the right honourable the Lady Frances Digby, who deceaſed at Coles-hill* 29 *Sept.* 1684. *on Prov.* xiv. 32. Lond. 1684. 4to. VI *The Religious Loyaliſt, or, a good Chriſtian taught how to be a faithful Servant both to God and the King, in a Viſitation Sermon preached at Coles-hill in Warwickſhire, Aug.* 28, 1685. on Matt. xxii. 21. Lond. 1686, 4to. VII. *A Sermon preached at Coles-hill in Warwickſhire, Jan.* 24, 1685, *on occaſion of the death of the right honourable Simon Lord Digby: who deceaſed* 19 *January,* Lond. 1686. 4to. Theſe four Sermons were reprinted after his deceaſe, in 1696, together with, VIII. *Five Diſcourſes on ſo many very important Points of practical Religion,* 8vo. IX. *The Practical Believer: or, the Articles of the Apoſtles Creed, drawn out to form a true Chriſtian's Heart and Practice. In two parts. Part* I. *Of the Nature and Certainty of Chriſtian Faith, and the Knowledge of God: or, an Explication of the divine Attributes, and Providence. Part* II. *or, the Knowledge of Jeſus Chriſt.* Lond. 1689. 8vo. reprinted in 1713, with ſeveral additions; being the 3d edition.

(6) See Life, &c. p. 24, 25.

The following were written after his deprivation. X. *Of Chriſtian Prudence, or religious Wiſdom; not degenerating into irreligious Craftineſs in trying times.* Lond. 1691 8vo. XI. *Chriſtianity a Doctrine of the Croſs: or Paſſive Obedience under any pretended invaſion of legal Rights and Liberties.* Lond. 1691. 8vo. XII. *The Duty of Allegiance ſettled upon its true Ground, according to Scripture, Reaſon, and the Opinion of the Church. In anſwer to a late Book of Dr William Sherlock, Maſter of the Temple, intituled,* 'The Caſe of the 'Allegiance due to Sovereign Powers, ſtated, and re'ſolved, according to Scripture &c. with a more par'ticular Reſpect to the Oath lately injoined,' Lond. 1691. 8vo. XIII. *Of the new Oaths; againſt thoſe that take them in a lower ſenſe, and alſo thoſe that make their Concern for the publick Good a ſufficient Reaſon to diſcharge them from the Obligation of a former Oath of Allegiance,* never printed. XIV. *Of Chriſtian Communion, to be kept on in the unity of Chriſt's-Church, and*

among

happy in the friendſhip and intimacy of the truly good and pious Mr Robert Nelſon, with whom he concerted a 'model of a fund of Charity for the needy ſuffering [i. e. Non-juring] Clergy (k).' Mr Kettlewell was naturally of a tender and delicate frame of body, and inclined to a conſumption, which had like to have carried him off in the 12th year of his age (l). Being ſeized again with the ſame illneſs in the 42d year of his age, it confined him to his houſe ſix months, and to his chamber four days, and at laſt put an end to his valuable life, April 12, 1695, at his lodgings in Gray's-Inn-Lane (m). He was buried three days after, in the ſame grave where Archbiſhop Laud was before interred, in the parish church of All-hallows, Barking; where a neat marble monument is erected to his memory (n). Mr Nelſon, who knew him beſt, gives this character of him (o). 'He 'was learned without pride; wiſe and judicious without cunning; he ſerved at the altar 'without either coveteouſneſs or ambition; he was devout without affectation; ſincerely re-'ligious without moroſeneſs; courteous and affable without flattery or mean compliances; 'juſt without rigour; charitable without vanity; and heartily zealous for the intereſt of 'religion without faction.'

C

KIDDER [RICHARD], a learned Biſhop of Bath and Wells, in the laſt century and beginning of this, was born, as one ſays (*a*), in Suſſex [*A*]; but, according to others (*b*), and more probably, in Suffolk. On the 5th of June 1649, he was admitted in Emmanuel College in Cambridge; where he took the degree of Bachelor of Arts in 1652, and that of Maſter in 1656 (*c*). July 13, 1658, he was incorporated at Oxford (*d*). By his College aforeſaid, he was preſented to the Vicarage of Stanground in Huntingdonſhire; from whence he was ejected for Nonconformity in 1662, by virtue of the Bartholomew-Act (*e*). But conforming ſoon after, he was preſented by Arthur Earl of Eſſex to the Rectory of Raine in Eſſex, to which he had inſtitution Octob. 29, 1664 (*f*). Here he continued, with great reputation and eſteem eſpecially for his knowledge of the Eaſtern languages, 'till the 24th of October, 1674, when he was admitted to the Rectory of St Martin's Outwich, London, to which he was preſented by the Merchant-Taylors Company (*g*). On the 16th of September 1681, he was inſtalled into a Prebend of Norwich, in the room of Dr Ezekias Burton, deceaſed (*h*). And being nominated, Octob. 6, 1689, to the Deanery of Peterburgh, was inſtalled the 30th of the ſame month (*i*). He then accumulated the degrees of Bachelor and Doctor in Divinity (*k*); not having been Doctor in Divinity ſo early as the year 1681, as Mr Wood has aſſerted by miſtake (*l*). Upon the deprivation of Dr Ken, Biſhop of Bath and Wells, for not taking the oaths to King William and Queen Mary; and Dr Beveridge's refuſal of that See, Dr Kidder, to whom it was offered next, did not prove ſo ſcrupulous. Being therefore nominated thereto June 13, 1691, he was conſecrated the 30th of Auguſt following (*m*). In the year 1693, he preached the Lecture founded by the Hon. Robert Boyle [*B*], being the ſecond that preached it. He continued, as he had done before his promotion, to benefit the world by his excellent writings; the moſt conſiderable of which were, 'A Demonſtration of the Meſ-'ſias ; in three parts [*C*]. And, 'A Commentary on the five books of Moſes; with 'a Diſſertation concerning the Author, or Writer, of the ſaid books, and a general Ar-'gument to each of them [*D*].' An account of the reſt of his works is given in the note

'Bible

note below [E]. Through a moſt unhappy accident, in the night between the 26th and 27th of November 1703, (during the *Great Storm*) he was killed in his bed, with his lady, by the fall of a ſtack of chimneys, in his palace at Wells; and was privately buried in the Cathedral (n). He left iſſue two daughters: Suſan, married to Sir Richard Everard, Bart. of Langleys in Great Waltham, Eſſex; and Anne, which dying unmarried May 13, 1728, left 300l. for erecting a monument to her father's and mother's memory; which was done ſoon after. He was a very clear, elegant, and learned writer, and one of the beſt Divines in his time.

(n) Br. Willis's Survey of the Cathedrals, Vol. II. p. 513.

' Bible for the uſe of families, and of all thoſe well-diſpoſed perſons that deſired to read the holy ſcriptures to their greateſt advantage. At that meeting they agreed upon this worthy deſign, and took their ſeveral ſhares, and aſſigned ſome part to them, who were abſent I was not preſent at that meeting, but I was ſoon informed that they had aſſigned to me the Pentateuch. I was very ſenſible how great a taſk this would prove, and was ſufficiently conſcious of my own defects; yet I was willing to undertake it, becauſe I did always hope, that by yielding to it, I might incourage the labours of thoſe who would exceed whatever I was able to do. Upon this conſideration I did ſet about this work, and did often declare (and with great ſincerity) that this was the motive which did induce me. The work was begun with common conſent, we did frequently meet, and what was done was communicated from time to time to thoſe met together, and that were concerned. The methods of proceeding had been adjuſted, and agreed to; a ſpecimen was printed, and an agreement was made when it ſhould be put to the preſs; and I finiſhed my part in order thereunto. But ſo it fell out, that ſoon after all this, the clouds began to gather a-pace, and there was great ground to fear that the Popiſh party was attempting to ruin the Church of England, and that there was a ſevere ſtorm from that quarter lighting upon us.—[viz. in K. James the IId's reign.]—Hence it came to paſs, that the thoughts of purſuing the above-mentioned deſign were at preſent laid aſide; and thoſe that were concerned in it, were now obliged to turn their ſtudies and pens againſt that dangerous enemy. —— During this time alſo, ſome number of thoſe perſons, concerned in the above-mentioned work, were taken away by death: and thus the work was hindered, that might elſe have been finiſhed long ſince. —I having drawn up my Notes upon this occaſion, do now think myſelf obliged to make them publick, God having now diſperſed thoſe clouds that then hung over our heads. And I do it from the ſame motive that firſt induced me to undertake it; viz. that I might draw on others to do much better in the following books.' This Commentary was publiſhed at London in 1694. 2 vols 8vo. To the firſt volume is prefixed a learned Diſſertation, wherein the Biſhop ſets down, and anſwers, all the Objections made againſt Moſes being the Author of the Pentateuch. And having conſidered, among the reſt, one Objection drawn by Mr Le Clerc (3), from Geneſ. xxxvi. 31. and ſpoken in pretty ſevere terms of him; that occaſioned the paſſing of ſome letters between them, which were printed by Mr. Le Clerc, *in his Bibliotheque Choiſie*, Tom. iv. artic. 10. p. 364. &c.

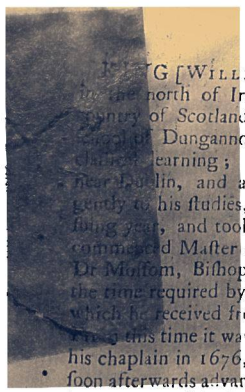
(3) In his Prolegomena to his Comment. on the Pentateuch.

[E] *An Account of the reſt of his works, &c.*] They are as follow, according to the order of time in which they were publiſhed. I. 'The Young Man's Duty. A Diſcourſe, ſhewing the Neceſſity of ſeeking the Lord betimes: as alſo the Danger and Unreaſonableneſs of truſting to a late, or death-bed Repentance. Deſigned eſpecially for young perſons, before they are debauched by evil Company, and evil Habits.' Lond. 1663. 12mo. The tenth edition of it was publiſhed in 1750. II. 'Convivium Coeleſte. A plain and familiar Diſcourſe concerning the Lord's Supper, ſhewing at once the Nature of that Sacrament, as alſo the right way of preparing ourſelves for receiving of it, &c.' Lond. 1674. 8vo. reprinted afterwards with additions. III. 'Charity directed: Or, the way to give Alms to the greateſt advantage. In a Letter to a Friend.' Lond. 1677. 8vo. IV. 'The Chriſtian Sufferer ſupported: Or, a Diſcourſe concerning the Grounds of Chriſtian Fortitude, ſhewing at once, that the Sufferings of good men are not inconſiſtent with God's Special Providence, &c.' Lond. 1680. V. He collected and communicated to the ingenious Mr Ray, the Hebrew Proverbs, that are added by way of Appendix to that induſtrious Gentleman's collection of Proverbs. VI. He publiſhed three ſeveral *Sermons*; 'A Diſcourſe concerning the Education of Youths: on Epheſ. i. 4. Lond 1673. A Sermon preached before the Lord Mayor and the Court of Aldermen at Guildhall chapel on July 11, 1682. The text is 1 Pet. iii 2. A Sermon preached at the funeral of Mr William Allen, the 17th of Auguſt 1686. on Heb. xiii. 4.' This Mr Allen was a citizen of London, and writ ten books, chiefly in defence of the Church of England, againſt the Anabaptiſts, Quakers, &c. 'A Sermon at the funeral of Thomas Pakeman, M. A. 1691. on Rev. xiv. 13. A Sermon on the Reſurrection.' Lond. 1694. Beſides which, he publiſhed in 1697, Twelve Sermons preached upon ſeveral occaſions; amongſt which is reprinted, 'The Judgment of private Diſcretion.' &c. which I ſhall preſently mention. VII. He writ the following *Tracts againſt Popery*: 'A ſecond Dialogue between a new Catholic Convert and a Proteſtant, ſhewing why he cannot believe the Doctrine of Tranſubſtantiation, though he do firmly believe the Doctrine of the Trinity.' Lond. 1686. 4to. 'An Examination of Bellarmine's thirteenth Note of the Church, *Of the Confeſſion of Adverſaries*.' Lond. 1687. 4to. 'The Texts which Papiſts cite out of the Bible for the proof of their Doctrine, *Of the Sacrifice of the Maſs*, examined.' Part I. and II. Lond. 4to. He was aſſiſted in this laſt by Mr Gee. 'The Judgment of private Diſcretion in Matters of Religion defended; in a Sermon on 1 Theſſal. v. 21. preached at St. Paul's Covent-Garden, Feb. 23, 1686.' Lond. 1687. 4to. with a Preface. 'Reflections on a French Teſtament printed at Bordeaux, Ann. Dom. 1686. pretended to be tranſlated out of the Latin into French by the Divines of Louvain.' Lond. 1690. 4to.' The other things he publiſhed, were, VIII. Help for Children's underſtanding the Church-Catechiſm.' Lond. IX. 'Charge to the Clergy of his Dioceſe, at his primary Viſitation begun at Axebridge, June 2, 1692' Lond. 1692. 4to. In that elegant charge, he has this remarkable paſſage among many others.——'There is no man ſo vile as a profane Miniſter of Religion; He is of all the moſt abject, the moſt ſelf-condemned, and deſtitute of plea, and liable to the heavieſt plagues of another life. If the Religion he teacheth be *falſe* why does he commend it to his people? if *good* why does he not practiſe it? He muſt anſwer for the Souls he miſleads; their guilt will be required of him. Oh the miſchief of ſuch an example! it wounds many ſouls at once. It reproaches our Religion, undermines our Church, breeds Diſſenters, produceth open enemies to our order, our function, and conſtitution. Theſe men are the enemies of the Church of England, theſe are its aſſaſſinates, from theſe men ſhe hath received the moſt dangerous wounds and blemiſhes. Good God awaken us to a conſideration of our danger this way! That Church can never be ſecure whoſe pillars and ſupporters are weak and rotten (4).' X. He was alſo author of the Life of Dr Anthony Horneck.' Lond. 1698. 8vo.—And, after his deceaſe were publiſhed theſe two pieces. XI. 'A Diſcourſe concerning Sins of Infirmity, and wilful Sins, with another of Reſtitution.' 12mo. Compoſed, chiefly to be diſtributed amongſt the poorer inhabitants of his Dioceſe. The copy was ſent to the preſs, a very ſhort time before the dreadful Tempeſt, which put a *period* to his life (5). XII. 'Critical Remarks upon ſome difficult Paſſages of Scripture, in a Letter to Sir Peter King.' Lond. 1719. and 1725. 8vo.

(4) P. 9.

(5) Preface.

KING



KING [WILLIAM] Archbiſhop of Dublin (a), was born May 1, 1650, at Antrim in the north of Ireland, where his father had ſettled on his removal from his native country of Scotland ſome years before. At the age of 12 he was put to the grammar-ſchool of Dungannon, in the county of Tyrone, where he made a good proficiency in claſſical learning; and growing ripe for the univerſity, was removed to Trinity-college near Dublin, and admitted there on the 18th of April, 1667: Applying himſelf diligently to his ſtudies, he obtained a ſcholarſhip of the houſe, and a native's place the enſuing year, and took his firſt degree in arts in 1670. Whence proceeding regularly, he commenced Maſter of Arts three years afterwards, in 1673, and was ordained Deacon by Dr Moſtom, Biſhop of Derry, the ſame year. In this initiatory ſtate he continued for the time required by the Canons of the Church, and then advanced into Prieſts orders, which he received from the hands of Dr Parker, Archbiſhop of Tuam, April 26, 1674. From this time it was not long before he was taken into favour by that prelate, who made him his chaplain in 1676, collated him to a Prebend in the church of Tuam the ſame year, and ſoon afterwards advanced him to the dignity of Præcentor in the ſame cathedral. However, he did not reſide there a long time, for his patron being promoted to the See of Dublin, took care to remove this favourite to a ſituation near himſelf, with the firſt opportunity, and preferred him to the office of chancellor of the church of St Patrick, and the pariſh of St Warburgh, the Archbiſhop's peculiar in Dublin; into which he was inſtalled, October 29, 1679. He was now only in the 30th year of his age, yet he appeared equal to all the eccleſiaſtical honours conferred upon him. And in the next reign when Popery was ſo greatly encouraged by the Court, and carried her face ſo high, he entered the liſts againſt her pretenſions, and following the example of his brethren in the Engliſh Church, he undertook the Popiſh controverſy in Ireland in 1687, againſt the Dean of Londonderry, who had been lately reconciled to the Romiſh Religion [A]. This diſpute was continued in the beginning of 1688; and the Deanery of St Patrick's becoming vacant ſoon after by the Death of Dr Worth, our author during the vacancy was firſt conſtituted preſident of the chapter, and then by them elected Dean on the 26th of January the ſame year. This was much about the time that the Revolution took place in England, which being zealouſly eſpouſed by the Dean, he was very active in promoting the ſame eſtabliſhment in Ireland, both before and after the landing of King James there in 1689 (b), who being ſenſible of the weight of his oppoſition, confined him twice on that account in the tower of Dublin caſtle (c) [B]. This did not hinder him from proceeding Doctor of Divinity that

(a) Several particulars of this article may be ſeen in the tranſlation and continuation of Sir James Ware, *De Præſulibus & Scriptoribus Hiberniæ*, by Mr Harris, in two volumes folio.

(b) Several inſtances of this are inſerted in his *Hiſtory of the Proteſtants of Ireland*, &c. paſſim.

(c) Ibid. p. 246.

[A] *He had a diſpute upon Popery with the Dean of Derry.*] The diſpute was occaſioned by a pamphlet, which the Dean of Derry publiſhed in vindication of his conduct, intitled, *The Conſiderations which obliged* Peter Manby, *Dean of London-Derry, to embrace the Catholic Religion; humbly dedicated to his Grace the Lord Primate of Ireland.* This no ſooner came to Mr King's hands, than he drew up the following: *An Anſwer to the Conſiderations which obliged* Peter Manby, *late Dean of Londonderry, (as he pretends) to embrace what he calls the Catholic Religion.* Dublin, 1687, 4to. The fight of this piece brought the ableſt advocates of the Romiſh Church to the aſſiſtance of the Dean; and the Court likewiſe countenancing that ſide, there came out a reply, under this title: *A Reformed Catechiſm, in two Dialogues, concerning the Engliſh Reformation; collected, for the moſt part, Word for Word, out of Dr* Burnet, John Fox, *and other Proteſtant Hiſtorians, for the Information of the People; in Reply to Mr* William King's *Anſwer to D.* Manby's *Conſiderations, &c. by* Peter Manby, Dean of Londonderry. Dublin, 1687, in 4to. Our author ſoon rejoined, in *A Vindication of the Anſwer to the Conſiderations &c. being an Anſwer to the firſt Dialogue already printed of the Reformed Catechiſm.* Dublin, 1688, 4to. Here the controverſy in the direct way was dropped by the Dean, who, inſtead of that, took a more artful method, by diſperſing a ſheet of paper, with this title: *A Letter to a Friend, ſhewing the Vanity of this Opinion, that every Man's Senſe and Reaſon are to guide him in Matters of Faith. March* 30, 1688, 4to. But Mr King did not ſuffer this to paſs without confuting it, in *A Vindication of the Chriſtian Religion and Reformation, againſt the Attempts of a late Letter, pretending to ſhew, that All Religions have a like Plea, and that there can be no ſuch Sins as Hereſy and Schiſm, if every Man's Senſe and Reaſon are to guide him in Matters of Faith.* 1688, 4to.

[B] *He was confined in the tower of Dublin-Caſtle.*] We are told, that 'he was accuſed to King James, 'for holding a correſpondence with, and giving intel-'ligence to, the Rebels, as they were then called, 'both in England and in the North of Ireland. Par-'ticularly it is ſaid, that he gave frequent intelligence 'to Marſhal Schomberg by one Sherman, and kept a 'conſtant correſpondence with one Tollet and others 'in London. That though this was high-treaſon, 'which a bloody-minded tyrant, ſuch as he afterwards 'repreſented King James to be (1), would have found 'another remedy for it than a ſhort impriſonment; 'but the King was diſpoſed to ſhew him mercy, the 'rather, becauſe his Majeſty had once ſo good an opi-'nion of him, that he had him frequently in private, 'and truſted him in his affairs; and that the Lord-'Chief Juſtice Herbert vouched for him at the Coun-'cil-table with ſo much zeal, as to ſay, that he was 'as loyal a man as any that ſat at that board; which 'atteſtation actually retrieved him from ſome inconve-'niencies that then lay upon him [the impriſonment], 'and continued him ſome time longer in the King's 'good opinion (2).' The truth of theſe facts were apparently never conteſted by our author, who allows the good-nature and merciful diſpoſition of King James; but at the ſame time maintains, that this temper, amiable as it is in itſelf, was ſo managed, as to be no ſecurity to his Proteſtant ſubjects. That his partizans made it their buſineſs to repreſent their maſter as the moſt merciful and juſteſt Prince in the world, and then railed at the Proteſtants for their miſtruſt of him. Perhaps, if he alone had been to have had the diſpoſal of their lives and liberties, and would have followed his natural inclinations, they would not have ſo much feared to have truſted him; but while he had ſuch miniſters about him, and embraced a religion of ſuch principles as he profeſſed, there was no room to depend much on his natural clemency or inclination, ſince theſe were ſufficient to corrupt the beſt natured man in the world, and had actually corrupted his Majeſty, as was evident from the whole tenour of his conduct with regard to the Proteſtants, of which he gives ſeveral inſtances both before and after his acceſſion to the throne. Among others, taking notice of the King's declaration, that *he would have all that did eat his bread to be of his own religion*, and accordingly, that if he ever employed a Proteſtant, it was for a colour only to his proceedings againſt them, or becauſe he could not find a Papiſt fit for their places, or becauſe he believed that in time he might make proſelytes of them; he obſerves, that 'where he did em-'ploy them, though their places were conſiderable, 'yet

(1) See our author's State of the Proteſtants in Ireland, &c. chap. iii.

(2) Anſwer to the State of the Proteſtants in Ireland, &c. by Charles Leſley, p. 5 and 8. Lond. 1692, 4to.

that year; and though he was attacked not long after in a weekly paper, called the *Abhorrence* [C], with a deſign to render him more obnoxious to the Court; yet he managed ſo prudently as to fruſtrate that attempt; but he did not eſcape being aſſaulted in the ſtreet, where a muſquet with a lighted match was levelled at him. He was alſo diſturbed in the performance of divine ſervice at his church ſeveral times, particularly on Candlemas-Day this year, when ſeven officers who were there, ſwore aloud they would cut his throat (*d*). Upon King James's retreat to France after the Battle of the Boyne, in the enſuing year 1690, the 16th of November being appointed a thankſgiving-day for the preſervation of King William's perſon, the Dean preached the ſermon on that occaſion at St Patrick's, Dublin; and on the 8th of January following, he was nominated to the Biſhoprick of Derry, and conſecrated on the 25th of that month, at the cathedral of Chriſt-church in Dublin, by Francis, Archbiſhop of that ſee, aſſiſted by Anthony Biſhop of Meath, William Biſhop of Kildare, and Narciſſus Biſhop of Fernes and Leighlin. A few months after this, he publiſhed a piece in vindication of the reſiſtance given to King James by the Proteſtants in Ireland, and of their ſubmiſſion to King William

(*d*) Id. ibid. and p. 247.

' yet they never had the intereſt with him, or power ' proper to their places, but were meer cyphers in it. ' Thus, continues he, Sir *Edward Herbert* was made ' Chancellor of *England*, and a new Great-Seal cut ' for him; but he was never allowed to have that in- ' tereſt with the King, nor had his Majeſty that re- ' gard for him in Councils, that his place required. ' The puny Papiſt Judges had more influence on the ' King, and could make bolder with him than he; ' that he was not admitted to the ſecret of affairs at ' all, and at the public Councils he was ſet below ' *Fitton* Chancellor of Ireland, and ſeveral others, ' whom, as Chancellor of England, and in his maſter's ' preſence, he ought to have preceded (3).' A remark, ſo much in favour of Sir Edward Herbert, who is hereby *fingled out* from many others, as a moſt flagrant example of thoſe that were ill uſed, notwithſtanding their ſteady loyalty, makes it more than probable, that his anſwering at the Council-Board for that of our author was by him not diſapproved. On the contrary, we ſhall ſee preſently, that Dr King was one of thoſe Proteſtants, who always declared their abhorrence of any inſurrection againſt the government, prudently avoiding all unſeaſonable and hopeleſs provocation thereof.

(3) State of the Proteſtants in Ireland, p. 52. third edition.

[C] *He was attacked in a weekly paper called the Abhorrence*] This paper was licenſed either by Mr Richard Nagle or Alſbeville, Secretaries of State *, and wrote by one Yalden, a Convert-Counſellor at Law, who made it his buſineſs to rake together all the little ſtories that might reflect on Proteſtants, and all the arguments his wit could furniſh for his cauſe; and in the ſcarcity of truth, he frequently invented falſe ſtories and lies concerning the Clergy, and began with Dr King and Dr Foy. He had publiſhed a collection of paſſages out of the Biſhop of Ely's [Dr Turner's] ſermon, and ſome ſixteen others, for Paſſive Obedience; which lying on the Bookſeller's hands, he printed the following advertiſement in his *Abhorrence*. ' There was lately publiſhed, by John Yalden, Eſq; ' the ſubſtance of fifteen ſermons, intituled, *An Ab- ' horrence from the Biſhop of* Ely, &c. *of the Proceedings ' of the Prince of* Orange, *and the Lords, &c. that in- ' vited him.* But ſome Proteſtants believing the ſaid ' book to be a Popiſh contrivance, and that ſuch doc- ' trines as were therein were never preached by the ' Divines there named; upon which † a gentleman of ' quality, to ſatisfy theſe doubts, applied himſelf to ' two reverend Divines of this city, viz. Dr King and ' Dr Foy; who both certified under their hands, that ' the doctrines contained in the ſaid book were honeſt, ' and true Chriſtian Divinity, and obliging to all ' Chriſtians to put immediately in practice, upon the ' peril of their ſalvation. Which certificate ſatisfied ' ſeveral Proteſtants here, and confirmed them in an ' unchangeable loyalty.'

* Ibid. p. 251, 252.

† It ſhou'd be, thereupon.

This paper coming to the hands of our author, occaſioned the following letter from him to Dr Foy:

' Reverend Sir, March 8, 1689.

' I intended to have waited upon you this afternoon, ' but found myſelf ſo indiſpoſed, that I durſt not ven- ' ture abroad. I have been made ſenſible, that the ' publiſher of the *Weekly Abhorrence* has made uſe of ' your name and mine: and affirms, that we have cer- ' tified under our hands, that the doctrines contained ' in a book publiſhed by one John Yalden, Eſq; con- ' taining a *Collection of the Subſtance of fifteen Sermons, ' were honeſt and true Chriſtian Divinity, and obliging ' to all Chriſtians to put immediately in practice, upon ' the peril of their ſalvation.* And he intimates, that ' this certificate has been ſhewn to ſeveral Proteſtants ' here. Sir, for my own part, I do profeſs, that I ' never read the aforeſaid book, nor did any gentle- ' man of quality (as he affirms) ever apply himſelf to ' me, to ſatisfy him *in* any doubts concerning it, that ' I remember. I am ſure never any body demanded ' a certificate from me concerning it; nor did I ever ' ſign any ſuch certificate as he pretends, or any thing ' like it: and therefore that whole advertiſement (as ' far as it concerns me) is abſolutely falſe and ground- ' leſs. If any one had aſked me concerning that col- ' lection, I could have given him no other anſwer, ' than that I had neither read it, nor the ſermons out ' of which it is ſuppoſed to be taken: perhaps the ' collection may be juſt, and no harm in certifying it ' to be ſo: but I am ſure there is a great deal of harm, ' in forging a certificate under a man's hand, whatever ' the matter be that is certified: and if there be no ' ſuch certificate, forged or real, it is no leſs criminal to ' publiſh to the world (as in this *Abhorrence*) that there ' is one. I cannot imagine to what purpoſe the pub- ' liſher ſhould have inſerted ſuch an eaſily detected ' falſehood, which he could not expect ſhould eſcape ' being diſcovered; except he had a mind to deſtroy ' both his own credit, and likewiſe that of the collec- ' tion. Pray, Sir, if you know any thing of this matter, ' communicate it to

Your moſt humble ſervant,

WILLIAM KING.

To the Rev Dr Nath. Foy, theſe,

To this Dr Foy returned the following anſwer.

Reverend Sir,

' What you were pleaſed to acquaint me with, ' ſeveral gentlemen, who were concerned for me, gave ' me notice of ſome few hours before: upon which I ' immediately repaired to the coffee-houſe (the likelieſt ' place, as I judged, to find a lye if it were ſtirring) ' where I ſaw myſelf in print; of which, though I ' could not imagine what ſhould be the ground, yet ' ſince it was reſolved it ſhould be ſo, I was glad to ' be found with ſo good company as yourſelf. Had ' the gentleman, among other things in his *Abhorrence*, ' but abhorred untruth, I am ſure my name had never ' appeared in his *advertiſement:* for I declare, I never ' read the book mentioned therein; and I judge, I ' ſhall not be very fond of reading any thing that comes ' from under his hand; having given ſuch a taſte to ' the world of his abilities in writing and collecting ' other mens ſenſes, that it is to be doubted whether ' he has yet well collected his own: whoſe collection, ' as I never read, ſo have I never received any account ' of the contents of it; nor did any perſon ever re- ' quire a certificate from me, or my judgment of that ' collection, or the ſermons ſaid to be in it: nor did I ' ever give any certificate, or my judgment, to any ' perſon unrequired. This is all I know of the matter, ' or of the Gentleman's collection. It may be a faith- ' ful one for ought I know, but certainly he has not

' taken

[illegible] and Queen Mary [D]; which was followed by another *Thankſgiving Sermon for King William's Succeſs in reducing that Kingdom.* This was printed in 1692; and the ſame year, there coming out *An Anſwer to his Vindication of the Proteſtants*, &c. he thought proper to take no public notice of it * [E]. In 1693, he was appointed one of the royal Viſitors

* About this time he made ſome remarks upon Mr Locke's *Eſſay on Human Underſtanding*, and communicated them to Mr Molyneux, who had ſent him a copy of the firſt edition of the *Eſſay*. Letters between Mr Locke and ſeveral of his friends, p. 4.

[illegible] the beſt method to aſſert the reputation of it, or his own, ſince he muſt give leave with them, who are as ignorant of his perſon and collection as I am, to ſuſpect, that he who can find a certificate in Dublin that never was written, may find a ſermon in London that never was printed. Your faithful friend and humble ſervant,

NATHANIEL FOY (4).

(4) This, in the appendix, No. 26.

For the Rev. Dr Will. King, theſe.

These letters being ſpread about the city, every body came to know the matter of fact as contained therein; by which means, concerning themſelves much in the matter, they both avoided the ſnare that was laid to entrap them, either by letting it paſs in abſolute ſilence, or by diſowning it and refuting the calumny.

[D] *A vindication of the reſiſtance given to King James, &c.*] This piece is intituled, *The ſtate of the Proteſtants of Ireland under the late King James's government; in which their carriage towards him is juſtified, and the abſolute neceſſity of their endeavouring to be freed from his government, and of ſubmitting to their preſent majeſties is demonſtrated* (5). The general plan of this treatiſe is as follows: he begins with ſtating the limits of the duty of paſſive obedience, wherein he follows the opinion of Grotius, that reſiſtance is allowable in caſes of neceſſity, and that this neceſſity commences when it becomes certain and apparent, that the inconveniencies of ſubmiſſion are greater to the commonwealth, than thoſe of a civil war, which it is entered into to remove, and then there needs no more to juſtify the Proteſtants of Ireland for deſerting King James, and accepting their Majeſties protection, than to ſhew, 1. That it is lawful for one Prince or ſtate to interpoſe between another Prince and his ſubjects, who uſes them cruelly, or endeavours to enſlave or deſtroy them, and to reſcue them from his hands even by a war, if other means prove ineffectual: and that it is lawful for the ſubjects to accept of ſuch interpoſition and protection, if they can find no better way to preſerve themſelves. 2. That King James deſigned to deſtroy and utterly ruin the Proteſtant religion, the liberty and property of the ſubjects in general, the Engliſh intereſt in Ireland in particular, and alter the very frame and conſtitution of the government. 3. That he not only deſigned but attempted it with great ſucceſs, and made a conſiderable progreſs in it. 4. That there remained no other proſpect, or human poſſibility of avoiding this ſlavery and deſtruction deſigned againſt the kingdom and proteſtants of Ireland, but by accepting of the protection, and ſubmitting to the government of their preſent Majeſties. It is evident from this plan, that the force of the argument depends upon the ſufficiency and truth of the facts to prove the ſecond and third branches of it. (6) The large collection our author has made of theſe, ſhews him to have been very diligent in his enquiries, moſt of them being ſo well atteſted as to put the truth thereof beyond all contradiction. And with regard to the whole he concludes in theſe words; 'Here I do ſolemnly proteſt, that no private diſſatisfaction, that no ill-will to King James's perſon, nor prejudice againſt any body, has moved me to ſay what I have ſaid; but that I might vindicate ourſelves by ſpeaking truth in a matter that ſo nearly concerned us, both in our temporal and eternal intereſt. And I muſt likewiſe proteſt before God, who will judge between us and our enemies in this point, that I have not aggravated the calamities we have ſuffered, nor miſrepreſented the proceedings againſt us out of favour or affection to a party; but have rather told things nakedly and in general, than inſiſted on ſuch particulars as might ſeem to ſerve no other purpoſe, but to make our adverſaries odious.' In proceeding he appeals to a future inquiſition to be made upon the oaths of eye-witneſſes and ſufferers, which he alſo propoſes as a thing much to be wiſhed for by the Proteſtants, as being well aſſured, that if ſuch commiſſions were iſſued by the proper authority into the ſeveral counties, that the treatment which the Proteſtants underwent, and the damages they ſuffered, would appear with a much worſe face than he had repreſented it, and that where one ſtory might happen undeſignedly to be aggravated, twenty worſe will be added to ſupply it. 'There is not, continues he, a 'a more neceſſary or effectual means can be taken for 'clearing the Proteſtants in this kingdom, or juſtifying 'the ſtate in their proceeding againſt the Iriſh: and 'we are ready and willing to ſtand or fall in the cenſure of the world by this plea, according as on the 'proof of particulars by ſufficient evidence, the truth 'ſhall appear:' to this we ſhall venture to add the following remark, as being ſuggeſted by the peruſal of the book. It has been often ſaid, that King James defeated his own views by proceeding too faſt even againſt the rules of ordinary policy in England; however that be, 'tis certain his miſcarriage in England was of no ſervice in teaching him that leſſon for his uſe in reſpect to Ireland; ſince nothing can be more notoriouſly manifeſt, as appears from this account, than that his conduct there was puſhed on with a ſtill greater degree of violence (7).

(5) This treatiſe was ſo well received by the public, that a third edition was printed in 1692. And Biſhop Burnet obſerves, that it was univerſally acknowledged to be as truly as it was finely written; and refers to it, as a full and faithful account. Hiſt. of his own Time, Vol. I.

(6) Accordingly, theſe two chapters fill up all, from p. 13 to p. 252. after which, chap. iv. is diſpatched in three pages, and ends at p. 255.

(7) Vindication, p. 269, 270.

[E] *An anſwer to his vindication of the Proteſtants.*] The famous Mr Charles Leſley was the author of the piece, which he called *An anſwer to a book intituled, The ſtate of the Proteſtants in Ireland*, &c. Upon the ſubject of Paſſive Obedience, which is laid for the foundation of our author's defence, he endeavours to ſhew, that Dr King, as well as many others, had taken care to ſtate the limits of that doctrine ſo as to ſuit the times and occaſions: that no man was, or could be, a higher aſſerter of it than 'the Doctor had been all 'his life before the Revolution took place; and that 'even at the beginning of it, he told a perſon of honour, 'from whoſe mouth Mr Leſley had it, that if the 'Prince of Orange came over for the crown, or ſhould 'accept of it, he prayed God might blaſt all his deſigns. That there was no way to preſerve the honour 'of our religion, but by adhering unalterably to our 'loyalty. That it would be a glorious ſight to ſee a 'a cart full of clergymen going to the ſtake for paſſive 'obedience as the primitive Chriſtians did. That 'it would prove the ſupport and glory of our religion; 'but that a rebellion would ruin and diſgrace it; he 'ſaid, continues Mr Leſley, that if it were no more 'than that declaration, which he had ſubſcribed of its 'not being lawful, on any pretence whatſoever, to 'take arms againſt the King, he would die a hundred 'deaths rather than do it. And in ſupport of this 'aſſertion, he proceeds to relate the following ſtory, 'that at a meeting of the clergy of Dublin in the beginning of the Revolution in 1688, to conſider what 'meaſures they were to take, Dr King declared, *that 'their taking arms in the north of Ireland at that time, 'was rank rebellion, if there could be any rebellion, 'particularly Derry ſhutting their gates againſt the 'King's forces ſent thither*; and when one there preſent 'affirmed, that the ſubjects might take arms in defence of their laws, &c. The Doctor violently oppoſed 'it, even in relation to Derry, and urged, that the 'Bp of Derry, Hopkins, who was then there, did 'proteſt againſt their ſhutting out the King's forces, 'and refuſed to join with thoſe who did it; for which, 'and other reaſons then given by Dr King, he was 'againſt any perſon's going to the north, or joining 'with them, as being a joining in a rebellion (8).' Every one ſees the rancorous ſpirit of party in this account of Mr Leſley; and indeed the ſame ſpirit ſhews itſelf at the firſt ſetting out of his anſwer, where he tells us, that 'Dr King's book is calculated for the deſtruction of mankind, by ſetting up ſuch principles 'as countenance eternal rebellions, and afford pretences for war and confuſion to the end of the world, 'and makes ſettlement and peace impracticable among 'men (9).' But neither on the other hand muſt it be denied, that our author has ſometimes not been ſufficiently upon his guard againſt the ſuggeſtions of the ſame

(8) Leſley's anſwer, p. 113.

(9) Ibid, p. 2.

(e) The other two Commiſſioners were Anthony Biſhop of Meath and Capel Biſhop of Dromore.

Viſitors of the Biſhop of Down and Connor, when that prelate was ſuſpended by them (e). The public tranquillity being now perfectly reſtored, his Lordſhip applied himſelf more particularly to the immediate duties of the paſtoral care; and reviewing the ſtate of his dioceſe, he preſently diſcovered, that, by the great number of colonies lately tranſported from Scotland, the major part of the people in the dioceſe of Derry were Diſſenters from the eſtabliſhed Church, which they oppoſed with as much zeal as the Papiſts: ſo that the danger in theſe parts of Ireland was not taken away by the new ſettlement, but only ſhifted into different hands. Hereupon, as he had employed his pen againſt Popery, when the danger to

(10) See §. 6. Part i. Append. III. where he intimates, that King James ſuffered the Engliſh Navy to go to ruin; which he endeavours to excuſe in the third edition, p. 93.

(11) Leſley's Anſwer, p. 105.

ſame evil ſpirit (10). We are told, 'tis true that our author at the time of his death had atteſted vouchers of every particular fact alledged in his book, and that theſe are ſtill in the hands of his relations. However, it is certain, that he does not even himſelf always give intire credit to the teſtimony of theſe vouchers; yet his antagoniſt has notoriouſly overcharged this part of his accuſation, when he tells us, that with regard to matters of fact, 'tho' he could not ſay that he had examined 'into every ſingle one related by our author, not having 'the opportunity of doing it. But, ſays he, I am ſure 'I have the moſt material, and by theſe you will eaſily 'judge of his ſincerity in the reſt, which could not all 'come to my knowledge. However, this I can ſay, 'that there is not one I have enquired into, but I have 'found it falſe in *whole* or in *part*, *aggravated* or '*miſrepreſented*, ſo as to alter the whole face of the 'ſtory, and give it perfectly another air and turn; inſomuch, that tho' many things he ſays were true, 'yet he has hardly ſpoke a true word, that is told 'truly and nakedly, without a warp (11).' In reality, as to our author's principles, as far as they may be conjectured from what is ſeen in this treatiſe, he ſeems to have run with the ſtream of the clergy, in diſapproving the bill of excluſion and the principle of reſiſtance on which it was built. In this opinion he carried the meaſures of obedience to the ſame unlimited degree as was generally preached up in the reign of King Charles II. and before the Revolution. To this purpoſe we find him obſerving, that 'when the Prince of 'Orange made his deſcent into England, King James 'had an army of Papiſts in Ireland, conſiſting of be'tween ſeven and eight thouſand men, of which near 'four thouſand were ſent over to him into England; 'there remained then about four thouſand behind, 'ſcattered up and down the kingdom, which were 'but a handful to the Proteſtants, there being men 'and arms enough in Dublin alone to have dealt with 'them: when therefore the news came, that King 'James had ſent commiſſioners to treat with the Prince, 'it was propoſed by ſome to ſeize the caſtle of Dublin, 'where the ſtores of arms and ammunition lay; the 'poſſibility of this was demonſtrated, and the ſucceſs 'extremely probable, inſomuch, that the perſons who 'offered to undertake it made no doubt of effecting it. 'They conſidered that the Papiſts, beſides the four 'thouſand of the army were generally without arms, 'that thoſe who were in arms were raw and cowardly, 'and might eaſily be ſuppreſt; that to do it effectually, 'there needed no more but to ſeize the Deputy Tyr'connel, who had not then above ſix hundred men in 'the city to guard him and ſecure it; that their hearts 'were generally ſunk, and they openly declared them'ſelves deſirous to lay down their arms; propoſing to 'themſelves no other conditions, but to return to that 'ſtation in which they were when King James came to 'the crown. This was ſo univerſally talked of by 'themſelves, that if any one could have aſſured them 'of theſe terms, there was no doubt but they would 'have readily complied, and have left the Lord Tyr'connel to ſhift for himſelf; nay, it is probable, the 'wiſer ſort among them would have been glad that 'the Proteſtants had ſeized him; and he himſelf com'manded ſome Proteſtants to ſignify to their friends in 'England, that he was willing to part with the ſword 'on theſe terms, ſo he might have leave to do it from 'King James.' *But the Proteſtants had been educated in ſuch a mighty veneration to the very name of authority, and in ſo deep a ſenſe of loyalty, that notwithſtanding the many provocations given them, and their fear of being ſerved as in* 1641, *the memory of which was ſtill freſh to them, they yet abhorred any thing that looked like an inſurrection againſt the government, and generally condemned the deſign of meddling with the Lord Deputy, tho' they knew he was no legal governor, and uncapable (as a Papiſt) by the law of that truſt.* Eſpecially the Lord Mountjoy laboured for his ſafety, and prevented the forementioned propoſal of ſeizing him and the caſtle with as much induſtry, as if he himſelf had been to periſh in it. *The truth is, it was an unanimous reſolution of all the Proteſtants of the kingdom, that they would not be the aggreſſors, and they held ſteadily to their reſolution; none offered or attempted any thing, 'till they ſaw the whole body of the Papiſts in Ireland forming themſelves into troops and companies, and theſe new raiſed men permitted, nay put under a neceſſity to rob and plunder for their ſubſiſtence. They pitied the hard fortune of King James, and notwithſtanding they were half ruined themſelves when he came into the kingdom, yet if he had carried himſelf with any tolerable moderation towards them, and his deſigns to ruin them had not been ſo apparent, he might have prevailed on them in a great meaſure* (12). He proceeds to ſhew, that the change of behaviour in the Proteſtants was no more than the neceſſary effect of that King's deſigns to ruin them actually carried into execution; and among other things, he ſuggeſts, that 'all King 'James's promiſes and declarations in favour of the 'Proteſtants, were perfectly copied from the French 'King's declarations to preſerve the edict of Nantz, 'and of as little ſincerity; and that notwithſtanding 'theſe he had as fully determined the ruin of the Pro'teſtants, as that King had reſolved the avoiding the 'edict of Nants, when he made his ſolemn declara'tions to the contrary (13).' Again, 'the preſent 'French King is a demonſtration, that neither love of 'glory, nor of intereſt, neither greatneſs of mind nor 'goodneſs of nature, are antidotes againſt the force of 'the Roman principles, or can reſtrain the Prince that 'has thoroughly imbibed them from blood and perſe'cution. Otherwiſe he would never have made him'ſelf infamous by ſuch horrid cruelties as he has com'mitted on his Proteſtant ſubjects, or blot an indelible 'blot on a reign which he would fain have repre'ſented to be more glorious than any of his predeceſ'ſors (14).' In anſwer to this, Mr Leſley acknowledges the fact of the French King Lewis XIV's conduct with the Huguenots and defends it, but is ſo far from allowing that King James had learned this leſſon, and copied from that monarch, that he loſt his crown by not doing it. 'His [the French King's] baniſhing 'the Huguenots, ſays he, and dragooning others to 'work them into another religion, does indeed, and 'juſtly, eclipſe his glory with thoſe who know not the 'true grounds and motives which induced him to me'thods ſo rigid and ſevere. But *his very enemies, who 'know the reaſons he had for it, do even in this excuſe 'him, and turn it into an argument of his wiſe foreſight and prudence. They tell you, that he was under 'an invincible neceſſity of being rid of theſe men, or 'hazarding ſuch a revolution as befel King James* (15). Our author ſtrongly maintains alſo the perfect union of King James with the French King in the general deſign of extirpating hereſy. 'Is not, ſays he, our late 'King's being of the ſame principles, and under the 'government of the ſame director of conſcience? Is 'not this fondneſs of France, and his alliance with it, 'his affecting to imitate the King in every thing, and 'above all his proſecuting the ſame, if not worſe me'thods, towards the Proteſtants in Ireland, that the 'King of France did with the Huguenots in his domi'nions; a clear and full proof of both Kings being 'in the ſame deſign, and that we muſt all have ex'pected the ſame uſage our brethren met with in 'France (61).' In anſwer to this, Leſley declares with the like ſpirit, that 'the Jacobites think themſelves for ever 'obliged to acknowledge with all gratefulneſs the noble and generous reception he has given King James in his diſtreſs, which as no King in Europe was able to have done but himſelf, ſo none but he could have done it in ſuch a manner, with that greatneſs and every punctilio of honour (17).'

to the Church in general was imminent from that quarter; ſo the ſame regard induced him to take it up again in her preſervation now, that he became ſenſible how much on the other ſide her borders were retrenched by the Preſbyterian Fanatics in his particular diſtrict. In this view he ſet himſelf to bring theſe over to a conformity to the eſtabliſhed liturgy, in a piece which he publiſhed under the title of, *The Inventions of* Men *in the Worſhip of* God. Printed at Dublin, 1694, in 4to. But, inſtead of perſwading them to a compliance, the attempt only ſerved to engage him in a ſecond controverſy with theſe ſeparating adverſaries; one of whoſe miniſters preſently drew up *Remarks on a late* Diſcourſe *of William Lord Biſhop of Derry*, concerning the Inventions of Men in the Worſhip of God. Dublin, 1694, 4to. In this piece, Mr Joſeph Boyſe, the author, acknowledged, that the Biſhop's 'Diſcourſe was written with an air of ſerioufneſs and gravity, 'becoming the weight of the ſubject as well as the dignity of his character.' Whereupon his Lordſhip returned an anſwer, under the title of, *An Admonition to the Diſſenting Inhabitants of the Dioceſe of Derry, concerning a Book lately publiſhed by Mr* J. B. *intituled*, Remarks, &c. *from* William *Lord Biſhop of that Dioceſe*. Dublin, the ſame year, in 4to. To this Mr Boyſe replied, in *A Vindication of the* Remarks, &c. Dublin, 1695, 4to. And the Biſhop rejoined, in *A Second Admonition to the Diſſenting Inhabitants*, &c. publiſhed the ſame year at Dublin in 4to. Here the conteſt ended, having, as uſual, produced very little, if any, good effect at all. And, from conſidering the waywardneſs of man, our author turned his thoughts to view the myſterious ways of God in his providential government of the world. The problem concerning *the Origin of evil* had employed the ſharpeſt wits both of former and latter ages, and ſtill remained a problem, at a great diſtance from having received any ſatisfactory ſolution. This moſt arduous intricacy our author thought worthy therefore of his utmoſt attention. Accordingly, he ſet himſelf to the taſk, with a reſolution in ſome meaſure equal to the difficulty; and, after the moſt diligent inquiry, having in his judgment penetrated up to the fountain-head, by firſt diſcovering and then proceeding in a new way to it, he preſented the public with the fruit of his pains, in his celebrated treatiſe, *De Origine Mali*, *authore* Gulielmo King, S. T. D. *Epiſcopo Derenſi*. Dublin. 1702, 4to. It was republiſhed the ſame year at London in 8vo. and a general view of his ſcheme may be ſeen below [*F*]. Our author therein

[*F*] *An account of his ſcheme*] This is as follows: '(1.) All creatures are neceſſarily imperfect, and at an 'infinite diſtance from the perfection of the Deity, and 'if a negative principle were to be admitted, ſuch as 'the *privation* of the *Peripatetics*, it might be ſaid, 'that every created being conſiſts of exiſtence and non-'exiſtence, for it is nothing in reſpect both of thoſe 'perfections which it wants, and of thoſe which others 'have. And this defect, or, as we may ſay, mixture 'of non-entity, in the conſtitution of created Beings, 'is the neceſſary principle of all natural evils, and of 'a poſſibility of moral ones; as will appear in the ſe-'quel. (2.) An equality of perfection in the creatures 'is impoſſible, as our adverſaries allow; to which we 'may add, neither would it be ſo convenient to place all 'in the ſame ſtate of perfection. (3.) It is agreeable to 'divine wiſdom and goodneſs to have created not only 'the more perfect beings, but alſo the moſt imperfect, 'ſuch as matter; ſo long as they are better than no-'thing, and no impediment to the perfect ones. '(4.) Admitting matter and motion, there neceſſarily 'follows compoſition and diſſolution of bodies, that is 'generation and corruption which ſome may look upon 'as defects in the divine work; and yet it is no objec-'tion to his goodneſs or wiſdom, to create ſuch things 'as are neceſſarily attended with thoſe evils. Allow-'ing therefore God to be infinitely powerful, good, 'and wiſe, yet it is manifeſt that ſome evils, viz. ge-'neration and corruption, and the neceſſary conſe-'quences of theſe might have place in his works; and 'if even one evil could ariſe without the ill principle, 'why not many? And if we knew the nature and cir-'cumſtances of all things, as well as we do thoſe of 'matter and motion, it may be preſumed, that we 'could account for them without any imputation of 'the divine attributes. For there is the ſame reaſon 'for them all, and one inſtance to the contrary de-'ſtroys an univerſal propoſition. (5.) It is not incon-'ſiſtent with the divine attributes to have created ſome 'ſpirits or thinking ſubſtances, which are dependent 'on matter and motion in their operations, and being 'united to matter, may both move their bodies, and 'be affected with certain paſſions and ſenſations by 'their motion, and ſtand in need of a certain diſpoſi-'tion of organs for the proper exerciſe of their think-'ing faculty, ſuppoſing the number of thoſe that are 'quite ſeparate from matter, to be as complete as the 'ſyſtem of the whole univerſe would admit, and that 'the lower order is no inconvenience to the higher. '(6.) It can't be conceived, but that ſome ſenſations 'thus excited by matter and motion ſhould be diſagree-'able, and tend to diſſolve the union between ſoul 'and body, as well as others agreeable. For it is 'impoſſible, as well as inconvenient, that the ſoul 'ſhould feel itſelf to be loſing its faculty of thinking, 'which alone can make it happy and not be affected 'with it. Now diſagreeable ſenſation is to be rec-'koned among natural evils, which yet cannot be 'avoided without removing ſuch kind of animals out 'of nature. If any one aſk why ſuch a law of union 'was eſtabliſhed? let this be his anſwer, becauſe there 'could be no better. For ſuch a neceſſity as this flows 'from the very nature of the union of things, and 'conſidering the circumſtances and conditions, under 'which, and which only, they could have exiſtence, 'they could neither be placed in a better ſtate, nor be 'governed by more commodious laws. Thoſe evils 'therefore are not inconſiſtent with the divine attri-'butes, provided that the creatures which are ſubject 'to them enjoy ſuch benefits as overbalance them. It 'is to be obſerved alſo, that theſe evils do not pro-'perly ariſe from the exiſtence which God gave to the 'creatures; but from hence, that they had not more 'of exiſtence given them, which nevertheleſs their 'ſtate and the place they fill in the great machine of 'the world could not admit. This mixture therefore 'of non-exiſtence, ſupplies the place of an ill principle 'in the origin of evil, as was ſaid before. (7.) The 'happineſs and perfection of every thing or agent, 'ariſes from the due exerciſe of thoſe faculties which 'God has given it; and the more faculties and per-'fections any thing has, it is capable of the greater 'and more perfect happineſs. (8.) The leſs dependent 'on external things, the more ſelf-ſufficient any agent 'is; and the more it has the principle of its actions in 'itſelf, it is ſo much the more perfect. Since there-'fore we may conceive two ſorts of agents, one 'which does not act, unleſs impelled and determined 'by external force; the other, which have the prin-'ciple of action within themſelves, and can determine 'themſelves to action by their natural power, it is plain 'that the latter are much more perfect than the for-'mer. Nor can it be denied, but that God may 'create an agent with ſuch a power as this, which 'exerts itſelf into action without either the concourſe 'of God, or the determination of external cauſes, ſo 'long as God by a general concourſe preſerves the exi-'ſtence, powers, and faculties of that agent. (9.) Such 'an

* Mois de Mai & Juin, 1703.

therein makes it his buſineſs to ſhew, how all the ſeveral kinds of evil with which the world abounds, are conſiſtent with the goodneſs of God, and may be accounted for without the ſuppoſition of an evil principle. So fatal a blow as this given to the Manichæan ſyſtem, did not fail to rouſe the attention and ſpirit of Mr Bayle, who, impatient to ſtep forth in defence of that his favourite opinion, attempted an anſwer to the Biſhop before he had ſeen his book [G], which came out, as has been ſaid, in 1702; and, the author

' an agent may preſcribe to itſelf an end, and proſe-
' cute it by proper means, and take delight in the pro-
' ſecution of it, tho' that end might be perfectly indif-
' ferent to it before it was propoſed, and be no more
' agreeable than any other of the ſame or a different
' kind would be, if the agent had once reſolved to
' proſecute it. For ſince all the pleaſure or happineſs
' which we receive ariſes from the due exerciſe of our
' faculties, every thing which is equally commodious
' for the exerciſe of our faculties will give us the ſame
' delight. The reaſon therefore why one thing pleaſes
' above another, is founded in the act of the agent
' himſelf, viz. his election. This is largely explained
' in the book itſelf, together with the limits, within
' which it is confined, and will be illuſtrated more
' fully hereafter. (10.) It is impoſſible that all things
' ſhould agree to all, that is, be good; for ſince the
' things are limited, diſtinct, and different one from an-
' other, and are endued with finite, diſtinct, and dif-
' ferent appetites, it neceſſarily follows, that the rela-
' tions of convenient and inconvenient muſt ariſe from
' this diverſity. Since therefore every created being
' is from the imperfection of its nature neceſſarily li-
' mited, and from that limitation there neceſſarily
' follows diſtinction and diverſity, it follows, that a
' poſſibility, at leaſt of evil, is a neceſſary attendant on
' all creatures, and cannot be ſeparated from them by
' any power, wiſdom, or goodneſs whatſoever. For
' when a thing is applied to an appetite or being to
' which it is not appropriated, as it is not agreeable
' to it, it neceſſarily affects it with uneaſineſs; nor
' was it poſſible that all things ſhould be appropriated
' to every being, where the things themſelves, and the
' appetites are various and different, as they muſt ne-
' ceſſarily be if created even in the moſt perfect man-
' ner. (11.) Since ſome agents have a power over
' their own actions as above, and can pleaſe themſelves
' in the choice of ſuch things as may exerciſe their fa-
' culties; and ſince there are ſome ways of exerciſing
' them which may be prejudicial to themſelves or
' others, it is plain, that from this power there ariſes
' a poſſibility of chooſing amiſs, and they may exerciſe
' themſelves to their own prejudice, or that of others.
' (12.) And ſince in ſuch a variety of things, thoſe
' that are beneficial or hurtful cannot be known by
' an intelligent being, which is in his own nature li-
' mited and imperfect, it was agreeable to the divine
' wiſdom to preſcribe ſome rules and directions to ſuch
' agents, in order to inform them what would benefit
' or incommode them or their fellow creatures, i. e.
' what would be good or evil, that they might chuſe
' the one and avoid the other.

' (13.) Since therefore, as was ſaid before, an equa-
' lity of perfection in the creatures is impoſſible, nei-
' ther would it be convenient for them to be placed in
' the ſame ſtate of perfection; it follows, that there
' are various orders and degrees even among intelligent
' creatures; and ſince ſome of the inferior orders and
' degrees are capable of thoſe benefits which the ſupe-
' rior ones enjoy; and ſince there are as many placed
' in the ſuperior orders as the ſyſtem of the univerſe
' allowed, it follows, that the inferior ones, as a more
' convenient place could not be left for them, ought
' to be content with a lower portion of happineſs,
' which their nature makes them capable of, and to
' a higher than which they could not aſpire without
' detriment to the ſuperior which poſſeſſes that ſtation;
' for he muſt quit his place before another can aſcend
' to it; and it ſeems hard and very inconſiſtent
' with the nature of God, to degrade a ſuperior as
' long as he has done nothing to deſerve it. But if
' one of a ſuperior order will by his own act, without
' any violence or compulſion, voluntarily quit his place,
' or freely chuſe ſuch things as deſerve a degradation,
' God would ſeem unjuſt to thoſe who are in an infe-
' rior degree, and by a good uſe of their liberty be-
' come fit and qualified for a ſuperior ſtate, if he ſhould
' refuſe them the free uſe of their own choice. It
' ſeems unjuſt for God to condemn or degrade any one
' arbitrarily, but he is not to be blamed for ſuffering
' one to degrade himſelf by his own act and choice,
' eſpecially when the uſe of that elective power belongs
' to the nature of an intelligent being, and could not
' in the preſent ſtate be prohibited without detriment
' to ſome other.

' Here the wiſdom and goodneſs of God ſeem to
' have exerted themſelves in a moſt glorious manner,
' the contrivance ſeems to be the effect of the higheſt
' policy and prudence. For by this means God has
' ſhewn himſelf moſt equitable to his creatures; ſo
' that no one can complain of or glory in his lot.
' He that is in a leſs convenient ſituation has no room
' for complaint, ſince he is endowed with faculties,
' and has power to uſe them in ſuch a manner as to
' acquire a more commodious one; and he muſt be
' forced to own himſelf only in the fault, if he conti-
' nues deprived of it: and he that is now in a ſuperior
' ſtate may learn to fear, leſt he fall from it by an un-
' lawful uſe of his faculties; the ſuperior therefore has
' a dread that may in ſome meaſure diminiſh his hap-
' pineſs, and the inferior a hope that may increaſe it;
' by which means they are both brought nearer to an
' equality, and in the mean time have the utmoſt pro-
' vocation and incitement to chuſe the beſt, and make
' the moſt beneficial uſe of their faculties. This conteſt
' makes for the good of the univerſe, and much more
' ſo than if all things were fixed by Fate and Neceſſity,
' and abſolutely confined to their preſent ſtate. Either
' God muſt have created no free agents to be governed
' by the hope of reward and fear of puniſhment, or
' theſe will be the fitteſt means to that end, and
' worthy of a God; for what ground is there to com-
' plain of the Deity in this whole affair, except that
' when an equal ſhare of happineſs could not befal
' every one, he beſtows the beſt on ſuch as uſe their
' faculties aright, and takes away what he had given
' from thoſe that abuſe them.

' (14.) If what is laid down above be true, from
' thence it is manifeſt that all kinds of evil, viz. that of
' *imperfection*, *pain*, and *ſin*, may enter into a world
' made by the moſt wiſe, good, and powerful author,
' and that its origin may be accounted for, without
' calling in the aſſiſtance of an evil principle.

' (15.) It is plain that we are tied down to this earth,
' and confined in it as in a priſon, and that our know-
' ledge does not extend beyond the ideas which we
' receive from the ſenſes; and who knows not how
' ſmall a part we underſtand even of thoſe elements
' about which we are converſant? But ſince the whole
' maſs of elements is as a point in regard to the whole
' univerſe, is it any wonder if we miſtake, when we
' are framing a judgment, or rather a conjecture, con-
' cerning the beauty, order, and goodneſs of the
' whole from this contemptible particle? This earth
' of ours may be the dungeon of the univerſe, an hoſ-
' pital of madmen, or a workhouſe of reprobates;
' and yet ſuch as it is, there is much more both of
' natural and moral good than of evil to be found in it.
' Thus far, concludes he, has the controverſy about
' the origin of evil proceeded in the author's book.
' For all that has been ſaid above, is either expreſsly
' contained in it, or may very eaſily be deduced from
' the principles there laid down (18).'

[G] *It was attacked by Mr Bayle before he had ſeen it.*] Monſ. Bernard having given an abridgment of our author's book in his *Nouvelles de la Republique des Lettres* for the months of *May* and *June* 1703. that abridgment fell into the hands of Mr Bayle, who obſerving his favourite opinion concerning the truth of the Manichæan ſyſtem to be brought in imminent danger of an overthrow therein, did not think proper to defer putting in ſome remarks by way of anſwer 'till he could ſee and conſult the book itſelf, but examined the hypotheſis of our author as it was repreſented in Mr Bernard's abſtracts, and in a paſſage cited by the authors of the *Acta Eruditorum Leipſiæ*, which had been omitted

(18) Law's Tranſlation, &c. ſecond edition, in the preface.

author was tranſlated to the Archbiſhopric of Dublin, by letters patent, dated the 11th of March the ſame year, having been firſt elected *Adminiſtrator Spiritualium* by the Chapters of both the cathedrals there, during the vacancy of that ſee, occaſioned by the promotion of Dr Marſh to the Primacy of Ireland, in that of Armagh. In 1704, he preached *A Thankſgiving Sermon for the Victory of Hochſtet at Chriſt-Church in Dublin*, which was publiſhed there; and another at London the ſame year in 4to. *preached before the Queen, at St James's, on Humility*. Where he alſo publiſhed in 1706, in 4to. *A Sermon preached at St Margaret's Weſtminſter*, January 13, 1705, on Prov. xxii. 6. *Train up a child in the way he ſhould go*, &c. And the preſs at Dublin produced the following year, 1707, in 4to,

omitted by Mr Bernard. The firſt principle of our author, which Mr Bayle mentions is, that *God always acts for an end, which end in the creation of the world was to exerciſe his power, or to communicate his goodneſs; ſo that it is only improperly ſaid, that God created all things for his glory.* Mr Bayle allows this principle, and that is almoſt the only point in which he agrees with the Archbiſhop. But he denies what the Archbiſhop aſſerts, viz. that *there is more natural good than evil in the world, and that the eſtabliſhing of two principles does not remove the difficulty about the origin of evil; becauſe it is as much repugnant to the divine goodneſs to have created beings which he foreſaw would be corrupted by another principle, as to have created thoſe which were corruptible in themſelves.* He denies alſo, in oppoſition to our author, that every thing derived from matter, muſt of neceſſity be ſubject to pain, diſeaſes, grief, &c. and to confute that notion ſeems to build upon the opinion of occaſional cauſes, as if it was an uncontrovertible doctrine; whereas it has very few followers in England. He aſks, to what purpoſe ſerve the pains of childbirth? and anſwers, to call for a midwife; and puts this inſtance in the margin, that a woman in a wilderneſs will feel as much pain as in a city, and would conclude from thence, that thoſe pains ſerve for nothing. He denies that miſtake and ignorance are the natural effects of man's imperfection, and cites upon that head the greateſt part of the divines, who believe that Adam was created ſo learned, that though his knowledge was not infinite, it would be abſurd to ſuppoſe that he was in error or ignorance. He denies that it is neceſſary, in order to a man's eſteeming himſelf happy in his right choice, to be perſuaded that the choice was made by the ſtrength of his own free will. He alledges ſeveral ſorts of men, who do not think their happineſs depends upon their liberty, and quotes a great many authors ancient and modern, poets and others to that purpoſe. He brings ſeveral other reaſons againſt our author's notion of liberty, and afterwards anſwers that queſtion of the Archbiſhop, why God permitted ſin? He pretends, that the inconveniencies which our author alledges, in caſe God had not created a being endued with ſuch a liberty as the Archbiſhop conceives, are abſolutely null. He ſays the ſame of what his Grace advances to ſhew, that God was not obliged to employ his omnipotent power to hinder thoſe free agents from abuſing their freedom, or to tranſport them to another habitation, where they would have had no occaſion to prompt them to a bad choice. Mr Bayle afterwards attacks our author's aſſertion, that the goodneſs of things depends ſolely upon God's having choſen them (19). Mr Bernard did not let theſe remarks of Mr Bayle paſs without a reply, wherein he begins with complaining of that author for not conſulting Archbiſhop King's book itſelf, and obſerves, that Mr Bayle "attacks his Grace upon ſuch principles as he would expreſsly deny, ſince the Engliſh divines do not maintain, in every reſpect, the principles common among others of the reformed; as that, for inſtance, already mentioned, where he recurs to occaſional cauſes. That as to the pains of childbirth, if he knew no other uſe of thoſe pains than that of calling a midwife, he might have conſulted ſome phyſician who would have informed him of the matter. That where he cites the authority of divines for the infinite learning of Adam, Mr Bernard ſays, their authority will ſignify little, where the queſtion is about reaſon. And as to his quotations from poets, &c. to ſhew that ſeveral ſorts of men do not think their happineſs depends upon their liberty, he ought, ſays the ſame antagoniſt, to have proved to Archbiſhop King, that all thoſe people who have ſuffered themſelves to be conducted by others, &c. did not by an antecedeat act of free will, chuſe this as the beſt way for them. For to ſuppoſe, that after a man having examined a ſhip which he finds to be good, and the pilot whom he finds to be ſkilful, has reſolved very freely to go on board, and intruſt himſelf to the conduct of the pilot; to ſuppoſe that this man, in order to preſerve the freedom of his will, muſt needs, at every motion which the pilot makes on board the ſhip, and at every order he gives out, make a free act of his will, by which he conſents to that motion, and without which he is not free; this is certainly what the Archbiſhop never alledged, and except he had maintained that propoſition, moſt part of Mr Bayle's inſtances fall of themſelves. Mr Bernard concludes with one general remark upon this ſubject, which he obſerves may be applied to many other parts of this controverſy, and that is, that Mr Bayle artfully ſeparates the inconveniencies which Archbiſhop King propoſes, that he may confute them with the greater eaſe, without taking notice that divers reaſons, which taken ſeparately, would not determine one to act after a certain manner, yet might determine him, if they acted jointly. I have a mind, for inſtance, to go to ſuch a town, I have a very preſſing reaſon which hinders me, and I have many others which incline me to undertake the journey; every one of theſe are leſs than that which ſhould determine me not go, but taken all together, they turn the ſcale. You do nothing at all to hinder me from taking the journey, if you only refute each reaſon apart which made me determine to go; you muſt make one argument of them all, and convince me, that all of them together are not ſo ſtrong as that one which ſhould hinder my proceeding to my journey. There is, moreover, continues Mr Bernard, one thing, which ſhews it was neceſſary for Mr Bayle to have read our author's book, is his way of confuting what the Archbiſhop hath ſaid of the torments of the damned, that *they are uſeful perhaps to keep good men to their duty, and make them perſevere in a right conduct.* Mr Bayle pretends, that this cannot be ſaid of the ſaints in paradiſe, who have no occaſion for ſuch a curb; but it may be, that Archbiſhop King will not grant him this, but maintain, that the confirmation of ſaints in goodneſs, is not the confirmation of an enthuſiaſt ſupported by no motives, of which number the Archbiſhop conjectures, that the example of the damned may be one. In the mean time Mr Bayle ſuppoſing it not to be ſo, imagines that the Archbiſhop would inſinuate, that after the reſurrection there will be new inhabitants upon the earth. This is the effect of confuting a book which Mr Bayle never read" (20.) But the diſpute did not end ſo: Mr Bayle afterwards replied to Mr Bernard, and having procured the Archbiſhop's book, made ſeveral new obſervations upon it, which were publiſhed after his death (21); and the Archbiſhop anſwered theſe remarks in the papers he left behind him, as will be ſeen hereafter. Beſides theſe of Mr Bayle, there were remarks in French upon the Archbiſhop's book, written by Mr Leibnitz, who allowing the treatiſe De Origine Mali to be a work full of learning and elegance, obſerves, that the Archbiſhop's firſt four chapters agree with his own principles, but that the fifth, which treats of human liberty and moral evil, is founded upon principles oppoſite to his (22). What theſe were may be ſeen in his *Theodicé*, where his hypotheſis is ſtarted. He ſuppoſes, that when God made the body, he impreſſed on his new created machine a certain ſeries or ſuit of motions; and that when he made the fellow-ſoul a correſpondent ſeries of ideas, whoſe operations throughout the whole direction of the motions are ſo exactly accommodated, that whenever any idea is excited in the mind, a concordant motion is ever ready to ſatisfy the volition. For inſtance, when the mind has the will to raiſe the arm to the head, the body is ſo precontrived as to raiſe at that very moment the part required. This he calls the pre-eſtabliſhed harmony, and propoſed to do wonders with it.

[H] *The*

4to, his *Sermon, preached at St Michael's Church in that City, before the Lord-Mayor*, &c. on Eccles. viii. 11. *There is no man that hath power over the ſpirit to retain the ſpirit, neither* hath he *power in the day of death*; and there *is no diſcharge in* that *war, neither ſhall wickedneſs deliver thoſe that are given to it.* Our author all along kept his thoughts upon reviewing the important point concerning the origin of evil; and, in the further proſecution of that ſubject, he publiſhed, in 1709, his famous diſcourſe, intitled, *Divine Predeſtination and Foreknowledge conſiſtent with the Freedom of Man's Will; A Sermon preached before* Thomas Earl of Wharton, *and* the Right Honourable the Houſe of Lords, on Rom. viii. 29, 30. *For whom he did foreknow, he alſo did predeſtinate* to be *conformed to the image of his ſon, that he might be the firſt-born among many brethren. Moreover, whom he did predeſtinate, them he alſo called: and whom he called, them he alſo juſtified: and whom he juſtified, them he alſo glorified.* In this ſermon our author, in vindicating human liberty, as being not over-ruled or affected at all by the moral attributes of the Deity, ſtarted a doctrine concerning the diſparity of thoſe attributes, with the moral qualities of the ſame name in man [*H*]; which raiſed the jealouſy of ſeveral perſons: and his notion was attacked particularly by Dr John Edwards, in a piece intituled, *The Divine Perfections vindicated; or ſome brief Remarks on a late Diſcourſe, &c.* Lond. 1710, 8vo. And the ſame year alſo, by Anthony Collins, Eſq; in a pamphlet, intituled, *A Vindication of the Divine Attributes; in ſome Remarks on his Grace the Archbiſhop of Dublin's Sermon, intituled,* Divine Predeſtination, &c [*I*]. However, all the objections made to this part of his general ſcheme

(*H*) *The diſparity of the divine attributes to the moral qualities of the ſame name in man.*] In ſo intereſting a point it will be neceſſary to give the author's ſenſe in his own words as follows; 'When the ſcriptures, 'ſays he, ſpeak of God, they aſcribe hands, and eyes, 'and feet to him; not that it is deſigned we ſhould 'believe, that he has any of theſe members according 'to the literal ſignification; but the meaning is, that 'he has a power to execute all thoſe acts, to the ef'fecting of which thoſe parts in us are inſtrumental. 'And when the ſcriptures repreſent God as affected 'with ſuch paſſions as we perceive in ourſelves, viz. as 'angry and pleaſed, as loving and hating, as repent'ing and changing his reſolutions, as full of mercy 'and provoked to revenge; the meaning is, that he 'will as certainly puniſh the wicked, as if he was in'flamed with the paſſion of anger; that he will re'ward the good as infallibly, as we will thoſe for 'whom we have a particular love; that when men 'turn from their wickedneſs, he will as ſurely change 'his diſpenſations towards them, as if he really re(23) Sermon, p. 6. 'pented and changed his mind (23).' *He afterwards proceeds in theſe terms,* 'As the nature and paſſions of 'men are thus by analogy and compariſon aſcribed to 'God, ſo in the ſame manner we find the powers and (24) Ibid. p. 7, 8. 'operations of their minds aſcribed to him (24).' And he inſtances in wiſdom, and underſtanding, and mercy, 'which are, ſays he, of ſo different a nature from 'what they are in us, and ſo ſuperior to all that we 'can conceive, that in reality there is no more like'neſs between them than between our hand and God's 'power. And that the terms of foreknowledge and 'predeſtination, nay of underſtanding and will, when 'aſcribed to God, are not to be taken ſtrictly and 'properly; nor are we to think they are in him after 'the ſame manner, or in the ſame ſenſe that we find 'them in ourſelves; but, on the contrary, we are to 'interpret them only by way of analogy and compa(25) Ibid. p. 19. 'riſon (25).' *Again,* 'Wiſdom in us is as different 'from what we call ſo in God, as light is from mo(26) Ibid. p. 21. 'tion (26).' *Again,* 'There is as great a difference 'between theſe foregoing, when attributed to God, 'and as they are in us, as between weighing in a ba(27) Ibid. p. 16. 'lance and thinking, in truth infinitely greater (27).' *He ſays further, that* 'the beſt repreſentations we can (28) Ibid. p. 34. 'make of God are infinitely ſhort of truth (28).' *And laſtly, he concludes, that* 'underſtanding, juſtice, and 'virtue, are not to be underſtood to ſignify the ſame (29) Ibid. p. 35. 'thing when applied to God and to men (29). For, 'continues he, if thoſe attributes are underſtood li'terally, and in the ſame way as we find them in us, 'abſurd and intolerable conſequences would follow (30) Ibid. p. 33. '(30). That the foreknowledge and predetermination 'of God are inconſiſtent with the contingency of 'events and our freedom of will, if his foreknowledge 'and predetermination are of the ſame nature with (31) Ibid. p. 9. 'ours (31). But ſince we have no more proper notion of 'foreknowledge and predetermination in God, than a 'man born blind has of light and colours, we ought 'no more to pretend to determine what is conſiſtent 'or not conſiſtent with them, than a blind man ought 'to determine from what he hears or feels to what 'objects the ſenſe of ſeeing reaches (32).' (32) Ibid. p. 27.

[*I*] *A vindication of the divine Attributes.*] Mr Anthony Collins having repreſented our author's opinion in his own words, offers the following conſiderations againſt it. 1. He obſerves, that according to thoſe notions, it is impoſſible for his Grace to prove the exiſtence of God againſt Atheiſts, ſince our conceptions or ideas that we ſignify by the term God muſt be the ſubject of proof, whenever we bring the term God into a propoſition. But his Grace ſays, *all our beſt conceptions of God are infinitely ſhort of truth, and as different from it, as weighing in a balance is from thinking, or as light from motion*; therefore his Grace cannot prove the being of a God, or, which is all one, the exiſtence of any being that is really conformable to our conceptions of God, unleſs his Grace will ſay, that what is infinitely ſhort of truth, and different from truth, can be proved true. 2. It being evident then, that whoever propoſes to prove the exiſtence of God, muſt have ſuch an idea of him, as is conſiſtent with the real nature of the being whoſe exiſtence is propoſed to be proved; I would aſk his Grace, how he would define the term God, if he undertook to prove God's exiſtence againſt an Atheiſt. It is evident he muſt either contradict his opinion, that all our conceptions of God are falſe, and aſſign ſome conception of God, that he would ſtand by; or elſe acknowledge the impoſſibility of proving God's exiſtence. And I am inclined to believe his Grace would chooſe the firſt, becauſe there are ſeveral paſſages in his diſcourſe which imply a conception of God, that his Grace may perhaps ſtand by, and own to be agreeable to the truth of things; and that, as I take it, is of a *being that is a general cauſe of the wonderful effects in nature, to which we cannot give any particular Attributes or perfections* (tho' in reality, according to his Grace, this can be no better than an analogous conception of God, any more than the conception of him as a holy, good, merciful, and wiſe being) (33); and that his Grace (33) Vindication, p. 17. can have no other notions of God, appears from ſome paſſages in his ſermon page 5. Mr Collins cites theſe paſſages (34), and proceeds thus. Now, if that be the (34) Ibid. p. 12. idea his Grace ſignifies by the word God, I will allow, that the term God may be brought into a propoſition, and the being of God in that ſenſe will become capable of proof. But if that be all that is meant by that term, I ſee not why Atheiſts ſhould not come into the belief of ſuch a deity; for they equally with the Theiſts allow ſome general cauſe of all effects to have eternally exiſted, but, as I take it, differ from them in the Attributes of that general cauſe. As for example, the Theiſt affirms the world was made by a wiſe being, and thinks the wonderful harmony of the univerſe an admirable evidence of the exiſtence of ſuch a being. On the contrary, the Atheiſt affirms, that wiſdom is not neceſſary to ſuch a purpoſe; but that all theſe admirable effects may be produced by cauſes and powers, of which we have no idea. And does not his Grace give up the point to theſe men, in allowing the world does not proceed from a wiſe or intelligent being,

ſcheme were fully conſidered by our author, as will appear preſently; though he did not think proper to enter into a diſpute, or to print any thing more upon the point at this time. Dr Narciſſus Marſh, the Primate, dying in 1714, our Archbiſhop preached his funeral ſermon at St Patrick's-church in Dublin, and printed it there the ſame year in 4to. He was appointed one of the Lords Juſtices of Ireland in 1717, into which he was ſworn July 17 that year; and he held the ſame office twice afterwards, viz. in the years 1721 and 1723. In the interim, he had publiſhed *A Diſcourſe concerning the Conſecration of Churches; ſhewing what is meant by dedicating them, with the Grounds of that Office.* Lond. 1719, 4to. This was his laſt performance in print. He died at his palace at St Sepulchre's in Dublin, May 8, 1729; and his corpſe was interred on the north ſide of the church-yard of Donnybrook. Beſides the books publiſhed by him, he left a great number of manuſcript papers, eſpecially relating to the ſubject of his treatiſe on the Origin of Evil, both in Latin and Engliſh. In theſe he conſidered the ſeveral objections to it; and the pains he had taken therein to vindicate it from the leaſt cavil, are a conſpicuous proof what a value he ſet upon it; in which view, all that he had written would make a much larger volume than the firſt. He begins with an account of the preſent ſtate of the then controverſy about the Origin of Evil, and offers many arguments againſt the ſuppoſition of

being, but only from a being conſidered as a *general cauſe*, of whoſe particular Attributes we have no notion at all? Perhaps his Grace may think there will remain a wide difference between Atheiſm and Theiſm, becauſe he ſuppoſes his eternal being to be immaterial, and the Atheiſt ſuppoſes his eternal being to be the material univerſe. But that difference is, as I conceive, of no conſequence: for if all the moral and all the other natural Attributes are given up as indefenſible, then all the arguments for God's government of the world, for rewarding and puniſhing men in a future ſtate, which are drawn from the conſideration of the Attributes of God, taken in a ſtrict and literal ſenſe, are given up. As for inſtance, do not we argue for a future ſtate from the juſtice of God, and conclude, that he will deal with every man according to his merit? Do we not from the ſame Attribute conclude the neceſſity of an incarnate God ſuffering for the ſins of the world? And do we not conclude from his goodneſs his deſign to ſave makind? And do we not infer from his knowledge that he takes cognizance of our actions; and from his will do we not infer our duty? but if none of theſe Attributes are in God, nor any other that we can conceive, we can never argue from them, nor infer any kind of obligation to duty; for all the motives to duty, unleſs it be that of preſent pleaſure (which is an atheiſtical conſideration) are ſolely drawn from the conſideration of the Attributes of God, taken in a literal ſenſe. How can men know God's will when he has no will? How can men know they ſhall be rewarded or puniſhed in a future ſtate, or what reaſon have they to think there ſhall be a future ſtate, but from the conſideration of God's juſtice, which will certainly make good men amends in another ſtate for their ſufferings in this life, and make wicked men ſufferers for the pleaſure their ſins gave them here? But if we loſe the uſe and benefit of the notion of God, that is, have ſuch a notion as has no influence on our practice, what ſignifies contending with the Atheiſt about ſo poor a ſpeculation as the queſtion of the exiſtence of an eternal immaterial being? For whether he be material or immaterial, if he can have neither underſtanding, nor will, nor juſtice, it is all alike. Beſides, if once the Deity be ſuppoſed to have no underſtanding, &c. I do not ſee how his Grace will be able to prove the exiſtence of one eternal immaterial being, if the Atheiſt ſhould think it worth his while to diſpute that point with his Grace (35). 3. Mr Collins obſerves, that his Grace has given up the cauſe to Mr Bayle, who ſays, that there is no anſwering the Manichean objections againſt ſome of the Attributes of God, without captivating the underſtanding to the obedience of faith, or believing againſt evidence, that is, believing God to be good, tho' it be evident he is not ſo; and believing him to be wiſe, tho' it be evident he is not ſo; and what ſays his Grace? Why he owns God is not good or wiſe, and thereby yields to the force of Mr Bayle's arguments. Only Mr Bayle continues to believe God is good and wiſe againſt the force of all human reaſoning, and his Grace ſuppoſes God is neither wiſe nor good, which two don't much, if at all, differ, but in words. For Mr Bayle's good and wiſe againſt evidence and arguments, is much the ſame with being neither good nor wiſe. 4. Mr Collins further remarks, that, according to his Grace, it is a matter of no great conſequence what notions men have of God. The Archbiſhop thinks, that *one who imagines God to be a mighty King, that ſits in heaven, and has the earth for his footſtool, that has thouſands of miniſters to attend him; that has great love and favour for ſuch as obey his orders, and is in a rage and fury againſt the diſobedient, and believes the things literally, will be ſaved by virtue of that belief.* And he calls thoſe *officious and impertinent that raiſe objections againſt ſuch a notion, and put them into peoples heads* (36). But I deſire his Grace to conſider, whether it is not dangerous to leave men to themſelves with ſuch erroneous and vicious conceptions of God; for if they will but give themſelves the leaſt trouble to reflect on their notion, they muſt find, nothing is ſo eaſy as to ſlide into Atheiſm from the belief of a God, which they take to be ſuch a finite, limited, corporeal, immoral (as fury and rage import) being, as his Grace deſcribes. I hope his Grace is of opinion, that the being of God, which is the foundation of all religion and morality, is capable of the cleareſt proof imaginable, and conſequently that there is no danger of well-meaning mens running into Atheiſm, if they ſhould happen to be convinced that they have erroneous conceptions of God. But ſuppoſe his Grace is of the opinion of *Tully* (37) and *Simonides*, and thinks the being of God a difficult problem, and that it is dangerous to diſturb them in their wrong notions of God, for fear they ſhould have no notion of him at all: I muſt confeſs, I cannot agree with his Grace in thinking it would be reaſonable even on that ſuppoſition, to forbear objecting to a wrong notion. Evidence ought to be the ſole ground of aſſent, and examination is the only way to arrive at evidence. And therefore, rather than I would have examination, arguing, and objecting, laid aſide, I would chuſe to ſay, that no opinions whatever can be dangerous to a man that impartially examines into the truth of things. And this I hope his Grace will aſſent to upon ſecond thoughts, rather than prevent ſo much good preaching, as his Grace muſt needs do, by arguing thoſe men guilty of officiouſneſs and impertinence, that would reclaim men from ſuch an error, as believing God to be like a man, if once the Clergy come to be of his Grace's ſentiment (38). 5. Mr Collins obſerves, that his Grace, by denying God to be a holy, wiſe, juſt being, plainly contradicts all thoſe paſſages of ſcripture where the example of God is recommended to our imitation (39). 6. That his Grace has given up the cauſe to the Unitarians, when he declares the diſtinction of *three perſons in one God* to be but a *reſemblance*, that is, *not truly and really ſuch as we mean by three perſons, but only analogically ſuch, juſt as* time and a line *are made to reſemble one another* (40). 7. That his Grace has failed of his main deſign pretended in his diſcourſe, viz. to manifeſt the divine foreknowledge conſiſtent with freedom of man's will. Mr Collins proceeds to conſider what might be objected to him from his Grace's ſermon, and concludes with calling upon his Grace to employ his thoughts once more upon this point, and give us a farther eclairciſſement on the ſubject of this ſermon and of his book *De Origine Mali*, which, ſays he, I wiſh he may perform to the ſatisfaction of the public, and thereby prevent my deſign of handling theſe queſtions (41).

of an abſolutely evil principle. In the next place he explains and confirms the chief principles upon which his book is built, and then proceeds to rank his adverſaries into their ſeveral claſſes, and conſiders the various arguments which they had urged againſt him. Upon the whole, this manuſcript contains an explication and defence of the principal part of his ſcheme, and affords very good hints for improving it in ſeveral points, eſpecially with regard to the union of the ſoul and body, and their mutual influence; to human liberty; to the ſtate of Adam in Paradiſe, and the conſequences of his fall; upon which laſt ſubject he alſo left a ſermon, which he ordered to be printed after his death; and a tranſlation of his book into Engliſh being publiſhed that year, by Edmund Law, M. A. Fellow of Chriſt's-college in Cambridge, with notes, the Archbiſhop's relations, the Reverend Mr Spence of Donneghmore, and the Reverend Mr King, Prebendary of St Patrick's, and Miniſter of St Bride's, in Dublin, communicated theſe papers to that gentleman; who thereupon printed a ſecond edition of his tranſlation, in the notes to which he inſerted the ſubſtance of thoſe papers [*K*]; and the whole came out with this title,

[*K*] *Notes from the author's manuſcript*] Among other objections, one of the principal is that drawn from the ſuppoſed prevalency of moral evil in the world: the purſuit of this ſubject neceſſarily leads into a very large and wide field of particulars, comprehending all the ways and walks of man, which muſt be thoroughly named, and then accurately weighed in the niceſt balance of criticiſm, in order to a right deciſion and determination of it. Conſequently a more proper ſpecimen of our author's talents, as well as his induſtry upon the ſubject of this book, and beautiful manner of handling it, cannot be given, than that which is inſerted, in anſwer to this objection, from his manuſcript. It has been ſeen in the preceding remark, that the laſt article of his plan lays it down as a principle to be proved in the work, that notwithſtanding all the complaints of the degeneracy and wickedneſs which abounds in the earth, yet ſuch as it is, there is much more both of natural and moral good, than evil to be found in it. In ſupport of this aſſertion, he begins with ſtating the objection, concerning the prevalency of moral evil, and then profeſſes himſelf to be of a quite different opinion than that contained in it, I firmly believe, ſays he, and think I very well comprehend, that there is much more moral good in the world, nay in the earth, than evil. I am ſenſible there may be more bad men than good, becauſe there are none but do amiſs ſometimes, and one ill act is ſufficient to denominate a man bad. But yet there are ten good acts done by thoſe we call bad men for an ill one. Even perſons of the very worſt character may have got it by two or three flagrant enormities, which yet bear no proportion to the whole ſeries of their lives. The author, continues he, does not know the objector, nor with whom he converſes, but he muſt profeſs, that among ſuch as he is acquainted with, he believes there are hundreds that would do him good for one that would do him hurt; and that he has received a thouſand good offices for one ill one. He could never believe the doctrine of Hobbes, that all men are bears, wolves, and tygers to one another, that they are born enemies to all others, and all others to them; that they are naturally falſe and perfidious, or that all the good they do, is out of fear, not virtue. He that deſcribes mankind in this manner, may give us cauſe to ſuſpect that he himſelf is ſuch; but if mankind were taken one by one, perhaps not one could be found in a hundred thouſand, that could truly own the character. Nay, the very authors of this calumny, if their own characters were called in queſtion, would take all poſſible pains to remove the ſuſpicion from themſelves, and declare that they were ſpeaking of the vulgar, of the bulk of mankind, and not of themſelves. Nor in reality do they behave in this manner toward their friends and acquaintance, if they did, few would own them. Obſerve ſome of thoſe that exclaim againſt all mankind, for treachery, diſhoneſty, deceit, and cruelty; and you will find them diligently cultivating friendſhips, and diſcharging the ſeveral offices due to friends, relations, and their country, with labour, pains, loſs of goods, and hazard of life itſelf, even where there is no fear to drive them to it, nor inconvenience attending the neglect of it. This, you will ſay, proceeds from cuſtom and education. Be it ſo; however the world has not then ſo far degenerated from all goodneſs, but that the greater part of mankind exerciſe benevolence; nor is virtue ſo far exiled, as not to be ſupported, and approved, praiſed and practiſed by common conſent and public ſuffrage, and vice is ſtill diſgraceful. Indeed we can ſcarce meet with one, unleſs preſſed by neceſſity, or provoked by injuries, who is ſo barbarous and hard-hearted as not to be moved with compaſſion, and delighted with beneficence to others; who is not inclined to ſhew good will and kindneſs to his friends, neighbours, children, relations, and diligent in the diſcharge of civil duties to all; who does not profeſs ſome regard for virtue, and think himſelf affronted, when he is charged with immorality. If any one takes notice of his own or of another's actions for a day together, perhaps he will find one or two blameable; the reſt all innocent and inoffenſive. Nay, it is doubtful, whether a *Nero* or a *Caligula*, a *Commodus* or a *Caracalla* (though monſters of mankind and prone to every act of wickedneſs and fury) have done more ill than innocent actions thro' their whole lives.

It is to be obſerved in the ſecond place, that one great crime, ſuch as murder, theft, or rapine, is oftener talked of, more univerſally reported, and much longer remembered, than a thouſand good, peaceable, generous deeds, which make no noiſe in the world, nor ever come to public notice, but are ſilently paſſed by, and overlooked: which very thing ſhews, that the former are more rare than the latter: otherwiſe they would not be received with ſo much ſurprize, horror, and aſtoniſhment.

Thirdly, it is obſervable that many things are done very innocently, which perſons, unacquainted with the views and circumſtances of the actors, eſteem criminal. It is certain we cannot judge of the goodneſs or badneſs of an action from bare appearance; but rather from the inward motions and intentions of the mind, and the light in which the thing appeared to the agent. Nero killed a man that was innocent, but who knows, whether he did it out of premeditated malice? Perhaps ſome intruſted with the care of his perſon, or a flattering courtier, whom he is obliged to depend on, informs of this innocent man as plotting a conſpiracy againſt the Emperor's life, and was diſpatched, leaſt he be firſt ſurprized. Perhaps the informer is impoſed upon himſelf, and thinks it real. It is plain ſuch circumſtances very much leſſen the guilt; and it is probable, if the crimes of princes were to be weighed impartially, and the whole proceſs laid open, many things might be offered, which would greatly alleviate them.

Fourthly, many things are done through ignorance of the law, and becauſe thoſe who commit them do not know that they are vicious; nay, they are often eſteemed virtues. Thus St Paul perſecuted the Church, and himſelf owns, that he did it out of ignorance, and therefore obtained mercy. How many things of this kind are done daily by ſuch as profeſs different religions? It is true theſe are ſins, but ſins of ignorance, which eaſily obtain forgiveneſs; and, as they do not proceed from an evil diſpoſition and depraved will, are ſcarce to be reckoned in the number of moral evils. Whoever falls foul on others out of a love of virtue, hatred of vice, or zeal towards God, does wrong; but ignorance and an honeſt heart make very much for his excuſe. This conſideration alone would take a great deal off from the number of wicked perſons. Neither does this excuſe hold only in matters of religion: party prejudices have alſo a ſhare in it, which induce men to extirpate, with fire and ſword, thoſe that they believe to be public enemies and traitors to their country. There is no error more pernicious to mankind, and which has produced more or greater crimes than this;

tle *An Eſſay on the* Origin of Evil, *by* Dr William King, late Lord Archbiſhop of Dublin; *Tranſlated from the Latin, with notes; and a Diſſertation concerning the Principle and Criterion of Virtue, and the Origin of the Paſſions. The ſecond edition. Corrected and enlarged from the author's manuſcripts. To which are added, Two Sermons by the ſame author; the former concerning Divine Preſcience, the latter, on the Fall of Man*, never before publiſhed. Lond. 1732, in two volumes 8vo (*f*). Theſe two pieces are annexed, as eſſential parts of our author's ſcheme; and the editor has taken occaſion to anſwer the only objection of any moment brought againſt the firſt [*L*]. But in the latter, ſome notions are incidentally

(*f*) The third edition was publiſhed in 1739.

this; and yet it ariſes from an honeſt mind. The miſtake lies here, they forget that their country and commonwealth ought to be defended by juſt and lawful means, and not at the expence of humanity.

Fifthly, Prejudice and ſurmiſe make many wicked, that really are not ſo. The moſt innocent converſation between man and woman gives the malicious a handle to ſuſpect and ſlander them. From any one ſingle circumſtance, that uſually attends a criminal action, the ſuſpected perſon is found guilty of the fact itſelf. From one bad action a man's whole life is diſparaged, and judged to be of the ſame tenour. If one member of a ſociety be caught in a fault, all the reſt are preſumed to be as bad. It is ſcarce credible how many are looked upon as ſcandalouſly wicked through ſuch ſuſpicions, who are very far from it. Conſeſſors and Judges, in criminal caſes, know very well how ſmall a part of publick fame is true, how little it is ever to be truſted.

Sixthly, we muſt diſtinguiſh, and the law itſelf does, between ſuch things as proceed from malice, and premeditated wickedneſs, and thoſe that ariſe from violence of paſſion, and diſorder of mind. The guilt is very much extenuated, when the perſon offending is under provocation, and, as it were, tranſported beyond himſelf by a ſudden fit of paſſion. Theſe things are all known to our moſt equitable judge, who will paſs a merciful, and not a rigorous ſentence upon us; and for theſe reaſons we believe he forbad us to judge any thing before the time. We only know the outſide of things: and it is poſſible, that ſuch as ſeem to us the greateſt crimes, would upon ſeeing the whole procedure, and making proper allowances, appear to be the leaſt. Many virtues, as well as vices, lie in the mind inviſible to human eyes, it is ſpeaking at random therefore to pronounce upon the number of one or other; and he that would from thence infer the neceſſity of an evil principle ought to be eſteemed a raſh judge, and an uſurper of God's tribunal.

Laſtly, It may be obſerved, that the continuance and increaſe of mankind is a ſure proof that there is more good than evil in the world; for one or two acts may have a pernicious influence on many perſons: nay, all immoral actions tend to the deſtruction of mankind, at leaſt to the common detriment and diminution of them. Whereas a great many, even numberleſs, good actions muſt neceſſarily concur to the preſervation of each individual. If therefore bad actions exceeded the good, there would be an end of human kind. We have clear evidence of this in thoſe countries, where vices multiply; the number of men continually decreaſe and the place grows deſolate; but upon the return of virtue and goodneſs it is again ſtocked with inhabitants. This is a ſign that mankind could not ſubſiſt, if ever vice were prevalent, ſince many good acts are neceſſariy to repair the loſs, which attends one bad one. One ſingle action may take away the life of a man, or of ſeveral men, but how many acts of benevolence and humanity muſt neceſſarily contribute to the bringing up, educating, and preſerving every one. From what has been ſaid, I hope it appears that there is more good than evil among men, and that a good God might make the world, notwithſtanding the argument drawn from the contrary ſuppoſition. His Grace concludes this beautiful chain of reaſoning with the following excellent remark. But almoſt all of this is unneceſſary, ſince the whole univerſe may have ten thouſand times more good than evil, though this earth of ours had no one good thing in it. This world is too ſmall to bear any proportion to the whole ſyſtem; and therefore we can form but a very unequal judgment of it from hence. It may be the hoſpital or priſon of the world, and can any one judge of the healthfulneſs of a climate from viewing an hoſpital, where all are ſick? Or of the wiſdom of a government from a place of confinement, where there are only madmen? Or of the virtue of a people from a priſon, where there are none but malefactors? Not that I believe the earth is really ſuch a place; but I ſay it may be ſuppoſed ſuch, and any ſuppoſition, which ſhews how a thing may be, deſtroys the Manichæan argument drawn from the impoſſibility of accounting for it. In the interim, I look upon this earth as an habitation abounding with delights, in which a man may live with comfort, joy, and happineſs. I own, with the greateſt gratitude to God, that I myſelf have lived ſuch a life, and am perſuaded, that my friends, acquaintance, and ſervants, have all the ſame; and I believe that there is no evil in life, but what is very tolerable, eſpecially to thoſe who have hopes of a future immortality (42).

(42) Law's Tranſlation, Vol. II. p. 473, ad edit.

[*L*] *Anſwered the only objection of any moment brought againſt the firſt*] The objection here meant is to that paſſage, where the Archbiſhop ſays, that underſtanding, juſtice, and virtue, are not to be underſtood to ſignify the ſame thing, when applied to God and to man. A doctrine which, as expreſſed, ſeems in reality to be utterly ſubverſive of all religion and morality, as is excellently argued by another archbiſhop, I mean Dr Tillotſon, as follows: *It is fooliſh*, ſays that inimitable preacher, *for any man to pretend that he cannot know what juſtice, and goodneſs, and truth, in God are; for if we do not know this, 'tis all one to us whether God be good or not; nor could we imitate his goodneſs, for he that imitates, endeavours to be like ſomething that he knows, and muſt of neceſſity have ſome idea of that to which he aims to be like; ſo that if we had no certain and ſettled notions of the juſtice and goodneſs of God, he would be altogether an unintelligible Being, and religion, which conſiſts in the imitation of him, would be utterly impoſſible* (43). 'This conſequence, as Mr Law obſerves, 'will hold equally good againſt the doctrine delivered 'by our author in the ſermon annexed, if he did not 'ſuppoſe, that there are ſome qualities in man in ſome 'reſpects really correſpondent to thoſe in God, and ſo 'very like them, that nothing could be more ſo, except that which exiſts in the very ſame manner and 'degree too, i. e. in a perfect one. If this be his 'meaning, as is not improbable from his anſwer to the 'like objection in §. 22. where he declares, that the divine attributes have much more reality and perfection 'in them, than the things by which we repreſent 'them. If, I ſay, he be taken in this ſenſe as I 'would willingly underſtand him, he is perfectly clear 'from the exceptions made above.' Mr Law then proceeds to take notice of another antagoniſt of the Archbiſhop upon ths ſubject, as follows: 'I wiſh, contin'ues he, the author of the Extent and Procedure of 'the Underſtanding, could be ſhewn to be ſo [clear of 'exception] who is generally ſuppoſed to have pur'ſued his notion of analogy, farther than moſt perſons 'will be able to follow him. As he has charged the 'Archbiſhop with a miſtaken way of treating the 'ſubject (44). I hope he will be ready to excuſe any 'for obſerving what they they conceive to be a mi'ſtake in his own method, eſpecially if they endeavour 'to ſhew directly that the foundation of analogy, as he 'has placed it, is falſe and groundleſs, which foun'dation is the general nature or diſtinguiſhing kind of 'theſe qualities. Now the nature of the forementioned qualities muſt either be wholly the ſame in 'God and us, or wholly different; if the former be 'maintained, then the analogical ſenſe is turned into 'an identical one, if the latter, then can no manner 'of reſemblance or analogy be drawn between them, 'ſince one nature can't in the leaſt help to explain or 'repreſent another quite different from it, I mean in 'thoſe very points wherein they differ, for that is to 'be different and not different, and the analogical 'ſenſe is turned into a diſparate or quite oppoſite one, 'i. e. into no analogy at all; or, laſtly, it muſt be 'partly the ſame and partly different, or like and unlike in different reſpects, which is the thing we con-

(43) Tillotſon's Sermons, Vol. II. No. LXXVI. p. 672 and 678. folio edit.

(44) Viz. In his introduction to the Extent and Procedure of the Underſtanding, p. 17.

'tend

incidentally dropped, which ſeem to be merely conjectural [*M*]. To conclude, the Archbiſhop's ſyſtem, as explained and improved by this editor, in clearing up ſome of the chief difficulties that occur in our conception of the Deity and his Providence, was afterwards adopted by Mr Pope, and adorned with all the graces of poetry in his *Eſſay on Man*.

' tend for, viz. like in perfection or in being perfec-
' tions of a certain kind, and unlike in defect or imper-
' fection that is mixed with the contrary qualities, or
' the ſame in their nature or eſſence, but different in
' degree and the manner of exiſtence. Or take it thus,
' the qualities as ſuch conſidered in the abſtract are
' the ſame, as exiſting in a particular ſubject different;
' in an infinite or rather perfect ſubject they exiſt per-
' fectly, or in the higheſt degree, they are abſolute
' without any mixture or defect, in a finite or imper-
' fect one they are limited or defective, they exiſt in
' an imperfect manner or inferior degree. Conſe-
' quently we conceive a likeneſs in both as perfections
' or qualities of a certain nature or kind, unlike only
' as mixed with imperfections or as confined to a cer-
' tain degree. If therefore the author founds his ana-
' logy in the very nature of the thing, he ſeems to in-
' cur the forementioned abſurdity of ſuppoſing a nature
' contradictory to itſelf, or ſomething from which it is
' at the ſame time totally different. If with us he will
' pleaſe to diſtinguiſh between the nature of the thing in
' general, and the particular modus of it's exiſtence,
' he muſt with us alſo remove the analogy from the
' former foundation, and fix it upon the latter (45)'

(45) Law's Tranſlation, in remarks to note 10, p. 91, 92, 93.

[*M*] *He advances ſome notions merely conjectural.*] His text is theſe words in Gen. ii. 16, 17. *And the Lord God commanded the man ſaying, of every tree in the garden thou mayſt freely eat: But of the tree of the knowledge of good and evil thou ſhalt not eat of it, for in the day that thou eateſt thereof thou ſhalt ſurely die:* He treats of it under the four following heads, (1.) He conſiders the ſtate and circumſtances of man when this command was given. (2.) The command itſelf. (3.) How man was ſeduced to break it. (4.) The conſequence of that diſobedience. Upon the firſt head he maintains that Adam before the Fall was in a ſtate of great ignorance, his knowledge extending no farther than what he ſaw of the creatures with him in the garden, and that for any thing more he was under the immediate direction and information of God: whence he ſhews, under the ſecond head, the true ſenſe of the command not to be an arbitrary trial of ſubmiſſion to the will of God; but rather a means to facilitate and ſecure his obedience to his own advantage. Your obedience, ſays God, in this will be an infallible means to ſecure you from chuſing wrong in any other thing. Whilſt you direct your free-will wholly right in this, I will take care, that you ſhall not abuſe it in any other. In treating the third head, he follows the common opinion, taking the ſerpent in the literal ſenſe, but aſſerts further that it was even the very ſame ſpecies of that creature which we ſee now, between whom and man there continues an enmity, ſays he, to this day; but though it was a true and literal ſerpent, yet there was more in it, for the devil ſpoke through it; nay, he thinks it no incongruity to ſuppoſe, that the devil poſſeſſed the ſerpent ſo as to be as it were incarnate in it; we may have leave, ſays he, to think that the power of God could unite them as cloſely as our ſouls and bodies are joined, and cauſe the puniſhment inflicted on the literal ſerpent to affect Satan in it, who therefore was obliged to crawl upon his belly, and lick the duſt of the earth, at leaſt as long as that individual ſerpent was in being. This he is the rather induced to believe, inaſmuch as the literal ſenſe ſo underſtood does not exclude the myſtical, the curſing of the ſerpent being a ſymbol to us, and a viſible pledge of the malediction with which the Devil is ſtruck by God, and whereby he is become the moſt abominable and miſerable of creatures. In explaining the fourth head he maintains, that a main conſequence of the Fall was an increaſe of knowledge in reſpect both of good and evil by the uſe of their natural faculties. From the whole he obſerves, that God did not think it fit our firſt parents ſhould be abſolutely happy in the ſtate of innocence, without revealed religion and the uſe of ſacraments. Their diſcovery of good and evil, in that ſtate, being to proceed from the continual communications of the divine wiſdom, and the trees of knowledge and life were truly ſacraments as being outward and viſible ſigns and means of grace, which is the true notion of a ſacrament. Whence he infers, that it is a great folly to deſpiſe and to think of being ſaved without revealed religion. P

(*c*) Id. ibid.

KING [WILLIAM], an ingenious and humorous Poet, was the ſon of Ezekiel King, Gent. of London; in which city he had his birth about the year 1663. He was bred with the ſtricteſt care from his infancy (*a*); and, as ſoon as he became fit for it, was put under the celebrated Dr Buſby at Weſtminſter ſchool, where, being choſen King's ſcholar, his natural good talents received all thoſe improvements from cultivation, that might be expected from ſo admirable a maſter. After which he was elected to Chriſt-church-college in Oxford, and admitted a ſtudent there in Michaelmas-term 1681, at the age of eighteen years (*b*). He was particularly pleaſed with this ſituation in the univerſity, and made uſe of the advantages it gave him; he had a ſtrong propenſity to letters, and of thoſe valuable treaſures he daily increaſed his ſtock; but being well deſcended, and becoming early poſſeſſed of an eaſy fortune * [*A*], he indulged his genius and inclination in the choice method of his ſtudies, ranging freely and at large through the pleaſant fields of polite literature; and being raviſhed with the ſweet purſuit, he proſecuted it with incredible diligence and aſſiduity [*B*]. He took his firſt degree in Arts, December 8, 1685 (*c*), and thence

[*A*] *He was well deſcended, and became early poſſeſſed of an eaſy fortune.*] The author of ſome account of his life obſerves, that he was allied to the noble families of Clarendon and Rocheſter (1); and ſeveral paſſages of his life mentioned in the courſe of this memoir confirm it. The Doctor himſelf having occaſion to ſpeak of ſome fine pictures of *Paulo Veroneſe* in the poſſeſſion afterwards of Lord Harcourt, calls him his couſin (2); and among his hints for making a collection of books, manuſcripts, &c. which might tend to the honour of the Britiſh name, he propoſes an enquiry to be made, what lives of merchants and citizens of eminency have been wrote. 'Tis a pity, continues he, if none or few are found. Whether there is not a life wrote of my great-grandfather *La Motte*. He was a merchant of note (3). With regard to his fortune we are informed, in the account of his life (4), that he enjoyed a pretty paternal eſtate in Middleſex and elſewhere; and our author himſelf occaſionally mentions his eſtates in Northamptonſhire and Leiceſterſhire. The

paſſage is in his animadverſions on Lord Moleſworth's account of Denmark, which becauſe it will furniſh no unfit ſpecimen of the taſte and manner of that piece, we ſhall preſent our readers with it as follows. In anſwer to ſome of his Lordſhip's remarks on the poor diet in Denmark, he writes thus: 'Their peaſants 'live as plentifully as in other countries, they have 'good fleſh and ſalt fiſh, white meats, roots, &c. but 'what ſignifies all this (according to our author, 'p 11) *ſince neceſſary freſh fiſh is wanting.* I could 'heartily condole their condition, if my tenants in 'Northampton and Leiceſterſhire would not take ex-'ception; for if they found me once ſo indulgent to 'the peaſants of another nation, they would certainly 'expect a double barrel of Coſcheſter oyſters by the 'next carrier; and without a cod's head, ſmelts, or 'turbot, I might e'en go to plow myſelf for Hodge 'and Sawney (5).'

(5) Miſcellanies in proſe and verſe, by Will. King, p. 14.

[*B*] *He purſued his ſtudies with incredible diligence.*] It appeared from his looſe papers, termed by him, *Adverſaria*,

them proceeded regularly to that of Maſter July 6, in the year of the Revolution (*d*), and the ſame year commenced author. He had the happineſs of being endued with a religious turn of mind [*C*]; which being joined to the warmeſt regard for the honour of his country [*D*], prompted him to reſcue the character and name of Wicliffe, our firſt Reformer, from (*d*) Ibid. p. 231.

oblivion, that before he was eight years ſtanding in the univerſity, he had read over and made reflections on twelve two thouſand and odd hundred books and manuſcripts (6). The following extracts from theſe Adverſaria will explain and illuſtrate the Doctor's taſte and manner in directing the courſe of his ſtudies.—— *Diogenes Laërtius*, book 1. *Thales* being aſked how a man might moſt eaſily brook misfortunes, anſwered, if he ſaw his enemies in a worſe condition. It is not agreed concerning the wiſe men, or whether indeed they were ſeven. Solon ordained, that the guardians of orphans ſhould not cohabit with their mothers, and that no perſon ſhould be a guardian to thoſe whoſe eſtate deſcended upon them at the orphan's deceaſe: that no ſeal graver ſhould keep the ſeal of a ring that was ſold: that if any man put out the eye of him who had but one, he ſhould loſe both his own: that where a man never planted, it ſhould be death to take away: that it ſhould be death for a man to be taken in drink. Solon's letters at the end of his life in Laërtius, give us a truer idea of the man than all he has written before, and are indeed very fine. Solon's to Cræſus are very genteel; and Pittacus's, on the other ſide, as rude and philoſophical: however, both ſhew Cræſus to have been a very great man.——Anacharſis has an epiſtle to Cræſus to thank him for his invitation; and Periander one to all the wiſe men to invite them to Corinth to him, after his return from Lydia. Epimenides has an epiſtle to Solon to invite him to Crete under the tyranny of Piſiſtratus.—Epimenides often pretended that he roſe from death to life——Socrates is ſaid to have aſſiſted Euripides in his tragedies. He was a great champion of democracy, and extols pleaſure as the beſt thing a man could enjoy, as Xenophon witneſſes in his *Sympoſium*. Xenophon was modeſt to exceſs, and the moſt lovely perſon living.——Bion uſed to ſay, it was more eaſy to determine differences between enemies than friends, for that of two friends, one would become an enemy; but of two enemies, one would become a friend.——Ariſtippus was a man of a ſoft temper, and could comply with all perſons, places, and ſeaſons. He could enjoy, and ſcorn pleaſure, if too expenſive to his way of living. He ſaid pleaſure was no crime, but it was a crime for a man to be a ſlave to his pleaſure. We can have no true character of him from his life in Laërtius; for it is certain, he was an exact courtier, and the reſt of the philoſophers, the Grecians, were generally averſe to him, becauſe he could endure to live in the court of Dionyſius, whereas they were all for a democracy, and could not endure to ſee a Greek complaiſant to a monarch, being a thing, as they thought, below the dignity of his birth.——Pleaſure was the thing he ſought after: and the Hegeſiacks, his followers, tell us, there was nothing either pleaſant or unpleaſant by nature; but that thro' ſcarcity, novelty, and ſatiety, ſome things were delightful, others diſtaſteful. That wealth and poverty had no relation to pleaſure; for that the pleaſures of the rich and the pleaſures of the poor were ſtill the ſame. They were of opinion, that the tranſgreſſions of men were to be pardoned, for that no man committed a voluntary ſin, but by the impulſe of ſome natural paſſion or other. That a man ought to propoſe to himſelf as his chiefeſt end, to live a life freeſt from trouble and pain, which happens to them who are not over eager in the chace and purſuit of pleaſure.——See in the life of *Ariſtippus* the notion of the Cyreniacks about friendſhip, and how they ſhew the pleaſure that is in it. Theodorus the Atheiſt denied friendſhip, as neither appearing really in fools nor wiſe men; for in the firſt, as ſoon as the benefit ceaſes, the friendſhip dies; and wiſe men truſt ſo much to their own abilities, that they ſtand in need of none.——Laërtius has made verſes on moſt of the philoſophers, which are very dull. The Phrygians profuſe in their tempers.——Menedemus, when a ſtupid fellow talked impertinently to him, ſaid, haſt thou any lands? The fellow anſwered, Yes, ſeveral farms. Go then, ſaid he, and look after them, leſt thou loſe thy wealth, and come to be a poor fool.—— Timon, an inveterate enemy to the academic philoſophers, has written a ſatire upon them all There is a very fine ode of Ariſtotle's in Diogenes Laërtius concerning virtue and friendſhip, which want to be tranſlated from the Greek. Laërtius is a very dull fellow. ——Diogenes's ſayings are moſt of them *puns*. He ſaid oppoſition was the ſtudy of his whole life.—— Hypparchia, a woman of a good birth and fortune, fell in love with Crates the naſty Cynic, and would needs marry him, and live after his faſhion. Crates made her brother become his auditor by letting a f—: theſe Cynics were naſty brutes.——The logick of the Stoicks ſeems to me, as far I can make any thing of Laërtius, to be nothing but words. They held ſelf-preſervation to be the firſt of all deſires infuſed into all creatures. Erillus maintained, there were things indifferent between virtue and vice (7).' From theſe obſervations on Laërtius the reader will be able to form a judgment of others. We need not take notice, that this method of making remarks upon the authors he read, is very far from being peculiar to the Doctor, it is the general way of every ſtudent, but nothing diſcovers the taſte and temper of his genius more than the turn and nature of his *Adverſaria* 'Tis theſe that ſhew how freely the Doctor ranged in the fields of polite learning, as well as what ſort of flowers pleaſed his fancy moſt None of the humorous kind ſeem to have eſcaped his notice, eſpecially if dreſſed up in verſe, of which the following may ſerve for a ſpecimen. (7) Ibid. p. 18 to p. 24.

Mirth makes them not mad,
Nor ſobriety ſad,
For of that they are ſeldom in danger;
At Paris, at Rome,
At the Hague they're at home,
The good fellow's no where a ſtranger.

[*C*] *He had the happineſs of being endued with a religious turn of mind.*] This was ſo much his diſpoſition, that he would never enter upon any buſineſs of the day 'till he had performed his devotions, and read ſeveral portions of ſcripture out of the Pſalms, the Prophets, and the New Teſtament; on which he would often make his remarks, taking a freſh piece of paper every morning in his hand, on which he always begun with Σὺν Θεῷ, *by God's permiſſion*: and this paper he kept at hand all day, to write down whatever occurred to his mind or pleaſed his fancy; theſe he called hints, which he could refer to at pleaſure. Accordingly, we find ſeveral of theſe upon the ſubject of religion, and the Church as well as virtue and morality. Such, for inſtance, are theſe. 'The ſecond of Eſdras ſeems to me full of tautologies and childiſh inſtances of God's power and explanation of his ſecret deſigns. Chryſoſtome ſpeaks expreſsly of Jeſus Chriſt.——See *Bartolus Agricola de Advocato*, having taught the Advocate to be a good man, he proceeds to make him a good Chriſtian (8).——There is ſuch an air of piety runs thro' all Hackluit's diſcoveries, that makes it ſeem as if that alone made them ſucceſsful. What ſignified all the Buccaneers proſperity without virtue? To what authority did all their wars and conqueſts bring them, but to make one another rich and vicious (9).' (8) Remains, &c. p. 26, 27. (9) Ibid. p. 67.

[*D*] *The warmeſt regard for the honour of his country.*] In this ſpirit, at the head of a very large number of his Adverſaria, we find——'Criticiſms and remarks in poetry, &c. as might tend to the honour of the Britiſh name and literature.' To encourage a collection of this kind, our author recommends a prodigious number of obſervations on books, manuſcripts, and what elſe he had met with to promote the ſaid work. Theſe obſervations fill up above twenty pages in 8vo (10,) and are moſt of them exceeding curious; the great number of the valuable ſmaller poetical pieces referred to and mentioned in them, are a conſpicuous proof of our author's judgment as well as diligence. Among other rare pieces, he mentions the *Poleno Middiana* a *Macaronick* poem, by Drummond of Hawthornden (11), which, as he intimates, was publiſhed by Dr Gibſon, late Biſhop of London. He takes notice alſo of the Biſhop of Lichfield's technical verſes for Chronology, as a ſtupendious work, comprehending (10) Ibid. from p. 46 to 66. (11) Ibid. p. 47. See Ben Jonſon's article, p. 2783. (*b*).

from the calumnies of Monſ. Varillas; the thing had been publickly requeſted alſo, as a proper undertaking for ſuch as were at leiſure and would take the trouble (e). Mr King therefore deeming himſelf to be thus called forth to the charge, readily entered the liſts; and, with a proper mixture of wit and learning, handſomely expoſed the blunders of that French author, in a piece intitled, *Reflections upon Mr* Varillas *his Hiſtory of Herſie, Book I. Tom. I. as far as relates to Engliſh Matters, more eſpecially thoſe of Wicliffe*. Lond. 1688 [*E*]. About this time, having fixed on the Civil-Law for his profeſſion, he entered upon that line in the univerſity (*f*), and at the regular time took his Doctor's degree therein; which qualifying him to plead in the courts of the Civil and Eccleſiaſtical Law, he was admitted an Advocate: and reſiding at Doctors-Commons, ſoon grew into conſiderable repute, and had great practice as a Civilian (*g*). In the interim (*h*), Lord Moleſworth publiſhing his account of Denmark in 1692, our author took up his pen once more in his country's cauſe, the honour of which was thought to be blemiſhed by that account (*i*). Animated with this ſpirit, he drew up a cenſure of it, which he printed under the title of *Animadverſions upon the pretended Account of Denmark* [*F*]. This was publiſhed in 1694, and was ſo much

that learning thro' many ages ſo ſhort, that nothing can be a greater inſtance, *memoriam in artem poſſe redire* (12). In the ſame view, having afterwards mentioned the technical verſes uſually found in the little manuals of logick, he ſays it were to be wiſhed, that the memorial verſes in all ſciences were collected together and printed (13), and his judgment in this particular has been confirmed, and the deſign here hinted actually put into execution by the learned Dr Richard Grey, in his *Memoria Technica*, or *Art of Memory*. Our poet is particularly inquiſitive after any pieces of the author of Hudibras. If that author, ſays he, has left any Latin behind him, it would be the beſt in that kind: his thoughts are ſo juſt, his images ſo lively, ſuch a deep inſight into the nature of mankind, and the humour of thoſe times, that no true hiſtory could be wrote without ſtudying that author. 'Tis pity, continues he, that the fineſt of our Engliſh poets, eſpecially the divine Shakeſpeare, had not communicated their beauties to the world ſo as to be underſtood in Latin, whereby foreigners have ſuſtained ſo great a loſs to this day; when all of them would do inexcuſable, but the moſt inimitable Shakeſpeare. I am ſo far from being envious and deſirous to keep thoſe treaſures to ourſelves, that I could wiſh all our moſt excellent poets tranſlated into Latin that are not ſo already. Accordingly this hint of the Doctor's was not loſt, among other things we have ſince ſeen not only a Latin tranſlation of Prior's Solomon, but even of Milton's Paradiſe Loſt excellently performed in verſe *.

(12) Ibid. p. 53.

(13) P. 59.

* By Mr Dobſon, Fellow of New-college, Oxford.

[*E*] *Reflections upon Varillas, &c.*] Mr Varillas had intitled his book, *Hiſtoire des Revolutions arrivées en Europe en Matiere de Religion. Paris*, 6 vol. 4to. 1686. and again in 1687, 12mo (14). It begins with the year 1374, and ends in 1650. Dr King made uſe of the Amſterdam edition, not being able to procure that of Paris. At the head of the firſt volume Varillas had put the following advertiſement. 'In compoſing this work, I have taken my materials indifferently from Catholick and Proteſtant writers; citing theſe laſt in their own words as often as I found them ingenuous enough not to ſuppreſs or diſguiſe the moſt important truths: and it is thro' their own fault that I have been obliged to have recourſe to the Catholicks.' In like manner Mr King prefixed an advertiſement, wherein he declares, 'that he was willing to contribute his ſhare in expoſing Mr Varillas's miſtakes concerning Wicliffe, having formerly laid together ſome obſervations conducing to ſuch a deſign. Mr Larroque had, 'tis true, gone before him in the attempt, but that ingenious gentleman was not well adviſed to meddle in a ſtrange country, 'till time had inſtructed him more fully in the conſtitutions and language of it. That he[Mr King] has given Mr Varillas all the law imaginable, having made no advantage of miſtakes, which with any reaſon could be charged upon the Printer, and has contradicted nothing without expreſs proof on his ſide, and in things highly improbable, which ſeem to have no foundation in hiſtory, unleſs he can confront them with poſitive and authentick teſtimonies, he lets the author alone, and ſuffers the boldneſs of the aſſertion to be its own ſecurity. In the reflections he obſerves, that the enemies of the Reformation, as they ſeem reſolved never to leave off writing controverſies, and being confuted by our divines; ſo they are not wanting upon occaſion to turn their ſtile and furniſh out matter of triumph to our hiſtorians. Sanders and Cauſſin heretofore, and of late Mr Maimbourg and Monſieur Varillas have thought themſelves qualified for this employment. Among the reſt, continues he, Mr Varillas has uſed his pen with ſuch a partial extravagance, and with ſo little regard to modeſty and truth, that he has not only provoked the learned of the reformed profeſſion to chaſtiſe his impudence in their public writings, but has alſo drawn upon him the ſcorn and indignation of ſeveral gentlemen of his own communion; who in a ſenſe of honour and common ingenuity, have taken ſome pains to lay open the ſmooth impoſture. Mr Hoſier, Genealogiſt to the King of France, in his epiſtle declares himſelf to have diſcovered in him above four thouſand errors *. Pere Bohours, in a diſcourſe of his makes it his buſineſs to expoſe him Even his old friend Mr Dryden ſeems to have forſaken him, and gone over to his adverſary Bohours, from whoſe original he is now tranſlating the life of St Xavier. To be free, there is almoſt as many faults in every ſingle page of Mr Varillas as in a Printer's table of *Errata*: and if the Archbiſhop of Paris would do his duty, he would find himſelf bound to put a holy cenſure upon his penſioner; and as he was lately very forward to compel thoſe of the religion to a recantation of their faith, ſo he ought here to oblige Mr Varillas to an abjuration of his hiſtory.' We muſt not omit in juſtice, however, to Varillas to obſerve, that as to the matter of this penſion he abſolutely denied it. 'Tis true, Le Long tells us, that he was offered ſuch by ſeveral French noblemen as well as foreigners, which he always refuſed, and particularly the States of Holland offered him one in 1669, to engage him to write their hiſtory, but he alſo refuſed this by the advice of Mr *Pompone*. He accepted that only of the clergy of France which Mr de Harlai, Archbiſhop of Paris, had procured for him (15). But Varillas contradicts this, and in his anſwer to Biſhop Burnet ſays, that he never accepted the penſion which Mr Harlai had obtained for him from the clergy of France in 1670, nor yet that which he procured of the King for him, charged upon the abbey of *La Victoire* in 1672; and that all that he received by the Archbiſhop's means, was a preſent from the aſſembly of the clergy in 1670, and a gratuity from the King of two thouſand livres in 1685 (16). However that be, our author having obſerved that theſe reflections on Varillas's account of Wicliffe, contain ſome memoirs of that great man, who was, as it were, the morning ſtar of the Reformation, proceeds thus: it were to be wiſhed, ſays he, that from the many volumes of his works ſtill remaining, a hiſtory of religion of that time were compoſed, which would give great light into the affairs of England.

(14) It was alſo printed in both ſizes at Paris, 1690.

* This extract of Mr Hoſier's letter is cited in the preface of Mr Larroque's book, which is intitled. *Nouvelles Accuſations contre M. Varillas, ou Remarques Critiques ſur une partie de ſon premier livre de l'hiſtoire de l'Hereſie*. Amſtelod. 1687. p. 162.

[*F*] *Animadverſions on the pretended account of Denmark.*] Our author acquaints us, that theſe animadverſions were wrote at the requeſt of the Reverend Mr Brink, miniſter of the Daniſh church in London, a perſon whoſe merit, travels, and knowledge of the world had deſervedly gained him the favour of the then preſent King of Denmark, upon whom he was an attendant at Venice. That from him, aſſiſted by his Excellency Mr Scheel, who reſided here as Envoy Extraordinary, he † had the memoirs which compoſed thoſe papers, which had the honour not to be unacceptable to his Royal Highneſs Prince George; and when ſent to Denmark, were, by the late King's order, turned into French, and read to him as faſt as they could be tranſlated. That he had ſeen two editions of them, one in Holland and another in Germany. That he ſhould be ungrateful if he did not acknowledge the great honour which the univerſity of *Copenhagen* did him

† General preface to his Miſcellanies.

much approved by Prince George, consort to the Princeſs [afterwards Queen] Anne, that the doctor was appointed Secretary to her Royal Highneſs the ſame year (*k*). In 1697, attacked by Dr Bentley, he took a ſhare with his fellow-collegians at Chriſt-church, in the diſpute againſt that learned doctor, about the genuineneſs of Phalaris's Greek epiſtles [*G*]. His zeal for the honour of his college glows with a ſingular warmth in this controverſy. And the following year came out his humorous piece, intituled, *A Journey to London in the year 1698, after the ingenious Method of that made by Dr* Martin L.—— [Liſter] *the ſame year*; which he deſigned as a vindication of his country, in the view of ſhewing Britain as much preferable to France, as wealth, plenty, and liberty, are beyond tortoiſes hearts, champignons, and Monſieurs; or the raiſing of two millions and two hundred thouſand pounds in a few hours, is preferable to any coins of Zenobia, Odenatus, and Vabalathus (*l*). This was a ſpecimen of that particular humour in which he excelled, and the charms of which proved irreſiſtible. Whence giving way to that *fuga negotii*, ſo incident to the poetical race, he paſſed his days in the purſuit of the ſame raviſhing images, which being aptly moulded, came abroad in manuſcript in the form of pleaſant tales and other pieces in verſe, at various times, as they happened to be finiſhed [*H*]. Thus captivated

(*k*) Ath. Oxon. Vol. II. col. 914.

(*l*) General Preface to his Miſcellanies.

him in a letter under the ſeal of that learned and flouriſhing body. That he took it as one of his greateſt happineſſes, that by the means of his acquaintance with Mr Brink, he had accompanied him to his Grace the Lord Archbiſhop of Canterbury and the Lord Biſhop of London, with letters from the Biſhop of *Copenhagen*, teſtifying the reſpect he had for their Lordſhips, and his juſt regard and veneration for the Church of England.

'As to the matters of fact laid down in theſe papers, 'ſays he, I am no farther accountable, but believe 'none of them can be contradicted (17)' The book has a great many curious remarks upon the Daniſh conſtitution both in church and ſtate, one of which we ſhall mention as follows. 'Tis a general miſtake, 'he obſerves, in England, to call the notion of the 'Lutheran Proteſtants concerning the ſacrament *Conſubſtantiation* (18), for no ſuch word is uſed amongſt 'them. Their notion amounts to this, that they believe ſtedfaſtly a real and true preſence of the body 'and blood of Chriſt in the ſacrament in a manner ineffable, which our Saviour himſelf is beſt able both 'to know and do; whereas *Conſubſtantiation* would imply ſomething more natural and *material* (19).' See more of this in the article of Lord Moleſworth.

(17) Preface to the Animadverſions, &c.

(18) See Lord Moleſworth's Account, p. 252.

(19) Animadverſions, &c. p. 277.

[*G*] *He engaged in the diſpute about Phalaris's epiſtles.*] We have two letters of our author, which ſhew how he came to enter into this diſpute (20); they are addreſſed to the honourable Charles Boyle, Eſq; who had applied to him for an account of what paſſed between Mr Bennet the Bookſeller and Dr Bentley, concerning the MS. of Phalaris's epiſtles; in anſwer to which, he ſays, that among other things the Doctor declared, *that if the MS was collated, it would be worth nothing for the future*; and that his whole diſcourſe was managed with much inſolence. This letter is dated Doctors-Commons, Octob. 13, 1697. and was written in Dr Bentley's *Diſſertation on the epiſtles of Phalaris and the fables of Æſop* (21), then juſt publiſhed. In which piece, our author finding himſelf treated with ſome contempt, addreſſed another letter to Mr Boyle in the following terms. '*Give me leave, Sir, to tell 'you a ſecret, that I have ſpent a whole day upon Dr 'Bentley's late volume of ſcandal and criticiſm; for 'every one mayn't judge it for his credit to be ſo employed. He thinks meanly, I find, of my reading; as 'meanly as I think of his ſenſe, his modeſty, or his manners. And yet for all that I dare ſay, I have read 'more than any man in England, beſides him and me; 'for I have read his book all over.*

(20) See an account of this controverſy in Dr Bentley's article, Vol. II.

(21) King's Miſcellanies, p. 261, 262.

'*If you have looked into it, Sir, you have found, 'that a perſon, under the pretence of criticiſm, may take 'what freedom he pleaſes with the reputation and credit of any gentleman; and that he need not have any 'regard to another man's character, who has once reſolved to expoſe his own. It was my misfortune once in 'my life to be in the ſame place with Dr Bentley, and 'a witneſs to a great deal of his rude and ſcurrilous 'language; which he was ſo liberal of, as to throw out 'at random in a public ſhop; and is ſo ſilly now as to 'call it eaves-dropping in me, becauſe he was ſo noiſy, 'and I was ſo near, that I could not help hearing him.*

'*You deſired me at ſome years diſtance to recollect 'what paſſed at that meeting, and I obeyed your commands. Shall I reckon it an advantage, that Dr 'Bentley, who diſputes the other teſtimonies, falls in 'entirely with mine? I would, if I were not apprehenſive that on that very account, it might be one ſtep 'farther from being credited. However, ſuch is his 'ſpite to me, that he confirms the truth of all I told you. 'For the only particular I could call to mind, he grants 'with ſome ſlight difference in the expreſſion: and as 'to the general account I gave of his rudeneſs and inſolence, he denies it indeed, but in ſo rude and inſolent 'a manner, that there is no occaſion for me to juſtify 'myſelf on that head. I had declared, it ſeems, that 'he ſaid,* The MS of Phalaris would be worth nothing if it were collated. *He ſets me right, and avers the 'expreſſion was, that* after the various lections were 'once taken and printed, the MS would be like a ſqueezed orange, and little worth for the future. '*The ſimilitude of a ſqueez'd orange is indeed a conſiderable circumſtance which I had forgot, as I doubtleſs 'did ſeveral others. But for all that, I remember the 'general drift and manner of his diſcourſe, as well as 'if all the particular expreſſions were preſent to me. 'Juſt as I know his laſt book to be a diſingenuous, vain, 'confuſed, unmannerly performance, tho' to my happineſs hardly any of his awkward jeſts or impertinent 'quotations ſtick by me*

'*I had owned it to be my opinion, that a* MS was 'worth nothing unleſs it were collated. *The Doctor 'cunningly diſtinguiſhes upon me, and ſays,* 'tis worth nothing indeed to the reſt of the world, but it is better for the owner, if a price were to be ſet upon it. *I beg his pardon for my miſtake, I thought we were talking of books in the way of ſcholars, whereas he anſwers me like a Bookſeller, and as if he* dealt in MSS *inſtead of reading them. For my part, I meaſure the value of theſe kind of things, from the advantage 'the publick may receive from them, and not from the 'profit they are likely to bring in to a private owner: 'And therefore I have the ſame opinion of* the Alexandrian MS (which he ſays he keeps in his lodgings) '*now, as I ſhould have had before the editors of the 'Engliſh Polyglot publiſhed the collation of it; tho' it 'may not perhaps bear up to the ſame price in St Paul's 'Church yard, or an auction. But, I hope, if it be 'ſafely kept, it need never come to the experiment.*

'*As to the particular reflections he has caſt upon me, 'tis no more than I expected. I could neither hope nor 'wiſh for better treatment from one that had uſed you 'ill. 'Tis reputable both to men and books to be ill 'ſpoken of by him, and a favourable preſumption on their 'ſide, that there is ſomething in both, which may chance 'to recommend them to the world. 'Tis in the power 'of every little creature to throw dirty language, but a 'man muſt have ſome credit himſelf in the world, before things, he ſays, can leſſen the reputation of another. And if Dr Bentley muſt be thus qualified in 'order to miſchief me, I am ſafe from all the harm that 'his malice can do me. I am, Sir,*

Your moſt obliged humble ſervant,

W. KING (22).

(22) The copy of this letter was found in *The Short Account of Dr Bentley's Humanity and Juſtice*, Ibid. p. 267.

But our author did not reſt the matter here: in the courſe of this famous diſpute he publiſhed *Dialogues of the dead relating to the preſent controverſy concerning the epiſtles of Phalaris*, he tells us, 'theſe were written in 'ſelf-defence, and I preſume, continues he, with modeſty (23)' and nothing ſhews that he had it at heart more than the various memorandums relating to that ſubject found ſcattered up and down in his Adverſaria.

(23) General preface to his Miſcellanies.

[*H*] *Humorous pieces written at various times.*] He collected theſe afterwards, and publiſhed them together with

vated with theſe beauties, he neglected his buſineſs, and even grew by degrees (as uſual in ſuch tempers) to dread and abhor it. Heedleſs of thoſe uſeful ſupplies which it brought to his finances, and which were in a few years ſo much impaired by this neglect, and by the gay courſe of life he led in the company of ſome of the beſt wits and principal gentry and nobility of the age, that he gladly accepted a ſeaſonable offer made to him in 1697 by the Lord Pembroke, appointed Lord-Lieutenant of Ireland, to attend his Lordſhip to that kingdom; where he was made Judge-Advocate, Sole Commiſſioner of the Prizes, and Keeper of the Records; and the Lord-Primate alſo conſtituted him his Vicar-General. With theſe honours he was well received and countenanced by perſons of the higheſt rank, and might have made his fortune, if the change of climate could have wrought a change in his diſpoſition. But ſo far was he from forming any deſign to heap up riches, or of treaſuring up any of that money which was now thrown into his lap, that he returned to England with no other treaſure than a few merry poems and humorous eſſays (*m*) [*I*]; and retiring to his ſtudent's place at Chriſt-church, he employed himſelf in finiſhing his *Art of Love*, in imitation of Ovid *de Arte Amandi* (*n*); to which he prefixed an excellent account of that poet [*K*]. However, he had not been long at the college, when an incident fell out that had power enough to draw him from his beloved amuſements. An action at Law had been brought againſt the Earl of Angleſey, for ſeveral cruelties uſed to his lady (*o*); wherein ſhe was backed by her mother the Counteſs of Dorcheſter. Upon this occaſion his Lordſhip ſollicited Dr King to come to town and undertake his cauſe, which was then before the Houſe of Lords. Here the force of friendſhip prevailed over all his averſion to the wrangling taſk of an advocate. He complied with the requeſt, took abundant pains for his old friend, more than ever he was known to do, and made ſuch a figure in the Earl's defence, as ſhewed him to have abilities in his profeſſion, equal to any occaſion that might call for them; ſo that he gained the reputation of an able Civilian, as well as of a humorous Poet (*p*). The Doctor's warm zeal for the Church carried him, in 1709, on the ſide of Dr Sacheverell, and had a hand in ſome of the political kites which flew about at that time (*q*). In this, indeed, he did no more, than concur with thoſe whoſe friendſhip he had always cultivated; and when theſe friends came into favour at Court, and were taken ſoon after into the Miniſtry, the doctor was not wanting in his friendly offices to them, and gave a helping hand towards the ſupport of the new meaſures they entered into. He printed ſeveral papers in this view [*L*], and, among others, one which

(*m*) Account of his Life, p. 9.

(*n*) It is dedicated to Lord Herbert, eldeſt ſon to the Earl of Pembroke, and was written at the perſwaſion of a very great Statesman. Ibid. in the dedication.

(*o*) She was a natural daughter of King James II. and having obtained a divorce on this occaſion from the Earl of Angleſey, was afterwards married to John Sheffield Duke of Buckingham-ſhire. See his article.

(*p*) Account of his Life, p. 14, 15.

(*q*) Among theſe is *A Friendly letter from honeſt* Tom. Boggs, *to the Rev. Mr* C—t—l, *Canon of Windſor, occaſioned by a Sermon preached in St George's chapel, dedicated to her* Grace *the* D—h ſs of M—l——b. Ibid. p 73 to 83.

with ſome other pieces in his Miſcellanies, prefixing this remark in the preface concerning them. The remaining papers which are here muſt ſeek their fate; they were abroad in manuſcript, and I hope will not have harder fortune now they are print, than they had in the opinion of ſome friends before they were ſo. That intituled *Little Mouths* has been univerſally admired, we ſhall inſert it as a ſpecimen of that particular kind of humour which runs thro' the reſt.

'From London, Paul the carrier coming down
'To Wantage, meets a beauty of the town;
'They both accoſt with ſalutation pretty,
'As how doſt Paul? Thank ye, and how doſt Betty?
'Didſt ſee our Jack nor ſiſter? No. You've ſeen
'I warrant none but thoſe who ſaw the Queen.
'Many words ſpoke in jeſt, ſays Paul, are true,
'I came from Windſor, and if ſome folks knew
'As much as I, it might be well for you.
'Lord, Paul, what is't? Why give me ſomething for't,
'This kiſs, and this; the matter's then, in ſhort,
'The parliament have made a proclamation,
'Which will this week be ſent all round the nation,
'That maids with little mouths do all prepare
'On Sunday next to come before the mayor;
'And that all bachelors be likewiſe there:
'For maids with little mouths ſhall if they pleaſe,
'From theſe young men chuſe two apiece.
'Betty with a bridled chin extends her face,
'And then contracts her lips with ſimp'ring grace,
'Cries, hem, pray what muſt all the huge ones do
'For huſbands, when we little mouths have two.
'Hold, not ſo faſt, cries he, pray pardon me,
'Maids with huge gaping wide mouths muſt have three.
'Betty diſtorts her face with hideous ſquawl,
'And mouth of a foot wide begins to bawl,
'Oh! oh! is't ſo? the caſe is altered, Paul;
'Is that the point? I wiſh the three were ten,
'I warrant I'd find mouth if they'll find men.'

[*I*] *He returned to England with a few merry poems and humorous eſſays.*] It ſeems he ſtruck up a particular friendſhip with one Judge Upton of Ireland, who was altogether a man after his own heart, that delighted in retirements and poetical amuſements; and having a country villa called *Mowntown* near *Dublin*, he retired there, where he ſpent moſt of his time and neglected all his buſineſs; for he neither minded his offices, or paid his court to the Lord-Lieutenant, but fell in love with his lazy retirement and melancholy companion; inſomuch that he ſeemed to have no other thoughts left but living and dying with his beloved *Mully* of *Mowntown*; a paſtoral poem ſo called, that he made upon the happineſs of his ſituation, that was, of being buried alive with *Mully*, the red cow that gave him milk, and was the ſubject of his poem. As our author was known to ſide with the party for the Church, the criticks among the oppoſite party would have impoſed the poem upon the world for a political allegory, the remoteſt from the Doctor's deſign of any they could have deviſed. And he would hardly think of attempting to undeceive them: on the contrary we may ſuppoſe he was not ill pleaſed to ſee himſelf in ſuch good company as that of Mr Pope, whoſe celebrated poem, called *The Rape of the Lock*, was about the ſame time allegoriſed in the ſame manner by a critick, who aſſuming this poſtulatum, that *the Lock* ſignified *the Barrier Treaty*, made all the reſt of the allegory out very clearly and unexceptionably.

[*K*] *The art of love*, &c.] This is ſuch an imitation of Ovid, as that where the imitator and his author ſtand much upon the ſame terms as Ben does with his father in the comedy, *What tho'f he be my father, I an't bound prentice to 'en.* The Doctor's virtuous diſpoſition is no where more remarkably diſtinguiſhed than in this piece; wherein both the ſubject and the example ſo naturally and almoſt unavoidably lead into ſome leſs chaſte images, ſome looſer love which ſtands in need of a remedy. But there is no occaſion for any remedy to be preſcribed for the love here treated of, beſides the ſpeedy obtaining of what it deſires, ſince it is all prudent, honourable, and virtuous. It is divided into fourteen books, moſt of which end with ſome remarkable fable that carries with it ſome moral.

[*L*] *He printed ſeveral pieces in ſupport of the new miniſtry.*] The chief of theſe were, *Rufinus, or an hiſtorical eſſay on the favourite miniſtry*, and *Political Conſiderations*

which he called the *Britiſh Palladium*, or a welcome of Mr St John [then Secretary of State, and afterwards Lord Bolingbroke] from France, Shortly after this, the Gazetteer's place was offered to him, in a way ſo agreeable to his temper, that he could not refuſe it [*M*]. Accordingly, he entered upon that office, January 1, 1711; but the extraordinary trouble he met with in the diſcharge of it (*r*), proved to be more than he could endure long. Beſides, he began to decline in his health; and this, joined to his natural indiſpoſition to the fatigue of any kind of buſineſs, furniſhed a ſufficient pretence for quitting the employ, which he held only 'till about Midſummer 1712, when he retired to a gentleman's houſe on the Surry ſide of the Thames, where he had paſſed a ſummer or two before. Here he enjoyed himſelf to his full content in the company of a friend or two, with a bottle and his books (*s*). However, he croſſed the water, and made frequent viſits to his relation the Lord Clarendon at Somerſet-houſe, as long as he was able. But, as the Autumn ſeaſon advanced, he drooped gradually, and then neither cared to ſee or be ſeen by any one; and winter drawing on, he ſhut himſelf up entirely from his neareſt friends, and would not ſo much as ſee his noble relation; 'till his Lordſhip hearing of his weak condition, ſent his ſiſter to fetch him in a chair to a lodging he had provided for him oppoſite to Somerſet-houſe in the Strand; where, next day about noon, being Chriſtmas-day 1712, he yielded up his breath with all the patience and reſignation of a Philoſopher, and with the true devotion of a Chriſtian hero (*t*). Lord Clarendon took care of his funeral [*N*], and had him decently interred in the cloyſters of Weſtminſter-abbey, where he lies next to his maſter Dr Knipe, to whom a little before he had dedicated his *Hiſtorical Account of the Heathen Gods and Heroes*, written for the uſe of ſchools; which was well received by the public at it's firſt appearance, and has gone through ſeveral impreſſions ſince. In 1732, there came out in 8vo. *Remains of the late learned and ingenious Dr* William King, *ſome time Advocate of Doctors-Commons, Vicar-General to the Archbiſhop of Armagh, and Record-keeper of Ireland. Containing Miſcellaneous Pieces in Verſe and Proſe upon various ſubjects; with Reflections, Obſervations, and Critical Remarks, upon Men and Books: with a particular Critique upon a favourite Miniſtry, particularly that of* Rufinus, *Favourite of the Emperor Theodoſius, and his Character rendered into verſe from* Claudian; *together with an Account of the Author's Life and Writings.* In this account we have the following particulars relating to the doctor's character; that in his morals he was religious and virtuous, modeſt and chaſte to that degree, that he was never known to ſpeak an immodeſt word, or write a lewd one (*u*). That though he could not endure his buſineſs as an Advocate, yet he made an excellent Judge in the court of Delegates, as often as he was called to that bench. That, however, his chiefeſt pleaſure conſiſted in trifles, and he was never happier than when he thought he was hid from the world. Yet that he loved company, provided they were ſuch as tallied with his humour (for few people pleaſed him in converſation), and it was a true ſign that he liked them, if he could be tolerably agreeable; at which times his diſcourſe was chearful, and his wit pleaſant and entertaining. That he was a great diſſembler of his natural temper, which was moroſe and peeviſh, where he durſt ſhew it; but he was of a timorous diſpoſition, and the leaſt ſlight or neglect would throw him into a melancholy ſtate of deſpondency. He would ſay a great many ill-natured things but never do one. That he was made up of tenderneſs and pity, and tears would fall from him on the ſmalleſt occaſion (*w*). Thus he is repreſented by the writer of his Life, who profeſſes a particular love and eſteem for him; and, if the picture bears a juſt reſemblance of the original, the doctor muſt have been a true humouriſt [*O*]. What other pieces he wrote,

(*r*) Alderman Barber, who printed it, obliged the doctor to ſit up in the morning of thoſe days the Gazette was publiſhed, to correct the errors of the preſs. Ibid. p. 162.

(*w*) Account of his Life, p. 9, 15, 16.

ſiderations upon the refined Politicks, and the maſterſtrokes of ſtate, as practiſed by the Ancients and Moderns. Written by Gabriel Naudé, *and inſcribed to the Cardinal* Bagni. Tranſlated into Engliſh. Theſe were both written in 1711. The firſt is levelled againſt the Duke of Marlborough and the heads of his party, and the ſecond aims to repreſent and extol the Earl of Oxford as a conſummate politician.

[*M*] *He was appointed Gazetteer*, &c.] This was done in the following manner: Dr Swift, Dr Freind, and Mr Prior, together with ſome of theirs and my Lord's friends, came to pay a viſit to our author, and brought along with them the key of the Gazetteer's office, together with another key for the uſe of the paper office, which at that time was made the repoſitory for the Pope, the Pretender, and the Devil, together with the effigies of Dr Sacheverell and ſome other high prieſts, who were ſeized in a grand cavalcade, as the mob, called then the Low-Church mob, were marching along in great triumph to burn them at Whitehall or Charing-Croſs. The day following this friendly viſit being New year's day 1711, the Doctor took poſſeſſion and entered upon his office, and in two or three days dined with the ſecretary, and thanked him for his kind remembrance of him, at a time when he had almoſt forgot himſelf (24). The ſame author tells us alſo, that about half a year after Dr Sacheverell's trial, our author was applied to by Dr Swift, Dr Freind, and ſome others, to write the Examiner; and accordingly undertook it, and began that paper about Octob. 10, 1710, which he continued by the aſſiſtance of thoſe gentlemen and many others, who afterwards favoured him with their correſpondence, but the Doctor's ill ſtate of health obliged him to quit ſo fatiguing an employ in about four months, when it fell into other hands (25).

(24) Account of his Life, p. 161, 162.

[*N*] *Lord Clarendon took care of his funeral*] He had evidently the greateſt eſteem poſſible for his Lordſhip, and could not be perſuaded to go to reſt the night before his death, or lie down, 'till he had made ſuch a will as he thought was agreeable to his *Lordſhip's inclinations*, whereby he conſtituted Elizabeth King his ſiſter his ſole executrix and reſiduary legatee of all his eſtate or eſtates, real or perſonal, in poſſeſſion or reverſion (26). But the writer of his life intimates he had ſpent his paternal eſtates, and that after his return from Ireland, his ſtudent's place at Chriſt-Church was all he had left; this he retained to his death, and the profits thereof, together with the buſineſs of his profeſſion, and the friendſhip of his acquaintance, which was very large, and that of the greateſt quality, were his chief ſubſiſtence (27).

(27) Ibid. p. 9, 10.

[*O*] *A compleat humouriſt.*] The Doctor has drawn his own character excellently in the following verſes found in his pocket at his death, being juſt freſh written with a lead pencil.

wrote, beſides thoſe contained in his Miſcellanies or Remains, and ſuch as have not been taken notice of already in the courſe of this memoir, ſhall be mentioned below [*P*].

I ſing the various chances of the world,
Thro' which men are by fate or fortune hurl'd.
'Tis by no ſcheme or method that I go,
But paint in verſe my notions as they flow:
With heat the wanton images purſue;
Fond of the old, yet ſtill creating new.
Fancy myſelf in ſome ſecure retreat,
Reſolve to be content and ſo be great.

[*P*] *His other works not already mentioned, and neither in his Miſcellanies nor Remains.*] Theſe are, 1. *The Art of Cookery*, in imitation of *Horace's Art of Poetry*. 2. *Letters to* Dr Liſter and *others*, occaſioned principally by the title of a book publiſhed by the Doctor, being *the works of Apicius Cælius concerning the ſoups and ſauces of the Ancients*; with an extract of the greateſt curioſities contained in that book. Among his letters is one of the *Dentiſcalps* or *Toothpicks* of the Ancients. Another contains a fine imitation of Horace, epiſt. v. book 1. being his invitation of Torquatus to ſupper. And a third contains remarks upon the Lord Grimeſton's play, called, *The Lawyer's Fortune, or Love in a hollow Tree*. 3. Three numbers of a project intituled *Uſeful Tranſactions*, containing the following ſmall pieces, 1. *An Eſſay on the Invention of Samplers, by a ſchool-miſtreſs at Hackney*. 2. *Natural Obſervations made in the ſchool of Llandwwſorhy*. 3. *Taylors and Millers proved to be no Thieves*. 4. Meurſius's *Treatiſe of the Grecian Games*. 5. *The Plays of the Grecian Boys and Girls*. 6. *A Method to teach learned Men how to write unintelligibly*. 7. *Some important Queries whether a Woman may lay a Child to an Eunuch*. 8. *Additions to Mr Lewenhoek's microſcopical Obſervations upon the tongue; ſhewing the ſeveral particles proper for prattling, tatling, pleading, haranguing, lying, flattering, ſcolding*, &c. 9. *Of the Migration of Cuckoos, with Remarks on Birds-neſts*. 10. *Obſervations on the tripal Veſſels*. 11. *An hiſtorical and chronological Account of conſecrated courts*. 12. *Jaſper-Hans-Van Slonenberg's Voyage to Cajamai*, i. e. A merry Critique upon Sir Hans Sloane's Natural Hiſtory of Jamaica.

P

KING [PETER], Baron of Ockham, and Lord High-Chancellor of Great-Britain in the XVIIIth century, was born in the year 1669 at Exeter in Devonſhire, in which city his father, Mr Jerom King, was an eminent Grocer and Salter. But though a man of conſiderable ſubſtance, and deſcended from a genteel family of his name in Somerſetſhire (*a*), yet he determined to bring up his ſon to his own trade; and accordingly, having given him ſuch an education as was ſuitable to that deſign, he took him into his buſineſs, and kept him to the ſhop for ſome years (*b*). However, the ſon's inclination being ſtrongly bent to learning, he took all opportunities of gratifying his paſſion; and being happily endued with a genius greatly ſuperior to his birth and breeding, he broke through the diſadvantages of his education. In this ſpirit he purchaſed books with what money he could ſpare, and devoting every moment of his leiſure hours to ſtudy, he became an excellent ſcholar before any body ſuſpected it. Thus improved, he happened to fall into the company of the celebrated Mr John Locke, author of *The Eſſay on Human Underſtanding*, to whom he was related; and that gentleman, after ſome diſcourſe, being greatly ſurprized and pleaſed with the prodigious advances he had made in literature, adviſed him to go to Leyden in Holland, in order to perfect himſelf therein (*c*). From this time he began to look abroad into the world, and obſerving the favourable turn given to the views of the Diſſenters by the Revolution in 1688, he began to entertain hopes of their obtaining an eſtabliſhment in the State, jointly with the Church of England, by a Comprehenſion. Animated with this proſpect [*A*], he took the pains of collecting all ſuch paſſages of the Fathers in the three firſt centuries, as might be of ſervice to that end; and having digeſted them into a fit method with proper remarks, he publiſhed the firſt part of the work in 1691, 8vo. with this title: *An Enquiry into the Conſtitution, Diſcipline, Unity, and Worſhip, of the Primitive Church, that flouriſhed within the firſt three hundred years after Chriſt. Faithfully collected out of the extant writings of thoſe ages* [*B*]. To which he prefixed a preface,

(*a*) Collins's Peerage of England, Vol. IV. P. 333. edit. 1741.

(*b*) Nouvelles de la Republique des Lettres pour mois de Novembre & Decembre, 1702.

(*c*) Ibid.

[*A*] *Animated with the proſpect of a Comprehenſion.*] The truth of this aſſertion will not be doubted, after peruſing the concluſion of his *Enquiry*, &c. which contains a moſt pathetic exhortation to that project, having complained of animoſity on both ſides, and ardently preſſed the neceſſity of love and unity from the imminent danger of having the vitals and eſſentials of religion corrupted and devoured by hereſy and profaneneſs, while the differences about the ſkirts and fringes thereof are continued with ſo much bitterneſs, he proceeds in theſe words: 'And as for theſe and the like 'reaſons, the neceſſity of an union or comprehenſion is 'manifeſt on the one hand, ſo the facility of ſuch an 'union is as apparent on the other hand; for, thanks 'be to God, our differences are neither about faith nor 'manners; we all believe in one and the ſame God, 'hope to be ſaved by one and the ſame Redeemer, 'deſire to be ſanctified by one and the ſame Sanctifier, 'receive one and the ſame ſcriptures, aſſent to the 'ſame doctrines, and acknowledge the neceſſity of the 'ſame duties: our diſputes are only about leſſer matters, about modes and forms, about geſtures and 'poſtures, and ſuch like inferior matters, about which 'it ſhould grieve a wiſe man to quarrel, and which 'with the greateſt eaſe in the world might be compoſed and ſettled, if managed by men of prudence 'and moderation; *and ſuch men, 'tis hoped, are the 'Reverend Biſhops advanced by their Majeſties, whoſe 'promotion to thoſe places of dignity and truſt many honeſt and peaceable men look upon as a good omen and 'prognoſtick of our future union and happy eſtabliſhment* '(1).'

[*B*] *Enquiry into the conſtitution*, &c. *of the primitive Church.*] In order to a clear idea of Mr King's primary motives and principal views in this *Enquiry*, it will be neceſſary to conſider both the ſtate of the times in regard to the Church in general, and likewiſe his particular ſituation in that reſpect at the time of writing it. As to the ſtate of the Church, the firſt thing that offers itſelf to our notice is the great alteration made therein by the toleration-act, which paſſed in 1689*, whereby the Proteſtant diſſenters were indemnified from the penalties of former acts, and a free exerciſe of their religion as moulded by the Preſbyterians, Independents, and Anabaptiſts reſpectively granted. This indulgence was conceded by the eſtabliſhed Church, in condeſcenſion to the weakneſs and prejudice of education in theſe nonconforming brethren, in hopes that ſuch a ſignal inſtance of her charity and moderation, would be a means of inducing them to lay aſide their prejudices, and return to the boſom of their mother. 'On the other hand, the Diſſenters ſaw it in a quite different light, conſidered it as nothing more than what they had an undoubted right to, from which they had been unjuſtly excluded before, and having once obtained it, were ſo far from reſting ſatisfied, or

(1) Second part of the Enquiry into the Conſtitution, &c. of the Primitive Church, &c. p. 169, 170. edit. 1712, 8vo.

* The royal aſſent was given to it on the 24th of May that year. Salmon's Chron. Hiſt.

face, wherein he declared, that when he firſt reſolved on the printing of this treatiſe, he deſigned to have publiſhed his obſervations on the fourth general head, propounded in the title

ſitting down contented with the full enjoyment thereof, that they made uſe of it as a ſtep for further demands, and were encouraged thereby to aſſert that in every point of difference between them and the Church, the weight both of ſcripture and antiquity lay on their ſide; and therefore, that the way of treating them as perſons of weak judgments and tender conſciences was a pure piece of inſolence, the very thing that power which the Church had juſtly objected for excluſion to them. In this ſpirit they inſiſted, that the Act of Toleration, under the pretence of granting them a favour, was upon that very account a moſt manifeſt invaſion of [illegible] and gave occaſion thereof ſeveral plans of [illegible] by them; in all which [illegible] as the church's [illegible] of union were ſo [illegible] the frame of their conſtitution, diſcipline, and worſhip, to the eſtabliſhed form. The conjuncture they thought favourable to their wiſhes, ſeveral of the Biſhops and great numbers of the inferior clergy had refuſed to comply with the Revolution, while the Diſſenters of all denominations had particularly recommended themſelves to the favour of the new Sovereign (who had been bred up in their principles) by their unanimous acknowledgment of his right, and by their warm zeal to promote and ſecure his eſtabliſhment in it. Hereupon, among others of the party, our author, young as he was, reſolved not to ſlip the opportunity, and in this view having peruſed the writings of the Fathers of the three firſt centuries, he drew up the treatiſe now under conſideration, wherein he attempts to ſhew, that the conſtitution of the primitive Church in the ſaid centuries was upon the matter intirely of the Preſbyterian form. To that end, having firſt recited the ſeveral acceptations of the word Church, he takes that ſenſe of it for the ſubject of his diſcourſe, wherein it ſignifies a particular church, that is, a ſociety of Chriſtians meeting together in one place under their proper paſtors, for the performance of religious worſhip and the exerciſe of chriſtian diſcipline. Of this Church he lays it down as ſure, that there was but one ſupreme Biſhop the proper paſtour and miniſter of his pariſh, tho' called by various titles, as Biſhop, Paſtor, Preſident, Governor, Superintendent, and Prieſt, or the Angel of his Church, as in the Revelations. (2). He proceeds to prove, that as there was only one Biſhop to a Church, ſo but one Church to a Biſhop; whoſe cure was never called a dioceſe, but uſually a pariſh, and not larger than our pariſhes, of which he produces inſtances in the time of Ignatius, as *Smyrna*, *Epheſus*, *Magneſia*, *Philadelphia*, and *Trallium*; as alſo at *Antioch*, *Rome*, *Carthage*, and *Alexandria*, which were the four largeſt dioceſes, that is, pariſhes, in thoſe days. (3). The office of the Biſhop, he obſerves, conſiſted in preaching the word, praying with his people, and adminiſtring the ſacraments, taking care of the poor, ordaining miniſters, governing his flock, excommunicating offenders, abſolving penitents. That for the diſcharge of theſe functions the primitive Biſhops conſtantly reſided with their flocks. That their election was made in the church by the whole body of the people, clergy, and laity. That this election was afterwards confirmed, i. e. the Biſhop was inſtituted, by the neighbouring Biſhops; and then, laſtly, they were ordained or inſtalled in their own church by three at leaſt of the neighbouring Biſhops (4.) He then paſſes to a Preſbyter, whom he defines to be a *perſon in holy orders, having thereby an inherent right to perform the whole office of a Biſhop, but, being poſſeſſed of no place or pariſh, not actually diſcharging it, without the permiſſion or conſent of the Biſhop of a place or pariſh.* Agreeable to this definition, he maintains, that a Preſbyter was inferior to the Biſhop in degree, but equal to him in order; for proof of which he runs thro' the ſeveral parts aforementioned of the Biſhop's office, and gives inſtances in each where they were performed, with the Biſhop's leave, by the Preſbyter, who he ſhews was alſo expreſsly ſaid to be of the ſame order, and had one and the ſame name, being indiſcriminately called Preſbyter or Biſhop. That this diſtinction of title was firſt given by Ignatius, and meant no more than that of Parſon and Curate, according to which diſtinction there were ſometimes many Preſbyters in one church, as now we have ſeveral Curates in large and populous pariſhes; but they were not eſſential to a church which might be without then, as well as a pariſh may be without a Curate now, it was ſufficient to have a Biſhop; and laſtly, that the Preſbyter's office began in the apoſtolick age. (5.) In the next place he conſiders the order and office of Deacons, and Subdeacons, as alſo of Acolyths, Exorciſts, and Lectors; but of theſe there being no great controverſy, he ſays very little, and haſtens to that more important point the ordination of Preſbyters; the manner and form whereof he lays down as follows. Firſt, the candidate propoſed himſelf to the preſbytery of the pariſh where he dwelt, and was to be ordained, deſiring their conſent, and praying them to confer upon him thoſe holy orders which he craved; and this petition was made to the whole preſbytery, becauſe a Biſhop alone could not give thoſe orders. Upon this addreſs, the preſbytery took it into their conſideration and debated his petition in their common-council, and then proceeded to examine him upon theſe four points, his age, his condition in the world, his converſation, and his underſtanding. As to the age, he obſerves, that the orthodox ordained none but ſuch as were well ſtricken in years, except in caſe of extraordinary grace and abilities. In reſpect to condition, the candidate was to be free from all ſecular employment. That his converſation was to be humble and meek, of an unſpotted and exemplary life, for which he was to have the people's teſtimony. Laſtly, for his underſtanding he was to be of a good capacity, fit and able to teach others; in which view the Fathers ſpeak often of the great utility and excellency of logick, and philoſophy, and human learning, which however was not determined to be abſolutely neceſſary for this office. After ſuch examination and approbation, the candidates were declared capable of the function; to which however they were very ſeldom preſently advanced, but firſt gave a ſpecimen of their abilities in the diſcharge of other inferior eccleſiaſtical offices, and ſo proceeded by degrees to the ſupreme function of all. If the people made no objection, the next thing was their actual ordination in that particular church; but they became thereby miniſters of the Church univerſal, and might ſerve any church where they had a legal call, whence the Preſbyters of a particular church were not confined to a ſet number as were the Biſhops and Deacons. Laſtly, their ordination was performed by impoſition of hands, uſually of the Biſhop and Preſbyters of the pariſh where they were ordained.——Having thus treated of the acts peculiar to the clergy, he proceeds to thoſe of the laity, who by baptiſm became members of the Church univerſal, and of that particular church wherein they were baptized, and being, in theſe early ages of Chriſtianity, moſtly adults, ſhared and exerted all the privileges and powers of the Faithful, which were, their atteſtation to thoſe that were ordained, the election and choice of their Biſhops, and a power to depoſe them either for ſcandalous immorality, hereſy, or apoſtacy. ——Next to the peculiar acts of the laity, he treats of the conjunct acts of the clergy and laity, in reſpect to which he maintains, that in general all things relating to the government and policy of the Church were performed by their joint conſent and adminiſtration; but becauſe, to recite every particular act thereof would be both tedious and fruitleſs, he confines himſelf to thoſe acts that regarded the diſcipline of the Church, i. e. the power and authority exerted by her, for her own preſervation, in the cenſuring her offending members; under which head he examines, (1.) What were the faults cenſured, and ſhews theſe to be ſchiſm, hereſy, covetouſneſs, gluttony, fornication, adultery, and all other ſins whatſoever, none excepted. Offences in any kind were all puniſhed, but none with ſo much rigour as apoſtacy. (2.) The judges that compoſed the conſiſtory or eccleſiaſtical court, were the whole body of a particular church or pariſh, both clergy and laity. That this, which is called the power of the keys, was ſo lodged in Biſhops and people, that each had ſome ſhare in it. The Biſhop had the whole executive, and part of the legiſlative power; and the people had a part in the legiſlative, tho' not in the executive power, or the formal pronunciation of ſuſpenſions and excommunications, the impoſition of hands in the abſolution of penitents, and ſuch like. That in this court

Biſhops

title to be enquired into, viz. *The Worſhip of the Primitive Church*, as well as thoſe of the three former, but that for ſome reaſons he had reſerved this for a particular tract by itſelf; 'which probably, ſays he, though I do not abſolutely promiſe it, may in a little time 'more be alſo publiſhed.' Accordingly, not long after, he ſent this into the world, under the title of, *The Second Part of the Enquiry into the Conſtitution, Diſcipline, Unity, and Worſhip, of the Primitive Church*, &c. [C]. Having, in a very handſome way, with a true

Biſhops and people had each a negative voice: however, becauſe the laity were incumbered with earthly buſineſs, from which the Preſbytery were free, theſe latter were appointed as a Committee to prepare matters for the whole court. He was the ſupreme tribunal within the limits of that pariſh, but in difficult points the neighbouring Biſhops, being deſired, gave their aſſiſtance. (3.) The form of the proceedings in this court was this. When the conſiſtory was ſat, wherein the Biſhop and his aſſiſting Preſbyters (2), but commonly the Preſbytery, preſided, the offender, if poſſible, was brought before them (3), and his crimes being objected to him, he pleaded thereto; then the court conſidered and debated his plea, and if judged inſufficient by the Biſhop and majority, he was voted by the common ſuffrage to be condemned and cenſured; after which, ſentence was pronounced by one of the preſiding elders, that is, either by the Biſhop or a Preſbyter commiſſioned by him, who proceeded to it with previous exhortations and rebukes. (4.) The nature of the ſentence was intirely ſpiritual, and conſiſted either in ſuſpenſion or excommunication. (5.) Abſolution was not to be obtained without repentance, undergoing a ſtate of penance, and a formal public confeſſion of the fault. In performing which, the penitent firſt of all proſtrated himſelf at the church door, weeping, and begging the prayers of the faithful as they entered. And if the court thought his repentance real, he was admitted into the church, but not to the whole ſervice 'till after a much longer time of probation; at the expiration of which, he applied to the court for abſolution, who, after examining his demeanour and actions, and enjoining him to make a public confeſſion of his fault, gave the abſolution in this form. The penitent kneeled before the biſhop and clergy, who put their hands upon his head, and bleſſed him; by which ceremony he was declaratively and formally admitted to the Church's peace, and to the communion of the Faithful, as before his offence; except in the caſe of the delinquent clergy, who, upon abſolution, were only reſtored to communion as laymen, and never re-admitted to their eccleſiaſtical dignity, if condemned for any great and aggravated crime. He then goes on to ſhew, that this power of exerciſing diſcipline on her own members was lodged in every particular church, without the concurrency of other churches; and therefore every church was in this ſenſe independent; but yet conſidered with other churches as part of the Church Univerſal, it was dependent. In which view each particular church had a care of the body of the whole Church, diſtended into various provinces; and accordingly there was an intercourſe and government by ſynodical aſſemblies, either œcumenical † or provincial; that provincial ſynods met at leaſt once, and in ſome provinces twice or thrice, a year, and were compoſed of biſhops, preſbyters, deacons, and deputed laymen in behalf of the people of their reſpective churches. That they were aſſembled by their own authority, becauſe in thoſe days there was no Chriſtian magiſtrate to order or determine theſe affairs. When convened, they choſe one, or ſometimes two, to be their moderators or prolocutors, whoſe office was to preſide in their aſſembly, to ſee all things calmly and fairly debated and decreed, and at the concluſion of any cauſe, to ſum up what had been urged on both ſides, to take the votes of the members, and laſt of all to give his own. That every thing relating to the polity, diſcipline, or government of the churches within the province, were regulated, and their decrees or canons were binding. Having thus diſcourſed of the conſtitution and diſcipline of the Primitive Church, he proceeds to treat of it's unity, and of ſchiſm, the breach of that unity. Here he conſiders the unity of the Church both negatively and poſitively, and aſſerts, that negatively it conſiſted not in uniformity of rites, nor in an unanimity of conſent, to the non-eſſential points of Chriſtianity; and therefore that the rigid impoſers of theſe upon particular churches, were condemned as cruel and tyrannical, and were the true ſchiſmatics, inaſmuch as they were the cauſe of ſchiſm and diviſion. But *poſitively*, the unity of the Church Univerſal, conſiſted in an harmonious agreement in the fundamentals of Faith and Doctrine; whence the corruption of that doctrine was a breach of that unity, and ſuch violaters were ſchiſmatics. The unity of a collective or provincial church conſiſted in a brotherly correſpondence with, and receiving to communion the members of, each other; and that unity was broken, either when they claſhed in any point of doctrine, and through hatred, rage, and fury reviled and abuſed each other; or, if diſpoſed regularly into a ſynodical government, then the violaters of their reaſonable ſynodical canons were ſchiſmatics. But paſſing by all theſe, as not the ſchiſm of the Ancients, our author obſerves, that ſchiſm principally and originally reſpected a particular church or pariſh, the unity of which, conſiſting in the mutual love and amity of the members, and in their due ſubjection and ſubordination to their paſtor or biſhop, conſequently a breach of that unity conſiſted, either in hatred or malice to each other, or in a rebellion againſt their lawful paſtor, i. e. in a cauſeleſs ſeparation from their biſhop, and thoſe that adhered to him. The firſt of theſe might happen without a formal ſeparation, and yet ſuch diſcords are called ſchiſms (4). Yet this is not what the Ancients ordinarily meant by ſchiſm; but that which they generally and commonly termed ſchiſm, was a rebellion againſt, or an ungrounded and cauſeleſs ſeparation from, their lawful paſtor or their pariſh church; and except in the caſe of the biſhop's apoſtacy, hereſy, or ſcandalous immorality, every ſeparation was cauſeleſs, and conſequently the true and proper ſchiſm of the Ancients.

[C] *The fourth article was publiſhed afterwards.*] This piece being a continuation of the ſame deſign with the former, our author proceeds in the ſame ſpirit to vindicate the claim of the Preſbyterians againſt the Eſtabliſhed Church, in reſpect to primitive antiquity upon the article of their worſhip. In the execution whereof he endeavours to prove, chap. i. that the method of their public ſervice began with reading the ſcriptures, and that without any appointed portions or leſſons. Next followed ſinging of pſalms, without any inſtrumental muſick. To this ſucceeded preaching, which continued for the ſpace of an hour, being a comment, with ſuitable inferences and applications, upon ſo much of the ſcripture as had been read, and was performed uſually by the biſhop, but with his permiſſion by any other, either clergyman or layman. The ſermon being ended, the congregation ſtood up to prayer, which, he maintains in chap. ii. was performed in that poſture (it being accounted a ſin to kneel, eſpecially on Sundays), by the miniſter alone, without any vocal joining of the people, and by him diſcretionally, in one long continued prayer, not divided into collects, and without any preſcribed forms, except the Lord's-Prayer; and that he was habited with a cloak and no ſurplice. The three following chapters are ſpent in treating of Baptiſm, which he ſuggeſts was performed in the earlieſt time from the Apoſtles, without the uſe of ſponſors or godfathers. That the perſon being baptized either by immerſion or ſprinkling, was afterwards anointed, ſigned with the ſign of the croſs, and confirmed by impoſition of hands; the two former of theſe were nothing more than rites, and therefore not neceſſary; but Baptiſm was deemed imperfect without confirmation, which, however, he labours to prove was performed by Preſbyters as well as Biſhops. Next to Baptiſm he ſpeaks, chap. vi. of the Lord's-Supper. In the celebration whereof he contends, there was only one long prayer that preceded the words of inſtitution. That the elements were diſtributed by the Deacon, Preſbyter, or Biſhop, indiſcriminately, and that the people received in a ſtanding poſture (5). After the ſacrament he conſiders, in the viith chapter, the circumſtances of publick worſhip, as time and place; and in treating of the latter of theſe he maintains, that churches were not thought to have any kind of holi-

(3) If he did not appear, he was condemned for obſtinacy.

† If this ſort he obſerves there was but one, if any, within the three firſt centuries, viz. that of Antioch, which condemned Paulus Samoſatenus.

(4) 1 Cor. xi. 18. and the epiſtle of Clemens Romanus to the Corinthians.

(5) He takes notice, by the by, of the practice in theſe times, of giving this Sacrament even to ſucking infants, p. 112.

true air of modeſty, deſired to be ſhewn, either publickly or privately (*d*), any miſtakes he might have made, that requeſt was firſt complied with by Mr Edmund Elys, between whom and our author there paſſed ſeveral letters upon the ſubject in 1692, which were publiſhed by Mr Elys in 1694, 8vo (*e*). In the firſt part of his treatiſe our author having aſſerted the equality of Preſbyters to Biſhops in reſpect to *Order*, appeals alſo to the learned reader to determine, whether that point had been fully proved, and whether the quotations did naturally conclude the premiſes. 'I am not conſcious, ſays he, that I have ſtretched any words beyond their natural ſignification, having deduced from them nothing but what they fairly imported. If I am miſtaken, I hope I ſhall be pardoned, ſince I did not deſignedly or voluntarily. As before, ſo I now profeſs again, that if any one ſhall be ſo kind and obliging to give me better informations, I ſhall thankfully and willingly acknowledge and quit mine errors; but till that information be given, and the falſity of my preſent opinion be evinced (which, after the impartialleſt and narroweſt enquiry, I ſee not how it can be done), I hope I ſhall not be offended, that I have aſſerted the equality or identity of the Biſhops and Preſbyters to *Order*.' This being obſerved when the treatiſe was republiſhed (*d*), while the famous Schiſm-bill was under the conſideration of Parliament (*d*), there came out ſome time after a piece, intituled, *The Invalidity of the Diſſenting Miniſtry; or Preſbyterian Ordination an irregular and unjuſtifiable Practice. In anſwer to Mr* Pierce's *Sermons, intituled,* Preſbyterian Ordination proved regular: *and to all the pretended Inſtances of Preſbyterian Ordination, in a book lately publiſhed by Mr* Charles Owen, *called,* The Validity of the Diſſenting Miniſtry; *with Remarks on the* Forgery *and* Diſhoneſty *of that writer. To which is added, An Impartial View and Cenſure of the Miſtakes propagated for the ordaining Power of Preſbyters, in a celebrated book, entituled,* An Enquiry into the Conſtitution, Diſcipline, Unity, and Worſhip, of the Primitive Church, that flouriſhed within the firſt three hundred years after Chriſt. *By a Preſbyter of the Church of England.* And not long afterwards, when the repeal of the Schiſm-bill came upon the carpet, many perſons remembered, that the leſs learned and more prejudiced adverſaries of the Church of England had made their boaſts of *The Enquiry*, &c. and, from it's not being anſwered, had proclaimed it an unanſwerable defence of their ſeparation from her. Hereupon Mr Sclater, a nonjuring clergyman, thinking, moreover, that all the ſcattered arguments and pleas for their unwarrantable ſchiſm, as he calls it, were reducible to ſome one or other of the great variety of quotations cited therein, publiſhed an anſwer under this title: *An Original Draught of the Primitive Church: in anſwer to a Diſcourſe, entituled,* An Enquiry into the Conſtitution, Diſcipline, Unity, and Worſhip, &c. *By a Preſbyter of the Church of England* [*D*]. Lond. 1717, 8vo. Having thus, for the ſake of perſpicuity, thrown together

neſs in them, but, on the contrary, though theſe primitive Chriſtians had churches for conveniency and decency, yet they did not imagine any ſuch ſanctity or holineſs to be in them, as to recommend, or make more acceptable, thoſe ſervices that were diſcharged therein, than if they had been performed elſewhere. The two next chapters are aſſigned to ſpeak of the primitive faſts and feaſts; where having obſerved in the former, that Lent was the only fixed faſt which they looked upon as abſolutely neceſſary to be obſerved, he aſſerts in the latter, that beſides Eaſter, Whitſunday, Chriſtmas, and Epiphany, they kept no other feaſts in commemoration of Chriſt, or the Virgin Mary, or the Apoſtles; which laſt he remarks had not the title of Saints in the primitive writings.—He concludes with the xth chapter, which is referred for the chief point in view, that is, the nature and obligation to particular rites and ceremonies obſerved in the Church. And here having ſhewn the difference between theſe, the firſt being deemed neceſſary concomitants of the circumſtances of divine worſhip, which the latter were not, he obſerves, that ſeveral ceremonies crept into the Church within the three firſt centuries, that from the beginning were not ſo, but were introduced, as the Church grew gradually corrupted both in doctrine and worſhip; and contends, in reſpect to both, that they were indifferent and arbitrary, the choice and appointment of them being entirely at the will and pleaſure of every particular church or pariſh; ſo that one church had no power over another in regard to the uſe of them. But that ſtill every particular church could enforce it's own members to a conformity even in theſe.

The detail we have given of the particulars under the four general heads of the enquiry, has ſwelled this remark into a much larger book than was expected; but ſuch an account was neceſſary to ſupport our aſſertion in the text, that it was our author's deſign therein to vindicate the Preſbyterians in their demands of a Comprehenſion. However, it would be an injury to him not to declare, to the ſame place, that, in the courſe of his Enquiry, he has taken notice of ſome articles obſerved in the primitive times, within his limitation, wherein the Eſtabliſhed Church hath kept cloſer than the Preſbyterians to that pattern. There is alſo a very becoming air of modeſty preſerved throughout the whole, his pen appears to be conducted by a juſt ſenſe of his youthful years, and he cloſes all with a moſt ardently pious and pathetic exhortation to a peaceful unity of all parties in a Comprehenſion.

[*D*] *An Original Draught of the Primitive Church, &c. in anſwer to an Enquiry, &c.*] Among other reaſons for publiſhing the *Enquiry*, Mr King had declared (6) the chiefeſt to be theſe two, to inform others and to inform himſelf; to inform others what the practices of the primitive Apoſtolic Churches were, if any ſhall be ſo inquiſitive and deſirous to know them, or if he was miſtaken (as who is without his errors?) to be better informed himſelf; and this, he ſays, was his chief deſign in the publication. *Wherefore,* continues he, *without oſtentation or challenging, but unfeignedly and ſincerely to prevent miſtakes in my younger years, I humbly deſire (if the requeſt be not too bold) and ſhall heartily thank any learned perſon that will be ſo kind as to inform me, if he knows me to have erred in any one or more particulars; which he may do either publickly, or, if he think fit, privately by letters to my Bookſeller, who will convey it ſafely to my hands.* Hereupon Mr Sclater obſerves, that our author, in his preface, ſhews an humble diffidence of his youthful performance, and deſires another ſenſe might be given of his ſeveral quotations (if need required) for better information of himſelf and others. 'I confeſs, ſays this antagoniſt, 'I ſaw need enough of that at my firſt peruſal of his 'book, and not a little wondered, that no friendly 'hand had done that kindneſs for him long before. 'As to my own part, I had never walked in the un'pleaſant paths of controverſy to that day; and be'ſides the conſciouſneſs of my unfitneſs for it, had 'averſion enough ever to ſet a foot in them; but ſee'ing none had anſwered, or was anſwering (as I could 'hear of), ſo reaſonable a deſire, though men of let'ters in both kingdoms of our united iſland had decla'red an earneſt expectation of it, and the Holy Church 'of England in particular has reproached the ſilence

(6) In the preface.

ther what relates to *The Enquiry*, we ſhall recur to the time of our author's life when it was written. After his return from Leyden, he entered himſelf a ſtudent of the Inner-Temple (*e*), reſolving to chuſe the Law for his profeſſion, by the advice of his forementioned learned couſin Mr Locke (*f*). He was endowed with good parts and great induſtry *, two qualities, which, when united in one perſon, never fail of raiſing him to a degree of eminence in any kind of learning that he applies to; accordingly, Mr King had not been many years at the Temple, when he had acquired the reputation of having as much ſkill and knowledge in all the parts, and hiſtory of the Law or in the civil part of the conſtitution; as he had before in Divinity or the eccleſiaſtical part. So that in 1699 he obtained a ſeat in the Houſe of Commons, of which Houſe he was elected a member to repreſent the borough of Beer-Alſton in Devonſhire; and the ſame honour was continued to him, not only in the enſuing, which was the laſt parliament of King William, but alſo in the five ſucceeding parliaments, during the reign of Queen Anne (*g*). In the mean time, as the ſubject of his theological treatiſe already mentioned had led him occaſionally to look into the origin of that which is commonly called the Apoſtles Creed, in order to find out the deſign of the primitive Fathers of the Church in compiling it; ſo he could not think of loſing all the pains he had taken, eſpecially in a favourite ſtudy. Wherefore, indulging his natural inclination, he employed his leiſure hours in purſuing that enquiry; and having at length completed his collections, as well as the neceſſary remarks upon them, he digeſted the whole into a proper method, and publiſhed it in 1702, in 8vo. under the title of, *The Hiſtory of the Apoſtles Creed, with critical Obſervations on it's ſeveral Articles* [*E*]. The learning and judgment manifeſted in this treatiſe, ſurprized the world

(*e*) See the inſcription on his monument *in* Collins's Peerage, ubi ſupra.

(*f*) Nouvelles de la Republique des Lettres mois de Novembre & Decembre 1703.

* The motto under his coat of arms is *Labor ipſe voluptas*, which has been thought to be choſen by him with great propriety, as being the characteriſtic quality of his nature.

(*g*) Willis's Notitia Parliamentaria.

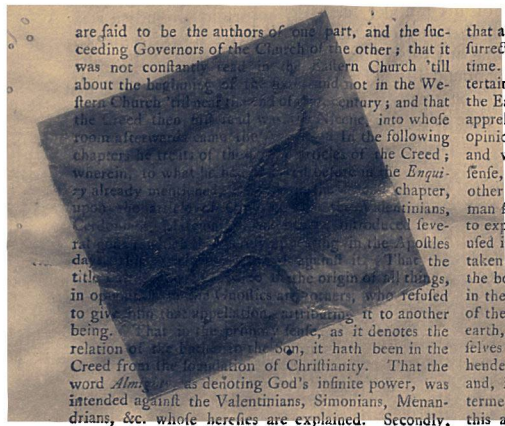
' of her children, in an argument that ſo plainly ſtruck
' at her foundation; *filial* obedience, I may ſay, to
' ſo *faithful* a parent, moved me to uſe the beſt en-
' deavours I could to vindicate the truly Apoſtolical
' Conſtitution, and to plead the cauſe of injured An-
' tiquity as well as her's; for that both are truly one
' in this caſe, the impartial reader will eaſily obſerve,
' when he ſees the palpable miſtakes corrected, and
' the unfair repreſentations of the venerable Fathers of
' the Church (ſo obvious in almoſt every page of thoſe
' plauſible collections), reſtored to their genuine ſenſe
' again. This is what may be expected here; and I
' am not conſcious I have ſtrained any one paſſage in
' Antiquity beyond the true meaning of the venerable
' authors themſelves, to form a different conſtruction
' of it from that of the ingenious enquirer. I ſhould
' count it the work of ſacrilege to do ſo; the goods of
' the Church are not ſo ſacred as her ſenſe is. What
' each quotation appeared to me, from the beſt autho-
' rity and cloſeſt attention I could uſe, I have fairly
' repreſented here. If defective in apprehending the
' true ſenſe, or injudicious in the inferences from it, I
' heartily ſubmit in my turn to the charity of a better
' information. For as I write with a conſcientious re-
' gard to undeceive ſome, ſo I am infinitely more con-
' cerned not to be deceived myſelf; and I wiſh no
' greater freedom from prejudice or party in any who
' read or cenſure theſe papers, than I am conſcious of
' in the compoſing of them.'

[*E*] *The Hiſtory of the Apoſtles Creed, &c.*] Our author had looked into this ſubject, and made ſome progreſs in his collections concerning it, when he drew up his *Enquiry*, &c. and once intended to have inſerted it in that treatiſe, where he has given a liſt of all the Creeds he could meet with which were uſed in the three firſt centuries; and comparing them with the Apoſtles Creed, obſerved two new articles introduced into this latter Creed, viz. *He deſcended into Hell*, and *The Communion of Saints*; and in order to find out how they were added, he conſiders how the whole Creed was framed, which he conceives to be theſe two ways. Firſt, ſome of the articles, he obſerves, were derived from the days of the Apoſtles. Secondly, others were afterwards added, in oppoſition to hereſies, as they ſprung up in the Church. The articles derived from the days of the Apoſtles were, *I believe in God the Father, or* (as the Greek Creed reads it) *in one God the Father* (in oppoſition to the Polytheiſm of the heathens); *and in Jeſus Chriſt, his only begotten Son, our Lord: I believe in the Holy Ghoſt, The Reſurrection of the Body, and the Life everlaſting.* For in the days of the Apoſtles, as well as afterwards, it was the practice at Baptiſm to demand the baptized perſon's aſſent to the fundamental articles of the Chriſtian Faith, as Philip did the Eunuch, Acts viii. 37. amongſt which fundamentals we may be certain they reckoned the doctrine of the Trinity, becauſe they were baptized in the name, and dedicated to the ſervice, of the Trinity; and that of the Unity of the Godhead, becauſe it was the great drift and deſign of their preaching, to overturn the Pagans multiplicity of deities; and that of the Reſurrection of the Body and the Life everlaſting, becauſe that was the characteriſtic or peculiar doctrine of the Chriſtian religion, by which it was eminently diſtinguiſhed from other ſects and opinions, and was the only comfort and ſupport of the Chriſtians under their ſufferings and martyrdoms. As for the other articles of the Creed, in ſuch as are predicated of Chriſt, as his being *conceived of the Holy Ghoſt, born of the Virgin Mary*, &c. and thoſe other two, *The Holy Catholic Church*, and *the Forgiveneſs of Sins*; he conceives them to be introduced the ſecond way, viz. in oppoſition to hereſies as they ſprung up in the Church; as, *Was conceived by the Holy Ghoſt*, in oppoſition to the Carpocratians, Ebionites, and Corinthians, who taught that Chriſt was born in the ordinary and common way, as other men and women are: *Was born of the Virgin Mary, ſuffered under Pontius Pilate*, &c. in contradiction to the Docetæ, Simonians, and others, who affirmed Chriſt to be a man not really, but only phantaſtically or in appearance (7). *The Remiſſion of Sins*, againſt the Baſilidians, who held, that not all ſins, but only involuntary ones, would be remitted; or rather againſt the Novatians, who denied remiſſion to the lapſed. *The Holy Catholic Church*, to exclude thereby all heretics and ſchiſmatics from being within the pale thereof. ' By theſe two ways, concludes he, was ' the Creed compoſed; and by the latter hereof ' were theſe two articles introduced, of Chriſt's *De-* ' *ſcent into Hell*, and of *the Communion of Saints*. The ' Communion of Saints was brought in laſt of all, the ' deſcent into Hell towards the latter end of the fourth ' century; into the manner and occaſion whereof, as ' alſo the intent and meaning whereof, I had deſigned ' once to enquire, having made ſome collection con- ' cerning it; but finding I ſhould be then forced to ' paſs the limits of my preſcribed time, I have thought ' it expedient to omit it (8).' He proſecuted this ſubject afterwards; and having completed his collections, not only with regard to theſe but all the other articles, he compiled the treatiſe now under conſideration. Wherein having forewarned the reader of his deſign, not to treat of the Creed theologically, or to explain the ſenſe of the ſeveral articles, as founded in, and deducible from, Scripture, but to ſhew the intent and meaning of each, as it is a part of the Creed, and for what reaſon it was introduced therein, he runs through the whole in that view; and dividing it into ſeven chapters, in the firſt he cites the encomiums given the Creed by the primitive writers, and the ſeveral names by which it hath been called; of which the principal was that of Symbol, a term derived from the Pagans, denoting a ſecret mark or token revealed to thoſe only who were initiated into their myſteries; in alluſion whereto, the Creed being uſed by the Chriſtians to the ſame end, was called by the ſame name. He obſerves the great difficulty of finding out the firſt framers of it; ſhews in what ſenſe the Apoſtles are

(7) Of theſe heretics it is, that Ignatius ſays, Ἀπιστοί τινες λέγουσιν, τὸ δοκεῖν αὐτὸν πεπονθέναι. Epiſt. ad Smyrn. p. 2. and his creed ſeems particularly to be levelled againſt them.

(8) Enquiry into the Conſtitution, Diſcipline, &c. Part II. chap. iii. in the concluſion.

world equally at leaſt with that of his former piece in Theology; inſomuch, that one of the Biſhops, a prelate diſtinguiſhed for his erudition, being perſwaded it could hardly be any



are ſaid to be the authors of one part, and the ſucceeding Governors of the Church of the other; that it was not conſtantly [illegible] Eaſtern Church 'till about the beginning of the [illegible] not in the Weſtern Church 'till near the end of the [illegible] century; and that the Creed then [illegible] into whoſe room afterwards [illegible] In the following chapters he treats of the [illegible] articles of the Creed; wherein, to what he [illegible] the *Enquiry* already mentioned [illegible] chapter, [illegible] Arrinians, [illegible] ſeveral [illegible] in the Apoſtles [illegible] againſt it. That the title [illegible] the origin of all things, in [illegible] Gnoſtics and others, who refuſed to give [illegible] it to another being. That [illegible] *Father*, as it denotes the relation of the [illegible] to the Son, it hath been in the Creed from the foundation of Chriſtianity. That the word *Almighty*, as denoting God's infinite power, was intended againſt the Valentinians, Simonians, Menandrians, &c. whoſe hereſies are explained. Secondly, it implies God's providential government, in oppoſition to the Gnoſtics and Marcionites, the former of whom at leaſt aſcribed that government to another being. Thirdly, it ſignifies God's immenſity and omnipreſence, in contradiction to the Gnoſtics, who maintained the Supreme God to be confined within a certain limited ſpace. That *Maker of Heaven and Earth* is levelled againſt the blaſphemous tenets of ſeveral heretics about the creation of the world; which Simon Magus and ſeveral others attributed to Angels; the Valentinians to certain Æons, agreeable to the ſenſe of the latter Platoniſts; the Cerdonians and Marcionites maintaining two eternal principles, God and the Devil, aſſigned the creation to the latter. In the third chapter he ſhews, that the *Son* of God denotes the Meſſias, theſe being convertible terms among the Jews at the time of our Saviour's appearance; that *His only Son* implies the peculiar manner of his ſonſhip, expreſſed in the Greek by generation, and oppoſed, perhaps, to the Valentinian *emiſſion*, or diviſion, from the Father. The title *Lord* expreſſes the dominion of Chriſt, againſt that uſurped by the Devil, and was therefore coeval with Chriſtianity. In the next articles, concerning Chriſt's humanity, he obſerves, that his incarnation was blaſphemed and denied in ſundry ways and manners by various heretics: againſt whom were levelled all the articles of the Creed, from our Saviour's conception to the reſurrection. And to thoſe heretical opinions beforementioned, he adds the names of ſeveral heretics, who denied that Chriſt aſſumed a material body from the ſubſtance of his mother; but held that his body was framed in Heaven, and paſſed through the Virgin Mary as water through a pipe; againſt whom the Creed directs us to believe, by being *born of the Virgin Mary*, that he took from her fleſh the real ſubſtance of his body. That the Crucifixion ſignifies it was not Simon of Cyrene, as the Baſilidians affirmed, but Chriſt himſelf who was crucified. The fourth chapter treats of the deſcent into Hell; which being untouched in the *Enquiry*, we muſt here be more particular upon, as follows. This article relates ſomething done by Chriſt's ſoul, which excludes the burial of his body from being deſigned thereby; and ſecondly, ſomething done by the ſoul in it's ſeparate ſtate, excluſive of the ſufferings thereof whilſt he was alive. In the explication of the article he begins with the word *Hell*, which in old Engliſh exactly anſwers to the Greek *Hades*, which properly ſignifies the habitation or receptacle of all ſeparated human ſouls, whether good or bad. Both Pagans and Jews uſed it in this ſenſe; but there is no one word in the modern Engliſh, French, or Dutch, that comprehends the full meaning of it. The primitive Chriſtians affirmed, that all good ſouls, immediately after their ſeparation from the body, paſſed into a place of joy and happineſs, which they called Hell. In the declenſion of the Greek, and eſpecially of the Latin, tongue, the word Hell began to be uſually applied to the manſion of departed wicked ſouls. Origen, among the Greeks, doubted of the paſſage of faithful ſouls into Hell ſince the reſurrection of Chriſt. But after him the ancient doctrine, that all ſouls go to Hell, and remain there 'till the Reſurrection day, generally prevailed in the Eaſt to this time. Ambroſe, and after him Jerom and others, entertained the ſame notion in the Weſt as Origen had in the Eaſt. Auguſtin was uncertain and wavering in his apprehenſions thereof. The receſſion from the ancient opinion was occaſioned by the mutation of languages and words. But the word Hell, in the Apoſtolical ſenſe, could not in any propriety of ſpeech ſignify any other thing, than the ſtate or place of ſeparated human ſouls, whether good or bad. He next proceeds to explain the word *deſcended*, and obſerves, that it is uſed in the Creed as being a popular kind of ſpeech, taken up from the common opinion, that Hell was in the bowels of, or under, the earth, and thence called in the Latin *Infernum*, and in the Greek *Hades*. Some of the Fathers imagined Hell to be in the heart of the earth, others under the earth, and ſome declared themſelves uncertain about it's ſituation; but all apprehended it to be the common lodge of departed ſouls, and, in a conformity to the common dialect, uſually termed the paſſage thither a deſcent into Hell, as in this article of the Creed: by which they meant no other, than that our Saviour's ſoul being ſeparated from the body, went, by a local motion, to the unſeen habitation of departed ſouls, where it remained 'till his reſurrection day. And this is farther proved from the ends of his going thither, which were chiefly theſe four. Firſt, to ſanctify to his followers the ſtate and place of their ſouls, during their ſeparation from their bodies. Secondly, that he might undergo a neceſſary and principal part of his humiliation. Thirdly, that he might perſonally, and, as the head of his Church, conquer Death and Hell; which he did by returning therefrom, and bringing the ſouls of ſeveral of the Faithful with him. Fourthly, that he might ſubject himſelf to the laws of death, and be in every thing like unto us. From whence it more evidently appears, that the deſcent of Chriſt into Hell ſignifies no other than the paſſage of his ſpirit into the receptacle of ſeparated ſouls. Our author then proceeds to the occaſion of inſerting this clauſe in the Creed, which he ſhews was taken from the Arians, Eunomians, and Apollinarians, who, in a more cunning way than the former heretics, aſſaulted the humanity of our Saviour, by denying that he had a reaſonable ſoul. That there was ſome difference between the errors of the Arians and Apollinarians. But that which rendered this hereſy the more conſiderable and dangerous was, the eſpouſing of it by Apollinarius the Younger, the moſt noted perſon of his age for ability and piety; on which account his fall was a very tender and ſenſible loſs to the Church. His hereſy was, that Chriſt had no human ſoul, but that his Divinity ſupplied the place thereof; the conſequences of which opinion are urged in ſeveral particulars. In oppoſition whereto, this article, or clauſe, was inſerted in the Creed, *He deſcended into Hell*; which point was pitched upon by the governors of the Church, becauſe, of all the arguments uſed againſt the Apollinariſts, it was the moſt unanſwerable: on which account it is frequently urged by the Fathers againſt them, and it falls in moſt naturally with the frame of the Creed, without diſturbing the order thereof. He then proceeds to ſhew the time of introducing this article; upon which head he obſerves, that the firſt Catholic Creed wherein it is found is in that of Aquileia, recorded by Ruffinus; though before that, in a private Creed of Epiphanius, and even before him, in a Creed framed by a party of Arians at the Council of Arminium, held in the year 359. He mentions ſeveral probable deſigns of thoſe Arians herein, as to clear themſelves from the ſuſpicion of the forementioned hereſy, to diſgrace their great antagoniſt Apollinarius, and by that means to create feuds and quarrels amongſt the Orthodox, who finding Apollinarius openly to declare for his hereſy, entirely abandoned him, condemned him in ſeveral ſynods, and at length, according to the example of the Arians, inſerted in the Creed this antidote againſt his hereſy, that Chriſt *deſcended into Hell*; which, in the Aquileian Creed, is expreſſed in a greater latitude, by *deſcending into the lower parts*, wherein the burial might be comprehended and deſigned; but, as it is expreſſed in the Roman or our preſent Creed, it can have no other than the foremen-

tioned

any thing better than a wretched rhapſody out of ſeveral diſcourſes on the ſubject before printed, and eſpecially of Biſhop Pearſon's *Expoſition of the Creed*, who ſeemed to have exhauſted that matter, took it up, and began to read it with this diſadvantageous prepoſſeſſion; but he was quickly convinced of his miſtake, and his injurious prejudice was turned into admiration, upon the ſight of ſo many curious things in this hiſtory, not to be met with in Dr Pearſon, without finding any thing borrowed from that writer's Expoſition (*b*). However, after this our author found himſelf under a neceſſity of dropping all further purſuits upon his beloved ſtudy. The great buſineſs which his abilities as a Lawyer brought into his hands, left him no time to ſpare for it; and in a few years his merit in

(*b*) Nouvelles de la Republique des Lettres mois de Novembre, p. 424, & Decembre, p. 633. 1702.

tioned ſignification, which, to prevent miſtakes, is again repeated. The fifth chapter contains an account of the Reſurrection of Chriſt, which he obſerves, as in the *Enquiry*, was always a part of the Creed, as a fundamental of Chriſtianity. After the Reſurrection follows the Aſcenſion, which, according to him, was introduced againſt an opinion of the Apelleians, viz. that at his Aſcenſion his body was reſolved into it's firſt principles, and aſcended not up on high, or into Heaven; the nomination of which place might probably have been deſigned, in contradiction to a conceit of Hermogenes, that his body went into the body of the ſun. He then proceeds to ſhew, that, by ſitting on the right hand of the Father, we muſt not imagine Chriſt confined to that ſingular poſture, but his advancement to the full exerciſe of his regal office, every thing being ſubjected to him by the Father, who is infinitely able to do it, ſeeing he is Almighty; which word in the Greek is here different from that uſed in the beginning of the Creed, and in this place denotes the irreſiſtibleneſs and efficacy of God's power. He obſerves, this clauſe was firſt found in the Creed of Tertullian, and was inſerted either as a continued proof with the Aſcenſion, that our Lord's body was not diſſolved a little after his Reſurrection; or rather was deſigned againſt ſome heretics, who imagined the body of Chriſt to be in a ſtupid and unconcerned poſture in Heaven, and not to be ſat down at his Father's right hand, exerciſing all power and authority for the good of his Church. The next clauſe being, *From whence he ſhall come to judge the Quick and the Dead*, in the explication of it he recites three interpretations of the *Quick* and the *Dead*, and obſerves the moſt natural to be, that by the *Quick* are meant thoſe that ſhall be alive at the coming of our Lord, and by the *Dead*, thoſe who ſhall then be actually void of life. He ſhews, that this article was levelled againſt the Marcionites and Gnoſtics, of whom the one blaſphemed the final Judge, the other the Judgment. Marcion, with his Maſter Cerdon, held, that the true God, and his ſon Jeſus Chriſt, were all mercy and love, and would never judge the world; which opinion opened a flood-gate to all impiety; in oppoſition whereto the Creed declares, that he ſhall come to judge. In explaining the word judging he notes, that it ſuppoſeth a liberty and freedom of action in the perſon judged, both which were denied by the Gnoſtics, as by the Valentinians, Baſilidians, Carpocrations, and others, who all ſprung from Simon Magus, and united in theſe two hereſies, that man was fatally neceſſitated to all his actions, and that he ſhould not be judged according to his works, but according to his ſpiritual ſeed election, and the like; which tenets were attended with moſt abominable conſequences, and therefore againſt them both it was inſerted in the Creed, that Chriſt *ſhall come to judge the Quick and the Dead*. Wherein, firſt, the liberty of man was acknowledged: which is farther evident from this, that the word Αυτεξουσιας, or that man hath a power over himſelf, was, in ſeveral of the ancient Creeds, part of this article: the Fathers could not imagine a juſt judgment, without ſuppoſing a freedom of the perſon judged. Secondly, it is further declared by this clauſe, that men ſhall be judged according to their works; for which reaſon, while the hereſy of the Gnoſtics raged, it was expreſſed with a ſuitable periphraſis, to prevent any equivocating evaſions. The ſixth begins with the article, *I believe in the Holy Ghoſt*, which being followed by *The Holy Catholic Church*, he obſerves, that clauſe was variouſly placed for different ends in the primitive Creeds, though moſt commonly after that of *the Holy Ghoſt*. That it is juſt mentioned by Tertullian; and that the moſt ancient Creeds read only *the Holy Church*, the term *Catholic*, which ſignifies univerſal, being added by the Greeks to be an explication or determination thereof; and that the *Unity* of the Church was here intended. From this he goes on to *The Communion of Saints*, which was added as an appendix to the former, and introduced about St Auguſtin's time, in oppoſition to the Donatiſts. He takes notice, that by *Saints* are [illegible] underſtood particular Churches and the members thereof, and ſhews why they are ſo called; and then having obſerved that by *Communion* is ſignified the mutual ſociety and fellowſhip of particular Churches and their members, he relates various methods uſed by the Ancients to preſerve that communion; which being refuſed by the Donatiſts, they were on that account juſtly condemned for ſchiſm, and rejected. In oppoſition to whom this article may be conſidered, either as a mark to know a true particular Church by, that ſhe is one that is acknowledged *ſo to be* by other Churches; or rather, as the quality, property, and practice, of ſuch an one as is ſuffered to hold communion with other Churches; in which ſenſe it is alſo added as an explanation of *the Holy Catholic Church*, and was intended to declare, that there ought to be a due communion and fellowſhip between the particular Churches and members of the Catholic and Univerſal one. The laſt chapter contains, Firſt, A brief explication of the *Forgiveneſs of Sins*, which he finds not to be conſtantly repeated in the Creed 'till the days of Cyprian, though ſometimes expreſſed, and always ſuppoſed from the very beginning of Chriſtianity; he notes the two interpretations given of it, a primary and a ſecondary; in order to a clear idea of the firſt, which reſpects ſins committed before Baptiſm, he conſiders the great wickedneſs of the world before the Goſpel, the guilt whereof the Heathens knew by the light of nature, but could not tell how to remove; and the Jews had no univerſal aſſurance of the pardon of ſins; wherefore the Apoſtles were ſent forth to reveal an infallible way for the obtaining it, viz. by believing and being baptized. This is proved to be the primary ſenſe of this article, always ſuppoſed, or elſe expreſſed, in the Creed, from the very firſt preaching of the Goſpel, viz. that all paſt ſins are, for the ſake of Chriſt, remitted to all penitential believers at Baptiſm, wherein theſe two things are contained, Firſt, That our ſins are forgiven for the ſake of Chriſt. Secondly, that the time of their forgiveneſs is at Baptiſm. The ſecondary ſenſe of this article reſpected ſins committed after Baptiſm; in which ſenſe this clauſe was conſtantly recited in the Creed, as an antidote againſt the rigorous tenets of the Baſilidians, the Montaniſts, and eſpecially the Novatians, who denied the pardon of God, or at leaſt of the Church, to ſcandalous ſins, perpetrated after Baptiſm; an opinion which was attended with the worſt of conſequences. Next follows *The Reſurrection of the Body*; under which, beſides enlarging upon what he had in ſubſtance laid down in the *Enquiry*, he adds, that in ſome Creeds this article is the laſt; that in the Greek and Latin Creeds, as alſo in the modern French and Dutch, it is *the Reſurrection of the Fleſh*. Several heretics would equivocatingly aſſent to the Reſurrection of the Body, who denied that the ſame fleſhly ſubſtance ſhould riſe again. In oppoſition to theſe it was emphatically inſerted in the Creed, that there ſhould be a Reſurrection of the Fleſh; that is, that the very ſame fleſhy and material body ſhould riſe again, though the qualities thereof ſhould be changed and altered. As to the clauſe of *The Life Everlaſting*, with which the Apoſtles Creed concludes, he obſerves, that it is pertinently put at the end thereof, becauſe it is the end of our Faith, as the determination of every man to his proper place. The Gnoſtics affirmed, that the greateſt part of mankind ſhould be annihilated at the day of Judgment, againſt whom it is declared in this article, that after *that* there ſhall be *Life Everlaſting*; wherein is included the eternal miſery of the Damned, as well as the everlaſting happineſs of the Bleſſed.

in the Law was diſtinguiſhed by ſome advantageous honours. Upon the death of Sir Salathiel Lovel, the Court of Lord-Mayor and Aldermen of the city of London choſe him Recorder, July 27, 1708, and he was knighted by Queen Anne Sept. 12 following. In 1709, he was appointed one of the managers of the Houſe of Commons at the trial of Dr Sacheverell (*i*); and three years afterwards, he appeared without any gratuity as Counſel for Mr Whiſton, on his trial before the Court of Delegates for hereſy (*k*) [*F*]. Upon the acceſſion of King George I. to the throne, the Lord Trevor being removed from the firſt ſeat in the court of Common-Pleas, Sir Peter King ſucceeded him in the poſt of Lord Chief-Juſtice of that court [*G*] in Michaelmas term 1714 (*l*), and was ſworn of the Privy-Council April 5 following. He was created a peer of England May 25, 1725, by the title of Lord King, Baron of Ockham in Surrey, and the Great Seal being taken from the Earl of Macclesfield, was delivered to our new created peer, whereby he became Lord High-Chancellor of England on the 12th of June following *. But his judgment not being well adapted to the nature of the ſtation in this office, occaſioned him to take extraordinary pains in the diſcharge of it, whereby impairing his conſtitution by degrees, brought him at laſt into a paralytic diſorder, [*F*] that he did not make that figure upon this bench as was expected from the [illegible] which called him to it (*n*); and his diſtemper increaſing, he reſigned the Seals November 26, 1733, and his life on the 22d of July following at eight in the evening, having been taken ſpeechleſs about noon that day. He died at his ſeat at Ockham in Surrey, and on the 29th of July, was interred in that pariſh-church, where a monument is erected to his memory, with a fine marble ſtatue of his Lordſhip (*o*), and an

(*n*) There were more of his decrees repealed by the Houſe of Lords, than of any other Chancellor in the ſame ſpace of time.

(*o*) Collins's Peerage, Vol. V. p. 350. edit. 1756. who obſerves in p. 349. that his Lordſhip was nephew by the mother's ſide to Mr Locke.

[*F*] *He was Counſel for Mr Whiſton, &c.*] He ſeems to have been a particular favourite of his client at this time, and very juſtly, ſince he appears to have his ſucceſs more at heart, and to have laboured more earneſtly towards it than Mr Lechmere, who was his other Counſel, though he refuſed a fee as well as Sir Peter; concerning whom Mr Whiſton has left the following memorandum: 'That on Tueſday April 28, 1747, Samuel 'Collet, my moſt intimate Chriſtian friend, informed 'me at Great-Marlow, that his brother, Governor Col'let, aſſured him from Sir Peter King's own mouth, who 'was one of my Counſel in the Court of Delegates, 'that when none of the Judges would agree to a ſen'tence againſt me in that cauſe of hereſy, the reſt of 'the Court, conſiſting of Biſhops and Civilians, were 'reſolving to proceed without them: 'till Sir Peter 'told them, We ſhould then proceed *againſt them*, 'and ſue them to a præmunire, which ſuch a ſentence 'would incur. Upon which they deſiſted. This re'markable paſſage, continues Mr Whiſton, I had ne'ver heard of; but being ſo very material, and ſo 'fully atteſted, I could not but add it in this place, 'and leave it to the reader's own reflections (9).'

(9) Memoir. of the Life of Mr W. Whiſton, p. 417. edit. 1753.

[*G*] *Lord Chief-Juſtice of the Common-Pleas.*] During the time that he enjoyed this poſt, he ſat Judge on the Crown ſide at the Lent aſſizes at Bury in Suffolk, in 1721, when he ſat on the remarkable trial of Coke and Woodburne, on an indictment on the Coventry Act for ſlitting the noſe of Mr Criſpe. A brief account of which can neither be unentertaining in itſelf, nor foreign to the purpoſe of this work, as it furniſhes a very material part of our author's character, which was greatly intereſted in that trial. The caſe was this: Coke having inſtigated Woodburne to undertake the killing of Criſpe, accompanies this laſt on the day agreed on to the place appointed for Woodburne to fall upon him; who accordingly, upon a ſignal given by Coke, comes up to Criſpe in the dark, gives him ſeveral blows and cuts with a hedging-bill, particularly one, which falling acroſs his noſe, cut through it into the noſtril, though without ſlitting the edge of it, and went off without killing him. Criſpe recovering, proſecutes both the aſſailants upon the Coventry act, who, to evade the indictment, plead an intention to murder, and not to maim ſo as to diſfigure in the ſenſe of that act; and Coke, eſpecially, brings ſeveral witneſſes, who ſufficiently prove his intention was to murder. The King's Counſel charge him with a double intention, one to murder, and another to maim ſo as to diſfigure. Coke obſerves this to be a nice point, and therefore begs Counſel may be allowed them; which is denied by the Chief-Juſtice for this reaſon, that no point of law had ariſen, the intention not being a point of law but a matter of fact; and in the concluſion of his charge to the Jury, ſpeaking to that point, Whether there was an intention to diſfigure? he expreſſes himſelf to the following effect. 'Facts do in ſome meaſure explain themſelves; and the circumſtances 'preceding and accompanying thoſe facts, and the man'ner of doing them, do many times more fully and clearly declare the intent of the party. The priſoner Coke, which defence goes both to him and Woodburne, inſiſts, that their intention was to murder and not to maim; and that if they did maim or ſlit the noſe, it was with an intention to kill, and not with an intention to maim or diſfigure. On the other ſide, it is inſiſted on by the King's Counſel, that though the ultimate intention might be to murder, yet there might be alſo an intention to maim and diſfigure; and though one did not take effect, yet the other had; an intention to kill doth not exclude an intention to maim and diſfigure. The inſtrument made uſe of in this attempt was a bill or hedging-hook, which, in it's own nature, is proper for cutting and maiming; and, when it doth cut or maim, doth neceſſarily and by conſequence diſfigure. The attempt intended on Mr Criſpe was immediately on his own perſon, to do him a perſonal injury. Beſides, the manner of doing and perpetrating this fact is proper to be conſidered, that it was done by violence, and in the dark, when the aſſailant could not well make any diſtinction of blows, but knock'd and cut on any part of Mr Criſpe's body where he could, 'till he had ſunk him down, and done to him what elſe he pleaſed; and if the intention was to murder, you are to conſider whether the means made uſe of, in order to effect and accompliſh that murder, and the conſequences of thoſe means were not in the intention and deſign of the party, and whether every blow and cut, and the conſequences thereof, were not intended, as well as the end for which it is alledged thoſe blows and cuts were given (10).

(10) State Trials, Vol. VI. p. 189, & ſeq. edit. 1730.

The Coventry act is an act of 23 Charles II. cap. 1. It was made on the occaſion of Sir John Coventry having ſuffered the like barbarous uſage. The words are, *That if any perſon or perſons, on purpoſe, and of malice forethought, and by lying in wait, ſhall wilfully cut or diſable the tongue, put out an eye, or ſlit the noſe, with an intention in ſo doing to maim or diſfigure any one of the members beforementioned; the perſon or perſons ſo offending, their counſellors, aiders, and knowing of, and privy to, the offence, ſhall be deemed* Felons, &c.

The intelligent reader will be beforehand with me in obſerving, that this is a particular and very penal act; and it is a ſettled caſe in Law, that ſuch acts are not in any ſort to be ſtrained beyond the letter. To which may be added, that it was generally agreed at that time, that Coke and Woodburne were indeed condemned and executed according to the general rules of juſtice, but not ſtrictly according to the particular rules of our municipal laws. In ſhort, the plea of an intention to murder muſt have immediately ſhocked human nature, and curdled the blood of every one that heard it; ſo that the caſe may be looked on as a defect in that law, to be ſupplied by the religion of the Judge or Jury; and in reality it was generally ſaid then, that the Lord Chief-Juſtice King was pitched upon to go the Norfolk circuit at this time, in order to give a ſanction to the verdict, by his univerſal reputation for ſkill and knowlege in the Law, and the no leſs univerſal character of his humane diſpoſition.

an inſcription on a marble pedeſtal, part of which may be ſeen in the book laſt cited. He married Anne, daughter of Richard Seys of Boverton in Glamorganſhire, Eſq; with whom he lived to the day of his death in perfect love and happineſs, and left iſſue by her four ſons, John, Peter, William, and Thomas, and two daughters, Elizabeth and Anne (p) [H].

(p) Inſcription on his monument.

[H] *He left iſſue by her four ſons and two daughters.*] Of ſome of theſe we have the following account by Mr Collins (11). John King, his eldeſt ſon and heir, who ſucceeded him in honour and eſtate, was member for Launceſton in Cornwall in the firſt parliament of King George II. and was elected for the city of Exeter and for Launceſton in the next parliament, ſummoned to meet 13 June, 1734. His Lordſhip, in May 1726, married Elizabeth, daughter to Robert Fry of Yearty in the county of Devon, Eſq; which lady deceaſed in the 23d year of her age, January 28, 1733-4, leaving no iſſue. And his Lordſhip being in an ill ſtate of health, was adviſed, for change of air, to go to Portugal; but, in his voyage to Lisbon, departed this life on board his Majeſty's ſhip the Ruby, February 10, 1739-40; whereupon the honour and eſtate deſcended to Peter his brother, late Lord King, who, on the 18th of April 1740, was appointed Out-Ranger of Windſor Foreſt in the room of his deceaſed brother; but dying March 22, 1754, unmarried, was ſucceeded in the honour and eſtate by the Chancellor's third ſon William, now Lord King. The Honourable Thomas King, in 1734, married a lady of an ample fortune in Holland, and a native of that country, and hath iſſue by her two ſons and two daughters. P

(11) In his Peerage, Vol. V. p. 351. edit. 1756.

KNOX [JOHN], the principal director of the Reformation in the Scotiſh Church, was deſcended of an ancient and honourable family [A], and was born in the year 1505 (a) at Giffard near Hadingtoun in the county of Eaſt-Lothian in Scotland. He received the firſt part of his education in the Grammar-ſchool of Hadingtoun, and from thence was removed to the univerſity of St Andrews, and placed under the tuition of the celebrated Mr John Mair (b). He applied with uncommon diligence to the academical learning in vogue at that time; and, by the natural ſharpneſs of his wit, having made a very great progreſs in theſe ſtudies in a ſhort ſpace, he obtained the degree of Maſter of Arts when very young (c). As the bent of his inclination led him ſtrongly to the Church, he turned the courſe of his ſtudies early that way, and, by the advantage of his tutor's inſtructions, ſoon became remarkable for his knowledge in ſcholaſtic Theology; inſomuch, that he obtained Prieſt's Orders before the time uſually allowed by the Canons (d); and, from being an auditor of his tutor's inſtructions, he began himſelf to teach, with great applauſe, his beloved ſcience to others (e). But after ſome time, upon a careful peruſal of the Fathers of the Church, and particularly the writings of St Jerom and St Auſtin, his taſte was entirely altered. He quitted the ſubtilizing method of Theorics and the Schoolmen, and applied himſelf to a plainer and more ſimple Divinity (f). At his entrance upon this new courſe of ſtudy, he attended the preaching of Thomas Guilliam (g), a Black-Friar, whoſe ſermons were of extraordinary ſervice to him. This Friar was Provincial of his order in 1543 [B], when the Earl of Arran, then Regent of Scotland, favoured the Reformation (h); and Mr George Wiſhart, ſo much celebrated in the hiſtory of this time, coming from England next year, 1544, with the commiſſioners ſent from King Henry the Eighth, our author being of an inquiſitive nature, learned from him, the following year, the principles of the Proteſtants [C]; with which he was ſo pleaſed, that he renounced the Romiſh religion, and

(e) Melchior Adam, ubi ſupra. Where he ſays, our author, in ſome things, was more happy than his tutor.

(f) Id. ibid.

(g) Or Williams, as his name is written in Keith's Hiſtory of Scotland, p. 37. edit. 1734, folio.

(h) And the Parliament of Scotland made that famous act, allowing the reading of the Scriptures in the vulgar tongue. Id. ibid.

[A] *He was deſcended of an antient and honourable family.*] According to his own account, ſome of his progenitors were partizans of the Bothwell family. 'My great-grandfather and father (ſays Mr Knox to 'the then Earl of Bothwell) have ſerved your Lord-'ſhip's predeceſſors, and ſome of them have died un-'der their ſtandards, and this is a part of the obliga-'tion of our Scotiſh kindneſs (1).' Theſe words ſeem to import, that Mr Knox's predeceſſors were in ſome honourable ſtation under the Earls of Bothwell, at that time the moſt powerful family in Eaſt-Lothian. We are told by another writer (2), that Mr Knox's father was a brother's ſon of the houſe of Renfarly. This, indeed, at firſt ſight, ſeems leſs reconcileable to Mr Knox's own account, which implies, that his family, particularly his great-grandfather, reſided in Eaſt-Lothian. But, perhaps, this great-grandfather was a ſon of that ancient family of Renfarly, which, from the reign of King Alexander II. had poſſeſſed theſe lands in the ſhire of Renfrew, and were ſold by Uchter Knox of Renfarly, to William firſt Earl of Dundonnald in 1665. In confirmation of which, the writer of his Life, prefixed to his Hiſtory in 1732, tells us (3), that he had been informed by very near relations of that family, that the family of Renfarly claimed Mr Knox as a cadet of it, and looked upon it as their honour that he was deſcended of it.

(3) P. ii.

[B] *Thomas Williams was Provincial of the Black-Friars.*] This Friar was born at Athelſton-Ford in Eaſt-Lothian. In 1543, he was chaplain to the Earl of Arran, then Governor of Scotland. Sir James Balfour ſays, he tranſlated the New-Teſtament, and publickly preached againſt the Pope's authority; and that he was winked at by the Regent, and ſupported by the noblemen that had returned lately from England. Which ſerves to explain the words of Buchanan (4) concerning him, that *he was a preacher of ſound judgment and healthſome doctrine*; as alſo of Calderwood, who obſerves (5), that he was *the firſt from whom Mr Knox received any taſte of the Truth.* Accordingly, Mr Knox remarks (6), that *the Provincial was learned and ſound, of a good utterance, but with a great vehemence againſt ſuperſtition.*

(4) Ubi ſupra.

(6) Knox's Hiſtory of the Reformation, &c. p. 33. edit. 1732, folio.

[C] *He learned the principles of the Proteſtants from Mr George Wiſhart.*] George Wiſhart was a ſon of Pitarrow in the Mearns; in his younger years he was Maſter of the Grammar ſchool at Montroſe, and afterwards ſtudied at Cambridge, and returned to Scotland in 1544 (7), as abovementioned. He is reckoned to be the worthieſt perſon of all thoſe who ſupported the new doctrines in this country. There is a full account of him in the general hiſtories of Scotland, to which we refer, and ſhall only mention ſuch particulars as ſerve to ſupport what is advanced in the text above. And for theſe we are obliged to Mr Knox himſelf, who, in his Hiſtory of the Reformation of Religion in Scotland, writes thus: 'In the middis of all the cala-'mities that came upon this realme, after the defec-'tioun of the Governour [the Earl of Arran] from 'Chriſt Jeſus, come in Scotland that blyſſit martyre 'of God, Maiſter George Wiſchart, a man of ſick 'graices, as before him were never hard in this realme, 'yea, and rare to be found yit in ony mon, notwith-'ſtanding this grit lycht of God that ſince his days has 'ſchynit unto us. He was not onlie ſingulerelie leir-'nit, as well in godly knawlege, as in all humane 'ſcience, but alſo he was ſo cleirlie illuminated with 'the ſpreit of the prophefie, that he ſaw not onlie 'thingis parteining to himſelf, but alſo ſick thingis, 'as ſum tounis, and the haill realme efterwards fund 'quhilk he foirſpak, not in ſecreit, but in audience of 'mony, as in their awin places ſhall be declairit.' Knox

(7) Keith's Hiſtory of Scotland, p. 41, 42.

and became a zealous Proteſtant (*i*). He had left St Andrews a little before, being appointed tutor to the ſons of the Lairds of Ormiſtoun and Langnidry, who were both favourers of the Reformation. Mr Knox's ordinary reſidence was at Langnidry, where he not only inſtructed his pupils in the ſeveral parts of learning, but was particularly careful to inſtil into them the principles of piety and the Proteſtant religion. This coming to the ear of the Biſhop of St Andrews, that prelate proſecuted him with ſuch ſeverity, that he was frequently obliged to abſcond, and fly from place to place. Whereupon, being wearied with ſuch continual dangers, he reſolved to retire to Germany, where the Reformation was gaining ground; knowing that in England, though the Pope's authority was ſuppreſſed, yet the greater part of his doctrine remained in full vigour. But this deſign being much diſliked by the fathers of ſuch his pupils, they, by their importunity, prevailed with him to go to St Andrews about Eaſter 1547; and for his own ſafety (*k*), as well as that of their children, to betake himſelf to the caſtle, where they might all be ſecure from the efforts of the Papiſts, and he be in a condition to inſtruct theſe young gentlemen with greater diligence. Here he began to teach his pupils in his uſual manner. Beſides the grammar and other claſſical authors, he read a Catechiſm to them, which he obliged them to give an account of publickly in the pariſh church of St Andrews. He likewiſe continued to read to them the goſpel of St John, proceeding where he left off at his departure from Langnidry. This lecture he read at a certain hour, in the chapel within the caſtle, whereat ſeveral of the place were preſent (*l*). Among theſe, Mr Henry Balnaveis (*m*), and John Rough preacher [*D*] there, being pleaſed with the manner of his doctrine, began earneſtly to intreat him to take the preacher's place; but he abſolutely refuſed, alledging, that he would not run where God had not called him, meaning, that he would do nothing without a lawful vocation. Hereupon, they deliberating the matter in a conſultation with Sir David Lindſay of the Mount, Lyon King at Arms, a perſon of great probity, and a good meaſure of learning, it was concluded to give Mr Knox a charge publickly by the mouth of the preacher. Accordingly Mr Rough, upon the day agreed, preached a ſermon concerning the election of Miniſters, wherein he ſet forth 'What 'power the congregation, how ſmall ſoever it was paſſing the number of two or three, 'had above * any man, in whom they ſuppoſed and eſpied the gifts of God to be, and how 'dangerous it was to refuſe, and not to hear the voice of ſuch as deſire to be inſtructed.' Theſe and other things being declared in general, the preacher then addreſſed himſelf particularly to Mr Knox in theſe words: 'Brother, Ye ſhall not be offended, albeit I ſpeak 'unto you that which I have in charge, even from all theſe that are here preſent; which is 'this. In the name of God, and of his ſon Jeſus Chriſt, and in the name of theſe that 'preſently call you by my mouth, I charge you that ye refuſe not this holy vocation; 'but, as ye tender the glory of God, the increaſe of Chriſt's kingdom, the edification of 'your

(*i*) Mackenzie's Account, &c.

(*k*) Mr Keith, in his Hiſtory, p. 61, 62. obſerves, that our author approved of the murder of Cardinal Beaton, calling it a godly deed, as indeed he does in his Hiſtory, p. 65.

(*l*) Knox's Life, in 1732, p. 4.

(*m*) This perſon was very zealous for the new religion, and very active in promoting it. On which account he is often mentioned by Knox, and from him o cſionally in the ſequel of this article.

* i. e. over.

Knox then proceeds to relate his progreſs through ſeveral parts of the kingdom where he preached his doctrine, beginning at Montroſe; whence he went to Dundee, and thence into the Weſt to Air, where, at Mauchlein, being denied the uſe of the church, he went with his followers, continues Knox, to a dyik in a muir edge, upon the ſouth-weſt ſide of the town, upoun the quhilk he aſcendit: the haill multitude ſtude and ſat about him: God gave the day pleſante and hette. He continewit in preiching mair ner thre hours (8). Thence he returned to Dundee then infected with the plague, where he viſited thoſe who were at the point of death, and took ſpecial care of the health of thoſe that were ſick. Thence paſſing to Montroſe, attempts were made againſt his life by Cardinal Beaton's means, but prevented. He propheeſied anent the progreſs of religion in Scotland, and his own death; went from thence to St Johnſtoun or Perth, and thence paſſed to Leith. He afterwards reſided for ſome time in the houſes of Brumſton, Langnidrie, and Ormiſtoun; and Mr Knox being at Langnidrie at that time, became particularly acquainted with him; or, to uſe his own words, he awaitit upoun him cairefulie frome the tyme he [Wiſchart] come to Lawthiane (9). At Ormiſtoun he was ſeized by Earl Bothwell, who carried him to Elpinſtoun, a ſeat of his own in the neighbourhood; where being delivered to Cardinal Beaton, he was removed by him, firſt to Edinburgh-Caſtle, and thence to that of St Andrews, of which the Cardinal was Governor, in January 1545-6. Thither the Cardinal wrote to the other prelates to convene on the 27 February; and in that meeting, Mr Wiſhart was ſentenced to be burnt the firſt of March following, which was accordingly put in execution (10).'

(8) Hence probably came the practice of preaching in the open air on commons, to which the Scots at this day are much devoted.

(9) Knox's Hiſtory, &c. p. 52.

(10) Keith, ubi ſupra.

[*D*] *John Rough preacher.*] This preacher entered among the Black-Friars in the town of Stirling at the age of 17, and remained there for the ſpace of 16 years; at which time the Lord-Governor, the Earl of Arran, having a kindneſs for him, aſked Cardinal Beaton to grant him a licence to come out of his monaſtery, and become his Lordſhip's chaplain. This being complied with, he continued in that ſtation about a year, until the Governor thought fit to diſmiſs ſuch perſons from his attendance, as favoured the new opinions (11). Preſently after the murder of Cardinal Beaton in the caſtle of St Andrews, in 1547, Mr Rough entered there, and took one lot with the murderers. He is ſaid, continues my author, to be a pious man, but 'tis much to be wiſhed, that he had not ſo far betrayed an erroneous judgment, as to have aſſociated himſelf with the perpetrators of a deed ſo highly contrary to and deſtructive of the principles of the Chriſtian religion (12). However, after he had remained with that debauched crew within the caſtle, until 'the firſt pacification was made, exhorting them all the time to forbear their godleſs courſe of life; and perceiving that he prevailed nought, he then left them, and began to preach in the town of St Andrews a little before Eaſter, 1547; where, during the time that intervened between this and the ſecond ſiege of the caſtle, he continued with Mr Knox to preach and diſpute with the eſtabliſhed clergy. But when the caſtle was beſieged the ſecond time, Mr Rough departed into England (13), and preached at Carliſle, Berwick, and Newcaſtle, in the reign of Edward the Sixth. But, in the ſucceeding reign of Queen Mary, he fled into the Low-Countries, and, together with his wife, gained his livelihood by knitting ſtockings, caps, &c. at Nordin in Eaſt-Friezland, until the end of October 1557, when he came to England to provide neceſſaries for his occupation. There he was elected preacher to a private congregation, but was taken at Iſlington near London on Sunday December 12 following, and burnt to death on the 22d of that month (14). Mr Knox having obſerved, that he ſuffered in England for the veritie of Jeſus Chriſt, declares, that albeit he was not ſo learned [as Williams], yet was he maire ſimple and maire vehement againſt all impietie (15).

(11) Ibid. p. 37, note (*b*), and p. 39.

(12) The writer of Mr Knox's Life, prefixed to the edition of his Hiſtory in 1732, p. iii. ſays, he entered this caſtle merely for his own ſafety

[*E*] *Of*

'your brethren, and the comfort of men, whom ye underſtand well enough to be op-
'preſſed by the multitude of labours, that ye take upon you the public office and charge
'of Preaching, even as ye look to avoid God's heavy diſpleaſure, and deſire that he ſhould
'multiply his graces with you.' Then directing his ſpeech to the audience, he ſaid, 'Was not this your charge to me, and do ye not approve this vocation?' They anſwered, 'It was, and we approve it.' Whereat Mr Knox abaſhed, burſt forth into moſt abundant tears, and withdrew into his chamber. His countenance and behaviour from that day, to the day he was forced to preſent himſelf to the public place of preaching did ſufficiently declare the grief and trouble of his heart: for no man ſaw any ſign of mirth in him, neither yet had he pleaſure to accompany any man for many days afterwards (n). But on the Sunday appointed, aſcending the pulpit, he preached a Sermon upon Dan. vii. 23—28. from which text he proved to the ſatisfaction of his auditors, that the Pope was Antichriſt, and that the doctrine of the Roman Church was contrary to the doctrine of Chriſt and his Apoſtles. He likewiſe gave the notes both of the true Church, and of the antichriſtian Church, &c. of which he gives a full account in his Hiſtory [E]. This ſermon made a great noiſe, and the Popiſh clergy being much incenſed thereby, the Abbot of Paiſley, lately nominated to the ſee of St Andrews, and not yet conſecrated, wrote a letter to the Sub-Prior, who, *ſede vacante*, was Vicar-General, expreſſing great ſurprize, that ſuch heretical and ſchiſmatical doctrines were ſuffered to be taught without oppoſition. Upon this rebuke, the Sub-Prior called a convention of Grey and Black Friars, to meet in St Leonard's-Yard; where, both our preachers being convened, they were charged with ſeveral offences, the particulars of which may be ſeen below [F]. The articles of the charge being read, the Sub-Prior entered into a conference with Mr Knox, who, after that, diſputed with one of the Friars upon ſeveral controverted points between the Papiſts and the Proteſtants. Popery ſenſibly loſt ground by the diſpute; and the ſupporters of it found themſelves obliged to take another method to maintain it's reputation. An order was paſſed, obliging every learned perſon in the abbey and univerſity, to preach in the pariſh-

(n) Knox's Hiſtory, p. 67, 68.

[E] *Of which he gives a full account in his Hiſtory.*] In that Hiſtory Mr Knox tells us, that he had alſo a public diſputation with the Dean of St Andrews upon Popery, at the end whereof the people unanimouſly called on him to let them hear the ſame doctrine from the preaching place, which call he accordingly obeyed. Upon the whole, the writer of his Life in 1732, makes the following remark. *This is the genuine account of Mr Knox's vocation to the miniſtry of the Goſpel, againſt which nothing can juſtly be objected, in the circumſtances he and the Proteſtants in Scotland were at that time. All ſincere lovers of the Reformed Cauſe do own his ordination to be good and valid. And indeed*, continues he, *it would be to no purpoſe to enter into a diſpute with ſome late High-Church men in England, who, by their* principles, not only nullify Mr Knox's ordination, *but that of all the foreign Reformed Churches. Their opinions have been ſufficiently refuted by very able writers; neither is it my preſent buſineſs to inſiſt any further upon that matter* (17). As this writer plainly ſuggeſts, that Mr Knox's ordination was in ſubſtance that of the Preſbyterians, it will be proper to give the opinion of another writer of that nation concerning it; who, ſpeaking of the neceſſity of a reformation at the time it was begun, expreſſes himſelf in the following terms. 'And had none but pious and prudent 'men ſet about that work, and had they put their 'hands to the real abuſes only, we, in this kingdom, 'might have obtained a reformation preferable, perhaps, to that of any other country. But, to our grievous misfortune, things went too much otherwiſe. 'And becauſe the ignorance and viciouſneſs of a great 'many of the then Prieſts, was too viſible either to be 'denied or palliated, therefore the leaders (or I might 'juſtly ſay the leading man) of the Reformation preſumed boldly to declare againſt the order of *Prieſthood* altogether (18), and to introduce in it's room a 'new-faſhioned ſort of miniſtry, unknown in the 'Chriſtian Church for all preceding generations. It 'has been ſaid, continues he, oftener than once, that 'our Reformation was carried on by Preſbyters only: 'a very fallacious affirmation ſurely; ſince the perſons 'here pointed at were any other thing as naturally as 'Preſbyters, and were not indeed Preſbyters at all. 'For though it be true, that Mr Knox and ſome others 'had formerly had the ordination of Prieſts, that is, 'Preſbyters, yet we know that he, and probably thoſe 'others too, acted at that time without any regard to 'their former ſacred Orders, and that they diſclaimed 'the ſame, as being of no worth nor authority. Inſomuch that, Mr Erſkine of Dun; William Harlow, 'Taylor in Cannon-gate Edinburgh; Paul Methuen, 'Baker in Dundee; and many more, no doubt, were 'we acquainted with the minute circumſtances of thoſe 'times, came into the ſame degree with them: and 'they all might have denominated themſelves Biſhops, 'Patriarchs, or Popes, as well as Preſbyters, or whatever elſe they pleaſed, or whatever we may think 'fit to call them now; though indeed they were none 'of all theſe orders, by any title or language known 'in the Chriſtian Church before that time. And any 'man may, by the ſame right, aſſume to himſelf the 'authority of Biſhop, Preſbyter, or Deacon, at any 'time he and his fellows ſhall find proper ſo to do — 'In a word, ſo intoxicated was the principal director 'of our Reformation, with the extravagances he had 'ſeen in foreign parts, that (contrary to the good advice given him) unleſs he got every thing plucked up 'that had been before, he could never ſuffer himſelf 'to be perſwaded, but that Popery was ſtill regnant 'in the land. And, unleſs Prince and Peers, Prieſts 'and People, would accommodate themſelves to his '*devout imaginations* (as he owns ſome of his new-fangled ſchemes were denominated), there was not any 'ſafety for them at all. And thus, concludes this 'writer, by his unruly and miſgoverned zeal, the 'goodly polity, which had ſo long continued, and 'ought ſtill to have ſubſiſted, in the Church, was utterly defaced. And the divine worſhip was left naked and bare, beyond any example in Antiquity: 'and, inſtead of that beauty, which might have been 'the ornament of our land, we relinquiſhed to our 'neighbouring nation the honour of claiming to themſelves the glory of the Reformed Churches (19).'

(17) Life of Mr Knox, p. vi.

(18) Eraſmus had cautioned Luther againſt this miſmanagement; but his good advice had not the leaſt effect. See the Letters between thoſe two great men.

(19) Keith's Hiſtory of Scotland, p. 594.

[F] *The articles of which may be ſeen below.*] Theſe are the following. 1. No mortal man can be the head of the Church. 2. The Pope is ane Antichryſt, and ſo is no member of Chriſtis miſtical bodie. 3. Man may nether mak nor devyſe a religioun, that is acceptabill to God, bot man is bound to obſerve and keip the religioun, that fra God is reſtavit, without chopping or changing thairof. 4. The Sacramentis of the New Teſtament aucht to be miniſtrate, as they war inſtituted by Chriſt Jeſus, and practiſit be his Apoſtles; nothing aucht to be addit unto thame, nothing aucht to be diminiſhed frome thame. 5. The Maſs is abbominabill idolatrie, blaſphemous to the deyth of Chriſt, and a prophanation of the Lordis Supper. 6. Thair is no purgatorie, in the whiche the ſoullis of men can nether be pyned or purged efter this lyif. But Hevin reſtis to the faithfull, and Hell to the reprobate and unfaithfull. 7. Praying for the deid is vane, and to the deid is idolatrie. 8. Thair is no Biſchopis, except they preiche evin by thameſelvis, without ony ſubſtitute. 9. The teindis, by Godis law, do not apertein of neceſſitie to the kirkmen (20).

(20) Knox's Hiſtory, p. 70, 71.

[G] He

parish-church by turns upon Sundays, and, in their ſermons, not to touch upon any of the controverted points. But Mr Knox rendered this caution ineffectual, by preaching on the week-days; when he took occaſion to praiſe God that Chriſt Jeſus was preached, and nothing ſaid publickly againſt the doctrine he had taught them: proteſting withal, that if in his abſence they ſhould ſpeak any thing which they forbore while he was preſent, that his hearers ſhould ſuſpend their judgment 'till it ſhould pleaſe God they ſhould hear him again. And he was ſo ſucceſsful in his work, that all the people in the Caſtle, and a great number in the Town, openly profeſſed the Proteſtant doctrine (*o*), and teſtified it by partaking of the Lord's Supper in the ſame manner it was adminiſtred in the Church of Scotland, after the Proteſtant religion was eſtabliſhed by Law, anno 1560 (*p*). And this, in 1547, was, perhaps, the firſt time that the Euchariſt was diſpenſed in Scotland in the way of the reformed churches. Mr Knox continued thus in the diligent diſcharge of his miniſterial charge 'till June that year, when the caſtle was ſurrendered to the French, upon terms, that all in the garriſon ſhould be carried ſafe to France; and, in caſe they were not ſatisfied with the conditions of their liberty there, they ſhould be conveyed at the expence of that King wherever they pleaſed, Scotland excepted. Mr Knox with the reſt was carried to France, and remained a priſoner on board the gallies 'till the latter end of the year 1549 [G], when, being ſet at liberty, he paſſed to England; and going to London, was there licenſed (*q*), and appointed preacher, firſt at Berwick and next at Newcaſtle. During this employ, he received a ſummons, in 1551, to appear before Cuthbert Tonſtal Biſhop of Durham, for preaching againſt the Maſs (*r*). In 1557, he was appointed Chaplain to King Edward the Sixth [H]; and, the enſuing year, he had the grant of an annuity of forty pounds, payable quarterly out of the Augmentation office, 'till ſome benefice in the Church ſhould be conferred on him (*t*) [I]. The ſame year

(*o*) Ibid. p. 75.

(*p*) Knox's Life, p. 7. edit. 1732.

(*q*) Either by Cranmer or Somerſet the Protector. Strype's Memorials of the Reformation, Vol. II. p. 235.

(*r*) See a MS. in the hands of Mr Woodrow, Miniſter of Eaſtwood in 1732.

(*t*) Strype's Life of Archbiſhop Parker, p. 366.

[G] *And was kept a priſoner on board the gallies 'till* 1549-50.] The writer of Knox's Life having obſerved, that he was carried with the reſt to France, tells us (21), that 'he continued there ſome ſhort 'time; for, in the 85th page of this edition of his 'Hiſtory, we are told, that he was delivered that 'ſame winter, and came over to England.' But this ſeems to be a miſtake, and ſuch as could not have eſcaped him, had he peruſed with due attention the whole account of this part of Mr Knox's Life, as it ſtands in his Hiſtory. He tells us there, that, upon the penult of June [1547], appeared in ſight of the caſtle twenty-one French gallies, with a great armie, p. 75. The caſtle ſurrendered to them on Saturday the laſt day of Jullie, p. 76. The galleys, with the ſpoyl, returned to France after certain days, and paſſing up the Sequan [Seine], lay before Rowane [Rohan], where the principal gentlemen [taken out of the Caſtle of St Andrews] were put into ſundrie priſons; the reſt were left in the galleys, and there miſerably entreated.—The ſame year, in the beginning of September, entreit into Scotland an armie from Ingland, p. 77. That winter following were great hardſhips made upon the borders of Scotland by the Engliſh, p. 78.—The Lanetrane following was Hadingtoun fortified by the Engliſh. The moſt part of Lauthiane, from Edinburgh eiſt, was either aſſured or laid waſt. The troubles of Scotland coming to France, there was prepared ane navye and armie. The navy was ſuch as never was ſeen to come from France; for, beſides the gallies, which were twenty-two in number, they had threeſcore great ſhips beſides victuallers.—They arrived in Scotland in May, anno 1549.—She [Mary, afterwards Queen of Scots] was convoyed by the weſt ſeys to France, with four galleys and ſome ſchips, p 80.—Ordour was taken, that nixt September ſume galleys ſould remaine in Scotland.—That winter remained Monſieur de Termes [who had come with the French army] in Scotland, p. 81. when the quarrel happened between ſome French ſoldiers and the citizens of Edinburgh, in which the Provoſt was ſlain.—This winter did the Laird of Rothe moſt innocently ſuffer, and was forfeited, p. 82. and was beheaded, becauſe he was known to be a great friend to thoſe that were in the Caſtle of St Andrews; of whoſe deliverance, and of God's wondrous working with them during the time of their bondage, we mun now ſpeik. Accordingly, he begins that account, p. 83. and continuing it in the ſubſequent page, he writes thus of himſelf. Mr James Balfour and Johne Knox being anuit one galley.—And being wondrous familiar with him, would oftimes ask his judgment, *if he thought they ſould ever be delivered?* Whoſe anſwer was, even for the day they enter'd into the galleys, *that God would deliver them from that bondage.* And betwixt Dundee and St Andrews the ſecond tyme

(21) P. viii.

that the galayis arrived to Scotland, the ſeid John being ſo extremely ſeik, that few hopid his life, the ſaid Maiſter James willed him to look to the land, and aſked him if he knew it? Who anſwerit, *Yes, I know it well; for I ſee the ſteiple of that plaice, quhair God firſt oppinit my mouth in publict to his glorie, and I am fullie perſuadit, how weik that ewir I now appeir, that I ſall not depart this Lyif, till that my toung ſall glorifie his Godlie name in the ſame placie.* He then proceeds to obſerve, that five of the priſoners in Mount St Michell wrote to him for his opinion, whether they might with a ſafe conſcience break priſon? To which he anſwered, that they might, if they could do it without bloodſhed, p. 84.—This counſel being followed, they all four made their eſcape, and two of them, after the ſpace of twelve or thirteen weeks, got into a French ſhip as mariners, and landing in the Weſt [of Scotland], came thence to England, where they met before them the ſaid Johne Knox, *who that ſame winter was delivered*, and Alexander Clerk in his company, p. 85. From this account it is evident, that by theſe laſt words, *that ſame winter*, is not meant the winter of 1547, but that of 1549. And agreeably to this time of his arrival in England, we find no mention of any thing done by him there, either by himſelf or any other writer, 'till the year 1550 (22).

(22) In his Hiſtory, lib. iv. p. 289. he ſays himſelf he was reſident in England only the ſpace of five years, and that he abode two years in Berwick, ſo long in Newcaſtle, and a year in London. But this is not the only paſſage in that hiſtory, lib. iv. wherein the expreſſion is inaccurate.

[H] *He was appointed Chaplain to Edward the Sixth.*] Mr Strype, from whom we have the account, expreſſes it in theſe terms: 'In the month of December 1551, it was thought fit that the King ſhould retain ſix Chaplains in Ordinary, who ſhould not only wait on him, but be itineraries, and preach the Goſpel all the nation over; two of theſe ſix to be ever preſent at Court, and four abſent abroad in preaching, one year two in Wales, two in Lancaſhire and Derby; next year, two in the Marches of Scotland, and two in Yorkſhire; the third year, two in Devonſhire, and two in Hampſhire; the fourth year, two in Norfolk and Eſſex, and two in Kent and Suſſex; and theſe ſix to be Bill, Harley, Pern, Grindal, Bradford, the ſixth was daſhed out of the King's Journal, whence Mr Strype takes all this, but probably was Knox; for he was one of the preachers of the North at Newcaſtle and elſewhere, and had a ſalary paid him out of the Exchequer. But the number was reduced to four, Bradford alſo being left out, who were ſtiled the King's Ordinary Chaplains (23).'

(23) Strype's Memorials, Vol. II.

[I] *He had an annuity of forty pounds for his good ſervice in preaching in the North.*] Mr Strype, to whom we are alſo indebted for this particular, ſuppoſes it was out of reſpect to John, that one William Knox, his brother or relation, had, in September 1552, a paſſport granted to him to bring in or carry out of any haven in England, all ſuch merchandizes as were permitted by law, to endure for one whole year, and to make the ſaid traffic in any ſhip of the burden of

year he came into ſome trouble, on account of a bold ſermon preached at Newcaſtle upon Chriſtmas-day, againſt the obſtinacy of the Papiſts [K]. And, about the latter end of the year, viz. in 1552-3, he returned to London; and being well eſteemed by his Majeſty and ſome of the Court, for his zealous preaching againſt the errors of the Romiſh Church, he was appointed to preach before the King and Council at Weſtminſter, a little before his Majeſty's departure thence. In this ſermon he had ſeveral piercing glances againſt ſome great ones, who were ſecretly well-wiſhers to the old religion, though outwardly they ſubmitted to the then preſent eſtabliſhment (u). But notwithſtanding that it muſt have been about this time, that the Council ſent to Cranmer, Archbiſhop of Canterbury, to beſtow the living of Allhallows in London upon him, which accordingly was offered him; but he refuſed it, not caring to conform to the Engliſh Liturgy as it then ſtood [L]. However, he ſtill held his place of Itinerary Preacher; and, in the diſcharge of that office, going to Buckinghamſhire, was greatly pleaſed with his reception at ſome towns, particularly at Amerſham, in that county (w); and he continued to preach there, and at other places, ſome time after Queen Mary's acceſſion to the throne. But that year, viz. in February 1553-4, he left England [M], and croſſing the ſea to Dieppe in France, went thence to Geneva; where he had not been long, when he was called by the congregation of the Engliſh refugees, then eſtabliſhed at Franckfort, to be preacher to them. This vocation he obeyed (though unwillingly) at the command of John Calvin. He continued at Franckfort, 'till ſome of the principal perſons of his congregation (x), finding it impoſſible to perſwade him to uſe the Engliſh Liturgy, reſolved to effect his removal from the place. In that view, they accuſed him to the magiſtrates of treaſon, committed both againſt their ſovereign, the Emperor of Germany, and alſo againſt their own ſovereign

(u) Particularly the Earl of Northumberland and the Marquis of Winchester (both preſent at the ſermon), in character of Achitophel the Counſellor, Judas the Purſe-bearer, and Shebna the Scribe, Comptroller, and Treaſurer. Strype's Memorials, &c. and Knox's Admonition, &c.

(x) Particularly Dr Richard Cox, King Edward VIth's Preceptor.

of a hundred tons (24). From ſome of Mr Knox's original letters, in the hands of the Reverend Mr Woodrow, it appears, that he enjoyed this annuity of 40 pounds 'till the beginning of Queen Mary's reign. In a letter to Mrs Bowes his mother-in-law, dated 1553 *, wherein he tells her, that he was obliged to abſcond by reaſon of the fury of the Papiſts, he writes thus: *I will not make you privy how rich I am, but off London I departed with leſs money than ten groats: but God hath ſince provided, and will, I doubt not, aburdantly for this life. Either the Queen's Majeſty, or ſome treaſurer, will be 40 l. richer by me, for ſo meickle lack I of duty of my patent; but that little troubles me.*

[K] *A Sermon againſt the Papiſts.*] In this ſermon he affirmed, that, whoſoever in his heart was an enemy to Chriſt's Doctrine and Goſpel, which was then preached within the realm, was an enemy to God, and ſecret traitor alſo to the Crown and Commonwealth of England, and that, as ſuch, thirſted after nothing more than the King's death, which their iniquities would procure. He ſaid, they regarded not who ſhould reign over them, ſo that their idolatry might be erected again (25).

[L] *Not caring to conform to the uſe of the Engliſh Liturgy, he refuſed it.*] We have the following account of this matter alſo from Mr Strype. 'April '14, 1552-3, Knox was called before the Council, 'who demanded of him three queſtions, 1. *Why he re-* 'fuſed the benefice provided for him in London? To 'which he anſwered, that *his conſcience did witneſs,* 'that he might profit more in ſome other place than in 'London, and therefore had no pleaſure to accept any 'office there. But he might have anſwered, that he 'refuſed it, becauſe of Northumberland's contrary 'command, who, perhaps, deſigned it for him that 'ſucceeded to it, namely, Samſon (26). 2. *Whether* 'he thought, that no Chriſtian might ſerve in the eccle-'ſiaſtical miniſtration, according to the rites and laws 'of the realm of England? To which he ſaid, that 'many things at that time were worthy of reformation 'in the Miniſters of England, without the reformation 'whereof, no Miniſter did or could diſcharge his con-'ſcience before God; for no Miniſters in England had 'authority to ſeparate the leapers from the heal, viz. 'the whole and ſound, ſays Mr Strype, that is, they 'had not the full power of excommunication, which, 'he ſaid, was a chief point of his office. 3. They 'aſked him, *If kneeling at the Lord's Table was not* 'indifferent? He anſwered, that *Chriſt's action was* 'moſt perfect, and it was done without kneeling; and 'it was moſt ſure to follow his example, and that 'kneeling was man's addition and invention (27). A-'bout this queſtion there was great contention between 'the Lords of the Council and him. There were then 'preſent the Archbiſhop of Canterbury, Cranmer; 'the Biſhop of Ely, Godrick; Lord Chancellor; Lord 'Treaſurer; the Earls of Bedford, Northampton, 'Shrewſbury; the Lord Chamberlain, and both the 'Secretaries. After long reaſoning it was ſaid to him, 'that he was not called of any ill meaning, and that 'they were ſorry to know him of a contrary mind 'to the common order. He anſwered, he *was ſorry* 'the common order was contrary to Chriſt's inſtitution. 'He was diſmiſſed with ſome gentle ſpeeches, and 'they willed him to adviſe with himſelf, whether he 'would communicate according to that order (28).'

But we muſt not conclude this remark, without taking notice of what is affirmed by ſome writers, viz. that beſides the living of Allhallows, Mr Knox had the offer of a biſhopric made to him in Edward the Sixth's reign, and that he refuſed it. Among theſe is Melchior Adams (29), whoſe words are, *Imperabat illis temporibus Angliæ Edwardus VI. qui Cnoxum obſervabat, ac qua erat pietate favore ſingulari eum proſequebatur, itaque cum epiſcopatus de Regis voluntate, Cnoxo eſſet oblatus, indignabundus Cnoxus, non ſolum honorem recuſavit, ſed etiam oratione gravi titulos illos improbavit, quaſi regni Antichriſtiani quiddam redolentes.* 'At that time in England reigned Edward VI. who 'obſerving Knox's piety, had a ſingular kindneſs for 'the man, and he was offered a biſhopric by the 'King's command; but he refuſed it with indignation, 'vehemently condemning thoſe titles, as ſavouring of 'the kingdom of Antichriſt.' Mr Calderwood gives us a paſſage (30), which ſeems to confirm this account of Adams's. 'Mr Knox, ſays he, being then reſident 'in St Andrews, and preaching upon the Lord's day, 'Feb. 10, 1572, the Earl of Mar being preſent, 'refuſed to inaugurate the Biſhop; yea, in open au-'dience of many then preſent, he denounced *anathe-'ma* to the giver and *anathema* to the receiver, as I 'find in a certain manuſcript.' And the ſame writer further obſerves, that, 'When Mr John Rutherford, 'Provoſt of the Old College, alledged Mr Knox's re-'pining proceeded from male-contentment [becauſe he 'was not made a Biſhop himſelf], Mr Knox purged 'himſelf the next Lord's day, ſaying, I have refuſed 'a greater biſhopric than ever it was, which I might 'have had with the favour of greater men than he 'hath his, I did and do repine for the diſcharge of 'my conſcience (31).' Mr Petrie gives the ſame account, with this addition, that Mr Knox ſaid, *I did and do repine for the diſcharge of my conſcience, that the Church of Scotland be not ſubject to that order* (32).

[M] *He left England in February* 1533-4.] In a commentary of Mr Knox's MS. (in the hands of the Reverend Mr Woodrow abovementioned), upon the ſixth Pſalm, directed to his mother-in-law Mrs Bowes, he ſigns it, thus, *Upon the very point of my journey, the laſt of January,* 1553-4. *Watch and pra. Your ſon with ſorrowful heart, J. K.*

Another paper, alſo in Mr Woodrow's hands, bears this title: *John Knox, to the Faithful in London, Newcaſtle, and Berwick, &c.* Which letter ends thus: *From an fair troublit hairt, upon my departure from Diepe,* 1553-4, *quhidder God knawis, John Knox* †.

reign in England, Queen Mary. Hereupon, the magiſtrates not having it in their power to ſave him, if he ſhould be required either by the Emperor, or in his name by Queen Mary, gave him private notice thereof; which he no ſooner received, than he ſet out for Geneva (*y*); where he arrived March 26, 1555, but ſtaid there only 'till Auguſt following; when, reſolving after ſo long an abſence to make a viſit to his native country, he went to Scotland (*z*). Upon his arrival there, which was in the end of harveſt, finding the profeſſors of the reformed religion much increaſed in number, and formed into a ſociety under the inſpection of ſome teachers (*a a*), he aſſociated himſelf with them, and preached to them. Preſently after this, he accompanied one of them, the Laird of Dun, to his ſeat in the North, where he ſtayed a month, teaching and preaching daily to conſiderable numbers who reſorted thither, among whom were the chief gentlemen in that country. From thence returning to Lothian, he reſided for the moſt part in the houſe of Calder with Sir James Sandilands *, where he met with many perſons of the firſt rank; viz. the Maſter of Erſkine, afterwards Earl of Mar; the Lord Lorn, afterwards Earl of Argyle; Lord James Stewart, Prior of St Andrews, afterwards Earl of Murray, and Regent of Scotland. With theſe noble perſonages he converſed familiarly, and confirmed them in the truth of the Proteſtant doctrine. In the winter of 1555, he taught, for the moſt part, in Edinburgh. About Chriſtmas 1556, he went to the Weſt of Scotland at the deſire of ſome Proteſtant gentleman, as John Lockhart of Bar, Robert Campbell of Kinzeancleugh, and others, and preached † in many places in Kyle, viz. the houſes of Bar, Carnal, Kinzeancleugh, Uchiltree, Gathgirth, and the town of Air; and in ſome of theſe places he celebrated the Euchariſt after the manner of the Reformed Churches. He viſited likewiſe the Earl of Glencairn, at his houſe of Fynlaiſton in the county of Renfrew, and adminiſtred the Sacrament to his Lordſhip's family. From theſe weſtern parts he returned to the Eaſt, and reſided ſome time in Calder, where many reſorted to him both for doctrine and the benefit of the Sacraments. From thence he went a ſecond time to the Laird of Dun's houſe in the county of Mearns, where he preached more publickly than before, and adminiſtred the Sacrament to many perſons of note at their deſire. The Popiſh clergy being greatly alarmed at this ſucceſs of Mr Knox, in promoting the Proteſtant cauſe, ſummoned him to appear before them in the Church of Black-Friars in Edinburgh, on the 15th of May 1556. Several gentlemen of diſtinction, among whom the Laird of Dun was none of the leaſt conſiderable, reſolving to ſtand by him, he determined to obey the ſummons. But the proſecution was dropped ‖, when the Biſhops perceived ſuch a conſiderable party appearing in his behalf. However, he went to Edinburgh on the day to which he was cited, where he preached to a greater audience than ever he had done before; in the Biſhop of Dunkeld's great houſe he taught, both before and after noon, to great numbers for ten days. At this time the Earl of Glencairn prevailed with the Earl Mariſchal, and his truſtee Henry Drummond, to hear one of Mr Knox's ſermons. They were extremely well ſatisfied with his diſcourſe, and propoſed to him to write to the Queen Regent an earneſt letter, to perſwade her, if poſſible, to hear the Proteſtant doctrine. He complied with their deſire, and wrote to her in May 1556. The letter was delivered by the Earl of Glencairn; the Queen read it, and gave it to James Beaton, Archbiſhop of Glaſgow, with this ſarcaſm: *Pleaſe you, my Lord, to read a Paſquil (b b)*. This gave occaſion to Mr Knox to make ſome additions to his letter, which he printed afterwards with the additions at Geneva, 1558. While our Reformer was thus occupied in Scotland, he received letters from the Engliſh congregation at Geneva, earneſtly intreating him to come thither (*c c*). Having ſeriouſly conſidered this invitation, he determined to return to that people, who had ſuch a great regard for him. Accordingly, in July 1556, he left Scotland, went firſt to Dieppe in France (*d d*), and from thence to Geneva. He had no ſooner turned his back, than the Biſhops ſummoned him to appear before them; and, upon his non-appearance, they paſſed a ſentence of death againſt him for hereſy, and burnt him in effigy at the Croſs of Edinburgh. Againſt this ſentence he formed, and afterwards printed at Geneva, in 1558, his *Appellation from the cruel and moſt unjuſt Sentence pronounced againſt him by the falſe Biſhops and Clergy of Scotland; with* his *Supplication to the Nobility, Eſtates, and Commonality, of the ſaid Realm.* On the 10th of March 1556-7, the Earl of Glencairn, the Lord Lorn, the Lord Erſkine *, and Lord James Stewart, afterwards Earl of Murray, the chief promoters of the Reformation at that time in Scotland, judging their affairs to be in a pretty good poſture, and being ſenſible of the uſefulneſs of Mr Knox for the purpoſe, ſent him an expreſs, earneſtly deſiring him to return home (*e e*). This letter coming to his hands in May 1557, he immediately communicated it to his congregation, who were very unwilling to part with him; but having conſulted with Mr Calvin and other worthy miniſters, they gave it as their opinion, that he could not refuſe ſuch a plain call, unleſs he would declare himſelf rebellious to God and unmerciful to his country. The congregation upon this yielded to his return to Scotland, and he wrote back by the meſſengers who brought the letter, that he would return to them with all reaſonable expedition. Accordingly, having provided for his congregation at Geneva, he left them in the end of September, and came to Dieppe in his way to Scotland on the 24th of October (*f f*). But there he unexpectedly met with letters from thence, contrary to the former, informing him, that new conſultations were entered into, and adviſing him to ſtay at Dieppe 'till the final concluſion of them. This was alſo further explained in another letter, directed to a friend of Mr Knox, wherein he was told, that

(*f f*) Life of Knox, p. xx.

* So it is in Knox's Life, p. xx. but in the ſigning it is only Erſkine, by which Mr Keith ſuppoſes is meant John Erſkine of Dun, the Lord Erſkine having not yet joined himſelf to this party. Keith's Hiſtory, p. 65. note (*a*).

that many of thoſe who had before joined in the invitation, were becoming inconſtant, and began to draw back (*gg*). Upon the receipt of theſe advices, Mr Knox wrote an expoſtulatory letter to the Lords who had invited him, concerning their raſhneſs; wherein he denounced judgments againſt ſuch as ſhould be inconſtant in the religion they now profeſſed. Beſides this, he wrote ſeveral other letters from Dieppe, both to the nobility and profeſſors of the Reformed Religion of an inferior degree, exhorting them to conſtancy in their profeſſion, and giving ſome uſeful cautions againſt the errors of ſectaries, which grew up about this time both in Germany and England. In theſe letters he alſo enjoined them to give due obedience to authority in all lawful things (*hh*). Theſe letters exciting them to a greater degree of zeal for the doctrine they had eſpouſed, they came at laſt to this reſolution, that 'they would follow forth their purpoſe, and commit themſelves, and whatſoever God had given them, into his hands, rather than ſuffer idolatry to reign, and the ſubjects be defrauded of the only food of their ſouls;' and that every one might be aſſured the more of one another, a common band or covenant was made and entered into by them, dated at Edinburgh December 3, 1557 †. Mr Knox returned to Geneva in the beginning of the year 1558 (*ii*), and the ſame year he printed there his treatiſe, intitled, *The firſt Blaſt of the Trumpet againſt the monſtrous Regiment of Women* (*kk*), an account of which ſhall be given in remark [*N*]. He deſigned to have written a ſubſequent piece, which was to have been called *The Second Blaſt*. But Queen Mary of England dying (*ll*) ſoon after *The Firſt Blaſt* was publiſhed, and he having a great eſteem of Queen Elizabeth, and entertaining great hopes of ſignal advantages to the Proteſtant cauſe from her government, whom he looked upon as an inſtrument raiſed up by the good Providence of God for the good of his people, he went no farther (*mm*) [*O*]. In April 1559, he determined to

(*ll*) Viz. Nov. 17, 1558.

(*mm*) Life of Knox, p. xxi, xxii.

[*N*] *An account of which ſhall be given below.*] Mr David Calderwood takes notice (33) that the cruel and bloody government of Queen Mary of England, and the endeavours of Mary of Lorrain, Queen Regent of Scotland, to break through the legal conſtitution, and introduce tyrannical government, and the domination of the French, were the chief motives which induced Mr Knox to write and publiſh this piece; that writer adds, that in it he ſhews his erudition and variety of reading, more than in any other of his treatiſes. However, it is certain it made a great noiſe, and was the occaſion of much obloquy and reproach againſt him. Yet it was much approved by ſeveral of the exiled Proteſtants, though diſliked by others. Mr Strype obſerves, that, 'After the death of King Edward, 'though Queen Mary was acknowledged by the far 'greater part of the Proteſtants in England, yet ſome 'few of them appeared for Lady Jane Grey; and Mr 'Goodman ‖, with ſome others, declared againſt the 'lawfulneſs of the government of women, an opinion 'not peculiar to them, but adopted by ſeveral learned 'men, and maintained by the whole kingdom of 'France. The Proteſtants in England, who were of 'this opinion, are accounted Mr Knox's diſciples, 'whoſe conceit, ſays Mr Strype (34), in this matter, 'chiefly ſprung from the fears they apprehended from 'the Lady Mary's government, and her marrying a 'foreigner (35).' Mr Strype alſo informs us, that Fox the Martyrologiſt had expoſtulated with Knox about this matter of *the Blaſt*, and has preſerved Knox's letter in anſwer to Fox, dated at Geneva March 18, 1558. In this letter he makes a modeſt apology for writing this book, does not excuſe any vehement or raſh expreſſions he has uſed in it, but ſtill affirms, that he is perſwaded of the truth of the poſitions laid down therein.

(33) In his MS. Hiſtory already cited.

‖ The title of Goodman's book is, *How Superior Powers ought to be obeyed of their Subjects, and wherein they may lawfully be diſobeyed and reſiſted, &c.* Mr Wood, who gives an Account of him, attributes *The Firſt Blaſt of the Trumpet, &c.* to him. Athen. Oxon. Vol. I. p. 315. Mr Strype informs us, that he recanted in the reign of Queen Elizabeth, and gives us the words of his recantation.

(34) In his Memorials.

[*O*] *He went no farther.*] Before the death of Queen Mary, he publiſhed at Geneva, in 1558, an advertiſement concerning the Second Blaſt, as follows:

John Knoxe to the reader.

'Becauſe many are offended at the firſt Blaſt of the 'Trompett, in which I affirme, that to promotte a 'woman to bear rule or empire above any realme, 'nation, or citie, is repugnant to nature, contumlie 'to God, and a thing moſt contrariouſe to his revealed 'and approved ordenance: and becauſe alſo that 'ſomme hath promiſed (as I underſtand), a confutation 'of the ſame, I have delayed the ſecond Blaſt, tyll 'ſuch time as their reaſons appere, by the which I 'either may be reformed in opinion, or els ſhall have 'further occaſion more ſimply and plainly to utter 'my judgement. Yet in the meane tyme, for the 'diſcharge of my conſcience, and for avoyding ſuſpi'tion, which might be ingender'd by reaſon of my 'ſilence, I could not ceaſe to notify theſe ſubſequent 'propoſitions, which by God's grace I purpoſe to en'treat in the ſecond Blaſt promiſed.

'1. It is not birth onely, nor propinquity of blood, 'that maketh a King lawfully to reigne above a peo'ple, profeſſing Chriſte Jeſus, and his eternal veritie; 'but in his election, muſt the ordenance which God 'hath eſtabliſhed in the election of inferiour judges, 'be obſerved.

'2. No manifeſt idolater, nor notorious tranſgreſſor 'of God's holie precepts, oght to be promoted to anie 'publick regiment, honor, or dignitie, in any realme, 'province, or citie, that hath ſubjected themſelf to 'Chriſte Jeſus, and to his bleſſed Evangil.

'3. Neither can othe nor promeſſe bynd any ſuch 'people to obey and maintein tyrantes againſt God, 'and againſt his trueth knowen.

4. But if either raſhely they have promoted any ma'niſeſt wicked perſonne, or yet ignorantly have choſen 'ſuch a one, as after declareth himſelf unworthie of 'regiment aboue the people of God (and ſuche be all 'idolaters and cruel perſecutors) moſt juſtlie may the 'ſame men depoſe and puniſh him, that unadviſedly 'before they did nominate, appoint, and electe.'

Matth. vi. *If the eye be ſingle the whole body ſhall be clere.*

We ſee our author here ſpeaks of an anſwer to the Blaſt, and accordingly, in April 1559, there was printed at Straſburgh an anſwer to it, written by John Ailmer an exile, formerly Archdeacon of Stowe, and Preceptor to Lady Jane Grey ‡, and afterwards made Biſhop of London by Queen Elizabeth. The induſtrious Mr Strype has written his life, and in it has given an account of this performance. The title of it is, *An Harborough for faithful and true Subjects, againſt the late blown Blaſt concerning the government of Women; wherein are confuted all ſuch reaſons, as a Stranger of late made in that behalf, with an Exhortation to Obedience.* And, in Mr Strype's opinion, the treatiſe is a notable and full anſwer to Mr Knox. And this opinion is greatly countenanced and confirmed by the behaviour of Mr Knox himſelf, who, after Queen Elizabeth's acceſſion to the throne, found a way of evading the principles advanced in that book. In a letter to Secretary Cecil, dated April 10, 1559, he writes thus concerning the *Blaſt*.

'*It is bruted, that my book is or ſhall be written 'againſt. If ſo be, Sir, I greatly fear, that flatte'rers ſhall rather hurt than help the matter, which 'they would ſeem to maintain; for except my error be 'plainly ſhewn and confuted by better authority, than 'by ſuch laws as from year to year may and do change, 'I dare not promiſe ſilence in ſo weighty a buſineſs, leſt 'in ſo doing I ſhould appear to betray the verity, which 'is not ſubject to the mutability of the time.* And if any think me either enemy to the perſon, or yet to the regiment, of her whom God hath now promoted, they are utterly deceived of me. For the miraculous work of God comforting his afflicted by an infirm veſſel I do acknowledge, and the power of his moſt potent hand (raiſing up whom beſt pleaſeth his

'men

(35) See Knox's Admonition.

to return to his native country; and having a ſtrong deſire in his way thither to viſit thoſe in England, to whom he had formerly preached the Goſpel, he applied to Sir William Cecil, his old acquaintance, to procure leave for that purpoſe. But this petition was ſo far from being granted, that the meſſenger, whom he ſent to ſollicit that favour, very narrowly eſcaped impriſonment [*P*]. Hereupon he made the beſt of his way to Scotland, where he arrived on the 2d of May 1559, and was very active in promoting the Reformation there, as appears from the ſecond book of his Hiſtory, which contains a full account of his conduct, 'till the Proteſtants were obliged to apply to England. For carrying on which tranſaction, in July this year, he was pitched upon to meet Sir William Cecil *incognito* at Stamford (*nn*); but his journey being retarded by the danger of paſſing near the French, who lay at Dunbar, he was afterwards ſent, in company with Mr Robert Hamilton, another Proteſtant miniſter, to negotiate theſe affairs between the Proteſtants in Scotland and Queen Elizabeth. When they came to Berwick, they remained ſome days with Sir James Croſs the Governor, who undertook to manage their buſineſs for them, and adviſed them to return home; which they did. Secretary Cecil ſent alſo an anſwer to the Proteſtant nobility and gentry, concerning their propoſals to Queen Elizabeth; which was ſo general, that they were very near reſolving to break off the negotiation, had not Mr Knox interpoſed with ſo much earneſtneſs, that they allowed him once more to write to the Secretary [*Q*]. To this letter there was quickly ſent an anſwer, deſiring that ſome

(*nn*) Ibid. p. xciii. Sir William Cecil's Letter deſiring that meeting, is dated at Oxford July 14, 1559, and printed in Knox's Hiſtory, p. 212, 213.

'mercy, to ſuppreſs ſuch as fight againſt his glory) I 'will obey, albeit, that both nature and God's moſt 'perfect ordinance repugn to ſuch regiment. More 'plainly to ſpeak, if Queen Elizabeth ſhall confeſs, 'that the extraordinary diſpenſation of God's great 'mercy, maketh that lawful unto her, which both na'ture and God's law doth deny unto all women; 'then ſhall none in England be more willing to main'tain her lawful authority than I ſhall be; but if '(God's wond'rous work ſet aſide) ſhe ground (as God 'forbid) the juſtneſs of her title, upon conſuetude, 'laws, or ordinances of men, then I am aſſured, that 'as ſuch fooliſh preſumption doth highly offend God's 'ſupreme Majeſty, ſo do I greatly fear that her ingra'titude ſhall not long want puniſhment. And this, in 'the name of the eternal God, and of his ſon Jeſus 'Chriſt (before whom both you and I ſhall ſtand to 'make account of all counſel we give) I require you 'ſignify unto her Grace in my name; adding, that 'only humility and dejection of herſelf before God 'ſhall be the firmity and ſtability of her throne, which (36) Knox's Hiſtory, &c. p. 206. 'I know ſhall be aſſaulted more ways than one (36).' He wrote alſo in the ſame ſtrain to Queen Elizabeth herſelf, intimating that, as long as ſhe ſhewed favour to them, that is, the Puritanical party, her regiment was lawful, but whenever ſhe failed of that, it would be lawful to depoſe her. 'If thus, ſays he, in God's pre'ſence you humble your ſelf, as in my heart I glorify 'God for that reſt granted to his afflicted flock with'in England, under you a weak inſtrument; ſo will 'I, with tongue and pen juſtify your authority and 'regiment, as the Holy Ghoſt hath juſtified the ſame 'in Deborah, that bleſſed mother in Iſrael. *But if the 'premiſes (as God forbid) neglected, you ſhall begin 'to brag of your birth, and to build your authority and 'regiment upon your own law, (flatter you who ſo liſt) 'your felicity ſhall be ſhort* (37).

(37) Ibid. p. 211.

[*P*] *His petition was not granted.*] The letter he wrote to Secretary Cecil on that head may be ſeen in Buchanan's edition of his hiſtory in 1649; as alſo in the MS. from which the edition in 1732 was printed; but is not inſerted in that edition, as it ſhould ſeem, becauſe not to be found in the firſt edition of the 8vo, 'being, as is probable, kept out to avoid giving of'fence to Queen Elizabeth and Secretary Cecil; but, notwithſtanding that conceſſion, the book was ſuppreſ'ſed in England where it had been printed.' Thus the writer of Knox's life in 1732 (38). But the calumniating inſinuation here thrown upon the memory of Queen Elizabeth and her council is clearly wiped off, and turned upon the author of it by another writer of that nation already mentioned, who, in a note upon the words of Camden, concerning Mary, Queen Dowager of Scotland, mother of Mary Queen of Scots, in his annals of Queen Elizabeth, where, ſpeaking of that dowager, ſays, 'ſhe was a pious and wiſe princeſs, who had 'ſuffered the moſt bitter reproaches from ſome virulent 'and furious preachers, as may be ſeen in their own 'Church Hiſtory, called in by Queen Elizabeth when it 'was juſt going to the preſs.' By this, ſays my author, he means Mr Knox's hiſtory, an edition whereof was printed at London; but at what preciſe time has not as yet fully appeared. Mr. Camden ſays here, that this book was called in by Queen Elizabeth when it was juſt going to preſs; he ſhould rather have ſaid, when it was going to be publiſhed; ſince, of this Engliſh edition in a ſmall 8vo, there are ſome few copies to be met with at this day; but every one of them is imperfect (39). He then proceeds in theſe terms: The author of the life of Mr Knox, prefixed to the late edition of his hiſtory at Edinburgh, 1732, gives a paſſage from Calderwood's MS. to aſcertain the time when this 8vo edition was printed at London, in the following words. February 1586, *Vaultellier, the printer, took with him a copy of Mr Knox's hiſtory of England, and printed twelve hundred of them. The ſtationers at the archbiſhop's* [*Whitgift*] *command ſeized them the 18th of February. It was thought that he would get leave to proceed again; becauſe the council perceived, that it would bring the Queen of Scots in deteſtation* (40). This ſeems to be the beſt account of the date when theſe books were ſeized; but the expectation of getting leave to proceed again ſeems to have failed. True indeed, the ground of the expectation ſeems to be plauſible enough, ſeeing Mr Knox has laid himſelf out, as it were, to bring the Queen of Scots, his ſovereign, into deteſtation; but it ſeems likewiſe, that the council of England ſtood no longer in need of Mr Knox's detracting pen; they had gained their point before that time (41), and now they ſaw well, that ſuch language and repreſentations as that book contained, was not fit to be allowed a free paſſage into the world. *That wiſe council acted herein ſomewhat like thoſe who fawn on a traitor, while his treachery may be ſerviceable to them; but when that ſeaſon is over, they deſpiſe both the traitor and the treachery* (42).

[*Q*] *He was allowed once more to write to the Secretary.*] As this letter was judged to be of ſo much importance as to procure an immediate compliance with the requeſt contained in it, we ſhall give an extract of it as follows: He begins with excuſing his not coming to Berwick, for the reaſon expreſſed in the text above, and then proceeds in theſe terms. 'I wiſh that rather 'your pen than our credit, or any thing written to any 'of us, ſhould aſſure the lords and others of our good 'minds (who are now in number but five hundred). 'Unleſs that money be furniſhed without delay to pay 'the ſoldiers for their ſervice by paſt, and to retain 'another thouſand footmen, with three hundred horſe'men, 'till ſome ſtay be had in this danger, theſe gen'tlemen will be compelled to leave the fields. I am 'aſſured as fleſh may be of fleſh, that ſome of them will 'take a very hard life, before that ever they compone 'either with the queen regent, either yet with France. 'But this I dare not promiſe of all, unleſs in you they 'ſee a greater forwardneſs. To ſupporte us will ap'pear exceſſive, and to break promiſe with France will 'appear dangerous. But the loſs of expences, in my 'opinion, ought not to be eſteemed from the firſt pay'ment, neither yet the danger from the firſt appear'ance. France is moſt fervent to conquer us, and 'avoweth, that againſt us they will ſpend their crown '(ſo did my own ears hear Bottincourt brag). But moſt 'aſſuredly I know, that unleſs by us they thought to 'make an entrance to you, they would not buy our 'poverty at that price. They labour to corrupt ſome 'of our great men by money (and ſome of our number

ſome perſons of credit might be ſent to confer with the Engliſh at Berwick; and the ſame letter informed them, that there was a ſum of money ready to be delivered for carrying on the common cauſe, aſſuring them, that if the Lords of the Congregation were willing to enter into a league with Queen Elizabeth upon honourable terms, they ſhould neither want men nor money. Upon this anſwer, Mr Henry Balnaveis, a man well reſpected in both kingdoms, was ſent to Berwick, who ſoon returned with a ſum of money, which defrayed the publick expence 'till November; when John Cockburne of Ormiſtoun being ſent for the ſecond ſupport, received it, but fell into the hands of Earl Bothwell, who took the money from him (*o o*). In the interim, Mr Knox was choſen Miniſter of Edinburgh in July; but being obliged to attend the Lords, while the agreement was in dependance, Mr Willock was left in Edinburgh to officiate in his room. The effect of theſe negotiations was the ſending of an army under the command of the Duke of Norfolk; which being joined by almoſt all the great men in Scotland, at laſt a peace was procured and concluded between the two kingdoms, on the 8th of July 1560 (*p p*). The Congregationers being freed by this peace from any diſturbance, made ſeveral regulations towards propagating and eſtabliſhing the new religion; and, in order to have the reformed doctrine preached throughout the kingdom, a diviſion was made thereof into twelve diſtricts (for the whole number of the reformed miniſters at this time was only twelve), whereby the diſtrict of Edinburgh was aſſigned to Mr Knox (*q q*). Theſe twelve miniſters alſo compoſed a Confeſſion of Faith, which was afterwards ratified by Parliament; they alſo compiled the firſt books of Diſcipline for that Church. In December this year, Mr Knox buried his firſt wife Margery Bowes, an Engliſhwoman, for whoſe loſs he was much grieved (*r r*). In January the following year, 1561, we find our author engaged in a diſpute concerning the controverted points of religion, againſt Mr Alexander Anderſon, Sub-Principal of the King's-college at Aberdeen, and Mr John Leſlie parſon of Une, and afterwards Biſhop of Roſs. In March 1560-61, Mr John Spottiſwood was admitted Superintendant of Lothian by Mr Knox [*K*]. And the ſame year, Auguſt 20, 1561, the Queen arrived at Leith From France. From her firſt arrival, her Majeſty ſet up a private Maſs in her own chapel, which afterwards, by her protection and countenance, was much more frequented: this excited the zeal of Mr Knox, who expreſſed himſelf with great warmth againſt allowing it; and an act of the Privy-Council being proclaimed at the market-Croſs of Edinburgh, forbidding any diſturbance to be given to this practice under pain of death, on the 25th of that month, Mr Knox openly in his ſermon the Sunday following declared, that *one Maſs was more frightful to him, than ten thouſand armed enemies, landed in any part of the realm* (*s s*). This freedom of ſpeech gave great offence to the Court, and the Queen herſelf had a long conference with him upon that and other ſubjects [*S*]. What part he bore

' are poor, as before I writ, and cannot ſerve without ' ſupport); ſome they threaten, and againſt others they ' have raiſed up a party in their own country. In this ' mean time, if you lye by as neutrals, what will be the ' end you may eaſily conjecture. And therefore, Sir, ' in the bowels of Chriſt Jeſus I require you to make ' plain anſwer, what the gentlemen here may liſten ' to, and what the queen's majeſty will do, may be ' without delay put in execution (43).'

(43) Knox's Hiſtory, p. 213, 214.

[*R*] *Spottiſwood was admitted ſuperintendant of Lothian by Mr Knox.*] The form and order of this admiſſion was compoſed by Mr Knox, and is inſerted in his hiſtory (44). He begins with a ſermon upon theſe heads: 1. The neceſſity of miniſters and ſuperintendants. 2. The crimes and vices that might unable them. 3. The virtues required in them. And laſtly, whether ſuch as by public conſent of the Kyrke were called to ſuch office might refuſe the ſame. Sermon finiſhed, it was declared by the preacher, That the lords of ſecret Council had given charge and power of the kirkes of Lothian to chuſe Mr John Spottiſwoode ſuperintendant, *&c.* Upon which words Mr Keith makes the following remark: 'One would think, ſays he, that if this charge, and power, and nomination of the particular perſon for this dignity, was given and made at that time by the Lords of the Council, there might be little ground to complain of the ſame power, when lodged in a lawful king (45).' The ſame writer upon another occaſion obſerves, that the whole behaviour of the firſt reformers of religion in Scotland, ſhews that they had no notion of a regular ſucceſſion being neceſſary for the vocation of ordinary office-bearers in the Church of Chriſt. What was it that made the new preachers to be the only perſons that had power to adminiſter the ſacraments? I ſuppoſe they will hardly ſay the parliament had authority to confer that power. If it was the call of the people, it ſeems to be unheard of 'till that time, that the people could conſecrate and ordain any perſon to the ſacred offices: their conſent and approbation is quite another thing. I am inclined to think, they will have recourſe to a ſpecial immediate appointment to ſuch perſon by Almighty God himſelf at that period; but with how many difficulties ſuch an aſſertion may be attended, I need not offer to mention.—That Mr Knox and ſome others, who had regular ordination, did at that time undervalue their ſacred orders, and act as preachers by a *new* call; and that others of the preachers never had any ordination, but the *new one* is certain: and 'tis as certain that many to this day have acted as office-bearers in the Church, merely by virtue of that new call. May it not therefore be reaſonably doubted whether ſuch perſons be really Miniſters of Jeſus Chriſt, or no? At leaſt, may not other people who lay ſome ſtreſs on the validity of regular miniſtrations, make ſcruple to receive from their hands the myſteries of the Covenant of Redemption? Is not the plea of the Quakers more defenſible, every one of whoſe preachers pretends an immediate call *.

(45) Keith's Hiſtory, p. 145, note (*d*).

* Ibid. p. 150. note (*b*.)

[*S*] *He had a long conference with the Queen.*] In this conference her majeſty having charged him with writing the *Blaſt*, he avows it, and then proceeds thus: 'I hear that an Engliſhman hath written againſt it, but I have not read him If he hath ſufficiently improved my reaſons, and eſtabliſhed his contrary propoſitions with as evident teſtimonies as I have done mine, I ſhall not be obſtinate, but ſhall confeſs my error and ignorance But to this hour I have thought, and yet think my ſelf alone to be more able to ſuſtain the things affirmed in that my work, than any ten in Europe ſhall be able to confute it. This confident aſſertion, together with his avowing to read the anſwer to his book, looks at firſt ſight to proceed from that obſtinacy of temper for which he was ſo remarkable; but upon a nearer view of it, will appear to be the genuine effect of art and policy. If he had read the anſwer he muſt either have replied, or, by his ſilence, have incurred the cenſure of a tacit retractation. The firſt he well ſaw was too raſh and dangerous to engage in; and therefore he took this method to avoid the reproach of the ſecond, which muſt have leſſened his authority among his own party. With the ſame art is his anſwer conducted to the Queen's next charge againſt him

bore in the affairs of the Church during the remainder of this year 1561, may be ſeen in his Hiſtory, to which we refer the reader. In 1562, we find him employed in reconciling the Earls of Bothwell and Arran, which is an evidence how much he was regarded by the moſt eminent perſons of the kingdom, and how much intereſt he had with them (*tt*). The ſame year, the Queen being informed that her uncles were like to recover their former intereſt at the Court of France, received the news with great joy: Mr Knox hearing of her behaviour, and apprehending that the power of the Queen's relations would produce diſmal effects, in prejudice of the reformed intereſt in theſe parts, thought fit to preach a ſermon, wherein *he taxed the ignorance, vanity, and deſpite of princes, againſt all virtue, and againſt all thoſe in whom hatred of vice and love of virtue appeared.* This and other expreſſions, in reproof of dancing for joy at the diſpleaſure taken againſt God's people, coming to the ears of the Queen, her Majeſty ſent for him, and had a ſecond conference with him (*uu*). This year he was appointed, by the General Aſſembly, Commiſſioner to the counties of Kyle and Galloway; and, by his influence, ſeveral of the moſt eminent gentlemen of Kyle, Cunningham, and Carrick, entered into a bond or covenant at Air, which was ſubſcribed September 4, 1562 (*ww*) [*T*]. From the ſhire of Air he went to Nithſdale and Galloway, and had ſeveral conferences about matters of great importance with the Maſter of Maxwell; and from this county he wrote to the Duke of Chaterault, giving him cautions both againſt the Biſhop of St Andrews and the Earl of Huntley, whoſe counſels he judged might prove prejudicial to the reformed intereſt. At this time he accepted a challenge made by an eminent perſon among the Papiſts to a publick diſpute about the Maſs, which continued the ſpace of three days, and was afterwards printed (*xx*). In the beginning of the Queen's firſt Parliament, in May 1563, Mr Knox endeavoured to excite the Earl of Murray to appear with zeal and courage, to get the articles of Leith eſtabliſhed by Law; but finding him cooler than he expected, there followed a breach between them, which continued for a year and a half (*yy*). And after the bill was rejected, the Parliament not being diſſolved, he preached a ſermon before a great many of the members, wherein he expreſſed his ſenſe of that matter with vehemency, and at the cloſe declared his abhorrency of the Queen's marrying a Papiſt *. This gave great offence to the Court; and her Majeſty ſending for him, expreſſed much paſſion, and thought to have puniſhed him, but was prevailed upon to deſiſt at that time [*U*]. The

(48) Knox's Hiſtory, p. 201.

Accordingly the writer of Knox's Life, in 1732, tells us, that from this bond, thoſe who ſeparated from Popery, were called the *Congregation*; becauſe in it they oblige themſelves to maintain, ſet forward, and eſtabliſh the moſt bleſſed word and his Congregation; and the nobility who adopted the Reformed intereſt were called the Lords of the Congregation (49). Mr Keith is arch upon this Bond. In which, tho' it be very conciſe, the reader, ſays he, may obſerve that they ſtile themſelves no leſs than ſeven times the Congregation. And that alſo, with this ſingular ſpecialty, as being the Congregation of the Lord, in oppoſition to thoſe of the Church, whom they are pleaſed to call the Congregation of Sathan (50).

(49) Knox's Life, p. xxi.

(50) Keith's Hiſtory, p. 69.

[*U*] *And was prevailed upon to deſiſt for that time.*] The offenſive words were; *And now, my lords, to put an end to all, I hear of the queen's marriage. Dukes, brethren to emperors and kings, ſtrive all for the beſt gain; but this, my lords, will I ſay (note the day and bear witneſs after) whenſoever the nobility of Scotland profeſſing the Lord Jeſus, conſents that an Infidel, (and all Papiſts are Infidels) ſhall be had to our ſovereign, ye do ſo far as in you lieth, to baniſh Chriſt Jeſus from the realm, ye bring God's vengeance upon the country, a plague upon your ſelves, and, perchance, ye ſhall do ſmall comfort to your ſovereign.* In his defence before the queen he ſaid, that out of the pulpit few had occaſion to be offended at him; and there, Madam, ſays he, I am not maſter of my ſelf, but muſt obey who commands me to ſpeak plain, and to flatter no fleſh upon the face of the earth. Then happened another incident, which was like to have brought him into great trouble this year. During the Queen's abſence

The General Assembly being held in June 1564, a selected committee was appointed to hold a conference with several persons of distinction, officers of state, upon some controverted points; the chief of which was about the boundaries to be settled between the power of the supreme magistrate and the people [*W*]. The ensuing year, Lord Darnley being married to the Queen, was advised by the Protestants about Court to hear Mr Knox preach, as thinking it would contribute much to procure the good-will of the people. At their desire he went, on the 19th of August, to the high church, but was so much offended at the sermon, that he complained to the Council, who immediately ordered Mr Knox before them, and forbad him to preach for several days [*X*]. The General Assembly, which met in December this year in their fourth session, appointed Mr Knox to draw up a consolatory letter in their name, to encourage ministers, exhorters, and readers, to continue in their vocations, which many were under great temptation to leave for want of subsistence, and to exhort the professors of the realm to supply their necessities. He was also appointed by this assembly to visit, preach, and plant, the kirks of the South, 'till the next assembly, and to remain as long as he could at that work (*z z*). He requested the General Assembly, which met at Edinburgh in December 1566, that he might have leave to go to England to visit two of his sons (*a a a*), and for other necessary affairs in that kingdom [*Y*]. The same General Assembly being informed, that some worthy and learned divines in England were prosecuted by the Bishops, because they refused to use the habits appointed by Law for Church-men, caused a letter to be written and sent by Mr Knox, wherein with great earnestness they intreated, that they might deal gently with such ministers as scrupled the use of those vestments [*Z*]. In 1567, Mr Knox preached a sermon at the coronation of King James the Sixth of Scotland, and afterwards the First of Great-Britain (*b b b*). This year is very remarkable in Scotland, upon account of the great turn of affairs there by Queen Mary's resigning the government, and by the appointment of the Earl of Murray to be regent. The first parliament which was called by the Earl met upon the 15th of December. It was a very numerous convention of all the Estates, and Mr Knox preached a very zealous sermon at the opening of it; and he was extremely afflicted at the Regent's death in 1569 [*A A*]. In 1571, the Hamiltons and others,

(*z z*) Life of Knox, p. xxx.

(*a a a*) Probably then at school, if the same as were afterwards sent to St John's-college in Cambridge, as is mentioned in the close hereof.

(*b b b*) This sermon is much commended by Buchanan in his History of Scotland, who was a good judge of the beauties of such a performance.

(51) After passing most part of the summer in the west, she staid some time at Stirling.

sence from Holy-rood house this summer (51), some of her family celebrating mass at the palace, there appeared greater numbers than usual; some of the most zealous Protestants being informed of it, went to the abbey to take down the names of such as they saw going to that service. The queen's servants sent to the comptroller, advertising him that they were in great danger, and craving his assistance, he came down with great expedition, attended by the magistrates of Edinburgh and several others. Upon this occasion one Patrick Cranstoun went into the queen's chappel, and finding the alter covered, and the priest ready to celebrate mass, said, *The queen's Majesty is not here, how dare you then be so malapert as openly to do against the Law?* The report of this being carried to the Queen, she ordered Cranstoun, with one Armstrong, to be summoned, and find surety to underly the law for felony, having made violent invasion into the queen's palace. Mr Knox being afraid that extremity might be used against these zealous men, and being authorised by the last General Assembly to give advertisement to the whole body of Protestants in Scotland, when any danger appeared, wrote a circular letter, wherein he desires them to convene for the support of these men against the time of their appearance (52). Some copies of this letter were intercepted and brought to the Queen. It was concluded in the cabinet-council that it contained treason, and the nobility were advertised to be present at Mr Knox's trial, which was appointed for the middle of December. The nobility convened accordingly, and having heard Mr Knox's defence, acquitted him. His conduct was likewise approved by the General Assembly of the Church (53).

(52) This letter is dated at Edinburgh, Octob. 8, 1563, and is printed in his History, p. 336, 337.

(53) That assembly met December 25, 1563. See a particular account of this whole affair in Knox's History, from p. 339 to p. 345.

(54) Ibid. p. 349 to 366.

[*W*] *The boundaries between power of the prince and people.*] The writer of Mr Knox's life tells us, that in this conference Mr Knox and the rest of his brethren espoused the same principles which have been owned by the supporters of the late happy Revolution. The courtiers were for screwing the royal prerogative to a great pitch, by which, upon perusing the conferences related by Mr. Knox (54), I suppose is meant, that in both cases, the courtiers on one side urged the doctrine of absolute Non-resistance, which was rejected by the other side.

[*X*] *Forbad him to preach for several days.*] His text was Isaiah xxvi. 13 and 17. *O Lord our God, other lords than thou have reigned over us.* From these words he took occasion to speak of the government of wicked princes, who for the sins of the people are sent as tyrants and scourges to plague them. And amongst other things, he said, that *God sets in that room (for the offences and ingratitude of the people) boys and women.* There were also some other words uttered by him which gave great offence to the king, as, that *God justly punished Ahab and his posterity, because he would not take order with that harlot Jezabel.* These words the Council told him had given offence to his majesty, and they desired him to abstain from preaching fifteen or twenty days, and let Mr Craig supply the place. He answered, that he had spoken nothing but according to his text; and if the Church would command him either to speak or abstain, he would obey so far as the word of God would permit him (55). The publisher of Mr Knox's history in 4to, adds in the margin, that in answering he said more than he had preached; for he added, that as the king had for pleasure of the queen gone to mass, and dishonoured the Lord God, so should God in his justice make her an instrument of his ruin; and so it fell out in a very short time; but the queen, being incensed at these words, fell out into tears, and to please her, John Knox must abstain from preaching for a time.

(55) Ibid. p. 380, 381.

[*Y*] *He went to England to visit his two sons, &c.*] Before he set out, he had ample testimonials from the assembly of his life, doctrine, and usefulness, and was by them recommended to all to whom he should come. The assembly limited his abode in England to the meeting of the next general assembly, June 25 (56).

(56) Knox's Life, p. xxx.

[*Z*] *To be gentle to the Nonconformists.*] This letter is published by Bishop Spottiswood in his history of the troubles at Francfort, as also by Mr Strype in his Life of Archbishop Parker. The letter itself seems to be Mr Knox's performance, as is affirmed in his History; where we have also a copy of the Assembly's letter (57).

(57) Book v. p. 402. It is dated December 27, 1566.

[*A A*] *He was much afflicted at the murder of the Earl of Murray.*] We are told that he apprehended the interest of religion would be exposed to the utmost danger by the earl's fall; and, upon that account, expressed himself with great concern both in public and private. The same writer tells us also, that he had seen a form of prayer composed by him upon this event, which shews his genuine sentiments of this matter. It is preserved by Mr Calderwood (58). Spottiswood, on the occasion of the Regent's murder, has related a story of Knox, which the writer of his life has inserted as a proof that he was in very great esteem, and reputed to be endued with an extraordinary faculty of predicting things to come. And indeed 'tis certain that Knox, upon all occasions, denounces the vengeance

(58) Knox's Life, p. xxxi. See also Smeton's answer to Archibald Hamilton's dialogue *de Confessione Calvinianæ Sectæ, apud Scotos*, p. 126.

others, who had entered into a combination against the Earl of Lenox, then Regent, began to fortify the town of Edinburgh. While they were thus employed, a Council was held by them in the caſtle on the fourth of May, where the Laird of Grainge, captain of the caſtle, propoſed that they might give ſecurity for the perſon of Mr Knox, which was alſo much deſired by the town's people. The Hamiltons anſwered, that they could not promiſe him ſecurity upon their honour, becauſe there were many in the town who loved him not, beſides other diſorderly people, that might do him harm without their knowledge. Upon this anſwer, which plainly ſhowed no good intention to Mr Knox, his friends in the town, with Mr Craig his colleague at their head, intreated him to leave the place, by reaſon of the impending danger to him, and to them too upon his account, in defending him from the attempts of the contrary party; which being alſo the ſtrongeſt, would moſt probably be able to execute their deſigns againſt him: Accordingly, leaving Edinburgh on the fifth of May, he went firſt to Abbotſhall in Fyſe, and thence to St Andrews, where he remained 'till the 23d of Auguſt, 1572 (*ddd*). That year there was a convention of the miniſters at Leith, where it was agreed, that a certain kind of Epiſcopacy ſhould be introduced into the Church, which was zealouſly oppoſed by our Reformer [*BB*]. The troubles of the country being much abated, and the people of Edinburgh, who had been obliged to leave it, being returned, they ſent two of their number, viz. Nicol Edward and John Johnſton, Scribe, to St Andrews, to invite Mr Knox to return to them, and to aſk his advice about the choice of another miniſter to aſſiſt him during the time of the troubles [*CC*]. With their commiſſioners they ſent a letter, which is inſerted below [*DD*]. The ſuperintendant of Lothian was with them, when they preſented the letter; which, when Mr Knox had peruſed, he conſented to return upon this condition, that he ſhould not be deſired in any ſort to ceaſe ſpeaking againſt the treaſonable dealings of thoſe who held out the caſtle of Edinburgh; and this he deſired them to ſignify to the whole brethren, leſt they ſhould repent afterwards of his auſterity againſt thoſe in the caſtle, or fear to be treated the worſe on his account; and after his return, he repeated theſe words more than once to his friends there, before he entered the pulpit; they anſwered,

(*ddd*) Life of Knox, p. xxxii, xxxiii.

geance of Heaven upon the enemies of the Congregationers, and conſtantly laid claim to the extraordinary illumination of the Holy Ghoſt, and to the gift of Prophecy, how truly needs not be ſaid at this time of day.

[*BB*] *Which was zealouſly oppoſed by our Reformer.*] The biſhops who came in by virtue of this Convention, were called *Tulehan* biſhops; the word *Tulehan*, in the Iriſh language, ſignifying the ſkin of a calf ſtuffed with ſtraw, to make the appearance of a living calf; which device was uſed in the Highlands of Scotland, that the cows might eaſily yield their milk, as they did not do it without a great ſtruggle, when their calves were taken from them: from this cuſtom the biſhops now introduced were called *Tulehan*, becauſe, altho' the courtiers had got the far greater part of the revenues of the biſhopricks, yet they could not get a colourable title to theſe rents, as the law then ſtood, except they had a conveyance from thoſe who had the title of biſhops; for this reaſon it was thought a good expedient by the great ones, who had a longing mind to enjoy the profits of the biſhoprics, that this ſort of biſhops ſhould be brought into the Church, and indeed all of them, by certain pactions, conveyed the far greater part of the revenues to their patrons, reſerving a very ſmall part to themſelves. Among the reſt, the Archbiſhoprick of St Andrew's coming to the ſhare of the Earl of Morton, that nobleman deſigned Mr John Douglas, Rector of the Univerſity there, in whom his Lordſhip had an entire confidence, to be elected to that See: for this purpoſe the electors were convened Feb. 8, 1572, where, after ſome oppoſition, he was elected archbiſhop. Mr Knox, being then in St Andrew's, was much diſpleaſed with this election; and the next Lord's-day, being to preach in the forenoon where the Earl of Morton was preſent, he not only peremptorily refuſed to inaugurate and receive the new-elected biſhop, but publickly denounced an anathema both to the giver and receiver of this biſhoprick. Notwithſtanding this oppoſition, Mr Douglas was admitted archbiſhop, according to the order for admitting ſuperintendants and miniſters (60); for they had not as yet framed any particular form for admitting biſhops. Mr John Rutherford, Provoſt of the Old College of St Andrew's, and Meſſieurs Archibald and John Hamilton, Profeſſors in the New College, ſpread a report next week, that Mr Knox's oppoſition to the biſhops proceeded from a pique that he was not elected himſelf. This coming to his ears, he vindicated himſelf from the pulpit next Lord's-day in words to the following purpoſe: *I have refuſed a far greater biſhoprick than ever it was, which I might have had with the favour of greater men than ever he had his; I did and do repine, not from malecontent, but for the diſcharge of my conſcience, that the Kirk of Scotland be not ſubject to that order* (61).

(60) This confirms Mr Keith's obſervation mentioned in remark [*FF*].

[*CC*] *The choice of another Miniſter, &c.*] They were exceedingly diſpleaſed with the conduct of Mr Craig during the time of the troubles, he having made too great compliacency, as they thought, with thoſe who appeared againſt the authority of the young king and his regents, and were unwilling any longer to ſubmit to his miniſters (62).

(61) Knox's Life, p. xxxiii. This ſeems to refer to the offer that we have obſerved was made him of a biſhopric in England in Edward VIth's time.

[*DD*] *With the letter which is inſerted below*] The letter is in theſe terms: '*The comfort of the Holy Spirit for ſalutation. Of the reſtoring of us undeſerved of our God into our town we believe ye are not ignorant; and yet we cannot excuſe our ſloth, that we have not as yet advertiſed you thereof, being troubled to obtain that liberty which we had before our parting therefrae, wherein as yet we are occupied, was and is the cauſe of our ſlackneſs, which we doubt not ye will accept in good part. Our eſtate at preſent in that thing, which to us at preſent is moſt dear, is, that miniſters may be had, of whom for the preſent we are deſtitute, you only excepted, moveth us more than any other thing; and for that purpoſe, and for treating of ſuch other things as concern the ſtate of the Kirk, we directed the bearers to the Aſſembly at St Johnſtown, who will certify you of their anſwer which they have received: but becauſe you are he to whom we are married under God, we would crave, and crave of God, if hability of your perſon might ſuſtain travel, that once again your voice might be heard among us, and that thing reformed which ſome time by you was planted among us. Loath are we to diſtreſs or hurt your perſon any wiſe, and far loather to want you, we being joined together in love by God, and knowing your care to be no leſs for us than it has been heretofore. We refer your returning to yourſelf and your judgment; but if it may ſtand with your will, we deſire the ſame moſt earneſtly. And knowing the ſufficiency of the bearers, who will declare our mind to you at great length, wherein ye ſhall give them credit, we commit you to the protection of the Eternal.*

(62) Ibid. p. xxxiv.

'*Off Edinburgh the 14th of Auguſt*, 1572.

'*Your Brethren and Children in God, with their Names ſubſcribed with their own Hands.*'

swered, that they never meant to put a bridle on his tongue, but desired him to speak according to his conscience, as in former times. They also requested his advice upon the choice of a minister; and, after some debates, they agreed upon Mr James Lawson, Sub-Principal of the King's college at Aberdeen (*eee*). Mr Knox left St Andrew's August 17, and came to Leith on the 23d. Upon the last day of that month, he preached in the great kirk; but his voice was become very weak, and therefore he desired another place to teach in, where his voice might be heard, if it were but to a hundred persons; which was granted. Immediately after this agreement commissioners were sent, by whom Mr Knox sent the letter below [*EE*]. Mr Lawson came to Edinburgh September 15, and preached upon the Friday after, to the great satisfaction of the people, and continued preaching, 'till he was admitted to the charge of the ministry at Edinburgh. Mr Knox preached in the Tolbooth as long as he had strength of body; but his health was greatly impaired by the news of the massacre of the Protestants at Paris about this time (*fff*). However, he introduced it into his next sermon, with his usual denunciation of God's vengeance thereon, which he desired the French Ambassador, Monsieur La Crocque, might be acquainted with [*FF*]. On Sunday November 9, 1572, he admitted Mr Lawson a minister of Edinburgh. But his voice was so weak, that very few could hear him; he declared the mutual duty between a minister and his flock; he praised God, that had given them one in his room, who was now unable to teach, and desired that God might augment his graces to him a thousand fold above that which he had, if it were his pleasure, and ended with pronouncing the blessing. From this day he hastned to his end. Upon the 11th, he was seized with a violent cough and great pains of the body; so that upon the 13th, he was obliged to give over his ordinary reading of the scriptures (*ggg*). During his sickness, he was visited occasionally by the Earl of Morton, and others of the principal nobility and gentry. But his decay still continually increasing, he resigned his breath on Monday the 24th of November, 1572, with great piety, resignation, and trust in God, such as well became the Principal Director of the Reformation of Religion in Scotland *. He was interred on the 26th, in the kirk-yard of St Giles's, the corpse being attended by several lords who were then at Edinburgh, and particularly the Earl of Morton, that day chosen Regent, who, as soon as he was laid in his grave, said, *There lies a man, who in his life never feared the face of a man, who hath been often threatened with dag and dagger, but yet hath ended his days in peace and honour. For he had God's providence watching over him in a special manner, when his very life was sought* (*hhh*) [*GG*]. As to his character, he was one of those extraordinary persons, of whom few, if any, are observed to speak with sufficient temper. All that we find of him in this way, are either extravagant encomiums on one hand, or senseless invectives on the other. The length of the first exclude them necessarily from a place here; we can only refer to them in the margin †. And of the latter, we have already given one in the last remark below, which may be taken for a specimen of the rest. We shall therefore conclude what relates thereto in the words of Mr Strype, who hath dealt candidly with his memory; and having spoken of his residence in England and Geneva, closes his account thus: 'In May 1559, 'he

† They are, Tho. Smeton, ubi supra. Beza in Iconibus. Melchior Adams, ubi supra. and Jacobus Verheiden, in his Effigies Præstantium Theolog. &c. Hagæ, 1602.

[*EE*] *The letter may seen below.*] It runs thus:

'*Beloved Brother,*

'*Seeing God of his mercy, far above my expectation,*
'*hath called me once again to Edinburgh, and yet I*
'*feel nature so decayed, and daily to decay, that I look*
'*not for a long continuance of my battle, I would*
'*gladly once discharge my conscience, unto your bosom,*
'*and unto the bosom of others, in whom I think the fear*
'*of God remaineth. If I had the ability of body, I should*
'*not have put you to the pains to which I require you*
'*now, that is, once to visit me, that we may confer to-*
'*gether of heavenly things, for in earth there is no sta-*
'*bility, except the Kirk of Jesus Christ, ever fighting*
'*under the Cross, to whose protection I heartily commit*
'*you.*

'*From Edinburgh, 7th of September, 1572.*

'*Accelere, mi frater, alioqui sero venies.*'

[*FF*] *He desired Mr Crocque might be told of his Denunciation.*] The Denunciation was to this purport, *Sentence is pronounced in Scotland against that murderer the King of France, and God's vengeance shall never depart from him nor his house; but his name shall remain an execration to posterity; and none that shall come of his loins, shall enjoy that kingdom in peace and quietness, unless repentance prevent God's judgment.* The ambassador being told of it, applied to the regent and council, and complained that his master was called a traitor and murderer of his subjects, under a promise and trust; and desired that an edict might be published, prohibiting the subjects of Scotland to speak any thing to the dishonour of his master, especially the ministers in their sermons. This was waved by the council, and the ambassador was told, that they could not hinder the ministers from speaking even against themselves (63).

(63) Ibid. p. xxxv.

[*GG*] *When his life was sought.*] We have a remarkable instance of this as follows: It was his custom to sit at the table head in his own house with his back to a window; yet, upon a certain night he sat with his back to the table, when a bullet was shot in at the window purposely to kill him; but the conspirators missed him, and the bullet lighted on the candlestick, and made a hole in the foot of it, which is yet to be seen (64). We need not observe, that the pretence insinuated in this story by Mr Calderwood of an extraordinary providence interposing in Knox's preservation, is the pure effect of bigotry. However, to ballance it on the other hand, an account of his death was fabricated by the Papists, who did not scruple to father it upon King James I. as follows: When that monarch, says the author, came first into England, being at dinner in a nobleman's house, he said, in speaking of Knox, that God thought fit to set a visible mark upon him even in his life-time before he went to the devil, (these are the author's words!); which was, that being sick, with a good coal-fire by him, and a lighted candle upon the table, he desired the servant-maid that attended him to fetch him some drink, being extremely thirsty. She went and returned quickly, but found the room all in darkness; for not only the candle, but the fire also was utterly extinct, and she, by that light which herself brought in immediately after, saw the body of Knox lying dead in the middle of the floor, and with a most ghastly and horrid countenance, as if his body were to shew the condition of his soul *.
